This robotics and autonomous systems course introduces students to the principles of sensing, perception, and motion planning in autonomous systems. Students examine how autonomous robots and intelligent systems perceive their environments, apply sensor fusion and computer vision, and use algorithmic methods to plan efficient paths in both static and dynamic physical systems. Emphasis is placed on the integration of control systems, mapping techniques, and decision-making processes that support advanced applications in robotics and artificial intelligence. (Prerequisite: **ELEN437**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN440 Mechatronics (4 semester hours)

This course covers the foundational concepts in mechatronics. It introduces students to the required skills necessary to design a complete mechatronic system. Students will learn about the use and integration of sensors, actuators, microcontrollers, and various types of software required to interact with hardware. Students will gain a system-of-systems approach to designing a complete mechatronics system and how to structure and interface to electromechanical systems. They will also gain practical experience through laboratory exercises in design of graphical user interfaces and real-time operating systems needed to control mechatronic systems. Students will also design feedback control systems with time and task constraints. NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details. (Prerequisites: **ELEN312** or **ELEN315**, and **ELEN416**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN498 Senior Seminar Design (3 semester hours)

This seminar is a senior-level course designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in electrical engineering. The student will design an approved project that demonstrates mastery of their program of study in a meaningful culmination of their learning and to assess their level of mastery of the stated outcomes of their degree requirements. Prerequisite: Completion of a minimum of 110 hours towards your program.
NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN499 Senior Seminar Project (3 semester hours)

After completing the design of their approved project in **ELEN498** - Senior Seminar Design, students will implement that design into a working prototype and write a senior thesis. The senior thesis will be completed and an oral defense presented. Selected senior papers will be retained in our library. The student is further encouraged to submit work to peer reviewed journals, conference proceedings, and/or senior design competitions. NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details. (Prerequisite: **ELEN498**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Engineering (ENGR)

ENGR200 Introduction to Engineering and Computing (3 semester hours)

This course provides an overview of the engineering profession and introduces the student to writing computer programs. The course provides information about different engineering disciplines and gives an overview of electrical engineering. The APUS electrical engineering concentrations are introduced and it describes what career opportunities are available in those concentrations. Additional Engineering subjects are presented including Engineering Ethics and Management. The class presents the principles of structured programming using the C++ language. The course is designed for engineering students without previous programming experience. Topics include: Introductions to computers, C++ programming, classes, objects, strings, control statements, recursion, functions, arrays, vectors, and pointers. Finally, an introductory engineering design problem will be presented which gives the students an opportunity to solve a problem. (Prerequisite: **ELEN100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGR300 Fundamentals of Mechanical Engineering (3 semester hours)

This course presents the fundamental mechanical principles of engineering required for any course of study in the engineering sciences. The student will be introduced to the principles and applications of statics, dynamics, thermodynamics and heat transfer. Students will study the interaction between mechanical and electrical systems and apply analogies between the two. Topics include: Technical problem solving and communication skills; Forces in Structures and Machines; Materials and Stresses; Fluids Engineering; Thermal and Energy Systems; Motion and Power Transmission. Finally, the course will present the essentials of the mechanical engineering profession and where it fits in the world of technology. (Prerequisites: **SCIN234** and **MATH240**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

English (ENGL)

ENGL101 Proficiency in Writing (3 semester hours)

Playing third base doesn't come naturally to most folks; instead, it requires dedication to become good at it. In the same way, learning how to cook or developing a new app takes a lot of time and commitment. As with any new skill, perseverance and consistent daily practice lead to success. And so it is with writing. It's not the mystery most people make it out to be; in fact, when you get right down to it, writing is pretty formulaic. It's a series of skills that, once learned, require a commitment to practicing them. In other words, no one is born a great writer; instead, writers learn their craft through hard work. **ENGL101** identifies the basic building blocks of writing, and as each new skill is learned, it is practiced in a safe and supportive environment. Come take the mystery out of writing in **ENGL101**: Proficiency in Writing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL110 Making Writing Relevant (3 semester hours)

Martin Luther King, Jr, said, "If you can't fly, then run. If you can't run, then walk. If you can't walk, then crawl. But whatever you do, you have to KEEP MOVING." Making Writing Relevant is a composition course that will definitely keep you moving. It is not merely a required course; it is the type of course you will want to take because it moves you onto the path to success. Over eight-weeks, we will help you learn the most important components of a successful writer-communicator. We will teach you how to research properly, knowing you will need this skill in every course you take here at APUS and also in interactions in your professional and personal life. We will teach you the formatting style you will use in your field. We will provide a supportive community to strengthen and encourage you, and by the end of this nearly-all-you-need-to-know-about-writing course, you will be able to fly.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL115 Argumentation and Rhetoric (3 semester hours)

Presidents winning elections, countries declaring war, spouses saving a marriage, students earning scholarships—all of these have something in common: argumentation. Mountains have been moved by masters of this craft. Just think of what such people as Martin Luther King, Jr., Franklin D. Roosevelt, and Abraham Lincoln achieved with the power of their words. There is, as Horace says, harmony in discord. We will explore that harmony and why Fredrick Douglass said there can be no progress without struggle. In this class, we will examine argument strategies and structures, interrogate assumptions, explore moral arguments with complex empirical questions, and analyze a variety of texts—popular culture, websites, advertisements, etc. Be prepared to work with a variety of evidence and opinions, cultures, counterclaims, evidentiary quality, and more, as we study and practice the art of argumentation. (Pre-requisite: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL125 Introduction to Creative Writing (3 semester hours)

Everyone has a story to tell. Our lives are filled with characters, are rich in texture, and have plots and storylines screaming to be told. Within each of us is a writer yearning to share that story. This course is designed to reach into you and pull that writer into the wonderful world of creative writing. You will learn how to build memorable characters, write incisive dialogue, and craft scenery that will make your readers want to buy a ticket to go there. If you have ever dreamt of being published or just want to flex your creative brain cells, this is the course for you. As one writer, Rodney White, so succinctly wrote: It takes nothing to dream and everything not to. Start your writing dreams today. Who knows where they might take you? (Pre-requisite: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL210 Introduction to Literature (3 semester hours)

Do you enjoy horror, romantic, adventure, or science fiction stories? Do you find song lyrics poetic? Have you ever fancied yourself a director, debater, or film critic? Many APUS students have been enthralled with **ENGL210** – a special course that gives students access to many worlds, plots, themes, and voices. You will enter the deep catacombs of Italy, feel the thrill of detective work, relish in the beauty of lyrical poetry, and experience historical events through a first-person perspective. Also, in **ENGL210**, you will feel what it is like to be a critic, director, author, and audience member. Come join an entertaining way to gain insight into the human experience!

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL220 Technical Writing (3 semester hours)

ENGL220 introduces students to several different forms of technical writing while challenging them to engage regularly with the field at a scholarly level. Major concepts include collaboration, audience, document design, persuasion, the use of mobile technologies, and revision. In this course, readings are discovered by students in relevant technical writing journals in the AMU/APUS Trefry Library. As students hone their academic research skills, they are tasked with reporting back to their peers regarding the found articles that are relevant to that week's writing objectives. Weekly class discussions are set up to simulate the technical writing work groups that are routinely found in companies and organizations, and should offer students a place to brainstorm and refine ideas for their larger assignments. Students will compose product proposals, instructions, labels, and a final web-based product manual. These assignments are designed to build on one another and culminate in the final project which can be included in a professional portfolio. (Prerequisites: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL221 Scientific Writing (3 semester hours)

Volcanoes. Biochemistry. Space studies. Whether pursuit of scientific knowledge is for personal interest or career progression, **ENGL221** gives you the knowledge and skills to understand how and why scientific writing is different from other writing styles. As a launch pad to study rocket science or gather data to advocate for environmental protection policies, this course will provide the groundwork for presenting relevant data to all scientific disciplines. We will learn the basics and practice writing various sections of a scientific paper, including the abstract, introduction, materials and methods, results, discussion, conclusion, and references. **ENGL221** will explore the unique structure, style, process, and documentation found in scientific writing. (Prerequisites: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL226 Effective Business Communication (3 semester hours)

In the modern workplace driven by technology, business is about relationships, and the written word connects us. This course teaches us how to build those relationships, efficiently and effectively, through composing common types of business messages. We will focus on writing emails, memos, and letters as well as social media content, presentations, and personal resumes and cover letters. Develop professional communication skills to articulate your ideas and purpose to a variety of different business audiences in clear, concise, correct, coherent, and credible ways. (Pre-requisite: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL235 Take on the World: An Introduction to Linguistics (3 semester hours)

The only constant in a person's life, whether awake or in a dream state, is language; in fact, it is everything, everywhere, all at once. The process of acquiring language begins even before birth, and by mid-childhood, most have developed a first language without having to work at it. It is natural; humans are hard-wired to acquire language. Throughout life, language influences thought, impacts identity development, and affects people's behaviors, and learning a second or later language can fundamentally change those thoughts and behaviors. Linguistics, the scientific study of language, focuses on the rules that explain the discrete sounds of language, the combination of those sounds into words, the arrangement of words into sentences, and the meaning derived from those sentences in use. This introduction to Linguistics course is a fascinating first foray into building an understanding of language.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL280 Exploring Society & Cultures via Science Fiction (3 semester hours)

This course offers students with a unique approach into the societies and cultures that we could progress toward in the future via the review of the science fiction genre. This course will review many aspects of technological questions that society will face in the future. Does the rise of technological advancements in artificial intelligence and robotics eventually bring us to a point where we must decide what is life and the right to self-determination as the Star Trek: TNG series covered in "The Measure of a Man", laying out the rights of Commander Data. This is just one of many aspects of society and culture that will be examined throughout the course as students are made to think critically about what will the future look like.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL300 Research, Analysis, and Writing (3 semester hours)

Writer Zora Neale Hurston describes research as "formalized curiosity. It is poking and prying with a purpose." This course will help students hone their research skills, along with all other aspects of academic writing. Students will receive step-by-step guidance through the process while writing about topics they want to explore.
In this course, students will learn how to compose thoughtful research questions, gather and evaluate supporting facts, and create an organized outline for a research paper. Students will also learn how to properly cite sources, avoid plagiarism, flesh out a research paper's paragraphs with substantive details, and turn in a polished final paper. Students will work within a supportive university community and will receive plentiful, constructive feedback.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL320 Freelance Writing (3 semester hours)

Have you ever wondered where magazines, newspapers, websites, and blogs find the content they deliver? In our current age of information, there is an increasing reliance on freelance writers to take on articles of interest and to fill the gaps in both online and print publications. **ENGL320** will teach you how to successfully pitch an article or idea via an industry-standard query letter, write hooks and ledes that will capture an editor's attention, and execute a variety of non-fiction articles for unique audiences. Additional topics include performing market research to determine the best home for your article, how to handle rejection gracefully, and how to fine-tune and polish your writing for publication. In **ENGL320**, you will learn practical skills that can be immediately applied to help advance your non-fiction writing career, so whether you're ready to find an audience for your work or you just want to see what freelance writing is all about, this is the course for you! (Prerequisites: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL322 The Personal Essay (3 semester hours)

Whether we realize it or not, we encounter unique characters, settings, circumstances, and situations nearly every day in almost every way we interact in the world. These encounters are filled with meaning that can only be unlocked through deep processing of the events and an evaluation of their effects on our lives. In **ENGL322**, we learn how to process our encounters and interactions. In order to become compelling first-person narrators, then, we will study what forms a personal essay can take. We will read a wide variety of essays that will act as models of good writing and choose from among them those that resonate with us. Then, we will write our own personal accounts, using the components of voice, setting, structure, theme, and style. In this way, we will develop a richer understanding of the world in which we interact. (Pre-requisite: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL402 WordPlay: A Biography of the English Language (3 semester hours)

Mysterious ancient runes carved into a sword hilt, fierce Germanic kingdoms, and Viking marauders—the history of our language is rooted in artifacts of breathtaking power and the spirit of warriors who came to the British Isles. Civilized by the French courts, seeking adventure along the Silk Road, and embracing democracy in the Americas, English would eventually reign in the world's corridors of power. Now, a sophisticated tool in the hands of wordcrafters, English is a language of strength, beauty, and caprice. Continue the adventure with us in **ENGL402** WordPlay: A Biography of the English Language where we will explore English from its oral roots right up to its modern-day artistry. (Pre-requisite: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL420 Advanced Creative Writing (3 semester hours)

Writing is an expression of self. It is the process of putting yourself, your thoughts, your ideas, your deepest fantasies, and your greatest fears on paper. Nobody writes the way you do! And nobody can write what you choose to write in the same exact way! **ENGL420** will focus on maximizing self-expression in writing; in other words, together, we will discover the voice inside longing to be heard, longing to sing out. We will hone your writing ability using tried and true techniques so that you can tell your stories in a way that is accessible to others. In **ENGL420**, we will explore fiction, creative nonfiction, poetry, songwriting and screenwriting, and develop the tools and the methods necessary to know the differences among them. Bring your creative spirit, your imagination, and your willingness to risk to write the story of your life. (Pre-requisite: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL498 Senior Seminar in English (3 semester hours)

So the end is in sight … now it's time to show us what you can do. In this course we will work through the process of creating a formal thesis in the form of a literary analysis essay that demonstrates the critical skills you have developed in your years as an English major. You will pick one literary work and dive deeply into it to engage the critical conversation surrounding it. The 10-15 page essay you produce will not only demonstrate your skills, but also serve as a formal writing sample for those of you intending to pursue graduate education. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Environmental Science (EVSP)

EVSP180 Introduction to Environmental Science (3 semester hours)

This course will give students the opportunity to learn and connect with the central issues in environmental science, from ecological to social to economic considerations. The basic concepts of ecology, geography, chemistry, economics, ethics, policy, and many other disciplines will be used to examine the overarching role that humans play in our planetary environmental problems, successes, and solutions. Assignments will allow students to collect and evaluate qualitative and quantitative data regarding the human-environment relationship. Lifestyle examination, ethical considerations, and critical analysis of individual contributions to local and global impacts in regards to environmental sustainability will be emphasized. This is a course primarily for a non-scientist.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP201 Environmental Economics (3 semester hours)

This course provides an introduction to the economics of natural resource management and environmental policy. Topics include benefit-cost analysis, valuation, market failure, pollution control, sustainable development, market-based environmental policy, and the economics of renewable and non-renewable resource management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP204 Hunting & Wildlife Conservation (3 semester hours)

This course gives students the opportunity to learn and connect issues in wildlife conservation as they pertain to hunting. Basic concepts of ecology, ethics, human health, policy, economics, history, culture, and other disciplines will be used to examine the role hunting plays in wildlife and conservation management. Assignments allow students to study issues and topics surrounding hunting in the U.S. and around the world. These include the following topics: endangered species and associated policies worldwide, the hunter's role in wildlife conservation, infectious diseases of game animals transmittable to humans, government's role in hunting regulations, major hunting and anti-hunting organizations, conservation management funding, invasive species, cultural differences within and outside the U.S., economic impact of hunting, and perceptions and myths of hunting.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP309 Atmospheric Science (3 semester hours)

Atmospheric science is an applied discipline that focuses on the structure and circulation of the atmosphere, global climate change and dynamics, air quality, and other processes that impact humans and the environment. Topics discussed in the course include meteorology, atmospheric physics, atmospheric chemistry, and climate dynamics. Students will also have opportunities to observe and discuss both past, current, and near real-time weather and air quality conditions to better understand the atmosphere's complexity.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP310 Water Science (3 semester hours)

An overview course on water sources, uses, management and conservation; biological, economic, and health issues. The course will use chemical and engineering approaches to water and wastewater treatment. It includes studies for assessing chemicals in water and wastewater. Students will cover the application of standardized analytical methods for evaluating water quality.
(Prerequisites: **BIOL133** or **SCIN130** and **MATH302**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP311 Soil Science (3 semester hours)

A fundamental study of soil properties and reactions critical to the evaluation of how contaminants, as well as essential nutrients, behave in the soil environment. Interactions of potential pollutants with soils and the aquatic and atmospheric environments are emphasized. Methods of soil management or remediation to minimize pollution are presented.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP312 Introduction to Sustainability (3 semester hours)

This course will introduce students to the principles of environmental sustainability. Students will explore various aspects of sustainability, including energy use, industrial processes, waste generation and disposal, and the built environment. As part of the focus on solutions, the course will introduce students to tools society can use to attain and implement sustainable practices, such as policy, law, education and communication, marketing, research advocacy, and international agreements and collaboration.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP316 U.S. Federal Environmental Organization (3 semester hours)

This course is a study of the environmental organization at the federal level, to include duties and responsibilities of federal environmentally-focused agencies, non-environmental agencies and organizations that have environmental impact or related responsibilities, and other federal administrative issues focused on environmental bureaucracy, contracting, and/or outsourcing to private organizations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP320 Energy and Resource Sustainability (3 semester hours)

This course will introduce students to current and future trends in energy technology, policy, and sustainability. It will address topics such as resource sustainability, relevant aspects of economics, sociology of innovation diffusion, product design principles, and the environmental impacts of existing and emerging energy technologies. Analysis of the range of current and future energy choices will be stressed, as well as the role of energy in determining local environmental conditions and the global climate.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP321 Land Use and Planning (3 semester hours)

This course will introduce students to the basic methods of land use planning, including: goal development and formalization, planning intelligence and information systems, population forecasting, land use forecasting, land suitability analysis, land use location requirements, land classification planning, natural/sustainable land use design, and the analysis of regional or local land use plans. Through lecture, discussion, case studies, and assignments, the class will examine fundamental land use controls (i.e., General Plans and Zoning), land use policy, and contemporary land use management techniques.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP322 Remote Sensing and Geographic Information Systems (3 semester hours)

This course illustrates the fundamental concepts of GIS and remote sensing technologies in the context of land use planning and management. Topics include the physical basis for remote sensing, remote sensing systems, digital image processing, data structures, database design, and spatial data analysis. The course is not intended to provide students with extensive training in particular image processing or GIS packages; however course exercises and the final project will require GIS data analysis and presentation skills.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP330 Fish and Wildlife Policies, Programs, and Issues (3 semester hours)

This course focuses on national fish and wildlife policy, programs, and contemporary issues. Topics addressed in the course include historical and contemporary fish and wildlife policy; major fish and wildlife federal, state, and local programs; economic incentives and disincentives associated with fish and wildlife; and non-U.S. approaches to fish and wildlife issues.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP331 Public Lands Management (3 semester hours)

This course focuses on the federal, state, and local agencies, policies, strategies, and public law that influences the public lands management of the United States, and, to a lesser extent, other countries. The focus of the course is the historical and contemporary land management approaches used to protect, exploit, manage, and/or use public lands in the United States. Topics include jurisdictional issues over public land, federal agencies involved in land management, state and local issues and land management, and contemporary issues associated with land management in the 21st Century.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP341 Introduction to Wildlife Management (3 semester hours)

The course explores conceptually the ecological knowledge needed for wildlife conservation, including how species behavior and life history evolves and ultimately how that shapes wildlife populations. Traditional wildlife management topics will be included, along with an added emphasis on ethological implications that affect biological variation. In addition, human behavior and its impact on wildlife populations and biological variation will be studied through case studies, scientific literature, and assigned readings.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP342 Population Ecology (3 semester hours)

This course examines the fundamental laws of population ecology, providing an overview of the underpinnings of population theory. Emphasis is placed on these principles as applied to conservation and management of fish and wildlife populations. Topics include assessing extinction risk of rare species, invasion dynamics of exotic species, demographic and environmental stochasticity, metapopulation dynamics, structured populations, species interactions, interspecific interactions, and micro-evolutionary processes. Use of case studies will demonstrate the application of population ecology models and methods to the management of fish and wildlife populations, and provide the opportunity to apply concepts to current problems and challenges in this field. Students will complete quantitative analyses throughout this course, and a familiarity with college algebra or statistics is encouraged.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP350 Introduction to Climate Change and Resilience (3 semester hours)

This course provides a comprehensive overview of climate change science, the impact of climate change, and potential future scenarios. Students will explore the fundamental concepts of climate resilience, vulnerability, and adaptation. Through case studies, students will analyze historical and contemporary examples of climate change impact on various systems, including ecosystems, infrastructure, and human societies. Topics will include rising global temperatures, extreme weather events, and sea level rise. Special attention will be paid to how different systems respond and adapt. **ESVP350** will also introduce strategies related to mitigation and resilience-building, contributing to a broader understanding of how communities can prepare for and respond to climate-related risks. This course is the prerequisite for **EVSP351**, **EVSP440**, and **EVSP441**.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP351 Climate Change Mitigation and Adaptation Strategies (3 semester hours)

This course delves into the strategies and policies aimed at mitigating greenhouse gas emissions and adapting to the impact of climate change. Students will explore a range of climate change mitigation options, such as renewable energy, energy efficiency, and carbon capture and storage. Additionally, **EVSP351** will cover adaptation strategies to address unavoidable climate effects, including infrastructure development, ecosystem-based adaptation, and community-based planning. Topics will also touch on the role of sustainable land management, emerging technologies, and the integration of climate policy and economics in supporting both adaptation and mitigation goals. (Prerequisite: **EVSP350**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP411 Environmental Policy, Regulation, and Law (3 semester hours)

This course is an introduction to environmental policy, regulation, and law in the U.S. Subjects covered will include command and control of regulation, air quality, water quality, control of toxic materials, waste management, energy, and natural resources.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP413 Environmental and Ecosystems Management (3 semester hours)

This course focuses on contemporary theories and practices associated with environmental and ecosystems management. Industrial, economic, commercial, political, developmental, and other issues and concerns that influence environmental and ecosystems management are addressed.
(Prerequisite: **EVSP310**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP416 General Ecology (3 semester hours)

This course provides an intensive treatment of the field of ecology. Ecology is the scientific study of the interactions among organisms and their environment, which explains the distribution and dynamics of organisms, their traits, and the effects that they have on the natural world. Students will learn that ecology is an integrative discipline that draws from various fields of biology (physiology, morphology, behavior, evolution) and natural sciences (e.g., geology and chemistry), as well as other disciplines (e.g., economics and social sciences). The focus of the course will be on identifying and recommending solutions to ecological problems, e.g., habitat destruction and fragmentation, biological variation, global environmental change, desertification, acidification of the oceans, and others.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP417 Conservation Biology (3 semester hours)

This course examines the fundamental biological and ecological principles of conservation biology. Instruction covers measures of biological variation, species concepts, genetics of small population viability analysis, and metapopulation dynamics; habitat fragmentation including edge effects, corridors and patch dynamics; reserve design principles; setting biological variation priorities; and monitoring indices. Changes in land use patterns and the science of Landscape Ecology are also investigated. Current conservation techniques are reviewed through the use of case studies and computer exercises. (Prerequisites: **BIOL133** or **SCIN130**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP418 Green Infrastructure and Renewable Technologies (3 semester hours)

This course will introduce students to the concepts of green infrastructure planning and design and the implementation of renewable technologies. The framework presented for planning and design will focus on increasing the performance of green infrastructure systems. Students will examine case studies and participate in exercises to develop richly layered, interconnected, and sustainable communities that increase human health and ecological resilience.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP421 Water Resources Management (3 semester hours)

This course is designed to review the practical application of watershed planning as a tool to manage land, water, and ecosystem resources. Students will explore the public policies and practices of watershed planning by examining case studies in water supply, water quality, drought, floodplain, and storm water management in the U.S. The watershed management curriculum will utilize a multi-disciplinary approach, involving the fields of geography, environmental science, geology, public policy, urban and regional land planning, geographic information systems (GIS) and engineering.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP440 Ecosystem-Based Adaptation (3 semester hours)

This course focuses on the role of ecosystem services in climate regulation and resilience, and the potential for widespread use of Ecosystem-based Adaptation (EbA)—a specific type of Nature-based Solution (NbS). Students will explore how EbA strategies conserve, restore, and sustainably manage ecosystems to help communities adapt to climate change. Topics include key services—carbon sequestration, water filtration, biodiversity conservation—and how they contribute to reducing vulnerability and building climate resilience.

EVSP440 will emphasize the design and application of climate-resilient ecosystems, examining terrestrial, freshwater aquatic, and marine environments. Students will also be introduced to concepts such as risk reduction, ecosystem-based planning, and the multiple benefits EbA offers from cost-effective climate solutions to enhanced protection from extreme weather events. (Prerequisite: **EVSP350**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP441 Climate Change Engagement (3 semester hours)

This course focuses on the effective communication of climate change, adaptation, and resilience to targeted audiences, including policymakers, the public, and community leaders. Students will learn how to develop clear and compelling messages about climate change impact, incorporating principles such as framing, storytelling, and the use of visual and data-driven communication.

Additionally, **EVSP441** explores strategies for audience engagement and stakeholder involvement in climate action and decision-making. Topics include public participation, community-based planning, and social marketing, as well as techniques for fostering dialogue, addressing climate skepticism, and promoting behavior change toward a more sustainable future. (Prerequisite: **EVSP350**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP498 Senior Seminar in Environmental Science (3 semester hours)

As a senior seminar, this course will provide a review of core program content and a springboard for more advanced discussion on topics covered throughout the degree program. Students will review and analyze the environmental problem solving process with consideration for the social, environmental, and economic components. This capstone course will provide students with the opportunity to reflect on the course work and demonstrate knowledge of their selected concentration field of study. This is a capstone course to be taken after the environmental science courses have been satisfactorily completed. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Esports (ESPT)

ESPT101 Introduction to Esports (3 semester hours)

This course provides students with an overview of the history of esports, the esports ecosystem, esports athlete culture, and other relevant topics within the industry. Students will be introduced to the interdisciplinary nature of the esports industry and how it affects stakeholders.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ESPT201 Contemporary Issues in Esports (3 semester hours)

This course provides students with an understanding of current events and important ethical issues of the modern esports industry. The course offers an understanding of contemporary issues and allows students to apply their knowledge to the current industry. Students will assess the field of esports from different perspectives, debate contemporary issues, and respectfully engage in discourse regarding controversial topics in esports.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ESPT205 The Business of Esports (3 semester hours)

This course provides a comprehensive examination of the business aspects of the esports industry. Students will examine esports concepts related, but not limited to, marketing, revenue generation, and sponsorship. The students will apply their knowledge learned in class to the current industry in order to develop practical takeaways and deliverables that can be used in professional settings. (Prerequisite: **ESPT101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ESPT210 Esports Event and Facility Management (3 semester hours)

This course will teach students how to plan, organize, and manage esports events and competitions. Concepts related to format, event size, purpose, and funding will be discussed. Students will also learn how to effectively plan and manage an esports facility. (Prerequisite: **ESPT201**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ESPT310 Policy Regulations and the Esports Ecosystem (3 semester hours)

This course provides an in-depth analysis of the governance structures and policies that exist in esports at various levels of competition and in international settings. Students gain an understanding of how esports competitions are structured in order to provide a fair level of play. Ideas related to international levels of competitions and associated regulations will be discussed. (Prerequisite: **ESPT201**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ESPT320 Esports Player Development (3 semester hours)

This course provides students with current knowledge and best practices to aid with effective esports athlete development. Students learn the basics of wellness, physical training, and other relevant aspects that may affect overall player performance. Additionally, students will analyze current coaching methodologies and gain a holistic understanding of the factors that affect esports player development. (Prerequisite: **ESPT201**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ESPT340 Esports Media and Production (3 semester hours)

This course familiarizes students with the tools and platforms used for digital media management and production within esports. Students learn the skills necessary to create and manage content for an esports organization or event. The elements of a high-quality broadcast production will also be covered. (Prerequisite: **ESPT201**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ESPT498 Externship in Esports (6 semester hours)

This course is designed to provide students with an opportunity to gain real-world experience within the esports industry. Students will proactively work with industry professionals, faculty, and the University's Career Services team to research and identify best-fit opportunities in advance of the externship course. (Prerequisites: All ESPT course courses)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ESPT499 Seminar in Esports (3 semester hours)

This senior capstone class is the final course in the degree sequence for students majoring in Esports. Students will review, assess, and then apply many of the concepts they have researched during undergraduate studies through the analysis and application of optimal solutions to the problems presented. Real-life, hands-on tools for career exploration will also be examined through lively discussions, including an investigation of the job market in esports, as well as how to properly network and prepare for a job interview. (Prerequisites: All ESPT course courses)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Finance (FINC)

FINC201 Financial Management Principles (3 semester hours)

Explore the key principles of financial management and their impact on both an organizational and global scale. This course covers essential topics such as financial systems, financial markets, financial statements and analysis, and capital budgeting. Students will engage in financial decision-making processes, focusing on return on investment and the effective allocation of financial resources. Proficiency in Microsoft Word® and Microsoft Excel® is required. (Prerequisites: **ACCT100** or **ACCT105**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FINC300 Foundations of Financial Management (3 semester hours)

This course is an overview study of the concepts and techniques in finance for non-financial managers. The course will cover basic financial tools and principles for both small and large business. Topics include financial and securities markets, financial statements and analysis, capital budgeting, management, and decision-making. Students must have access to Microsoft Word® and Microsoft Excel® software.

Microsoft Word® and Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FINC303 Blockchain Technology for Business (3 semester hours)

This course explores blockchain technology and its applications in the business environment. Topics include cryptocurrency systems such as Bitcoin, blockchain networks, smart contracts, supply chain management, and the development of blockchain solutions for the private sector. Students will gain a solid foundation in the basic concepts of blockchain, evaluate its potential benefits and challenges, and apply their understanding through hands-on projects and case examples across different industries.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FINC405 Budget Development and Execution (3 semester hours)

This course provides an in-depth focus and analysis of the four phases of the budget cycle -- formulation, review, execution and audit. It also explores the purposes of budget, including line-item budgeting, performance budgeting, zero-based budgeting and capital budgeting. Students must have access to Microsoft Word® and Microsoft Excel® software.

Microsoft Word® and Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Fire Science Management (FSMT)

FSMT102 Fire Behavior and Combustion (3 semester hours)

This course explores the theories and fundamentals of how and why fires start, spread, and are controlled. The student can expect to identify physical properties of the three states of matter; categorize the components of fire; recall the physical and chemical properties of fire; describe and apply the process of burning; define and use basic terms and concepts associated with the chemistry and dynamics of fire; discuss the various materials and their relationship to fires as fuel; demonstrate knowledge of the characteristics of water as a fire suppression agent; articulate other suppression agents and strategies; and compare other methods and techniques of fire extinguishments.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT188 Fire Prevention (3 semester hours)

This course examines the history, principles, and evolving landscape of fire prevention. Students will explore the origins of fire prevention practices through the work of the National Fire Protection Association (NFPA) and the cutting-edge 1973 America Burning report on fire prevention. These works will guide students into the world of modern fire prevention initiatives. Through the material presented in this class, participants will gain a deep understanding of fire prevention techniques, regulations, and emerging technologies shaping the field today.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT201 Fire Protection Systems (3 semester hours)

This course provides an in-depth study of fire protection systems and the critical safety measures that support them. Emphasizing the essential role of these systems in modern fire protection and life safety, students will explore the design, installation, and operation of a broad range of fire suppression technologies. Key topics include fire alarm systems, sprinkler systems, standpipe systems, fire pumps, smoke control systems, and special hazards suppression systems. Students will gain practical understanding of inspection, testing, and maintenance procedures as defined by the National Fire Protection Association (NFPA) and industry standards. The course also examines portable fire extinguishers, smoke detectors, and other fire protection equipment, preparing students to evaluate how these systems contribute to reducing risk, preventing property damage, and protecting lives. By the end of the course, students will be equipped to recognize, differentiate, and assess commonly used systems encountered by firefighters and facility managers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT210 Fundamentals of Fire Protection (3 semester hours)

This course is an overview of fire protection and its related fields. It also covers the philosophy and history of fire protection/service, fire loss analysis, organization and function of public and private fire protection services, fire departments as part of local government, laws and regulations affecting the fire service, fire service nomenclature, specific fire protection functions, basic fire chemistry and physics, introduction to fire protection systems, and introduction to fire strategy and tactics. Students can expect to describe and discuss components of the history and philosophy of the modern fire service; analyze the basic components of fire as a chemical reaction, examine the major fire phases, and examine the main factors that influence fire spread and behavior; list and describe major emergency response services and illustrate how they interrelate; synthesize roles of national, state, and local support organizations in fire and emergency services; describe the scope of fire and emergency services organization; describe the common fire facilities, equipment, and apparatus; analyze management concepts for emergency situations; and explain fire prevention including code enforcement, public information, and public and private fire protection systems.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT281 Principles of Fire and Emergency Services Safety and Survival (3 semester hours)

This course introduces the basic principles and history related to the national firefighter life safety initiatives. The course focuses on the need for cultural and behavior change throughout the emergency services.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT284 Emergency Medical Services (3 semester hours)

This Emergency Medical Services (EMS) course explores the role EMS plays in public safety as well as how it is staffed, funded, and delivered. Students will learn about the future of EMS education, the four different levels of EMS certification, and the four EMS domains according to the National EMS Scope of Practice Model.

In addition, students will develop the ability to describe emerging trends in EMS; how those trends align with EMS Agenda 2050; and identify medical, legal, and ethical issues associated with the EMS profession. In addition, students will also learn how to explain the role of an EMS leader in relation to patient care, experience, training, education, and credentialing and to discuss a culture of health and safety in EMS. Other topics included in this class are the role of an EMS director in providing out-of-hospital care in a community and the preparedness of EMS personnel in dealing with mass casualty incidents.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT287 Fire Protection in Building Construction (3 semester hours)

This course provides an in-depth exploration of building construction and its critical connection to fire protection and life safety, with a strong emphasis on firefighter safety. Students will study the elements of structural design and building materials—particularly fire-resistant and combustible materials—and examine how these factors influence fire prevention, building inspections, fire department pre-planning, and emergency response strategies. Topics include the classification of major types of building construction, an analysis of potential fire hazards, and tactical considerations involving flammable materials, fire suppression systems, and property damage risk. Students will assess various loads and stresses that impact structural integrity and evaluate fire protection systems such as fire alarm systems, sprinkler systems, smoke detectors, and fire doors. The course also addresses fire safety measures, flame spread versus fire resistance, and occupancy classifications outlined in local fire codes and national standards. Students will learn to recognize indicators of structural failure and apply fire safety protocols, risk assessment methods, and code enforcement strategies to help safeguard occupants, building owners, and fire department personnel during high-risk situations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT288 Community Risk Reduction for the Fire and Emergency Services (3 semester hours)

This course provides a theoretical framework for the understanding of the ethical, sociological, organizational, political, and legal components of community risk reduction, and a methodology for the development of a comprehensive community risk reduction plan.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT289 Fire Protection Hydraulics and Water Supply (3 semester hours)

This course is a theoretical study to understand the principles of the use of water in fire protection and to apply hydraulic principles to analyze and solve water supply problems. The student can expect to apply the application of math and physics to the movement of water in fire suppression activities; comprehend the design principles of fire service pumping apparatus; analyze the community fire flow demand criteria; and demonstrate understanding of hydraulics, water characteristics, fluid pressure, hydrokinetics, Bernoulli’s formula, nozzle reaction, friction loss in water conductors, nozzle pressure equation, water distribution systems, Hazen-Williams equation, fire flow tests, determination of required fire flow, fire service pump design and testing, friction loss calculations, engine and nozzle pressure, Underwriter’s formula, parallel lines, Wyed lines, aerial stream calculations, relay pumping, mobile water supply, fire streams, four hydraulic laws of friction loss, and firefighting foams and foam systems.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT299 Sophomore Seminar in Fire Science (3 semester hours)

This course is a culminating course for the Associate of Science in Fire Science degree. It is designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Fire Science. The student will complete an approved academic project or paper that demonstrates their grasp of the fire science field. This is a culminating course to be taken after all other Associate of Science in Fire Science courses have been satisfactorily completed. Student must have SOPHOMORE standing to register. Prerequisite: This course is to be taken as the LAST course in the AS in the Fire Science Program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT311 Fire Dynamics (3 semester hours)

This course focuses on fire behavior and includes topics such as fire chemistry, science, interaction with the environment, and reaction to chemical and/or natural elements involved in a response. The student will be able to understand the fundamental principles related to structural fire protection, building furnishings, and fire protection systems. physical properties of the three states of matter. The components and dynamics of fire, the process of burning, suppression agents and strategies, and the methods and techniques of fire extinguishment will be covered in the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT320 Fire Protection Structure and System Design (3 semester hours)

This course examines design principles involved in structural fire protection and automatic suppression systems, including fire resistance and endurance, flame spread evaluation, smoke control, alarm systems, sprinkler innovations, evaluation of sprinkler system designs, and specialized suppression systems. Advanced fire suppression systems must be properly designed and the occupants must be properly trained to react in concert with the life safety systems and the fire department. Knowing how the different design systems function and how they protect a space or process aids in the interaction with owners, engineers, architects, and contractors. The importance of a good relationship between the authority having jurisdiction and those charged with the enforcement of the code is considered.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT321 Community Fire Mitigation and Protection (3 semester hours)

This course is a study of the leading theory and practice associated with community fire mitigation, planning, protection, response, and recovery. Topics of the course include fire-community relations, community outreach, volunteerism and fire protection, strategic community planning, inter-organizational responses, and other issues. Concepts in Code enforcement, investigations, and the historical, social, and cultural influences on fire prevention are discussed. The students will look at the economic, and governmental and departmental influences on fire prevention. Fire prevention programs will be evaluated and prepared.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT340 Incendiary Fire Analysis and Investigation (3 semester hours)

This course is designed to meet the levels of mastery established by the National Fire Academy, NFPA 1021 and NFPA 1033. These standards are agreed upon by professionals across the fire service community as the foundational benchmarks that all individuals should know at the completion of this course. This course examines technical, investigative, legal, and managerial approaches to the arson problem, including principles of incendiary fire analysis and detection, environmental and psychological factors of arson, gang-related arson, legal considerations and trial preparations, managing the fire investigation unit, intervention and mitigation strategies, and shaping the future.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT362 Fire Administration and Finance (3 semester hours)

This course examines the relationship of fire administration and the role of executive fire administrators in the administration of complex issues in a dynamic environment. The course covers political, legal, financial, and ethical issues faced by fire administrators within the context of public administration. Topics include examination of the effects, influences, challenges, and opportunities of public and private fire functions and roles.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT405 Fire Safety and Risk Regulation (3 semester hours)

This course establishes the foundation of history, knowledge, and processes to assist the Risk Manager or Fire Department Safety Officer achieve their goal in preventing firefighter injury and death. The Safety Officer is a position mandated in Hazmat and Terrorism/Homeland Defense responses and it is a good idea for all responses to keep the safety of responders in first place as well as the community. The course includes a study of the leading theories and practices associated with risk management and emergency scene safety. This course focuses on citizen and responder fire safety and risk reduction through prevention, response, and recovery phases of fire operations. Topics include risk reduction planning, equipment, communications, and procedure, among others.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT410 Fire Regulation, Policy, and Law (3 semester hours)

This course introduces the student to many areas of fire laws and regulations. The main purpose of this course is to introduce you to the laws and regulations that will impact your work. This course enables the student to acquire a basic knowledge of the law in each of the specified subject areas that directly or indirectly affect fire services by providing a basic knowledge of the methodology through which to locate, read and comprehend the various statutes and regulations surrounding fires. This course focuses on public policy, law, and regulation concerning fire mitigation, response, and recovery. Legal issues and risk are addressed as topics in the course, as are general and specific national, state, and local fire regulations and public law.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT475 Applications of Fire Research (3 semester hours)

This course focuses on the rationale for conducting fire research, various fire protection research activities, and research applications, including fire test standards and codes structural fire safety, automatic detection and suppression, life safety, and fire fighter health and safety. This course examines tools and techniques of rational decision making in fire departments, including databases, statistics, probability, decision analysis, utility modeling, resource allocation, cost-benefit analysis, and linear programming. This course involves selecting a fire-related topic, developing research objectives, a proposal, and a plan using a quantitative or qualitative research design for the completion of a final research paper.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT498 Senior Seminar in Fire Science (3 semester hours)

This senior capstone course allows students majoring in fire science to analyze program-related issues and problems. Students will be required to utilize their fire management, fire research, fire regulations/laws, and other knowledge gained from previous core courses and a significant number of major courses to complete this course. (Prerequisite: All required, core, and major courses must be completed prior to enrollment in this course.)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Foreign Languages (ARAB)

ARAB100 Arabic I (3 semester hours)

This course will introduce the student to the fundamentals of the Arabic language. The student will learn basic vocabulary, verb conjugations, and grammatical usage through online listening, speaking, reading and writing exercises. The student will also learn about the cultures of Arabic speaking nations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARAB101 Arabic II (3 semester hours)

This course is a continuation of **ARAB100**, Arabic I. Students will continue to build vocabulary and be introduced to more advanced grammatical usage. In addition to similar—but more advanced—online listening, speaking, reading and writing exercises, students will also learn to communicate in more abstract patterns of thought as demonstrated through the use of cartoons and humor. (Prerequisite: **ARAB100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARAB200 Arabic III (3 semester hours)

This course introduces the student to the fundamentals of Intermediate Modern Standard Arabic (MSA) language and cultures. This course uses an interdisciplinary approach in an asynchronous online setting. Emphasis is placed on the development of fundamental communication skills of writing, reading, speaking, and listening using authentic language contexts. Besides learning about the language, we will also explore various areas of the world where Arabic is spoken. (Prerequisite: **ARAB101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARAB201 Arabic IV (3 semester hours)

This course is a continuation of **ARAB200** (Arabic III). Students continue to build on the fundamentals of Modern Standard Arabic (MSA) language and culture. They learn how to use conjugated verbs, both past and present tense, to communicate using more complex grammatical structures. The course focuses on beginning and intermediate concepts of vocabulary and grammar principles and uses an interdisciplinary approach. Emphasis is placed on fundamental communication skills in writing, reading, speaking, and listening. Additionally, students will explore various areas of the world where Arabic is spoken. (Prerequisite: **ARAB200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Foreign Languages (FREN)

FREN100 French I (3 semester hours)

This course will introduce the student to the fundamentals of the French language using an online immersion technique developed by Rosetta Stone. The student will learn basic vocabulary, verb conjugations, and grammatical usage through online listening, speaking, reading and writing exercises. The student will also learn about the cultures of French speaking nations. Please note the technical specifications below. These are required to interface with the online version of Rosetta Stone. If you cannot meet these requirements we strongly recommend you do not take this course. Please contact classroomsupport@apus.edu if you are unsure or have any questions.

* The ability to download and install the speech component.
* A working microphone installed on the computer for speech recognition.
* Access to streaming media is also required and should be confirmed before registering for the class.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FREN101 French II (3 semester hours)

This course is a continuation of **FREN100**, French I. Students will continue to build vocabulary and be introduced to more advanced grammatical usage. In addition to similar—but more advanced—online listening, speaking, reading and writing exercises, students will also learn to communicate in more abstract patterns of thought as demonstrated through the use of cartoons and humor. Please note the technical specifications below. These are required to interface with the online version of Rosetta Stone. * Access to streaming media is also required and should be confirmed before registering for the class.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Foreign Languages (SPAN)

SPAN100 Spanish I (3 semester hours)

Provides an introduction to the language and culture of the Spanish-speaking world. Focus is placed on development of four skills: reading and listening comprehension and writing and speaking proficiency. Much practice is also dedicated to pronunciation, lexicon and syntax through a variety of materials. Students will also learn about the culture and people of Spanish speaking countries and the Hispanic/Latino communities in the United States.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPAN101 Spanish II (3 semester hours)

Is a continuation of **SPAN100**. Students are introduced to more advanced syntax, lexicon and idiomatic expressions. The goal is to enhance the development of four skills: reading and listening comprehension and writing and speaking proficiency. Students will continue to learn more about the people, traditions and cultures of Spanish speaking countries and the Hispanic/Latino communities in the United States.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPAN200 Spanish III (3 semester hours)

SPAN200 is an intermediate course. The main focus is placed on enhancing the development of four skills: reading and listening comprehension and writing and speaking proficiency. Command of Spanish language is promoted through concepts of geography, civilization, culture, arts, and literature. Complex grammatical structures and sophisticated vocabulary including idiomatic expressions and colloquialisms are developed. Students will continue to learn more about the people, traditions and cultures of Spanish speaking countries and the Hispanic/Latino communities in the United States. (Prerequisite: **SPAN101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPAN202 Spanish IV (3 semester hours)

SPAN202 is a continuation of **SPAN200**. In this course, students master reading and listening comprehension, formal and informal writing, and presentational and interpersonal speaking skills. Students also use their critical thinking skills when comparing and contrasting, persuading, analyzing and synthesizing. Command of Spanish language is promoted through concepts of geography, civilization, culture, arts, and literature. Complex grammatical structures and sophisticated vocabulary including idiomatic expressions and colloquialisms are developed. Students will continue to learn more about the people, traditions and cultures of Spanish speaking countries and the Hispanic/Latino communities in the United States. (Prerequisite: **SPAN200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Foundations (COLL)

COLL111 Planning Your Future with Purpose in Humanities & Education (3 semester hours)

This course introduces students to an attitude and approach for college success and relevant connections to their own inner motivations and external career options. Some key elements include values-goal alignment, an orientation to online learning, and strategies for successful adult learning.

Other elements include planning a pathway from academic studies to a career path, career awareness, networking, engaging support resources, and collaborating with colleagues. Through the learning and activities of this course, students will gain the perspective needed for successful time management and prioritization, critical thinking, applied and collaborative learning, and civic/democratic and global learning. Content within the classroom includes learning material that can be easily obtained online. This course fulfills one general education elective.

This course is recommended to be completed first in the student's degree plan when possible.

COLL111, **COLL112**, **COLL113**, **COLL114**, and **COLL115** are considered equivalent courses. Students may only take one of these courses for credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COLL112 Planning Your Future with Purpose in Business (3 semester hours)

This course introduces students to an attitude and approach for college success and relevant connections to their own inner motivations and external career options. Some key elements include values-goal alignment, an orientation to online learning, and strategies for successful adult learning.

Other elements include planning a pathway from academic studies to a career path, career awareness, networking, engaging support resources, and collaborating with colleagues. Through the learning and activities of this course, students will gain the perspective needed for successful time management and prioritization, critical thinking, applied and collaborative learning, and civic/democratic and global learning. Content within the classroom includes open educational resources that can be easily found online. This course fulfills one general education elective.

This course is recommended to be completed first in the student's degree plan when possible.

COLL111, **COLL112**, **COLL113**, **COLL114**, and **COLL115** are considered equivalent courses. Students may only take one of these courses for credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COLL113 Planning Your Future with Purpose in Health Sciences (3 semester hours)

This course introduces students to an attitude and approach for college success and relevant connections to their own inner motivations and external career options. Some key elements include values-goal alignment, an orientation to online learning, and strategies for successful adult learning.

Other elements include planning a pathway from academic studies to a career path, career awareness, networking, engaging support resources, and collaborating with colleagues. Through the learning and activities of this course, students will gain the perspective needed for successful time management and prioritization, critical thinking, applied and collaborative learning, and civic/democratic and global learning. Content within the classroom includes open educational resources that are easily available online. This course fulfills one general education elective.

This course is recommended to be completed first in the student's degree plan when possible.

COLL111, **COLL112**, **COLL113**, **COLL114**, and **COLL115** are considered equivalent courses. Students may only take one of these courses for credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COLL114 Planning Your Future with Purpose in STEM (3 semester hours)

This course introduces students to an attitude and approach for college success and relevant connections to their own inner motivations and external career options. Key elements in this course include values-goal alignment, an orientation to online learning, and strategies for successful adult learning. Other elements include planning a pathway from academic studies to a career path, career awareness, networking, engaging support resources, and collaborating with colleagues.

Through the learning and activities in this course, students will gain the perspective needed for successful time management and prioritization, critical thinking, applied and collaborative learning, and civic/democratic and global learning. Content within the classroom includes open educational resources that are easily available online. This course fulfills one general education elective.

This course is recommended to be completed first in the student's degree plan when possible.

COLL111, **COLL112**, **COLL113**, **COLL114**, and **COLL115** are considered equivalent courses. Students may only take one of these courses for credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COLL115 Planning Your Future with Purpose in Security & Global Studies (3 semester hours)

This course introduces students to an attitude and approach for college success and relevant connections to their own inner motivations and external career options. Key elements in this course include values-goal alignment, an orientation to online learning, and strategies for successful learning. Other elements include planning a pathway from academic studies to a career path, career awareness, networking, engaging support resources, and collaborating with colleagues.

Through the learning and activities in this course, students will gain the perspective needed for successful time management and prioritization, critical thinking, applied and collaborative learning, and civic/democratic and global learning. The content within the classroom includes open educational resources that are easily available online. This course fulfills one general education elective.

This course is recommended to be completed first in the student's degree plan when possible.

COLL111, **COLL112**, **COLL113**, **COLL114**, and **COLL115** are considered equivalent courses. Students may only take one of these courses for credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COLL300 Research, Analysis, and Writing (3 semester hours)

Does the thought of writing a research paper make your hair stand on end? Are you postponing certain classes because they require research papers? Do you fear plagiarism more than malaria? If you answered yes to any of these questions, **COLL300** is the course for you. **COLL300** will help you gain confidence, so you can tackle even the toughest research assignments. You will be guided, step by step, from the beginning to the finished product as you write about a topic that you really want to explore. You will learn how to exercise your curiosity in writing research questions; how to be a detective in gathering and evaluating evidence; how to plan and organize a sturdy framework; how to conquer fears of citing sources and avoiding plagiarism; how to flesh out paragraphs with substantive details; and how to polish your finished paper. You will do all this in a supportive community with plentiful, constructive feedback. Each week will take you closer to becoming a skilled research writer. (Prerequisites: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Foundations (INTD)

INTD310 Applied Interdisciplinary Perspectives (3 semester hours)

An interdisciplinary perspective can help form innovative, thoughtful, and creative approaches to solve complex challenges and issues. In this course, students will analyze connections between two or more major discipline areas in order to thoroughly examine a personal or professional experience or challenge.

This course will support students in examining career paths that align with their interdisciplinary coursework as they learn how to present diverse disciplinary knowledge effectively to others and prepare for their senior seminar. Students must have completed 60 credits to enroll in this course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTD498 Senior Seminar in Interdisciplinary Studies (3 semester hours)

In this course, students will develop an independent interdisciplinary project showcasing their acquired knowledge, academic and research skills, writing abilities, and presentation strategies. Approved projects will demonstrate the application of prior coursework, the interdisciplinary nature of the program of study, and substantial research knowledge that demonstrates the ability to synthesize and broadly integrate subject-specific and cross-disciplinary knowledge and to connect theory and application.

This course also addresses capstone work by considering students' overall academic accomplishments in light of specific personal and career goals. **INTD498** is to be taken after all other Interdisciplinary Studies courses have been satisfactorily completed. A student must have SENIOR standing to register for this course. (Prerequisites: **INTD310** and completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Government Contracting and Acquisition (DEFM)

DEFM200 Fundamentals of Contracting and Acquisition (3 semester hours)

This course provides an in-depth examination of federal acquisition practices, policies and procedures, to acquaint managers and non-contracting personnel with the acquisition process and compliance issues. Contracting and acquisition fundamentals reviews contract planning, contract execution, and contract management as part of the acquisition process. They will learn basic mission support planning strategies, how to research the Federal Acquisition Regulation (FAR) and Defense Federal Acquisition Regulation Supplement (DFARS); additionally, students will learn how effective market research and socioeconomic programs support the FAR and DFARS acquisition planning process as well as its implementation. They will examine the process, problems and issues of solicitation and contract award. Instruction will also include: benefits of early industry involvement in shaping requirements; basic procedures for acquisition of commercial and noncommercial requirements; basic competitive acquisitions; awards processing; management of contract award protests; contractor performance metrics; contract changes procedures; disputes; and close out procedures of completed contracts. This course is designed for personnel new to the contracting career field or non-contracting personnel who play a role in the acquisition process.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM305 Acquisition Business Management (3 semester hours)

Deals with common financial issues in acquisition that include cost estimating; earned value analysis; Planning, Programming, Budgeting and Execution (PPBE); congressional enactment; and budget preparation and execution. In this course, the student will prepare, justify, and defend budget exhibits and obligation/expenditure plans; formulate impact/reclama statements and reports; and develop and defend business aspects of the acquisition and PPBE cycle.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM310 Program and Acquisition Management I (3 semester hours)

This course is an introduction to the requirements of successful program management in the DOD. The course will look at the entire systems acquisition cycle from the point of view of government requirements and the efforts of the civilian contractor to bring the system to Full Operational Capacity.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM311 Program and Acquisition Management II (3 semester hours)

This course of instruction addresses the DOD acquisition process once the government has decided that it must seek the enormous resources of the private industry. The scope of this course specifically addresses the formal process by which the DOD requests (or solicits) industry to respond to their needs and requirements. The course also outlines the evaluation process and evaluation criteria used by the government to evaluate and select the winning proposal. The course will review the Federal Acquisition Regulations (FAR) and the Defense Federal Acquisition Supplements (DFARS). Additionally the course will review the current policy in the DOD to outsource to the private sector (non-DOD sources) the tasks and functions previously performed by in-house government workforce. (Prerequisite: **DEFM310**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM312 Defense Budget Development and Execution (3 semester hours)

This course is a study of the process by which the acquisition, personnel, and readiness (operations and maintenance) portions of the annual Defense Budget are integrated and executed. Students will learn of the politics behind the issues and will gain an appreciation for the complexity of the process. Following an in-depth review of the political scope of budgeting, the course will shift into a study of how budgeting actually works at each stage of executive and legislative action. From the preparation of the service and agency budgets, through the presentation of the president's budget, to the actual appropriation and expenditure of funds, the student will apply their knowledge of the politics of the process to appreciate the problems and issues in defense budgeting.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM332 Transition and the Military Family (3 semester hours)

This course is designed to provide students with knowledge of the theoretical and practical aspects of managing transitions, with a focus on those issues incumbent on the military family. Course topics include change and choice, psychology of the self, interpersonal relations, health, dysfunction, grief, and building a life-career. Particular attention is focused on these topics' application to the military family lifestyle, to include deployment separation, reunion, marriage and family, parenting, military casualty, and life-career. The following questions appear as themes throughout the course: what is transition; what transitions do military families experience; what are the affects on the body, mind, spirit, and interpersonal relationships; what is resilience; and how does one create a plan to strengthen resilience?

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM410 Program Appraisal (3 semester hours)

This course is designed to develop the basic skills essential to evaluate public programs. Knowledge of the policy process and of research methods are brought together in the execution of an ethical evaluation of how well the processes, and outcomes of a program meet the needs at which the program is targeted. This course will introduce the basic concepts of planning and carrying out an evaluation, the most commonly used analytical tools, and cost-benefit and cost-effectiveness methods. It will also introduce the basic format of evaluation reports.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM415 Acquisition Test & Evaluation (3 semester hours)

Emphasizes the basic test and evaluation (T&E) principles, policies, organizations, processes, and practices used by DOD. Course topics include the role of T&E in systems acquisition, T&E planning, experimental design, measurement of systems effectiveness and suitability, instrumentation, and data collection and management. Also covered are reliability, maintainability, and availability of systems; analysis and evaluation; software; modeling and simulation; and T&E of alternative acquisitions. Problem-solving situations engage students in the use of T&E concepts, principles, and theories.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM420 Cost Analysis and Negotiation Techniques (3 semester hours)

This course introduces methods and techniques necessary to analyze a contractor's cost proposal and to develop a Government negotiation objective. Students will apply the cost analysis techniques to analyze a contractor's proposal and develop a cost objective. The course also introduces negotiation terminology, styles, and techniques.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM421 Joint Contingency Contracting (3 semester hours)

This course develops skills for contracting support provided to Joint Forces across the full spectrum of military and disaster relief operations. Exercises focus on unique aspects of contingency, critical thinking skills, and the execution of appropriate contractual instruments.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM422 Mission Support Contracting I (3 semester hours)

This course involves a series of case studies where students demonstrate their ability to develop and execute business strategies to meet customer requirements. These cases help develop critical thinking, customer needs analysis, procurement strategy development, and source selection skills necessary for successful contract performance.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM423 Mission Support Contracting II (3 semester hours)

This course involves a research paper in which professionals apply the knowledge and skills to demonstrate their ability to negotiate fair and reasonable prices and to consider the legal implications for various contract situations. The research paper helps develop critical thinking, cost analysis, negotiation, and contract administration skills necessary for successful contract performance.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM424 Overhead Management of Defense Contracts (3 semester hours)

This course provides an understanding of industry overhead costs and the costs' impact on seller pricing/business strategies under various acquisition environments with differing contract types. Attendees will understand the development and application of overhead rates used in contract formation, administration, and closeout. The course-integrating case study provides hands-on application of the overhead-rate process in which attendees determine their own final overhead rates.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Health Information Management (HIMA)

HIMA100 Medical Terminology (3 semester hours)

This course is a basic study of the professional language of medicine. It is designed to include word construction, pronunciation, spelling, definition and use of terms related to all areas of medical science, hospital service and health related professions. The course uses a systems based approach that provides students with the skills and knowledge necessary to derive meaning from common medical terms. Students will deconstruct medical word construction and language, as well as the derivation, roots, prefixes, and suffixes. Various structures and organization of bodily systems will also be examined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA110 Introduction to Health Information Management (3 semester hours)

The purpose of this course is to introduce the students in Health Information Management to the historical development of the health care field with emphasis on the organizational structure of health institutions: federal, state, local agencies and allied health associations. The course also addresses the theoretical and practical applications of health information management, the Health Information Department, its functions, and an overview of the American Health Information Management Association (AHIMA®). The course includes definitions of, standards for, and the development of the health record (both electronic and paper-based) as to content, format, evaluation, completion, legal and regulatory aspects and automation. The course content also consists of numbering systems and methods; the use of accessory equipment and technology; conversion systems; the master patient index; filing systems and control; evaluation methods; electronic health records, and supplies and equipment. Documentation issues, along with indexes, registers, and health data collection are also introduced.

AHIMA® is a registered trademark of the American Health Information Management Association.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA200 Legal Aspects of Health Information Management (3 semester hours)

This course focuses on the legal system and procedures, ethics, control and use of patient-specific health information. Student will analyze the major external forces affecting the HIM professional's ability and responsibility to manage patient-specific health information. In addition it also addresses specialty matters such as healthcare fraud and abuse in health information management (HIM). Students will examine the impact that e-mail, digital imaging, telemedicine, and the Internet are having on health records, and analyze laws, regulations and standards related to patient confidentiality and privacy.(Prerequisite: **HIMA110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA220 Classification Systems I (3 semester hours)

This course will introduce the student to the principles of taxonomy. The course will include purposes of classifying diseases, clinical vocabularies, and terminologies/nomenclatures. The interaction of different Prospective Payment Systems with classification systems will be emphasized. Data quality, the Uniform Hospital Discharge Data Set as well as coding/sequencing guidelines and advanced topics in diagnosis and procedural coding. (Prerequisites: **BIOL201** and **HIMA100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA230 Classification Systems II (3 semester hours)

This course will introduce the student to the principles of taxonomy. The course will include purposes of classifying procedures, clinical vocabularies, and terminologies/nomenclatures. The course will include purposes of coding for professional services, ambulatory services and procedures. The course will properly instruct the student on the proper usage of CPT and HCPCS code books. The interaction of different code systems such as the Prospective Payment Systems (PPS) with classification systems will be emphasized. Data quality, the UACDS as well as coding/sequencing guidelines will be examined. Coding and indexing of procedures using various classification systems and nomenclatures. The interaction of different Prospective Payment Systems with classification systems and data quality will be emphasized. (Prerequisite: **HIMA220**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA240 Healthcare Reimbursement Methodologies (3 semester hours)

This course provides students with a foundation of the basics of health insurance and public funding programs, managed care contracting, and payment for services. The content focuses on health insurance plans, government-sponsored healthcare programs, managed care plans, fee schedules, resource-based relative value system for physician payment and prospective payment for various inpatient settings. Students will examine various reimbursement methodologies, and the interconnection between clinical coding, compliance, and reimbursement. Within this, revenue life cycle management will be studied and its impact on provider financial stability.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA250 Healthcare Delivery Systems and Documentation (3 semester hours)

This course will introduce students to the healthcare delivery systems including organization, accreditation, licensure, and regulatory agencies. Students will examine the historic development, organization and characteristics of the health care delivery systems; current payment and reimbursement systems for each healthcare delivery systems; accrediting agencies applicable to health care; the functions of health care providers; organizational patterns of health care facilities; medical staff organization and bylaws. The work of accrediting, licensing, and certifying agencies, such as that of the Joint Commission, the American Osteopathic Association, Medicare, and Medicaid will be discussed in detail for each health care area.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA310 Electronics Health Records Fundamentals (3 semester hours)

This course examines the emerging technology of Electronic Health Records through conceptual theory of health information systems used in health care delivery systems including terminology and essential concepts of health information systems. An overview of varied automated administrative, clinical and financial systems is given. Additionally, the course covers structure of electronic health records (EHRs). Content includes overview of health care industry’s transitioning to electronic health record systems, components of EHRs, technologies used for input into EHRs, and privacy and security issues affecting access to and use of patient information.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA350 Compliance (3 semester hours)

The purpose of this course is to familiarize students with the concept of Quality and the process of Quality Improvement across the Health Care continuum. This course focuses on the history and evolution of quality, its terms, principles, theories, and practices. The student is introduced to a diverse collection of methods of improving quality, including but not limited to continuous Quality Improvement and Total Quality Management, and to the guidelines for implementing quality management and the continuous quality improvement processes. Students will also be exposed to new cutting edge technologies that impact the quality improvement efforts/interventions in health care delivery that make quality health care more safe, timely, effective, equitable, efficient, and patient-centered.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA360 Health Informatics Project and Enterprise Management (3 semester hours)

This Project Management course examines project management in theory and practice and the roles and responsibilities of the health information project manager. The course offers a practical approach to managing projects, focusing on organizing, planning, and controlling the efforts of the project. Additionally, this course covers project, enterprise, financial and contract managements in a health information environment. Students will examine system selection processes and develop negotiating skills in the selection process. The principles and approaches to the assessment of quality in health care and how this impacts the role of the health information manager will be examined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA410 Informatics and Analytics (3 semester hours)

This course offers an overview of the field of health informatics and analytics by providing students with the fundamental knowledge of the concepts of health informatics applications as they relate to the collection, storage, retrieval, communication and optimal use of health related data and how technology can be used in the delivery of health care. The basic principles of health informatics and analytics that govern communication systems, clinical decisions, information retrieval, telemedicine, bioinformatics and evidence based medicine will be explored.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA460 Healthcare Data Management and Governance (3 semester hours)

This course is designed to give the student an insight into the procedures and techniques that can be used to analyze health care data. The course will focus on the "how to" of systems by demonstrating fundamental skills and techniques that can be applied immediately to the management and governance of healthcare data. This course covers fundamentals of health care workflow process analysis and redesign as a necessary component of complete practice automation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA497 Health Information Management Practicum (3 semester hours)

This guided health information management (HIM) practicum provides an overview of health information services with hands-on and reality-based experiences in a health information department, or related site that will reinforce and enhance classroom learning. Students will also acquire technical skills through guided simulated online lab activities designed to simulate the activities that would be completed in an HIM department setting. Students will evaluate and utilize relevant HIM computer and software applications. This course is intended to give the student practical experience in HIM, and during the course students will employ practical application of previously studied theory, principles, and knowledge in data retention, retrieval, storage assembly, deficiency analysis, physician communication, and release of information. Prerequisite: Students may take the practicum after all other Major Required courses are completed. This course requires an additional cost for the use of Typhon student practicum tracking software, to be purchased by the student prior to the start of the practicum.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA499 Senior Seminar in Health Information Management (3 semester hours)

This seminar is a senior level course designed to allow the student to review, analyze, and integrate the work the student has completed toward a degree in health information management. The student will complete an approved academic project or paper that demonstrates mastery of their program of study in a meaningful culmination of their learning, as well as assess their level of mastery of the stated outcomes of their degree requirements. (Prerequisite: Students may only take this course after the completion of all CORE courses)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Healthcare Administration (HCAD)

HCAD300 Legal and Ethical Principles in Healthcare (3 semester hours)

Legal and Ethical Principles in Healthcare introduces major concepts and functions of government and law applicable to healthcare throughout our global society. Theoretical health law and governing policies are investigated along with regulations of health quality. Students will analyze ethical dilemmas and utilize an ethical decision-making framework to solve complex legal and ethical problems faced by healthcare practitioners. (Prerequisite: **ENGL110**, **PBHE111** and **PBHE112**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD301 Healthcare Principles and Policies (3 semester hours)

Healthcare administrators comply with health policy on a day-to-day basis and influence the drive for change to improve policies across the healthcare system. Principles for planning, managing, and evaluating healthcare policies and programs are examined. Students will explore modern and historical issues and determine the theoretical basis for the healthcare system to include the epidemiology for major health policy issues. Students will examine alternate opportunities to enhance healthcare systems from the perspective of health providers, community leaders, and community residents.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD302 Healthcare Quality and Safety (3 semester hours)

Regulatory aspects of healthcare, such as licensing, accreditation, credentialing, and governance, impact the quality of healthcare programs. This course will analyze components which contribute to healthcare quality and promote a systems thinking approach to improving healthcare processes. Students will apply process improvement tools to identify healthcare challenges and create solutions to improve quality, safety, and value in healthcare organizations. Patient safety indicators are analyzed to ensure quality healthcare services implementation. (Prerequisite: **ENGL110** and **HCAD301**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD400 Strategic Planning and Marketing in Healthcare (3 semester hours)

Strategic planning theories and methodologies are essential to the quality, safety, and value of healthcare programs and organizations. Students will study strategies to evaluate and shape strengths and weaknesses within a healthcare organization along with implementation and monitoring approaches for strategic planning and implementation. The impact of marketing in the strategic planning and development process will be examined as students design promotional tools to advance and successfully market healthcare programs. (Prerequisite: **HCAD301**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD401 Finance and Budgeting for Healthcare Administrators (3 semester hours)

This course provides an in-depth focus and analysis of the financial and budgeting components of healthcare administration. Students will compare and contrast the various types of budgets that are used within health organizations. Additionally, there is an analysis of various healthcare reimbursement methodologies and the effect that operational quality has on reimbursement. (Prerequisite: **HCAD300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD498 Senior Seminar in Health Sciences (3 semester hours)

The Health Sciences Senior Seminar is a cumulative project consisting of key concepts, theoretical knowledge, critical thinking, practical application, and real-world decision-making relative to the program objectives and courses completed throughout the program. Students will integrate critical analysis with healthcare disciplines and synthesize ethical standards in decision-making to achieve organizational goals. Students will discuss real-world scenarios and applications to the ever-changing healthcare industry and environment. The seminar project enables students to demonstrate skills of leadership, management, and systematic problem solving. (Prerequisite: **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

History (HIST)

HIST101 American History to 1877 (3 semester hours)

This course is a survey of United States history from the earliest European settlements in North America through the end of Reconstruction and emphasizes our nation's political, economic, and social development, the evolution of its institutions, and the causes and consequences of its principal wars.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST102 American History since 1877 (3 semester hours)

This course is a survey of history of the United States from the end of Reconstruction to modern times. Emphasis will be placed on internal expansion, inherent isolationism, America’s road to becoming a world power, and the development of the concept of America as the "policeman" of the world.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST111 World Civilization before 1650 (3 semester hours)

This course is a survey of the history of the human community from the dawn of civilization to 1650. Emphasis is placed on the origins and achievements of the core civilizations of Asia, Europe, Africa and the Western Hemisphere. It stresses the interrelations of societies and cultures of the past, comparing and contrasting the experiences of peoples and civilizations with one another.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST112 World Civilization since 1650 (3 semester hours)

This course is a survey course in the history of the human community from 1650 to the present. It covers the origins, development and achievements of the major civilizations and stresses the interrelations of societies and cultures of the past, comparing the experience of peoples and civilizations with one another.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST121 Western Civilization before The Thirty Years War (3 semester hours)

This course is a survey of the history and culture of the Western Civilization from the ancient civilizations of the Near East, through the rise of the classical civilizations of Greece and Rome, to the beginnings of Europe's Early Modern period. Emphasis is placed on the examination of the major political, social, economic and religious developments of European history.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST122 Western Civilization since The Thirty Years War (3 semester hours)

This course is a study of the history and culture of the Western world, from the beginnings of Europe's Early Modern Period to the present. It covers the major political, social, economic, religious and cultural developments, since the thirty years war.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST213 History of Women in the United States (3 semester hours)

This course has been designed as an introduction to the history of women in the United States from the colonial period to the present. It will be surveying the field of American women's history in order to understand how specific political, social and economic transformations in the nation's past have affected the female half of the population. Throughout, it will remain attuned to ethnic, racial, and regional differences and class distinctions in the lives of U.S. women. It will look at women's culture, as distinct from the dominant male culture, and analyze women's writings, art, life cycles and sexuality. It will work to understand the collective lives of women as workers, family members, reformers, and political activists as well as the individual experiences of women in the U.S. from the colonial era into the 21st Century.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST221 African-American History before 1877 (3 semester hours)

This course examines the complex and varied experiences of African Americans from slavery to 1877. Topics include West African roots, the middle passage, American slavery and resistance, the development of racism, the Civil War, and Reconstruction. The course will examine internal and external factors that shaped the black historical experience economically, culturally, and politically. While the class is designed to proceed chronologically, important themes such as the development of racism, abolitionist thought, the slave community, and the impact of free blacks will be emphasized.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST222 African-American History since 1877 (3 semester hours)

This course surveys the economic, cultural, and political facets of the African American experience from 1877 to the present. Topics of African American history will be examined, such as Jim Crow laws, the Harlem Renaissance, the Civil Rights Movement, and Black Power. While the class is designed to proceed chronologically, themes such as military and diplomatic policies, migration and urbanization, black political thought, and popular culture will be emphasized.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST223 History of the American Indian (3 semester hours)

This course surveys American Indian history from before Columbus to the present. It emphasizes the American Indians' political, economic, and social development, the emergence of the principles that guided them into the 21st century, the evolution of its institutions, and the causes and consequences of its principal wars.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST225 West Virginia Studies (3 semester hours)

In this course, students will review the geographical, cultural, economic, and political aspects of the state with an emphasis on the events leading up to statehood and beyond. Local traditions and state sectional patterns are stressed and examined in the context of assimilation into the national body politic.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST230 History of East Asia (3 semester hours)

This survey course traces China's social, political, and cultural developments from the dynastic period to the present. Through this process, this course will examine the Chinese dynastic system, the rise of Confucianism, the adoption of Buddhism, technological developments, and explores the great range and impressive continuities of traditional Asian civilization. Additionally, students will explore the historical transformations that have led to the development of modern Asia as well as how China has historically impacted all of Asia.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST270 History of Science (3 semester hours)

Science is unquestionably central in shaping our modern world. Though often directed by the "big science" efforts of universities, global corporations, and nations, it is the individual scientist that populates these scientific communities. It is at this individual level, both professionally and personally, that science touches us most directly. Students earn advanced degrees in a wide range of specialties like physics, biology, and chemistry. Science is also a central component in related fields of medicine, geology, genetics, ecology, cosmology, and technology. On the personal level we encounter science everyday when we eat genetically enhanced food, take complicated medicines to combat illness, debate the origins of life, strive to understand new information about ourselves in the universe, use advanced technologies, and in many more ways.

These scientific developments do not emerge instantaneously from a vacuum. To fully understand science, one must have an appreciation of its history and how it has developed over time. The latest scientific advance is merely a snapshot of the present, and only looking at this image obscures our appreciation of the dynamic interaction between science and culture, and the ways that national, institutional, and individual goals have determined its trajectory. This broader perspective, gained only by the study of the history of science, serves as our central mission in this class. **STEM185** and **HIST270** are considered equivalent courses. Beginning January 2023, students may only take one of these courses for credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST290 History of the Holocaust (3 semester hours)

This course is an overview of the major historical, political, cultural, religious, and military issues associated with the Holocaust. It will examine how the anti-Semitic propaganda of the early Nazi Party manifested itself into a legitimate political platform, evolving into state sponsored legal legislation, and culminating into an industrialized killing industry. Students will be introduced to the principle historical figures, events and time lines regarding the birth of the Nazi Party, their taking control of the German nation, and finally their political and military actions against those deemed 'subhuman'. In addition, students will also become well-versed in The Hague and Geneva Conventions regarding the roles of the military and the protective status and qualifications of noncombatants.
(Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST300 Research Methods in History (3 semester hours)

The purpose of this course is to prepare the student for upper-division course work, research, and writing based on historical methodologies such as quantification or paleography. It is designed to familiarize the student with what historians do and how they do it, and affords the student the opportunity to develop their own skills as a historian by interpreting and evaluating primary and secondary source material and presenting their findings in a written, properly referenced format.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST301 Ancient Greece (3 semester hours)

This course covers the history of the Greek speaking peoples from the origins of Greek civilization during the Bronze Age to the dispersion of Greek culture during the Hellenistic era through the conquests of Alexander the Great. The topics emphasize the political, social, cultural, and economic institutions and values that Hellas created to revolutionize Ancient Mediterranean history. Students gain an introduction to the history of Greek civilization and a deeper understanding of the nature of democracy, and the relationships among politics, art, literature, and the ideals of civic virtue. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST302 Ancient Rome (3 semester hours)

This course will study the history of Ancient Roman civilization from the founding of the Republic in 735 BC to the fall of the western empire in 476 AD. Roman political, military and cultural events and personalities will be the focus of this course. Interaction and conflict with neighboring Mediterranean, western tribal, sophisticated eastern, and later barbarian cultures will serve as the thematic core. The course will also examine the lasting impression and influence of Ancient Roman civilization on European and Western culture.
(Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST303 The Middle Ages (3 semester hours)

This course will cover the history of Europe from the 4th/5th century when the Roman Empire was ending to the middle of the 14th century when the new nations were fully defined. Starting with the fall of the Romans and the effect of that fall on Europe, the course will cover the arrival of the “barbarian” invaders, the reign of Charlemagne, the rise of separate, new European states such as France, England and Germany as well as the Church, the relations between these states and with the Byzantine Empire, the period of the Crusades, and the development of different government systems in the various European nations.
(Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST304 The Renaissance (3 semester hours)

This course is a survey of Western Europe from 1350 to 1600. It examines the political, military and social events surrounding the re-birth of classical knowledge and artistic expression in Italy known as the Renaissance. The course also traces the movement of the Renaissance northward, focusing on the coming Reformation era. The last part of the course studies the Protestant and Catholic Reformations to include how the Reformations effected the growth of the modern nation-state. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST305 France in the Age of Enlightenment (3 semester hours)

This course examines the "Age of the Enlightenment" in France with the reigns of King Louis XV and Louis XVI. Through readings of the functioning of the monarchy, on the world of everyday peoples in Paris and the countryside, and the intellectual climate of the era, students will be able to reconstruct the time known as "the ancient regime." The class will also analyze readings by authors such as Diderot, Voltaire, DuChâtelet, and Rousseau to gain a sense of the intellectual excitement of the "Enlightenment." (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST306 The British Empire (3 semester hours)

This course examines the British Empire from the late 18th century to the 1960s. It includes the settler colonies, the colonies inhabited almost exclusively by non-European peoples, and the "informal empire" of trade and investment as well as the impact of the Empire upon the British Isles. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST307 The Age of Dictators: Europe 1914-1945 (3 semester hours)

This course focuses on the great crises of 20th century European civilization, from the outbreak of war in August 1914 to the defeat of Hitler Germany in May 1945. Through novels and historical monographs, it explores the effects of total war and mass mobilization on the industrially advanced state systems of the period, as well as the social emancipation, economic disintegration, and cultural innovation brought on by the great wars of the period. Particular attention is paid to the experience of the "great powers" (Germany, the Soviet Union, Britain and France), which is supplemented by student research on the smaller countries of Europe. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST308 History of European Colonialism (3 semester hours)

This course explores European colonial history from the fifteenth century to the present. It takes into account the exploration, colonization, and decolonization of the Americas, Africa, Asia, India and the Middle East by three major European powers: Britain, France, and Spain. The actions of these countries, among others in Europe, affected the areas they colonized and the indigenous populations for generations to come. This course will focus on the expansion of European empires, the consolidation, management, and disintegration of the empires. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST310 History of Modern Europe (3 semester hours)

The course evaluates European politics from the French Revolution to the industrialization process and effects in the late 18th and 19th centuries. Students assess the impact of military modernization and analyze the commercialization of the culture. An overview of politics and wars in the 20th century and their relationship to the fall and rise of the economy will be presented as well as the concept of European security. The forces of modernization, causes of war, and power of unification will be evaluated, with an emphasis on effects and divisions of the Cold War and democratization wave of the 1990's. It will examine the evolution of trade unions to a regional union with its effects on politics, economics and security, including case studies of regional terrorism. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST320 History of Russia (3 semester hours)

The course covers the history of Russia and its people from the medieval period up to the present. While student projects can be on any aspect of Russian history from any period, the emphasis in the classroom will be on political and social history from the period of reforms in the mid 19th century up to the fall of the Soviet Union. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST340 History of Africa (3 semester hours)

This course examines the history of Africa from the first periods in recorded history, through the colonial period and 20th Century. The focus is upon the major European powers that influenced the continent and the internal social, religious, political and economic dynamics specific to each region. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST350 History of the Middle East (3 semester hours)

This course examines Middle Eastern history from the era of Suleyman the Magnificent, the 16th-century Ottoman sultan, to the late 20th century. It traces the roots of current Middle Eastern politics to social changes-- as the region lost its pivotal role in the world economy in the 19th century but gained oil wealth-- and to the political aftershocks of colonial occupation a century ago. Themes include the emergence off dictatorship and violence in politics during the 20th century, and especially the conflicts centered on the emergence of Israel; the rise of new political ideologies, nationalism, liberalism, and Islamism; the rise of women's rights movements, and the reasons that political conflict has come to center on women's status; and the polarization of rich and poor classes that continues to destabilize domestic politics. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST360 History of Latin America (3 semester hours)

This course is a survey course of Latin American History. The subject is approached from two very different perspectives. The primary method is a comprehensive overview of Latin American history and theories important to the study of Latin America and the second provides the student with an overview of the history of individual Latin American countries. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST402 Colonial America (3 semester hours)

This course explores North American history from the dawn of the British colonization of North America to the end of the French and Indian War in 1763, which sparked subsequent British Colonial Policy and thus set into motion the events leading to American Revolution in 1775. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST403 The Early Republic, 1783-1815 (3 semester hours)

The Early Republic, 1783-1815 examines the development of American political, social, and cultural institutions during the formative years of the new Republic. Through a study of the primary and secondary literature of American history this course surveys the individuals and groups who influenced the American experience, as well as the cultural, political, and socio-economic movements that shaped the nation. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST404 Jacksonian America, 1815-1846 (3 semester hours)

Jacksonian America, 1815-1846 examines the nature of Jacksonian democracy and its treatment in American historiography. Through a study of the primary and secondary literature of American history this course surveys the individuals and groups who influenced the American experience, as well as the cultural, political, and socio-economic movements that shaped the nation.
(Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST405 Antebellum America, 1846-1861 (3 semester hours)

Antebellum America, 1846-1861 examines the divisive political, social, and economic forces which intensified in the 1840s and culminated in the Civil War. Through a study of the primary and secondary literature of American history this course surveys the individuals and groups who influenced the American experience, as well as the cultural, political, and socio-economic movements that shaped the nation. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST406 Civil War And Reconstruction, 1861-1877 (3 semester hours)

Civil War and Reconstruction, 1861-1877 examines the wartime problems of the Union and Confederacy, as well as the consequences of the war and the postwar efforts to create a new Union. Through a study of the primary and secondary literature of American history this course surveys the individuals and groups who influenced the American experience, as well as the cultural, military, political, and socio-economic movements that shaped the nation. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST407 The Gilded Age, 1877-1900 (3 semester hours)

The Gilded Age, 1877-1900 examines the rise of the United States as an industrial and world power with particular stress on the changing patterns within American society. Through a study of the primary and secondary literature of American history this course surveys the individuals and groups who influenced the American experience, as well as the cultural, political, and socio-economic movements that shaped the nation. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST408 The United States: 1900 to Second World War (3 semester hours)

This course examines the changes in American society at the end of the 19th century as it confronted the issues of industrialization, immigration, and urbanization. It explores the open conflict between the advocates of isolationism and collective security and examines the impact of World War I. It also examines the changing values of the 1920's, the stock market crash of 1929, the Great Depression that followed, and the prelude to the second world war.
(Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST409 The United States: WW II to the Present (3 semester hours)

The United States: WW II to the Present is a study of the political, economic, social, and cultural development of the United States from World War II to the Present. Topics include social and cultural changes in the 50s, 60s, 70s, 80s, 90s, and the first decade of the 21st Century; the United States foreign policy from the post-WWII "Cold War," to Korea, Vietnam, and other global confrontations between the United States and the communist world from Somalia, Grenada, and the First Gulf War to the most recent "War on Terrorism"; and the technological changes and their impact on the social and economical development of the United States. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST415 The Cold War (3 semester hours)

The Cold War developed between capitalist and communist nations—primarily between the United States and Russia—shortly after World War II and lasted until the early 1990s. Although the conflict is technically considered over, its impact is still felt in society, politics and economics even today. The Cold War often threatened to transform into a hot war, and actually did so periodically, such as in the Korean and Vietnam Wars. This course focuses on the development of the ideological conflict and its effects on politics, economics, technology, society and culture in both the East and the West. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST480 Special Topic: History (3 semester hours)

This is a special topics course that is designed to afford students the opportunity to examine topics not covered by the existing curriculum. Students are permitted to substitute up to two special topics classes for other courses required in their concentration. Special topic courses are offered quarterly, and the topics for these will vary.

July 2026: The History of AI
As artificial intelligence becomes increasingly embedded in daily life, understanding its long and complex history is essential for interpreting the present—and anticipating a potential "posthuman" future. This course traces AI from early dreams of artificial minds in classical antiquity to the latest advances in generative AI. Students examine foundational figures and early post-WWII pioneers (Turing, Newell, Simon, Minsky, Shannon, McCarthy, and others), as well as the skepticism and backlash of subsequent "AI winters." The course explores the significance of gaming as both a laboratory and a public proving ground for AI (from chess to today's AI-driven worlds, where agents learn, adapt, and generate dialogue and quests in real time). Students examine how popular culture (from Frankenstein and Metropolis to 2001: A Space Odyssey, Star Trek, The Matrix, Her, and Black Mirror) has shaped public expectations and, at times, influenced technological agendas. Finally, students assess why historical perspective is indispensable for contemporary debates over AI creativity, labor, bias, surveillance, regulation and companionship. The course concludes by confronting emerging "posthuman" questions about what AI is becoming, what society should demand of it, and how it may reshape human life and work.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST481 Special Topic: History Fall (3 semester hours)

This is a special topics course that is designed to afford students the opportunity to examine topics not covered by the existing curriculum. Students are permitted to substitute up to two special topics classes for other courses required in their concentration. Special topic courses are offered quarterly, and the topics for these will vary.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST482 Special Topic: History Winter (3 semester hours)

This is a special topics course that is designed to afford students the opportunity to examine topics not covered by the existing curriculum. Students are permitted to substitute up to two special topics classes for other courses required in their concentration. Special topic courses are offered quarterly, and the topics for these will vary.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST483 Special Topic: History Spring (3 semester hours)

This is a special topics course that is designed to afford students the opportunity to examine topics not covered by the existing curriculum. Students are permitted to substitute up to two special topics classes for other courses required in their concentration. Special topic courses are offered quarterly, and the topics for these will vary.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST484 Special Topic: History Summer (3 semester hours)

This is a special topics course that is designed to afford students the opportunity to examine topics not covered by the existing curriculum. Students are permitted to substitute up to two special topics classes for other courses required in their concentration. Special topic courses are offered quarterly, and the topics for these will vary.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST490 Independent Study: History (3 semester hours)

An opportunity for History students to pursue an independent research project or examine a specific area of history under the mentorship of a single professor. Course is open to History majors only. The course will typically involve a major research paper; there will be no examination. Students will submit a proposal prior to the start of the project, and a rough draft of the paper, both of which will count toward the final grade. To be eligible for an independent study, students must be enrolled in a bachelors degree program, must have completed 24 hours at APUS toward their current degree program, and should have already contacted a professor and gained approval for the independent study topic. Once these conditions are met the student should contact their academic advisor. Once the course is open the student must complete an official online registration for the course. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST491 Writing a Research Proposal (3 semester hours)

Preparation for the BA in History and Military History Capstone seminar begins on day one of a student's program of study. The theories, research methods and analytical skills, and substantive knowledge obtained through their BA curriculum provide the basis for the Senior Seminar. Students are required to develop primary and secondary source materials on their research topic and address the writing requirements as described in the syllabus and classroom assignments. The research proposal must provide a clear description of a question or problem and a proposed method of answering the question or solving the problem. This course should be the LAST course in your program prior to **HIST498**/**MILH498** and should not be taken earlier in your program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST498 Senior Seminar in History (3 semester hours)

The Senior Seminar in History is designed to integrate the student's past work in their major field of study and to review as well as strengthen their understanding of their focus area in history. After a review of the student's academic experience, the student and professor will design a course of study to round out the student's preparation for research and writing a major paper in their field of interest. (Prerequisite: **HIST491** and completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Homeland Security (HLSS)

HLSS154 Mind of a Terrorist (3 semester hours)

This course explores psychological and behavioral perspectives of terrorism. Specifically, the course examines the circumstances underlying why people radicalize and join terrorist groups, engage in terrorist activities, assume various terrorist roles, and, in some instances, de-radicalize and disengage from terrorist activities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS212 Chemical, Biological, and Radiological Hazards (3 semester hours)

This course provides an in-depth study of the nature and tactical use of chemical, biological, radiological, and nuclear (CBRN) agents/weapons by nation-states, state-sponsored organizations, and terrorists. The course will also discuss agricultural attacks and various approaches to deter the use of CBRN agents, materials, and weapons.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS215 Regulatory Issues in Weapons of Mass Destruction (3 semester hours)

This course focuses on the strategic and regulatory issues associated with weapons of mass destruction (WMD) response. Course topics include WMD-relevant public law, definitions, reporting authorities, and jurisdictional and functional issues that govern organizations, technical companies, medical providers, and the scientific world. Other topics include the moral/ethical issues of using WMD, various aspects of WMD response, global CBRN threats, and CBRN arms limitations, treaties, organizations, regimes, and agreements.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS230 Chemistry of Explosives (3 semester hours)

This course offers explosive handlers, bomb disposal technicians and responders an introduction to the chemical make-up and associated hazards of explosive substances. The combination of challenging reference sources and instructional interchange immerses the student in the world of explosive compounds including the research and development behind many explosive compounds widely used throughout the world today. This combination of reference materials, website research and group-related projects, allows the new explosive handler to learn the scientific basis for the long lists of safety precautions involved when handling explosives. Topics include, but are not limited to, history of explosives; basic chemical composition of explosives; and, safety precautions and guidelines when approaching or handling explosives. It will also cover researching information sites and references for material ranging from basic safety precautions of explosives to the resources available for emergency handlers and responders. The course helps students understand the hazards associated with common explosive materials.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS231 History of Explosive Ordnance Disposal (3 semester hours)

This course is a dynamic and information packed introduction to the history of incendiaries and explosives. Included is a short study of the origins of modern-day Bomb Disposal and Explosive Ordnance Disposal (EOD) Teams and their evolving techniques. The course examines areas and ideas from the ancient mystique of “Greek Fire” and the inventions of gunpowder and high explosives, up to modern-day nuclear reactions and weapons of mass destruction. The course provides an in-depth understanding and appreciation of the history and background of the science and mechanics applied to explosive technologies, and provides for a better understanding of those who work to render safe unexploded hazards.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS232 Electronics, Electricity, and Explosives (3 semester hours)

This course is designed for Explosive handling technicians, police or military, or others who respond to incidents involving hazardous devices containing electrical and/or electronic components. Concepts covered include the important differences between electricity and electronics (E&E) from the scientific and technical perspective and the practical situational aspects of threats posed to any handler of suspicious E&E devices. Specific areas are covered in a logical and easy to digest manner and include the fundamental principles of Alternating Current (AC) and Direct Current (DC) including series, parallel, and series parallel circuits; hazardous device circuit component operations and capabilities; and, safety precautions and guidelines when dealing with circuits contained in hazardous devices. The course focuses on how to conduct research on information sites and references for basic circuitry and helps students recognize the technical aspects of circuit theory, components and capabilities required to effectively perform diagnostic procedures.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS233 Explosive Incident Assessment: Methods, Practices, Protocols (3 semester hours)

This course is an overview of Explosive Ordnance Disposal (EOD). It provides a framework in which to evaluate Standard Operating Procedures (SOPs) utilized by military and civilian Explosive Ordnance Disposal teams and Hazardous Devices teams in the field. The extremely hazardous nature of these operations lends itself to a detailed evaluation of the methods; practices and protocols used during live ordnance and emergency response calls. Formal EOD guidance contained in military instructions and regulations, and Federal Codes of Regulation (CFRs) are examined as references and for operational compliance. They are evaluated for efficacy in meeting the often conflicting and demanding needs of EOD operators. Procedures covered include the full spectrum of military EOD Required Operational Capabilities. Included are high-risk evolutions such as diving and demolition operations, parachuting and rappelling operations, and, response to weapons of mass destruction, and small arms employment under hostile and time constrained conditions. The vulnerability and risk of specific EOD procedures to terrorists’ actions is defined, and proposed countermeasures are weighted for effectiveness. The application of industry “Best Practice” risk management processes is examined for application to the Explosive Ordnance Disposal field.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS300 Research Methods in Homeland Security Studies (3 semester hours)

This class is highly recommended as the first course that upper-level homeland security students should take. It will prepare students to employ basic research methods and use their writing skills to produce sound research papers and analyses. Students taking this course will gain the knowledge of how to develop a research strategy, critically read and evaluate data, and communicate their findings in coherent, well-organized written work.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS302 Introduction to Homeland Security and Defense (3 semester hours)

This course offers a broad overview of key operational and policy areas the United States government employs to best ensure U.S. domestic security. Students will explore and discover central themes that create the framework of the homeland security enterprise that emerged after the 9/11 terrorist attacks and continues to evolve.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS303 Homeland Security Risk, Threats and Consequences (3 semester hours)

This course examines the homeland security threat landscape by examining risks, threats, and consequences as they apply to local communities, states, and the nation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS305 Private Sector Homeland Security (3 semester hours)

The private sector is responsible for much of what has become known as the “homeland security enterprise.” This course will address this expanding role and address the responsibility of private sector entities in securing the homeland.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS310 Critical Infrastructure Protection (3 semester hours)

This course provides an overview of critical infrastructures and their relationships to one another. Critical infrastructure sectors will be analyzed to determine prioritization, potential areas of vulnerability to threats, and potential counter-measures that can be utilized. Students will explore issues pertaining to planning, securing, and responding to these infrastructures under serious threat to ensure continuity of operations. Factors that should be considered in the response to minimize disruption and improve first responder safety will also be discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS311 Border and Coastal Security (3 semester hours)

This course is a study of the federal, state and local organizations involved in border and coastal security, associated homeland security issues, the various policy and operational strategies used for border and coastal access and security, and contemporary border and coastal security concerns. Topics also include immigration and non-U.S. approaches to border and coastal security.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS312 Port Security (3 semester hours)

This course is designed to provide students with a broad knowledge of port security issues. It examines the critical importance of ports to trade and the U.S. economy, as well as ports' vulnerability to disruption and attack. Legislation, port facility management and operations, access controls, and future maritime threats will also be discussed in this course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS320 Intelligence and Homeland Security (3 semester hours)

This course focuses on the development and evolution of U.S. intelligence support to the homeland security enterprise. Students will examine the roles and responsibilities of U.S. Intelligence Community members and the support they provide to the federal, state, and local levels as well as the intelligence collection programs for supporting homeland security. Also addressed in this course is the analysis of a terrorist group that threatens the homeland and how intelligence support could be used to counter the threat.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS322 Homeland Security Legal and Ethical Issues (3 semester hours)

This course provides an overview of legal and ethical issues in homeland security. Homeland security legislation and executive orders will be discussed, as will international law, conventions, and declarations. The central focus of the course is the balance of goals, strategies, and objectives for effective homeland security while preserving civil liberties. Issues surrounding intelligence and the use of surveillance, rights of U.S. citizens and foreign nationals, immigration, transportation security, and cyber security will all be examined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS323 Homegrown Violent Extremism (3 semester hours)

This course explores homegrown and domestic violent extremism in Western society, which has significantly increased due to the inspiration of domestic causes, foreign causes, and terrorist groups. This course examines the ideology of homegrown and domestic extremists and the different models of why and how people become radicalized and take violent action against their fellow citizens. Also addressed in this course is the increasing use of social media to recruit and radicalize individuals, initiatives to counter homegrown and domestic violent extremism, and efforts to de-radicalize individuals.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS498 Senior Seminar in Homeland Security (3 semester hours)

This senior capstone course allows students majoring in homeland security to analyze specific program related issues and problems using the knowledge and understanding gained by completing the required courses in the program and a significant number of the major courses.
Prerequisite: Completion of a minimum of 106 hours towards your program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Hospitality Management (HOSP)

HOSP100 Introduction to Hospitality Management (3 semester hours)

Hospitality Management is the largest service industry in the world. This course is an overview of the basis dimensions of professionalism, customer service, and sustainability to the major areas of hospitality management, and segments of travel and tourism. The background and historical development of the hospitality industry and its component areas are presented; employment opportunities and trends in each area are discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP101 Foodservice Sanitation (3 semester hours)

An examination of topics related to food borne diseases and how to control them, importance of employee personal hygiene and habits, and appropriate procedures for handling utensils and equipment. Key terms and real-world food safety case studies are reviewed. (Prerequisite: **HOSP100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP110 Practical Food Safety and Awareness (3 semester hours)

In a developed country, one can often take for granted the safety of the food supply. 1 in 6 Americans get sick from foodborne illness annually, with an estimated 128,000 requiring hospitalization and resulting in approximately 3,000 deaths annually. Practical knowledge in safe food sourcing, storage, preparation and serving is addressed along with providing tips for practical awareness of techniques for staying safe. In a global society, food safety is not just a local issue, and everyone should have a working knowledge of food safety and what to look for to remain free of foodborne illness. In this course, students will learn general techniques for preparing and consuming food that is free from harmful pathogens, incorporating the flow of food from purchasing through storage and preparation to serving. Students will explore contemporary and cross cultural issues surrounding food safety in a global society. Practical knowledge about preparing safe food and red flags to watch for when dining out will be explored. Students will learn where to find information on health inspection reports, foodborne illness outbreaks and recall alerts, and will know where to report any suspected foodborne illness or suspicious activity related to the food and water supply.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP200 Food and Beverage Management (3 semester hours)

Introduction to the principles of the food and beverage management; attention is focused on major industry segments, business practices and trends. Subsequently, detailed consideration is given to the components of the foodservice system: marketing, menu planning, logistical support, production, service, controls, and quality assurance. Product and systems differentiation in various industry segments are emphasized throughout.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP202 Quantity Food Preparation (3 semester hours)

A study of established standards, techniques, and practices in large quantity food production, to include sales, production, and service of meals in varied environments - fine dining, casual table service, and catering, among others. (Prerequisite: **HOSP100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP203 Hotel and Restaurant Purchasing (3 semester hours)

A study of the principles and techniques of purchasing both food and non-food supplies applicable to the food industry. Purchasing ethics are discussed in additions to specifications for all items.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP204 Introduction to Hotel and Restaurant Law (3 semester hours)

A study of the legal rights and liabilities of travel and tourism personnel, hotel and restaurant operators, including innkeeper and guest, landlord and tenant, liquor, sanitation, labor and other laws applicable to hotel and restaurant operations; insurance coverage for the protection of the hotel and restaurant operators from the various liabilities inherent to these types of operations; safety measures necessary to protect guests and employees from legal harm.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP207 Principles of Cost Control in Foodservice Operations (3 semester hours)

This course covers the necessary principles to keep food, beverage and labor costs under control, helping to contribute to the success of the operation. Students will apply the terminology and calculations involved in cost control systems and analysis. The course will examine cost control techniques for food, beverage and labor. Menu engineering and analysis will be introduced along with development of cost reduction methods through management policy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP212 Fundamentals of Tourism Management (3 semester hours)

A comprehensive look at the output, employment, exports, investments and taxation emanating from the immediate providers of travel and tourism products and services

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP221 Hospitality Marketing (3 semester hours)

An introduction to the marketing of hotels, restaurants and clubs. Information on market segmentation, marketing research, public relations, promotions, packaging, pricing strategies and the future of hospitality marketing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP295 Restaurant Operations Seminar (3 semester hours)

This course is a culminating course for the Associate of Arts in Hospitality Management, Restaurant Operations concentration and the AAS in Culinary and Foodservice Management. It is designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Hospitality Management. The student will participate in simulated exercises that provide practical exercise enabling the student to demonstrate a grasp of hospitality management study. This is a culminating course to be taken after all other Associate of Arts in Hospitality Management and Associate of Applied Science in Culinary and Foodservice Management courses have been satisfactorily completed. Student must have SOPHOMORE standing to register. This course is to be taken as the LAST course in the A.A. in Hospitality Management and AAS in Culinary and Foodservice Management programs.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP300 Managerial Accounting for the Hospitality Industry (3 semester hours)

Key accounting concepts and the selective application of their most effective strategies and tactics are mission critical factors for most hospitality operations. Students complete financial statements and analysis using sound accounting principles, preparing them for real-world, hands-on managerial accounting in a hospitality setting. Revenue management and dynamic pricing, accounting for hospitality operations, and profitability indexes are introduced.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP302 Hospitality Law (3 semester hours)

Focus is on fundamental laws, rules, and regulations applicable to the hospitality industry regarding rights and liabilities of innkeepers and restaurant operators. Case studies will be used to provide additional learning opportunities specific to hospitality.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP304 Nutrition in the Food Service Industry (3 semester hours)

An introduction to basic nutrition concepts and concerns in relation to food preparation and service in the hospitality industry. Students are introduced to nutrition and dietary guidelines and the connection to healthy life styles and prevention of health issues.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP308 Meeting and Convention Planning (3 semester hours)

A thorough explanation of the lucrative meeting and convention industry and its function in the travel and tourism sector. An overview of the meeting, exposition, and convention businesses, that covers the history of these businesses and the economic value they represent to a destination. Course will include a broad brush of the organizations that support this segment, such as convention bureaus, destination management companies and meeting planners.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP309 Convention Sales and Services (3 semester hours)

A practical insight into servicing different kinds of meetings and conventions, the types of organizations that stage such events, and the people who hold the key to site selection, and implementation is the focus. Convention management is presented in a way that prepares the student for real-world experiences in planning, selling and servicing meetings and conventions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP310 Management of Lodging Operations (3 semester hours)

Focuses on the understanding of how hotels are managed from the rooms' perspective. Managerial aspects of the front of the house departments/divisions and the back of the house departments/divisions are to ensure efficient lodging operations; topics include the overview of the lodging industry, housekeeping, front office, PBX, reservations, revenue management, forecasting, budgeting, inventory management, service, ethics, and technology.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP316 History and Culture of Wine (3 semester hours)

Study of wine manufacturing, quality criteria, and sensory standards for both U.S. and international wines; topics include history of wine in society, selection of wine for specific meals, and wine variations. Opportunities for students to purchase different types of wine and participate in evaluative tasting techniques are presented; however, alternatives are available for students that choose not to, or may not legally, consume alcoholic beverages.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP320 Business and Conference Hospitality Mgmt (3 semester hours)

A study of business travel and conference management in the multi-billion dollar industry is covered from the international down to the local level. Discussions focus on best practices, strategies, and customer perspectives that differ for business vs. leisure travel, leading organizations in the business and conference hospitality industry, issues of liability and insurance, and other factors implicit in effectively managing and providing services to be competitive in this industry.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP321 Marketing and the Hospitality Industry (3 semester hours)

A comprehensive review of marketing in the hospitality industry; restaurants, hotels, planned play, theme parks and convention centers, based upon customer satisfaction and the customer’s perspective. Students will identify best practices in marketing, analyze the market, and assess consumer behavior, offerings, price, and promotion strategies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP325 Revenue Management for the Hospitality Industry (3 semester hours)

This course examines principles and tactics in revenue management for the hospitality industry. It is designed to equip students with the knowledge and skills to optimize pricing strategies and enhance perceived value in the hospitality sector. Through a combination of theoretical principles, relevant calculations, and data analysis, students will learn to assess market trends, develop dynamic pricing models, and implement effective revenue strategies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP335 Leadership and Management in Hospitality (3 semester hours)

Focus is on the leadership role, people management, interpersonal skills and attention to quality in hospitality organizations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP350 Managing Technology in the Hospitality Industry (3 semester hours)

Focuses on identifying and evaluating technology by type and utility to assess how technology influences the guest experience and operations management. Interconnected components of a system, data gathering and analysis, utility, and ease of use are examined though class reading, group discussion, and assessments.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP400 Quality Service Management (3 semester hours)

The focus is on service delivery and methods for implementation and improvements within the service delivery process. Special emphasis will be placed on management and supervision techniques in service quality along with steps in critical evaluating and implementing a quality service plan within hospitality based organizations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP410 Advanced Tourism and Hospitality Management (3 semester hours)

Focus is on advanced techniques and skills for Hospitality Management Professionals to ensure effective and efficient management within the Tourism and Hospitality Management industries. Standards and expectations for restaurant owners, hotel and tourism managers and meeting and event planners are addressed. Price points, product development, tips and marketing techniques that restaurants, hotels, tourism organizations and event planners employ to enhance the customers' experience are addressed.(Prerequisite: **HOSP100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP413 Meeting and Event Risk Management (3 semester hours)

This course introduces procedures to manage facilities and risks specific to the events industry. Current knowledge in risk management is needed to protect guests from safety hazards and firms from loss of profits specific to this unique sector of hospitality. Topics covered include: health and safety, loss prevention and security, emergency preparedness and safeguards, program design and site management. (Prerequisite: HOSP 100)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP415 Destinations and Cultures (3 semester hours)

Introduces tourism development as a process with its own organizational structures and its own responses to the economic cycle of supply and demand. Cultural environments and their influence are discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP495 Senior Seminar in Hospitality Management (3 semester hours)

The 16-week Senior Seminar is the final course for the BA in Hospitality Management. Students fulfill the requirements by obtaining an internship in their selected concentration. Students obtain an internship that consists of 80 hours of work over the 16 weeks in a self-selected and instructor approved hospitality environment (hotel, restaurant, convention center, etc.). Students will apply insights and learning from the classes and obtain real-time work experience. Students are required to keep a journal or log during the internship capturing questions, insights, and learning from the experience. Upon completion of the practicum students will write a final 10 page integrative paper drawing upon literature and insights to support and enhance their practicum experience. For those students who do not obtain an internship, they can fulfill the requirements by writing a 30-page, instructor-approved, research paper that is connected to a real organizational issue. See syllabus for further information. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Humanities (ARTH)

ARTH200 Art Appreciation (3 semester hours)

This course provides a survey of the visual arts, which is directed at understanding how to read the global visual world. Building from basic terminology and fundamental analysis, to more complex concepts of understanding art, the course provides tools for examining, analyzing, interpreting, and writing about works of art. Topics will include the political, religious, socio-cultural, and aesthetic functions of painting, sculpture, architecture, camera arts, and new media. No prior art classes or experiences are required.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARTH240 Survey of Photography (3 semester hours)

This course is designed to acquaint the student with the history of photography from its beginnings through contemporary times, including its terminology and analytical skills applied to the art and practical applications of photography. The course will give the student a broad background of major photographic works and photographers from various eras in both Western and non-western arts; photographic production, tools, and techniques; ways to interpret art and apply photographic terminology; describing, comparing, contrasting, and analyzing photography within technological, social, political and historical contexts; and applying digital information literacy to the research and writing process about photography.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARTH241 Film and Literature (3 semester hours)

This course is designed to enhance students' appreciation for the history and traditions of American film. Students will investigate traditional as well as non-traditional film images, themes, techniques, and styles.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Humanities (MUSI)

MUSI200 Music Appreciation (3 semester hours)

Spanning the Middle Ages through the twenty-first century, this course offers a thorough introduction to the elements of music, a broad overview of the history of musical styles, including cultural contexts and perspectives.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MUSI212 Jazz and Rock (3 semester hours)

This course is designed to provide students with an introduction to popular American music in the 19th, 20th, and 21st centuries and the cultural contributions of African Americans, Indigenous peoples, Hispanics, and European descendants. Students will learn about ragtime, jazz, how jazz became an art, blues, rhythm and blues, rock and roll, and popular music. Important artists will be discussed, important songs will be reviewed, and the intersection of cultures will be analyzed throughout the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MUSI250 World Music and Cultures (3 semester hours)

World Music and Cultures explores traditional and popular from major regions of the world, and how music relates to its culture. Students develop knowledge of representative styles and regional characteristics in world music, including cultural context and perspectives.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Information Technology (DSIN)

DSIN141 Image Enhancement using Adobe Photoshop® (3 semester hours)

This course introduces students to the principles and practices of image manipulation, image enhancement, and image storage. In this class, students will explore graphical file formats, color and perception, color balance, histograms, web-friendly colors, the impact of image size and resolution on screen size and resolution, brightness, contrast, image noise, noise reduction, and digital signal processing (blurring, de-blurring, Gaussian filters, sharpening, softening, spot healing, dodging, and burning). The course will also teach students about transparency, opacity, hue, saturation, image layering, color blending (multiplying and dodging), image transformation (rotation, resizing, and shearing), selections (pixel and vector), alpha channels, and image modes (grayscale, RGB, CMYK, HSB, and indexed color).

NOTE: For this course, students must have access to Adobe Photoshop. This software is not provided by the course material grant and must be purchased/provided by students.

Adobe Photoshop® is a registered trademark of Adobe, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DSIN143 Design Using Adobe InDesign® (3 semester hours)

This course studies the principles, practices, processes, and disciplines related to using Adobe InDesign to create print media for effective communication. In this course, students will learn how to evaluate the design process and acquire the knowledge for planning, preliminary negotiations, pre-visual research and analysis, visual conceptualization, points of view, attitude, document design, document production, and post-production. This class also examines the principles of typographic design, word design, page organization, page layout, the integration of words and images, character styles, paragraph styles, layout design, tiling, scaling, textures, and illustrations. In addition, this course investigates color theory, additive and subtractive color models, complementary colors, patterns, and rhythms. Students will apply their knowledge to design flyers, brochures, CD/DVD covers, and product packaging.

NOTE: For this course, students must have access to Adobe InDesign. This software is not provided by the course material grant and must be purchased/provided by students.

Adobe InDesign® is a registered trademark of Adobe, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DSIN241 Illustration & Design Using Adobe Illustrator® (3 semester hours)

This course examines the process of designing, developing, and deploying text and graphics using an industry standard vector graphics program, Adobe Illustrator. Students will create graphics that take advantage of the broad set of tools, effects, and attributes available in Illustrator.

Also, students will learn to edit existing vector graphics files and structure and manage vector graphics files for maximum efficiency and effectiveness. In addition, the course will cover how to format files for use in other applications and for output to a variety of imaging devices.

NOTE: For this course, students must have access to Adobe Illustrator. This software is not provided by the course material grant and must be purchased or provided by students.

Adobe Illustrator® is a registered trademark of Adobe, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Information Technology (ENTD)

ENTD120 User Experience I (3 semester hours)

This is an introductory course on user experience (UX). It explores fundamentals concepts, principles, theories, laws, and techniques of UX. It examines how UX affects the success or failure of a business or an organization. The course also addresses psychology, ethical implications of UX and user design principles. This course will serve as the foundation for other related UX courses.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD150 Beginning Programming (3 semester hours)

This course introduces beginners to computer programming through Python®, one of today's most popular programming languages. Students learn essential programming concepts, including variables, data types, functions, control structures, loops, and data structures. With an emphasis on basic programming concepts and programming fundamentals, the class teaches how to write code, solve problems with logic, and design step-by-step algorithms. No prior experience is required—this learning experience is ideal for students exploring computer science or preparing to study different programming languages such as C or Java. By focusing on structured problem-solving and clear instructions, the course equips future programmers with the skills to begin their programming journey and build lasting knowledge in programming.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD213 Introduction to Mobile Application Design and Development (3 semester hours)

This course is an introductory study of mobile application design and development and how enhanced mobile devices are changing the face of technology. The course begins with some introductory concepts to lay the foundation for more advanced topics, such as regarding development platforms, cross-platform development, mobile operating systems, the mobile web, The Internet of Things, and artificial intelligence in mobile apps.

Also, the course will cover a theoretical overview of mobile application, design and development issues, and practical application concerns. Conceptual and scenario-based exercises will be used to reinforce student learning in the course. To do well in this course, students will need introductory-level programming experience and/or knowledge; no specific programming language is required.

Note: **ENTD213** duplicates **ENTD313**, students may only earn credits for one course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD220 Introduction to Python® (3 semester hours)

The course presents the principles of object-oriented programming using the Python® language, one of the most increasingly preferred languages for programming today. Python is a high-level general-purpose programming language that is portable and used on different systems to include UNIX and Mac—it is platform independent. Python has been touted as one of the most powerful and easy to learn programming languages. The course addresses syntax, types, variables, strings, branching, loops, tuples, lists, dictionaries, functions, files, exceptions and other related concepts and terms in an effort to establish a solid foundation for more advanced programming using structured language. The course will also provide both conceptual and scenario based exercises, thus enabling students to experience the maximum amount of comprehension and retention of material covered. The Python interpreter is available online for free. This software is not provided by the course material grant and must be purchased/ provided by the student. (Prerequisites: **ENTD150** or **ENGR200**)

Python® is a registered trademark of the Python Software Foundation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD225 Introduction to Blockchain and Cryptocurrency (3 semester hours)

This course offers a high-level technical introduction to blockchain and cryptocurrency, providing students with a foundational understanding of how blockchain technology works. Topics include blockchain networks, consensus mechanisms, distributed ledger architecture, cryptography, digital signatures, smart contracts, and decentralized record systems. Students will examine how blockchain stores information securely across nodes in a peer-to-peer network, enabling tamper-resistant transactions without third-party verification. Emphasis is placed on blockchain implementation and data structures, including public and private blockchains, and the role of blockchain in business operations and identity management. Through practical exercises, students gain exposure to blockchain frameworks like the Ethereum blockchain, while exploring potential applications in digital assets, voting systems, property records, and other industries. The course focuses on the computer science and engineering aspects of blockchain, rather than finance or cryptocurrency investment. Students will leave with a deeper understanding of blockchain's decentralized nature, security principles, and future impact across many industries.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD226 Applications of Blockchain (3 semester hours)

This course explores the technical implementation and applications of blockchain technology across a range of industries. Students will examine blockchain architecture, including the layers of the blockchain technology stack and how these affect system governance, consensus algorithms, data privacy, and access control. Emphasis is placed on blockchain's decentralized nature, secure data storage, and data transparency, with examples from healthcare (e.g., patient data and medical records), finance (e.g., secure transactions, payment processing, bitcoin transactions), logistics, and real estate. Students will analyze how blockchain protocols support data integrity, prevent data tampering, and validate transactions across a distributed ledger network. The course also investigates blockchain-based solutions such as smart contracts, private and public blockchain networks, and blockchain records, highlighting both opportunities and vulnerabilities. Additional topics include cryptographic hash functions, document timestamps, digital assets, and blockchain's role in data security, digital currencies, and mobile device integration. (Prerequisite: **ENTD225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD261 Scripting Languages for the Administrator (3 semester hours)

This course introduces the scripting languages necessary in custom programming for server administration and security purposes. Introductory level programming will be covered using scripting languages such as JavaScript®, VBScript®, Windows Shell Script, Python® and SQL. Previous programming experience is recommended. You must have access to a Windows®-based system to successfully complete the assignments in the course.

JavaScript® is a registered trademark of Oracle America, Inc.

VBScript® is a registered trademark of Microsoft Corporation.

Python® is a registered trademark of the Python Software Foundation.

Windows® is registered trademark of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD268 Information System Design (3 semester hours)

This course is an overview of the system development life cycle. Emphasis on current system documentation through the use of both classical and structured tools/techniques for describing process flows, data flows, data structures, file designs, input and output designs and program specifications. Discussion of the information gathering and reporting activities and of the transition from analysis to design.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD278 Object Oriented Design (3 semester hours)

This course is a study of the principles, practices, and technical architecture and development characteristics of Object Oriented Programming and an examination of the differences between object oriented programming and traditional programming. It examines objects, instances, classes, inheritance, polymorphism, encapsulation, abstraction, methods, attributes, tight-encapsulation, interfaces, type casting, type conversions, and object libraries. This course differentiates between single-inheritance model and multiple inheritance models. This course also explores the foundations of the Unified Modeling Language (UML), class models, state models, and interaction models.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD300 User-Centered Experience Behavioral Design (3 semester hours)

This course provides a study of behavioral user experience (UX) techniques, strategies, tools, and tactics. This course will be taught utilizing a mixture of analytical and practical methods.

The course examines UX principles and human behavior patterns, as well as how they are used to improve the UX design of products, services, and processes. Course topics include common types of behavioral UX Issues, user personas, behavioral UX data analysis, and user behavior and psychology. Other topics covered in the course include behavioral design, human computers and cognition, and usability analysis.

The course begins with introductory UX concepts and lays the foundation for more advanced topics. The course covers both conceptual and scenario-based exercises, which will enable students to more easily comprehend and retain the course material. (Prerequisite: **ENTD120** and **WEBD122**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD301 User Experience Strategy (3 semester hours)

This UX strategy course introduces concepts and strategies for creating a successful user experience strategy. It examines UX design principles and their connection to business strategy and business goals. Students will apply user research and analysis to address user needs and explore how a UX strategist can align solutions with business stakeholders and UX team members. Through team-based projects, students will learn how to define a UX vision, build a UX roadmap, and incorporate user feedback and user testing into the design process. Topics include the historical development of UX strategy, tenets of defining UX strategy, value propositions and value innovation, target users, and business model prototypes. By completing this course, students will strengthen UX management skills that prepare them to contribute to UX initiatives and collaborate with UX professionals. (Prerequisites: **ENTD120** and **WEBD122**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD302 User-Centered Experience and Interactive Design (3 semester hours)

This user experience design course is the study of UX design and the role of UX designers. It examines how businesses and organizations use user experience methods to conduct user research, analyze, plan, and implement techniques that enhance a user's experience. The course builds on concepts from prior UX research and design courses and emphasizes scenario-based exercises that apply design principles in practice. Students will use design tools to build prototypes and user interfaces, supporting retention and hands-on learning. The course blends analytical and practical approaches to user centered design. Topics include the design process, UI design, user interface design, UI UX design, interaction, wireframes, animations, usability testing, user personas, and the psychology of experience design. Students will also practice problem solving and apply design thinking to create meaningful, real world projects. (Prerequisites: **ENTD120** and **ENTD301**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD320 Intermediate Python® Programming (3 semester hours)

This course presents the principles of object-oriented programming using the Python® language, one of today's preferred languages for programming. Python is a high-level general-purpose programming language that is portable and used on different systems, including UNIX and Mac, and it is platform independent. Python has been touted as one of the most powerful and easy-to-learn programming languages. The course addresses data structures and algorithms; efficient and scalable Python programming; RESTful application programming, interface services, microservices, and multiprocessing using the Python programming language; and other related concepts and terms in an effort to establish a solid foundation for more advanced programming using structured language. The course will also provide an intermediate level of both conceptual and scenario-based exercises, thus enabling students to maximize their comprehension and retention of material covered. The Python interpreter is available online for free. This software is not provided via the course material and must be obtained by the student. (Prerequisite: **ENTD220**)

Python® is a registered trademark of the Python Software Foundation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD323 App Development (3 semester hours)

This course studies application development for various mobile devices and covers how to enhance the use of mobile devices with uniquely designed application software. The course expands on concepts introduced in other mobile application design and development courses and allows students to design and develop a prototype app. In addition, this course covers scenario-based exercises and requires students to use assigned tools to write, test, and deploy mobile software applications associated with applicable operating systems.

Before the class begins, students must install the latest Xcode®, available from the App Store. Students must have access to an Apple computer with Xcode installed to successfully complete this course. Students will also need intermediate-level programming experience and/or knowledge, including previous programming experience using an object-oriented C-based language such as C#, Java®, Python®, or C++. (Prerequisite: **ENTD213**)

Xcode® is a registered trademark of Apple, Inc. JavaScript® is a registered trademark of Oracle America, Inc. Python® is a registered trademark of the Python Software Foundation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD326 Blockchain and Crypto Programming (3 semester hours)

This course introduces students to blockchain programming through hands-on experience with the data structures, coding techniques, and consensus algorithms used in blockchain development. Students will explore the foundations of blockchain technology and gain practical skills in blockchain coding languages such as Python and JavaScript, with attention to object-oriented programming (OOP) principles and their application in blockchain systems. Key topics include designing and developing smart contracts, programming decentralized applications (dApps), and implementing blockchain-based solutions across various platforms such as the Bitcoin and Ethereum blockchains. The course also covers functional blockchain architectures, blockchain security, and the role of programming languages in supporting scalable and secure blockchain ecosystems. Emphasis is placed on coding for real-world blockchain projects, the growing demand for blockchain developers across different industries, and the career paths available in blockchain software development. Students will also assess how blockchain works, including its data structures, peer-to-peer transactions, and portable code requirements. (Prerequisites: **ENTD225**, **ENTD226**, and **ENTD381**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD381 Object Oriented Programming With Java® (3 semester hours)

This course is a study and application of the principles and concepts of Object-Oriented Programming (OOP) as it is implemented in the world of Java®; including inheritance, encapsulation, and polymorphism. It appraises the processes and practices used to develop IT solutions that are reusable, modular, and small; all of which are popular objectives in the world of IT management. This course explores the inheritance (is a), containment (has a), and collaboration (use a) relationships; and examines the major packages in the Java Class Library, strings, arrays, classes; instantiation, properties, methods, constructor methods, method overloading, method overriding, inheritance modifiers, access modifiers, interfaces, and packages. This course also assesses exception handling with the use of "try," "catch," and "finally." Students must have access to the latest edition of the Java Development Kit. This software is not provided by the course material grant and must be purchased/provided by the student. (Prerequisites: **ENGR200** or **ENTD150**)

Java® is a registered trademark of Oracle America, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD382 Intermediate Object-Oriented Programming With Java® (3 semester hours)

This course is designed to build upon the foundational concepts of Java® programming. This course delves deeper into object-oriented principles, the Graphical Users Interface (GUI), and advanced Java features. Students will gain hands-on experience in developing robust and maintainable Java applications. This software is not provided by the course material grant and must be purchased/provided by the student. (Prerequisite: **ENTD381**)
Java® is a registered trademark of Oracle America, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD411 Application Development (3 semester hours)

This course covers issues of software project development from the perspective of a manager and of an application developer: from conception, to prototyping, to interfacing with analysts, supervisors/team leaders and management, through to product testing, release, and maintenance. Also covered are issues related to revision control, coding under stress, and strategies for dealing with budget and schedule overruns. Particular attention is given to strategies for maintaining code quality, programmer productivity, and coding and design standards under budget, staffing, and time constraints. Lateral versatility of the developer within project roles across a project's life span (such as often occurs in small software companies) is emphasized.(Prerequisite: **ENTD150**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Information Technology (INFO)

INFO221 Relational Database Concepts (3 semester hours)

This course introduces students to the concepts, management issues, and advantages of relational database management systems. Topics covered in the class will include data definition, data manipulation, relational algebra, Structured Query Language (SQL), and Online Transaction Processing (OLTP) systems. Also, this class examines database design, normalization for OLTP systems, Codd's rules for OLTP systems, data integrity, database system functions (journaling, forward recovery, and backward recovery), database security (authentication and authorization), and database administration. Other topics that students will explore in this course include distributed databases, Online Analytic Processing (OLAP) systems, data warehouses, and object-oriented databases.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INFO222 Database Concepts (3 semester hours)

This course studies the major advancements in database technology that have taken place in recent years. The class will introduce students without a prior background in Microsoft Access® to basic concepts and will cover advanced topics as well. The course offers both conceptual and hands-on material in database management, enabling students to have improved comprehension and retention of course material.

Note: Software for this course is not provided by the course material grant and must be purchased/provided by students.

Note for Mac users: Access 2019 and older do not work on the Mac OS. The University recommends using Windows OS, even on Mac. If a Mac OS must be used, it is recommended that students install Windows on Parallels (purchased separately) and install Access 2019 on the Windows OS via Parallels. Microsoft Access is a registered trademark of Microsoft Corporation.

Microsoft Access® is a registered trademark of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INFO331 Management Information Systems (3 semester hours)

This course provides a technical and organizational foundation for understanding the use and importance of information systems and information technology in today's management environment. This course covers the hardware, software, and infrastructure that support management information systems. Information and decision support systems, knowledge management and specialized information systems, database management systems, telecommunications, the Internet, Intranets, Extranets, and wireless networks will be examined. This course also covers systems development, e-commerce, and the ethical and societal impact of management information systems.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INFO401 Data Exploration and Visualization (3 semester hours)

In this project-based Python data science course, students will explore the Python language and its use in data analysis. Students will gain hands-on experience applying statistical methods through exploratory data analysis, data wrangling, and data visualization with libraries such as pandas and the NumPy library. The course covers preparing datasets, handling missing values, and using NumPy arrays to support effective analysis. Students will also examine machine learning models such as regression models and practice model evaluation on real datasets. In addition, students will work with relational databases using SQL and explore NoSQL systems to compare different approaches to managing data. Through interactive exercises and Python projects in environments like Jupyter Notebook, students will write Python code, create visualizations, and develop essential data analytics skills for solving real world problems in data science. (Prerequisites: **ENTD150**, **ENTD220**, and **INFO222**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INFO498 Information Technology: Capstone (3 semester hours)

This capstone course is a senior level course designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Information Technology. The student will complete an approved academic project and paper that demonstrates mastery of their program of study in a meaningful culmination of their learning, and assesses their level of mastery of the stated outcomes of their degree requirements. This is a capstone course to be taken after all other Information Technology courses have been satisfactorily completed. Students must have senior standing in the program and must demonstrate that they have taken all other IT courses in their degree plan prior to registering for this course. (Prerequisite: Completion of a minimum of 105 hours towards your program including **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Information Technology (ITCC)

ITCC111 Basic Productivity Applications (3 semester hours)

This course is a study of the concepts and technology trends essential to office productivity applications. Students will explore the principles, practices, features, and functions of the word processing application in the Microsoft Office® Suite. The course will be taught with a mixture of analytical methods and practical exercises. Students will use Microsoft Word® to create and format documents; and use lists, themes, mail merge, watermarks, templates, graphics, navigation tools, tables, charts, citations and bibliographies. Students may access MS Office 365® Suite via their MyCampus account for FREE in the classroom. Microsoft Office 365 is free to students and faculty.

Microsoft Office®, Microsoft Word® and Microsoft Office 365® is a registered trademark of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITCC112 Advanced Productivity Applications (3 semester hours)

This course is a study of the concepts and technology trends essential to office productivity applications. Students will explore the principles, practices, features, and functions of the electronic spreadsheet application in the Microsoft Office® Suite. The course will be taught with a mixture of analytical methods and practical exercises. Students will use Microsoft Excel® to create and format spreadsheets; they will also manipulate data and use formulas, charts, workbooks, styles, hyperlinks, themes, functions, conditional logic, graphics, comments, and security features. Students will participate in an engaging learning experience that aligns with Microsoft's Exam. The course content maps to the Microsoft Office Specialist (MOS): to Microsoft Office Excel Certification. Students may access MS Office 365® Suite via their MyCampus account for FREE in the classroom. Microsoft Office 365 is free to students and faculty.

Microsoft Office®, Microsoft Excel® and Microsoft Office 365® is a registered trademark of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITCC113 Office Presentation Applications (3 semester hours)

This course is a study of the concepts and technology trends essential to office presentation, communication and productivity applications. Students will explore the principles, practices, features, and functions of Microsoft PowerPoint®, the presentation application in the Microsoft Office® Suite. The course will be taught with a mixture of analytical methods and practical exercises. Students will use Microsoft PowerPoint to build and format presentations; and to use styles, templates, lists, tables, charts, hyperlinks, transitions, animations, graphics, multimedia, and digital signatures. They will also rehearse the timing of the presentation and prepare presentations for the Web. Students will participate in an engaging learning experience that aligns with Microsoft's Exam. Students may access MS Office 365® Suite via their MyCampus account for FREE in the classroom. Microsoft Office 365 is free to students and faculty.

Microsoft PowerPoint®, Microsoft Office® and Microsoft Office 365® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITCC121 Introduction to Computer Science (3 semester hours)

This course is an overview of computer information systems in which hardware, software, procedures, systems, and databases are explored in relation to their integration and application in business and other segments of society. Telecommunications and network concepts are introduced as a basis for understanding of the Internet and e-commerce capabilities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITCC200 Application Software Integration (3 semester hours)

In this course, students will explore the principles, practices, features, and functions of software in the Microsoft Office® suite. The course will be taught through a mixture of analytical methods and practical exercises. Students will use Microsoft Word®, Excel®, Outlook®, and PowerPoint® to format and design documents, spreadsheets, and other related projects. Students will also design and publish advertising and marketing documents according to hypothetical and real-world scenarios.

Through this course, students may acquire a more comprehensive understanding of commonly used applications and how they can be integrated with one another. Students may access the free Microsoft Office 365® suite via their MyCampus account. This software suite is available to students using both Apple® and Microsoft Windows® computers.

Microsoft Word®, Microsoft Excel®, Microsoft Outlook®, Microsoft Access®, Microsoft PowerPoint®, Microsoft Office 365®, and Microsoft Windows® are registered trademarks of Microsoft Corporation. Apple® is a registered trademark of Apple, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITCC231 Introduction to Information Technology Writing (3 semester hours)

This course provides a writing foundation necessary for an IT professional to identify and respond to communication needs within the IT environment, so that the professional can produce clear, concise, and appropriate IT documentation for peers and supervisors, with the ultimate goal of increasing organizational standardization and efficiency.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITCC298 Computer Technology Intermediate Capstone (3 semester hours)

This course provides a comprehensive overview of major components of computer technology. The course explores concepts, principles, and practices associated with computer hardware and software, web development, productivity applications, and programming fundamentals. This course provides an opportunity to integrate academic rigor with real-world experience; apply theory to solve real-world problems, make the learning experiential, facilitate project-based learning, and integrate knowledge and skills with practice. (Prerequisite: Completion of all other General Education Major and Elective Requirements in the Associate of Science in Computer Technology program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITCC498 Computer Technology Advanced Capstone (3 semester hours)

This capstone course is a senior level course designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Computer Technology. The student will complete an approved academic project that demonstrates mastery of program of study in a meaningful culmination of learning and assesses the student's level of mastery of the stated outcomes of the degree requirements. This course is to be taken after all other Computer Technology courses have been satisfactorily completed. Students must have senior standing in the program and must demonstrate that they have taken all other IT courses in their degree plan prior to registering for this course. (Prerequisite: Completion of a minimum of 111 hours towards degree program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Information Technology (ITMG)

ITMG121 Fundamentals of IT Project Management (3 semester hours)

This IT project management course introduces the planning and processes involved in managing an information system project. Students learn essential project management skills by examining planning, scheduling, and controlling aspects throughout the project lifecycle. The course explores widely used project management techniques such as the Project Evaluation and Review Technique (PERT), Gantt charts, and other tools for developing and maintaining a project plan. Emphasis is placed on methodologies that help manage projects effectively, guide project teams, and support positive outcomes. This course also aligns with the knowledge required to pursue the CompTIA Project+® certification, helping students strengthen their technical foundation and prepare for future career opportunities in technology management and leadership.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITMG223 IT Project Management Using Microsoft Project® (3 semester hours)

This applied project management course introduces students to core project management principles and technology trends while providing hands-on experience with Microsoft Project®. Through a blend of analysis and practical assignments, students gain essential project management skills by creating comprehensive project plans, organizing project tasks such as estimating, budgeting, and scheduling, and managing resource allocation. Additional topics include identifying constraints, determining critical paths, building Gantt charts, and establishing baselines to monitor project performance. Because this is an applied project management program, students will learn to apply industry-recognized techniques for managing projects of varying complexity. The course also aligns with the topical knowledge required for the CompTIA Project+® certification, supporting both academic success and preparation for future career opportunities in technology management and leadership.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITMG281 Law, Privacy, and Digital Data (3 semester hours)

This course examines how laws have changed to account for the expanded realm of crimes in the digital age. Students will learn about topics such as online identity theft, sexual harassment, intellectual property rights violations, and plagiarism. In addition, students will learn how stalkers can access the digital data of victims, gain access to highly confidential medical and financial information, and sabotage their victims' reputations. This course examines current literature on topics such as the Health Insurance Portability and Accountability Act (HIPAA), the Family Educational Rights and Privacy Act (FERPA), the Children’s Online Privacy Protection Act (COPPA), the Sarbanes-Oxley Act, and other legislation impacting legal disputes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITMG371 Contemporary Internet Topics (3 semester hours)

This course explores the Internet's impact on business and personal dynamics, from a managerial perspective. A review of current literature will examine such issues as: changes in workplace productivity, legal issues arising from company Internet use policies, staff morale in the face of nearly ubiquitous Internet access, institutional liability for employee conduct while on the Internet, telecommuting, and the impact of conducting personal business during work time. Non-workplace issues such as the impact of the Internet on family life, politics and the economy will also be explored.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITMG421 Virtual Management (3 semester hours)

This course is designed to provide an overview of key individual, group, and organizational issues involved in virtual management (technology-assisted employee management). Topics covered in this class include gauging employer and employee readiness for technology-enabled communication and telecommuting; identifying appropriate job types and flexibility options; applying effective communication strategies and methods when utilizing computer video, telecommunication technologies; and implementing and evaluating management procedures and policies in flexible organizations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITMG481 Ethics in Information Technology (3 semester hours)

This course introduces students to issues and controversies that comprise the new field of Cyberethics. The course examines a wide range of ethical issues of moral responsibility towards social and ethical concerns which affect us in our daily lives. Other topics include machine ethics, conceptions of autonomy and trust, responsible innovation, ethical controversies related to ethical computing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITMG498 IT Management: Senior Seminar (3 semester hours)

This Capstone course is a senior level course designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Information Technology Management. The student will complete an approved academic project or paper that demonstrates mastery of their program of study in a meaningful culmination of their learning and to assess their level of mastery of the stated outcomes of their degree requirements. This is a capstone course to be taken after all other IT Management courses have been satisfactorily completed. (Prerequisites: **ENGL101** or **ENGL110** and completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Information Technology (ITNW)

ITNW200 Cisco I (3 semester hours)

Cisco I is the first of two courses that follow the Cisco Networking Academy curriculum, providing a strong foundation in networking fundamentals. This computer networking course introduces students to essential concepts such as network terminology, protocols, and the basics of Ethernet LANs, Virtual LANs (VLANs), and wide-area networks (WANs). Students will explore the OSI model, structured cabling, and the role of key network devices such as routers and switches. Additional topics include Internet Protocol (IP) addressing, configuring basic network management features on switches, and understanding common network standards. By completing this course, students build the core networking basics needed to continue into more advanced Cisco training.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITNW201 Cisco II (3 semester hours)

Cisco II is the second of two courses in the Cisco Networking Academy, expanding students' knowledge, skills, and training in the networking field. Topics include Spanning Tree Protocol, Subnetting IPv4, Classful Networks, Subnet Masks, static and dynamic routing, Cisco routers, and IP Routing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITNW210 Cloud Foundations (3 semester hours)

Cloud Foundations is intended for students who seek an overall understanding of cloud computing concepts, independent of specific technical roles. It provides a detailed overview of cloud concepts, AWS core services, security, architecture, pricing, and support.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITNW211 Cloud Architecting (3 semester hours)

Cloud Architecting covers the fundamentals of building IT infrastructure on Amazon Web Services, or AWS. The course is designed to teach solutions architects how to optimize the use of the AWS Cloud by understanding AWS services and how these services fit into cloud-based solutions. Because architectural solutions can differ depending on industry, type of applications, and size of business, this course emphasizes best practices for the AWS Cloud, and it recommends various design patterns to help you think through the process of architecting optimal IT solutions on AWS. It also presents case studies throughout the course, which showcase how some AWS customers have designed their infrastructures, and the strategies and services that they implemented. Finally, this course also provides opportunities to build a variety of infrastructures via a guided, hands-on approach.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Information Technology (WEBD)

WEBD121 Web Development Fundamentals (3 semester hours)

This course introduces students to website development through a combination of readings and hands-on development exercises. This course covers coding with Hypertext Markup Language 5 (HTML5), website development essentials, Cascading Style Sheets (CSS), graphical elements, hyperlinks, HTML table creation, web forms, video, audio and image techniques, website development for business, and website publishing and maintenance. Fundamentals of JavaScript® programming are also introduced in this course.

Students will need access to a web browser such as Microsoft Edge Firefox, or Google Chrome.

Microsoft Edge, Firefox, or Google Chrome are not provided by the course material grant and must be purchased/provided by students. To succeed in this course, students will also need basic computer knowledge such as creating files and folders, downloading and uploading files, creating zipped files, and working with a text editor such as Notepad++.

JavaScript® is a registered trademark of Oracle America, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD122 Introduction to Web Analytics (3 semester hours)

This introductory web analytics course is designed for beginners who want to develop foundational skills in web analytics and data analysis using Microsoft Excel®. Students will learn how to transform raw data into actionable insights by learning how to collect data, interpret website traffic, and understand how businesses use analytics to report on website visitors. They will learn key terms and web analytics concepts, gaining reinforcement through hands-on exercises and examples that reflect the broader web analytics process taught in the course. No prior experience with data analysis or web analytics is required. This course also showcases Microsoft Excel® as a powerful and versatile tool for modern analytics tools and introductory measurement of key performance indicators (KPIs).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD221 Intermediate Web Development (3 semester hours)

This course teaches advanced website development concepts and skills through a combination of readings and hands-on development exercises. It builds upon students' fundamental coding skills by emphasizing HTML5 structure elements, embedded video and audio elements, HTML5 APIs, cross-browser user-input forms, the use of JavaScript® to add interactive capabilities to webpages, and the use of Cascading Style Sheets (CSS3) to enhance reusability and design consistent user interfaces.

The class will also introduce advanced CSS3 techniques, including 2D and 3D transformations, transitions, animations, and user interface (UI) properties. Techniques for developing webpages, optimized for mobile devices, including Responsive Web Design (RWD), are emphasized. This course covers the Advanced HTML5 and CSS3 Specialist curriculum needed to pursue the CIW Web and Mobile Design Professional certificate.

Students will need access to a web browser such as Microsoft Edge or Firefox. This software is not provided by the course material grant and must be purchased/provided by students. To succeed in this course, students will also need basic computer knowledge such as creating files and folders, downloading and uploading files, creating zipped files, and working with a text editor such as Notepad++. (Prerequisite: **WEBD121**)

JavaScript® is a registered trademark of Oracle America, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD222 Advanced Web Analytics (3 semester hours)

This course is an advanced study of Web analytics technology and how businesses and organizations may use the technology to measure website traffic, enhance business presence, and conduct market research. The course expands on concepts introduced from the Introduction to Web analytics course and expands into more advanced topics regarding the subject. The course will cover scenario-based exercises and requires students to use free Web analytic tools to experience the maximum amount of application and retention of material covered in the course. (Prerequisite: **WEBD122**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD241 Web Development Using JavaScript® (3 semester hours)

This course expands on the topics introduced in Web Development Fundamentals (**WEBD121**). This course introduces students to fundamental JavaScript® programming concepts, such as variables and data, functions, program flow control (branching and iterating), the JavaScript object model (window, document, image, history, location, and navigator objects), and JavaScript language objects (String, Array, Date, and Math objects). This course also addresses the development of interactive forms with JavaScript, cookies and JavaScript security, frame control with JavaScript, and custom JavaScript object creation. This course partially covers the CIW JavaScript Specialist curriculum needed to pursue the CIW JavaScript Specialist certification. (Prerequisite: **WEBD121**)

Students must have access to a web browser such as Microsoft Edge or Firefox. This software is not provided by the course material grant and must be purchased/provided by the student.

JavaScript® is a registered trademark of Oracle America, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD300 User Interface Design (3 semester hours)

This course presents the principles and skills for how to design effective user interfaces for websites, with an emphasis on designing for mobile technologies. This course covers the content for the Certified Internet Web (CIW®) User Interface Designer certification in the Web and Mobile Design Series. Emphasis is on how to apply key usability concepts and user analysis techniques; how to design for multiple platforms using suitable color schemes, formatting and topography; and how to collect information from customers, users, and market analysis to better address ease-of-use and to enhance website experiences for mobile users. (Prerequisite: **WEBD121**)

CIW® is a registered trademark of Certification Partners, LLC.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD311 Internet Concepts (3 semester hours)

This course concentrates on the technical side of the Internet, examining Internet communication and technology, Web browsing, multimedia on the Web, databases and Web search engines, business e-mail and personal information management, Internet services and tools [newsgroups, telnet, File Transfer Protocol (FTP), and instant messaging], Internet security (encryption, authentication, firewalls, malware, virus detection and prevention, spyware, updates and patches), and IT project and project management. Students will need access to a browser. This software is not provided by the course material grant and must be purchased/provided by the student. This course covers the Internet Business Foundations curriculum of the CIW® Foundations certification.

CIW® is a registered trademark of Certification Partners, LLC.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD321 Web eCommerce Development (3 semester hours)

This course is a study of Web e-commerce development and how businesses and organizations may to use the Web to the buy and sell products and services online. The course begins with some basic introductory concepts and progresses into more advanced topics regarding the subject. The course will cover both conceptual and scenario based exercises, thus enabling students to experience the maximum amount of comprehension and retention of material covered in the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD323 Search Engine Optimization (3 semester hours)

This course introduces concepts and strategies for successful search engine optimization (SEO). It examines different kinds of searches including image searches, local searches, and industry-specific vertical search engines. Additional topics such as link building, site structure improvements, conversation tracking, research and development keyword strategic development, and understanding barriers of search engine optimization are addressed for the purpose of increasing a website's relevance and to determine how people search for products and services.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD341 Enterprise Data Exchange Using XML (3 semester hours)

This course is a study of the concepts and applications of the Extensible Markup Language (XML), a general-purpose markup language that can be used to formally specify special-purpose markup languages. This course will be taught from a mixture of analytical and practical methods. Topics include: the history of XML, the XML language, Data Type Definition (DTD), XML Schema, eXtensible Style Sheet Language (XSL), and eXtensible Style Sheet Language Transformations (XSLT). The student will bind values to elements to render them distinct and different from its other instances of that attribute and explore the power of XML as a tool for Enterprise Exchange in both the J2EE and .NET Software Development Frameworks. Knowledge of XML will enable the student to standardize and reuse reference text, paragraphs, and chapters.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD343 jQuery (3 semester hours)

This course studies the concepts and applications of jQuery using multi-browser JavaScript® language. This course will be taught from a mixture of analytical and practical methods. Topics include JavaScript, React.JS, Model View Controller architectural pattern, Angular.JS, the Document Object Model (DOM), Asynchronous JavaScript and XML (Ajax), JavaScript Object Notation (JSON), events, animations, and plugins. The student will use jQuery to conduct and apply jQuery's traversal methods, DOM manipulation, perform AJAX calls, apply popular events, write plugins, animate elements, build their own jQuery slider, and explore jQuery API documentation. (Prerequisite: **WEBD221** and **WEBD241**)

JavaScript® is a registered trademark of Oracle America, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Intelligence Studies (INTL)

INTL200 Introduction to Intelligence Studies (3 semester hours)

This course provides an introduction to intelligence studies and focuses on the five principle categories in the study of strategic intelligence. In this course students will focus on the role, purpose, and history of strategic intelligence analysis. They will gain a better understanding for the use of intelligence to carry-out foreign policy objectives. Students will be engaged on topics looking at the nature and evolution of congressional oversight. In addition to this, we will look at the role of strategic intelligence collection when it comes to supporting strategic decision making, as well as the role that counterintelligence plays at the highest levels of government.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL301 U.S. Intelligence Community (3 semester hours)

RECOMMENDED AS SECOND PROGRAM COURSE. This course surveys the U.S. Intelligence Community, with an emphasis on its current structure. Students review the members of the community and distinguish their key roles and missions. Students also assess the impact of the post-9/11 restructuring of the intelligence community.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL304 Intelligence Collection (3 semester hours)

A multidisciplinary survey of Imagery Intelligence (IMINT), Signals Intelligence (SIGINT), Human Intelligence (HUMINT), and Measurement and Signature Intelligence (MASINT) is conducted. The background, capabilities, and limitations of each intelligence collection method are covered. The course focuses on planning activities which provide an integrated approach to intelligence collection.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL305 Law and Ethics in Intelligence (3 semester hours)

This course examines the legal foundations and oversight mechanisms for the US intelligence community. It also explores the major ethical problems confronting the intelligence profession. Students will investigate the difficult legal and ethical issues in the intelligence community.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL401 Critical Analysis (3 semester hours)

This course provides an introduction to critical thinking, intelligence analysis, and the use of structured methodologies. Functions associated with the processing of information to include perception, memory, and the evaluation of information are examined. Conscious and unconscious cognitive biases along with strategies to mitigate their impact are also assessed.
(Prerequisite: **SSGS300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL402 Intelligence Analysis (3 semester hours)

This course builds upon the foundations of critical analysis taught in INTL 401, expanding the student's repertoire of analytical techniques. Students explore creative analysis techniques, including hypothesis generation, red-teaming, and adversarial collaboration. Students focus on intelligence as a service to decision makers, including principles of customer-focused writing and techniques for analytic problems designed to provide tactical, operational, or strategic support. (Prerequisite: **SSGS300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL408 Counterintelligence Operations (3 semester hours)

Students in this course study and analyze counterintelligence operations focusing on activities that comprise counterintelligence functional activities, including the detection of espionage and elicitation; counterintelligence interviews/debriefings; and the collection of counterintelligence information. The student will be required to study a range of books and articles on this topic and will develop a comprehensive knowledge of counterintelligence activities and operations in order to protect U.S. national security and global interests and from adversaries.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL409 Counterintelligence Analysis (3 semester hours)

This course provides students with an introduction to foreign counterintelligence analysis. Students will learn and apply aspects of counterintelligence basic principles, concepts, missions, and functions. Students will be instructed in the analytical process, denial and deception identification, analytical techniques, threat profiling procedures, and analytical tools and databases.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL410 Counterintelligence (3 semester hours)

During this course, students will develop a comprehensive knowledge of counterintelligence, and how intelligence agencies, organizations, and military units in the U.S. use both offensive and defensive counterintelligence to guard and protect U.S. national security interests from foreign intelligence entities. Students will study and analyze counterintelligence, learn and discuss multi-discipline counterintelligence support to intelligence operations, counterintelligence collection process, and analyze how cultural, social, and technological changes affect counterintelligence.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL411 International Criminal Organizations (3 semester hours)

This course differentiates historical and contemporary patterns, modus operandi, capabilities, and vulnerabilities of organized crime organizations. Course content includes a review of the contemporary literature of South American, Mexican, Asian, European, and African criminal enterprises, traditional organized crime, Outlaw motorcycle gangs and transnational criminal enterprises.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL412 Espionage/Counterespionage (3 semester hours)

This course studies the history of intelligence and espionage and reviews ancient espionage techniques, profiles famous agents throughout history, and focuses on such intelligence issues as SIGINT and HUMINT. The bulk of the course concentrates on 20th century intelligence, assessing changes in intelligence collection and priorities and analyzing how technological changes have affected intelligence collection.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL413 Denial and Deception (3 semester hours)

This course will be an overview of denial and deception possibilities. It will review the history, concepts, and implications of denial and deception on national security decision making. It will also discuss foreign and domestic case studies, tradecraft, and the different methodologies associated with this topic area.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL419 Applied Geospatial Intelligence (3 semester hours)

This course is an exploration of the historical development, capabilities, and application of Geospatial Intelligence to inform decision makers in policy making, national defense, and law enforcement. The focus will be on understanding the underpinnings of this exciting and relatively new intelligence discipline. We will explore what GEOINT is, and how is it used.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL421 Signals Intelligence and Security (3 semester hours)

This course examines the history of signals intelligence, also known by the acronym SIGINT. It covers the various methods and modes of intelligence collection by electronic means for the use of strategic and operational level communications (COMINT), and electronics (ELINT) intelligence. The course also discusses encryption and protection of electronic capabilities and countermeasures (EECM).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL422 Open Source Collection (3 semester hours)

This course provides an examination of how various unclassified materials, such as news services, databases, government documents, newspapers, journals, magazines, yearbooks, surveys, radio, TV, Internet, indexes, materials from various organizations, interviews, and country studies can be utilized as intelligence.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL423 Human Intelligence (3 semester hours)

This course is an introduction to Human Intelligence (HUMINT). The course will define and examine HUMINT in context with the other intelligence collection disciplines. Students will understand the dynamics and functions of human source intelligence as a discipline through the use of focused discussion supported by directed readings and by applying critical thought to an incremental research project that requires a HUMINT solution.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL424 Interrogation (3 semester hours)

This course examines intelligence interrogation from a conceptual perspective that provides students with the tools to develop an overall understanding of interrogation and practical interrogation concepts as they can be applied to intelligence interrogation. This course addresses legal issues, verbal and non-verbal behavior, interrogator and subjects, environmental and cultural issues, coercive practices, as well as current events as they apply to the concepts of intelligence interrogation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL431 Criminal Intelligence Analysis (3 semester hours)

The rapid increase in multinational analysis and transnational organized crime, corporate drug trafficking organizations, and the impact of crime on national and international policy has created a critical need for law enforcement intelligence experts in the relatively new field of criminal intelligence. The course provides the student with an introduction to the methods and techniques of criminal intelligence analysis and strategic organized crime. It will demonstrate how to predict trends, weaknesses, capabilities, intentions, changes, and warnings needed to dismantle criminal organizations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL432 Geographic Information Systems I (3 semester hours)

Geographic Information Systems (GIS) contain a powerful set of tools for data acquisition, management, query and display. This course will provide students with a substantial foundation of skills to merge both theoretical and applied information with hands-on practical training utilizing the basic tools provided with the ArcGIS Online software. Students will become familiar with GIS and with GIS software as they create ArcGIS Map projects addressing security and intelligence issues.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL433 Geographic Information Systems II (3 semester hours)

Geographic Information Systems (GIS) contain a powerful set of tools for data acquisition, management, query and display. This course will provide students first with a substantial foundation in theory and practical use of GIS. The weekly labs provide practical training utilizing the basic tools provided with the Esri ArcMap software as applied to a national security issues. (Prerequisite: **INTL432**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL434 Threat Analysis (3 semester hours)

This course examines nation-states and the theories, characteristics, and impacts of threats to decision-making. Various historical and modern threats will be discussed throughout the course. An understanding of threats to the state and its vulnerabilities is developed through a discussion of the types of nation-states and non-state actors as well as terrorist, economic, military and emerging threats among others. This course will focus on these specific threats as well as the conditions that create them. This course provides the opportunity to examine these specific threats through analysis and research. This course is a prerequisite to any of the Intelligence Studies country analysis courses.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL440 Cyber Warfare (3 semester hours)

This course provides an overview of cyber warfare and the potential impact of its use by military, terrorist, and criminal organizations. By studying the operation of computer networks, the student will gain an appreciation of how they have both benefited society and made portions of its infrastructure more vulnerable. An overview of cyber weaponry will be presented, and various offensive and defensive strategies will be examined via case studies

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL442 Tactical Intelligence (3 semester hours)

This course examines the impact of terrain and weather on tactics, employment of multi-discipline intelligence collections, and principles of tactical intelligence analysis form the core of the course. Students develop an appreciation for the limits of process in applying the art of intelligence to deal with tactical problems and how tactical intelligence theory and practice are utilized in support of ground operations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL443 Foreign Intelligence Organizations (3 semester hours)

This course introduces students to several foreign intelligence organizations that continue to play a significant role in U.S. strategic intelligence, foreign policy, and national security strategy planning. Each country’s organizational structure, their collection methods, operational strengths and weaknesses will be assessed with the objective of evaluating their overall relative effectiveness.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL446 Intelligence and Narcotics (3 semester hours)

This course surveys the role of narcotics and the illicit drug trade as risks to national security, international development, and progress. The purpose is to assess both domestic and foreign intelligence gathering and analysis, with an emphasis on counter-narcotics policies and strategies. Students will be able to critically analyze, strategically assess effective intelligence collection, and evaluate the impact of current drug interdiction efforts by federal domestic and international agencies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL450 Terrorism and Counterterrorism (3 semester hours)

This course examines terrorism as a social and political instrument from past to present. Topics include comparing insurgencies and terrorism, the paths to radicalization, the roots of extreme Islam, U.S. domestic terrorism issues, counter terrorism, national & domestic intelligence resources employed against terrorism, and a review of U.S. National Security Policy regarding terrorism.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL451 Terrorism and U.S. National Security (3 semester hours)

This course assesses the impact of terrorism on U.S. national security. With a focus on essential elements related to terrorism as well as on U.S. anti-terrorism and counter-terrorism policies and their challenges, the student will develop a comprehensive understanding of how the United States views terrorism and how its lasting threat affects national security.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL453 Illicit Finance (3 semester hours)

Modern criminal business, to include drug trafficking, trafficking in people or weapons, gold and precious gem smuggling, and even terrorism are reliant on how such activities are funded. Without some form of funding, illicit actors and illicit behaviors would have difficulty existing. This course will explore the shadowy world of illicit finance, from money laundering to Hawalas, to fraud, trade, and corruption used to fund illicit actions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL454 Forecasting Terrorism (3 semester hours)

This course examines the theoretical underpinnings of the phenomenon of terrorism, actual and planned cases of chemical and biological weapons use, and the modern threat of improvised weapons of mass destruction. The course surveys traditional and newer methods of forecasting terrorism: intuition-based, profiling, conflict vulnerability analysis, and prognosis (early warning), etc. The course concludes by looking at the significant post-9/11 efforts at hardening facilities, increasing security, and monitoring terrorist-WMD activity. However, the threat is still substantial as religious-based extremists are still wholly intent on acquiring WMDs.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL498 Senior Seminar in Intelligence Studies (3 semester hours)

The Senior Seminar in Intelligence Studies is required for all majors. This capstone experience for Intelligence Studies majors will review and integrate their academic coursework, strengthen their understanding of intelligence research methodologies, and relate their academic preparation to their post-graduation goals. Students will conduct original research and present their findings to the class in written and e-portfolio formats.

Prerequisite: Completion of a minimum of 106 hours towards your program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Intelligence Studies (SSGS)

SSGS300 Research Design and Methods (3 semester hours)

This course provides basic research methods skills for addressing problems and issues specific to the programs within the School of Security and Global Studies. The course covers four basic approaches to social research including experimentation, survey research, field research, and the use of available data. Students will gain foundational knowledge in research planning, design, methodology, data collection, and analysis. This course prepares students to carry out research at the undergraduate level.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

International Relations (IRLS)

IRLS200 Information Literacy and Global Citizenship (3 semester hours)

Information Literacy and Global Citizenship builds students' information literacy skills in the international relations/global studies context. Students analyze scholarly sources in the discipline, identifying the types of issues and questions scholars pursue, the discursive conventions they employ, and their methods of engaging in dialogue with and citing sources. After identifying their own discipline specific research question, students select and use appropriate research tools, developing complex search strategies that help them to find relevant scholarly information on their topics. They evaluate sources and information to determine their authority, reliability, timeliness as well as the quality and underlying assumptions of the arguments presented. They synthesize the information they've found with their own ideas, effectively integrating source material into their papers and citing that material appropriately. Finally, the course asks students to reflect upon the ways in which the information literacy skills they've acquired provide a foundation for both global citizenship and lifelong learning.
NOTE: Students may not earn credit for both **IRLS200** and previous course **IRLS303**.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS210 International Relations I (3 semester hours)

An overview of the field of international and global politics. The nation state, factors of power, collective security, international trade, regional and international organization, sources of conflict and convergence are addressed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS211 International Relations II (3 semester hours)

This course analyzes international relations from 1945 to the present. Students will become thoroughly familiar with events and major interpretive issues. Topics include the Cold War, decolonization, the role of the United Nations and other non-governmental organizations, the development of international terrorism, the Arab-Israeli and Persian Gulf conflicts, and the Korean and Vietnam Wars. (Prerequisite: **IRLS210**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS213 Political Geography (3 semester hours)

September 11 and its aftermath, the ongoing conflicts in the Middle East and South Asia and debate over the nature and effects of globalization all highlight the importance of political geography as a means of understanding the world around us. This course examines the relationship between earth and state. World political phenomena are studied from a geographic perspective, including international boundaries, territorial seas, and landlocked states. This course emphasizes the practical application of geography to political events.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS214 American Foreign Policy (3 semester hours)

This class examines the elements and practice of American Foreign Policy. It reviews the history of American Foreign Policy and ideology, and then examines the actors, tools and processes of US foreign policy. This class emphasizes current foreign policy issues, including policy geared toward national security.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS260 Middle Eastern Culture (3 semester hours)

This course covers geography, culture, society, economy, and religions of the major ethnic and linguistic groups in the Middle East. The course will introduce students to important events and developments, such as the changing concepts of politics in Islam; the evolving sociological bases of states and societies in the Middle East; and the early impact of Europe on the Middle East, first through trade and then through colonialism.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS300 Comparative Political Systems (3 semester hours)

Introduces major theoretical approaches to the comparative study of politics. The student applies these approaches to government institutions, the policy-making process, political participation, economic structures and social change for both state and non-state actors.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS301 International Organizations (3 semester hours)

Examines the role of and interrelationship of international organizations, nation-states, and non-state actors in the global system. North-South and East-West relations are discussed in terms of specific global issues: crisis management, conflict resolution, human rights, refugee problems, international finance, developmental assistance, world trade, and globalization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS302 International Development (3 semester hours)

In this course, students will study the history, theories, and practices of international development. This class will guide students in understanding the complex geographic, political, economic, social, and environmental factors that contribute to international development and the interplay of those factors. Students will also analyze the role of non-governmental organizations in international development and apply their knowledge to current issues in global development.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS310 Introduction to Human Security (3 semester hours)

This course introduces students to the international relations subfield of human security. A broad overview of the security issues affecting humans, their communities, and as a result global stability are the focus of this course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS322 African Politics (3 semester hours)

This class provides an introduction to contemporary African politics. Specifically the course examines the historical, cultural, economic, social and geographic traits that distinguish this region and shape its domestic political processes and interstate relations. This includes a survey of contemporary multilateral issues important to the region with emphasis on regional security concerns.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS331 Asian Politics (3 semester hours)

This course examines historical, cultural, economic, social and geographic traits that distinguish this region and shape its domestic political processes and interstate relations. This course surveys the governments of selected countries to include China, Japan and Korea. Topics will emphasize the interaction between economic development and political changes, as well as the conflict between traditional norms and modern institutions. This course includes a survey of contemporary multilateral issues important to the region with emphasis on regional security concerns.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS343 Government and Security of Russia (3 semester hours)

Explores historic, cultural, economic, and geographic traits that characterize the Russian state and shape the domestic political processes and interstate relations. Critically compares the politics, governments and orientations of post-Soviet states and other regional powers. Surveys contemporary regional issues such as ethnic conflict, nationalism and political-economic reforms, with a particular emphasis on security concerns.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS344 European Politics (3 semester hours)

This course focuses on comparative evaluation of Europe paying particular attention to challenges facing the continent such as migration, ethno-nationalism, and terrorism. It will also focus on opportunities for European countries to work together, including NATO, OSCE, and the EU.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS355 Latin American Politics (3 semester hours)

This course is designed to familiarize students with the politics of contemporary Latin America. The course will cover such topics as the various types of political systems found in Latin America, the political economy of development, and the issue of regime transition.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS360 Global Politics of Islam (3 semester hours)

The purpose of this course is to provide a comprehensive survey of the politics of Islam in the global context (both within and across states). While a portion of the class will be dedicated to the Middle East, we will also focus on parts of the globe where Muslims form a significant minority, e.g., the U.S., Western Europe, Russia, and China. This is an interdisciplinary class, meaning that we will discuss religion, history, culture, and identity in addition to politics. We will explore the implications of past and present U.S. foreign policy in the Muslim world and historical and current relations between Islam and the “West.” Additionally, we will address conflicts within Islam, transnational Islamist movements such as Hizb-ut Tahrir and Al Qaeda, and the role of pan-Arab media such as Al Jazeera. This is a reading-intensive course. Students will be expected to think critically, interpret texts, and formulate their own ideas in verbal and written form.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS392 Globalization and the Market Economy (3 semester hours)

Based on a theoretical analysis, a detailed study is undertaken of the globalization of the market system and its impact on population growth, urbanization, political governance, and traditional values in various nation-states and regions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS400 Human Rights (3 semester hours)

This course provides an overview of human rights, their history, codification, and the various debates that surround human rights discourse. Additionally various human rights topics are analyzed. The course provides students with a thorough understanding of how human rights and human security are intertwined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS402 International Law and Regimes (3 semester hours)

This course focuses on the role that international law and international regimes play in global governance. Students will examine the international legal framework that governs state relations, including international organizations and norms, ordering principles, treaties and international regimes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS405 National and Transnational Justice (3 semester hours)

This course provides an overview of many transitional and transnational justice approaches. Beginning with Nuremberg through to the International Criminal Courts, students will gain a thorough understanding of the global justice endeavors and their connection to human security.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS409 Environmental Security (3 semester hours)

This course provides an overview of environmental security by examining environmental threats such as climate change, water scarcity, consumption patterns, urbanization, resource extraction and usage, food security, and globalization. The course provides students with a thorough understanding of how environmental security and human security are intertwined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS412 Comparative Foreign Policy (3 semester hours)

An analysis of the foreign policy and policy-making process in various regions of the world. Specific case studies allow the student to assess national priorities and ideological commitments in the post-Cold War era.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS413 International Conflict Resolution (3 semester hours)

This course examines the application of conflict resolution theories to interstate crises and civil wars by international organizations like the UN and NATO, states and ad hoc coalitions of states and non-government entities. The focus will be on the post-cold war conflicts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS414 Principles of Peacekeeping (3 semester hours)

This course is an examination of the fundamental principles behind peacekeeping, including the political, managerial, military, and humanitarian aspects of the peacekeeping process.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS415 Peacekeeping Logistics (3 semester hours)

This course explores logistics in peacekeeping operations. Students will gain an understanding of the concepts, principles, and strategies that govern logistical support for UN and regional peace operations. Emphasis is placed on building an understanding of the role, responsibilities, and limitations facing those who manage logistics for peace operations. This includes challenges surrounding funding and rapid deployment, as well as the advantages and challenges associated with public/private partnerships and a multi-dimensional approach to peacekeeping logistics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS417 International Civil Order (3 semester hours)

This course explores the unique role of international civilian police in peacekeeping operations. Students will gain an understanding of the principles, strategies, operational and tactical considerations that shape the way that international civilian police establish a rule of law that is effective enough to support emerging democratic societies and build sustainable peace. Emphasis is placed on the roles, responsibilities, challenges, and risks facing international civilian police, as well as their relationships with other international actors.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS460 Government & Security in the Middle East (3 semester hours)

Examines historic, cultural, economic, social, religious, and geographic traits that distinguish this region and shape its domestic political processes and interstate relations. Surveys the governments of selected countries, considering factors such as legitimacy and political development. Includes a survey of contemporary issues salient in the region, including the Arab-Israeli dispute, with particular focus on regional security concerns.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS463 Arab-Israeli Conflict: Contemp. Politics & Dipl. (3 semester hours)

This course will trace the origins, evolution and development of the Arab-Israeli conflict from the early 20th century to the present. The course follows a thematic and chronological schema, drawing on a variety of sources. Considerable focus and attention will be given to the current and ongoing conflict between Israelis and Palestinians.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS468 Politics and Security in the Persian Gulf (3 semester hours)

Politics and Security in the Persian Gulf course explores political, social, economic, and cultural issues that are relevant to the contemporary Gulf politics and security. In this context, this course also examines the impact of external powers within the region; and thus, the correlation of this impact with the rise of vulnerabilities and implications both at the regional and global levels.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS490 Independent Study: International Relations (3 semester hours)

Individual study or research of a selected topic conducted on a tutorial basis. To be eligible for an independent study, students must be enrolled in a bachelors degree program, must have completed 24 hours at APUS toward their current degree program, and should have already contacted a professor and gained approval for the independent study topic. Once these conditions are met the student should contact their academic advisor. Once the course is open the student must complete an official online registration for the course. (Prerequisite: **IRLS210**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS491 Special Topics in International Relations (3 semester hours)

This course allows the students to examine an emergent issue or event in this field of study. The course will be taught in a structured seminar format. Students are required to complete a research project.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS492 Senior Seminar in International Relations (3 semester hours)

This senior capstone course allows students majoring in International Relations to analyze specific issues at the global level that would include: armaments, disarmament and proliferation; nationalism and world order; terrorism; peacekeeping; drug wars; political development and revolutionary change in less developed countries; and the organized use of force. This course will provide students with the opportunity to complete an approved academic research exercise that demonstrates knowledge of a selected field of study. This is a capstone course to be taken after all other International Relations courses have been satisfactorily completed. (Prerequisite: Completion of a minimum of 106 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS493 Capstone Middle Eastern Studies (3 semester hours)

This senior capstone course allows students majoring in Middle Eastern Studies to analyze specific issues at the regional level including the role of religion, culture, politics, security, economic issues. This course will provide students with the opportunity to complete an approved academic research exercise that demonstrates knowledge of a selected field of study. This is a capstone course to be taken after all other Middle Eastern Studies courses have been satisfactorily completed. (Prerequisite: Completion of a minimum of 106 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Legal Studies (LSTD)

LSTD100 Introduction to Law for Paralegals (3 semester hours)

This is the foundation course for the program. This course requires no previous legal background and introduces the student to the paralegal profession, the legal system, legal research, writing, and analysis, and other aspects of the law and the law office. This course will provide practical problem exercises of the type faced in an office environment; help the student develop the requisite paralegal skills; and presents a variety of the ethical issues and perspectives that paralegals face today. The overall theme is to address a broad range of paralegal topics in a contemporary law office environment.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD201 Litigation (3 semester hours)

This course gives the students a broad overview of the litigation process and the specific role of the paralegal. This course is an introduction to and the exploration of the process related to civil litigation and the procedures normally the responsibility of the paralegal in preparing materials for trial. Coverage will include information gathering, interviewing, organizing, and preparation of materials for trial. It includes general information on the litigation process and practical exercises to help the student learn to implement the role of the paralegal, such as how to conduct an initial fact finding interview. The course will give an overview of the structure of the court system.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD202 Real Estate Law (3 semester hours)

This course is a study of real estate law, with emphasis on those portions of real estate law that are essential to the processes and functions of the real estate purchase, administration, financing, land use regulation, financial instruments, leases, and property rights. The law of real estate has traditionally consisted of laborious manual searches to ensure good title. The internet provides real estate attorneys and legal assistants with new tools and procedures for conducting real estate transactions. This course will prepare the student for these concepts and will introduce the student to the new world of the Internet as related to real estate law.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD203 Criminal Law and Procedure for the Paralegal (3 semester hours)

This course will examine the practical aspects of criminal law and procedure as they pertain to the work of the paralegal. The course covers the nature of criminal liability, the elements of various crimes, and defenses to criminal accusations. The course will also cover criminal procedure, from search and seizure through trial and appeal. Constitutional issues relating to search and seizure, self-incrimination and other matters are explored in depth. Students learn how to prepare relevant legal documents.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD204 Introduction to the Courts (3 semester hours)

This course is an introduction to the structure of the American court system. Topics include prosecution, right to counsel, pretrial release, grand jury process, and sentencing concepts. The course will assess the U.S Courts System and how it relates to the criminal justice system in America. Students will become familiar with the chronological events from the arrest process to sentencing and appeals. Students will be able to explain concepts of stop and frisk arrest, searches under warrant, and presentation of the case to the magistrate. Assessments of the criminal trial process and phases of pretrial and trial proceedings will be examined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD205 Legal Research and Writing (3 semester hours)

This course will assess the methods used to locate necessary legal materials and be able to evaluate the appropriate citations of those materials. The paralegal aspects are reviewed and distinguished from other judicial case briefings. The course will introduce legal analysis methods and the preparation of appropriate techniques for researching legal issues and cases. Critical definitions of legal terminology are analyzed and used in preparation of legal materials such as memoranda, client letters, and other relevant documents. The course presents the student with techniques for effective writing in the legal environment.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD207 Civil Practice and Procedure (3 semester hours)

This course is an overview of civil practice and procedure and will examine the process that courts must follow when hearing cases of a civil nature. During the course of study, students will learn how a lawsuit is commenced, what kind of service of process is required, the types of pleadings, motions, and orders allowed in civil cases, the timing and manner of depositions and discovery, the conduct of trials, the process for judgment, various available remedies, and how the courts and clerks must function. The course focuses on the legal skills involving interviewing and counseling for civil cases, the drafting of legal documents for civil cases, and legal ethics focused specifically on civil cases. Course topics include civil trial practices of pleadings, motions, discovery, pre-trial conferences, jury selection, trial protocols, and appellate strategies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD209 Sports Law, Risk, and Regulation (3 semester hours)

This course is a broad study and analysis of sports law and regulation. This course is rooted in the conviction that sports law is an intricate blend of contracts, regulatory schemes (including antitrust law, risk and liability concerns), and torts. Additionally, bargaining issues including unions, contract negotiation, and collective bargaining will be covered. This course will also examine risk assumption and liability as they relate to sports law. This class will also discuss relevant sports organizations (NCAA, NFL, etc.); Title X; drug testing of athletes; the role of sports agents; intellectual property issues; broadcasting law; and rules of athlete eligibility and participation. This course exposes the student to legal cases from the individual perspective of the player, coach, fan, owner, agent, and medical staff, in addition to leagues and administrative bodies, dealing with captivating subjects as varied as drug testing, gender discrimination, player violence and criminal conduct, breach of contract, player eligibility, product liability, endorsement contracts, and television broadcasting.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD210 Legal Ethics (3 semester hours)

This undergraduate course introduces students to the ethics and professional responsibilities of the legal profession. Emphasis is given to the strict regulation of the practice of law and accompanying reasons, as well as the standard of care expected by those who work in the field. Important ethical issues, such as marketing, client relationships, fees, and communications are explored. Students will analyze the model rules and their practical applications.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD211 Introduction to Legal Technology (3 semester hours)

Technology has changed the legal field and how professionals operate within it. Law offices need to be innovative and efficient in addressing client needs. The American legal justice system requires new technical skills and expertise from those who work within it to better serve the public's need for legal and equitable justice. This course will provide students with introductory legal technology competence about how it can be used in the court system, law offices, and throughout the duration of a legal case.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD212 Basic Contracts Law (3 semester hours)

This course was designed for students new to contract law with no prior knowledge of contracts or how the law applies to them. This course will give students a broad overview of the elemental framework of contracts law, including an introduction to and exploration of contract formation as well as contract enforcement. Students will also gain early hands-on experience in contract drafting, and negotiating amendments and remedies. The key concepts of the course are tied together through the use of a long-running factual scenario.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD298 Sophomore Seminar in Legal Studies (3 semester hours)

This course is a culminating course for the Associate of Science in Legal Studies degree to be taken after all other courses in the program have been satisfactorily completed. It is designed to allow the student to review, analyze, and integrate the work completed toward the degree. The student will complete an approved academic project or paper that demonstrates their grasp of the legal studies field. (Prerequisite: Sophomore standing and completion of at least 85% of other courses required in the AS in Legal Studies program.)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD300 Administrative Law and Policy (3 semester hours)

This undergraduate course is the study of the work of administrative agencies in the executive branch of the United States government with some additional material on administrative agencies in state and local governments. Administrative law and policy touches virtually every person in the United States virtually every day of the year. It is the administrative agencies that fill in the "details" of government policy. Indeed, administrative agencies are so important and so powerful that they are frequently referred to as the "fourth branch of government. "This course will examine the position that agencies occupy in our constitutional system of government by carefully detailing the respective roles of the legislative, executive and judicial branches of government. The course will be mainly concerned with administrative procedure (i.e., agency rulemaking and adjudication, agency investigations, agency sanctions) but because it is almost impossible to distinguish between substance and procedure, the procedural elements of administrative law will be illustrated and discussed in the context of a specific agency action--e.g., the Environmental Protection Agency's actions on carbon emissions and global warming. The course will analyze the work of the "independent regulatory commissions" as well as those agencies that are completely under the control of the President of the United States. Both the legislative and judicial branches of our government have a large impact on administrative law, so the actions of Congress in creating and watching over the agencies and the actions of the courts in adhering to the rule of law for agency action ("judicial review of agency action") will be vital components of the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD301 Constitutional Law (3 semester hours)

This course is an introduction to Constitutional Law, the Supreme Court, and other aspects of the legal system using the case analysis approach. Its concentration is on the study and analysis of United States Constitution. It emphasizes an in-depth study of the Bill of Rights, specifically those rights pertaining to Civil Liberties. Topics include: the historical events that led to the development of the Constitution; principles governing the operation of the Constitution and the role of the U.S. Supreme Court and the Judiciary; characteristics and powers of the three branches of government; development of due process and individual protections to include right to speech, freedom of religion, right to bear arms, right to vote, and right to counsel.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD302 Criminal Law (3 semester hours)

This course familiarizes the student with the basic law, procedures and rules that govern the criminal justice system in America. It is designed to produce students who can understand, appreciate and discuss the benefits and problems with the criminal justice system in America today. The students will become conversant with the Bill of Rights, basic criminal law terminology and procedures. The course emphasizes the principles of criminal liability and the acts, mental state, and attendant circumstances that are necessary ingredients in crimes against persons or property or in offenses involving theft, fraud, drugs, morality and decency, public peace, or public justice.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD303 Family Law (3 semester hours)

This upper level undergraduate course introduces students to the legal and procedural requirements of family law. Students will explore various legal procedures and extrajudicial methods. Topics such as marital agreements, separation, divorce, alimony, custody, adoptions, domestic violence, cohabitation, and same-sex marriages will be covered. Emphasis is placed on linking theory to practice.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD304 Military Law (3 semester hours)

This course is designed to provide students with a solid knowledge of US Military Law through the study of the evolutionary process, politics, and motivation that has led to the current status of US Military Law. Topics include the history of military law, US Military Law, statutory basis, legal system, and basic application. It will also include an analysis of current events as related through the press, where military law is involved.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD306 International Law (3 semester hours)

This course introduces students to the nature, development, principles, and processes of the law that applies among nations. Students will evaluate the various implications of state sovereignty as viewed through the prism of public international law. Specific topics include the sources of international law such as custom and treaty, the role of international organizations such as the United Nations, the bases of international jurisdiction, and international norms governing recognition, nationality, the global environment, protection of human rights, and the use of force. This course introduces the student to the basic principles and practices of international law and legal regimes and examines traditional and emerging topics in the field: human rights, the Law of the Sea, the Law of Armed Conflict, War Crime Tribunals, and the International Criminal Court.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD350 Victim Advocacy (3 semester hours)

This course prepares students to provide assistance to crime victims. What a victim advocate is and their rights and responsibilities will be discussed. Students will learn how to navigate through the Criminal Justice System to include both the civil and criminal litigation process, as well as understanding the steps to help victims towards a successful recovery. The course prepares the student to work in victim advocacy arenas such as crisis hotlines, domestic violence shelters, etc. Course topics include legal terminology, legal process, legislation regarding victims-rights, effects of victimization, victim advocate skills, and crisis intervention.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD400 Criminal Legal Process (3 semester hours)

This is a procedural law course which includes an overview of the law of arrests, search, and seizure, the making of bail, adjudication, pre- and post-trial activities and the nature of plea bargaining. Substantial emphasis is given the constitutional protections afforded through the Bill of Rights. This course examines procedures used by American police, prosecutors, and courts to bring criminal cases to trial and explores some of the defendant's rights at trial and on appeal. The course will consider the Common Law, constitutional, and statutory bases of procedural practices in American criminal law. The student will be exposed to a comprehensive overview of the processes involved in the use of criminal evidence including rules of evidence; arrests, searches, and seizures; interrogations, confessions, and non-testimonial evidence, impeachment and cross-examination of witnesses; opinion evidence; hearsay evidence; and articles and exhibits of evidence.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD401 Maritime Law (3 semester hours)

This course is a study of the primary international and domestic laws governing navigation, naval operations, and maritime law enforcement. Students will study various aspects of the international law of the sea, maritime jurisdiction, and other laws and treaties dealing with such topics as maritime safety and security, drug trafficking, fisheries management, marine environmental protection, and piracy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD402 Immigration Law and Policy (3 semester hours)

This course is an introduction to immigration law and policy. Its concentration is on the study and analysis of governing immigration laws and the application of those laws to immigration practice. Current immigration policies and procedures will also be analyzed and discussed. Topics covered include: historical developments and sources of immigration law, federal agencies governing immigration law and practice, admission procedures to the U.S. to include immigrant and non-immigrant visas and citizenship, removal (commonly referred to as “deportation”) laws and procedures, and relief from removal to include asylum, cancellation of removal, and other forms of relief.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD453 Evidence (3 semester hours)

This undergraduate course will focus on the basic legal rules governing kinds of information which can be developed and received at trial, and how evidence may be considered by the trier of fact. Students will study how policies favoring probative evidence must be weighed against policies protecting against hearsay, opinion, prejudice, time consumption, and other harmful matters. Proper examination and impeachment of witnesses will also be explored.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD454 Legal Technology: eDiscovery (3 semester hours)

Electronic discovery (eDiscovery) is critical to the development of a case. Exactly how that electronic information is managed before and during litigation is essential. In this course, students will learn about the key ethical and legal concepts of eDiscovery, its project management, and the requirements necessary to identify, collect, preserve, manage, review, and produce electronically stored information (ESI) in the discovery process. Researching developing issues and trends in court rules and case law as well as applying that knowledge to scenarios will prepare students for real-world situations. Analysis will include spotting critical e-discovery issues and how to best resolve them. Technology Assisted Review (TAR), Electronic Discovery Reference Model (EDRM), and predictive coding will be examined. To better navigate the wealth of legal technology related issues and concepts, students will analyze federal and state case law, court rules, eDiscovery terminology, and ethical rules. Critical issues, such as the use of mobile devices, social media, metadata, computer forensics, and cloud computing in the context of discovery, trial practice, security and confidentiality, will also be examined. Special emphasis will also highlight eDiscovery-related ethical, privacy and IT security concerns. (Prerequisite: **LSTD453**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD497 Senior Seminar in Legal Studies (3 semester hours)

The Capstone course is a senior level course designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Legal Studies. The student will complete an approved academic project or paper that demonstrates mastery of their program of study in a meaningful culmination of their learning and to assess their level of mastery of the stated outcomes of their degree requirements. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. To be taken as the last course prior to graduation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD498 Practical Legal Studies Applications (3 semester hours)

This course is a pinnacle of the Legal Studies bachelor degree program. As such, it is designed to allow students to demonstrate their ability to review, analyze and integrate their work commensurate with their status as seniors who are ready to graduate. Students will both submit a series of high quality academic research-based essays and make an audio-visual presentation to demonstrate their mastery of this program of study.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Literature (LITR)

LITR215 Literature of American Encounters, Revolution, and Rebellion (3 semester hours)

How does a young country develop a literature of its own? From explorers to frontiersmen, follow the search for freedom and new lands through early American literature, guided by the adventuresome spirit reflected in works from the Colonies to the advent of the Civil War. How do we rationalize reports from explorers and early settlers on indigenous populations? What impact did religion have on early colonial writing and why did the focus shift to reason? How did American writing reflect and shape thought about rebellion and war? How did American women carve out space for themselves as writers of merit? This course explores these questions and more through the writing of American history and the American character, deepening our understanding of a literature that came to be defined by courage, passion, idealism, and—yes—even objection and protest. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR218 From Abolition to #MeToo: Literature of the American Civil Rights Movement (3 semester hours)

True to its revolutionary roots, America is not just the birthplace of democracy but it is also home to the major civil rights movements of the modern era. This course is a survey of American literature related to the major civil rights movements of the last 150 years, including Abolition (Pre-1865), the Suffragettes (1860-1920), Civil Rights (1920-Present), Women's Rights (1920-present), and GLBT Liberation/ACT UP (1960-Present). **LITR218** will take students on a journey through the social, political, and cultural changes that shape modern America and ask students to contemplate the connections between literature, politics, social change, and the American identity. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR222 Pivotal Figures in Early British Literature (3 semester hours)

Join us on a journey through a thousand years of British history, beginning in an Anglo-Saxon mead hall with a couple of characters named Beowulf and Grendel and even a dragon. From there we'll go on a pilgrimage to Canterbury with the Good Wife of Bath, ride alongside Arthur's knights, sit at Queen Elizabeth's feet, get up close and personal with Satan, ride a slave-ship to the new world, debate the state of Ireland, and hear some words of wisdom from Samuel Johnson. It will be quite a ride, so hang on tight. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR225 British Literature from Wordsworth through the Wasteland (3 semester hours)

Ready to explore the darkest places of the heart, the mind, the soul? Are you longing to "fade far away, dissolve, and quite forget" the modern world for a little while? Then, join us as we grapple with the tumultuous relationship between Catherine and Heathcliff in Wuthering Heights and consider Josef Conrad's harsh criticism of imperialism in Heart of Darkness. **LITR225** delves deep into the literary periods of the Romantics, Victorians, Imperialists and Modernists. Learn how society and historical events shaped our authors, and in turn, how our authors impacted society. Come prepared to debate, analyze and share your personal insights in forum conversations and written assignments. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR231 Leadership in World Literature: Antiquity to the Early Modern Period (3 semester hours)

Humans have theorized about great philosophical questions since the dawn of time. While the values and beliefs that guided the views of ancient cultures have undoubtedly changed, it is also clear that those views continue to influence modern lives.
From the ancient world through the European Renaissance, **LITR231** focuses on these monumental philosophical questions using great works of art, including the major genres of epic poetry, drama, lyric verse, religious texts, and prose fiction, drawn from Classical Greece, Asia, the Middle East, Western Europe, and the Americas. Students will travel through the musings of ancient authors from foreign lands to gain an understanding of cultural practices and values and investigate any connections between the modern-day world and those who lived and wrote before the modern era.
Students will explore their ideas regarding leadership, conflict, heroism, friendship, love, politics, and religion to understand how they continue to impact humanity. They will consider what "world" literature means and why the struggles, concerns, and lives of those long dead are still important today.
(Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR233 Literature of the Newly Globalized World: The Individual's Struggle to Adapt (3 semester hours)

How would you like to travel through time, witnessing historical global events, a variety of different cultures, and exciting scenery? In **LITR233**, Literature of the Newly Globalized World: The Individual's Struggle to Adapt, you won't simply read a textbook. You will travel to different continents and time periods, observing life during significant moments in modern history. Through historic fictional works, you will become part of the action, experiencing war, changing belief systems, and cultures. Not only will you understand what life was like for those in power, you will also see the world from the lens of those who have been oppressed. Come join our journey through history! (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR311 Monsters, Heroes, Romance, and the Human Condition Through the Centuries (3 semester hours)

We hit the ground running with the bloodthirsty monster, Grendel, who roams the Danish countryside and cheer on the noble Beowulf who jumps in to save the day. Next, we move on to one of Chaucer's bawdy tales and read about the pitiful competition between two lovesick knights. In Shakespeare's "As you like it," we witness an Elizabethan Rom-Com of tortured lovers who roll their eyes and sigh deeply. After aggressive cannibals face off against Defoe's Robinson Crusoe, we take on Mary Shelley's greatest creation: Frankenstein. And still there's more! Jane Austen and George Eliot pull back the curtain on the petty machinations, weaknesses, and hypocrisy of the upper class in 19th century England while Yeats, Woolf, and Orwell ask probing questions about society, morality, and our fellow creatures. Join us in **ENGL311** for a rollicking fun adventure! (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR315 British Poetry from Blake to the Beatles (3 semester hours)

Don't miss **LITR315**! We play the classics from Shakespeare to Sting and everything in between. In an eight-week exploration of British verse, we'll ask the important questions: Was Chaucer a feminist? Was Satan the hero in Milton's work? Were the otherworldly visions of Blake for real? We'll also take a look at the conspiracy theories that rocked the poetry world. Where did the conspiracy theory of Paul McCartney's death come from? And who was the actual recipient of Shakespeare's sonnets? These are just some of the showstoppers we discuss in British Poetry from Blake to the Beatles. With three projects and no quizzes, don't let this one get away! (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR319 Society, Identity and Politics: Contemporary Topics in Critical Theory (3 semester hours)

This course is a survey of contemporary critical theory from the late 20th century to the present. Theories include Contemporary Feminist Theory, Queer Theory, Postcolonial Theory, Critical Race Theory and Transgender Theory. The course combines philosophy, cultural critique, and politics to examine how different theoretical approaches can create dramatically different interpretations and analyses of a text. Theoretical premises and techniques are applied to selected works so as to understand more fully those techniques and to analyze specific texts in particular. Readings are from Judith Butler, Judith Halberstam, Michel Foucault, Riki Wilchins, Alan Freeman and others critical to the development of contemporary critical theory. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR331 Gothic Literature - Nightmare Creators from Lord Byron to Anne Rice (3 semester hours)

In Nightmare Creators from Lord Byron to Anne Rice, we will explore and assess a range of Gothic literary texts, covering numerous time periods, styles, and authors. The course begins by looking at the major influences of the Gothic tradition and then explores the major Gothic texts beginning in Victorian England and moving into present-day America. The readings will cover a variety of literary genres, including poetry, short stories, and the novel. Most importantly, this course will introduce students to a range of representative texts that reveal the interconnectedness of literature across time and place and show how the Gothic tradition has changed over time. This is a great class for students interested in learning about the origins of modern day horror and thriller stories, films, and TV shows. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR333 Women Writers: Finding a Voice, Sharing a Vision and Establishing Identity (3 semester hours)

Why did Louisa May Alcott feel the need to write her "blood and thunder tales" under a pseudonym? Why, in the nineteenth century, did Nathanael Hawthorne describe women writers as "a damned mob of scribbling women"? And how might we apply feminist theory to better understand the constructs and corresponding roles of gender and how that is reflected in both literature and lived experience? Find out the answers to these questions and more as we explore how women have established their voices and given authenticity to women’s writing and experience throughout the course of literary history. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR335 Exploring Relationships through Folk Narrative (3 semester hours)

Ogres, giants, elves, talking animals, brave heroes, magic, curses, prophecies, ghosts, otherworld adventures, quests, sex, taboo, tricksters, and monsters! What doesn’t folklore contain? Often considered tales suitable for bedtime or teaching lessons to young children, folklore allows us to contemplate the psyche, analyze cultural ideals, and make connections across vast societies. In this course, we’ll discover how folklore offers a safe space in which to examine our own personalities, provides a context through which to view social issues, and continues to inspire modern storytellers. Get ready to talk to animals about love, resist temptations set by lovers, and engage in a quest to better understand the world! (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR336 The Imaginary Real: Magical Realism in Latin American Literature (3 semester hours)

In the world of magical realism, the ordinary becomes extraordinary and the magical becomes commonplace. Featuring literature from Spanish speaking countries of Latin America, this course will introduce students to key writers of the genre. Spanning a century of literary narrative, beginning with the first magic-realist flashes in the 1920s and reaching to its echoes today, the course will emphasize the Latin American Boom with the writers of the 1960s and 70s, whose alchemy crafted and transformed this style into one understood today as distinctly Latin American. As students will learn, Magical Realism is not a style or a genre so much as a way of questioning the nature of reality. As such, it will expose students to equal parts magic and realism in key literary works and challenge them to think critically about prominent themes in order to better understand the evolving character and identity of Latin America.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR339 Flowers Bloom in the Desert: Literature of the Middle East (3 semester hours)

Without realizing it, you have been exposed to Middle Eastern Literature for most of your life. One of the first important texts in history, The Epic of Gilgamesh, so influenced the ancient world that parts of it are found in the Bible and other major works from before the time of Christ. The Middle East is known as the “cradle of civilization,” and true to its history, the region today continues to capture the attention of the world. Stories adapted from thousand+ year old texts, like Aladdin, for example, have earned billions of dollars at the box office and introduced wider audiences to the stories of the Middle East. The literature that comes from the region, both then and now, is filled with passion and power and is a testament to the region’s relevance throughout history. Our course will begin with essential texts and continue through newer works that show the cultural challenges to be found in today’s complex environment. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR350 America’s Genre: The Art and Genius of the Short Story (3 semester hours)

American writers are credited with the creation of the short story and have defined the genre for the world. From Nathaniel Hawthorne's first published collection in 1837, America's short stories have explored topics such as witches and demon worship, mysterious murders and insanity, tall tales from the Wild West, love and loss, and the ethics that reflect the cultural identity of Americans. Through a variety of short stories, students will examine the components that embody this original and compressed art form and uncover the ingenuity behind this precise and difficult genre of fiction. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR354 American Poetry from Bradstreet to Bukowski (3 semester hours)

To the rich oral tradition of Native Americans, new European arrivals added their own lyrics and sense of morality in a Neoclassic style. Not long after, the Romantics rejected this rational view of the world and instead explored emotions: love, obsession, fear, patriotism, and more. Later, in a country torn apart by fighting, Realists voiced their despair in poetry as the nation attempted to recover from the Civil War, and not long after that, the Modernists struggled with finding an identity in a new world shaped by World War I, economic depression, and modernization. Finally, Postmodernists and contemporary poets rejected everything and nothing; to them, anything was possible, and an explosion of new voices, experiences, and ideas emerged. Explore all these American movements—and more—in American Poetry! (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR357 The Past is Always Tense: Contemporary African-American Literature (3 semester hours)

This course explores the emergence of a distinctly Black modernist and post-modernist literary discourse in fiction, poetry, drama, and criticism published from the middle of the twentieth century to the present, often in response to and in conversation with contemporaneous Anglo-American literary movements and trends. We will investigate African American writers' engagement with the "Wright School of Social Protest"; the evolution of the Black Arts/Black Aesthetic Movements of the 1960s and 1970s; the emergence of Black feminist literature, criticism, and theory in the 1970s and 1980s; and the so-called "third renaissance" of the 1990s and 2000s. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR403 The Work and Life of Ernest Hemingway (3 semester hours)

"Writing is something that you can never do as well as it can be done," said Ernest Hemingway, and he did it better than most. Through his adventurous life and authentic work, he became a larger-than-life cultural icon of his time and one of the most influential writers of the 20th century. Through his work, this course examines the genesis and influences that made Hemingway the writer we know, the writer that was selected for the sort of quality and precision that defined his writing and earned the respect and recognition of the Nobel Committee for his "powerful, style-making mastery of the art of modern narration." (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR408 Mark Twain: The Voice of American Literature (3 semester hours)

Mark Twain's works are filled with danger and adventure, rollicking humor, biting satire, and memorable characters that wrestle with universal and timeless issues. In his writing, he asks us to consider what it means to be human, and in Mark Twain's characters, we often see and hear parts of ourselves which helps us hone in on our own humanity. Through social satire and a wicked irreverent sense of humor, his works became timeless; while he lived, he was known as "the funniest man on earth." But Mark Twain also used his distinct voice to expose the problems and issues that faced society often by highlighting the quirks of its members. **LITR408** examines Twain's literary genius and the man behind the genius who unflinchingly proclaimed, "I am not an American. I am the American." (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR410 All of the World's a Stage: Differences in the Dramatic World of Shakespeare (3 semester hours)

In All the World's a Stage: Defining Differences in the Dramatic World of Shakespeare, we'll discuss life. Specifically, we'll look at life and love, politics and ambition, evil and violence, wit and laughter, racial divisions, battles between the sexes, and misery and happiness as it unfolds in the plays and poetry of the Bard. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Management (HRMT)

HRMT101 Human Relations Communication (3 semester hours)

This course provides students with communication strategies from the behavioral sciences designed to establish positive relationships with individuals and groups in the modern workplace. Through readings, critical thinking exercises, problem-solving scenarios, written assignments, and case studies, students develop the human relations skills required to interact effectively with people at work. Communication skills and practices pertinent to ethical relationships with members of line management, co-workers, direct reports, customers, and the public are examined. Also, interpersonal and organizational applications associated with group/team functions, multicultural and multigenerational relationships, leadership, mentoring, and customer satisfaction are presented to assist students with the timely identification and resolution of communication issues and challenges.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT200 Human Resource Fundamentals (3 semester hours)

This introductory course focuses on the concepts and methods of managing human capital in an organization. Students will have the opportunity to explore human resource fundamentals by discussing practices in the selection, training, job analysis, evaluation, wage setting, incentive principles, merit rating, job efficiency, and labor/employee relations of human resources as applied to various types of organizations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT201 Employee Training and Development (3 semester hours)

In the emerging global economy, only those organizations dedicated to continuous learning are expected to grow and thrive. This course is an examination of individual and organizational strategies designed to stimulate creative approaches to learning in organizations. Students will have the opportunity to outline individual development plans from an organizational and personal perspective. Theoretical foundations and practical issues involved in employee training and development in business organizations are explored.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT202 Interviewing Fundamentals (3 semester hours)

In today's workforce, being qualified is not enough. Most applicants are qualified, but they may not be the right fit for the culture. Interviewing has become a crucial process in organizations, and the outcome can determine the next path for many people. Therefore, it is important to spend time preparing for the actual interview meeting. This course will provide a comprehensive study on skill sets that interviewees should display to be the chosen candidate. Topics include communication and interpersonal skills, critical thinking and problem-solving skills, time and project management techniques, and managing change with a positive attitude and self-confidence. Emphasis will be placed on clear concise written and spoken communication regarding business correspondence and oral presentations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT300 Negotiation I (3 semester hours)

This course provides a comprehensive overview of negotiation and distributive bargaining. It expands on the strategies of negotiation such as value claiming, value creation, mutual adjustments, ethics, and conflict management. Students will develop knowledge and skills and apply the characteristics of negotiation and distributive bargaining techniques to build relationships, establish agreements, and solve problems in real-world scenarios.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT301 Negotiation II (3 semester hours)

This course provides a specialized focus on negotiation. It expands on the techniques of perception, cognition, emotion, communication, power, relationships, teams, and cross-cultural concepts, principles, and theories in negotiation. Students will develop knowledge and skills and apply best practices in negotiation to build relationships, establish agreements, and solve problems in real-world scenarios. (Prerequisite; **HRMT300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT320 Employment Law (3 semester hours)

This course on employment law offers a comprehensive overview of legal frameworks relevant to human resources management. Students will explore key legislation, regulatory requirements, and case law affecting the employer-employee relationship. Topics include the Fair Labor Standards Act, the Civil Rights Act, anti-discrimination laws, wage and hour regulations, collective bargaining, employee rights, workplace safety, and labor relations. Through case studies and practical exercises, students will develop skills to navigate legal issues and ensure compliance in the workplace, preparing for roles as HR professionals and legal compliance specialists.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT407 Human Resource Management (3 semester hours)

This course provides an overview of concepts, skills, theories and techniques involving human resource management(i.e. recruitment and selection, training and development, performance appraisals, reward systems, and benefit programs). Students will have the opportunity to review scenarios involving innovative HR practices in the workplace.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT411 Dispute Resolution (3 semester hours)

This course focuses on the principles, practices, and processes of dispute and conflict resolution. The course draws on interdisciplinary materials from social science, decision theory, management/labor relations, law, and others. Course curriculum incorporates a review of non-binding dispute resolution strategies such as negotiation and mediation, binding strategies including arbitration, and psychological challenges to overcoming conflict such as cognitive perception biases.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT412 Compensation and Benefits (3 semester hours)

This course establishes a foundation for the art of compensation and benefit practices. Students will examine the context of compensation and benefit practices, the criteria used to compensate employees, compensation system design issues, employee benefits, and contemporary challenges that compensation and benefits professionals will face given the current economic times.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT413 Employment and Labor Relations (3 semester hours)

This labor relations course examines the historical evolution and current state of employment and labor law, as well as theories of employment relations. Students will explore the role of unions in America, collective bargaining, contract negotiations, arbitration, and dispute resolution processes. Additional topics include conflict management, leadership strategies, and the impact of laws such as the National Labor Relations Act on the employee/employer dynamic. Designed for HR professionals, this course provides practical knowledge of labor and employment relations, preparing students for roles in human resources management and labor relations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT415 Human Resource Management Information Systems (3 semester hours)

This course provides a basic overview of various automated information systems that are available to support today's human resource departments. Students will have the opportunity to explore online, offline, and hybrid HR software applications as well as other automated processes. Additional topics include HR analytics, systems security, individual privacy, legal implications and streamlined interview process.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT416 Human Resource Development (3 semester hours)

Training and development is no longer an option for organizations – continuous learning has become an essential requirement for those companies that wish to sustain market share and compete successfully in the marketplace. This course provides a comprehensive overview of the training and development function and is applicable to all organizations and jobs. Training methods, theories, research findings, and issues regarding training, employee development, and the career management function in organizations will be explored.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT419 Recruitment and Staffing (3 semester hours)

Hiring a new employee can be costly, and the cost becomes greater with the selection of an individual who is not a good fit. Therefore, the talent management and development functions spend quality time developing strategic plans to address the organization's recruitment, selection, and retention initiatives. This course examines external and internal staffing processes and practices needed for a successful search. Students will explore the various techniques/methods for determining whether individuals possess the knowledge, skills and abilities required by the organization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT427 International Human Resource Management (3 semester hours)

This course explores the importance of human resource management in the context of the global marketplace, including topics on culture, compensation and benefits, managing expatriates, global labor markets, managing diverse teams, and the legal and regulatory considerations that global organizations face. This course will help you identify differences in operating domestically versus globally, and adapt human resource practices successfully in foreign markets.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT430 Performance Management (3 semester hours)

This course examines how to measure and develop individual and group performance. Students will have the opportunity to design performance management systems in an effort to align employee performance with an organization's strategic objectives. There will be an exploration of methods, theories and issues regarding workforce expectations and performance.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT490 Senior Seminar in Human Resource Management (3 semester hours)

This course integrates Human Resource Management principles from previous coursework culminating in comprehensive projects and case studies. Students will focus on foundational Human Resources Management functions including understanding controlling employment laws, the use of HR technology and data analytics, designing fair compensation programs, and implementing diversity and inclusion initiatives to foster an equitable and ethical workplace. Prerequisite: Senior Standing and completion of all major courses prior to enrollment.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Management (MGMT)

MGMT100 Human Relations (3 semester hours)

This course is designed to provide the student with a basic foundation of positive communication strategies among individuals in today's business settings. Students will accomplish a variety of assignments that promote critical thinking and problem solving, and will develop basic human relations skills essential to function effectively in a modern business environment. Students will be presented with communication concepts associated with interpersonal relationships, including individual differences, group/team activities, cultural relations, leadership, mentoring, customer satisfaction and ethics. Communication concepts from assigned reading will be stressed, and this knowledge will then be applied in the analysis of case studies, scenarios, and problem-solving exercises to develop interpersonal skills that can be used in actual work situations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT101 Principles of Supervision (3 semester hours)

Supervisors are the first line of leadership. This course provides an overview of supervision in the workplace. Students will explore concepts and skills on how supervisors can improve their skill set for their scope of responsibilities (i.e. goal setting, problem-solving, staffing, conflict management and development of employees).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT200 Ethics Fundamentals (3 semester hours)

How can we help employees do the right thing? Ethical behavior in organizations is a topic that warrants exploration. The purpose of this course is to investigate some of the ethical issues facing the modern workplace. Topics include acceptable risk, intellectual property, workers' rights, whistle-blowing, moral leadership, outsourcing, and ethical issues in marketing. Students will be asked to reflect and examine how one comes to terms with being a good citizen and preventing unethical business practices.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT201 Organizational Fundamentals (3 semester hours)

Students taking this course should not take **RTMG150**. This course is designed to provide students with an overview of the challenges that arise for managers in organizational settings and to provide an introduction to the concepts and theories that can be useful in facilitating organizational effectiveness. Students will have the opportunity to review and critique the latest research on obstacles facing the modern workplace, motivation of employees, organizational justice, and implementing the best systems, processes and procedures for efficient workflow.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT296 Capstone: Portfolio (3 semester hours)

This **MGMT296**, A.A. in Management Capstone: Portfolio, course is the final course in the Associates Program. This course will prepare students to reflect on their academic experience by compiling and revising artifacts from previous courses in the program into an organized e-portfolio. The e-portfolio will reflect the student's educational growth from entry in the associates program. In addition, the student will develop the skills necessary to successfully transition to and navigate post-graduate life as well as understand the civic and social responsibilities of being educated citizens. Finally students will be given the resources to connect with APU/AMU in an ongoing relationship.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT310 Principles and Theory of Management (3 semester hours)

This course introduces the concepts, theories, and principles of management. Students will have the opportunity to explore the aspects (i.e. planning, organizing, staffing, directing, and controlling) of the management process. Classical and contemporary management theories that operate in today's business will be discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT311 Organizational Behavior (3 semester hours)

Successful organizations strive to hire the best talent and seek innovative strategies on how to retain them. Leaders attempt to create an environment that is appealing by soliciting feedback on what motivates them to stay. This course examines the field of organizational behavior and the various research strategies in areas such as personality, motivation, values, stress, leadership skills, power bases, and communication. It is designed to explore the attitudes and behavior of leaders and employees. The course examines decision-making and risk management techniques incorporating accounting and financial concepts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT312 Leadership & Motivation (3 semester hours)

This course is designed to provide students with a solid foundation about leaders, the leadership process, and motivation. Topics include the theories of leadership and motivation, leadership power, leader behavior, leadership characteristics, the role of gender, substitutes for leadership, and dysfunctional leadership. **MGMT312** serves as a self-assessment of the student's leadership and motivation skills, knowledge, and attitudes and addresses the questions: Who am I as a leader? What are my most distinguishing leadership traits? What leadership style am I most comfortable being around? How do I influence others, and how do I motivate others?

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT313 Organizational Change (3 semester hours)

The realities of organizational change affect every individual, every business, and every government. Change and transformation are constants in today's global and technical environment. This course explores theories and concepts which explain how to gain acceptance and buy-in for change management initiatives within organizations. If management and employees accept these changes, the impact will be beneficial and less disruptive to daily operations. Whether the change is as small as the implementation of a new financial system or as big as a plant move across the country, the implementation process necessitates planning and communication to ensure success.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT314 Management Ethics (3 semester hours)

With all of the cases regarding corruption, scandals and unethical behavior in businesses, how does one do the right thing? This course explores the moral and ethical responsibilities of managers and their direct reports. Topics of discussion include organizational justice, human resource practices (i.e. employee selection, salary administration, employee relations), and corporate/social responsibility.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT315 Management Communications (3 semester hours)

Effective communication is necessary at all levels of an organization, and executives are concerned that employees lack this skill set. The focus of this course is the exploration of theories and techniques utilized in achieving efficient external and internal communication processes and practices within and among businesses. These processes and practices include communication around operations, legal, marketing, budgets, costs, and earnings. Students will be encouraged to apply their analytical, creative, and critical thinking skills in developing and presenting potential solutions to managerial problems.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT316 Paving Your Career Path (3 semester hours)

This course provides students with information and knowledge for career decision-making. Students will explore the job search process, and develop professional skills to stand out during the recruitment stages or to advance in a career. Students will learn the various forms of resumes as well as how to construct an effective resume for their field. Students will also learn how to leverage networking and gain insight to finding job leads.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT331 Leading Yourself Foundations (3 semester hours)

This course provides the critical elements of analytical and intellectual examination and reflection of certain core issues in the practice of leadership. The purpose of the course is to gain a better understanding of leadership from multiple angles and perspectives. Students will explore the different ways leadership has been defined and studied; similarities and contradictions among current leadership theories and the way leadership has been exercised in business, military, and political contexts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT410 Strategic Management (3 semester hours)

In today's business environment, executives have challenging and costly corporate decisions to make regarding globalization and organizational expansion. This course focuses on concepts and approaches that shape organizational strategic decision making by examining internal and external factors and influences. Students will have the opportunity to analyze case studies and participate in discussions on how best to select competitive strategies and analyze competitive advantages. Students discover the importance of strategic marketing and leveraging internet, marketing, and e-business capabilities toward a competitive advantage.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT414 Strategic Planning (3 semester hours)

This course focuses on the principles utilized in the formulation and execution of an organization's strategic plan as it relates to maintaining a competitive advantage. The integration of an organization's mission, stakeholder objectives, vision, and core values is emphasized.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT495 Senior Seminar in Management (3 semester hours)

This end-of-program course is designed to allow students to create a final project or paper by integrating the knowledge obtained throughout their program of study. (Prerequisite: Completion of a minimum of 105 hours towards the program).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT496 Capstone: Portfolio (3 semester hours)

This capstone course is the final class in the management and human resource management programs for the B.A. in management. This course prepares students to reflect on their academic experience by compiling and revising work from previous courses into an organized e-portfolio. The e-portfolio will reflect the student’s educational growth from the initial entry to the final stage of the bachelor’s program.

In addition, students will develop the skills necessary to successfully transition to and navigate post-graduate life, and they will understand the civic and social responsibilities of being educated citizens. Finally, students will be given the resources to connect with APUS in an ongoing relationship.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Marketing (MKTG)

MKTG201 Fundamentals of Marketing (3 semester hours)

This course provides a comprehensive overview of marketing activities and functions, introducing students to the scope, terminology, and procedures of marketing. Key topics include the analysis of markets, competition, and consumer behavior, along with the assessment of product, price, distribution, and promotion strategies.

Students will explore consumer motivation and the processes behind the diffusion and adoption of new goods and services. Additionally, students will engage with a practical component, reviewing the key elements of a marketing plan, including market segmentation, branding, and integrated marketing communications, to understand how these factors work together in marketing strategy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG205 Fundamental of Sales (3 semester hours)

Fundamentals of Sales provides a comprehensive introduction to the role of sales within the broader marketing mix. Students will explore the sales process from prospecting to closing, with an emphasis on effective lead management and relationship-building techniques. The course covers a variety of methods for presenting products and services, as well as strategies for overcoming customer objections and successfully closing sales. Students will also examine long-term relationship-building strategies, focusing on customer retention and post-sale engagement. By the end of the course, students will be able to apply key concepts and techniques to drive sales performance and foster lasting customer relationships in a competitive marketplace.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG301 Principles of Sales (3 semester hours)

This course explores the principles of selling in various situations encountered in interpersonal interactions. Effective and ineffective sales methods for both person-to-person and group selling are studied in order to increase the understanding of the sales process.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG304 Public Relations (3 semester hours)

This course is an introduction to public relations, covering strategies and tactics used by public relations professionals. The course emphasizes theory and skills needed to perform in the professional arena, including an introduction to research-based public relations campaigns. A major focus of the course for the student is a “walk through” of a public relations campaign that uses a checklist approach.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG305 Advertising (3 semester hours)

This course is a study and analysis of advertising's role in marketing operations. Course topics will include such areas as the integration of advertising into sales promotion, event marketing, direct response, and other varied support strategies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG307 Consumer Behavior (3 semester hours)

This course explores consumer behavior from determining consumer needs and wants, the process by which they are satisfied, and the environment in which the behavior occurs. The objectives of the course are to introduce the student to concepts developed in psychology, economics, and sociology and their relationship to consumer behavior, to involve the student directly in the study and analysis of consumer behavior, and to develop in students the ability to translate what can be learned into marketing action implications.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG308 Social Media Marketing (3 semester hours)

This course presents the use of online social networking as a marketing strategy designed to increase customer loyalty and lead conversion. Through the study of social media sites, students evaluate contemporary and emerging tools in the digital marketplace.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG310 Digital Marketing (3 semester hours)

This course is a study of marketing activities in the digital age. The course will familiarize the student with digital marketing approaches using the internet and other forms of new media. Course topics include online advertising, social media, online listening and monitoring, and search engine optimization. The student will learn how digital marketing strategies fit into the overall marketing plan and how to measure the effectiveness of these efforts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG400 Marketing Research (3 semester hours)

This course is a study of the conduct of marketing research to provide information to be used in the decision making process. Course topics include problem definition and solution in a marketing context, data collection methods, sampling, research design, statistical techniques in the analysis of market research information, and survey planning.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG401 Marketing Strategy (3 semester hours)

This course presents the analytical and decision-making processes involved in formulating, implementing, and controlling a strategic marketing program for a given product-market entry. It includes discussions of customer, competitor, and environmental analysis; market segmentation and targeting; competitive positioning; implementation; and control. Because the course assumes that the student is already familiar with many of the concepts and analytical tools relevant to these topics, it goes beyond a simple review of definitions and procedures to examine strategic implications. The course also explores how marketing interacts with other levels of strategy and with other functional departments within an organization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG403 Marketing Management (3 semester hours)

This course provides a comprehensive overview of how marketing managers transform strategic plans into coordinated, high-impact marketing execution. Students will explore the operational responsibilities of marketing leadership, including campaign planning, resource allocation, cross-functional collaboration, and team management. Emphasis is placed on aligning execution with business goals, measuring performance, and adapting strategies using customer insights, analytics, and technology. Through practical applications, students learn to lead marketing efforts that drive results, foster customer loyalty, and respond to dynamic market conditions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG407 International Marketing (3 semester hours)

This course is designed to develop marketing decision skills in the global context. The course focuses on international marketing theory and practice from the point of view of the marketing manager and the requirements of a business in the international marketplace. The emphasis is on the application of tools and methods of international marketing practices. This course builds on skills developed in previous course work and assignments by integrating these with the issues and concepts of international marketing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG420 Branding (3 semester hours)

This course introduces students to understanding the need to differentiate products and services. The course explores how branding can have an impact on purchasing decisions. Students learn branding methods to transcend industries and techniques to use branding as an asset.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG425 Integrated Marketing Communications (3 semester hours)

This course provides a sound understanding of an integrated approach toward the marketing communications mix. The course assesses the impact of globalization of markets on marketing communications and provides an understanding of the cultural, legal, and lifestyle of various cultures. This is an advanced writing course providing practice in producing marketing content for print, broadcast, online, and public relations media. Commonalities and differences among writing formats, mechanics, and approaches of each medium are addressed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG495 Senior Seminar in Marketing (3 semester hours)

This course is a capstone course designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Marketing. The student will complete an approved academic project or paper that demonstrates mastery of marketing principles, concepts, and study. This is a capstone course to be taken after all other Marketing courses have been satisfactorily completed. (Prerequisite: Completion of a minimum of 105 hours towards your program).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Mathematics (MATH)

MATH101 Introduction to College Algebra (3 semester hours)

This course is an introduction to college algebra and is organized into six distinct parts, beginning with a review of basic mathematics skills. It then addresses the language of algebra, the definition, uses, and methods of solving equations and inequalities, exponents and polynomials, factoring, and rational expressions. Practical applications are emphasized throughout the course. This course does not fulfill the mathematics General Education Requirements, but it can be used as elective credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH110 College Algebra (3 semester hours)

This course will encompass the basic concepts involved in graphing points and linear equations and the solution and graphing of inequalities and systems of linear equations. The course will also concentrate on the manipulation and use of exponential expressions and radicals and the solution of quadratic equations and their applications.
Practical applications will be provided throughout the course. There is careful attention to the presentation of concepts that will become important in the study of analytic geometry, trigonometry, and calculus.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH111 College Trigonometry (3 semester hours)

This course in college trigonometry synthesizes topics from college algebra courses and is designed to extend students' knowledge of trigonometry. It covers a variety of mathematical concepts and techniques that are important to students planning to continue into more advanced math and math-related classes.

The course concentrates on various trigonometric functions, identities, and equations as well as the practical application of trigonometry to real-life situations. The final part of the course includes polar coordinates and vectors. While there are no prerequisites for **MATH111**, it is very highly recommended that students complete **MATH110** College Algebra or an equivalent college-level course prior to taking this course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH112 Pre-Calculus (3 semester hours)

This is a course to prepare students for Calculus. It synthesizes topics from college algebra and trigonometry (courses such as **MATH110** College Algebra and **MATH111** Trigonometry). It also goes into greater depth with concepts that will be crucial when taking Calculus. These mathematical concepts and techniques are important to those continuing into more advanced math and math-related classes. Practical applications are provided throughout the course.

The course assumes the student is completely comfortable with the language of algebra, equations and inequalities, polynomials, factoring, and rational expressions. If a lower-level math course has not been completed recently, we recommend that students take **MATH100** Pre-Algebra or **MATH101** Introduction to College Algebra.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH120 Introduction to Statistics (3 semester hours)

This is an introductory statistics course designed to help students achieve a basic understanding of the statistical methods available to analyze and solve the wide variety of problems encountered in the workplace. This course is designed for students who seek an understanding of descriptive and inferential statistical methods. The emphasis of the course will be on the proper use and interpretation of statistical techniques. **MATH120** is the recommended mathematics general education course for students who will be required to take additional statistics courses such as **MATH302** Statistics as part of their program of study.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH125 Math for Liberal Arts Majors (3 semester hours)

THIS COURSE DOES NOT FULFILL MATH PREREQUISITE REQUIREMENTS IN SCIENCE PROGRAMS. STUDENTS IN AS OR BS PROGRAMS OR IN PROGRAMS THAT REQUIRE **MATH302** SHOULD TAKE **MATH110** OR HIGHER AS THEIR MATH GEN ED UNLESS CLEARED WITH ACADEMIC ADVISOR FIRST.

This course examines various mathematical concepts and problem solving techniques and provides mathematical functional literacy for those majoring in non-technical subject areas such as intelligence, military history, economics, and management. Students will learn how to solve a wide variety of problems from such areas as: mathematical thinking; logic; number theory and real numbers; introduction to algebraic equations, inequalities, and problem solving; functions and graphs; geometry; mathematical systems and matrices; sophisticated counting techniques; consumer math; and an introduction to probability and statistics. This course is principally a problem-solving course where students learn how to solve a wide variety of mathematical problems, rather than a conceptual course where problem solving is not emphasized.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH200 Analytic Geometry (3 semester hours)

This course introduces students to the concepts of analytic geometry. Some of the most important applications in physical sciences will be presented; however, emphasis is on the fundamentals of analytic geometry as a foundation for the study of calculus. Students may use this course for higher level prerequisite mathematics requirements. Topics include: plane analytic geometry; vectors in the plane; equations of lines, circles, and conic sections; transformation of coordinates; curve sketching of polynomial and rational functions; polar coordinates; parametric equations; and three dimensional vectors. (Prerequisite: **MATH111** or equivalent)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH210 Discrete Mathematics (3 semester hours)

This course introduces students to the fundamental concepts of discrete mathematics. The course provides a foundation for the development of many computer related concepts and more advanced mathematical concepts found in electrical engineering or computer science courses. Important applications in the computer science and engineering disciplines will be presented. Topics include: fundamentals (basic tools for discrete math); logic; methods of proof; graphs and sets; functions; relations and equivalences; recursive relations; polynomial sequences; induction; combinatorics; counting; and probability. (Prerequisites: **MATH110**, **MATH111**, or **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH220 Linear Algebra (3 semester hours)

This course presents vectors, matrices, determinants, eigenvalues, and eigenvectors; and how these concepts may be used and applied. The emphasis of the course will be on understanding the concepts and methods of linear algebra, as well as solving problems and understanding how linear algebra is used in real world applications. (Prerequisite: **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH225 Calculus (3 semester hours)

This course begins with a study of limits and continuity, which leads into the study of derivatives. Students will be taught to find the derivative of many functions using a variety of methods, including power rule, product rule, and chain rule.
Students will then learn how to tackle several different applications of derivatives, including optimization, curve sketching, approximations, and related rates. Finally, students will be introduced to integration and how it can be used to determine areas. (Prerequisite: **MATH111**, **MATH112**, or an equivalent course)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH226 Calculus II (3 semester hours)

This course builds on the concepts introduced in Calculus I and will expand students' ability to integrate more functions using a variety of techniques, including substitution, integration by parts, and trigonometric substitutions. These skills are then used to find the area between curves, the volume of shapes created by rotating area, arc length, and surface area. The course also introduces sequences and series and includes several methods for determining when the series and sequences converge. (Prerequisite: **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH227 Calculus III (3 semester hours)

This course is designed to extend calculus concepts to functions with more than two variables. Students will perform vector calculations encompassing operations such as the dot product and cross product. They will also use these skills in several applications, including arc length and motion.
Students will then apply their calculus skills to multivariable equations to find the partial derivatives and double and triple integrals. Finally, they will apply their vector skills to vector calculus and work with vector fields, line integrals, and surface integrals. (Prerequisite: **MATH226**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH239 Data Analysis and Presentation (3 semester hours)

This applied course introduces students to a variety of techniques for organizing, analyzing and presenting large data sets. Topics to be covered include descriptive statistics with graphics and sample estimation. Emphasis is placed on real-world applications such as those found in the social and physical sciences. Students will become familiar with statistical software packages. (Prerequisite: **MATH220**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH240 Differential Equations (3 semester hours)

MATH240 is introduction to differential equations. It is designed to introduce students to the basic concepts and techniques of differential equations. The course covers the standard materials addressed in the first semester of college differential equations to include: first and second order differential equations, Laplace transforms and differential equations with variable coefficients. Problems have been selected to illustrate the applications of these techniques across a wide range of areas of science, technology, and economics. It is essential for engineering, science, and economics. Increasingly, applications in business management and related fields also employ the calculus. (Prerequisite: **MATH227** or equivalent)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH302 Statistics (3 semester hours)

This is an interactive course designed to help students achieve a greater understanding of the statistical methods and models available to analyze and solve the wide variety of problems encountered in business, science, medicine, education, the social sciences, and other disciplines. Successful completion of this course will provide students with a working knowledge of the principles of both descriptive and inferential statistics, probability, averages and variations, normal probability distributions, sampling distributions, confidence intervals, statistical hypothesis tests, and correlation and regression analyses. The emphasis of the course will be on the proper use of statistical techniques and their application in real life -- not on mathematical proofs. This course will use Microsoft Excel for some of the work. Students should have a basic familiarity with Excel and have access to this software application. **MATH120** is the recommended mathematics general education course for students who will be required to take additional statistics courses such as **MATH302** Statistics as part of their program of study. (Prerequisites: **MATH110**, **MATH111**, **MATH120**, or **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH303 Probability and Statistics for Engineers and Scientists (3 semester hours)

This course in statistics is designed to provide students with a more in-depth understanding of statistics than **MATH302**. Topics covered include: the principles and applications of descriptive and inferential statistics, probability, common distributions and hypothesis testing. Regression and correlation will also be considered. (Prerequisite: **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH305 Real Analysis (3 semester hours)

This course provides a theoretical foundation for single-variable calculus concepts and introduces higher level abstraction of these concepts. Topics include the structure of the real numbers, sequences, continuity, and metric spaces. This course will be run as a seminar that emphasizes mathematical constructs of real analysis and proof writing. (Prerequisites: **MATH227**, **MATH240**, and **MATH320**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH320 Mathematical Modeling (3 semester hours)

This course introduces students to the fundamental concepts of math modeling. It integrates the student's previous experiences with mathematical concepts to provide a variety of practical methods to solve problems. The course covers mathematical concepts such as graphs, inequalities, slopes, linear regression, matrices, operations and applications of matrices, linear programming, sets,Venn diagrams, permutations, combinations, binomial theorem, and an introduction to logic.
(Prerequisite: **MATH220**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH325 Linear Regression I (3 semester hours)

Linear regression models are widely used in business administration, economics, engineering, and the social, health, and biological sciences. Successful applications of these models require a sound understanding of both the underlying theory and the practical problems that are encountered in using the models in real-life situations. In this first course in linear regression students will be exposed to some of the fundamental tools of linear regression. The emphasis will be on using and interpreting linear models. In addition to analyzing given linear models, students will analyze data and create linear regression models as a means to assess and evaluate the extent to which individual or sets of predictor variables influence a particular response. Furthermore, students will use models to forecast outcomes associated with various response variables. Applications from a number of different areas will be examined. (Prerequisites: **MATH220** and **MATH302**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH328 Probability Theory with Applications (3 semester hours)

This course introduces students to the basic concepts and applications of probability theory. An understanding of probability theory is essential to statistics, which is the fundamental basis of how all research is done, from science to medicine to business, marketing, and governmental politics. Probability theory is also essential to such disciplines as mathematics, finance, artificial intelligence, and even legalized gambling (such as state lotteries). Examples of applications problems from these areas are included in the course, with a focus on understanding the concepts and methods of probability theory, as well as solving problems taken from real world applications.
(Prerequisite: **MATH226**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH330 Linear Optimization (3 semester hours)

This course examines various linear optimization concepts and problem solving techniques commonly found in manufacturing, transportation, and military operations. The goal of optimization is to find the best possible solution to a problem given a number of constraints. The emphasis of this course is problem solving. This course includes the construction and analysis of real world problems and the application of various linear optimization techniques to find an optimal solution. An optimization software package will also be presented and used to solve problems. This course covers a wide range of linear optimization techniques. Topics include linear programming; the simplex algorithm and goal programming; sensitivity analysis and duality; problems in transportation and transshipment; network models; and integer programming.
(Prerequisite: **MATH220**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH340 Multivariate Statistics (3 semester hours)

This course will introduce to students analysis of categorical data, log linear models for two- and higher-dimensional contingency tables, and logistic regression models. Also, students will analyze aspects of multivariate analysis to include random vectors, random sampling, multivariate normal distribution, inferences about the mean vector and MANOVA. (Prerequisites: **MATH328** and **MATH302**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH360 Mathematics History and Development (3 semester hours)

This course will introduce students to the historical development of the disciplines of mathematics. Within the discipline of mathematics, we will examine the development of numbers and number systems, geometry and measurement, algebra, probability and statistics, calculus, and discrete mathematics. Throughout this course, students will study the history of mathematics and mathematics education through readings, case studies, and problem sets. (Prerequisite: **MATH320**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH375 Inventory Models and Systems (3 semester hours)

This course introduces students to the basic concepts and application of inventory management, its theory and practice. An understanding of the inventory management theory is essential to operations management, production planning and scheduling, and global supply and demand chain management. Inventory management is the heart of operations management in any industry. On upstream, it will dictate policies and procedures for procurement and material management. Its impact on downstream, especially in meeting the required service level, is a determinant factor in high service level which greatly impacts marketing and financial departments. In this course, we introduce quantitative methods of optimal inventory management in the context of operations management, forecasting, BOM, MPS, and ERP.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH410 Design of Experiments (3 semester hours)

This course is delivered online and is organized into distinct parts. This course will begin with Design of Experiments (DOE) methodology and statistical inference. The design of single factor, factorial, nested and nested factorial experiments will be taught. Quantitative and qualitative factors will be introduced to simulate real situations that are encountered in operations being explored. Students will learn how to set up and solve fixed, random, and mixed models with two or more factors. Practical applications are provided throughout the course. (Prerequisite: **MATH340**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH412 Graph Theory (3 semester hours)

This course studies set theory, counting techniques such as permutations, combinations, generating functions, partitions and recurrence relations, Polya's theorem, Hamiltonian and Euclidian properties of graphs, matchings, trees, coloring problems and planarity. (Prerequisite: **MATH305**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH415 Operational Simulation (3 semester hours)

This course examines various mathematical concepts and problem solving techniques and introduces discrete system simulation, Monte Carlo methods, discrete event modeling techniques, programming considerations, statistical definitions and concepts, random number generation, and output analysis. This will be a problem-solving course which will emphasize tools that can be used during the analysis phase of real world problems. (Prerequisites: **MATH330** and **MATH375**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH418 Topology (3 semester hours)

Topics include definition of a topology, closed sets, relativizations, base and sub-bases of a topology, compact topological spaces, separation axioms, normal spaces, regular spaces, metric spaces, continuous mappings, product spaces, and function spaces. (Prerequisite: **MATH305**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH420 Game Theory and Decision Models (3 semester hours)

"A Beautiful Mind" is a movie that helped popularize game theory. It is a biographical film about the life of John Nash who is known for his work in game theory. "Game theory is the study of mathematical models of conflict and cooperation between intelligent and rational decision makers." This course examines game theories and their applications commonly found in economics, business, political science, and law and how to model games to make informed decisions. Topics include dominance solutions, Nash equilibrium, backward induction, subgame perfect equilibrium, repeated games, dynamic games, Bayes-Nash equilibrium, mechanism design, auction theory, and signaling. (Prerequisites: **MATH410** and **MATH415**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH460 Principles of Applied Mathematics (3 semester hours)

The process of expressing scientific principles, experiments, and conjectures in mathematical terms. Topics include: gathering reliable data, exposing underlying assumptions, variables, relationships, levels, refining of models, and stochastic models. Deterministic versus stochastic models. (Prerequisite: **MATH305**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH470 Measurement Theory (3 semester hours)

This course covers the study of basic topics in analysis with emphasis on methods and measurement. Sequences, series, functions, uniform convergence, continuity, partial differentiation, extreme value problems with constraints, Riemann integrals, line integrals, improper integrals, integrals with parameters, transformations.
(Prerequisite: **MATH305**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH499 Senior Seminar in Mathematics (3 semester hours)

The Capstone course is a senior level course designed to allow the student to review, analyze, and integrate the work the student has completed toward a degree in Mathematics. Students will examine a number of real-world case studies; prepare an approved academic project or paper; and demonstrate mastery of their program of study in a meaningful culmination of their learning. Students must demonstrate that they have taken all other math courses in their degree plan prior to registering for this course. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Military History (MILH)

MILH201 Introduction to Military History (3 semester hours)

This course is a survey of the changing patterns of warfare within Western civilization, to include analyses of principal military thinkers and the evolving relationship among Western societies, warfare, and their military institutions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH202 Survey of American Military History (3 semester hours)

This course is a study of the American military institution from the colonial period to the current environment in the 21st century. Students will examine military traditions and employment of forces during war and peace as well as the relationships between the military and society. Recommended prerequisites are two lower level survey courses in U.S. or World History.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH221 War From Antiquity to 1700 (3 semester hours)

This course is a survey and discussion of warfighting during ancient times through to the beginning of the 17th century with emphasis on technological advances in the military arts and sciences and their short-term and long-term effects on strategy and tactics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH222 War from 1700 to the Present (3 semester hours)

This course is a survey and discussion of warfighting from end of the 17th century until now, to include military arts and science as well as combined arms employment. Emphasizes the innovations and changes in strategy, tactics, organization and technology engendered by the decisions of the great captains of each age.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH303 Readings in Military Leadership (3 semester hours)

This course is a study of military leadership of ancient to present day commanders through selected readings. Emphasis will be on the burden of command and the various solutions that military leaders employed in the prosecution of war. Ancient and modern leadership will be examined, but the primary focus will be on the modern era.
(Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH304 Readings in Military Philosophy (3 semester hours)

This course is a study of basic concepts in military strategy and tactics viewed through the prism of the selected readings from well-known military philosophers. Both ancient and modern philosophers will be studied.
(Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH320 The American Revolution (3 semester hours)

This course examines the American Revolution from its antecedents to its legacy. The events leading to the revolt and the Declaration of Independence; the strategy and tactics of the war emphasizing the land campaigns; and the aftermath of war on the new Nation.
(Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH355 World War I (3 semester hours)

This course analyzes World War I, from the political unrest in Europe in 1914 and the outbreak of war to the Armistice in November 1918 to the treaty of Versailles in 1919 and the official end of the war. Global in scope, the themes highlight the origins of the conflict, Entente and Central Powers strategies, plus the major military campaigns, power diplomacy, life on the home front and America's entry and effect to the Entente (Allied) war effort her entry had on the outcome of the conflict. (Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH360 World War II (3 semester hours)

This course is a global examination of the Second World War with an emphasis on the origins of the conflict, Axis and Allied strategies, major military campaigns, great power diplomacy, life on the home front, and the Holocaust. The experience of combat, social and political changes that resulted from the conflict and the scientific consequences of the war will be continual themes addressed by the course material.
(Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH362 Ancient Military History (3 semester hours)

This course is a comprehensive survey of ancient and classical warfare (prehistory to c. AD 500) in Western Civilization from the origins of warfare in the Paleolithic period to the decline and fall of the Western Roman Empire in the fifth century. The millennia under study in this course were a dynamic period in warfare, full of important discoveries and innovations in martial technologies, strategy, organization and combined-arms tactics, fortification, siege craft, and naval warfare. Students will read and analyze a wide variety of sources on ancient and classical warfare in Mesopotamia and the Near East (Sumerian, Akkadian, Babylonian, Hittite, Assyrian and Persian), Egypt (Old, Middle and New Kingdom), Greece (Mycenaean, Archaic, Hellenic and Hellenistic) and Rome (Republican and Imperial) in order to develop an appreciation of the important contributions of these civilizations to the continuity of warfighting in the Western world.
(Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH363 17th and 18th Century Military History (3 semester hours)

This course covers the history of warfare from the Spanish Armada in 1588 to the dawn of the French Revolutionary wars in the 1790s. The 17th and 18th centuries were an era in world history abound in continuous warfare. The militaries of Europe in particular were still primarily composed of mercenaries, politically and often militarily unreliable. Warfare in this era was not confined to the plains of Europe; the world's oceans also played host to their own form of combat. The 17th and 18th centuries at sea began with Great Britain on the verge of invasion from the Spanish Armada to Great Britain becoming the unquestioned master of the ocean. Thus, the 17th and 18th centuries began in an aura of indecisiveness and closed awash in the destruction of "world" war. The evolution of warfare from the inconclusive to the decisive battle is explored in depth. (Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH364 Medieval Military History (3 semester hours)

This course is a comprehensive study of European post-classical warfare from the decline and fall of the Western Roman Empire in the fifth century to the integration of reliable gunpowder technologies at the beginning of the sixteenth century (c. 450 to c.1500 AD). Students will read and analyze a wide variety of sources on medieval warfare in order to develop an appreciation of the important contributions of the European Middle Ages to the continuity of warfighting in Western civilization. Contrary to popular belief, the millennium under study in this course was a dynamic period in warfare, full of important rediscoveries and innovations in fortification, siegecraft and combined-arms technology, organization and tactics, all of which allowed Europe to become the preeminent military power in the period after 1500 AD. (Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH365 The Napoleonic Wars and the Long Peace (3 semester hours)

This course examines the theory and practice of warfare in Europe from 1785 to 1870. It will emphasize the rise of Napoleon as a military leader, as a practitioner of the operational art, but will also examine his political, economic and legal impact on Europe as a whole. This course will focus on the wars of the French Revolution, Napoleon's northern Italian campaigns, his expedition to Egypt, his battles while leading the Grand Army at Austerlitz and Jena, and his march to Moscow where he led the largest army in European history to date. It will also cover the 1813 and 1814 campaigns, the reactions of Napoleon's enemies to his innovations in warfare, and his final defeat at Waterloo. The course then looks at the status of Europe in 1815 and the conditions which set the terms for the "Long Peace". The course ends prior to the start of the wars of 1870 and the lessons learned. (Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH370 The Korean War (3 semester hours)

This course provides a history of the Korean War from pre-hostilities to post-ceasefire. The course mainly concentrates on the U.S. and South Korean conflict against North Korean and Chinese forces, but other UN participants are covered throughout the course. All three levels of conflict, from tactical to strategic are discussed. The increase in technology, the usage of modern weapons, POWs, and the continued presence of U.S. forces in the Republic of South Korea are also covered. (Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH371 The Vietnam War (3 semester hours)

This course examines the origins of the conflict in Indochina, American intervention and commitment, the ground wars, Vietnamization, trouble at home, the US withdrawal, and the war's effect on American society. (Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH422 History of Peacekeeping: 1988-Present (3 semester hours)

This course examines the strategy, operations, evolution, and functions of United Nations and regional peacekeeping operations (PKO) from the end of the Cold War to the present. Emphasis is on the significance of individual peacekeeping missions, including their background, functioning, military operations, and end result. While the United Nations peacekeeping operations are studied in detail, other forms of peacekeeping are presented as well.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH480 Special Topic: Military History (3 semester hours)

This course is a one-time offering on an area of special interest and may be applied to fulfill major course requirements or electives. A student may appeal to take this course twice, if the subject matter is different enough to merit separate credit. WINTER 2016 SPECIAL TOPIC - MEDAL OF HONOR: Students will learn about the story behind the Medal of Honor and the significance of the design of the Medal. Students will also learn how Confederates were honored with a Roll of Honor. They will learn that the Medal of Honor Legion was founded in 1890 to protect the Medal from abuse. They will learn that 911 Medals of Honor were revoked in 1917 after all the Medals to date were reviewed, including those of the only woman and the 27th Maine, and will learn if any of these Medals were restored later. They will also learn about modern Medal of Honor recipients.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH490 Independent Study: History (3 semester hours)

An opportunity for Military History students to pursue an independent research project or examine a specific area of history under the mentorship of a single professor. Course is open to Military History majors only. The course will typically involve a major research paper; there will be no examination. Students will submit a proposal prior to the start of the project, and a rough draft of the paper, both of which will count toward the final grade. To be eligible for an independent study, students must be enrolled in a bachelors degree program, must have completed 24 hours at APUS toward their current degree program, and should have already contacted a professor and gained approval for the independent study topic. Once these conditions are met the student should contact their academic advisor. Once the course is open the student must complete an official online registration for the course. (Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH498 Senior Seminar in Military History (3 semester hours)

The Senior Seminar in Military History is designed to integrate the student's past work in their major field of study and to review as well as strengthen their understanding of their focus area in military history. After a review of the student’s academic experience, the student and professor will design a course of study to complete the student’s preparation for research and writing a major paper in their field of interest. This is a capstone course to be taken after all other Military History courses have been satisfactorily completed. (Prerequisite: **HIST491** and completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Nursing (NURS)

NURS159 Fundamentals, Adult, and Childbearing Family Nursing Transition Course (6 semester hours)

This course prepares the Licensed Practical Nurse, Paramedic, Army Medic, Air Force Technician, and Navy Corpsman to enter a community college associate degree nursing program with advanced standing. The role of the nurse in the delivery of safe and effective care to individuals across the life span is addressed with an emphasis on adults and childbearing families. The nursing process and critical thinking guide the provision of patient-centered care. Advocacy through effective verbal and written communication with patients, families, and other members of the healthcare team facilitates the achievement of desired patient outcomes. Emphasis is placed on the role of evidence-based practice in the delivery of optimal health care. THIS IS A RESTRICTED COURSE THAT REQUIRES APPROVAL FROM OUR NURSING PROGRAM.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS161 Fundamentals and Adult Nursing Transition Course (6 semester hours)

This course prepares the Licensed Practical Nurse, Paramedic, Army Medic, Air Force Medical Technician, and Navy Corpsman to enter a community college associate degree nursing program with advanced standing. The role of the nurse in the delivery of safe and effective care to individuals across the life span is addressed with an emphasis on adults. The nursing process and critical thinking guide the provision of patient-centered care. Advocacy through effective verbal and written communication with patients, families, and other members of the healthcare team facilitates the achievement of desired patient outcomes. Emphasis is placed on the role of evidence-based practice in the delivery of optimal health care. THIS IS A RESTRICTED COURSE THAT REQUIRES APPROVAL FROM OUR NURSING PROGRAM.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS300 Professional Transitions in Nursing (3 semester hours)

This course is only open to students admitted and enrolled in the RN to Bachelor of Science Nursing Program. In this course, students examine the role of the baccalaureate-prepared Registered Nurse as a leader and change agent in various practice settings. Students determine the impact and effectiveness of informatics, cultures of safety, levels of professionalism and ethics in their healthcare settings. Students will conduct a self-assessment of professionalism, identify areas for growth and write a Professional Development Plan. Principles of critical thinking and scholarly writing are applied throughout the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS310 Assessment, Evaluation and Clinical Decision-Making (3 semester hours)

This course explores assessment of the individual and families across the lifespan. The concepts of genetics and health maintenance/health promotion will guide the student to develop plans of care focused on clinical prevention. Students will cultivate professional assessment skills by completing a health interview, a health risk assessment and a discharge teaching plan. All evidence-based plans of care reflect an understanding of the relationship between assessed risk factors and genetic predisposition toward illness with the goal of achieving quality patient outcomes. (Prerequisite: **NURS300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS315 Pathophysiology and Clinical Pharmacology (3 semester hours)

This course is only open to students who are enrolled in the RN to Bachelor of Science in Nursing (RN to BSN) program. This course explores the connections between pharmacological interventions and pathophysiology across the life span. The study of genetics/genomics, culture, and integrative health provides a theoretical context for the delivery of patient-centered care. An understanding of the dynamic relationship between comorbidities and medication interactions facilitates the development of an individual plan of care. An analysis of human responses to pharmacological interventions will be explored through case studies, evidence-based research, and group projects. (Prerequisite: **NURS300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS340 Science of Evidence-Based Practice (3 semester hours)

This course is only open to students who are enrolled in the RN to Bachelor of Science in Nursing (RN to BSN) program. This course reviews evidence-based practice, the history of this movement, and the challenges to implementation in the practice setting. Students will further develop their skills with efficiently finding, reading, and comprehending published research and determine applicability to clinical practice. Students continue to explore means to assess, monitor, and develop cultures of safety in their own organizations and will become familiar with several national safety initiatives. (Prerequisites: **NURS300** and **MATH120**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS350 Transformational Leadership and Cultures of Safety (3 semester hours)

This course is only open to students who are enrolled in the RN to Bachelor of Science in Nursing (RN to BSN) program. It includes a 20 hour practice experience in leadership with a nurse leader in a care setting. This course builds on assessments related to professionalism, culture of safety, nursing ethics and effective use of healthcare technology completed in previous courses with an emphasis on leading change in complex organizational healthcare systems. Students integrate and apply this knowledge to improve quality and build cultures of safety in their workplaces. It is recommended that students select a nurse leader for this assignment prior to the course start. (Prerequisite: **NURS300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS400 Emerging Scholarship and Trends in Healthcare (3 semester hours)

This course is only open to students who are enrolled in the RN to Bachelor of Science in Nursing (RN to BSN) program. Students explore the rapid evolution of current nursing practice and examine historical and contemporary issues germane to their practice. Students examine changes in technology and its impact on access, cost, quality, and knowledge development. Global health and nursing workforce issues are evaluated and discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS401 Caring for Today's Veterans (3 semester hours)

This course addresses the unique healthcare issues facing today's veterans. Emphasis is on physical and psychosocial needs of veterans and the delivery of patient/family centered care. Post-traumatic stress disorder, traumatic brain injury, and other health issues of veterans will be explored through evidence-based literature and research. Students will examine the veteran culture, identify health risks, analyze health issues and trends in healthcare systems, and explore best practices.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS421 Community Health I (3 semester hours)

This course is only open to students who are enrolled in the RN to Bachelor of Science in Nursing (RN to BSN) program. In this course, the student will focus on the community as client with an emphasis on specific vulnerable populations and related topics, such as substance abuse, mental illness, domestic violence, women's and men's issues, and environmental health. The student will gain knowledge of underserved populations as well as how communities are affected by cultural diversity and natural and man-made disasters. Clinical experiences will allow for the implementation of a teaching project for a designated vulnerable population. (Prerequisite: **NURS300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS425 Informatics and Technology in Healthcare (3 semester hours)

This course is only open to students who are enrolled in the RN to Bachelor of Science in Nursing (RN to BSN). This course explores the role of healthcare technologies in the provision of safe and high quality, patient-centered nursing care. The use of informatics to improve the health of individuals and the delivery of healthcare services will also be examined with an emphasis on patient privacy and confidentiality in the digital age. (Prerequisite: **NURS300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS498 Senior Seminar in Nursing Studies (3 semester hours)

This course is only open to students who are enrolled in the RN to Bachelor of Science in Nursing (RN to BSN) program. This course is organized around individual student research papers and project development and serves as a capstone and culminating experience where students integrate knowledge and apply professional skills to improve the quality of health in the workplace. Students prepare formal written and poster presentations of the project. A final evaluation of progress toward meeting goals is completed. (Prerequisite: **NURS300**, **NURS310**, **NURS315**, **NURS340**, and **NURS350**.) NOTE: Students must earn a grade of B or higher to pass this course

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Philosophy and Religion (PHRL)

PHRL498 Religion and Philosophy Capstone (3 semester hours)

This capstone course is an intensive study of major figure(s) and or movement(s) in philosophic thought, and/or contemporary issues and beliefs in religion and events of particular historical importance to the discipline. Students will integrate knowledge acquired in previous courses into critical analyses of movements, theories and principles that have influenced historical and contemporary thought in philosophy, and the integration of a critical analysis of selected sacred scriptures, collection and review of religious adherents' expressions and experiences, and a synthesis of all research into a final written project. This is a capstone course to be taken after all other Philosophy and Religion courses have been satisfactorily completed. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Philosophy (PHIL)

PHIL101 Introduction to Philosophy (3 semester hours)

This course is intended to equip the student with a baseline understanding of issues and concepts that compose the Western philosophic enterprise, and to serve as a point of departure for their further studies in Philosophy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL110 Critical Thinking (3 semester hours)

Critical Thinking introduces skills, concepts, models, and techniques for reading, writing, and thinking critically. Critical thinking is a necessary process for identifying and solving problems in academia and the workplace, as well as interpreting information in the media. Through the use of critical and logical thought processes, students will develop practical, analytical skills that prepare them for the investigative nature of being life-long learners.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL200 Introduction to Ethics (3 semester hours)

This course will examine the field of ethics and provide the tools for ethical decision-making. Students will analyze texts for meaning, apply theories learned to various areas of moral concern, such as war, euthanasia, divorce, and poverty. The course will also provide an overview of how philosophers have thought about moral problems and some of the solutions they have proposed. Students will develop the ability to think about moral problems in a clear and logically consistent manner.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL202 Philosophy of Science (3 semester hours)

Philosophy of Science will introduce students to the origins and development of modern science and how that is distinguished from pseudo-science; the importance of deduction and induction and their separate methodologies; the process of the scientific method; scientific change and scientific revolutions, particularly that of Thomas Kuhn; and selected philosophical problems in the basic sciences, such as absolute space, biological classification, the modular mind, and recent discoveries of neuroscience.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL270 Thinking & Acting Ethically (3 semester hours)

This course offers students a chance to delve into ethics from many approaches. Every day, an individual’s ethics may be challenged, and this course will do its best to provide a foundation on which students can develop a personal set of ethics. The course covers various ethical frameworks, reviews the ethical challenges individuals are likely to encounter in their daily or professional lives, and explores solutions based on ethical principles.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL300 Logic (3 semester hours)

This course is an examination of the historical and contemporary concepts and techniques used in logic, emphasizing classical and modern treatments of topics such as rules of inference. The course will cover the principles of deduction, induction, informal fallacies, and uses of logic in everyday life. (Prerequisite: **PHIL101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL302 Ancient Western Philosophy (3 semester hours)

This course examines themes in the thought of Plato, Aristotle, and the Stoic, Epicurean, and neo-Platonist philosophers of the ancient world. It enables the student to enter the “great conversation” of western civilization as well as debate the fundamental questions that surround science, religion, self-awareness, ethics, and politics. (Prerequisite: **PHIL101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL303 Medieval Philosophy (3 semester hours)

This course considers the synthesis of Christianity with classical pagan philosophy achieved by St. Augustine and St. Thomas Aquinas. What became of the ancients’ ideal of human knowledge in an age when philosophy became the “handmaid of theology"? What were the underpinnings of the “natural law” conception of moral and political philosophy? How did this medieval synthesis break down, on the scientific side with Galileo’s challenge to Aristotelian physics and astronomy, and on the moral and political side with Machiavelli’s portrayal of a Renaissance prince? (Note to Students: The course materials, assignments, learning outcomes, and expectations in this upper level undergraduate course assume that the student has completed all lower level general education and career planning coursework necessary to develop research, writing, and critical thinking skills. Students who have not fulfilled all general education requirements through courses or awarded transfer credit should strongly consider completing these requirements prior to registering for this course. (Prerequisite: **PHIL101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL320 Environmental Ethics (3 semester hours)

This course is a study of environmental issues from a moral and philosophical approach. Issues raised in the course include the moral obligation, or lack thereof, to preserve and protect the environment, the ethical presumptions that underlie environmental policy, the traditional theories of moral philosophy applicable to contemporary environmental problems, and the potential for a new conception of the relationship between humanity and nature.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL330 Philosophy of Law (3 semester hours)

This course surveys the main issues in the philosophy of law. We will study seminal work on questions like “what is the law?”, “what is the relationship between the law and morality?”, “what does it mean for someone to be responsible for a crime?,” and “what makes a punishment reasonable?”

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL340 Bioethics (3 semester hours)

This bioethics course examines some of the primary ethical issues in human health, biomedical research, and healthcare, as well as the ethical challenges they present. These philosophical problems are approached scientifically, argued rationally using ethical theory, and critically examined for practical application. Students will explore case studies and hypothetical situations that require judgment and decision-making, connecting philosophical principles to real-world dilemmas in medicine, law, science, and society. Although students are encouraged to think for themselves, they are required to demonstrate a clear understanding of different positions on any given issue, providing a strong foundation in biomedical ethics and the medical humanities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL400 Contemporary Issues in Philosophy (3 semester hours)

This course examines specific topics in philosophy, such as ethics, neuroscience, social philosophy, and political philosophy, that are of central interest and interdisciplinary in nature. In this course, students will develop a deeper knowledge of notions of the self, love, the morality of charity, and philosophies that address war and terrorism. Students will also develop a better understanding of how neuroscience, biology, and experimental philosophy influence our understanding of human morality. (Prerequisite: **PHIL101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL401 Modern Philosophy from Descartes to Kant (3 semester hours)

This course focuses on the work of European philosophers from roughly 1600 to 1800. Students will study the philosophy of René Descartes and traces the development of philosophical rationalism and empiricism in thinkers such as John Locke, David Hume, and Baruch Spinoza. In addition, the class will cover the transcendental idealism of Immanuel Kant. (Prerequisite: **PHIL101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL403 Continental and Post-Modern Philosophy (3 semester hours)

This course is a contemporary discussion of philosophic thought. It addresses leading thinkers and theories of the past two centuries and includes Hegel, Marx, Nietzsche, Sartre, Arendt, and other philosophers. (Prerequisite: **PHIL101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL405 Metaphysics and Epistemology (3 semester hours)

This course will cover basic themes in the topics of metaphysics and epistemology. It will investigate the basic question of "being," or what reality is most fundamentally, as well as the fundamental question of knowledge, or what distinguishes real knowledge from mere belief or opinion. Students will be asked to investigate questions regarding the existence or non-existence of God, and to critically examine leading metaphysical options such as theism, atheism, materialism, and idealism. They will also be considering questions regarding the acquisition and justification of various epistemic claims. Particular topics will include free will, determinism, skepticism, and truth.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL410 God and World (3 semester hours)

What is it that we name, what is it that we mean, when we say God? Although we may speak of God as if we are naming some entity or being whose identity we hold in common understanding, as we will see, God is a name used to express a range of concepts and experiences that have varying and often conflicting features. In this class we will examine some of these concepts and descriptions of experiences of the divine. Ultimately, however, this is not a study of God but of man and his attempt to understand his relation within and between God and the world.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL417 Analytical Philosophy (3 semester hours)

This course is designed to introduce students to the foundations and building blocks of philosophy in the analytical tradition. Focusing on a combination of topical and chronological, students will learn about the development of a school of thinking occurring in primarily anglophone countries, as opposed to primarily non-anglophone, Continental Philosophy. Specifically, starting with individuals such as Carnap, Russell and Wittgenstein, the course covers the development of analytical philosophies of language, metaphysics, epistemology, mind, ethics, and personal identity. The class culminates by examining a few recent developments including experimental philosophy and neuroexistentialism.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL420 Contemporary Philosophy (3 semester hours)

This contemporary philosophy course explores major figures, debates, and developments in Analytic, Continental, and Postmodern philosophy from the 19th century to the present. Students examine thinkers such as Hegel, Marx, Nietzsche, Wittgenstein, Sartre, Arendt, and Putnam. Emphasis is placed on philosophical arguments about individual liberty, moral and political philosophy, consciousness, and the nature of truth and existence. Through critical reading, writing, and discussion, students gain a deeper understanding of how contemporary philosophers continue to influence thought across society, science, government, and daily life. (Prerequisite: **PHIL101**).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL498 Senior Seminar in Philosophy (3 semester hours)

This capstone course offers an intensive review of major figures and movements in the history of philosophical thought. Students will apply knowledge gained from previous courses to critically analyze influential movements, theories, and principles in both historical and contemporary philosophy. Students will also synthesize all research into a final project. This course is intended to be taken after successfully completing all other Philosophy courses. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Political Science (POLS)

POLS101 Introduction to Political Science (3 semester hours)

Introduction to Political Science explains foundational principles of the field. Students will learn the purpose of political science, common terms and concepts, and subfields. Among these are introductions to political philosophies and ideologies, comparative systems of government, and international relations. The course also examines the professional and academic fields to which a political science degree is relevant.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS210 American Government I (3 semester hours)

This is the first course in a two-course sequence in American Government. The course is designed to convey basic facts about the structure and functioning of the American political system. The philosophical foundation of the U.S. Constitution is explored and the federalist construct is examined. The functions of the three separate branches of government and their roles in policy making are a major focus.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS211 American Government II (3 semester hours)

This is the second course in a two-course sequence in American Government. The course is designed to provide research tools and writing skills that will build on the academic knowledge acquired in **POLS210**. The student will investigate issues in American government in greater detail through use of Internet-based research, seminar discussions, and point papers. (Prerequisite: **POLS210**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS213 Political Theory (3 semester hours)

This course offers an overview of Western political thought from the Ancient Greeks to contemporary political theorists. It follows the rise of secularism and modernity through an Enlightenment tradition of social contract theory, shaping debates on human nature, equality, liberty, rights, and justice as the basis for civil society and democratic governance. This course is an essential foundation for the political science major.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS301 Ethics in Politics (3 semester hours)

This course focuses on providing students a study of ethics as it relates to government. Students will be presented with readings, case studies, and insightful information that will provide them the opportunity to analyze topics that will enable student discussions pertaining to ethical dilemmas in politics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS311 Political Parties and Interest Groups (3 semester hours)

This course is a study of the various roles of political parties and interest groups in the American democratic process. Issues covered include the ideological differences among parties, the role of third party candidates, mobilization of voting blocks, the formation and types of interest groups, and political agenda development.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS312 State, Local, and Community Politics (3 semester hours)

Comparative analysis of state and local political systems in the United States. Emphasis is placed on the contemporary role of states and localities in the development and implementation of public policies. Additionally, there is an examination of the role of grass roots social movements in shaping local politics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS401 The Psychology of American Politics (3 semester hours)

This course is an overview of the psychological study of American politics. Various topics and issues are covered throughout the course to include the personality, leadership style and decision making of presidents, voter choices and preferences, the influence of the media and political attitudes of different groups.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS410 Public Policy (3 semester hours)

Analyzes the formulation and execution of public policy in America. Includes study of decision-making theory, bureaucratic politics and other models that seek to explain how policy is made. Issues explored include social, environmental, economic, homeland security, defense, and foreign policy. Additional issue areas may be covered depending on contemporary significance.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS497 Senior Seminar in Political Science (3 semester hours)

Analyses of specific issues addressed at the national level that would include a review of American political institutions and decision-making; policymaking in the economic, social, and security arenas; instruments of foreign and defense policy; federalism and democratic political theories; and the electoral process. This capstone course will provide students with the opportunity to complete an approved academic research exercise that demonstrates their knowledge of their selected field of study. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Psychology (PSYC)

PSYC101 Introduction to Psychology (3 semester hours)

The course introduces students to the art and science of Psychology. Course emphasis is on applying the "science of human behavior" to a variety of settings: vocational, personal, academic, and clinical. Course content introduces the history of psychology, major theories of personality and learning, current research and developmental issues. The course has a holistic approach and integrates the biological basis of behavior, social factors, learning and the unique coping styles of the individual to understand human behavior.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC102 Professional Careers and Education in Psychology (3 semester hours)

This course provides an overview of psychology as a profession and academic discipline. It focuses on the broad discipline of psychology and its subspecialty areas within the discipline, career opportunities available in the field and educational requirements for field entry, effective job and graduate program preparation strategies, and practical issues confronting psychologists and professionals in related occupations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC201 Introduction to Social Psychology (3 semester hours)

This course introduces students to historical and contemporary theories of social psychology, key theorists' contributions to the field of and practical applications of theoretical concepts in the real world of the individual functioning in group settings. The focus of study includes social judgments and decisions, attitudes and perception, social influence, attraction, aggression, altruism and group pressure and their influences on human behavior, cognition and emotion, along with exposure to the methods of social scientists who study group influence on human behavior in the field. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC221 Personality Theories (3 semester hours)

This course provides a broad overview of theories of personality. Course content includes psychodynamic, behavioral, cognitive, and humanistic perspectives, and examines contributions of major theorists from each school, key theoretical points from each perspective, critiques of the value (and the limitations) of each theory.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC300 Research Methods in Psychology (3 semester hours)

This course focuses on laboratory and field research methods applied in the study of human behavior. Course content emphasizes the development of sound methods of hypothesis testing, data interpretation and formal research report writing, the review of empirical, peer-reviewed literature, the critique and interpretation of applied research and the ethical responsibilities and codes of conduct related to psychological research

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC303 Learning and Cognition (3 semester hours)

This course examines basic learning processes within the context of classical, instrumental, and operant learning situations. Course content focuses on classical conditioning, instrumental learning, principles of reinforcement, punishment and avoidance conditioning, stimulus generalization and discrimination, retention and forgetting, nature and functioning of memory, and learning and performance of motor skills. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC304 Perception (3 semester hours)

This course provides an introduction to the study of how humans organize and interpret stimulation arising from their environments. Course content includes a review of theory, methodology, and research findings. Illustrative case studies will be explored, particularly with regard to disorders of perception. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC305 History and Systems of Psychology (3 semester hours)

This course examines the major antecedents of modern psychological theories and methodology. Course content focuses on the history of psychology as a field of scientific inquiry, including an overview of development of schools of thought, prominent figures, and key theories. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC324 Psychology of Addiction & Substance Abuse (3 semester hours)

This course focuses on the role of drugs in society, licit and illicit substances, the use and abuse of medical drugs, and the state of the field in terms of prevention and treatment for substance abuse and dependence. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC325 Biopsychology (3 semester hours)

This course surveys anatomical structures and functioning as the biological bases for human functioning and psychological states. Topics investigated include sensory processing, movement, emotional expression, sleep, learning, memory, language, reproduction and psychopathology. (Prerequisite: **CHFD342** and **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC343 Adult Development (3 semester hours)

This course is an in-depth study of the developmental processes from the transition to adulthood through old age. Course content examines the ways adults construct meaning, including intellectual, moral, and personality development. Gender and culture are highlighted, and particular emphasis is placed on understanding the influence of context on adult development. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC360 Psychology of Terrorism (3 semester hours)

This course is an introduction to historic and contemporary terrorist groups and their motives and strategies. The psychological and social impact on individuals, communities and global societies of the achievement of terrorist goals as well as recruitment methods, the influence terrorist groups exert on their members and factors influencing the establishment and dissolution of terrorist groups will be examined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC406 Psychopathology (3 semester hours)

This course surveys syndromes of psychopathology, by reviewing etiology, symptomatology, and treatment. Psychological, neurobiological, and genetic approaches to understanding mental disorders are considered. Topics also include depression, anxiety, schizophrenia, personality disorders, memory disorders, and childhood disorders. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC431 Psychology of Disaster (3 semester hours)

This course focuses on the psychological and physiological human response to natural and man-made disasters. Using clinical research and case histories, students will examine normal and abnormal psychological reactions, the recovery process and principles of mental health care for victims of mass disasters. Differences between natural and man-made disasters are examined and factors that mitigate post-traumatic effects are reviewed. Psychological aspects of Weapons of Mass Destruction (WMD) disasters are also considered.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC432 Psychology of Combat (3 semester hours)

This course is a study of acute and chronic behavioral response to battle. Students will review, analyze, and evaluate the range of psychological responses to combat, from "normal" reactions to variations of "Combat Stress Reaction." Case studies from combat action will provide material for application and synthesis of the concepts presented in the course. Topics include the U.S. military approach to psychiatric management of combat, POW experiences, mental adaptation for future warfare, and stress associated with other forms of conflict, such as peacekeeping. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC490 Independent Study: Psychology (3 semester hours)

This Independent Study course provides an opportunity for undergraduate Psychology students to examine in depth, and with individualized guidance from a professor, a specific area within the discipline of psychology. The course is open to upper division Psychology majors only. Independent Study course sections are 8-weeks long and run during the University's regular monthly course offering cycles. Completing of this course off cycle or for less than 3 credits is not permitted. No exams are included in the course. Course completion will involve weekly in-classroom engagement with the Independent Study professor, to be accomplished via asynchronous discussion board engagements, assignment grading feedback and email, and the multi-phased completion of an in-depth peer-reviewed literature review paper with a required minimum length of 20 main body pages and formatted per the editorial requirements of the American Psychological Association (APA), along with the completion of any other supporting assignments to be determined by the professor. Independent Study involves advanced-level student work held to rigorous standards and it should not be attempted merely as a means of earning 3 credits needed to finish up a degree. To be eligible to register for the course, a student must be actively enrolled in the undergraduate Psychology degree program and must have completed 24 hours at APUS toward the degree. Prior to attempting **PSYC490** registration, the student must first have identified an Independent Study topic focus of interest, and must have discussed the proposed topic with and obtained a memo of commitment from a professor agreeing to teach the course. The student also must have subsequently obtained approval from the Psychology Program Director prior to any registration attempt. Ample time for meeting these responsibilities must be allowed and attempts to do so should not be made during the final week before the registration period for the target course session closes, as each required step in the process necessitates consultation and review turnaround time. A month of lead time is strongly recommended. Following completion of these responsibilities, the student will be notified that a section of **PSYC490** Independent Study has been opened for individual registration. The student must then complete official online registration for the course prior to the ending of the regular course registration period (late registration for this course is not permitted), enter the classroom during Week 1 to connect with their professor, review the course syllabus and all other classroom materials, and subsequently complete each week of the course as required by the professor. Pre-requisite: **PSYC101** Introduction to Psychology. Available to upper division APUS Psychology majors only. Must have completed 24 hours at APUS toward current degree program. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC498 Senior Seminar in Psychology (3 semester hours)

The Senior Seminar in Psychology is the capstone course for the bachelor of arts in psychology degree. Students will examine what they have learned during their program and how these concepts and skills apply to a specific occupational path in the psychology profession. Students will also examine the requirements to seek careers in psychology as well as the options for graduate study. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Public Health (PBHE)

PBHE111 Introduction to Health Care Administration (3 semester hours)

This course presents information and insight that identifies the challenging and overarching issues surrounding Heath Care Administration. It carefully examines the broad functions, operations and tools of the field and emphasizes the need for excellence in the management of health services. This course will assist students as they prepare for health services management careers and provides an ongoing program of professional development for those already employed in health professions. The course is divided into three parts: Managing in Health Services Environments, Managerial Tools and Techniques, and Managing Relationships.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE112 Health Services Organization (3 semester hours)

This course examines Health Service Administration, primarily The Structuring Policies of Federal, State, and Local Organizations. **PBHE112** reveals the framework of the United States Healthcare System; the organization and administration of health services; the roles of international, federal, state, and local health organizations; and the barriers to health services delivery.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE209 Wellness: Health Promotion and Disease Prevention (3 semester hours)

This course introduces students to the wellness concept, which builds the foundation for health literacy and an appreciation for life-long health and physical fitness. The components of wellness will be studied in this class, including physical, intellectual, emotional, social, spiritual, environmental, and occupational, with the goal of promoting and advocating for self-responsibility, health literacy, and a life-long commitment to wellness.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE211 Public Health in America (3 semester hours)

This course discusses the important role that public health plays in the United States. Students will examine how behavioral, epidemiological, environmental and social factors influence the public's health, and how public health professionals develop appropriate intervention strategies to improve the nation's health. Students will also explore future challenges facing public health professionals in the 21st century.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE215 Healthcare: Moral Issues (3 semester hours)

This course is an examination of moral issues and dilemmas within the health care profession based on associated ethical theories and principles. The course puts special emphasis on patient's rights, social justice of health care, and evolving health care technologies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE315 Health Economics and Finance (3 semester hours)

This course is designed to provide the student with tools used to express the financial and economic components of the health care industry. The student will develop a vocabulary in addition to gaining knowledge in the use of graphs, charts, tables and reports. The student will utilize these tools to assess past and present analysis as well as projecting future developments.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE413 Special Operations in Emergency Medical Services (3 semester hours)

This course deals with the specialized issues associated with emergency medical services—those issues that are not commonplace or part of everyday procedure. Topics include emergency medical services in mass casualty, biological, chemical and radiological incidents. The course also covers unique topics in emergency medical services, to include the employment of services in complex contingencies, such as those faced when fire, police, terrorist, and other emergencies co-exist with the need to provide medical services on-scene and post-disaster.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE426 Quarantine (3 semester hours)

This course is a study of the theoretical, historical, and contemporary issues associated with quarantine as a public health and safety measure. Students will learn quarantine strategy, implementation, effectiveness, and debate. The course topics will include the consideration of quarantine as a health and safety measure in modern homeland security strategy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE427 Epidemiology (3 semester hours)

This course provides an introduction to epidemiologic concepts and approaches to population problems in public health. It covers a wide spectrum of topics, to include outbreak investigation, test properties, and study design. The course will provide understanding of disease and disease transmission, rates and proportions associated with different forms of outbreak, and epidemiological risk management methods and measures.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE498 Senior Seminar in Public Health (3 semester hours)

This senior capstone course allows students majoring in public health to analyze specific program related issues and problems using the knowledge and understanding gained by completing the required courses in the program and a significant number of the major courses. This is a capstone course to be taken after all other Public Health courses have been satisfactorily completed. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Religion (RELS)

RELS101 Introduction to the Study of Religion (3 semester hours)

This introductory course explores the basic nature of religion, both historical and contemporary, and familiarizes the student with a multidisciplinary approach to religious study. Students examine the importance of religious thought and expression, from the viewpoints of both a participant and a critic.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS201 Introduction to World Religions (3 semester hours)

This course introduces the major religions of the world with attention to origin, history, beliefs and practices. The course provides a balanced consideration of both Eastern and Western religions. No force has influenced human life and civilization more than religion; no understanding of human affairs, on an individual scale or a global one, can succeed without comprehending it.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS202 Religion in America (3 semester hours)

This course examines the variety of ways in which religion is found in contemporary American experience. Course content focuses on the changes within traditional historical religions as well as new religious groups which have evolved within American society.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS205 Christianity (3 semester hours)

An introduction to Christianity as a world religion — with origins, history, beliefs, literature, ritual, and practical ethics as points of departure — this course places emphasis on understanding the multiple and complex global interpretations of Christianity as expressed by the great church traditions (including Roman Catholic, Eastern Orthodox, Protestant denominations, and traditional churches of the Middle East and Africa) and in regional variations worldwide.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS206 Contemporary Christianity (3 semester hours)

Over the past 2,000 years, the influence of Christianity has grown to impact almost every corner of the world as the largest religion in our time. This course will provide an academic survey of the modern issues that are currently impacting contemporary Christianity through the study of selected themes, movements, religious contexts, theologies, philosophies, and beliefs with attention to its continuing religious and cultural impact. It delves into the study of contemporary Christian issues, including the nature of the Bible, science and evolution, gender and sexuality, world Christianity, persecution, the decline of Christianity in America, church and state, racism, freedom, art and technology, ecology, sports, and institutions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS211 Introduction to the Old Testament (3 semester hours)

This course acquaints students with the content and major themes of the Old Testament and familiarizes them with important contemporary scholarship which helps to illuminate the biblical documents. Course content explores the socio-political and religious forces that shape the thirty-nine books of the Old Testament and examines the enduring significance of their messages.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS212 Introduction to the New Testament (3 semester hours)

This course provides a detailed exploration of the historical and religious context, literary styles and theological themes of each of the twenty-seven books of the New Testament, and offers an overview of current New Testament studies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS250 Death and Dying (3 semester hours)

This course provides perspectives on death and dying. Students examine how death is beneficial and necessary for evolution. Participants explore the media's impact on mortality. Participants analyze how to communicate death to the living. Students assess the bereavement and burial process. Topics include: communicating death, the feeling of emptiness, the forgetfulness of life, living in the face of death, organ donation, burial, and the other side after death.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS260 Race & Religion (3 semester hours)

American society is a cauldron of various racial, political, ethnic, and religious formations. Amongst these, religious and racial formations provide strong modes of social organization. Both religion and race are also a major stimulus of cultural practices and belief systems. These two modes influence the ideals of democracy, equality, freedom, and even political identifications. The current agitations about Black Lives Matter are drawing attention to the racial divisions that are splitting the American society. At the same time, these movements are receiving the support of people from different religions. The Islam phobia and growth of right-wing militias are also similarly pitting Americans against one another based upon their religious beliefs. American writers, artists, activists, and even poets have drawn attention to these linkages and the pernicious impact it is having upon our society. Their contributions provide an alternate understanding of the strengths and limitations of American democracy. In this course, we will examine a variety of sources to understand how religion and race are shaping American democracy and society.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS270 Hope and Resilience (3 semester hours)

This is a survey course that will investigate different religions and the techniques they offer to maintain physical and mental well-being. In this process, students will review various religious teachings, the Sufi Dervish tradition, and the Christian teaching of gratitude, Yoga, and Meditation from different religious traditions. We will go over contemporary applications of the religions with particular attention to the cultural, social, and political structuring of their practices.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS305 Theology of Social Responsibility (3 semester hours)

This course provides an exploration of belief and practices related to agitation, direct action for social change, and responsible action in the religious setting. This course dives into how identity, power, and suffering shape historical judgments about the intersection of religion and ethics. Close readings of primary sources drawn from autobiographies, letters, sermons, poems, and treatises. Figures may include John Wesley, Sojourner Truth, Frederick Douglass, Eberhard Arnold, Martin Luther King Jr., Pauli Murray, Dorothy Day, Thomas Merton, Jean Vanier, Daniel Berrigan, Joan Chittister, Jonathan Wilson-Hartgrove, and The Sister Fund.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS311 Introduction to the Bible (3 semester hours)

This course explores the languages, canonization, organization and translation of the Bible. The genres of narrative, poetry, wisdom, law, prophecy, gospels, parables, letters, and apocalypse are analyzed in order to thoughtfully read the Bible without the aid of other reference works. This course is foundational to further Biblical study.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS330 Religions of the Middle East (3 semester hours)

This course is a study of the three primary religions whose origins were in and which are still practiced in the Middle East: Judaism, Christianity, and Islam. For each religion, topics include history, culture, beliefs, scriptures and practices. Variations within the religions will be studied in context of their expression in the Middle East. In addition, the relationship of the three in the present day context will be studied, as well the influence of the religions on political and social situations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS353 Islam (3 semester hours)

This course is an introduction to Islam - and its associated civilization - through readings, case studies, projects, and interaction within the classroom. Course content will examine the people and nations that practice this fascinating religion.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS360 East Asian Religions (3 semester hours)

This course deals with theoretical and practical concerns regarding East Asian Religious Studies. From a comparative viewpoint, the indigenous religions of the geographical regions will be studied along with the historical development and modern form of these religious beliefs and practices and how they interact on the world stage.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS370 South Asian Religions (3 semester hours)

This is a survey course for students to understand South Asian religions. The course will use primary and secondary texts, videos, and first-person accounts for instruction to generate class discussions. Hinduism, Buddhism, Jainism, and Sikhism are major religions practiced in South Asia and by their diaspora in the west. This course will invite students to think deeply about different perspectives and how various religions have emerged or accepted teachings from each other to evolve as independent religions. The course covers contemporary applications of the religions with particular attention to the cultural, social, and political structuring of their practices.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS405 Myth and Ritual (3 semester hours)

This course is a study of the role of myth and ritual in historical terms as well as modern myth and ritual developments. Students explore the influence of pervasive myths and rituals in society as they are infused throughout people and religious thought. Students will examine the continued influences of classical, religious and new myths in American popular culture and society today.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS411 Religious Existentialism (3 semester hours)

This course is a study of the set of philosophical ideals that emphasizes the existence of the human being, the lack of meaning and purpose in life, and the solitude of human existence. The course will cover the existentialist philosophy and its leading historical proponents.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS422 The Teachings of Jesus (3 semester hours)

Jesus Christ has impacted the world unlike any other person in history. Profound and multifaceted, Jesus' life and teachings are explored through the careful study of the history, culture, miracles and teachings presented in the four ancient Gospel accounts of Matthew, Mark, Luke and John.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS462 New Religious Movements and Cults (3 semester hours)

This course examines new religious movements and religious cults that span specific times and faith-based perspectives. Its focus is on the development of new religious movements and their growth, as well as the causes of cult formulation, cult leadership, cult purpose, and cult interactions with the outside world. Course content also explores what is meant by the terms "new religious movement," "cult," and "alternative religion," using historical and contemporary examples to illustrate these ideas. (Prerequisite: **RELS101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Retail Management (RTMG)

RTMG150 Retail Organization Fundamentals (3 semester hours)

In this course, students will learn the basics of retail management functions, principles and techniques found in today's marketplace. Students will also explore the ideal characteristics and responsibilities of an effective department or store manager, ranging from legal and safety scenarios to understanding the role and importance of logistics in various retail establishments. In this class, students will focus on the individual as a contributor, their roles and responsibilities in retail management and operations, and its varied sizes and types.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG200 Customer Relations (3 semester hours)

This course introduces students to the basics of customer relations functions and describes the ideal characteristics of good customer relations in both small and large retail organizations. This class will also discuss effective customer relations strategies, effective listening, oral and written communication, analytical and problem-solving skills, and teamwork based on the organization's commitment to meeting customer needs while making customers feel welcome and valued. Students will also learn the methods and approaches to addressing problems, including the management of conflicts when they occur.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG201 Retail Inventory Management (3 semester hours)

This class in retail inventory management will present the significant factors in managing a business’ profits at a steady margin and reducing theft and loss of inventory. Students will learn to distinguish between large and small retail organizations and become familiar with variations in inventory management based upon the nature of the inventory (such as perishable, seasonal, and fashion). The course will also review the skills, tools, and resources required for effective inventory management, as well as the strategies for keeping inventory current and various ways to identify and mitigate inventory management challenges.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG202 Risk Management (3 semester hours)

This course enables students to identify, define, and explain risk situations and to develop management concepts, techniques and processes and understand from a company perspective the impact of safety and compliance policies. To understand risk management students will examine risk management origins and trends from an insurance perspective in retail and develop skills in interpreting the impact that unresolved risk management issues can have on compliance, safety and the bottom line. Risk management is about insurance and developing policies to mitigate risk. This strategic focus and its application are covered in this class.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG204 Finance Fundamentals (3 semester hours)

During this course, students will develop a basic vocabulary and application of finance functions and principles. Students will describe the importance of knowing retail based calculations such as retail pricing, markup, and gross profit. They will relate the concepts of retail math (initial margin, markdown, shrinkage, gross profit dollars and percents) to finance and to the overall business success of the retail enterprise. They will define and apply ending inventory, retail cost, cost compliment, net profit, net sales, controllable expense, and non-controllable expense. Students will examine how retail finance can be applied to products and services in a wide variety of situations and how to review a project and evaluate the financial situation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG300 Retail Strategy (3 semester hours)

This course in retail strategy will teach students to use analytical techniques for diagnosing the competitive position of retail-focused strategy and discover specific retail options to suit particular markets. Students will discover the strategic perspectives of retail management; examine essential concepts in the retail industry; determine how retail businesses increase returns; and learn ways to create economic value for owners and stakeholders. Students will also examine how consumers behave as shoppers and what retailers can do to create and satisfy customer demands.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG301 Retail Innovation (3 semester hours)

This course looks at new or significantly improved service concepts such as new customer interaction channels and approaches, new distribution systems, and innovative technological concepts. Students will examine how retailers must continually review current practices and introduce innovative concepts to remain competitive. The class will also explore how market patterns change and create both opportunities and threats for retailers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG302 Retail Operations (3 semester hours)

In this retail operations class, students will study how to manage the day-to-day functions of retail establishments, such as department stores, grocery stores and specialty shops. Students will also learn how to formulate and analyze of policies and operations that collectively determine how a retail-oriented business positions itself to increase its returns and create economic value for its owners and stakeholders. In addition, students will be introduced to analytical techniques for diagnosing the competitive position of retail-focused strategy and the functions and applications of retail operations theory.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG303 Retail Merchandising Operations (3 semester hours)

For this course, students will examine retail merchandising operations as the principal task of in-store managers and sales personnel. Students will also learn all of the functions related to merchandising and corporate profitability and how to manage and arrange products on display in a store to increase sales within a competitive market. In addition, students will discover how today’s global business organizations utilize techniques and resources to succeed and remain profitable.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG304 Digital Retail Inventory Management (3 semester hours)

In this course, students will review the digital retail inventory management processes and methods used to keep track of stock and inventory. These methods control ordering, shipping, receiving, inventory tracking, retail turnover, and storage. Also, students will analyze the skills, tools, and resources required for effective inventory management, as well as strategies for keeping inventory current. In addition, students will learn different ways to identify and mitigate inventory management challenges and risks to support a retail organization's profitability.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG305 Financial Concepts in Retail Management (3 semester hours)

During this course, students will develop a basic vocabulary and application of finance functions and principles. Students will describe the importance of knowing retail-based calculations such as retail pricing, markup, and gross profit. They will relate the concepts of retail math (initial margin, markdown, shrinkage, gross profit dollars and percentages) to finance and to the overall business success of the retail enterprise. They will define and apply ending inventory, retail cost, cost complement, net profit, net sales, controllable expense, and non-controllable expense. Students will examine how retail finance can be applied to products and services in a wide variety of situations and how to review a project and evaluate the financial situation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG310 Digital Retail (3 semester hours)

This Digital Retail course provides an introduction to digital retail concepts and principles and explores real-world practices for engaging the customer in the shopping experience that empowers both the employee and the consumer. Students will be introduced to the evolution of retail markets from pre-industrial to modern times. Students will investigate the way retailers are using technology in both small and large organizations to create seamless transactions for an e-commerce or mobile platform, along with efficient supply chain and distribution methods. In addition, this course includes a discussion on the inherent risks of digital retail, including data fraud and safety protection.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG311 Digital Retail Technologies (3 semester hours)

This course is designed to provide a foundational knowledge in digital retail technology and how it is used by retailer, both large and small. As technology has changed the landscape of retail processes, it has also created a necessity for decision-makers to have the ability to use various methods to evolve in the global retail market. Students will learn how to use predictive analytics to help organizations problem-solve retail objectives. In addition, students will explore new ventures retailers are taking to overcome challenges in the market place through implementing digital inventory and supply chain management. Students are introduced to the trends and challenges of new technology including augmented reality, enhancing the customer experience, smart enabled equipment, and product customization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG312 Digital Retail Analytics (3 semester hours)

This course focuses on digital retail analytics. Students will have the opportunity to discuss and review terminology, concepts and best practices in digital retail analytics. Topics will include the role digital retail analytics plays in the supply chain, inventory, customer relations, merchandising, and security. Students will examine methods used to best uncover patterns in data. Looking forward, students will develop predictive tools to benefit retailers in future planning and strategy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG313 Digital Retail Strategies (3 semester hours)

This course focuses on digital strategies in retail. Students will have the opportunity to discuss and review terminology, concepts, best practices and strategies in digital retail. Topics will include the creation and implementation of digital strategies and digital market planning used by successful retailers. Students will explore the retailer's role in society, providing insights as to how consumers behave as on-line shoppers, what retailers do to create demand, as well as their role in satisfying customer demands in a digital world. In addition, students will discuss digital retail strategies from the perspective of planning for success as well as identifying challenges and problems that occur when retailers do not react to rapid changes in the digital marketplace.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG314 Digital Merchandising (3 semester hours)

This course is designed to provide the student with an in depth understanding of digital merchandising, fashion, retail, and consumer shopping behavior from a digital perspective. Materials that will be covered include digital, social, and mobile platforms as we explore the future of digital merchandising. Students will discuss the increasing role of e-commerce and how mobile technologies are shaping the consumer shopping experience and how to best utilize these tools to drive business success. Students will explore digital merchandising and how promotions and web layout design can affect consumer purchasing and decision-making processes. Students will also explore how trend forecasting, digital marketing and advertising campaigns affect the sale of products in the digital marketplace.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG315 Retail Cybersecurity (3 semester hours)

This Digital Retail Cybersecurity course provides a broad overview of cybersecurity concepts and principles and explores real-world threats facing today's retailers in a global economy. Students will assess various methods retailers can utilize to avoid security threats on outdated hardware or software. Students will investigate various data breaches throughout the past decade, analyze ransom and malware attacks, and discuss how retailers and consumers are both a part of preventing financial data breaches. In addition, this course includes a discussion on the inherent risks of digital supply chains, third party vendors, and explores the ever-increasing mobile security issues facing retailers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Reverse Logistics Management (RLMT)

RLMT301 Introduction to Reverse Logistics Management (3 semester hours)

This course provides students with a systems-centric view to explore what is seen as today's wide range of practices in reverse logistics applications in manufacturing, retail and in the military. It includes the many definitions related to reverse logistics, the different scope, practices, procedures and processes of reverse logistics as compared to forward logistics. It explores the various dilemmas practitioners face in designing a reverse logistics system. A practitioner approach is used to explore and examine the management functions and the interrelationships among the components of reverse operational logistics are provided. This course is intended for students and professionals working in reverse logistics, retail business management, general management, transportation management, supply chain management, and corporate and military decision makers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT302 Environmental Issues in Reverse Logistics (3 semester hours)

This course provides students with an overview of sustainment of materials recovered from waste management programs. Students will study environmental regulations and their impact on company's plans to dispose of unused or waste materials into landfills or recycling programs. Students will gain a perspective on how reverse logistics can work to improve the environment to help increase the value of the company's products, and increase revenue in the process. The student will evaluate the direct and indirect impact of reverse logistics operations and the impact on the local, regional, and world environment. The "green" movement will be explored as a competitive advantage. The student will study various recycling processes for various products, from automotive to clothing to food and beverages.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT303 Technology in Reverse Logistics (3 semester hours)

This course provides students with a systems-centric view to explore how tracking and tracing technology, such as GPS, bar codes and Radio Frequency Identification (RFID) tags can be used in reverse logistics operations for returns, recalls, recycling and waste management. Case studies of today's best practices in reverse logistics technology used in manufacturing, retail and in the military will be studied and discussed. Packaging technology and the growth of new types of packages to reduce waste will be examined. A comparison will be conducted on how different technology is used in processes of reverse logistics as compared to forward logistics. A practitioner approach is used to explore and examine the management functions and the interrelationships regarding the use of technology to capture data for products flowing in the reverse logistics system. Data synchronization and the issues of interfacing legacy software systems or information technology systems will be explored. This course is intended for students and professionals working in reverse logistics, retail business management, general management, transportation management, supply chain management, and corporate and military decision makers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT304 Reverse Logistics Policies and Procedures (3 semester hours)

This course demonstrates the 21st century importance of strategic reverse logistics planning in contributing to corporate profits, customer service enhancements leading to higher sales and a marketing weapon to gain sustainable competitive advantage. The importance of moving information becomes equal to the movement of goods but is different when working in forward logistics compared to reverse logistics operations. Federal and state regulations regarding waste management and the handling of recycled materials will be examined. Managerial perspectives are offered on aligning corporate planning, technology, financial controls and reverse logistics performance measurement. Students will also gain an overview on the interaction among stakeholders in the public and private sectors in aligning public policy with global uncertainties when implementing reverse logistics operations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT305 Cost and Benefit Analysis of Reverse Logistics (3 semester hours)

This course provides students with a systems-centric view to explore the financial management components needed to develop best practices in reverse logistics applications in manufacturing, retail and in the military. A systems view of total life cycle cost will be calculated and compared to the benefits or value added by incorporating a reverse logistics process to manufacturing and retail operations. Students will analyze a potential reverse logistics case study to determine the short and long term financial implications to the company and to the environment. The student will examine how to define the problem and the core assumptions that define the problem space. This course is intended for students and professionals working in an organization that uses or is considering using reverse logistics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT306 Green Logistics Programs and Issues (3 semester hours)

This course provides students with an understanding of sustainability and environmental issues and programs for today's logistics and supply chain manager. Students will examine recycling activities of several corporations and examine "green" technology initiatives from using energy-efficient lighting to using wind and solar power. Legislation and regulations will be examined and discussed that place boundaries on greenhouse gases in manufacturing and in retail operations. International impacts on U.S. policies and programs, such as Cap-and-Trade will be examined in relationship to similar programs in other countries. The definition and potential impact of global climate change will be discussed. The student will examine how different manufacturing and distribution companies are complying or not with the Carbon Footprint concerns.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT307 Food and Beverage Reverse Logistics (3 semester hours)

This course provides students with a systems-centric view to explore what is seen as today's best practices in reverse logistics applications to the food production and distribution industry as well as the beverage industry. The student will study new container and packaging designs, such as the TEDSBOX, to help eliminate the spoilage factor of food and beverage movement in a reverse logistics operation. The issue of food and beverage is complex with many solutions from retail grocery giants. How to process returned food and beverage items will be explored and options discussed. Field survey of a grocery store or commissary near the student will be encouraged in order to obtain the unique language used in each type of retail store. Recycled food and beverage items will be examined in order to reprocess basic ingredients, such as sugar, to be resold in the marketplace next to virgin sugar. This course is intended for students and professionals working in manufacturing and retail reverse logistic who are concerned with returns and unsalable products.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT309 Reverse Logistics Management and Operations (3 semester hours)

This course provides students with an overview of today's best practices in reverse logistics applications in manufacturing, retail and in the military. It includes the nature, scope, practices, procedures and processes of adding a reverse logistics operations center to a forward logistics supply chain. A practitioner approach is used to explore and examine the management functions and the interrelationships among the components of reverse operational logistics are provided. Case studies of Central Returns Centers are examined and core assumptions derived to help define the steps to follow in setting up a Central Returns Center. This course is intended for students and professionals working in logistics, retail business management, general management, transportation management, supply chain management, and corporate and military decision makers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT400 Recalls Best Practices and Issues (3 semester hours)

This course provides students with a systems-centric view to explore what is seen as today's best practices in product recalls in manufacturing and retail. There appears to be no one standard set of practices or steps to follow for recalls. Each time a recall is voluntary or is issued by a company or the government, different procedures seem to be followed. This course will examine case studies of recalls from the food and beverage industry, consumer electronics, automotive, toys, and home appliances and furniture. The student will examine these cases to discover a set of procedures or steps that are common and those that are unique. This course is intended for students and professionals working in reverse logistics, retail business management, general management, transportation management, supply chain management, and corporate and military decision makers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT495 Senior Seminar in Reverse Logistics Management (3 semester hours)

This course allows students majoring in Reverse Logistics Management (RLM) to analyze specific issues of defining the various components of reverse logistics operations both domestically and internationally. This course will provide students with the opportunity to complete an approved academic research project that demonstrates knowledge of a selected applications area in reverse logistics management. The project, chosen on a specific topic, will be completed by each student in the course. (Prerequisite: Completion of a minimum of 106 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

School of Health Sciences (PSYC)

PSYC460 Sports Psychology (3 semester hours)

Students will examine human behavior in a sport and exercise setting. They will understand that enhancing individual performance is a primary objective of sport psychology. Students will learn how to create a psychological skills training program, which incorporates theories of anxiety reduction, imagery training, and self-efficacy. Current theoretical perspectives of personality factors in exercise and sport, why people exercise, what motivates an individual, exercise/sport adherence, stress, anxiety, and arousal, and the psychological effects of exercise and sport will be investigated. Students will learn the key features of effective goal setting, and apply this understanding to their own professional development.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

School of Health Sciences (SCIN)

SCIN255 Principles of Pathophysiology and Pharmacology (3 semester hours)

This course introduces students to the fundamental physiological principles of disease and injury and the mechanisms and use of drugs in the care and treatment of humans. It is intended to prepare students for careers in the health sciences and healthcare systems (medical assisting, medical technology, radiologic technology, respiratory therapy, health information management, medical coding, etc.). Initial lessons provide an overview of cellular injury, inflammation, immunity, drug naming, classification, and common mechanisms of drug action. Later lessons examine the common diseases and medications affecting each organ system. (Prerequisite: **HIMA100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Science and Society (STEM)

STEM100 Introduction to STEM Disciplines (3 semester hours)

This course provides students a chance to explore an array of topics and disciplines across science, technology, engineering and mathematics (STEM) and provides a solid exploration of the STEM industry and career opportunities through undergraduate study. Students will be introduced to major areas of STEM, covering the fundamental concepts of each discipline, and how STEM topics are integrated into non-STEM areas. Additionally, students will be introduced to career avenues, expectations of career readiness, career satisfaction, and professional communication. There is an emphasis on developing an understanding of personal interests, skills, and abilities, with a focus on helping students find their passion through self-reflection and self-assessment. Additionally, this course is designed to foster community among students from a variety of majors.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM185 The History and Context of STEM (3 semester hours)

This course offer students the opportunity to delve into the history and context of the STEM disciplines. The course will review not only the definition of STEM (Science, Technology, Engineering, and Mathematics), but the history of the individual study areas and their progression toward a unified field of study. The course will delve into the similarities that helps to unite these fields as well as the distinct differences that separate them. Students will be exposed to a wide range of topics as the course looks at different key timeframes in STEM, such as 19th century America and Europe as well as today. **STEM185** and **HIST270** are considered equivalent courses. Beginning January 2023, students may only take one of these courses for credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM270 Thinking and Acting Ethically (3 semester hours)

This course offers students a chance to delve into ethics from many approaches. Every day, an individual's ethics may be challenged, and this course will do its best to provide a foundation on which students can develop a personal set of ethics. The course covers various ethical frameworks, reviews the ethical challenges individuals are likely to encounter in their daily or professional lives, and explores solutions based on ethical principles.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM280 Exploring Society and Cultures via Science Fiction (3 semester hours)

This course offers students with a unique approach into the societies and cultures that we could progress toward in the future via the review of the science fiction genre. This course will review many aspects of technological questions that society will face in the future. Does the rise of technological advancements in artificial intelligence and robotics eventually bring us to a point where we must decide what is life and the right to self-determination as the Star Trek: TNG series covered in "The Measure of a Man", laying out the rights of Commander Data. This is just one of many aspects of society and culture that will be examined throughout the course as students are made to think critically about what will the future look like.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM380 Coevolution of Society, Culture, and Technology (3 semester hours)

This course will expose students to how since the earliest days of mankind, technology and technological advances have helped to mold our society and guide our prosperity, but also to the goals of the society in driving the development and progression of technology as well. This course will review the various periods of time, where the world leaped forward in their understanding of the world around them and how they could harvest the world around them to advance their own world. This course will also reveal the potential conflicts of complex relationships between technology and society, looking at such topics as global warming, artificial intelligence, nuclear weapons, and many other potentially dangerous technological advances.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM470 Cybersecurity, Surveillance, Privacy and Ethics (3 semester hours)

This course offers an opportunity for students to look into the surveillance that takes place at all levels in today's world. The course will first review the collection of surveillance technologies such as CCTV, border control, traffic cameras, etc. The course will then continue onward to look into such innocuous and hidden data collection such as website analytics, app data collection, online identity databases, and more. These topics will be viewed not only from the collection standpoint but also from a privacy standpoint and an ethical standpoint. Students will study these data collections and look at the rationales for their collection and be encouraged to justify or refute these collections on an ethical or privacy basis.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM471 Analytics, Algorithms, AI, and Humanity (3 semester hours)

Welcome to STEM 471. In this course, you will explore how artificial intelligence, AI systems, and AI algorithms shape society and influence everyday life. You will examine the societal impacts of AI technology, including ethical, political, psychological, and economic dimensions such as ethical concerns, decision making, and racial and gender biases. Coursework develops critical thinking about the use of AI and its AI capabilities and AI risks. Your work will inform both personal and professional applications, including how AI development and such systems may benefit society. No prior technical background is required.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM493 Independent Study for Bachelors Students (3 semester hours)

Bachelor's students can pursue an independent study course, which the University occasionally offers in response to student interest. Students have the opportunity to study their chosen subjects under a faculty mentor's guidance. These courses are limited in their offerings and scope, and the format will vary based on the student's interest and the topics to be covered in the course. Approval of the Department Chair is needed prior to enrollment.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM494 STEM Special Topics for Bachelors Students (3 semester hours)

Special Topics courses are offered occasionally, in response to student interest, on emerging topics. These courses are limited in their offerings and scope, and the format will vary based on the student interest and the topics to be covered. Enrollment by Program Director approval.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Science (BIOL)

BIOL133 General Biology I with Lab (4 semester hours)

This course provides a foundational basis for the study of basic biology. It is the first in a two-part biology series designed for students who intend to complete a degree that requires a majors-level biology course.

Topics covered in this course include an introduction to the molecular basis of life; the biology of the cell; genetic and molecular biology; evolution; and the variety of life on Earth. This course includes virtual laboratories that complement the topics and concepts covered in the lectures.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL134 General Biology II with Lab (4 semester hours)

This course is the second in a two-part biology series designed for students who intend to complete a degree that requires a majors-level biology course. Topics in this course include the variety of life on Earth; plant form and function; animal form and function; and ecology and behavior.

This course includes virtual laboratories that complement the topics and concepts covered in the lectures. NOTE: This course requires students to purchase additional materials that are not covered by the undergraduate book grant. Please refer to the Course Materials section for additional details. (Prerequisite: **BIOL133**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL180 Introduction to Biology (3 semester hours)

This course introduces students to the biological systems within their associated environments. The course furnishes an understanding of biological principles and the properties of life. Topics covered in this course include the structure and function of plants and animals, cell biology principles, genetics, reproduction, development and growth, the variety of life on Earth, principles of evolution, and interactions among organisms and with their environment. Students will discuss the process of the scientific method and also demonstrate science information literacy skills through source selection and completion of a course project.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL181 Introduction to Human Anatomy and Physiology (3 semester hours)

This online human anatomy and physiology course explores the structure and function of the human body, emphasizing homeostasis, integration, and regulation of physiological processes. Students explore cells, tissue types, and major organ systems, including integumentary, skeletal, muscular, nervous, endocrine, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems, as well as an overview of gestational development and an introduction to patterns of inheritance. Emphasis is placed on anatomical structure, molecular mechanisms, and environmental interactions that influence health and disease. Learners apply scientific concepts and life sciences principles to understand how the body works, developing analytical and research skills essential for success in science and healthcare-related fields.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL201 Principles of Anatomy and Physiology with Lab (4 semester hours)

This course introduces students to the fundamental principles associated with the structure and function of the human body. It is intended to offer knowledge and skills often required in the health sciences and healthcare systems, such as medical assisting, medical technology, radiologic technology, respiratory therapy, health information management, and medical coding.
The lessons and laboratory exercises focus on the organization, microscopic and gross anatomy, and the functions of the integumentary, musculoskeletal, nervous, endocrine, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems of the human body. The course will also introduce the basics of chemistry and cell biology to provide a foundation for discussion of individual organ systems.
This course includes a virtual laboratory component. This is a time- and resource-intensive course. Students intending to pursue a career in the health sciences should verify that this course meets the requirements of their intended program prior to enrollment. NOTE: Students may take either **BIOL201** or **BIOL250**/**BIOL251** for credit, but not both versions of the anatomy and physiology courses.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL202 Principles of Microbiology with Lab (4 semester hours)

This course includes the study of the history of Microbiology, as well as the fundamentals of microbe staining, culture and growth. We will also focus on sterilization, disinfection and antimicrobial therapies that help to keep microbes in check. Finally, the course will focus on microbial infections of the skin, eyes and wounds as well as the urogenital, respiratory, oral gastrointestinal and nervous systems. This course includes a laboratory component that allows the student to explore exercises in the principles and concepts of microbiology. This course is designed for students with interests in basic science, microbiology and the medical professions. NOTE: Students may take either **BIOL202** or **SCIN202** for credit, but not both versions of microbiology. (Prerequisites: **BIOL133** or **SCIN130**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL240 Elements of Biological Chemistry (3 semester hours)

This course introduces students to the fundamental principles associated with the structure and function of the macromolecules that sustain living systems. The course will begin with a general introduction to organic chemistry including the molecules and functional groups that set this category of chemistry apart from the others. Topics will then move on to more specific molecules such as carbohydrates, lipids, proteins and nucleic acids along with the cellular processes involved in building and metabolizing these macromolecules. Additional details regarding biology at the cellular and molecular level will include topics such as nutrition, body fluids, pH and cellular respiration. (Prerequisites: **CHEM134**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL241 Cell Biology (3 semester hours)

This cell biology course will provide a detailed understanding of the fundamental processes of cellular functions. The course will include aspects of prokaryotic and eukaryotic cells as both often share similar mechanisms. In the first half of the course, the focus is on the macro--level with an exploration of basic cell characteristics, cellular membranes, cellular respiration and how cells interact with the environment. In the second half of the course, the focus is on genetics with a look at chromosomes, genes, gene expression, how cell accomplish DNA replication, repair errors that can result in DNA, how cells reproduce, how cells communicate, and finally we will explore the relationship between cancer and the immune system at the cellular level. (Prerequisites: **BIOL134** and **CHEM134**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL250 Human Anatomy and Physiology with Lab I (4 semester hours)

This course is the first of a two-course sequence in human anatomy and physiology. It is an intensive course intended provide knowledge and skills often required in the health sciences, such as sports medicine, physical therapy, EMS, nursing, or physician assistant.
The lessons and laboratory exercises focus on the organization of the human body; homeostasis; basic chemistry; cell biology; genetics and heredity; and the integumentary, musculoskeletal, and nervous systems. It also includes a virtual laboratory component.
This is a time- and resource-intensive course. Students intending to pursue a career in the health sciences should verify that the **BIOL250** and **BIOL251** course sequence meets the requirements of their intended program prior to enrollment.
NOTE: Students may take either **BIOL201** or **BIOL250**/**BIOL251** for credit, but not both versions of anatomy and physiology. (Prerequisites: **CHEM133** or **SCIN131**, and **MATH110**, **MATH111**, or **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL251 Human Anatomy and Physiology with Lab II (4 semester hours)

This is the second of a two-course sequence in human anatomy and physiology. It is an intensive course intended to enhance knowledge often needed in the health sciences, such as sports medicine, physical therapy, EMS, nursing, or as a physician assistant).
The lessons and laboratory exercises focus on homeostasis; metabolism; acid-base balance; human growth and development; and the body's endocrine, cardiovascular, lymphatic, respiratory, urinary, digestive, and reproductive systems. Students are also required to successfully complete a cumulative assessment of anatomy and physiology objectives from both **BIOL250** and **BIOL251**. This course also includes a virtual laboratory component.
NOTE: Students may take either **BIOL201** or **BIOL250**/**BIOL251** for credit, but not both versions of the anatomy and physiology courses. (Prerequisite: **BIOL250**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL301 Molecular Biology (3 semester hours)

This molecular biology course will provide a detailed understanding of the structure, function, and regulation of DNA, RNA and proteins. The first half of the course will focus on the basic biochemical properties of DNA, RNA and proteins to establish and understanding of how these molecules function. The second half of the course will focus on transcription, translation, and regulation of these processes and finally the real-world application of molecular biology. (Prerequisite: **SCIN211**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL302 Viruses (3 semester hours)

This course will introduce students to the concept of viruses as nonliving parasites that prey upon microbes, plants, and animals. Students will explore various aspects of viruses, including molecular composition and structure, host specificity, viral diseases, and viruses as a cause of genomic evolution. The origins and evolution of viruses will be discussed, including how zoonotic viruses such as Zika and COVID-19 gained the new ability to infect humans. (Prerequisite: **BIOL241**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL404 Synthetic Biology (3 semester hours)

This interdisciplinary course explores how scientists are working to engineer living organisms. This work includes experimental manipulation to modify individual genes, add foreign genes from other organisms, and construct living systems from non-living components. In this way, organisms are redesigned for useful purposes by engineering them to have new abilities.
The course will cover the biological background of gene regulation and experimental methods for the construction of gene circuits. It will also explore practical examples of synthetic biology from medicine, manufacturing, and agriculture. In addition, students will address potential ethical issues that might arise with the construction of entities that fall somewhere between living things and machines or between humans and other organisms. (Prerequisite: **BIOL301**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Science (CHEM)

CHEM133 General Chemistry I with Lab (4 semester hours)

This is the first course of a two-course general chemistry sequence that introduces students to the principles, terminology, methodology, and worldview of chemistry. Lecture and lab topics are both descriptive and mathematical and include matter, measurement and problem solving; atomic theory and structure; the periodic table; and nomenclature. Other topics covered in the class are the physical properties of gases, liquids, and solids; molecular bonding and geometry; stoichiometry; thermochemistry; the types of chemical reactions; and solution chemistry.
The virtual laboratory exercises in this course are designed to help students to learn how to make qualitative and quantitative observations about physical and chemical phenomena; to make calculations; and to test their own reasoning. Students will also acquire skills in laboratory techniques to reinforce and build upon the concepts presented in class lectures.
This is a time- and resource-intensive course. Students intending to use this course to satisfy prerequisites for pre-professional programs should verify that the **CHEM133** and **CHEM134** course sequence meets the requirements of their intended program prior to enrollment. To be successful in this course, it is recommended that students complete high school chemistry or a basic college equivalent, and they should also be comfortable with basic algebra, including the manipulation of equations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHEM134 General Chemistry II with Lab (4 semester hours)

This is the second course of a two-course general chemistry sequence that introduces students to the principles, terminology, methodology, and worldview of chemistry. Lecture and lab topics are both descriptive and mathematical and include solution chemistry; chemical kinetics; chemical equilibrium; acids and bases; aqueous ionic equilibrium; free energy; thermodynamics; electrochemistry; radioactivity; and nuclear chemistry.
The virtual laboratory in this course is designed for students to learn how to make qualitative and quantitative observations about physical and chemical phenomena, to make calculations, and to test their own reasoning. Students will also acquire skills in laboratory techniques designed to help reinforce and build upon the concepts presented in the lecture portion of the class.
This is a time- and resource-intensive course. Students intending to use this course to satisfy prerequisites for pre-professional programs should verify that the **CHEM133** and **CHEM134** course sequence meets the requirements of their intended program prior to enrollment. In order to be successful in this course, students must have successfully completed CHEM 133 General Chemistry I with Lab or an equivalent course. (Prerequisite: **CHEM133**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHEM180 Introduction to Chemistry (3 semester hours)

This course introduces students to the principles of basic chemistry; the terminology, methodology, and world view of chemistry; and chemistry's practical application to everyday living. Topics discussed in the course include acids, bases, atomic structure, chemical equations, chemical reactions, and chemical language and nomenclature.

Other topics that will be covered in the course include gases, molecular structure, solution chemistry, chemical mathematics, organic chemistry, and biochemistry. Also, students will discuss the process of the scientific method and be required to demonstrate science information literacy skills through the creation of a narrated presentation.

Topics covered in this course require some comfort with math. This course is time-intensive, so students should ensure they have the time to fully commit to this course if it is used to fulfill the General Education science course requirement.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHEM233 Organic Chemistry I with Lab (4 semester hours)

Fundamentals of bonding, structure, and reactions of organic compounds, including nomenclature, molecular geometry, polarity, conformation, isomerism, functional groups, stereochemistry, reactions and reaction mechanisms, and spectroscopy. Designed primarily for chemical engineering and the biological sciences majors: premedical, predental, life sciences, and pharmacy. (Prerequisite: **CHEM134**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHEM234 Organic Chemistry II with Lab (4 semester hours)

Emphasis on organic reactions, reaction mechanisms, synthesis, and spectroscopy building on the foundation of Organic Chemistry I, including functional group reactivity of carbonyl compounds, aromatic compounds, organic acids and bases, polymers, and biomolecules. Designed primarily for chemical engineering and the biological sciences majors: premedical, predental, life sciences, and pharmacy. (Prerequisite: **CHEM233**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Science (ERSC)

ERSC180 Introduction to Meteorology (3 semester hours)

Introduction to Meteorology covers the fundamental principles governing the behavior of our atmosphere and the duties and methods of the professional meteorologist. Students will gain insight into the exciting discipline of meteorology, discussing topics such as cloud formation, movement in the atmosphere, thunderstorms, tornadoes, meteorological satellites, and climate change. Students will discuss the process of the scientific method and also demonstrate science information literacy skills through source selection and creation of a narrated presentation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ERSC181 Introduction to Geology (3 semester hours)

Geology encompasses the study of our planet, and students in this course will explore: how it formed, the nature of its interior, the materials of which it is composed, landforms, earthquakes and volcanoes, geologic resources, and geologic history. Current events that students learn about in the news, ranging from volcanic eruptions, earthquakes, landslides, and more will fit into a larger picture of how Earth works and why such things happen.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ERSC204 Earth System History (3 semester hours)

Earth System History explores the amazing history of our planet. Many astonishing events of the geologic past, and the science behind how they came to be understood are examined. The Earth and its inhabitants have undergone continuous change during the last 4.56 billion years. These changes are investigated using an integrated approach that considers the inter- relationships between the solid Earth, atmosphere, hydrosphere, and biosphere. Thus, students learn how our planet became a place where life began and continued to flourish; how change has dominated Earth history; and how continuing changes to Earth's subsystems may challenge us in the future.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ERSC302 Geomorphology (3 semester hours)

Geomorphology is the study of the physical features of the Earth's crust. The study of geomorphology helps us understand not only about the earth as it is today, but also as it may have been in the past. Climate change and global warming are hot issues in current events these days, but how do scientists determine the climate is actually changing? Through observation of what we see today, and comparison to what we "see" in the past. This allows us to determine if the climate of the earth has always been like it is today or whether it's changed over time. With that knowledge we can predict how the climate might change (or not) in the future. If global warming and cooling has happened before, then it might happen again. One way to determine past climatic conditions is to study the landscape. What types of landforms are associated with different climatic conditions? The Midwest used to be the bottom of a vast shallow sea; the northern part of our continent was sculpted by glaciers that no longer exist. Understanding geomorphology, gives us insight to the landforms we see today that are the result of processes no longer at work on the landscape. (Prerequisite: **SCIN138**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ERSC304 Remote Sensing and GIS for Earth Sciences (3 semester hours)

This class introduces students to the fundamentals of remote sensing, geographic information systems (GIS), and associated geospatial technologies and techniques such as global positioning systems and image interpretation. It will provide an understanding of spatial data and its creation, manipulation, and analysis, through a combination of conceptual learning and hands-on exercises that focus on applications in earth and space studies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ERSC305 Ocean and Atmospheric Dynamics (3 semester hours)

This course will explore the fluid mechanical principles guiding the atmosphere and ocean on a global scale. We will examine the inherit variables in the equations of motion, hydrostatic equations, and balanced flow principles. An examination of the atmospheric general circulation will be discussed including vertical and horizontal structure of temperature, pressure and density as well as a discussion on the dynamics of convection. Ocean dynamics will be discussed including the air- -ocean interaction, thermohaline circulation and ocean heat budget and transport.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ERSC401 Natural Hazards and Society (3 semester hours)

The purpose of this course is to introduce the student to the complex relationships between the natural hazards of earth processes that have direct, and often sudden and violent impacts on human society. The course integrates principles of geology, hydrology, meteorology, climatology, oceanography, soil science, ecology and solar system astronomy. This class describes the earth processes that drive hazardous events in an understandable way, illustrates how these processes interact with our civilization, and describes how we can better adjust to their effects. Examples and case studies are taken from international and U.S. experiences, along with how societies adjust to natural hazards. (Prerequisites: **GEOG103** and **ERSC302**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ERSC402 Earth and Planetary Sustainability (3 semester hours)

This course introduces students to the principles of planetary sustainability. Students explore various aspects of sustainability, including energy use, industrial processes, waste generation and disposal, and the built environment. As part of the focus on solutions, the course introduces students to tools society can use to attain and implement sustainable practices, such as policy, law, education and communication, marketing, research advocacy, and international agreements and collaboration.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Science (GEOG)

GEOG101 Introduction to Geography (3 semester hours)

This course is a basic overview of the geographer's study of the location and distribution of features on the Earth's surface. These features are both natural and man-made, both physically and culturally determined. The relationship of people and place is central to an understanding of human history, contemporary events, and possible global futures. As an introductory course it covers the whole globe and all its greatest geographic features and relationships. This dictates that the approach is broad and not too deep. However, knowledge of the geographer's art will enable students to delve as deeply as their interest and energy will allow, into the dynamic spatial realities that surround them.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

GEOG103 Physical Geography (3 semester hours)

Physical Geography includes the study of processes of the atmosphere, hydrosphere, lithosphere and biosphere. Specific topics include maps and map reading, temperature cycles, storms formation, plate tectonic theory, structures of volcanoes, flooding, coastline formation, glaciations, ice ages, and the distribution of plants and animals on the planet. This course is an excellent choice for anyone with interest in environmental studies, natural hazards and the science behind earth processes.
NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

GEOG200 Fundamentals of Geographic Information Systems I (3 semester hours)

The term “Geographic Information System” refers to the synthesis of information (data), software, and hardware for the express purpose of better understanding the world in which we live. Data are collected and managed within this system, and are ultimately used to question, analyze, and interpret patterns that occur throughout physical space. The interaction between different types of data reveals patterns and relationships that are not otherwise readily detectable. This course will provide students with the theoretical concepts necessary for advancement in the field of GIS, and further enhance their experience in a wide range of multidisciplinary endeavors. Note: This course requires students to install software on a Windows-based computer (Windows 7 or higher) in order to complete assigned course work.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

GEOG201 Fundamentals of Geographic Information Systems II (3 semester hours)

This course builds upon principles covered in Fundamentals of GIS I and will provide students an emphasis of hands-on Geographic Information Systems (GIS) experience while solidifying the foundation of the concepts learned in Fundamentals of GIS I. The objectives of this course are to begin establishing a solid foundation in the operation of GIS systems and to teach organizational skills needed for successful GIS project management. Overall this course prepares the student for learning beginning and intermediate functional applications of GIS as well as spatial data analysis. Note: This course requires students to install software on a Windows-based computer (Windows 7 or higher) in order to complete assigned course work. (Prerequisite: **GEOG200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Science (PHYS)

PHYS133 Elements of Physics I with Lab (4 semester hours)

This fundamental Physics course is the first of two courses that examine basic Physics using algebraic techniques. Topics include Mechanics, Fluids, Oscillations, Waves, Temperature, Heat, and thermodynamics. The course involves study through hands-on laboratory experiments designed to help reinforce and build upon the concepts presented in the lectures. NOTE: In addition to the laboratory equipment provided as part of the course materials, students will need access to the following: paper towels, water, a freezer, a stove top, a pot, a pencil and crushed ice. (Prerequisites: **MATH110**, **MATH111**, or **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHYS134 Elements of Physics II with Lab (4 semester hours)

This fundamental physics course is the second of two courses that examine basic physics using algebraic techniques. The course covers electric forces and fields, electric currents and circuits, magnetic forces and fields, electromagnetic induction, alternating current, electromagnetic waves, reflection and refraction of light, optical instruments, interference and diffraction, and an introduction to quantum and particle physics. NOTE: In addition to the laboratory equipment provided as part of the course materials, students will need access to the following: pencils, a printer, several sheets of paper and water. NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details. (Prerequisite: **PHYS133**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHYS180 Introduction to Physics (3 semester hours)

This course is designed as an introduction to classical physics for non-scientists. Students will learn to apply Newtonian principles to the basic topics of motion, gravitation, momentum, work, energy, heat, wave behavior, sound, light, electricity, and magnetism.

Basic algebra will be used in the course to demonstrate how mathematics can describe and predict the real-world behavior of objects from electrons to planets. Students will also be expected to relate physics principles to their daily lives. Also, students will discuss the process of the scientific method and must demonstrate science information literacy skills through the creation of a narrated presentation.

Topics covered in this course require some comfort with math. This course is time-intensive, so students should ensure they have the time to fully commit to this course if it is used to fulfill the General Education science course requirement.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Science (SCIN)

SCIN120 Foundations of Scientific Inquiry Laboratory (1 semester hours)

This course provides an introductory laboratory experience for students who have previously completed a course in the natural sciences (biology, chemistry, physics, earth science, or astronomy) and require a laboratory experience to meet the general education natural sciences requirement for their degree. Students will discuss and apply the steps of the scientific method to activities and simulations drawn from across the natural sciences. Students will also review and demonstrate science information literacy skills through source selection, critical thinking, and writing. Note: Enrollment in this course is limited to incoming transfer students. Contact the Transfer Credit Department at CreditAward@apus.edu for information and registration instructions. This course may only be taken once for credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN130 Introduction to Biology with Lab (4 semester hours)

This course introduces students to biological systems in their natural environments. The course offers an understanding of biological principles and the properties of life.

The topics covered in this course include the structure and function of plants and animals; cell biology principles; genetics; reproduction; development and growth; the variety of life on Earth; the principles of evolution; and interactions among organisms and with their environment. The course will also include online lab work, which is designed to reinforce the concepts in the assigned reading. The lab involves study through interactive simulations, videos, and animations, which will be provided to students throughout the course.

Topics covered in this course require some comfort with math. This course is time-intensive, so students should ensure they have the time to fully commit to this course if it is used to fulfill the General Education science course requirement.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN131 Introduction to Chemistry with Lab (4 semester hours)

This course introduces students to the principles of basic chemistry; the terminology, methodology, and worldview of chemistry; and chemistry's practical application to everyday living. Topics covered in this course include acids, bases, atomic structure, chemical equations, chemical reactions, and chemical language and nomenclature. Students will also learn about gases, molecular structure, solution chemistry, chemical mathematics, organic chemistry, and biochemistry.

This course will also include lab work, designed to help students to learn how to make qualitative and quantitative observations about physical and chemical phenomena, make calculations, and test their own reasoning. Through interactive virtual laboratories, students will acquire skills in laboratory techniques and critical thinking that will build upon the concepts in the class.

Topics covered in this course require some comfort with math. This course is time-intensive, so students should ensure they have the time to fully commit to this course if it is used to fulfill the General Education science course requirement.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN133 Introduction to Physics with Lab (4 semester hours)

This course offers an introduction to classical physics for non-scientists. Students will learn to apply Newtonian principles to the fundamental topics of motion, gravitation, momentum, work, energy, heat, wave behavior, sound, light, electricity, and magnetism. Basic algebra will be used in this course to demonstrate how mathematics can describe and predict the real-world behavior of objects ranging from electrons to planets.

Students will be expected to relate physics principles to their daily lives. Through interactive simulation software, lab exercises will teach students how to take measurements, make observations about physical phenomena, make calculations, and test out their own reasoning.

Topics covered in this course require some comfort with math. This course is time-intensive, so students should ensure they have the time to fully commit to this course if it is used to fulfill the General Education science course requirement.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN134 Introduction to Astronomy with Lab (4 semester hours)

This course will introduce students to the wonders of the universe. Topics covered in this course will involve deciphering the movement of objects in the sky; learning how astronomers decode the light coming to us from distant objects; exploring the Earth and other bodies in our solar system; and investigating the properties and structure of stars, galaxies, and the universe.

Students will be encouraged to develop a conceptual understanding of these topics beyond the mere memorization of facts. With lab work and online tools, students will engage in astronomy inquiries and learn how astronomers work by asking research questions, collecting data, and defending evidence-based conclusions.

This course is conceptual in nature, but students should expect to use some mathematics. Completion of at least college algebra prior to taking this course is highly recommended. This course has a required prerequisite of **MATH111**.

Topics covered in this course require some comfort with math. This course is time-intensive, so students should ensure they have the time to fully commit to this course if it is used to fulfill the General Education science course requirement. (Prerequisite: **MATH111**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN137 Introduction to Meteorology with Lab (4 semester hours)

Introduction to Meteorology covers the fundamental principles governing the behavior of our atmosphere and the duties and methods of the professional meteorologist. Students will gain insight into the exciting discipline of meteorology, discussing topics such as cloud formation, movement in the atmosphere, thunderstorms, tornadoes, meteorological satellites, and climate change. The Meteorology laboratory will take the student deeper into the aspects of our weather through the study and exploration of our atmosphere via online interactive modules prepared by professional meteorologists. Topics to be discussed range from hurricane formation and the impacts of extreme weather to forecasting local weather and toxic pollution. The online laboratory modules increase the student's awareness of our planet through hands-on activities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN138 Introduction to Physical Geology with Lab (4 semester hours)

Geology encompasses the study of our planet, and students in this course will explore: how it formed, the nature of its interior, the materials of which it is composed, landforms, earthquakes and volcanoes, geologic resources, and geologic history. Current events that students learn about in the news, ranging from volcanic eruptions, earthquakes, landslides, and more will fit into a larger picture of how Earth works and why such things happen. The laboratory component of the course provides students with practical activities which reinforces the content of the course in a virtual format. (Prerequisite: **MATH111**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN140 Introduction to Environmental Science with Lab (4 semester hours)

This course will give students the opportunity to learn and connect with the central issues of environmental science. This is a course primarily for the non-scientist. The basic concepts of ecology, geography, chemistry, economics, ethics, policy, and many other disciplines will be used to examine the overarching role that humans play in our planet's environmental problems and successes. The laboratory exercises will allow students to use hands-on, field, and/or Internet resources to collect and evaluate qualitative and quantitative data regarding the human-environment relationship. Lifestyle examination, ethical considerations, and critical analysis of individual contributions to local and global impacts in regards to environmental sustainability will be emphasized in the laboratory portion of this course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN202 Introduction to Microbiology (3 semester hours)

Introduction to Microbiology includes the study of the history of microbiology, as well as the fundamentals of microbe staining, culture, and growth. We will also focus on sterilization, disinfection and antimicrobial therapies that help to keep microbes in check Finally, we will focus on microbial infections of the skin, eyes, and wounds as well as the urogenital, respiratory, oral gastrointestinal and nervous systems. NOTE: Students may take either **BIOL202** or **SCIN202** for credit, but not both versions of microbiology. (Prerequisites: **BIOL133** or **SCIN130**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN211 Principles of Genetics with Lab (4 semester hours)

This course is an introduction to the basic principles of human genetics and heredity. Students will investigate both classical Mendelian genetics and modern molecular genetics. Topics include the transmission of genes from one generation to the next, the molecular structure of genes, the regulation of gene expression, genes and cancer, genetic technology, genetically modified foods, gene therapy and population genetics. The course is designed for all students interested in human genetics, the application of genetic principles and genetic technology. (Prerequisites: **BIOL133** or **SCIN130**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN233 Physics I with Lab (4 semester hours)

This fundamental Physics course is the first of two courses that examine basic Physics using Calculus techniques. Topics include Mechanics, Fluids, Oscillations, Waves, Temperature, Heat, and Thermodynamics. The course involves study through interactive simulation laboratories designed to help reinforce and build upon the concepts presented in the lectures. (Prerequisite: **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN234 Physics II with Lab (4 semester hours)

This fundamental physics course is the second of two courses that examine basic physics using Calculus techniques. The course covers Electric Forces and Fields, Electric Currents and Circuits, Magnetic Forces and Fields, Electromagnetic Induction, Alternating Current, Electromagnetic Waves, Reflection and This fundamental physics course is the second of two courses that examine basic physics using Calculus techniques. The course covers Electric Forces and Fields, Electric Currents and Circuits, Magnetic Forces and Fields, Electromagnetic Induction, Alternating Current, Electromagnetic Waves, Reflection and Refraction of Light, Optical Instruments, Interference and Diffraction, and an Introduction to Quantum and Particle Physics. (Prerequisites: **SCIN233** and **MATH226**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN311 Fishery Biology (3 semester hours)

This course will present the principles and methods used in studying the biology of fishes, the ecological requirements of freshwater and anadromous fishes, and the principles and practices in sport fishery management. Students will participate in case studies and critically analyze existing fisheries management plans to ascertain their effectiveness and scientific validity. This course will also emphasize the value of collaboration in effective fisheries management. (Prerequisites: **BIOL134**, **BIOL180**, **SCIN130**, or **SCIN206**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN314 Botany (3 semester hours)

An introduction to the structure, processes, and reproduction of higher plants with an emphasis on flowering plants. This course will use an integrative approach to examine the relationships between structure and function, variation, and evolution. (Prerequisites: **BIOL134**, **BIOL180**, or **SCIN130**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN316 Plant Identification, Taxonomy, and Systematics (3 semester hours)

An introduction to classification and evolution of vascular plants, with emphasis on flowering plants (angiosperms). This course will use structural terminology, characteristics of major plant families, and systematics. Student will use taxonomic keys, floras, and manuals for species identification. (Prerequisites: **SCIN130** or **BIOL134**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN400 Research Methods in Natural Sciences (3 semester hours)

This course focuses on providing students with the essential elements of scientific research and matters associated with the scientific method; experimental and non-experimental research design; and statistical data analyses. Students will become familiar with the current methodologies, tools, and instruments of modern research, such as sampling, test design, data collection reporting, and the scientific writing process.
In addition, each student will develop a proposal to conduct an original research project in the field of natural sciences. This proposal will then be used as the basis for an independent research project in **SCIN499**.
The University recommends that students do not attempt this course until they have completed all required courses for the natural sciences major and all required courses in the biology or earth science concentration. (Biology concentration prerequisites are **BIOL240**, **BIOL241**, **EVSP416**, **SCIN202**, and **SCIN211**. Earth Science concentration prerequisites are **GEOG200**, **SCIN138**, and **SCIN261**.)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN401 Mammalogy (3 semester hours)

The goal of this course is to introduce students to the biology of the class Mammalia. The course will include a survey of the origins, evolution, variation, and adaptations of mammals to diverse environments. Topics include taxonomy, reproduction, sensory perception, herbivory, population cycles and behavior. Students will use case studies to apply the concepts of mammalogy to broader problems of species management, biological variety, and the effects of development and habitat fragmentation on mammals. (Prerequisites: **BIOL134**, **BIOL180**, or **SCIN130**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN402 Ornithology (3 semester hours)

Ornithology is the study of the anatomy, physiology, and behavior of birds. In this course, students will integrate ornithological study with the principles of bird conservation and management. Students will learn to identify birds by sight and call and will learn the names of the major orders and families of birds throughout the world. (Prerequisites: **BIOL134**, **BIOL180**, or **SCIN130**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN499 Senior Seminar in Natural Sciences (3 semester hours)

Instruction in analysis and presentation of original scientific research. Each student will carry out an original independent research project which was proposed in **SCIN400**. After data collection, each student will analyze and interpret data collected from the experimental project executed as part of this upper-level course. Each student will prepare a scientific paper and a live webinar presentation of their research. This is considered the capstone course for students completing majors within the natural sciences. (Prerequisites: **SCIN400** and completion of a minimum of 106 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Security Management (SCMT)

SCMT101 Introduction to Security Management (3 semester hours)

This course is an introductory course to the Security Management field and is designed to familiarize students with the profession as well as to provide an overview of security measures used in the industry. Emphasis is placed on distinguishing the terminology used in the security industry. The student will be exposed to such topics as the privatization of public safety, use of technology and physical security, contract and proprietary security, executive protection, special event security, access control, integrated security systems, and the need for assessing vulnerabilities to increase the security posture of an organization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT150 Transportation and Border Security (3 semester hours)

This course is designed to provide the student with an understanding and knowledge of modern transportation and border security challenges as well as techniques to combat those challenges. The course will address changes in infrastructure technology as well as the technology that TSA has to respond to events. We will explore prevention, detection, response, and mitigation. Transportation and border systems of particular interest in this course include, but are not limited to: seaports, ships, airports, aircraft, train stations, trains, railways, highways, bridges, trucks, buses, and pipelines. Students will emerge with a greater understanding of potential threats to our borders and transportation systems, as well as preparation and responses to these threats.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT301 Foundations of U.S. Government Security (3 semester hours)

This course offers the student an overview of many of the primary laws and policies, which drive the U.S. Government's security apparatus. There is a vast array of policy covering security topics, which are promulgated throughout numerous U.S. Government agencies. Topics will include the U.S. Constitution, Executive Orders, Presidential Decision Directives, and the National Industrial Program Security Operating Manual. The student will gain an appreciation for the complexities involved in securing U.S. Government sponsored facilities, personnel and information.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT302 Protecting U.S. Government Facilities (3 semester hours)

This course offers the student an in-depth look into the construction and security management requirements of a wide range of United States Government sponsored facilities (domestic and overseas). This course includes coverage of a wide array of natural and man-made threats that must be considered in facility construction as well as special requirements for constructing facilities designed for the protection of classified information. Additionally, this course will cover facility security management procedures and build upon the student's existing knowledge of basic physical security principles. The student will gain an appreciation for the wide range of facility security applications across the federal government.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT303 U. S. Government Personnel Security (3 semester hours)

Personnel Security (PERSEC) is the fundamental program in government security that provides a process for vetting and maintaining individuals' suitability, reliability, and trustworthiness. This course offers the student an in-depth exploration of the steps to gaining access to United States National Security information, facilities and Information Systems. Basic requirements for access with emphasis on the National Industrial Security Program Manual (NISPOM) PERSEC process, as well as processes utilized by the Intelligence Community for Access to Sensitive Compartmented Information (SCI) and the Special Access Program (SAP) communities will be covered.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT319 Global Terrorism (3 semester hours)

This course examines various elements and aspects of International and Domestic Terrorism. Students explore the cultural and ideological philosophies, as well as the social, economic, political, and religious conditions of select states, groups, and individuals that comprise the phenomena of terrorism. By examining the historical and contemporary aspects of terrorism students develop a working knowledge of the current Global War on Terror and are better prepared to comprehend terrorist motives and ideologies. Topics include: History and Development, Types of Terrorism, Conventional and Unconventional terrorist tactics, the Media's impact on terrorism including the US Counterterrorism Policies. Particular attention is addressed to the Al-Qaeda terrorist network.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT370 Principles and Theory of Security Issues (3 semester hours)

This course is an overview of the principles and issues in business and organizational security management. It reviews the classical management functions including the role of the Chief Security Officer and the principles of organizing the security function. It assesses the traditional management theories and concepts of planning, staffing, span of control as they are applied to the organization. Students examine the challenges embodied in various aspects of physical, personnel, and information security. Principles of loss prevention and the protection of assets are also considered. The history, legal foundations, functions, operations, processes, and tools of security management are explored to ensure the student has a broad understanding of security management and its current role in government and business operations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT371 Legal and Ethical Issues in Security Management (3 semester hours)

This course assesses legal and ethical issues that inevitably affect security managers. It examines dimensions of security management including pertinent points of civil and criminal law, personnel law and obligations, negotiations, contract management, constitutional rights of individuals, legal compliance, liability, ethical standards and dilemmas, and decision-making.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT373 Evaluation of Security Programs (3 semester hours)

This course explores industry standards, practices and methods of determining the adequacy of security management programs. It reviews the interplay of management structures, functions and processes as well as proper procedures for conducting physical security analyses and evaluations. The course examines the principles of operating technology-centered programs for the protection of assets.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT374 Contemporary Issues in Security Management (3 semester hours)

This course focuses on the contemporary issues of security management such as substance abuse, violence, ideologies, adjudication and reconsideration reviews, security countermeasures, case management, use of examinations such as polygraphs, report writing, international commercial sales, and media relations. It also addresses the security manager's role in personnel management, security planning, organizational communication, recruitment, retention, training and development, and management of contracts, as well as examines techniques and tools that help security managers understand bias, educate, and shift attitudes of employees towards more proactive security practices.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT379 School and Campus Security (3 semester hours)

Over the last several years, the perception of safety has been challenged by a series of high profile critical incidents, litigation, legislation and the protection of the 2nd Amendment, right to bear arms. Officials at educational and all types of institutions must be prepared to manage every day security issues while planning for high impact scenarios such as terrorism and active shooter/ mass casualty incidents. Students will explore risk management and emergency management protocols, the threat assessment process, crisis and recovery measures, and become aware of the Department of Homeland Security protocols for active shooters/mass casualty incidents. Students will be required to take the web-based FEMA Active Shooter training and upon successful completion will receive a FEMA certification. This course will benefit students in the educational, criminal justice, security management, emergency management and, homeland security fields of study.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT390 Security Administration (3 semester hours)

This course focuses on principles and practices that security managers can put to immediate use. The bedrock requirements of effective organization, staff selection, and daily operating procedures are emphasized over abstract concepts. Topics include guard operations, plans, policies, and procedures, workplace violence, managing change, bomb threat management, security awareness training, physical security, securing information systems, investigations, and employee screening.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT392 Industrial Espionage (3 semester hours)

Industrial espionage results in millions of dollars in lost revenue each year. This course provides a brief history of espionage and examines the World Wide Web as an enabler of espionage, the role of governments in
industrial espionage, the rise of the competitive intelligence professional, tensions between openness and security, and the Economic Espionage Act of 1996.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT396 Protective Services (3 semester hours)

Executive protection is a growth industry. This course provides a thorough overview of the subject. Topics covered include basic principles, threat assessment, risk analysis, training opportunities, finding employment, organization and management of a protective services detail, working the principal, home and office security, technological considerations, vehicle security, conducting an advance, domestic and international travel, firearms selection and training, and self-defense fundamentals.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT397 Physical Security (3 semester hours)

Effective physical security is based on an accurate threat assessment followed by the implementation of an overlapping system of physical and electronic safeguards designed for the specific needs of the client. Topics covered include threat assessment, the security survey, architectural design for security, physical and electronic security methodologies, security lighting, perimeter protection and the guard force, clear zones, wall materials, signage, and the importance of effective and continuous local, state, and federal governmental liaison.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT498 Senior Seminar in Security Management (3 semester hours)

The Capstone course is a senior level course designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Security Management. The student will complete an approved academic project or paper that demonstrates mastery of their program of study in a meaningful culmination of their learning and to assess their level of mastery of the stated outcomes of their degree requirements. NOTE: All required, core, and major courses must be completed prior to enrollment in this course.

Prerequisite: Completion of a minimum of 106 hours towards your program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Social Science (ANTH)

ANTH100 Introduction to Anthropology (3 semester hours)

This course introduces students to human nature and behavior from the broad, holistic perspective of contemporary U.S. American anthropology. The four primary sub-fields of anthropology, biological, cultural, linguistics, and archaeology, will be discussed in order to integrate various aspects of the human condition.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANTH200 World Archaeology (3 semester hours)

This course is a worldwide survey of prehistoric cultural adaptations from the first use of bone and stone tools to the ancient mysterious civilizations of Asia, Africa, the Americas, and Europe including recent archaeological discoveries. Emphasis is on the development of technologies, social groups and the patterns of cultural development. Archeological excavation methods and archeological artifacts are discussed in considerable detail. Archaeological concepts and skills will be explored through simulations as well as virtual field trips and activities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANTH202 Introduction to Cultural Anthropology (3 semester hours)

This course is designed to acquaint the novice anthropology student with anthropology and its various sub-fields, examining cross-cultural, global, comparative, and critical perspectives on human behavior and culture, as well as the breadth of human cultures from hunter-gatherers to industrialized city dwellers. The implications of socio-cultural analysis of economic, social, symbolic, and religious systems are also considered.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANTH203 Introduction to Forensic Anthropology (3 semester hours)

Forensic anthropology is the application of physical anthropology in a medico-legal context; forensic anthropologists use the tools of archaeology and physical anthropology to discover, recover and identify human remains. Students will be exposed to the interdisciplinary, scientific basis of forensic anthropology, along with legal and ethical issues forensic anthropologists face. The course is designed to give students a broad overview of the field by introducing them to the process of human remains identification; the archaeological and laboratory methods incorporated in human remains recovery; and, a review of the work forensic anthropologists work do with law enforcement, forensic pathologists and odontologists in recovering and collecting victims of foul play as well as those of mass fatalities, such as the 9/11 terrorist attack on the World Trade Center.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Social Science (SOCI)

SOCI490 Independent Study: Social Science (3 semester hours)

An opportunity for Social Science students to pursue an independent research project or examine a specific area of Social Science under the mentorship of a single professor. Course is open to upper division students only. Participation is at the discretion of the faculty member. The course will typically involve six or more professor contacts and produce a major research paper (30+ pages); there will be no examination. Students will submit a proposal prior to the start of the project, and a rough draft of the paper at week 10, both of which will count toward the final grade. Participation is at the discretion of the faculty member. To be eligible for an independent study, students must be enrolled in a bachelors degree program, must have completed 24 hours at APUS toward their current degree program, and should have already contacted a professor and gained approval for the independent study topic. Once these conditions are met the student should contact their student advisor. Once the course is open the student must complete an official online registration for the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Sociology (SOCI)

SOCI111 Introduction to Sociology (3 semester hours)

Introduction to Sociology introduces students to the sociological investigation of human interaction and behavior in society. Students will become familiar with the sociological perspective and develop a ‘sociological imagination’ – the ability to see the general in the particular, the new in the familiar, and to observe the impact social forces have on our lives. The course explores environmental, historical, cultural, and organizational influences on our interpersonal relationships and life-patterns within the context of contemporary society. Students will learn how to use sociological concepts, theory and research to think critically about individuals, groups, institutions, and societies in any given situation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI212 Social Problems (3 semester hours)

This course examines a sample of social problems facing the United States today and identifies how these problems affect, and are affected by, our institutions and culture. The sociological perspective and key theories will be used to understand the beginnings of the civil society, how problems develop and are defined, and the role of social change (particularly contemporary technological innovation). Key social problems covered will include social stratification/inequality, crime, drug abuse, prostitution, aging, infectious disease, family violence, health care, racial/ethnic conflict, terrorism, etc. Sociological research on social problems will be explored, and social policies to remedy the negative consequences of these issues on society will be discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI213 Society, Interaction, and the Individual (3 semester hours)

This course surveys sociological theories and research on the relationship between the individual and society. It is a sociological approach to social psychology, emphasizing symbolic interactionism and social constructionism. Students will learn how individuals participate in the construction of society through interaction and the impact of cultures and social structure on our everyday lives including individual behavior in group processes. Core topics covered will include the Social Construction of Reality, Ethnography and other key methods in Symbolic Interactionism; the Self in Context; the Sociology of Emotions; Interaction and inequality.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI214 Stratification and Inequality (3 semester hours)

This course will critically examine the causes, processes and patterns of social inequality in society. Social stratification explores inequality through the lens of social class, gender, race-ethnicity, sexuality, age, and wellness. Students will use sociological theory and applied research to explore the various ways hierarchies are produced and maintained among people within the social structures such as the economy, religion, education, and family in the United States. Students will also consider the impact of globalization on the distribution of power and access to resources in the United States.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI215 Social Deviance (3 semester hours)

This course is a critical examination of the relationship between deviance and social control. It will include how and why certain forms of behavior come to be known as deviant, it will analyze the nature of formal and informal responses to deviance, and explain the interaction of different social control institutions. Special attention will be given to an overview of general theories of deviance, and the particular forms it takes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI220 American Popular Culture (3 semester hours)

This course is a contemporary study of popular culture in America – its development and characteristics, its role in shaping our individual lives and key social institutions; and its broad effects on our globalizing world. The course is designed around the interdisciplinary nature of cultural studies, and students will learn how to use key concepts and theories to examine popular culture from a number of different fields including Sociology, Anthropology, Communications, History, Cultural Studies, English, Women's Studies, Ethnic Studies, and American Studies. Students will develop the skills to analyze the reciprocal relationship between culture and key stratification factors such as gender, race, ethnicity, class, age, region and sexuality. The course will cover many facets of popular culture from all forms of media, to sports, fashion, and the influence of technology. Students will learn to situate popular culture within its social, historical, political, and economic contexts and their personal lives.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI303 Classical Sociological Theory (3 semester hours)

This course examines the transition from social philosophy to sociology with special emphasis on the European theorists in the nineteenth and early twentieth centuries.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI305 Contemporary Sociological Theory (3 semester hours)

This course offers a general survey of recent developments in social theory since the 1960's. It covers a variety of theories that have been or are influential in the social sciences. Focus will be directed towards both those social theories that have sought to understand modernity as a social epoch and those that claim we have entered a new postmodern era. Differences between European and American approaches will be considered as the substance of the course is developed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI306 Race and Ethnicity (3 semester hours)

This course is a critical analysis of the structure of racism, stratification, hate violence, youth violence, poverty and human rights, stereotyping and ethnocentrism in the contemporary United States. Students examine the outstanding problems facing society and strategies for change, including an exploration of the ethics of intervention.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI307 Sociology of Aging (3 semester hours)

In this course the social construction of age and aging in the U.S. will be examined. The sociological perspective will be used to explore social problems associated with aging and the elderly, the influence of various social institutions on older adults, and sociological theories and research associated with aging. The course will also examine the impact of government, healthcare, the media, and various social factors such as race and gender on the experiences of older adults.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI310 Military Sociology (3 semester hours)

This course will examine the military through the lens of sociological theory, specifically focusing on social factors associated with military membership, collective narratives of military members as well as the complex relationships between civilian and military stratification. Comparisons will examine life inside and outside the military including studies of families, veterans, and retirees. Complex social issues and movements key to military history will also be explored including the evolution of combat, human ethics, gender, race, and sexual identity.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI311 Political Sociology (3 semester hours)

Political Sociology examines the broad social bases of politics and identifies how politics and actions by government can influence the fate of nations and their citizens. These influences include, but are not limited to, power and authority, economic policy, equality, forms of political rule, access to the political process, and the roles of political parties.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI312 Organizational Sociology (3 semester hours)

This course examines the nature of formal organizations in society. Organizations are a distinct form of modern society and human interaction. They shape us as individuals, and they affect the structure of society. Students will explore key organizational sociological literature and apply it to practical case studies in areas such as fast food, the military, politics, religion, education, and social movements, their structures and outcomes. Key substantive areas of analysis will include organizational processes, such as power, leadership and change, and organizational environments and inter-organizational relationships.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI315 Food and Culture (3 semester hours)

This course is a theoretical and empirical exploration of human food choices from an ecological, political and sociological perspective. Students will examine food taboos and cravings, with their social, ideological and biological sources. The course is designed to discuss the socio-cultural dimensions of food production, preparation and consumption to include dimensions of individual, family, community and societal structures, as well as ideological, religious and cultural identities embodied in gender, race, ethnicity and socioeconomic status. Choices of pets, insects and people as food choices are considered in their socio-cultural contexts. Social issues include the 21st century locavore and organic movements, community food production, malnutrition and hunger.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI331 Research Methods for Sociology (3 semester hours)

This course introduces students to the purpose and techniques in social research: problem definition, research design, sampling and data collection methods including observation, interviewing, questionnaire construction and the use of documents and other unobtrusive data sources. The basic goal of all social research is to gather evidence in order to answer questions about the nature of relationships between individuals, groups, institutions, and societies. This course is designed to give the student a broad overview of the logic of social research, of the process of research design, and of the major types of data collection techniques and methods of data analysis.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI332 Statistics for Social Science (3 semester hours)

This course is designed to provide a basic survey of the application, empirical use and interpretation of a variety of statistics methods used in the social sciences. A key objective of the course is the instruction in best statistical practice through the use, exploration and analysis of empirical data. Emphasis will be placed on understanding and interpreting the meaning of statistics. The practical aspects of statistics are emphasized and students are instructed in the use of the standard statistical package for the social sciences (SPSS) which is widely used in the social sciences and in the labor force. NOTE: Students must have access to required software: SPSS (Statistics Package for the Social Sciences); see Course Materials for current version requirement. APUS does not supply this software. (Prerequisite: **MATH120**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI340 Digital Society (3 semester hours)

Technological advances have created a dynamic and ever-changing landscape for social experiences in life online. This course will focus on the shift from the industrial age to today's information age dominated by digital technology. Using a social science lens, students will examine the way technology has increasingly shaped individual and social experiences. The course traces the establishment of the early internet to current trends in social media and explores society's responses to changing technology. Students examine the way social movements, political participation, and social support have been shaped by new opportunities for people to connect digitally.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI341 Social Analysis of Digital Communities (3 semester hours)

Social life online is complex, offering opportunity and positive community in some contexts while reinforcing disparities and structural inequalities in other contexts. As consumers of online experiences or participants in generating online content and discussion, everyday people play a significant role in shaping social movements through presence and participation in digital communities. In this project-based course, students will examine a specific social issue by analyzing specific communities (social media groups, influencer blogs, news outlets) to assess the social impact of digital community content on digital audiences.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI403 Social Change (3 semester hours)

Beginning with industrialization, a structural and cultural approach will be used to study processes of human interaction resulting in social change. The concept of what 'change' is and how it happens will be clarified with a focus on the various factors and theories that explain it. Key topics will include industrialization, institutional change, social movements, modernization, world systems, economic development, globalization, and information society.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI404 Gender and Society (3 semester hours)

This course is a critical analysis of the structure of sexism, stratification, poverty and human rights in the contemporary United States. Students examine the outstanding problems facing society and strategies for change, including an exploration of the ethics of intervention. The course is designed to discuss the way culture shapes and defines the positions and roles of both men and women in society. It will cover the historical development of gender roles and stereotypes, how gender roles are socially constructed, and the social conditions which may lead to the broadening or reduction of gender roles and stereotypes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI420 Sociology of Religion (3 semester hours)

This course will guide students through a critical and sociological exploration of religion. It will provide them with an opportunity to think about religious experience and religious organizations as a part of a larger social order. It will introduce basic concepts in the sociology of religion. This process involves analyzing the interrelationship of culture, society, and religion; religion and social stratification; religious, economic, and political institutions; social change and religion. There will be a general emphasis on American society and institutions, with global and historical contexts integrated throughout the course. The course is designed with a focus on reading, discussion, field observation and critical writing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI421 Sociology of the Family (3 semester hours)

This course is a sociological analysis of the modern family and marriage, its structures and functions, variant patterns, and the influence of contemporary society on this institution. Course topics include dating, marital roles, divorce, child raising, and alternative lifestyles.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI422 Sociology of the Law (3 semester hours)

This course is a study of law, law-making, law-enforcement, and legal systems in social life. Course content focuses on the American legal system from a sociological perspective--its origins, development, and current format, and examines the sources of the legal tradition, the function of legislation in society, and current trends in the social construction of norms. The course investigates the human need for social order and conflict resolution, and how that takes shape in the social world.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI423 Sociology of Health and Illness (3 semester hours)

This course examines the social contexts of health, illness and organized medical care. It focuses on the theories, research and debates of medical sociology. Topics covered will include the social, environmental and occupational factors in health and illness; the meaning of health and illness from the patient's perspective; the historical transformation of the health professions and the health work force; the social and cultural factors surrounding the creation and labeling of diseases; disparities in health, access to healthcare, and the quality of healthcare received; organizational and ethical issues in medicine including rising costs and medical technology; and health care reform.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI424 Sociology of Death and Dying (3 semester hours)

This course is an exploration of the social, psychological, cultural, and individual experiences of death, grief, and loss. The study of the structure of the human response to death, dying, and bereavement in a socio-cultural, interpersonal, and personal context will be examined. Topics to be discussed will include development of perceptions of death, bereavement and grief over the life course; functions of the funeral; euthanasia and death-related ethical debates; and, suicide. Current sociological theories and empirical research regarding the study of death and dying will also be introduced and discussed. Attention will be given to appropriate coping strategies for dealing with death and for aiding others in the coping process.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI491 Sociology Independent Study (3 semester hours)

An opportunity for Sociology students to pursue an independent research project or examine a specific area of Sociology under the mentorship of a single professor. Course is open to upper division students only. Participation is at the discretion of the faculty member. To be eligible for an independent study, students must be enrolled in a bachelors degree program, must have completed 24 hours at APUS toward their current degree program, and should have already contacted a professor and gained approval for the independent study topic. Once these conditions are met the student should contact their academic advisor. Once the course is open the student must complete an official online registration for the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI498 Senior Seminar in Sociology (3 semester hours)

The focus of this course is to review the major issues within the field of sociology and their relationship to current events. Theoretical and applied perspectives will be discussed, culminating in the students' completion of a major sociological research paper/project that synthesizes the body of acquired knowledge. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Space Studies (SPST)

SPST180 Introduction to Astronomy (3 semester hours)

This course will introduce students to the wonders of the universe. Topics will include deciphering the motions of objects in the sky, learning how astronomers decode the light coming to us from distant objects, exploring the Earth and other bodies in our solar system, and investigating the properties and structure of stars, galaxies, and the universe itself. Students will be encouraged to develop a conceptual understanding of these topics beyond memorization of facts. While the course is conceptual in nature, students should expect to use some mathematics. Completion of at least college algebra prior to taking this course is highly recommended.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST200 Introduction to Space Studies (3 semester hours)

This course is designed to introduce the student to a variety of subjects, which together comprise the overall field of space studies. This includes the space environment, astrodynamics, launch vehicles, spacecraft, space operations, commerce, space law, policy, telecommunications, space navigations, remote sensing, space resources, astronomy, and space life sciences. All of these topics will be addressed with a very broad brush, as the student will study them more in-depth during later courses in the aerospace studies degree program. Instruction is primarily through readings (both textbook and online), along with weekly classroom discussions.

As the first space studies course in the AS and BS degree in Space Studies program, this course also focuses on research and writing methods appropriate to space studies. The web readings listed under "Web Resources" will discuss critical elements of research, writing, style and formatting. The Turabian style (also known as the Chicago style) is required for all courses in this program. The course will introduce the student to a variety of research sources that will be useful in future space studies courses. (Prerequisite: **MATH111**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST201 Introduction to Space Flight (3 semester hours)

Students in this course assess the major aspects of space flight. The course covers space flight from early rocketry through the development of satellite navigation, meteorology, and telecommunications, up to human space flight. Course topics also include: rocket propulsion, basic orbital mechanics, the space environment, living and working in space, and an overview of non-U.S. space programs. Instruction is primarily through readings, along with weekly forums. There will be weekly quizzes, and a paper. (Prerequisite: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST203 History of Space Flight (3 semester hours)

This course is a history of human activity in space and includes rocketry, space associations, voluntary organizations, human flight, unmanned flight, satellites, science-fiction, and ballistic missiles. The History of Space is a survey of humanity’s quest to explore outer space, “the final frontier.” This course is a history of human activity concerning, about, and in space and includes early humanity’s fascination with the heavens, the quest for knowledge about what lay beyond the sky, human flight, unmanned flight, the development of rocketry and satellites, the role of early space associations and voluntary organizations, space exploration and ballistic missiles and the increased militarization of space, and science fiction. (Prerequisite: **SPST201**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST304 National Space Organization (3 semester hours)

This course addresses the United States organization for space operations, to include exploration, satellite operations, military purposes, and research and development. Included in the organization will be the linkages between governmental and non-governmental enterprises in or dealing with space. The course will also briefly address comparative organizations for space as witnessed in other industrialized nations. (Prerequisites: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST305 Introduction to Orbital Mechanics (3 semester hours)

Students taking this course compute and calculate satellite orbits, planetary orbits, solar system orbits, and other essential space orbits. Designed for the non-scientist student, this course provides a fundamental understanding of how orbital mechanics works in space. (Prerequisites: **MATH111** and **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST306 Human Space Flight (3 semester hours)

This course evaluates the physical and psychological effects of spaceflight on humans, countermeasures for both short- and long-duration spaceflight, and discussions of human factors in spacecraft engineering. (Prerequisites: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST307 Space Policy (3 semester hours)

This course assesses the various aspects of policy surrounding space activities and investigates how space policy evolves from historical contexts through policy outcomes, including law, commerce, the environment, international cooperation, and national security. (Prerequisites: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST310 Rocket Propulsion (3 semester hours)

This is a survey course of rocket propulsion that covers the history of rockets, the basic science of rocket propulsion including Newton's Third Law, basic fluid mechanics, the ideal rocket equation, nozzle design and impulse, types of rockets including thermodynamic and electrodynamic, and exotic propulsion methods such as solar sails, tethers and the future of antimatter propulsion.
As an introductory survey course, the objectives of this class are geared towards gaining a conceptual understanding of these topics and how rocket propulsion works, rather than memorizing a lot of facts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST330 Launch and Reentry Systems (3 semester hours)

This is a survey course of launch systems and re-entry principles that reviews the basic principles of rocket propulsion, and covers launch windows, times and locations, launch vehicles and their subsystems, the concept of staging, current launch systems, re-entry design including trade-offs and options, and ICBM re-entry systems.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST340 Tools of the Observatory (3 semester hours)

This course is designed to familiarize students with the tools used by the astronomer in the observatory. Such tools include telescopes and astronomical imaging cameras. Students will have the opportunity to use the APUS remote observatory. The course will also introduce students to career opportunities as night telescope operators at astronomical observatories.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST341 Tools of the Planetarium (3 semester hours)

This course is designed to familiarize students with the equipment and operation of the modern planetarium. Students learn about the use of the planetarium as an effective astronomical educational tool, and explore exciting career opportunities in the planetarium field. Students have the opportunity to utilize planetarium software and visit a local planetarium in their region of the country.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST342 Habitable Worlds (3 semester hours)

This course focuses on the concept of habitability and the search for habitable conditions in our galaxy. Students learn about the requirements for life and the conditions for circumstellar and galactic habitable zones. They will explore the possibility of life both within our solar system and on planets that orbit other stars, known as exoplanets. Students will study the Drake equation and use this important tool to understand the conditions for the development of intelligent life elsewhere in the universe. They will consider the differences between primitive and intelligent life, and current efforts to search for both. Completion of at least college algebra prior to taking this course is highly recommended. (Prerequisite **SCIN134**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST351 Introduction to Unmanned Aircraft Systems (UAS) (3 semester hours)

This course provides a foundational introduction to unmanned aircraft systems (UAS). Students will explore the history, development, and operations of UAS technology with a focus on small, commercial drone systems. Key topics include system components, command and communication structures, fundamentals of flight, FAA regulations, safety protocols, sensors, and human factors. The course also addresses the societal impact of UAS and introduces the potential future use of uncrewed aerial systems in planetary exploration. This course is suitable for students seeking access to the growing field of UAS operations and engineering. (Prerequisite: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST352 Unmanned Aircraft Systems (UAS) Components and Modeling (3 semester hours)

This course provides an in-depth study of unmanned aircraft systems components and modeling, with a focus on multi-rotor drone design and system integration. Students analyze the structure and function of unmanned aircraft vehicles (UAVs), beginning with carbon fiber frames and progressing through key system components including motors, rotors, ESCs (Electronic Speed Controls), flight controllers, FPV (First Person View) equipment, radio transmitters and receivers, propellers, onboard sensors, cameras, smart battery technology, and charging equipment. Emphasis is placed on UAV flight control systems, payload capacity, structural integrity, and system efficiency. Students will investigate component-level functions through drone deconstruction and explore the application of UAS in civil, commercial, and environmental monitoring contexts. The course also examines future developments in uncrewed aircraft, including the use of drones in planetary exploration, and considers regulatory frameworks such as those set by the Federal Aviation Administration (FAA). (Prerequisite: **SPST351**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST353 Unmanned Aircraft Systems (UAS) Applications (3 semester hours)

This course explores a broad range of unmanned aircraft systems (UAS) applications, with a focus on commercial and scientific uses of drones and UAS. Students examine UAS applications across multiple sectors, including precision agriculture, architectural inspection, construction, environmental monitoring, geospatial analysis, energy management, emergency services, public safety, communications, aerial photography, and search and rescue in disaster-stricken or inaccessible areas. The course also explores how unmanned aircraft systems can be used in remote sensing applications, aerial mapping, and scientific research such as planetary topology and terrain mapping, preparing students for roles as remote pilots and data analysts in evolving commercial UAS environments. Emphasis is placed on commercial drones, sensors, high-resolution cameras, autonomous systems, and the associated equipment that support low-cost, high-impact operations. The course concludes by addressing regulatory frameworks from agencies such as the Federal Aviation Administration (FAA) and highlights emerging trends in UAS technology and applications for space exploration. (Prerequisite: **SPST351**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST361 Planetary Science with Lab (4 semester hours)

This course is a tour of the planets and moons of the solar system and an introduction to their internal structures, atmospheres, and surface features. Processes that form planets and act continually to change them, such as earthquakes, volcanoes, giant impacts, are discussed, as are comets, asteroids, rings, and life. Information gained from spacecraft missions is highlighted. In the laboratory component, students will engage in planetary science inquiry using online interactive simulations and data gathered from space missions and ground-based observatories to help reinforce and build upon the concepts presented in the lecture portion of the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST415 Space Station Systems and Operations (3 semester hours)

This course elaborates on Space Station flight operations, its supporting elements and planned systems. Students will study commercial applications, logistical support, maintenance and servicing design concepts. (Prerequisite: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST425 Satellite and Spacecraft Systems (3 semester hours)

Orbital satellites and spacecraft are discussed according to their application, design and environment. The power system, shielding and communication systems are reviewed along with their missions, space environment and limitations. This course elaborates on Space Station flight operations, its supporting elements and planned systems. Students will study commercial applications, logistical support, maintenance and servicing design concepts. (Prerequisites: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST426 Space Habitats (3 semester hours)

This class introduces students to the fundamentals of space and planetary habitats, not limited to space stations but including lunar, asteroid, and Martian structures. It will provide an understanding of the cost/value of such habitats and how they can be built. (Prerequisite **SPST307**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST427 Space Resources (3 semester hours)

This class introduces students to the fundamentals of space and planetary resources, including lunar and asteroid mining, solar power in space, and Martian resources. It will provide an understanding of the cost/value of such resources and how they can be gathered. (Prerequisite **SPST307**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST435 Planetary and Space Exploration (3 semester hours)

This course is a summary of U.S. and international space programs. The student will assess the Earth and its space environment, to include methods of scientific exploration and spacecraft and payload criteria at the basic physics level. This course elaborates on Space Station flight operations, its supporting elements and planned systems. Students will study commercial applications, logistical support, maintenance and servicing design concepts. (Prerequisites: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST440 Stars and Galaxies (3 semester hours)

This course is designed to familiarize students with celestial objects found beyond the Solar System. Students learn about the origin and evolution of stars and galaxies. Topics covered in the course include main sequence stars, red giants, white dwarfs, neutron stars, and black holes. Galaxy classification is also considered. Students have the opportunity to use the new APUS remote observatory for celestial observations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST441 Cosmology (3 semester hours)

This course covers the origins and evolution of the universe. It begins by describing the scale of the universe, both in size and in distance. It will take an in-depth look at the important eras in the history of the universe from the Big Bang to the expansion and inflationary periods. This course will analyze the possible future of the universe as a function of critical density, dark matter, and dark energy. It will consider observational evidence for these theories and also investigate the Steady State Theory and alternate cosmologies. (Prerequisite **SPST440**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST445 Space Transportation Systems (3 semester hours)

This course evaluates Space Transportation Systems (STS) including manned space flight operations, supporting systems and the Space Shuttle mission, both present and future. Included are manned space flight operations, supporting systems and the Space Shuttle mission, both present and future. A review of Space Shuttle flight profiles, guidance and navigation control, proximity operations and rendezvous and a brief review of hypersonic orbiter aerodynamics are included. Also covered are future STS applications to space station logistical operations, commercial applications and Department of Defense operations. (Prerequisites: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST451 Unmanned Aircraft Systems (UAS) Payload and Sensor Technologies (3 semester hours)

This course explores payload and sensor technologies for unmanned aircraft systems (UAS), with a focus on UAS used in commercial, civil, and space-based applications. Students examine sensor payload integration and data collection techniques for aerial imaging, environmental monitoring, infrastructure inspection, and off-world exploration. Topics include high-resolution imagery, RGB and EO/IR (electro-optical/infrared) cameras, thermal imaging, hyperspectral sensors, short-wave infrared, vegetation indices, and synthetic aperture radar. Emphasis is placed on the role of onboard sensors, ground control stations, global positioning systems (GPS), and inertial measurement units (IMUs) in UAS remote sensing. Students also explore payload capacity, obstacle avoidance, flight controllers, and post-processing methods. The course considers the growing relevance of artificial intelligence, situational awareness, and actionable intelligence in UAS operations. This foundational course prepares students for advanced work with UAS payloads in diverse commercial and civil applications. (Prerequisite: **SPST351**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST452 Remote Pilot Certification Preparation (3 semester hours)

This course prepares students for the FAA Part 107 knowledge test, required to obtain the Remote Pilot Certificate for operation of small, unmanned aircraft systems (UAS) in commercial settings. Students will review FAA regulations, operating requirements, and emergency procedures, with a focus on real-world applications within the National Airspace System. Using FAA study guides, learning statement codes, and sample exam questions, students will complete a structured eight-week schedule designed to build familiarity with the remote pilot certification process. Topics include airspace classification, flight restrictions, maintenance and inspection, weather interpretation, and regulatory compliance. Students will also develop the confidence and foundational knowledge needed to take the “Unmanned Aircraft General – Small (UAG)” knowledge test. While course completion provides preparation, it does not guarantee a passing score on the FAA exam. Students are responsible for scheduling and paying for their certification exam at an FAA-authorized testing center. (Prerequisites: **SPST351**, **SPST352**, **SPST353**, and **SPST451**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST465 Space Weather (3 semester hours)

The relatively new science of space weather has significant influence on both the space program, and our increasingly technology-dependent society. Space weather is largely the result of solar activity, including sunspots, solar wind and solar flares and their interaction with the Earth's magnetic field. This course will discuss this Sun-Earth connection, its implications for both Earth-bound and space activities, and the current state of space weather study and prediction.(Prerequisites: **SPST200** or **SPST435**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST485 Space Wargaming (3 semester hours)

This course promotes the understanding and effective use of space power while providing insight into the shaping and consequences of strategic decisions made in a space wargame. Students explore critical space issues in-depth and investigate the integration activities of multiple agencies associated with space systems and services. The course includes an overview of wargaming, the reasons why we wargame, and the history of wargaming. It then examines the space environment and why we wargame in space, even though there has never been a conflict in that domain. Next is an overview of Thor’s Hammer (the National Reconnaissance Office’s wargame) and the Schriever wargame series, followed by lessons learned from each wargame and how wargames affect military strategy. This course allows students to think critically about the importance of space assets and how best to protect them.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST499 Senior Seminar in Space Studies (3 semester hours)

Analyses of specific issues will be conducted that will include a review of current and future space exploration goals and discoveries, space policy and law, aerospace engineering, and astronomical studies and discoveries. Students will review and analyze the problem solving process with consideration for the implications of these areas on national and global scales. This capstone course will provide students with the opportunity to complete an approved academic research exercise that demonstrates their knowledge of their selected field of study. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Sports and Health (SPHE)

SPHE250 Sports First Aid and Safety (3 semester hours)

Sports First Aid is the recognition and emergency treatment of sports injuries sustained during participation in a sporting event. Students will learn basic first aid principles in order to provide emergency care to injured athletes. Students will develop a basic knowledge of common sports injuries to be able to administer appropriate sports first aid. This course introduces the role of the coach as well as other medical professionals who provide first aid to athletes. Focus will be placed on techniques and concepts used to treat these sports injuries. Students taking this course will become a competent first aid responder for basic athletic injuries.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE290 Foundations of Sports and Health Sciences (3 semester hours)

This course introduces students to the fundamental concepts of Sports and Health Sciences including basic principles in exercise science, health, wellness, fitness, and coaching studies. The student will focus on clarification of the wellness continuum including physical, emotional, intellectual, spiritual, interpersonal, and environmental wellness while implementing the methods of the health-related components of physical wellness – cardiorespiratory endurance, muscular strength, muscular endurance, flexibility, and body composition to promote lifelong physical fitness, disease prevention, and health and wellness.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE295 Foundations of Nutrition (3 semester hours)

This course introduces students to the scientific principles of nutrition pertinent to the function of nutrients in the body and the physiological processes involved in digestion and absorption. Students will attain knowledge of the nutrients that make up the food we eat; the anatomy and physiology of digestion and absorption; the function of the each macro and micro nutrient within the body; the interplay between foods, food substances and disease processes like heart disease, cancer, and obesity; the role of nutrition throughout the life cycle; and, our global food problems.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE314 Exercise Physiology (3 semester hours)

This course is designed to provide students with the knowledge of the inner workings and physiological changes that occur in the body during exercise, after exercise, and during a training period. Topics include efficiency, needs and limitations of body systems and their interrelationships, genetic differences in exercise, and developing a personalized exercise routine to meet your needs.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE315 Training and Conditioning (3 semester hours)

This course concentrates on the science, planning, management, and analysis of training and conditioning as it relates to the human body. Through a series of assignments and case studies, you will learn the theory of muscle growth and how muscle growth applies to your body. The course will answer many questions including how can you build an impressive, muscular physique using free weights? How, for example, can you customize your workouts according to your body type? And how should diet, including food supplements, factor into your fitness goals?

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE317 Sports Medicine (3 semester hours)

This course in sports medicine explores the causes and prevention of common sports injuries. You will learn the prognosis and treatment of injuries by examining the anatomy of the injured area of the body through diagrams and interactive websites. Each section of the course covers a certain category of injuries; you will learn what sport or particular athlete is more at risk. Each student will be required to submit a course paper on a specific injury that includes case studies from appropriate references. It is recommended that students complete SPHE 421 Kinesiology before enrolling in this course. (Prerequisite: **BIOL251**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE318 Coaching Theory and Methodology (3 semester hours)

Students in this course will review Coaching Theory and Methodology within the coaching profession. They will examine theories specific sports teams, including the development of methodologies and the development of a team, principles for coaches to follow and pass on to teams, and the end of competitive careers in organized sports. Guiding questions include: What sport has done for the player and coach? Why is theory and methodology in sport important? How does leadership and strategy play a role? Students will develop a coaching philosophy that will drive their coaching theories and methods. Students will discover that teaching life lessons through sport is vital to the success of their athletes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE322 Sports Nutrition (3 semester hours)

What should you eat? When should you eat it? Why? Nutrition plays an integral part of our daily life. A healthy diet can protect us from a number of diseases, including heart disease and cancer. Nutrition also plays an integral part in an athlete's performance, often making a difference between success and failure. Improper use of diet and/or ergogenic aids can result in poor performance. Students in this course will explore basic nutrition concepts, gaining an appreciation of the contribution of macro and micronutrients to a healthy diet and gaining an understanding of the importance of these nutrients as performance enhancers. They will identify a number of strategies for making healthy food selections, for integrating these selections into their lives, and for successfully maintaining a healthy diet. These concepts will be reinforced through the analysis of their own diets and the development of several new diets. The impact of excessive or deficient caloric intake on health and body composition will be determined. Finally, dietary supplements and performance enhancers are used by many people. Improper use of these can be detrimental to one's health as well as adversely impact athletic performance. Strategies for identifying and using good and bad supplements/enhancers will be developed. (Prerequisite: **SPHE295**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE324 Biomechanics (3 semester hours)

Students in this course will use qualitative and quantitative analysis to understand the biomechanics of human movement. This course will focus on biomechanics in sports and how biomechanical evaluation can improve performance and prevent injuries. Through the use of videos and personal observations, students will learn to apply mathematical equations to various sports skills to develop an understanding of how the laws of physics affect performance. Linear and angular kinematics and kinetics will be applied to sport skills. Students will complete a course project which will require the student to observe a sport skill, qualitatively analyze the athlete performing the skill and make recommendations for improvement. It is highly recommended that students complete College Algebra and Physics before taking this course. (Prerequisites: **BIOL250** and **BIOL251**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE340 Nutrition Throughout the Lifecycle (3 semester hours)

This course examines nutrition and dietary needs throughout the lifespan, emphasizing nutrition/dietary factors to improve one's health span. The course will focus on dietary guidelines, special nutritional needs at each life stage, nutritional health concerns at each life stage, and wellness coaching techniques to enact behavior change. (Prerequisite: **SPHE295**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE360 Scientific Principles of Coaching (3 semester hours)

This course provides coaches with the biomechanical tools necessary to help their athletes achieve optimal performance in their sport. Students will explore theories and activities designed to improve movement capabilities, methods to reduce the risk of injuries caused by faulty mechanical principles, and a wide range of practical mechanisms useful to teach correct movement skill acquisition.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE416 Athletic Programs Administration (3 semester hours)

Athletic programs administration focuses on the coach, and their administrative responsibilities of their profession. Coaching goes beyond knowledge of the game, strategies to win or practice design. Coaches and administrators, much like managers in the business world, are decision makers and resource allocators. They make sure player to player and coach relations are operating smoothly. Their duties also include fundraising, facility management, scheduling and maintaining budgets much like any business manager. This course examines the key concepts and skills to becoming an effective sports manager that includes program promotion, leadership, personal organization, public relations and risk management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE417 Leadership Concepts in Coaching (3 semester hours)

This course will introduce Coaching Leadership on a sports level but show how that leadership can relate to personal, business and everyday successes for individuals. Creating success in the sports arena, a leader has to communicate, to bring a set of individuals together to accomplish one common goal. To be a good leader and coach, one must motivate teamwork and reveal the powerful characteristics of success. Leadership can be universal and used in any walk of life. Coaches are faced with many hurdles to overcome on different levels. The best coaches are able to work through these barriers and develop systems that bring teammates together with a common purpose. Course objectives will be reached by means of selected case studies and focused assignments, reinforced by study of proven coaching leaders.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE420 Exercise Programming and Testing (3 semester hours)

This course is designed for the undergraduate degree in Sports and Health Sciences. Students will combine knowledge from prior classes such as Anatomy, Exercise Physiology, Nutrition and Training and Conditioning and will be prepared to implement their knowledge in a professional setting. Application of basic exercise training principles will be expanded as the course progresses, allowing the student to execute a wide range of personal fitness training principles such as fundamentals of human movement science, client/athlete assessment, exercise training concepts, program design, nutrition and supplementation. This course incorporates advanced exercise programming techniques utilizing the Optimum Performance Training Model (OPT Model) and prepares students for the Certified Personal Training examination offered by the National Academy of Sports Medicine (NASM-CPT). Upon successful completion of this course and with a valid CPR certification students are eligible to sit for this examination. (Prerequisite: **BIOL251**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE421 Kinesiology (3 semester hours)

Kinesiology develops a practical understanding of the neuromotor system in relation to anatomical structures responsible for human movement along with their respective functions. Students will learn how to analyze movement and determine specific muscles responsible for a particular movement along with the associated joint action and neural control mechanisms. Students will contrast movements and exercises to determine their appropriateness and fit for specific and common goals in real world settings. Additionally, students will discuss Kinesiology principles and critical concepts as they relate to athletics, rehabilitation, and recreational exercise. The course will also explore how to improve human performance through effective exercise and training program design. Students learn concepts in this course which apply in coaching, athletics, rehabilitation, and fitness settings. (Prerequisite: **BIOL251**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE423 Advanced Strength and Conditioning (3 semester hours)

This course provides the student with the skills necessary to develop an annual training program for athletes of all levels. Emphasis will be placed on the principles of periodization and how to determine the appropriate training program for each sport. The topics of plyometrics, speed, agility, strength, and power will be demonstrated in videos and through other course materials. Students will be required to complete a 52-week training plan for an athlete based on the principles of periodization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE426 Principles of Corrective Exercise (3 semester hours)

The purpose of this course is to provide an understanding of exercise physiology, biomechanics, and exercise prescription for those in need of remedial exercise programming. This course will examine the theory and practice associated with functional and corrective exercise program design and progression when movement dysfunctions and imbalances are present. In addition, scope of practice, limitations, and coordination of care with health care professionals will be addressed. (Prerequisite **SPHE317**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE435 Advanced Nutrition (3 semester hours)

This course uses recent advances in nutrition science to investigate the role of nutrients in biochemical, physiological, and hormonal processes within the body and nutrient-disease relationships. (Prerequisite: **SPHE295**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE460 Business Aspects of Fitness and Wellness (3 semester hours)

This course provides the student with the tools to pragmatically conduct business within the fitness and wellness industry. The student will develop parameters of management within a business structure including financial, facility, marketing, risk management, leadership, and personnel.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE461 Current Issues and Trends in Fitness and Wellness (3 semester hours)

This course is designed to explore the growing field of Sports and Health Sciences and its cultural impact on the United States and International health and wellness. The student will gain the tools necessary to assess the fitness, sport, and health industry and its relationship to health and wellness management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE470 Psychology of Sport (3 semester hours)

Students will examine human behavior in a sport and exercise setting. They will understand that enhancing individual performance is a primary objective of sport psychology. Students will learn how to create a psychological skills training program, which incorporates theories of anxiety reduction, imagery training, and self-efficacy. Current theoretical perspectives of personality factors in exercise and sport, why people exercise, what motivates an individual, exercise/sport adherence, stress, anxiety, and arousal, and the psychological effects of exercise and sport will be investigated. Students will learn the key features of effective goal setting, and apply this understanding to their own professional development.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE490 Senior Seminar in Sports and Health Science (3 semester hours)

This senior capstone class is the final course in the degree sequence for students majoring in Sports and Health Sciences. In this dynamic and interactive course, learners will review, assess and then apply many of the concepts they have researched during undergraduate studies through the creation of a customized graduation portfolio. This portfolio can be used for future career or academic goals and serve as a tangible job aid that houses previously acquired knowledge. Real life, hands on tools for career advancement will be examined and then applied, including the creation of a professional resume. An investigation of the job market in the field of sports and health will also take place through case study analysis and lively, career focused discussions. Alternative career paths for sports and health sciences degree holders will also be explored. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Sports Management (SPMT)

SPMT200 Foundations of Sports Management (3 semester hours)

Sports management is evolving at a rapid pace. This course provides an overview of the sports industry and teaches the basics of sport management to future sport managers. Students will explore the sports industry in different segments that will help guide them to what area of expertise they might choose as a career path. Topics will include ethics, finances, high school and youth sports, marketing and legal issues. This course also examines specific industries involving management such as the fitness industry, facility management, sporting goods, and event management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT213 Principles of Sports Marketing (3 semester hours)

This course focuses on the promotions, public relations, advertising, and other marketing functions involved in the multi-billion-dollar sports industry. The course provides research, case analysis, and other opportunities to learn about the effective principles, theories, practices, and methods involved with all aspects of sports communications.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT230 Integrated Communication in Sports (3 semester hours)

This sports communication course introduces the principles and practices of sports media in today's industry. Topics include models of sport communication, print and electronic media, public relations, media relations, and promotion of sporting events. Students examine how sports organizations communicate through writing, discussion, and applied projects that simulate professional communication tasks. Learners will assess real-world examples of sports media strategies and construct their own messages within various sport contexts. Course activities include reflective reading, analytical discussions, and a final project emphasizing effective communication and ethical practice in the global world of sports.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT279 Social Issues in Sports (3 semester hours)

Students use analytical techniques to examine the scope and effect of sport on society. They will explore sociological concepts regarding how sports and sport participation impact the lives of individuals and groups in a society. Students will explore several significant contemporary issues including drug abuse, Title IX, ethics, gambling, and violence. To further increase their sociological understanding of sport, students will also identify and discuss sociological perspectives about the components of sport and physical activity.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT299 Externship in Sports Management (3 semester hours)

This course is an introduction to on-site sports management. It requires a minimum of 100 hours of on-site game, team, event, or organizational management, and students will assist in planning, organizing, and executing approved sports or entertainment events.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT316 Sports and Recreation Facility Management (3 semester hours)

This course prepares students with an interest in pursuing a career in the fast growing industry of sports facility or event management. During the course, students will acquire professional skills that can be applied in a wide variety of career positions. A range of topics includes facility financing, alcohol management, crowd management, and box office management. Upon completion students will have basic fundamentals to comprehend the field of facility and event management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT326 Ethics in Sports (3 semester hours)

Students will examine morality and ethical issues pertaining to sport. During this course, students will discuss sportsmanship, fan behavior, performance-enhancing drugs, Title IX, deviant behavior in athletics, and issues related to youth sports participation. Students will examine their current rules, morals, and philosophies in both ethical as well situational manners. Students will be immersed in ethical situations through the use of videos and relevant current event articles.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT410 Applied Concepts in Sports Finance (3 semester hours)

Applied Concepts in Sports Finance will provide students with a vast overview of the financial and contemporary economic issues related to sports, athletes and the sport industry. The course will examine the market power in sports, impact of teams and facilities on neighborhood economics, issues relating to a professional sports lockout as well as the relationship among academics, athletics, and the economy. Contemporary topics will include sports franchises, agents, contracts, sports industry financing, and financial and legal issues.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT440 Sports Event Management and Planning (3 semester hours)

Sports Event Management and Planning involves a comprehensive overview of the development and implementation process involved with managing a successful sporting event. The student will examine detailed event criteria including time line, budget analysis, sponsorship, event location, staff and consumer management, as well as the development of television and talent contracts. The course shall provide the knowledge necessary to cultivate, organize, and execute any sporting event from a managerial standpoint.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT450 Sports Governance (3 semester hours)

This course will focus on the policies, structure and politics that shape sport at the regional, national and international levels. With a focus on the Olympic movement, the course will also examine the organization and development of amateur and professional sport, including the need for Paralympic Games, Gay Games and Special Olympics. The student will analyze the different membership guidelines, organizational goals, and administrative roles of the many governing bodies as well as learn about the historical politics and boycotts, the international development of sport and the bidding process for an international event.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT455 Ticket Sales Management (3 semester hours)

This course provides training in all aspects of ticket sales including prospecting and qualifying, creating and presenting sales proposals, overcoming objections, and closing sales. Specific techniques such as networking and role playing will be used to prepare students for careers in sport ticket sales. The material is designed to expose students to the standards, principles and practices that can be applied to the ticketing industry at any level by combining knowledge of ticket sales strategies with management of ticket office operations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT491 Senior Seminar in Sports Management (3 semester hours)

This senior capstone class is the final course in the degree sequence for students majoring in Sports Management. In this dynamic and interactive course, learners will review, assess, and then apply many of the concepts they have researched during undergraduate studies through the analysis and application of optimal solutions to the problems presented. Real-life, hands-on tools for career exploration will also be examined through lively discussions, including an investigation of the job market in sports management, as well as how to properly network and prepare for a job interview. Prerequisite: Completion of a minimum of 106 hours toward your program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT499 Internship in Sports Management (3 semester hours)

This course is designed as a culminating experience for sports management majors. Students will develop practical and leadership skills in a pre-approved, professional setting, including (but not limited to) interscholastic or intercollegiate recreation or athletic programs, community recreation agencies, sport businesses, sports facilities, amateur athletic organizations, and/or professional sports teams. Students are required to complete a minimum of 150 hours of work, including a comprehensive project.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Supply Chain Management (SCMG)

SCMG201 Principles of Supply Chain Management (3 semester hours)

This course is a study of design, planning, execution, control and monitoring of supply chain activities with the objective of creating net value, building a competitive infrastructure, leveraging worldwide logistics, synchronizing supply with demand and measuring performance globally. As a principles course, it will introduce these components along with their integration into the supply chain. The impact of technology of supply chain management will be examined and its critical role enabling synchronized logistics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMG301 Supply Chain Risk Management (3 semester hours)

This course is a study of the implementation of strategies to manage every day and exceptional risks along the supply chain through continuous risk assessment with the objective of reducing vulnerability and ensuring continuity. Supply Chain Risk Management (SCRM) can be viewed as the intersection of supply chain management and risk management. Topics include: risk concepts, risk management strategies, key components of SCRM including risk resilience, risk appetite, risk response planning, risk compliance and risk governance.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMG305 Global Demand Management (3 semester hours)

This course is a study of the demand for goods and services to support the marketplace, prioritizing demand when supply is lacking. Proper demand management facilitates the planning and use of resources for profitable business results. The demand management process weighs both customer demand and firms output capabilities to seek balance between the two. Topics include: demand planning, demand driven supply networks, demand forecasting, demand segmentation and demand side analysis.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Transportation and Logistics (TLMT)

TLMT200 Retail Shipping and Receiving (3 semester hours)

This course introduces the student to retail Supply Chain and Logistics Management with a focus on the shipping and receiving functions to include its nature, scope, and processes. An examination of shipping and receiving functions and the interrelationships among these components of an operational supply chain and related logistics of large retail businesses is provided. Students receive an overview of the role and importance of shipping and receiving within the retail industry with an emphasis on effective management. The contemporary environment of retail shipping and receiving functions are addressed as well as management perspectives, inventory management, and the impacts of technology on providers and users, both domestically and globally. Ultimately, this course is for those seeking retail opportunities in management, supervisory, and/or entry-level positions as well as those transitioning into the retail industry.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT201 Retail Transportation (3 semester hours)

Students in this course are introduced to the area of transportation within the logistics field to include its nature, scope, and processes. An examination of the management functions and the interrelationships among the components of operational logistics is provided. Students receive a familiarization of transportation functions within the retail industry. The various aspects of transportation are addressed within the retail supply chain to include modes of transportation, international logistics, import/export, regulations, customer management (selection and negotiating), warehousing and inventory management, and technology. A practitioner approach is used to explore and examine processes, strategies, best practices, issues and trends in retail transportation. This course is for those seeking retail opportunities in transportation management and supervisory opportunities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT311 Introduction to Transportation Management (3 semester hours)

This course is an overview of the transportation sector, including providers, users and government agencies. It examines contemporary public policy issues, such as deregulation, along with managerial strategies in transportation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT312 Transportation Economics (3 semester hours)

This course focuses on the micro and macro economic issues associated with international, national, and local transport, logistics, and other issues in the transportation industry. Topics include the economic aspects of rail, water, air, ground, and other transport modes; inventory, and supply.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT313 Supply Chain Management (3 semester hours)

This course is a study of supply chain management from the consumer back to raw materials. The entire process is studied from the standpoint of the leading theory and practice of cutting-edge organizations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT318 Hazardous Materials Transportation (3 semester hours)

This course is a study of the packaging, transportation, and delivery of hazardous materials. Course topics include container, vehicular, storage, mode, onload/offload, and other considerations associated with hazardous materials transportation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT331 Fundamentals of Intermodal Transportation (3 semester hours)

This course examines the United States and worldwide commercial freight transportation systems, with an emphasis on international intermodal surface transportation. Modal/intermodal economic and operating characteristics will be surveyed, along with cost, pricing, and regulation of transportation services. In addition, students will be introduced to electronic data interchange (EDI) in commercial transportation and the use of computer software applications in transportation management—all with the goal of providing students with an in-depth understanding of the principles of intermodal transportation systems, a grasp of transportation terminology, and the interrelationship between the Defense Transportation System (DTS) and the global commercial transportation infrastructure.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT341 Logistics Management (3 semester hours)

This course studies the logistics functions of business involved in the movement and storage of supplies, work-in-progress, and finished goods. It examines the trade-offs between cost and service and the purchase and supply of raw materials; the warehousing and control of inventory; industrial packaging; materials handling within warehouses; and the distribution of finished goods to customers required to minimize costs, maximize profits or increase customer service levels.
STUDENTS ARE STRONGLY ADVISED TO COMPLETE **TLMT311** PRIOR TO TAKING THIS COURSE.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT342 International Logistics Management (3 semester hours)

This course addresses the design and operation of international logistics systems. Topics include export-import issues, multi-national sourcing and distribution strategies, channel management, and comparative transportation systems and policies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT351 Packaging (3 semester hours)

This course examines the role of packaging marking and labeling as part of the physical distribution process. It examines inner, outer, and intermediate packing, packaging media, dunnage, lading and ISO & non-ISO containers. Topics include: packaging as containment; packaging as a physical barrier, packaging as an impediment to in-transit visibility and handling; packaging as a carrier of arachnids, nematodes and plant and animal life; and contaminated packaging incompatibilities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT352 Distribution Systems (3 semester hours)

This course addresses the principles and practices of transportation and its role in the distribution process. Topics include the physical transportation system of the United States and its performance; carrier responsibilities and services; economic and legal bases of rates, freight classification and tariffs; public policy regarding regulation; and transportation issues and problems.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT353 Logistics Management and Operations (3 semester hours)

An overview of the general area of logistics, its nature, scope, and process. It is a critical examination of logistics management functions and the interrelationships among strategic support and operational logistics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT381 Hazardous Materials Management (3 semester hours)

This course will cover the requirements and regulations associated with packaging, handling, storage, transport, and incident response at the operational level for all forms of Hazardous Material. The emphasis will be on the federal regulations and their often-competing goals and contradictory provisions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT405 Best Practices in Reverse Logistics (3 semester hours)

This course provides students with a systems-centric view to explore what is seen as today's best practices in reverse logistics applications in manufacturing, retail and in the military. It includes the nature, scope, practices, procedures and processes of reverse logistics as compared to forward logistics. A practitioner approach is used to explore and examine the management functions and the interrelationships among the components of reverse operational logistics are provided. This course is intended for students and professionals working in logistics, retail business management, general management, transportation management, supply chain management, and corporate and military decision makers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT411 Air Transportation (3 semester hours)

This course covers the history, management and future trends in air transportation. It covers the four principal segments of air transportation: major carriers, regional carriers, all-cargo carriers and general aviation. In each segment, the issues of aircraft design, market share, finance, insurance and operations are discussed. The course analyzes the development and application of national and international regulations that impact air transportation. Topics include: cost structure, air fares, flight crews and safety, environmental impacts of aircraft and airports, operating and service characteristics, technological advances, world competition and intermodal operations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT415 Airport Operations (3 semester hours)

This course is a study of managerial and leadership issues associated with airport operations, to include human resource, union, commercial, legal, security, air and air support operations, and other issues.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT416 Air Cargo Operations and Security (3 semester hours)

This course provides students with an understanding of air cargo theft and proper control for safety and security of people, the cargo and the environment. This remains the focal point of cargo security management despite the justifiably increased concern for disruptions due to natural catastrophes, accidents and global terrorism. Topics include introduction to cargo security, benchmarking against best practices in the industry and conduct of an effective cargo theft investigation. With what are the learning outcomes? At the completion of this course the student will be able to: Assess transportation as a conveyance and evaluate the impact of transportation disruptions on the supply chain, understanding of the role of airport management operations focused on air cargo movement and control through an airport system.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT441 Advanced Business Logistics (3 semester hours)

Business Logistics is the set of activities involved in the flow of materials and products through an organization and through the supply chain to the market. This course examines and applies management tools and principles to these supply and distribution problems. Emphasis is first placed on developing a broad overview of the logistics field: what are its principle activities, decisions and how these activities produce value by supplying customer service through order fulfillment. Interfunctional coordination is reviewed by examining how logistics is coordinated or integrated with marketing and corporate strategy. Next, a thorough grounding in concepts, alternatives and tools for the primary activities of logistics: inventory, transportation, warehousing and order processing are presented. This provides the basis for examining issues in logistics system design, including stock
location, sourcing, number and location of facilities and flow management. The organizational design of the logistics system across the internal supply chain is examined if time permits.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT442 International Trade and Regulations (3 semester hours)

This course is a study of international trade, to include the theories and practice of international trade and their economic outcomes from both global and local vantages. Topics of the course include free and restrictive trade theories, free trade agreements, general and specialized tariffs, and trade as an arm of foreign and/or domestic policy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT498 Senior Seminar in Transportation and Logistics (3 semester hours)

This senior capstone course allows students majoring in transportation and logistics to analyze specific program related issues and problems using the knowledge and understanding gained by completing the required courses in the program and a significant number of the major courses. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Accounting (ACCT)

ACCT603 Advanced Business Concepts (3 semester hours)

This course covers the knowledge and understanding of general business environment and concepts. The topics in this course include knowledge of corporate governance; economic concepts essential to understanding the global business environment and its impact on an entity's business strategy and financial risk management; financial management processes; information systems and communications; strategic planning and operations management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Accounting (ACCT)

ACCT603 Advanced Business Concepts (3 semester hours)

This course covers the knowledge and understanding of general business environment and concepts. The topics in this course include knowledge of corporate governance; economic concepts essential to understanding the global business environment and its impact on an entity's business strategy and financial risk management; financial management processes; information systems and communications; strategic planning and operations management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT604 Comprehensive Financial Accounting (3 semester hours)

This course covers the knowledge and understanding of the financial reporting framework used by businesses, not-for-profit, and government entities. The financial reporting frameworks covered in this course include those issued by the FASB, the IASB, the SEC, and the GASB.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT606 Advanced Auditing Topics (3 semester hours)

This course covers the knowledge and understanding of the following professional standards: Auditing standards promulgated under U.S. GAAS [related to audits of an issuer (a public company), a non-issuer (an entity that is not a public company), government entities, not-for-profit entities, and employee benefit plans], standards related to attestation and assurance engagements, and standards for performing accounting and review services.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT607 Business Law and Taxation (3 semester hours)

This course the professional ethics issues relating to tax practices and based on the AICPA® Code of Professional Conduct, Treasury Department Circular 230, and rules and regulations for tax return preparers. Business law topics covered include the legal implications of business transactions, auditing, and financial reporting.

AICPA® is a registered trademark of the American Institute of Certified Public Accountants.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT608 Financial Reporting & Analysis (3 semester hours)

A study of the techniques used to interpret and analyze financial statements effectively. Managers, accountants, investors and analysts often perform analytical procedure to learn more about what is being reported by public corporations. The viewpoint is that of the user of financial statements. This course is designed primarily for students who expect to be intensive users of financial statements as part of their professional responsibilities. Students must have access to Microsoft Word and Microsoft Excel software.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT609 Auditing & Assurance I (3 semester hours)

The primary goal of the course is to expand students understanding and application of auditing research, processes, planning, and execution. This course provides an in-depth analysis of a wide range of topics on auditing. Topics include audit reports, responsibilities, objectives, evidence, planning, legal liability, and ethics. (Prerequisite: **ACCT400** or equivalent)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT610 Advanced Accounting (3 semester hours)

An advanced analysis of accounting theory and practice designed to prepare the accounting major for complex problems that arise from partnerships, consolidations and mergers, receiverships, and governmental units. Also a study of the theoretical and practical approach of accounting, budgeting, reporting and auditing for governmental units, colleges and universities, hospitals and other not-for-profit organizations. Students must have access to Microsoft Word® and Microsoft Excel® software. Please refer to the Course Materials section for additional details on materials and pricing or contact booklist@apus.edu. (Prerequisite: **ACCT608**)

Microsoft Word® and Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT612 International Accounting (3 semester hours)

This course examines methods of international accounting concepts, practices, and issues. The course focuses on the accounting issues encountered by multinational companies engaged in international trade and invested in foreign operations. The course analyzes the global financial environment, foreign exchange market, foreign exchange risks, global financing and investment decisions. (Prerequisite: **ACCT610**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT614 Government & Non-Profit Accounting I (3 semester hours)

The primary goal of the course is to expand students understanding and application of government and non-profit accounting research, processes, planning, and execution. This course provides an in--depth analysis of a wide range of government and non-profit accounting topics. Topics include governmental operating statement accounts, budgets, accounting for general assets, accounting for long-term liabilities, etc. (Prerequisite: **ACCT410** or equivalent)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT615 Individual Tax Research and Planning (3 semester hours)

A study of income determination and concepts for individuals with emphasis of the impact of taxation on personal and/or business decisions, advances student knowledge of research techniques, and understanding of the IRS tax code. Students must have access to Microsoft Word® and Microsoft Excel® software.
Microsoft Word® and Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT616 Advanced Federal Taxation (3 semester hours)

This course is a continuation of **ACCT615** Individual Tax Research and Planning for students with an interest in continuing their study of Federal Taxation. The course will consider tax reporting issues for regular C Corporations, S Corporations, and Partnerships. A brief introduction to International Tax transactions and Federal Estate and Gift Taxes is included. Students must have access to Microsoft Word® and Microsoft Excel® software. (Prerequisite: **ACCT615**)

Microsoft Word® and Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT617 Advanced Cost Accounting (3 semester hours)

This course covers the analysis of accumulating and reporting costs of operations, budgets, and other tools of management for measuring profitability of a business enterprise. Emphasis is given to the various cost systems like job order, process cost, standard cost, and variable costing. (Prerequisite: **ACCT610**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT618 Managerial Accounting (3 semester hours)

The focus of managerial accounting is to provide key information to internal parties (e.g., managers) to enable them to make better business decisions. This course will provide students key facets of cost analysis and various cost accounting systems. Students will learn how managerial accounting is used to facilitate and guide business decisions. Topics include planning (e.g., budgets), variance analysis, and overall performance measurement, among others.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT620 Forensic Accounting (3 semester hours)

This course is a study of forensic accounting with an emphasis on using accounting techniques in white collar criminal investigations. The course exposes students to criminology topics such as skimming, cash larceny, check tampering, billing schemes, payroll and expense reimbursement irregularities, non-cash misappropriations, corruption, and interviewing witnesses. The course advances student knowledge of auditing, financial statement analysis, and research techniques in the context of fraud. This course requires the student to purchase additional materials. Please refer to the Course Materials section for additional details on materials and pricing or contact booklist@apus.edu. (Prerequisite: **ACCT609**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT695 Accounting Theory and Concepts (3 semester hours)

In this course students evaluate how organizations process and report accounting information in adherence to ethical standards and generally accepted accounting principles. Topics include accounting literature related to the accounting cycle, adjusting and closing entries, ethics, financial reporting & analysis, international accounting, auditing, taxation, and governance. (Prerequisite: **ACCT610**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT699 Financial Accounting Theory Capstone (3 semester hours)

A required capstone course that explores the rationale and structure of accounting theory including the concepts underlying current accounting thought. Students will conduct accounting research and complete a thesis that bears to their intended area of practice and facilitates a broadened perspective by exploring relevant technical constructs in a theoretical context.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Business (ANLY)

ANLY600 Data Mining (3 semester hours)

This course covers data mining using the R programming language. It offers hands on experience approach through a learn-by-doing-it strategy. It further integrates data mining topics with applied business analytics to address real world data mining cases. It continues the examination of the role of “Data Mining in R”, and review statistics techniques in prescriptive analytics, and some predictive analytics. Additionally, some standard techniques and excel functions will be also covered.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY610 Text Mining (3 semester hours)

This course covers the elements of text mining techniques used to complement data mining methods but for unstructured text. The essential transformation techniques where text is prepared and handled to a form in which it can be mined is discussed and explained. Additionally, some standard techniques and excel functions will be also covered. (Prerequisite: **BUSN662**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY620 Predictive Analytics (3 semester hours)

This course equips students with the skills to forecast business outcomes based on historical data and sophisticated modeling techniques. Students will explore a gamut of predictive models from regression analyses to state-of-the-art machine learning algorithms.

Class participants will practice building, validating, and deploying models to address pressing business challenges and to ensure proactive strategic initiatives. Emphasizing both theory and application, this course is essential for students aspiring to learn how to harness the predictive power of data to shape business trajectories. (Prerequisite: **BUSN662**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY630 Optimization and Simulation (3 semester hours)

This course primarily covers handling elements of the influence on a business performance that can be constraints for achieving certain results. The course discusses optimization methodologies to support management choices. Students will learn about applying linear programming principals to harness a precise objective considering a set of business constraints. Students will use spreadsheet software to implement and solve these linear programming problems. (Prerequisite: **BUSN662**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY640 Data Management (3 semester hours)

This course offers a comprehensive overview of the methodologies, tools, and best practices required to store, organize, and maintain high-quality datasets. Students will explore relational databases, data warehousing, and the essentials of data governance and security.

Through hands-on exercises, participants will design and implement database structures, ensuring data integrity and accessibility. This course may be useful for students seeking a mastery of the backend of analytics. (Prerequisite: **BUSN662**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY645 Enterprise Analytics (3 semester hours)

This course centers on leveraging analytics at a grand scale, ensuring students are well-equipped to drive strategic initiatives across large corporations and multifaceted institutions. Students will acquire a knowledge of holistic data strategies, systems integrations, and the nuances of analytics deployment in diverse enterprise environments. Class participants will participate in real-world case studies, simulating the challenges and opportunities of analytics in expansive organizational settings.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY646 Social Media Analytics (3 semester hours)

This course delves deep into advanced analytical techniques tailored for marketing from customer segmentation and lifetime value prediction to sentiment analysis and recommendation systems. Class participants will harness big data to craft personalized marketing campaigns, optimize customer touchpoints, and predict emerging market trends. Engaging with real-world scenarios and utilizing cutting-edge tools, students will gain a mastery over optimizing marketing return on investment (ROI) through precision analytics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY647 Six Sigma Concepts & Tools (3 semester hours)

In this course, students will journey through the Define, Measure, Analyze, Improve and Control (DMAIC) framework to comprehend the key principles and tools that underpin Six Sigma methodologies for excellence in process management and continuous improvement. From root cause analysis to control charts and process mapping, participants will harness a suite of tools to identify, quantify, and mitigate process variability. Real-world projects will ensure hands-on experience, enabling students to implement Six Sigma strategies for optimal business performance.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY699 Analytics Project (6 semester hours)

Preparation for the Applied Business Analytics Project/Capstone begins on day one of a student's graduate program of study. The theories, research methods, analytical skills, analytical tools, and substantive knowledge obtained through their master's curriculum provide the basis for a major data analysis project. Students will work closely with the assigned faculty member to develop the subject matter of their project. The experiential or practical component of the class aims to apply learning in an aspect of interest related to the degree and concentrations of the student's areas of specialization. It is understood to be a supervised project where data is collected from or about an approved organization. The selection of an organization or site for the project must relate to the content of the student's course work and/or analytics concentration. Goals of the applied project will be submitted by the student using an application for approval to the faculty member and/or Program Director. The organization will serve as an opportunity to experience the practice of business or big data analytics. This option will act as a capstone of the student's program and is to be completed in the student's final semester.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Business (BUSN)

BUSN501 Critical Thinking and Digital Literacy (3 semester hours)

This **BUSN501** Critical Thinking and Digital Literacy course will prepare the transportation and logistics management and reverse logistics management graduate student to address issues associated with critical thinking and digital literacy. Students will be afforded the opportunity to begin to compile artifacts and signature assignments related to their field of study of transportation and logistics management or reverse logistics management. The course is intended to provide a foundation from which the student may use the knowledge and practices gained in this course throughout the rest of their graduate program.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN600 Artificial Intelligence Practices in Business (3 semester hours)

This course introduces the fundamentals of artificial intelligence (AI)'s applications in business for non-technical professionals. Students will gain a basic understanding of AI's development, its use in business operations and decision making, and the ethical and legal implications inherent in its use. In exploring the many facets of real-world AI business applications, learners will analyze the disruptive changes brought by AI innovation and evaluate AI's potential future influence on business and society.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN604 Fundamentals of Business Analysis (3 semester hours)

This course examines issues and functions that business managers face within the context of day-to-day operations and long-term planning for an organization. Topics covered in this course include the tools used in business operations, the global dimensions of business, financial statement analysis, capital budgeting, legal and ethical behavior, and economic analysis for decision makers.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN619 Global Business Perspectives in a Digital World (3 semester hours)

This course examines the issues and problems confronting business leaders and managers in the international business environment. The focus is strategic management in today's fast-changing global digital world, in the context of both long-range planning and day-to-day operations. Topics include the global perspective of managing interests of diverse stakeholders; marketing; sustainability; supply chain issues; economic, accounting, and tax considerations; organizational challenges; sustainability; and communications. Students engage in real life case studies and problem-solving culminating in a summative course project. (Prerequisite: **FINC600**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN620 Strategic Management (3 semester hours)

This Strategic Management course serves as a culmination of prior business studies where students can integrate all core functional areas of designing a unified business strategy for long-term organizational success. Students explore the strategic management process, including strategy formulation, strategy implementation, and strategic planning in complex business environments.

The course examines competitive advantage, strategic decisions, and strategic thinking through real-world case studies from leading organizations and industries. Students apply management frameworks to develop and evaluate effective strategies, enhancing their skills, knowledge, and ability to make informed decisions as managers and future leaders.
By the end of the course, students will be prepared to design and execute innovative strategies that drive organizational growth, adaptability, and sustained performance in today's dynamic marketplace. (Prerequisites: **BUSN600**, **ECON600**, **FINC600**, and **MTKG600**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN623 Legal & Ethical Issues in Management (3 semester hours)

This course examines major legal and ethical issues confronting business operations and management in a changing, fast-paced global environment. It explores the intersection of law and ethics, equipping students with the skills to evaluate and integrate legal risk and ethical practices for effective decision-making. Using a case study approach, major topics include business structure and liability, intellectual property, contracts, torts, ethical theories, Constitutional law, regulatory compliance, corporate social responsibility, and emerging contemporary issues. (Prerequisites: **BUSN600**, **ECON600**, and **FINC600**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN624 Principles of E Commerce (3 semester hours)

This course introduces the student to the concepts and terminology of modern e-commerce approaches. It includes topics on marketing, web technologies, security, legal issues, imaging, search engines. The emphasis will be to develop an understanding of the underlying principles of e-business.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN625 Applied Decision Making (3 semester hours)

This course provides students with a comprehensive understanding of decision-making processes in business contexts and the balance between theoretical foundations and practical applications in decision making. Through theoretical frameworks, case studies, and practical exercises, students will develop skills in identifying, analyzing, and making effective decisions in complex environments.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN627 Legal, Policy, and Ethical Issues of Crisis Situations (3 semester hours)

This course provides a study of legal, policy, and ethical issues and practices that relate to decision-making in crisis situations in the 21st century U.S. and global environment. Using a case study analysis approach, students are provided readings and comparative case studies for recognition of the important legal issues, ethical approaches, and policy implications involved in such crisis arcs as pandemics, social and political unrest, environmental disaster, communications disruptions, and terrorism.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN632 International Business Law, Ethics, & Cultural Intelligence for Business Leaders (3 semester hours)

This course examines contemporary and emerging issues of international business law, ethics, and cultural intelligence for the business leader. Through a case study approach, students delve into legal, ethical, and multi-national topics affecting global business decision making, such as cross-border transactions, international trade law, contracts, antitrust, artificial intelligence, human rights, intellectual property, cybersecurity, human resources, dispute resolution, labor, terrorism, and sustainability. Ethical considerations, such as bribery prevention and corporate responsibility, are integrated with strategies for fostering ethical leadership. Cultural competence is emphasized, with insights into negotiation dynamics and team building across multi-cultural contexts. Through case studies and practical exercises, students gain skills to lead knowledgeably, with integrity, in the global marketplace. (Prerequisite: **BUSN623**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN633 Artificial Intelligence: Law, Ethics, and Risk Strategy (3 semester hours)

Using a practical case study approach, this course explores the evolving law governing artificial intelligence applications in business, ethical issues relating to artificial intelligence, and the associated risks of artificial intelligence in business. Students will apply key legal principles and ethical considerations to business management problems and build a risk strategy tool kit to effectively navigate the fast-changing AI environment. (Prerequisites: **BUSN600** and **BUSN623**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN634 Artificial Intelligence: Business Strategies for High Level Decision Makers (3 semester hours)

This course introduces students to the best business practices for the use of AI technologies and leveraging AI tools for responsible decision making. Students will research and analyze implications of emerging AI developments for competitive business applications. (Prerequisites: **BUSN633** and **BUSN656**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN636 International Finance and Emerging Global Markets (3 semester hours)

Today's digitally linked global world requires skillful navigation of the intricacies of international finance to attain sustainable growth and profitability. This course provides a strategic overview of the theories and frameworks that underpin international finance, with a focus on practical corporate decision-making in a global context. Students will gain insights into fluctuating global markets, exchange rate dynamics, balance of payments analysis, and international investment theories. Students will explore factors propelling emerging global markets, such as demographic shifts, disruptive technological advancements, and geopolitical trends, and determine strategies to mitigate financial risks and maximize returns. (Prerequisites: **BUSN619** and **BUSN632**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN640 Nonprofit Law, Governance, and Ethics (3 semester hours)

A survey of the legal structure that defines and regulates the nonprofit sector and an examination of fundamental governance issues in nonprofit corporations. The focus of the course is on the board of directors (trustees) and the executive director and their fiduciary responsibilities established both by law and by the moral imperatives from actions on behalf of the public interest.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN641 The Nonprofit Organization and Executive Leadership (3 semester hours)

A comparative analysis of the various theories, principles, and styles of leadership and how they apply to the management and governance challenges in nonprofits; complex organizations with a wide range of stakeholders and often fragile and fragmented financing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN642 Financial Management in Nonprofit Organizations (3 semester hours)

A comprehensive study of the key financial statements to help monitor the organization's financial health. An analysis of fund accounting, the importance of quality financial reporting and financial controls to protect and sustain nonprofit organizations, and the budget as a tool to direct the organization are included in this course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN654 Business Continuity (3 semester hours)

BUSN654 introduces students to the elements of continuity for an organization. A business continuity plan (BCP) includes procedures for short- and longer-term issues. Students will gain the knowledge to identify essential services and develop a business continuity plan that will outline the methods for protecting the various components of a business, as well as how to proceed when experiencing a crisis.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN655 Sustainability and Crisis Management (3 semester hours)

BUSN655 introduces the fundamental concepts of crisis management and sustainability in a business. A crisis can happen in an organization anytime, anywhere. Topics include advanced crisis management planning, which is key to sustainability and assures a company has the processes and procedures in place to address almost any issue that may arise. The course also covers the impact of a crisis on an organization's employees, customers, suppliers, and general public; and the sustainability of a company's value.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN656 Artificial Intelligence and Crisis Management (3 semester hours)

BUSN656 covers several key concepts. In the course, the student will learn to identify potential internal and external crises and provide insight on how businesses can use AI to prepare to face crises and challenges. Students will develop an understanding of how AI technology improves the efficiency of the management process during a crisis response. Students will learn how the use of robotics, information sharing using ontologies, and providing multi-agent systems for real-time support and simulated environments assist in crisis management planning. They will also learn about the tools needed to conduct ethically sound crisis management practices.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN657 Crisis Management for the Business Leader (3 semester hours)

BUSN657 introduces the role of leaders/managers in crisis management. Topics include the types of crisis, the importance of developing a crisis management plan and implementing a team, and the ways to overcome crisis. The course also covers the impact of a crisis on an organization's employees, customers, suppliers, and general public; and managing stress during a crisis.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN660 Advanced Analytics I (3 semester hours)

This course delves deeper into the sophisticated techniques, algorithms, and tools central to modern analytics. Building upon their foundational knowledge of analytics, students will engage with complex data sets, machine learning methodologies, and advanced predictive modeling. Through real-world case studies and hands-on projects, course participants will learn how to derive actionable insights and address intricate business challenges.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN661 Advanced Analytics II (3 semester hours)

This course equips students with advanced Excel data analysis skills that can be used for problem-solving and decision-making in business. Building upon a foundational knowledge of analytics, students will engage with complex data sets, estimate regression models, and conduct visual analytics. Using case studies and hands-on projects, students will learn how to derive actionable insights and address business challenges. (Prerequisite: **BUSN660**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN662 Applied Advanced Analytics (3 semester hours)

This course in applied advanced analytics imparts a deep understanding of the strategies, methodologies, and leadership skills required to drive and manage technological change and innovation in today's evolving business environments. This course combines intricate analytical theories with tangible business scenarios, ensuring students can adeptly transfer classroom knowledge to real-world contexts.

Students will utilize intricate data sets, employ cutting-edge algorithms, and learn to make strategic decisions grounded in advanced analytical findings. Through hands-on projects, students will be taught how to confront and solve genuine business challenges from supply chain optimizations to market forecasting. This course is ideal for those seeking to not only understand but also apply high-level analytics, and it serves as a bridge between theory and impactful business application. (Prerequisite: **BUSN661**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN663 Project Management for the Business Professional (3 semester hours)

This course delves into the theories, concepts, and practical application of project management for business professionals and how internal and external environmental factors affect projects that individual students will lead and oversee. Students will analyze project scenarios to determine the best outcomes and what actions to take when the project overruns its budget or schedule. Also, students will examine the future of project management and what technology is available to help the business professional and the project manager.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN664 Advanced Business Project Schedule and Scope Management (3 semester hours)

This course provides an in-depth analysis of project schedule development and project scope management. Students examine the relationship between schedule and scope across the project life cycle while applying key project management processes. Topics include developing a project scope statement, creating a Work Breakdown Structure (WBS), and building a detailed project schedule. Students learn to identify task dependencies, allocate resources, calculate durations, and apply scheduling techniques such as network diagrams, Gantt charts, and the Critical Path Method (CPM). Tools for monitoring project progress and managing scope changes are explored, including earned value management and change control processes. Emphasis is placed on using project scheduling software, fostering collaboration among project team members, and applying schedule and scope management practices to deliver successful project outcomes. (Prerequisite: **BUSN663**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN665 Advanced Business Project Risk and Quality Management (3 semester hours)

This course provides an in-depth analysis of project risk and quality management. These two aspects of project management are considered difficult to make tangible to the project team. This class will introduce students to the tools and techniques to identify, control, and monitor risks and opportunities and how to plan and promote a project’s quality program. (Prerequisite: **BUSN663**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN666 Advanced Business Project Integration, Resource, and Stakeholder Management (3 semester hours)

This course studies project integration, project human resource management, and stakeholder management. Students will be exposed to the skills to plan, monitor, and control resources to complete a project. Skills will be introduced to understand how to assess project stakeholders and keep them informed regarding the project status. (Prerequisite: **BUSN663**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN667 Advanced Business Project Cost Controls (3 semester hours)

This course introduces the advanced concept of project cost management. The concepts of creating a budget and controlling and monitoring the budget and costs through earned value management are explored. The student will also be able to articulate to stakeholders and senior leaders the expectations for a project to finish within its budget. (Prerequisite: **BUSN663**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN669 Business Intelligence Analysis (3 semester hours)

The course provides the student with a clear understanding of the importance of aligning business intelligence to organizational strategy, performance, competitiveness, and tactical business decisions. The student will focus on leveraging the organization's internal and external data-rich assets to support business strategies. The student will apply common methods used in business intelligence to analyze data and present findings related to the state of the business.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN695 School of Business Internship (3 semester hours)

Participating in an internship provides students with valuable educational and professional opportunities designed to make connections between theory and practice. During internships, students explore and gain hands on experience in their field of study, exploring practical applications in a professional work environment. The primary responsibility for finding an internship belongs to the student; however, there are a number of resources in place to help the student in their search and application process.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN696 Capstone: E-Portfolio (3 semester hours)

The MBA Capstone E-portfolio course is the final course in the MBA program. This course will prepare MBA students to reflect on their graduate experience by compiling and revising artifacts from previous courses in the program into an organized e-portfolio. The e-portfolio will reflect the student’s educational growth from their entry in the MBA program to its completion. In addition, the graduate student will develop the skills necessary to successfully transition to and navigate post-graduate professional activity. Finally, students will be given the resources to connect with the university in an ongoing relationship.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN697 Master's Capstone: E-Portfolio (3 semester hours)

This Master's Capstone E-portfolio course is the final course in the Master's Program. This course will prepare graduate students to reflect on their graduate experience by compiling and revising artifacts from previous courses in the program into an organized e-portfolio. The e-portfolio will reflect the student's educational growth from entry in the graduate program. In addition, the graduate student will develop the skills necessary to successfully transition to and navigate post-graduate life as well as understand the civic and social responsibilities of being educated citizens. Finally, students will be given the resources to connect with APU/AMU in an ongoing relationship.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN698 Comprehensive Examination for MBA (0 semester hours)

Comprehensive final examination for students in the Master of Business Administration program.
IMPORTANT: You must have COMPLETED all other courses in the program and have a GPA of 3.0 in order to register for this course. As an MBA student, you must pass this comprehensive exam in order to have your degree conferred. The comprehensive exam must be taken by the course end date or a failing grade will be posted. If you fail your first course attempt to pass the comprehensive exam, you will need to get approval to register for a second attempt of the course and BOTH final course grades will show in your transcript.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Business (ECON)

ECON600 Managerial Economics (3 semester hours)

This course is designed to use economic analysis to enhance business decision-making within private businesses, not-for-profit institutions, and public agencies. Economic concepts covered include demand analysis, production and cost analysis, linear programming applications, pricing policies and regulation.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ECON610 Global Economics (3 semester hours)

This course is a study of theory and concepts fundamental to understanding the global economy. Students learn to analyze the global business environment of industrialized developing countries, and to think strategically, using micro and macroeconomics principles.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Business (ENTR)

ENTR500 Ideation (3 semester hours)

There are two types of entrepreneurs - those that have a myriad of ideas and those that can't think of one idea. This course will help the student identify opportunities for a new business venture by either deciding on one idea they have or helping to create ideas. This course will span the realm of possibilities for a new business venture and the student will leave the course with a plan for taking the idea and turning it into reality.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR510 Lean Accelerator (3 semester hours)

The Accelerator is a dynamic learning and business development experience, unlike any class you will have had before. You start with your own creative ideas and, through the rigorous lean startup protocol, strive to determine the exact business model by which to launch and go to scale. The Accelerator model is based on lean startup and customer development principles (i.e., innovative business models, scientific approach, hypothesis testing, rapid iteration, minimum viable product, problem-solution fit, and customer discovery).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR615 Legal Practices for Small Business (3 semester hours)

This course examines the legal and ethical issues small business owners face in the start-up and growth processes and equips them with the concepts needed to be successful. Students review decisions affecting business formation, including business entity selection and formation, employment law, intellectual property, taxation, government regulation, and contract law.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR617 Legal Practices for Entrepreneurs (3 semester hours)

This course is intended to address the various legal, tax, and ethical issues that confront individuals and companies in starting up new ventures, either within an existing company or a new start-up company. Students are exposed to the process of buying and/or selling a company, intellectual property, tax implications, and ethical challenges entrepreneurs face.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR620 Small Business Operations (3 semester hours)

This course focuses on lean processes associated with owning a business and equips students with modeling skills to help them make better decisions in the operations process. Students evaluate different lean operations in areas such as lean six sigma, quality improvement, value creation, project management, the DMAIC process, pricing strategy, assumption testing, and inventory management. *This course uses spreadsheet software.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR621 International Entrepreneurship (3 semester hours)

This course focuses on international opportunity for new and emerging ventures; market analysis; exporting; joint ventures, regional, legal, and cultural issues; and financing foreign ventures. The course provides students with an understanding of the complexities faced by entrepreneurs doing business in a global environment and with knowledge to help them be successful within the global context.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR623 Venture Capital (3 semester hours)

This course covers major sources of funding for entrepreneurs - including family and friends, angels, venture capitalists, informal investors, banks, and crowdfunding. Each are reviewed and evaluated in this course. Some topics for this course include valuation, bootstrapping, joint ventures, strategic alliances, and private placements. Students create financial statements, develop a funding plan for a new venture, and create a pitch to present to an investor. *This course uses spreadsheet software.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR625 Small Business Funding (3 semester hours)

This course examines financial strategies needed to support a small business. Topics addressed include managing the cash cycle, seed and venture capital, cost of capital and capital structure, entry strategies such as franchising and acquisition, self-funding, debt financing, angel investors, and financing from venture capital firms.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR630 Entrepreneurial Marketing (3 semester hours)

This course examines the marketing process and components of a successful marketing strategy for starting and growing a successful entrepreneurial venture. Students learn about the evolving practice of marketing and the potential for entrepreneurial thinking. Focal points range from issues with conventional marketing paradigms to the development of marketing strategy in the digital age.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR631 Small Business Marketing (3 semester hours)

In this course, students examine the unique marketing challenges faced by entrepreneurs launching new products and/or services. Topics include: designing new offerings, targeting customer segments, and marketing on a tight budget. The course is designed to be useful for small business owners.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR635 Business Plan Development (3 semester hours)

This course is designed to provide the student with the skills necessary for developing a comprehensive, effectively written business plan for a new business venture. Every business benefits from a business plan. This class helps students understand that a business plan is more than a strategic plan. The motives for a business plan are largely the same for every business: to have an intent, purpose, and direction for the business. This course deals with the critical decisions and action steps entrepreneurs must make in both planning and executing a new venture. The business plan is often a tool used for those who may be interested in the business venture for a variety of reasons. Therefore, the plan must reflect the concept's viability and business model, the environment in which the firm operates, and the expertise of the management team to execute the plan.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR699 Entrepreneurial Project Capstone (3 semester hours)

As a culmination to the graduate-level Master's program in Entrepreneurship, this capstone course focuses on tying together the functional aspects of an entrepreneurial initiative to position it for growth and longevity. Topics covered include elements that must be considered by the entrepreneur to better position the organization for future growth, such as market research, management acumen, funding, etc. Students evaluate the opportunity of their venture as a foundation for the strategic business plan that stresses growth and answers to market shifts. This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Child and Family Development (HDFS)

HDFS501 Advanced Child Life Theory and Practice (3 semester hours)

Advanced Child Life Theory and Practice provides students with the knowledge and tools to educate, prepare and support children and their families who are experiencing acute or chronic illness or trauma. This course covers scope of practice, impact of illness, family centered care, therapeutic play, preparation and official documents of the Association of Child Life Professionals.

Note: This course is taught by a Certified Child life specialist and meets one of the academic requirements of the Association of Child Life Professionals (ACLP®) to become a Certified Child Life Specialist.

ACLP® is a registered trademark of Child Life Council, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HDFS502 Therapeutic Play (3 semester hours)

This course will cover the history, theories, techniques, applications, and skills as they relate to therapeutic play. Students will develop therapeutic strategies for meeting children's emotional needs and helping them to cope during times of acute and chronic illness, bereavement, and trauma. (Prerequisite: **HDFS501**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HDFS503 Death, Dying and Grief - A Child's Perspective (3 semester hours)

This course explores issues around death and dying and the impact on children to include the theoretical and multicultural perspectives as well as ethical and moral issues. Students will also examine the impact of death and dying on a family and community. Students will engage with tools such as legacy building and memento creation, identify and utilize resources that promote positive coping skills, and identify strategies for helping children to cope with terminal illness and impending death. (Prerequisite: **HDFS501**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HDFS540 Family Systems (3 semester hours)

This course will examine the ecological or systems approach to understanding families as well as a review of historical and contemporary family theories. The course will include a look at family structure, family dynamics, family relationships, and family roles particularly as they are impacted by a wide range of stressors that necessitate intervention strategies. The nature of families will be explored across cultures and family composition.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HDFS596 Child Life Practicum Experience (3 semester hours)

This course supports students who are completing a clinical practicum in child life as part of their graduate program in Psychology. This experience will expose students to relevant clinical practices in child life. Students will complete their practicum experience while participating in weekly online discussions throughout the course. Students will be expected to complete a work journal, keep accurate time records, and evaluate their practicum experience. The course will integrate the competencies as outlined by the profession throughout the course. (Prerequisite: **HDFS401** or **HDFS501**)

Note: Students are required to secure their own practicum experience. The University does not assist in placement.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HDFS597 Child Life Internship (3 semester hours)

The Child Life Internship is designed to support students who are completing an internship as a part of the certification requirements for Child Life Specialist. This internship will expose students to relevant work practices in their area of study.

Students will complete their internship while participating in weekly online discussions throughout the course. In addition, students will be expected to complete a work journal, keep accurate time records, and evaluate their internship experience. The course will integrate industry competencies throughout the course and encourage students to apply the skills they learn.

Note: Students are required to secure their own internship, because the University does not assist in placement. This course is designed for students needing a University affiliation for clinical placement.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Computer Science (CSCI)

CSCI500 Foundations of Advanced Computer Science (3 semester hours)

This course serves as an essential primer for students in computer science, providing the foundations for advanced computer science study and subsequent work in **CSCI505**, **CSCI510**, and **CSCI520**. It develops core knowledge and skills in data structures, algorithms, machine learning, and big data analytics. Emphasis is placed on applying theory to computational systems and software development challenges, while introducing techniques that support deeper understanding of advanced computational problems, machine learning, artificial intelligence, and big data analytics. The course also highlights connections to engineering concepts and professional practice within the field. These elements strengthen the subject foundations and align with program outcomes, ensuring students have the resources needed for progression within the Master of Computer Science degree.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI505 Advanced Algorithms and Data Structures (3 semester hours)

This course explains the design, analysis, and implementation of data structures and algorithms essential for solving computational problems in computer science. Building upon foundational knowledge, students explore and implement advanced data structures and advanced algorithms, including binary search trees, linked lists, graphs, and hash tables. The course also addresses data storage methods, external storage techniques, sorting strategies, and a range of algorithmic design paradigms such as dynamic programming. Emphasis is placed on applying theory through programming languages like Python and other high-level tools to support software development and systems development. By working with these concepts, students strengthen their skills in analysis, implementation, and optimization, aligning with program outcomes in the broader subject of computer science. (Prerequisite: **CSCI500**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI510 Applied Machine Learning and Artificial Intelligence (3 semester hours)

This course offers a rigorous exploration of machine learning and artificial intelligence, focusing on both theoretical concepts and practical applications. Students study the mathematical and statistical foundations of machine learning models, including supervised learning, unsupervised learning, semi-supervised learning, and reinforcement learning. The course emphasizes an advanced understanding of neural networks, artificial neural networks, and deep learning architectures, along with optimization techniques and their use in domains such as natural language processing, computer vision, robotics, and healthcare. Through hands-on development, students gain skills in implementing these models using modern tools and frameworks while engaging in projects that address real-world applications of AI. The course also examines ethical issues and the societal impact of AI technologies, reinforcing critical knowledge within the broader computer science program and aligning with graduate-level outcomes in the subject area. (Prerequisite: **CSCI500**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI520 Big Data Analytics & Data Mining (3 semester hours)

This course provides an in-depth study of big data mining and analytics, emphasizing advanced techniques and practical applications across multiple domains. Students examine methods for data analysis, data processing, and data management with both structured and unstructured data, including large datasets, data warehouses, and data lakes. The curriculum covers statistical analysis, machine learning algorithms, feature engineering, and pattern recognition to support informed decision making in areas such as business, healthcare, and science. Through hands-on projects, students develop skills in using modern software, programming languages, and distributed computing frameworks to address real-world information challenges. This course strengthens knowledge within the computer science discipline, preparing learners to explore and apply analytics in diverse professional contexts while aligning with graduate-level program outcomes. (Prerequisite: **CSCI500**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI530 Advanced Cybersecurity & Network Defense (3 semester hours)

This advanced cybersecurity course examines strategies, tools, and techniques used in cybersecurity and network defense. Students learn to identify, analyze, and respond to cyber threats through applied training that includes intrusion detection, penetration testing, threat detection, and continuous monitoring. The course explores security controls, information security practices, and policies to mitigate attacks and manage risk across digital systems and enterprise environments. Emphasis is placed on both technical knowledge and practical skills, with hands-on experiences using real-world scenarios. Additional topics include cryptography, malware analysis, and the role of machine learning in advancing cyber defense. By integrating applied methods with broader information and security architecture, the course strengthens expertise for students and professionals pursuing careers in the program of computer science and related fields. (Prerequisite: **CSCI510**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI550 Advanced Software Engineering and DevSecOps (3 semester hours)

This advanced software engineering course provides a rigorous exploration of modern software engineering principles, practices, and emerging trends. Emphasis is placed on agile development, DevSecOps, and devops methodologies, highlighting their integration throughout the software development life cycle. Students study both theoretical foundations and applied techniques in software architecture, application development, system architecture, and requirements analysis, while also addressing software security, security testing, and related security best practices. Topics include continuous integration, continuous deployment, and CI CD pipelines, along with cloud computing, cloud services, and modern development environments. Through hands-on projects using industry-standard tools, students gain skills and knowledge essential to contemporary software development and information technology within the broader computer science discipline. (Prerequisite: **CSCI505** or **CSCI510**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI560 Human-Computer Interaction and User Experience (3 semester hours)

This human computer interaction course explores methodologies, tools, and techniques for designing effective and intuitive interactive systems. The course covers human computer interaction principles, user centered design, user interface design, interaction design, and human centered design, emphasizing both theoretical concepts and practical application. Students study usability testing, visual design, design thinking, and UX research to better understand user needs and how people interact with computer technology. Through hands on projects and case studies, students gain skills and knowledge in user experience design, building a solid foundation in applying UX design principles to interactive systems. The course situates human factors and interaction within the broader computer science discipline while preparing learners to apply best practices to diverse design processes and professional career pathways. (Prerequisite: **CSCI510**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI570 Advanced Cloud Computing (3 semester hours)

This advanced cloud computing course provides a comprehensive study of cloud computing, addressing both foundational concepts and advanced topics in cloud technologies. The course examines cloud architecture, cloud infrastructure, cloud applications, and cloud solutions, as well as deployment models that support modern enterprise business processes. Students gain knowledge of serverless computing, distributed systems, virtual machines, and data management, while also exploring emerging cloud technologies. Emphasis is placed on cloud security, compliance, and best practices for deploying and managing cloud computing services. Through hands-on projects, students apply skills and techniques using modern software tools to explore the benefits and challenges of cloud service environments. The course situates cloud computing within the broader computer science discipline, reinforcing understanding of critical practices and applications for academic and professional contexts at the university level. (Prerequisite: **CSCI530**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI580 Advanced Computer Architecture (3 semester hours)

This advanced computer architecture course provides a rigorous study of computer architecture and the design, analysis, and functionality of modern computer systems. The course emphasizes both theoretical concepts and practical techniques, covering advanced computer architecture topics such as instruction set design, instruction level parallelism, parallel architectures, and processor design, including out of order processors, branch prediction, and speculative execution. Students examine memory systems, including cache structures, cache coherence, memory hierarchies, and virtual memory, as well as interconnection networks and system-level design approaches. Additional areas of focus include optimization, performance, and efficiency in hardware and software solutions, reinforcing connections to algorithms, engineering, and computer science. Through applied analysis of principles and operation, students gain advanced knowledge needed to explore and develop effective designs for contemporary and emerging computer systems. (Prerequisite: **CSCI520**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI590 Advanced Operating Systems (3 semester hours)

This advanced operating systems course provides a comprehensive understanding of modern operating systems principles and operating system design strategies. It prepares students to address real-world challenges through modern techniques and the latest developments in the field. The course will cover various topics: process management, memory management, advanced file systems, distributed systems, optimization techniques, I/O systems, and security. A comprehensive survey of various operating systems, including Unix, Linux, MacOS, Android, real-time and embedded systems, and Windows, will provide a robust foundation for comparative analysis and performance optimization. In addition, the course material emphasizes key concepts in system-level communication, research, and applied problem solving, ensuring that students gain both theoretical knowledge and practical skills relevant to graduate-level program outcomes in computer science and artificial intelligence. (Prerequisite: **CSCI550**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI601 Capstone Project Phase I (3 semester hours)

This capstone course is designed to integrate knowledge and skills from the cutting-edge technologies and future trends shaping the field of computer science. Students will engage with the latest research and advancements, applying their comprehensive knowledge from previous coursework to real-world problems and case studies. The course offers direct access to industry challenges and opportunities, exposing innovative ideas. This course represents the initial phase of the Capstone project pathway. Within this course, students will engage in the selection of their project topic and the development of preliminary proposals, all under the guidance of their faculty members. (Prerequisites: **CSCI505**, **CSCI510**, and **CSCI520**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI602 Capstone Project Phase II (3 semester hours)

CSCI602 is the final stage of the graduate capstone project pathway, where students will implement their proposals developed in **CSCI601**. This capstone course represents the concluding stage of the capstone project pathway. This course emphasizes the practical application of research methodologies, data collection, or program development, and the integration of findings into a comprehensive written paper. Additionally, they will begin preparing for their final presentations, which will be based on their written work, and ultimately deliver these presentations as the culmination of their efforts. This course aims to develop students' ability to conduct independent research, synthesize information, and communicate their findings effectively. (Prerequisite: **CSCI601**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Criminal Justice (CMRJ)

CMRJ500 Criminal Justice Ethics (3 semester hours)

This course is an examination of issues of professional and ethical behavior within the criminal justice system. Key issues examined include professional behavior of the individual and the agency. Current topics such as law enforcement ethics, research ethics, and are examined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ501 Criminology (3 semester hours)

This course will examine the various theories and their application to criminal justice. Additionally this course will examine the implications of criminal acts in relation to behavior, discipline and causation. Analysis of criminal and non-criminal behavior is also addressed regarding certain causes, controls, and legal aspects of criminal behavior. Crime is analyzed from an interdisciplinary study of social problems and social responsibility perspectives.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ512 Police Administration (3 semester hours)

The student will evaluate policies and procedures that are utilized in all phases of police administration. These include judicial decisions, which impact the legal status of the operation of police agencies. Additionally, administrative issues inherent in both large and small police organizations are assessed including: the history and context of police administration, police organizational tasks, leadership in the police organization, the role of the police manager, and the role of citizen oversight. Oversight committees addressing police accountability for community enforcement services are analyzed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ515 Sexual Exploitation/Children (3 semester hours)

This course will examine the social and legal problems involved with the sexual exploitation of children. Major issues that will be examined in this course will be child pornography, prostitution, sex trafficking, pedophilia, and international child abuse issues. This course will also explore options utilized for enforcement of the current laws designed to protect children from these crimes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ518 Deviant Behavior (3 semester hours)

This course examines deviant behavior and the common definitions associated with it. The course further identifies what social deviance is and what is considered to be deviant in today’s society. The sociological and psychological issues are also reviewed as they pertain to the methods of sentencing and the criminal justice system's approach to deviance. In addition, the theories associated with deviance are also explored.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ522 Forensics (3 semester hours)

Students will explore the role of forensic science in the investigation of crime by introducing the non-scientific student to the field. The course will examine the different forensic science disciplines to include pattern evidence, fingerprints, body fluids, firearms, arson, and drug analysis. Scientific methodology as it applies to each forensic discipline will be discussed as well as technological advances making an impact in the field of forensics. The course will include development of case scenarios in order for students to apply critical thinking skills to learning concepts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ524 Organized Crime (3 semester hours)

This course examines the historical roots of organized crime and its current role within the American criminal justice system. Structural models are compared for understanding emerging groups. Special attention is paid to dependencies and cooperation among ethnic groups as well. Additionally, there will be a review of the activities associated with organized strategic aspects (i.e. profit-oriented ventures such as extortion, credit card fraud, counterfeiting, prostitution, drug trafficking, smuggling) and tactical issues (i.e. activities that support the criminal organization such as money laundering, violence, corruption, and recruitment).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ525 Negotiations: Crisis and Hostage (3 semester hours)

An examination of how to effectively manage critical incidents and hostage situations in law enforcement and corrections. Combining principles and applications from criminal justice, psychology, sociology, communications, business and other disciplines, this course presents an effective conceptual framework students can apply in high-pressure situations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ526 Drug Cartels and the Narcotics Threat (3 semester hours)

This course covers the development of the drug cartels and their organization, production, and distribution networks. This course will focus on the regions known as the Golden Triangle and Golden Crescent, and the drugs that are typically manufactured and transported from these areas. This course also provides an overview of U.S. counter-drug efforts and basic information on illicit drugs. Additionally this course provides an historical overview of drug trafficking including a focus on the opium wars in China.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ527 Crime and Mental Disorders (3 semester hours)

In the last 30 years, the link between criminal behavior and mental disorders has become more evident. Because of the apparent link between mental health disorders and criminal behavior there has been an increasing need to understand how mental health diagnoses influences behavior. This class will analyze mental disorders such as schizophrenia, personality disorders, brain damage and mental retardation and their role in criminal behavior. This graduate level class will focus on rehabilitation methods and its effectiveness for addressing the problem of mental health in the criminal justice system.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ531 Criminal Profiling (3 semester hours)

This course will examine in detail crimes such as murder, serial killing, rape, and related crimes of violence from a socio-psychological profiling perspective. Topics covered will include the foundations of criminal profiling, the elements and goals of criminal profiling, multidisciplinary theory, victimology, geographic profiling, the scientific method as applied to behavioral theories, and ethical considerations. Modus Operandi and signature behaviors will be analyzed and inductive and deductive profiling methods will be assessed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ601 Cases in Executive Decision Making (3 semester hours)

This course is a study in the major decisions made by law enforcement executives from a variety of levels and locales. These decisions include issues in crisis management as well as inter-relationships among community leaders with police executives. Management styles are addressed to determine the most effective methods of implementing solutions to macro social community problems. Additionally, strategic decision-making processes are assessed to evaluate fairness and the aspects of voluntary cooperation and attitudes of all parties. The intent of the course is to provide a thorough analysis of executive decision making from which the student can appreciate the strengths and weaknesses of executive decisions while reflecting on the student's own style and approach to decision making.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ696 Capstone - Theory to Practice (3 semester hours)

This course enables the student to demonstrate the understanding of current criminal justice theory by applying theories to practice in the criminal justice system. Students are to address two criminal justice theories from two of the three pillars of the criminal justice system, law enforcement, courts, and corrections. During Week 4, the student will submit a paper with a 20-30 page body on one current criminal justice theory impacting one of the three criminal justice pillar. During Week 8, the student will submit a paper with a 20-30 page body on one current criminal justice theory impacting one of the other two criminal justice pillars. Thus the student will complete two papers. For example the Week 4 paper will have a law enforcement focus while the Week 8 paper will have a corrections focus. The intent of the course is to demonstrate understanding of how criminal justice theories apply in two components of the criminal justice system.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ698 Comprehensive Examination in Criminal Justice (0 semester hours)

Comprehensive final examination for students in the Master of Arts in Criminal Justice program. The "Comprehensive Final Exam" is tailored specifically to each program and must be taken after students have completed 36 hours of study (i.e. during the semester following the final course) and successfully completed before the award of a degree.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Cybersecurity (ISSC)

ISSC621 Computer Forensics (3 semester hours)

This course examines information concealment techniques, technologies, hardware, software, and relevant legislation for cyber forensics to reveal and track legal and illegal activity. The course examines the process for investigation and introduces the tools and procedures required to legally seize and forensically evaluate a suspect machine. Also covered are the rules of evidence, chain of custody, standard operating procedures, and the manipulation of technology to conceal illegal activities, and revealing concealed information using cyber forensics.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC630 Advanced Cybercrime Analysis (3 semester hours)

The global reach of the Internet, the low cost of online activity, and the relative anonymity of users has led to an increase in computer related crimes. This course focuses on cybercrime investigation and prevention; it appraises the legal issues related to on-line criminal conduct, the collection of electronic evidence, and the onslaught of new technology. This course also analyzes the phases, processes, and challenges of cybercrime investigations, and it examines technical, legal, and social issues relating to the search and seizure of digital evidence and computer forensics. Students will encounter the challenges of the latency between technology and the law.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC631 Cyber Ethics: Privacy and Intellectual Property (3 semester hours)

This course is an advanced study of information ethics, cyber privacy, and intellectual property. It examines the ethical, economic, and societal issues that face today's information-entrenched society; this includes intellectual property rights, privacy, accessibility and censorship. The explosive growth of information technology, the increased competition in the global marketplace, and the surge in the use of information to protect society from terrorism has led to the unintended erosion of fundamental rights and values. This course appraises the current state of information ethics, the dangers and opportunities presented by information technology, and the potential solutions to the inherent risks in today's information-bound society.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC640 Computer Networks and Data Systems (3 semester hours)

This course is a study of computer networks and the evolution of modern communication systems. It examines the various layers of the basic reference models such as the five-layer IP model or the seven-layer OSI model, by scale, connection method, network architecture, or topology. This course also includes an in-depth analysis of transmission protocols, communications systems, and networks. Prior knowledge of networks and networking is recommended.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC641 Telecommunications and Network Security (3 semester hours)

Telecommunications networks are a critical component of the global economic and social infrastructures. Securing critical infrastructure is an established priority within Information Security Management. This course examines the field of secure telecommunications networks, including emerging threats, system vulnerability, network evolution, and network defense mechanisms.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC642 Intrusion Detection and Incident Handling (3 semester hours)

This course examines the tenets of Intrusion Detection, Intrusion Prevention, and Incident Handling. Intrusion Detection focuses on the methods to detect attempts (attacks or intrusions) to compromise the confidentiality, integrity or availability of an information system. Also included is an analysis of the principles and practices of intrusion detection, intrusion prevention, and incident handling; network-based, host-based, and hybrid intrusion detection; identifying attack patterns; deployment of resources and responses to handle the incident, surveillance, damage assessment, risk assessment, data forensics, data mining, attack tracing, system recovery, and continuity of operation.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC650 Advanced Digital Forensics (3 semester hours)

This course is an advanced study of the models of investigative methods for finding evidence in a wide scope of disparate digital devices such as computers, laptops, netbooks, networks, mobile devices – phones, notepads, PDAs, digital audio and video players, and any device or appliance that carries an electronic circuit board which could potentially store data or information. It also examines the science, the evidence, and the law related to digital forensics, the validation of findings, and determination of acceptable and irrefutable evidence in a court of law. It also evaluates various digital forensics models for data identification, preservation, collection, examination, analysis, preparation, and presentation. (Prerequisite: **ISSC621**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC651 Advanced eDiscovery (3 semester hours)

This course is an advanced study of the principles and methodologies of the e-discovery process and the increasing importance of digital evidence in litigation. Topics include contemporary investigative methods, legal issues, cost containment, collecting and prioritizing data sets, preservation of digital evidence, document review, metadata and spoliation considerations, comparative assessments, and forensic investigations. (Prerequisite: **ISSC621**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC660 Information Assurance (3 semester hours)

The course analyzes computer and systems security measures by examining a model for information assurance; it also examines the components of a comprehensive Information Assurance plan. Topics included are: asset identification, human factors, compliance with regulations, personnel security, risk assessment and ethical considerations, IA policy, as well as computer and network security tools.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC661 Information Assurance: Assessment and Evaluation (3 semester hours)

This course is an advanced study of the principles, practices, procedures, and methodologies to assure the protection and availability of vital digital information systems assets. It examines information assurance, incident management and response, and security standards; and it appraises the convergence between information security, information systems security, and information warfare. This course appraises organizational, legal, technical, and ethical issues related to securing vital digital assets. Topics include: the role of the corporate security officer, corporate cybercrime, electronic commerce, cryptography, and international standards, policies, and security acts. (Prerequisite: **ISSC660**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC662 Information Assurance: Capability Maturity and Appraisals (3 semester hours)

This course examines the phases, processes, standards, the levels, and the process areas of the INFOSEC Assessment Capability Maturity Model (IA-CMM). The IA-CMM minimizes false indications of quality and maturity by relating the IA-CMM process areas to the INFOSEC Assessment Methodology (IAM). This course appraises the principles and methodologies of the IA-CMM; and applies it to develop an organizational ratings profile to provide a measure of maturity. The ratings profile is used to develop strategies to mature the organizational processes. (Prerequisite: **ISSC660**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC680 Information Security Management (3 semester hours)

This course explores the management of information security in modern organizations, focusing on strategic, technical, and human factors that ensure the confidentiality integrity and availability of digital assets. Students will learn to identify, evaluate, and respond to contemporary threats (including cloud, AI/ML, IoT, and supply chain risks) by applying risk management frameworks, security controls, security architecture models, and information security management practices. Drawing from topics such as access control, physical controls, network security, computer security, information systems security, and risk assessment—all foundational elements emphasized in the course curriculum—they will analyze how organizations protect data and manage information security risks across information systems and other information assets.
Through case studies and discussions, students will develop critical skills in incident response, business continuity, governance, and cultivating a resilient cybersecurity culture. The course also strengthens student capabilities in evaluating security measures, conducting risk analysis, modeling security threats, and supporting effective security management within critical business environments.
Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC698 Cybersecurity Studies: Capstone Practical (3 semester hours)

This Cybersecurity Studies: Capstone Practical course integrates the knowledge, skills, and posture acquired in the program courses. This course is the capstone course of studies completed toward the graduate degree in Cybersecurity Studies. This course will only be offered in 16-week sessions. Students will complete an applied project design that demonstrates mastery and application of advanced research and analytic skills related to the learning outcomes of this degree program. This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC699 Cybersecurity Studies Capstone (3 semester hours)

This Master's degree capstone course in Cybersecurity Studies is an integrative, multi-disciplinary course that applies the knowledge, skills, and attitudes obtained in the core courses.
NOTE: This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA.
THIS COURSE IS 16 WEEKS.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Doctorate (DOCT)

DOCT700 Qualitative Methods (3 semester hours)

This course provides an overview of methods used in qualitative research and its theoretical concepts. Elements of qualitative research design such as ethics, developing research questions, sampling techniques, and data collection methods such as observation, interviews, documentary evidence, and audio-visual materials are addressed and applied. (Prerequisites: **SSGS700** and **GLBS710** or **INTL710**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DOCT701 Quantitative Methods (3 semester hours)

This course provides a foundation in theoretical concepts and practical considerations relating to quantitative research design and methodology. Students will gain the knowledge and skills to do primary research in both the academic setting and the practical world. Theoretical and conceptual elements of quantitative research design are examined and applied, including the scientific method; causal inference and hypothesis construction; variables, measurement, and operationalization; threats to validity and reliability; and types of error and bias. In addition, the course exposes students to both causal and non-causal types of quantitative research design, including experimental, quasi-experimental, correlational/associational, comparative, and descriptive designs. This course, in combination with **DOCT700** and **DOCT702**, is intended to provide a framework and skills that doctoral students can draw upon in planning and carrying out primary data collection and analysis for dissertation research. (Prerequisites: **SSGS700** and **GLBS710** or **INTL710**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DOCT702 Statistics (3 semester hours)

This doctoral seminar provides an overview of introductory statistical procedures used in quantitative research and their application. Its focus is to enable students to develop a foundation of basic statistical literacy. Students will assess the role of statistics in quantitative research and develop the competency to conduct statistical tests and procedures. Both descriptive and inferential statistics are addressed. Statistical concepts involving sampling, variables, describing data, hypotheses and models, analysis of variance, probability theory, inference, and the foundations of bivariate and multivariate regression will also be covered in this course. Students will gain competence in a statistical software program. Students will analyze data and research situations to interpret the meaning underlying the data and how statistics can be used to address important research questions. (Prerequisites: **DOCT701**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DOCT704 Professional Practice II (1 semester hours)

During the course, students gain familiarity with the professional academic conference circuit and presentation expectations. Students will develop or refine their CV and begin to create concept maps related to their dissertation interests. (Prerequisites: **SSGS700** and **GLBS710** or **INTL710**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DOCT705 Professional Practice III (1 semester hours)

During this seminar, students will gain experience developing abstracts for conference proposals. Students will continue to work on writing and communication skills. During this course, students will schedule and complete their formal check-in to assess their overall progress in their doctoral program of study. (Prerequisite: **DOCT704**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DOCT706 Professional Practice IV (1 semester hours)

In this course, students begin pre-work on their dissertation proposal. Students will gain additional insight into strategies for building their dissertation committees and will review Year Two and Three program milestones. Students will also receive additional training on the Institutional Review Board and research grant writing. (Prerequisite: **DOCT705**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DOCT707 Professional Practice V (1 semester hours)

The focus of this course is preparing for the e-portfolio defense, the practicum, and the dissertation proposal. Students will take a deeper look into emotional intelligence to include the different EQ-I elements and levels. (Prerequisite: **DOCT706**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DOCT708 Professional Practice VI (1 semester hours)

Students will continue the study of emotional intelligence. They will complete a reflection paper to help shape the portfolio and place the artifacts within the current body of knowledge. In preparation for the dissertation proposal defense, students will give a 3 Minute Thesis-style presentation to articulate the academic and professional practice significance of their doctoral work. (Prerequisite: **DOCT707**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DOCT715 Seminar in Strategic Leadership (3 semester hours)

This seminar examines classic and contemporary literature on best practices in leadership relevant to developing personal leadership skills and on the role of strategic leadership in developing a vision and strategy for an organization. (Prerequisites: **SSGS700** and **GLBS710** or **INTL710**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DOCT716 Seminar in Business and Financial Management (3 semester hours)

Students will perform practical research in business and financial management. The emphasis will be on developing an integrated framework for understanding issues in financial management. The course will examine the fundamentals of financial management, models in corporate finance, and contemporary topics in financial research. Topics include the theory of the firm's choice, financial statement analysis, financial instruments, capital markets, project and corporate valuation, global finance operations, and ethics in finance. (Prerequisites: **SSGS700** and **GLBS710** or **INTL710**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DOCT721 Residency: Preparing for the Practicum and Dissertation (2 semester hours)

This course fosters interaction amongst students, program administrators, faculty, and support staff. A detailed overview of faculty research areas, collaborative research opportunities, and the dissertation proposal and dissertation requirements are provided. Students will discuss the practicum experiential learning requirement. Key skillsets will be reinforced, which will set the students up for success as they move into the dissertation phase of their program of study. (Prerequisite: **DOCT722** or **DOCT723**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DOCT722 Residency: Scholar/Practitioner Presentation (2 semester hours)

This residency involves presenting to the academic and/or practitioner community original research that advances academic and professional practice in the discipline. (Prerequisites: **DOCT705**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DOCT723 Residency: Foreign Experience (2 semester hours)

Students create an individual residency plan with the approval of the Department Chair. The residency may include travel outside of the United States for research, field-related volunteer work, or a conference presentation at an international academic conference. Also, students may present at an academic conference in the United States focusing on global issues. (Prerequisites: **DOCT705**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DOCT894 Dissertation Proposal Defense (3 semester hours)

In this course, students will develop their skill set surrounding the different components of the dissertation proposal. The skill set can include analyzing and producing deliverables centered on a comprehensive description of the problem/research question(s), a literature review, and detailed research design. (Prerequisite: All coursework with the exception of **DOCT897**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DOCT897 Practicum (3 semester hours)

The Practicum course provides a hands-on experience in a professional environment. This course involves a supervised opportunity where academic skills and knowledge are applied to a professional environment. Refer to the Practicum guidelines in the Doctoral Manual. (Prerequisite: **DOCT721**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DOCT899 Dissertation (1 semester hours)

The dissertation is a comprehensive document that is an original contribution and one that advances theory, research, and practice in the global security discipline. It is written under the direction of the dissertation committee and students must be enrolled in the dissertation course to proceed to this stage. All program requirements and the proposal defense must be successfully completed before beginning the dissertation. This course is a 16-week course. Students must continuously enroll in the course until successful completion of the oral dissertation proposal defense and full dissertation and corresponding oral defense. Refer to the dissertation guidelines in the Dissertation Manual. (Prerequisite: **DOCT894**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Education (ADHE)

ADHE601 Introduction to Higher Education Administration (3 semester hours)

This course provides a starting place to introduce the primary areas of responsibility for higher education administration with the various contexts in which higher education is situated, whether public or private, for-profit or non-profit, or onground or online. Students learn about the essentials of institutional mission, organizational structure, institutional evaluation and assessment, human resources, governance, financial and budgeting oversight, resource management, decision-making, internal and external constituencies, culture, student services, student outcome assessment, program evaluation, and organizational change associated with university leadership. The course will present and connect organizational theories for higher education administrative practice and delivery that relate to university student persistence, retention, and success.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ADHE605 Enrollment Management, Admissions, and Finance in Higher Education (3 semester hours)

This foundational course presents an array of enrollment management processes and strategies that contribute to recruitment, retention, admission, and enrollment of students at institutions of higher education, both undergraduate and graduate. Particular attention will be given to the role of various stakeholders in relation to various factors influencing enrollment and admissions: financial aid, scholarships, educational readiness, diversity considerations, academic standards, learning formats, and institutional goals. Students will be exposed to recruitment and enrollment strategies based on current research, enrollment prediction and selection practices, marketing, applicable advisement practices, ethical guidelines, and institutional standards pertaining to student success.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ADHE611 Technology, Curriculum, and Instruction for the Online Campus (3 semester hours)

Recognizing the constantly-morphing role that technology and innovative online campus platforms play in the landscape of education requires higher education administrators to stay in tune with current trends and emerging modalities. This course explores emerging trends with regard to classroom management systems and best practices in curriculum and instruction for the online institution of higher education. Students will discuss topics involving innovative online and classroom technologies, course management tools, cyber-ethics, instructional practices, curriculum development, classroom support services, and integration of various adjunct platform applications that support student learning in an online campus.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ADHE613 Communication Strategies for Online Higher Education Administration (3 semester hours)

This course examines the essential approaches and policies related to effective communication in the online administration of higher education involving both internal and external stakeholders. Key topics include communication theory and best practices in a virtual campus environment; identifying differences in onground and online administration; developing, maintaining, and coordinating a remotely working team and support staff; establishing and implementing faculty online teaching practices and accountability; working with disciplinary issues involving online students and faculty; communication issues for human resource development in an online institution; working with staff and faculty expectations across time zones and cultural variances; and, campus/student life in an online environment.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ADHE621 Online Campus Compliance Issues and Accreditation (3 semester hours)

The unique and emerging issues surrounding government, military, and industry-related compliance in an online context are compounded by the challenge of identifying, implementing, and verifying accreditation standards in a virtual campus. This course prepares students to develop and administer a plan to fulfill current and prevailing standards in higher education. With unique differences in performance expectations across sectors and accrediting bodies, students will examine the development of a process and teams in order to address the array of associated issues of compliance and accreditation in an online context.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ADHE631 Higher Education Strategic Planning, Innovation, and Institutional Advancement (3 semester hours)

This course introduces students to the practices and methodologies of developing strategic plans that result in the conceptual and practical processes associated with innovation and institutional advancement within higher education. Essential discussion topics include mission, vision, and values alignment, managing and implementing organizational change, marketing/communications/promotion, alumni relations, financial resource development, program evaluation and review, innovative teaching and learning modalities for effective higher education, and strategic planning execution. Students will examine case studies and real-world scenarios, as well as consider the ethics of professional practice and strategic planning in both for-profit and non-profit settings. There will be an examination of resource development strategies and their relationship to university strategic priorities and objectives.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ADHE639 Community College Administration (3 semester hours)

The community college setting provides unique challenges requiring conceptually relevant and expertise appropriate application of higher education administration. This course examines the history, philosophy, management functionality, and financial resourcing associated with community college administration and the effective navigation skills pertaining to the associated leadership responsibilities. Attention will be given to the preparedness of incoming high school students for college through the forging of relationships with secondary education providers, including dual-enrollment credit programs, and by consideration of graduation and retention rates at the community college level. The course will explore special issues related to the relationship of the community college to the local region and workforce, the role of community college online course instruction with regard to four-year for-profit and non-profit institutions, issues regarding student transfers to four-year institutions, consideration of potential administrative redesign for the future, and initiatives geared toward increasing student outcomes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ADHE644 Crisis Management in Higher Education (3 semester hours)

This course prepares college and university administrators to take effective action during crises, as well as to develop protocols and actions steps that diminish the likelihood for future occurrences. Students examine emergency preparedness that extends confidence in the long-term safety, security, and success of their institutions. Key topics also include threat assessment, hazard mitigation, outcome prediction, and organizational resilience and survival amid natural and human-authored emergencies and disasters. Students will draw upon case studies based on actual events, and will discuss risk analysis/assessment and formulation of a comprehensive plan and organizational strategy to alleviate crises and work with support public safety and emergency services agencies during a variety of scenarios, including mass casualty incidents. Risk factors associated with mental health concerns, substance abuse, aggressive behavior, bullying, and violence will also be examined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ADHE649 Critical Issues in Higher Education (3 semester hours)

This course examines acute current and future issues and trends that face higher education in America and abroad in a variety of college and university contexts, both onground and online. Students will examine the changing scene of higher education in terms of for-profit and non-profit settings amid the marketing and financial realities that challenge the future realities of public and private universities and colleges. Special focus will be given to current events and controversies. Topics include, but are not limited to the following: the changing demographics of the college and university scene; campus politics, clubs, and campus culture; the impact of technologies and online learning strategies on access to education; the increasing competition and related ethics discussions concerning public/private, for-profit/non-profit, and onground/online universities; and, the prospective direction of higher education within a global and virtual student body. What are the higher educational needs of the student of the future, and what will universities need to consider in order to meet those needs?

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ADHE695 Capstone (3 semester hours)

The Capstone is the culminating required course for the student who already works in a higher education administration-related role and desires to advance their career. The course exhibits the capability of the student within higher education administration through the demonstration of their synthesis of the related theory and practice. Students work with a faculty advisor to develop a research prospectus that addresses a current issue facing higher education, preferably within the student's context of higher education. The Capstone culminates with an E-Portfolio and Oral Presentation. (Prerequisites: **EDUC640** Research Methods; Completion of a concentration related to the program of study.)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ADHE698 Practicum (3 semester hours)

The Practicum is the culminating required course for the student who is preparing to enter a higher education administration-related role. Students will take theory to practice during practicum and gain supervised professional experience in their concentration. Students will complete 150 hours at an approved practicum site. This course includes a practicum seminar during which students will reflect on their practicum experiences and connect these to the virtual classroom learning they have had in their graduate program. Approval of practicum site and position are required before students can begin their compulsory 150 hours. The Practicum culminates with an E-Portfolio and/or Oral Presentation. (Prerequisite: Completion of all core courses plus at least half of a concentration of courses related to the program of study)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Education (EDUC)

EDUC501 Human Growth and Development (3 semester hours)

This course examines theories of child, adolescent, and young adult development and learning. It introduces a comprehensive view of human development across the lifespan, drawing on the application of major theoretical positions - both historical and current. Developmental themes are discussed in terms of their application to typical and atypical human development in children, adolescents, and young adults. Concepts related to the significant role that transitions play in development throughout the lifespan will be integrated throughout the course. Application of theory to the school setting in the areas of learner development, learner styles/differences, the nature of the learner, and learner motivation are discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC503 The Professional Educator (3 semester hours)

This course is intended to provide individuals with the knowledge and skills needed to succeed in the Master of Education program. Students will explore what it means to develop as a professional educator and how this impacts teaching and learning. The course examines the significance of various educational theories, historical developments, philosophies, pedagogical approaches, basic research designs, and educational paradigms. Students will discover how different social, emotional, physical, and ethical issues impact various aspects of K-12 classrooms, and other instructional settings. Effective use of technology as a tool in educational situations will be emphasized, as well as how educational research can alter classroom practice.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC504 Curriculum, Instruction, and Assessment (3 semester hours)

This course examines curriculum, instruction, and assessment in the context of various standards and accountability and their relationships to improvement in student learning, based on sound pedagogical approaches. The importance of alignment to learning outcomes and the necessity for valid assessments are discussed. Methods for collecting various assessment data; analyzing assessment data; creating campus curriculum and instruction goals; and implementation issues related to accountability, planning, and collaboration are addressed. The use of technology to assist with accurate assessments is presented.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC511 Foundations of Higher Education (3 semester hours)

Foundations of Higher Education is a comparative and historical survey of colleges and universities in the United States. The historical, social, and philosophical influences and assumptions that have shaped the growth and purpose of higher education will be studied from Colonial era to "virtual" public and private universities. Major areas of focus include the evaluation of higher education, contemporary issues, and policies and practices that characterize the operational environments of higher education institutions in the 21st century.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC516 Financial Management in Higher Education (3 semester hours)

This course will examine and analyze the factors, challenges, and complexities of financing higher education institutions. Students will develop perspectives of how campuses are funded through a variety of revenue streams while also gaining practical experience to understand financial concepts, processes, institutional considerations, and budgetary tools. (Prerequisites: **EDUC511** and either **SAHE510** or **ADHE601**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC517 Ethics, Law, and Policies in Higher Education (3 semester hours)

This course will examine ethical and legal issues relevant to higher education institutions and the campus policies commonly in place to address them. Key legal cases, statutes, and constitutional laws will be reviewed and students will use case studies to explore how campus leaders have upheld these decisions and, in some cases, responded to crises. (Prerequisites: **EDUC511** and either **SAHE510** or **ADHE601**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC519 The Professional School Leader (3 semester hours)

This course serves as an introduction to the skills one needs to become an effective school leader. Course activities involve having the potential leader examine the qualities of effective leadership, exploring definitions of leadership, and the creation of a personal model for leadership practices. This course provides students with opportunities to reflect on personal and professional goals while gaining an understanding of the role of building administrator.

Note: This is required as the first course in the M.Ed. in Educational Leadership program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC521 Different Perspectives on Teaching and Communicating (3 semester hours)

This course, designed for educators, examines issues related to promoting learning opportunities in the classroom for all students, including effective approaches to encourage collaboration among different colleagues, staff, parents, and students. Interpersonal communication skills – to include speaking, listening, reading, and writing - and their effect on individuals, organizations, and communities will be discussed. Topics examined include ethnic, cultural, gender, class, religious, and linguistic differences.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC522 Supervision of Instruction (3 semester hours)

This course focuses on the ways in which teachers and educational professionals incorporate instructional leadership into their organizational behavior and create instructional practices that raise levels of teaching and learning. The course focuses on teachers as leaders, the importance of teacher leadership to improve outcomes in educational settings, and Professional Learning Communities (PLCs). (Prerequisite: **EDUC503**).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC523 Supervision of Instruction (3 semester hours)

This course will study the evaluation process and candidates will learn how to use aspects of effective teaching strategies when working with teachers during the observation/walk-through process. Strategies for coaching and mentoring teachers for improved student achievement will be presented. Candidates will focus on the process of gathering data for the formal evaluation process and on providing professional development to meet teacher needs. Attention will also be given to analyzing and interpreting assessment results and other instructional data and how to deliver effective professional development to improve teaching and learning.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC527 Classroom Management for the 21st Century (3 semester hours)

This course is designed for the practicing K-12 education professional and focuses on positive classroom management approaches and strategies. This course reviews models of classroom management as well as the fundamentals of behavior change. Program candidates will explore systematic approaches including Response to Intervention (RTI) and Positive Behavioral Interventions and Supports (PBIS) and topics such as cultural considerations, data tools, assessment and analysis of behaviors, and fostering community and collaboration in classrooms. In this course, candidates will focus on implementing strategies for class-wide, small group, and individual intervention as well as methods for monitoring student progress. Equivalent to **EDUC524**. (Prerequisite: **EDUC503**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC528 Classroom Management for the Digital Educator (3 semester hours)

This course is designed for the practicing K-12 education professional or leader who teaches in a virtual or hybrid classroom setting. The focus is on proactive and reactive positive classroom management approaches and strategies that are unique to a digital learning environment. Program candidates will explore systematic approaches including Response to Intervention (RTI) and Positive Behavioral Interventions and Supports (PBIS) and topics such as cultural considerations, data tools, assessment and analysis of behaviors, and fostering community and collaboration in online classrooms. In this course, candidates will focus on implementing strategies for class-wide, small group, and individual intervention as well as methods for monitoring student progress.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC531 Maximizing Student Achievement Through Effective Assessment (3 semester hours)

Educators learn the appropriate methods for selection, administration, and interpretation of assessments in K-12 education and related instructional settings. Research and statistical concepts such as reliability, validity, and standard error of measurement are reviewed. Educators will become familiar with the most frequently used personality, educational, intelligence, formative, and summative assessments. Additional topics include historical perspectives, testing ethics, and assessment accommodations for different populations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC536 Foundations of Coaching (3 semester hours)

Foundations of Coaching is an eight-week course designed to introduce the models and basic skills used in executive coaching and/or life coaching practices. This course introduces the vital skills, methods, and strategies required of an effective coach including developing coaching relationships, setting goals and planning, developing awareness, asking powerful questions, communication and language, action and accountability and facilitating learning and results. Participants will examine various coaching models and gain knowledge of the ethical considerations associated with coaching relationships. This training prepares participants to coach individuals, groups, and teams for performance, development, skills and personal/professional growth. Participants will engage in coaching conversations, apply best practices, and practice creating empowering coaching experiences.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC549 Elementary School Arts Across the Curriculum (3 semester hours)

The course addresses visual and performing arts standards and their integration across core elementary curriculum. The course is designed to introduce elementary teacher candidates to the application of visual and performing arts content across the areas of mathematics, science, language/literature, and history/social sciences, including current events and humane topics. The course focuses on learning about, with, and through the arts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC561 Issues and Ideas in Special Education (3 semester hours)

This course provides educators with an opportunity to critically examine major contemporary issues related to field of special education to include legal, curricular, and instructional procedures appropriate for students at the elementary, middle, and secondary school levels, or in other instructional settings. (Prerequisite: **EDUC503**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC570 Personnel and Human Resource Management (3 semester hours)

This course will focus on the skills necessary for principals to effectively work with faculty and staff. Current theories and practices relating to recruitment, development, and appraisal of personnel will be covered. The course will examine specific personnel functions such as recruitment, selection, retention, and evaluation. Additional topics include conflict resolution, effective communication skills, and creating and maintaining a positive school environment.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC590 Differentiation for Learners in Mixed Ability Classrooms (3 semester hours)

This course is designed to give regular education teachers strategies to use in academically and culturally different classrooms. Using case studies as a launching point, course participants will examine the complexities of balancing the needs of gifted education, general education, special education, and culturally different students in a standards-driven climate. Use of tiered assignments, alternative assessments targeting different intelligences, and other modifications will be evaluated, implemented, and refined. Course participants will collaborate to address beliefs, best practices, challenges, current research, and ways to apply them to their own teaching practice.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC596 Literacy Instruction for Struggling and Challenging Students (3 semester hours)

This course explores a variety of issues and strategies related to literacy and literacy assessment in the early and middle grades. Cases focus upon the problems and opportunities related to literacy instruction for at-risk student populations.

This course explores a variety of issues and strategies related to literacy and literacy assessment in the early and middle grades. Content and activities focus on phonemic awareness, phonics, comprehension, vocabulary, and fluency and related strategies through differentiated instruction, technology integration, and family partnerships. The focus of the course is on struggling student populations and developing effective instructional and different assessment skills needed for teaching emergent, beginning, and instructional-level readers. (Prerequisite: **EDUC503**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC599 Issues in TESOL Education (3 semester hours)

This course provides an examination of cultural groups, including aspects of communication, belief systems, and value orientations, as well as patterns of thinking and behaving with implications for instruction. Basics of second language acquisition theories and practices and fostering home/school relationships for K-12 learners are explored.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC601 Methods and Materials in TESOL Education (3 semester hours)

This course focuses on evaluating, developing, and applying instructional strategies for supporting English Language Learners (ELLs) in content area learning. Participants will reflect upon using evidence-based assessment and instructional practices to enhance learning in different classroom environments. Beliefs, best practices, challenges, current research, and applications to one's own teaching practice will be explored with an emphasis on ELL lesson planning, assessment, and technology integration.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC603 Applied Linguistics in TESOL Education (3 semester hours)

Through this course, participants will become knowledgeable about the nature and structure of language and how first and second languages develop. Participants will explore language teaching strategies consistent with the current understanding of the nature, structure and development of language. By developing a repertoire of effective strategies, participants will become more proficient at supporting students' second language development. Educators will investigate best practices and current research and consider how to adapt and integrate these principles into their own educational practice.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC604 Leadership in Higher Education (3 semester hours)

In Leadership in Higher Education, students thoroughly examine various leadership theories and develop the ability to draw upon multiple paradigms and perspectives to improve their practices as leaders. Students will analyze current challenges in Student Affairs and discuss the leadership skills needed from all administrators involved. Throughout the course, students will reflect on how their values and philosophical perspectives influence their day-to-day leadership decisions and practices and how they respond to crises. (Prerequisites: **EDUC511** and either **SAHE510** or **ADHE601**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC611 Identifying and Diagnosing Reading Difficulties (3 semester hours)

This course is designed for classroom teachers to effectively assess classroom reading. Participants will learn how to administer formal and informal measures of reading assessment, including screening, diagnostic, and progress monitoring measures. The assessment-to-instruction connection is emphasized with a focus on emergent literacy, word recognition, fluency, spelling, comprehension, and affective factors. Educators will use a variety of assessment tools, practices, and adaptations to plan and evaluate effective reading instruction.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC612 Issues and Models of Language Arts Education (3 semester hours)

This course is designed to assist educators in the teaching of reading and language arts. The focus will be on reading, writing, listening, and speaking. The emphasis will be on creating environments conducive to developing all students' skills in the four language arts using research-based instructional strategies. The course also focuses on differentiating instruction for students of varying literacy levels.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC613 Teaching Reading and Writing across the Content Areas (3 semester hours)

This course concentrates on interdisciplinary teaching and learning in elementary, middle, and high schools. Witnessing and discussing a range of cross-curricular activities, participants will develop an understanding of the benefits, challenges, and essential components of effective integrated instruction.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC614 Living and Learning with Exceptional Students (3 semester hours)

Course participants will develop skills required for teaching students with special learning needs, as well as students who are at-risk for academic or social failure. The concepts of educator collaboration, least restrictive environment, accommodations and modifications, confidentiality, behavior management, identification, categories of disabilities, and giftedness will be reviewed. Educators will analyze beliefs, evidenced-based practices, challenges, and applications to their own teaching practice. (Prerequisite: **EDUC503**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC616 Foundations in Special Education and the Individuals with Disabilities Education (3 semester hours)

This course addresses legal trends and issues related to the Individuals with Disabilities Education Act (IDEA), including the identification process that schools must follow: child study, assessment, eligibility, IEP development, and placement. Educators will analyze the legal requirements as defined in IDEA, specifically the requirements for Free and Appropriate Education (FAPE), the Least Restrictive Environment (LRE), and the development of Individualized Education Plans (IEPs). Course participants will analyze historical aspects, beliefs, evidence-based practices, challenges, and applications to their own teaching practice.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC618 Classroom Accommodations and Modifications for Special Needs Learners (3 semester hours)

This course explores accommodations and modifications for special learners within the Least Restrictive Environment (LRE) and enhances regular and special educators' understanding of how best to address the individual needs of special learners. Topics focus on the creation of appropriate accommodations, the integration of accommodations into a general education classroom, the legal requirement for accommodations, and the roles of the general and special education educators within the LRE. Course participants will also study technologies, assessment, beliefs, challenges, current research, and strategies for specific categories of disabilities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC621 Online Learning for the Adult and the K-16 Learner (3 semester hours)

This course examines the similarities and differences of the learning needs and abilities of adult and younger learners. The course emphasizes differentiated instruction and course development as applicable to adult and K-12 learners in traditional, virtual, and hybrid contexts. Topics include a historical perspective, andragogy versus pedagogy in the online classroom, trends and issues with technology education and online education, LMS elements, and basics of grant writing/technology grant writing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC622 Ethics and Legal Issues in Online Learning (3 semester hours)

This course will focus on the issue of ownership of certain types of intellectual property on the internet, which has become a critical issue with different technological platforms, digital tools, and apps becoming so prevalent in our schools and culture. In this course, online, face-to-face, and hybrid educators will learn about the different types of potential copyright infringement, fair use, and privacy aspects for students, exploring the implication for course development and instruction.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC623 Online Learning and Student Achievement (3 semester hours)

In this course, educators will develop an understanding of the structure of the different types of digital tools and their effect on raising student achievement. Evidence-based practices that address student achievement gains via technology will be examined. The course guides course participants in evaluating and applying technology across disciplines (e.g., math, science, language arts, social studies, music, art, P.E., and health) and to support students with special needs or who need remediation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC624 Assessment of Online Learning (3 semester hours)

In this course, educators will examine various approaches to the assessment of online learning. Topics include types of assessment, technology-enhanced assessment, assessment challenges, and using assessment data to inform instruction. Additionally, course participants will analyze assessment accommodations and explore program evaluation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC625 Instructional Design in Online Learning (3 semester hours)

In this course, participants will explore and evaluate the different types of online learning platforms, as well as study the different components of asynchronous and synchronous instructional delivery from the perspective of an educator. Educators will evaluate basic course design principles, activities that foster student engagement, authentic assessment, and integration of media enhancements.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC629 Personalized and Individualized Online Learning (3 semester hours)

This advanced graduate course will examine the evidence-based practices for individual and collective student personalization in K-16+ classrooms and similar settings. Personalization is closely related to two additionally important approaches: individualization and differentiation. All three require a shift from a teacher-centered approach to an authentic student-centered approach. An effective student-centered focus requires tailoring of lessons to the abilities, interests, preferences, future life dreams, socio-emotional attributes, and other individual and collective needs of different students. The course examines motivation, assessment, and technological tools and how they pertain to personalization in online, face-to-face and hybrid contexts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC630 Introduction to Students with Autism Spectrum Disorder (ASD) (3 semester hours)

This course provides candidates with an examination of characteristics of students with Autism Spectrum Disorder (ASD) across the lifespan. Defining characteristics as outlined in the current Diagnostic and Statistical Manual of the American Psychiatric Association and multidisciplinary peer-reviewed research are examined. Prevalence rates, etiology, and co-morbid conditions are studied relative to historical progression. Ethical implications and obligations related to ASD evaluation, eligibility determination, and implications for educational programming are analyzed with attention to legislative rights and protections under the Individuals with Disabilities Act (IDEA), Americans with Disabilities Act (ADA), and Section 504 of the Rehabilitation Act of 1973 (Section 504).(Prerequisite: **EDUC503**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC631 Evidence-Based Practice for Students with Autism Spectrum Disorder (ASD) (3 semester hours)

This course provides candidates with examination of the components of and process for evidence-based practice (EBP) in educational programming for students with ASD to include integration of research-validated intervention strategies with other critical factors (i.e., professional judgment and data-based decision making, family values and preferences, and capacity). Intervention strategies with the highest level of empirical support will be examined with attention to qualifying evidence, effective proven outcomes, and ages of individuals. Medication commonly prescribed to students with ASD will be explored related to target behavior and potential side effects. Laws, legislation, and litigation related to EBP for students with ASD will be examined.(Prerequisite: **EDUC630**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC632 Educational Programming for Students with Autism Spectrum Disorder (ASD) (3 semester hours)

This course provides candidates with examination of the components of and process for ASD program development and progress monitoring to include the leadership role. Assessment instruments and procedures specific to the development of effective programs for students with ASD will be studied to include Functional Behavior Assessment and subsequent Behavior Intervention Plans. The process for defining and detailing target skill and behavior goals will be examined in relation to the development of Individualized Education Program and Section 504 Plans. Strategies for facilitating the least restrictive environment in the general education classroom will be explored. Laws, legislation, and litigation related to educational programming for students with ASD will be analyzed. (Prerequisite: **EDUC631**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC633 Emotional Intelligence and Coaching Assessments (3 semester hours)

Building on the foundational coaching skills gained in **EDUC536** - Emotional Intelligence and Coaching Assessments provides participants with an understanding of emotional intelligence and when and how to use assessments in the coaching experience. Participants learn about Emotional Intelligence (EI) and its role in coaching. Participants examine several coaching assessments to gain familiarity and an understanding of when each assessment is appropriate for coaching. Specifically, participants will consider tools such as the Wheel of Life, Personality Type, DISC, EI, TPI, Strengths, and other assessments designed for various settings. Participants will also examine the ethical considerations associated with using assessments in the coaching relationship. (Prerequisite: **EDUC536**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC634 Co-Teaching and Collaboration for All Learners (3 semester hours)

This course examines the role of the educators working collaboratively in various models, including co-teaching. This approach to effective instruction will focus on the classroom factors relating to the nature of the student and the essential meaning of the curriculum. Particular emphasis will be placed on classroom elements that educators can differentiate – or modify – to increase the likelihood that each student will learn as much as possible, as efficiently as possible. This would include the areas of content, process, products, affect and learning environment. The idea of differentiating instruction to accommodate the different ways that students learn often involves working with others to reach this goal.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC635 Coaching Groups and Teams (3 semester hours)

Coaching Groups and Teams extends participants' thinking about coaching from coaching individuals to coaching groups and teams. Participants compare strategies for team and group coaching alongside those for coaching individuals. This course offers participants an opportunity to examine coaching groups and teams within an organizational system. As with the other trainings in this series, participants will explore and expand the application of coaching competencies and focus on ethical considerations associated with coaching groups and teams vs. coaching individuals. (Prerequisite: **EDUC633**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC639 Online Teaching Technology Integration (3 semester hours)

This course examines various digital tools, apps, and emerging technologies appropriate for online, face-to-face, and hybrid learning environments, with a focus on online learning integration. Course participants learn about the potential for using social networking sites as vehicles for effective communication that can promote as well as inform. Educators will be exposed to cloud computing, WebQuests, and collaboration tools to be better prepared to integrate technology into K-16 instruction in ways that promote learners connecting, engaging, interacting, creating, problem-solving, and experiencing immersive learning.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC640 Research Methods in Education (3 semester hours)

This course provides an overview of approaches to research, rationales for methodological choices, integrity of research processes, and tools and techniques for data collection and analysis. Additional topics include reliability and validity, sampling, and evaluating quantitative, qualitative, and mixed methods research designs. There is an emphasis on adhering to ethical principles. Course participation and activities provide experiences designed to equip practitioners with the knowledge and skills necessary to select, evaluate, and apply findings from extant research and conceptualize research studies related to issues at the K-12 and/or higher education level. (Prerequisites: Either **ADHE601**, **EDUC503**, **EDUC509**, **EDUC511**, or **EDUC621**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC645 Career Counseling and Development (3 semester hours)

Career Counseling and Development explores career development theories and the career decision making process. Students learn how to encourage motivation by connecting personal values and interests with academics. Topics include multicultural considerations, the relationship between one's career development and other life roles, and assessment instruments relevant to career planning. The process of career development will be covered as well as the implications for students with disabilities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC651 Technology Leadership in Education (3 semester hours)

The course is designed to help school administrators develop an understanding of how to create and support technological change through a systems approach. Topics include sources of resistance to change, tools for planning, decision-making and change, creating and supporting a culture for learning and change, and managing and institutionalizing change systems. Administrators will evaluate the essential 21st century skills for success in today's world, such as critical thinking, problem solving, communication, creativity and collaboration, as well as skills and strategies for leading their school or district into the ongoing process of technology integration. (Prerequisite: **EDUC519** or **EDUC561**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC652 Powerful Technology Applications for the Active Learning Environments (3 semester hours)

This course explores how technology may be used as a tool to facilitate changes in the ways teachers teach and students learn, and ultimately to examine how teachers can use technology more efficiently and effectively to improve student achievement. The course examines how educators may use technology for communication and collaboration among colleagues, staff, parents, students, and the larger community. Additional topics include multicultural considerations, ethics, and copyright. This course aligns with the National Educational Technology Standards for Teachers (NETS•T), developed by the International Society for Technology in Education (ISTE).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC665 Emerging Issues and Trends in Education Leadership (3 semester hours)

This course examines a framework to address the emerging issues and trends in and supervision and instructional leadership that have the potential to influence the future direction of education. The course focuses on the teacher leader/instructional leader and ways to address evolving challenges in the field in both collaborative and leadership roles within schools. Research, study, discussion, and multifaceted assignments enable candidates in this course to analyze various issues and trends such as safety, technology integration, social justice, advocacy, school improvement, community resources, ethical leadership, and more. (Prerequisite: **EDUC503**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC669 Education, Law, Ethics, and Politics (3 semester hours)

This course explores legal, ethical and politics issues governing K-12 education in America and the legal responsibilities and powers of state and local governing bodies and individuals that arise in elementary and secondary schools. This course focuses on understanding federal codes, case law, policies, and significant precedent and will emphasize analysis of key legal concepts and application of law to specific situations. The ethics of decision making and the process through which school leaders can advocate for political reform will be examined. Major areas of analysis include personnel, risk management, curriculum, student services, parent and student rights, teacher rights and torts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC670 Education Law, Ethics, and Politics (3 semester hours)

This course explores legal, ethical, and political issues related to PreK-12 U.S. education. Topics include NCLB/ESSA, district liability, rights of students and teachers, and issues related to employment and technology. Emphasis is given to federal and state statutes and case law affecting due process, liability, equal protection, and the rights of teachers and students in order to better understand risks and possible strategies to reduce those risks. Ethical and political contextual aspects are explored in relation to public education decision and policy making at the classroom and school levels. (Prerequisite: **EDUC503**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC671 Integrated Elementary Mathematics and Sciences (3 semester hours)

This course emphasizes the objectives, methods, instruction, and integration of elementary school mathematics and science through a STEAM (STEM + the Arts) lens. Educators will examine research related to elementary school mathematics and science instruction with an emphasis on innovative programs and approaches. Activities include analyzing and evaluating educational trends, curricular materials, and techniques related to teaching mathematics and science to elementary school children. Additional topics include brain-based learning, technology integration, thematic/integrated instruction, and quality children's literature as enhancements to facilitate children's understanding of math and science/STEAM concepts and skills. (Prerequisite: **EDUC503**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC672 Integrated Elementary Language Arts and Social Studies (3 semester hours)

This course explores the keys to successful integration of language arts into the elementary social studies curriculum. Social studies is integrative by nature (National Council for the Social Studies, 2017). Powerful and purposeful social studies incorporates language arts skills to help young learners use context clues to suggest meaning, decipher maps and charts, and interpret primary and secondary source documents. A high quality integrative social studies and language arts curriculum brings forth carefully chosen Big Ideas and Essential Understandings with authentic action to promote social understanding and civic efficacy. This course will delineate the integrative nature of elementary social studies and explore the ways in which literature and language arts skills (e.g., listening, speaking, reading, writing, viewing, and representing) add depth and breadth. (Prerequisite: **EDUC503**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC694 Capstone: Field-Based Research Project (3 semester hours)

In this capstone course, candidates will apply program theories, content, and skills to address a real-world, field-based issue in an adult education, digital learning, or other pertinent context relative to the academic program of study. This course requires candidates to conceptualize and present an original scholarly research study to include research questions based upon an issue in a face-to-face/online/or hybrid educational setting, a literature review, research methods, data and analysis, discussion, and references. The capstone project requires written, oral, and audiovisual/multimedia components proposed by the candidate and approved by the course instructor. Capstone course work must follow the style requirements established by the Teaching department. All grades for any capstone attempts will appear on the transcript and will be calculated in the GPA. Candidates may choose an 8-week or 16-week course format. This is intended to be the final course in the degree program and all other course work should be completed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC695 Capstone Seminar K-12 Learning Organization (3 semester hours)

Since the early days of K-12 education in the United States, public schools have been the primary option for the education of K-12 students. With trends toward non-traditional K-12 learning organizations becoming more popular, students are gaining access to a variety of non-traditional learning models. This course will focus on the unique structures of non-traditional K-12 learning organizations, including the various types of charter schools, private schools, and a look at online learning for the K-12 student. (Prerequisites: **EDUC509** or **EDUC519** and 30 of 36 program hours completed)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC698 Capstone: Action Research (3 semester hours)

Accomplished teachers have a rich understanding of the subject(s) they teach and associated content area pedagogical practices. In this course, candidates will assess their teaching practice in the context of previous coursework, observational experiences, and teaching. They will apply content area knowledge to contemporary theory through the development of artifacts and reflective pieces related to praxis. Candidates will also engage in discourse related to emerging social and philosophical issues in teaching to prepare them to be informed practitioners. This course will focus on action research in a classroom situation. Its purpose is to inform candidates with respect to ongoing pedagogical practices. All grades for any capstone attempts will appear on transcript and will be calculated in GPA

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Education (SAHE)

SAHE501 Student Development Theory (3 semester hours)

Student Development Theory is a course focused on the principles and key concepts of working with traditional and nontraditional students in college settings. This course will examine the developmental processes that impact college students, student development theories, and development of effective programs to meet their various learning, personal, career, and identity development needs. (Prerequisites: **EDUC511** and either **SAHE510** or **ADHE601**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SAHE502 Student Learning and Assessment (3 semester hours)

This course will explore learning theories and provide an overview of implementation strategies for enhancing student academic performance and assisting them with goal achievement. Research on learning and development will be reviewed. Ways to assess the quality of these efforts will be discussed as a means of determining the effectiveness of academic advising initiatives and their impact on student learning and success. (Prerequisites: **SAHE510**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SAHE506 Strategic Planning and Program Evaluation (3 semester hours)

This course will introduce students to the process of developing strategic plans by guiding them through the cyclical process of planning, evaluation, and program review. Students will explore the theories relevant to the steps of this cyclical process and delve into the factors and circumstances that contribute to continuous improvement. Students will learn the necessary skills to evaluate programs by analyzing case studies and offering justifications for programmatic change. (Prerequisites: **EDUC604** and **SAHE510**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SAHE508 Organizations, Culture, and Change (3 semester hours)

This course will provide an overview on how organizations work and behave. The culture of organizations will be explored, how cultural values are developed and sustained, and how to bring about change. Students will review organizational theories in higher education and explore concepts related to management, performance, governance, and leadership. (Prerequisites: **EDUC511** and either **SAHE510** or **ADHE601**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SAHE510 Introduction to Student Affairs (3 semester hours)

Introduction to Student Affairs is an introductory course providing a comprehensive overview of the historical and philosophical foundation of student affairs in higher education. Organizational, management, and leadership theories relevant to college settings, the roles and functions associated with careers in student affairs and college counseling, and contemporary trends and challenges will be examined. Students analyze higher education policies and procedures, programs, and services that meet the needs of all students in various institutional settings, including community colleges, four-year universities, and those that offer programs via distance education (Prerequisite: **EDUC511**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SAHE515 The U.S. College Student (3 semester hours)

The U.S. College Student is a study of the characteristics, needs, and goals of college students as they vary across the nation according to student demographics and institution types. The course will involve a consideration of campus environments, curriculum, sociocultural factors, and financial and political issues, and other influences on the student experience. Implications for Student Affairs practice, educational attainment, and student development will be discussed. (Prerequisites: **SAHE510**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SAHE520 Introduction to Academic Advising (3 semester hours)

This course will introduce students to the history and purpose of academic advising in higher education and the critical role it plays in promoting student success, retention, and learning. Students will learn foundational academic advising principles and values, academic advising models, and how academic advising delivery systems and programs have evolved to meet students' changing needs. Essential competencies and skills will be discussed and standards for practice will be closely reviewed. (Prerequisites: **SAHE510**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SAHE533 Academic Advising Theory and Practice (3 semester hours)

In this course students will develop a deeper understanding of various academic advising theories and how they can be put into practice on a day-to-day basis with individuals and groups. Students will also examine their own philosophical perspectives and academic advising styles to identify and become more self-aware of their own personal approaches. Students will develop their personal advising philosophy during this course. Prerequisites: **SAHE510** and **SAHE520**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SAHE695 Capstone Seminar for Student Affairs in Higher Education (3 semester hours)

This capstone course is the culminating required course for students who already work in a higher education student affairs role and desire additional professional development. The course exhibits the capability of the student within student affairs through the demonstration of their synthesis of the related theory and practice.

Students will work with a faculty advisor to develop a research project that addresses a current issue facing higher education, preferably within the student's professional context. This course will culminate with an e-portfolio and/or oral presentation. (Prerequisite: Completion of either a 12-unit concentration that includes **EDUC640** Research Methods or completion of the 12-unit Executive Coaching concentration)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SAHE698 Practicum (3 semester hours)

The Practicum is the culminating required course for the student who is preparing to enter a higher education student affairs-related role. Students will take theory to practice during practicum and gain supervised professional experience in their concentration. Students will complete 150 hours at an approved practicum site. This course includes a practicum seminar during which students will reflect on their practicum experiences and connect these to the virtual classroom learning they have had in their graduate program. Practicum sites and positions must be approved before students can begin their required 150 hours. [Prerequisites: Completion of all core courses plus at least half of the concentration-specific courses from one of the following concentrations: Academic Advising Concentration, Campus Leadership Concentration, or Career Coaching and Services Concentration]

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Emergency Management (EDMG)

EDMG501 Emergency Management and Public Law (3 semester hours)

This course identifies the public law, regulation, and associated policy that facilitates and in some cases restricts emergency management planning, recovery, and relief. Topics include national, state, and local issues and examples of public law. The course also covers issues associated with intergovernmental (fire, police, EMS, emergency management, military, etc.) action in emergencies as such action relates to regulation or public law.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG502 Emergency and Disaster Theory (3 semester hours)

This course establishes the theoretical foundation that enables the study and understanding of what constitutes ‘disaster’ as a part of the human condition and experience. Students are given a basic understanding of scientific concepts such as fact, theory, and hypothesis. These are then illustrated by analysis and case studies provided by renowned thinkers and writers in the field of emergency and disaster management. Students leave the class with a quality theoretical foundation from which to conduct all of their future master’s-level work.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG503 Emergency and Disaster Planning and Management (3 semester hours)

This is a survey course that is designed to introduce students to the concepts of emergency management. Topics covered include the history of the field, hazard analysis, mitigation, planning, communication, response, recovery, and terrorism. Students conduct interview research with an emergency manager and conduct a site visit of an emergency operations center. Students can use this course to springboard into advanced topics within the field as offered by other courses, and is a great place for students to begin their emergency management degree programs.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG509 Interagency Disaster Management (3 semester hours)

This course deals with the interaction, coordination, and facilitation between federal, state, and local agencies during preparation, response, and recovery operations. The history of emergency response organizational development is explored, along with the current structural and operational design provided by the National Response Framework (NRF) and the National Incident Management System (NIMS). Finally, the potential for public-private partnerships in disaster response is examined. Students will achieve an understanding of how all of the various agencies work together to achieve emergency management and disaster response goals and objectives.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG515 Hazard Mitigation and Resilient Communities (3 semester hours)

This course provides an overview of what is known about natural hazards, disasters, recovery, and mitigation, how research findings have been translated into policies and programs, and a sustainable hazard mitigation research agenda. The course also provides an examination of past disaster losses and hazards management over the past 50 years, including factors--demographic, climate, social--that influence loss.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG530 Economics of Disaster (3 semester hours)

This course is a study of the economics associated with international, national, state, or local level disaster. Students will study, analyze, and conduct research on the direct and indirect economic losses associated with disaster. The course will cover the economics associated with both public and private institutions.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG541 Mass Casualty Incident Management (3 semester hours)

This course deals with the casualty consequences of large scale emergency, disaster, and/or destruction. Public health, emergency casualty services, mortuary, and other issues are addressed using case examples, theory, and principles that have been researched, studied, and documented in international, national, and local settings. The course covers the background and philosophy, parameters, clinical issues, special circumstances (CBRN/WMD), clinical and non-clinical issues, and recovery strategies in Mass Casualty Incident Management. In conjunction with the outlined topics, the course examines a number of Mass Casualty Incident Management Case Studies (New York City, Jerusalem, Toronto, New Orleans, Tokyo and Madrid).

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG560 Crisis Action Planning (3 semester hours)

This course examines the role of crisis action planning in emergency management and disaster response. This course begins by examining the art and science of future studies – that is, being able to accurately predict an outcome from a given set of inputs and understand the ramifications. Impacts of global warming are presented. Crisis leadership and management theories and methodologies are examined. Taking these three components into account, and adding in other threats that students envision in forum discussions, students then develop a crisis action plan for an organization of their choice, with the purpose being to provide a plan for organizational survival against the challenges depicted above. Students also select an optional topic from an approved bibliography to present and discuss, on such topics as future climate, weather, social justice, energy, economics, environment, resource depletion, and potential strategies for the survival of civilization. Students will achieve a new and more holistic appreciation of the disaster planning process. The crisis action plans that students develop for this course are consistently implemented in the real world, and are in place in organizations across the globe.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG564 Wildland Fire Mitigation and Management (3 semester hours)

A new normal is now present with respect to wildland fire occurrence. Mega-drought, depleted water resources, climate change-enabled forest insect infestations, reduced snowpack, and related impacts have resulted in earlier, more prolonged, and more deadly fire seasons in America's natural wilderness regions. Mitigation of and adaptation to this new normal are important features of protecting the public that students, practitioners, and public officials must be aware of in order to effectively discharge their respective duties. This course will make current and future public officials aware of the challenge, the urgency of action, the opportunities available, and the leadership & management skills needed to guide society during this increasingly critical threat situation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG565 Consequence Management: Terrorism Preparation & Response (3 semester hours)

This course addresses the potential results from nuclear, biological, and chemical incidents or uses. Topics include public health consequences of such incidents, emergency planning and response measures in place among U.S. agencies, and emerging detection and management technologies. Existing vulnerabilities to these types of incidents and attacks will also be discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG600 Emergency Management Perspectives on Cybersecurity (3 semester hours)

A healthy cyberinfrastructure is the foundation of emergency and disaster management. It provides emergency and disaster management agencies the ability to effectively address and respond to natural disasters, terrorist attacks, and law enforcement issues. Technology has leveled the global playing field, and the impact on the cyberinfrastructure must be assessed among all relevant communities. This means implementing cybersecurity awareness into all levels of emergency and disaster management through: knowledge management, task behavior, dissemination of information, cyberinfrastructure impact awareness, communication, and deterrence. Students will be exposed to planning, management, response, and recovery factors related to cyberinfrastructure, as well as analyze economic, social, and technical aspects of cybersecurity associated with public emergencies and disasters.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG611 Case Analysis: Crisis and Disaster (3 semester hours)

This course offers students the opportunity to study a historical disaster of their choosing in depth. The theory of case study analysis is covered in detail—problem formulation, research methodology, data collection, and analytical techniques are examined. Concurrently, students develop a topic statement and concept of analysis for their chosen disaster. The final product of the course is a case analysis that includes a telling of the story of the disaster; a depiction of the methodology that will be utilized to understand the disaster in academic terms; an analysis of what happened and why; and the lessons that can be drawn from the study that would improve the field of emergency and disaster management. Students will learn a valuable research skill that can be used repeatedly throughout their careers.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG612 Risk Communications (3 semester hours)

This course examines necessary communication that must be provided by public officials before and during emergencies and disasters in order to protect the public and achieve understanding and cooperation. Specific theories of emergency and disaster communication are examined. The communication surrounding several recent disaster events is analyzed, and students write a press briefing or press release for one of these cases. Finally, students engage in a forum discussion of a disaster of their choice, appropriately titled: 'the good, the bad, and the totally clueless.' Students achieve an enhanced ability to deal with the media and the public before and during crisis situations, which is an extremely valuable skill to have.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG650 Social Justice Issues in Emergency Management (3 semester hours)

Emergencies and disasters do or can impact all people, anywhere, at any time. The emergency and disaster management field was developed in recognition of this, and seeks to prepare practitioners and public officials for the challenges that they will face. Evidence indicates that the impact of disasters is not distributed evenly—that in fact, the poor, minorities, and women are disproportionately impacted by disasters. This is something that students, practitioners, and public officials must be aware of in order to effectively and ethically discharge their respective duties. This course will make current and future officials aware of the impacts of race, poverty, gender, and similar social justice issues that they will need to consider in their careers in emergency management and public service.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG665 Climate Change Adaptation (3 semester hours)

Climate change and global warming are real, and science has coalesced around the fact that mankind's activities are causing or contributing to the rapid global warming that is currently in progress. Mankind's input into the equation is the burning of carbon fuels, which releases unprecedented levels of carbon dioxide, a highly potent greenhouse gas, into the atmosphere. The field of emergency management typically divides activities into four components: planning, mitigation, response, and recovery. It is now time to add a fifth component: adaptation.

Mankind's activities have programmed into the future climate somewhere between one and six degrees Celsius of warming, and a significant but as yet incalculable amount of sea level rise. We do not have the option of stopping or reversing these events, so we must adapt if our civilization is to survive. The student will begin by examining the science itself, courtesy of the Climate Reality Project. The student will examine how the US government has evaluated the situation in the National Climate Assessment. The student will look at both the pessimistic and optimistic possibilities that our future could hold. Students will select a book from a supplemental reading list and report on their topic of choice in the forums. To conclude, students will create a personal Climate Change Adaptation Plan for themselves, their families, and/or their organizations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG692 Comprehensive Examination in Emergency and Disaster Management (3 semester hours)

Comprehensive final examination for students in the Master of Arts in the Emergency & Disaster Management program. The Comprehensive Final Exam is tailored specifically to each program and must be taken after students have completed 33 hours of study (i.e., during the semester following the final course) and successfully completed before the award of a degree.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG699 Emergency and Disaster Management Capstone (3 semester hours)

This course serves as the final program requirement for students achieving the emergency and disaster management master's degree. This course will involve a major research paper or thesis project that demonstrates understanding of and ability to implement the program objectives. The research paper and thesis option will demonstrate understanding of social science research methodology as it applies to the program of study. Students will follow the requirements of the APUS Capstone Manual and the appropriate presentation style guide. NOTE: This course may not be taken until all other courses are completed and the student has a minimum 3.0 GPA. Capstone courses are 16 weeks long and cannot be taken along with any other course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Emergency Management (EMHS)

EMHS699 Emergency and Disaster Management & Homeland Security Capstone (3 semester hours)

Preparation for the Emergency & Disaster Management and Homeland Security Master's Thesis Capstone Seminar begins on day one of a student's graduate program of study. The theories, research methods and analytical skills, and substantive knowledge obtained through their master's curriculum provide the basis for the master's thesis. Students will support the thesis effort, including gathering bibliographic and reference materials on the thesis topic including developing individual course research papers that may become sections of the final master's thesis. Students will address the requirements as described in the syllabus and classroom assignments. The master's thesis proposal shall be prepared in accordance with the standards of the academic discipline. The master's thesis proposal must provide a clear and lucid description of a topic and a proposed method of analyzing the problem. Students must have completed all other course work before taking the master's thesis seminar. Capstone courses are 16 weeks long and cannot be taken along with any other course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Environmental Science (EVSP)

EVSP501 Environmental Management (3 semester hours)

This course focuses on the analysis and resolution of complex environmental management issues. Environmental Management investigates the use of management tools and strategies to resolve complex environmental problems and controversies, including application of adaptive management, structured decision-making, and negotiation principles, and incorporating stakeholders, economic drivers, and the human element. Environmental leadership, collaboration, and conflict resolution will be emphasized, with due consideration to the use of sound scientific data in environmental decision making. Students will be expected to use critical thought, innovation, and creativity to formulate an adaptive management plan for a highly controversial environmental issue or policy as their course final project.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP502 Environmental Economics (3 semester hours)

This course is a qualitative and quantitative study of the public and private economic costs and effects of environmental programs, industrialization, regulation, and international and national environmental policies, among other issues.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP503 Environmental Policy, Regulation, and Law (3 semester hours)

This course is a study of the major legal, regulatory, and policy framework that encompasses environmental programs and projects in the United States and with international political, commercial, and non-governmental institutions. The primary learning approach used in this course will be case studies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP504 Fisheries Management (3 semester hours)

This course examines the principles and theory of fisheries management with major emphasis on the human dimension in fisheries management, fishery assessment, population dynamics, and common management practices.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP505 Wildlife Management (3 semester hours)

This course examines the principles of managing wildlife resources with emphasis on the history of wildlife resources in the United States, population ecology, wildlife values, and the administration of wildlife resources and resources agencies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP506 Restoration Ecology (3 semester hours)

This course will examine the concept of restoration ecology, which employs science, applied techniques, and environmental design principles to restore ecological processes and biological communities on disturbed, degraded, or altered landscapes. Students will conduct scientific study and explore techniques used in restoring endangered species, native prairie, rare plants, riparian areas, streams, rivers, lakes, wetlands, watersheds, woodlands, and wildlife habitat.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP507 Conservation Biology (3 semester hours)

This course examines the development of major areas in conservation-oriented research that include patterns of biological variation, extinction, conservation genetics, conservation of populations, communities and landscapes, and ecological sustainability.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP508 Environmental Ethics (3 semester hours)

This course is an advanced study of environmental issues from a moral and philosophical approach. Issues raised in the course and through student research and writing will include: the moral obligation or lack thereof, to preserve and protect the environment; the ethical presumptions that underlie environmental policy; the traditional theories of moral philosophy applicable to contemporary environmental problems; and the potential for a new concept of the relationship between humanity and nature.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP509 The National Environmental Policy Act (3 semester hours)

This course consists of an in-depth review of the National Environmental Policy Act (NEPA), its legislative background and history, significant case law, and Council of Environmental Quality (CEQ) Guidelines. Students will review examples of agency Categorical Exclusions, Environmental Assessments, and Environmental Impact Statements to become familiar with the documents as a building block for **EVSP629** Environmental Impact Analysis. Students will evaluate whether specific documents "meet the intent or spirit" of NEPA, compare state vs. federal NEPA regulations, and review at least one federal agency's NEPA procedures. (Prerequisite: **EVSP503**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP558 Watershed Management (3 semester hours)

In recent years, water resource management in the United States has begun a shift away from top-down, government agency-directed decision processes toward a collaborative approach of negotiation and problem solving. Rather than focusing on specific pollution sources or specific areas within a watershed, this course will present this new process, considering the watershed as a whole, and seeking solutions to an interrelated set of social, economic, and environmental problems. Through readings, discussions, and current and historical case studies, students will explore a wide range of threats to the productivity and health of watersheds and explore new, collaborative approaches to watershed management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP561 Elements of Sustainable Design (3 semester hours)

This course is an introduction to the philosophical and practical principles of green and sustainable design through the exploration of environmental issues, sustainable materials and methods, and public policy and decision making. Sustainability principles, policies, and programs that encourage and guide current initiatives are analyzed. Innovative strategies for implementing sustainable projects, programs, and practices are investigated through the review of case studies and completion of a final course project.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP594 Environmental Toxicology (3 semester hours)

This course presents an introduction to the dynamics of ecosystems and the effects of toxic substances on its living and nonliving components, and incorporating human health issues and concerns. Students will examine the regulatory framework for environmental contaminants issues and detail the federal regulations, policies, and guidelines under which current environmental remediation is done. A key aspect of the course will be the application of risk assessment principles through case studies to gain an understanding of how to develop remediation plans and restoration alternatives that meet or exceed established regulatory guidelines.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP601 Capstone Proposal (3 semester hours)

This course prepares the student to understand materials and issues associated with but not limited to the scientific method, research design, and qualitative and statistical analysis of data. This course is intended to guide the student through selection of a suitable topic for the capstone project or thesis. Once an approved topic is selected, the student will prepare a formal proposal to be used in the capstone course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP605 Energy Policy and Sustainability (3 semester hours)

This course is an introduction to energy policy and decision making, primarily in the United States. Students will examine the nature and scope of environmental, energy, and resource problems, analyze the goals and strategies of the renewable energy movement, investigate ideological, political, and institutional forces that shape policymaking and implementation, and conduct in-depth analyses of the various approaches to U.S. energy needs. An exploration of renewable energy technology, feasibility, and implementation is incorporated through the analysis of case studies and current events.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP627 Landscape Ecology and Planning (3 semester hours)

Landscape planning and ecology is a rapidly developing area of study that explicitly examines the effects of spatial pattern and scale on ecological processes that unfold over areas of several square miles or larger. Thus, landscape ecology and planning provides many concepts, tools, and approaches that will enhance the effectiveness of endeavors such as watershed management, ecosystem management, design of conservation reserves and green infrastructure, and smart growth. The goal of this course is to give students a firm grasp of the concepts of landscape ecology and planning and how they can be applied to enhance the effectiveness of environmental policy, management, regulation, and assessment.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP628 Global Environmental Change (3 semester hours)

The study and consideration of global environmental and climate change are of increasing significance to society. In this course, students will examine the evidence for and causes of global environmental change and will analyze potential impacts on environmental policy and society. Emphasis will be on the implications of environmental change for environmental managers, including management decision-making, the adequacy of the current regulatory framework in addressing these problems, and the effect on future policy and legislation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP695 Capstone Portfolio (3 semester hours)

This course steps students through the construction of a professional portfolio that highlights major skills gained through their academic course work. The professional digital portfolio will be built using portfolio software and will include both scholarly work and writing geared towards the general audience. The final course output may include the digital portfolio, discipline relevant blog articles, and an oral defense of the portfolio presented to an audience of faculty and peers. NOTE: This is intended to be the final course in the degree program. Students must have a 3.0 GPA to enroll. This course is 8 weeks in length.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP699 Environmental Policy and Management Capstone (3 semester hours)

Designed specifically for students with an interest in scholarly research or continuing their academic career in doctoral studies, this course requires students to present original scholarly research. The capstone thesis must have a substantial research component, which will include research questions and presentation of an original argument using proper academic writing conventions. Students writing a capstone thesis will collect and analyze data from carefully documented primary and/or secondary sources, and will develop a rigorous research paper in the style of a traditional scientific paper (i.e., abstract, introduction, methods, results, discussion, references). The capstone thesis must represent an original contribution to the body of knowledge within the broad field of environmental policy and management. The theories, research methods, analytical skills, and substantive knowledge obtained through the Environmental Policy and Management curriculum provide the basis for the thesis project. NOTE: This is intended to be the final course in the degree program. This course is 16 weeks in length. (Prerequisite: **EVSP601**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Finance (FINC)

FINC600 Corporate Finance (3 semester hours)

This course is a study of the major corporate finance and financial management theory, strategy, processes, functions, and other issues. Topics include the finance function, concepts of sources and uses of funds, analysis and estimation of need for funds (short- and long-term), short-term sources, working capital management policy, long-term sources, capital structure policy and implementation, capital budgeting and the cost of capital. Students must have access to Microsoft Word and Microsoft Excel software. Please refer to the Course Materials section for additional details on materials and pricing or contact booklist@apus.edu.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FINC605 Financial Accounting (3 semester hours)

This course examines the nature of accounting theory and practice, procedures, and preparation and interpretation of financial statements. The various uses of accounting information in decision-making, accounting issues concerning income and cash flows, economic resources and capital will be discussed. Students must have access to Microsoft Word and Microsoft Excel software. This course requires the student to purchase additional materials. Please refer to the Course Materials section for additional details on materials and pricing or contact booklist@apus.edu.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FINC610 Financial Institutions (3 semester hours)

This course provides students with an overview of the basic contributions in the modern theory of corporate finance and financial institutions. The course utilizes a methodology approach, requiring students to master the necessary technical tools for each topic.

Topics covered in the course may include capital structure, distribution policy, financial intermediation, incomplete financial contracting, initial and seasoned public offerings, market for corporate control, and product market corporate finance interactions. Other topics offered in this course are corporate reorganization and bankruptcy, financing in imperfect markets, and security design under adverse selection and moral hazards.

Students will also conduct an in-depth analysis of the financial system in which banks, other intermediaries, and non-financial organizations function.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FINC615 Investment Management (3 semester hours)

For this course, students will study financial markets – principally equity markets – from an investment decision-making perspective. The course utilizes a set of conceptual frameworks and analytical tools, applying them to particular investments and investment strategies chosen from a fairly broad array of companies, securities, and institutional contexts.

The focus will be on adding value across the spectrum of decisions ranging from position-taking in particular securities to portfolio risk management, as well as the delegation to and oversight of professional investment managers. Also, the course explores the competitive dynamics among investment organizations, products, and markets.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FINC620 International Finance (3 semester hours)

This course provides an understanding of current academic research in international finance and international macroeconomics. Students will learn the tools for conducting field research and will have a comprehensive overview of currency, equity, and international bond markets around the world.
Institutional, theoretical issues, and current trends will also be analyzed. A strong emphasis will be placed on the hedging techniques and tools used to reduce the risks associated with those financial markets.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FINC625 Entrepreneurship Finance (3 semester hours)

This course is designed to provide students with the ability to analyze the various processes and sources of seed and venture capital for funding a new enterprise – debt and equity. Planning for the funding aspect of a new financial venture is critical, and this course addresses alternative sources of funds for carrying out a venture's mission.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FINC626 Mergers and Acquisitions (3 semester hours)

This course will give an in-depth understanding of the mergers and acquisitions (M&A) process. The M&A process involves several stages, from initial planning to post-merger integration. Students will learn about strategic planning, due diligence, valuation and negotiation of target companies, deal structuring, regulatory approval and post-merge integration. Each of these stages will be examined in detail so that the student can understand the entire process and how each stage will build to the next.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FINC627 Structuring and Leading Merger and Acquisition Deals (3 semester hours)

This graduate-level course is designed for professionals seeking to understand and execute mergers and acquisitions across industries. Students explore deal structuring in mergers and acquisitions, focusing on deal structure, transaction structure, and the financial implications, tax implications, and legal implications of each acquisition deal. Emphasis is placed on corporate finance, due diligence, and evaluating whether a stock purchase, asset sale, or other legal structures create the best deal structure for both the buyer and sellers in complex transactions.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FINC628 Post-Merger Integration (3 semester hours)

This course is designed to benefit students aspiring to careers in corporate development, M&A consulting, and strategic planning. This graduate-level course, Post Merger Integration, focuses on the crucial planning and effective management required to integrate organizations following mergers and acquisitions (M&A) successfully. Emphasizing that preparation should begin well before finalizing the M&A deal, the course draws on research studies and real-world cases to analyze and discuss the structural, cultural, and social implications of merging organizations.
Students will gain a comprehensive understanding of the complexities involved in merging different organizational cultures and structures. The course involves developing an effective post-merger integration model aimed at maximizing the synergistic value potential of merger opportunities. Practical tools for managing cultural integration, a critical aspect of successful integration, are also provided.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FINC630 Debt Instruments and Markets (3 semester hours)

The graduate course, Debt Instruments and Markets, provides a detailed examination of debt securities and their trading markets. The course begins with an overview of various types of securities, emphasizing their unique cash flow patterns and risk profiles.
A central focus of the course is the study of the term structure of interest rates, covering spot, coupon, and forward yield curves. These concepts are explored in the context of traditional bond yield calculations and the relationship between price and yield.
This course also addresses risk management strategies for different notes, including floating and fixed-rate notes. This course will explain the use of Libor-based derivatives such as interest rate swaps and Eurodollar futures.
Another significant aspect of the course is the analysis of default risk and its impact on bond valuation, including examining credit derivatives for managing default risk.
Furthermore, students will comprehensively understand Treasury futures and options, exploring their complexities and applications in financial markets.
The course concludes with a study of managing interest rates and currency exposure in international debt markets, providing practical insights relevant to global finance.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FINC699 Finance Capstone (3 semester hours)

This advanced graduate-level course in Finance explores the strategic rationale and execution of corporate mergers and acquisitions. Students will understand why and how firms engage in these activities and their impact on key business metrics such as stock prices, capital structure, and market power.
The course covers various aspects of Finance, such as mergers and acquisitions, including strategic alignment of merging entities, target company valuation, negotiation processes, and post-merger integration. Additionally, it examines legal, ethical, and regulatory considerations, encompassing the legal framework, ethical implications, and the role of regulatory bodies in ensuring market competition and fairness. The capstone will offer specific requirements depending upon the concentration selected for the Finance Master's degree.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Foundations (COLL)

COLL501 Analytical Writing for Graduate Students (3 semester hours)

The intent of this course is to encourage and foster the graduate student's analytical thinking and written communication skills. Students will learn advanced analytical techniques and communication strategies that professors at the graduate level across all academic areas expect them to know. Exposed to challenging ideas and potentially new strategies in examining a variety of topics, students will be expected to focus upon critical thinking principles and theories within those topics and then respond to assignments that require them to produce critical essays and a course project. Students will hone their reasoning skills through engagement in the forums and sharpen their writing skills through multiple drafts of papers with substantial feedback from their peers and their instructor. The culmination of the course will be a project that demonstrates the student's growth as a thinker and as a writer.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Global Security Studies (GLBS)

GLBS710 Seminar in Global Governance (3 semester hours)

This doctoral seminar examines how global governance works. The various ways in which states have created order and organization to their conduct in international affairs are examined, as are the increasingly diverse range of actors involved in global governance. The first part of the course provides theoretical and conceptual foundations for understanding the key actors, major developments, and current challenges in global governance today. The second part of the course focuses on exploring global governance architectures across a range of key policy and issue areas. Overall, students will gain both theoretical and substantive knowledge covering a wide range of global governance arrangements, actors, and issues. (This first course and corequisite **SSGS700** must both be successfully passed before moving on to other courses.)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

GLBS711 Seminar in Global Security Issues (3 semester hours)

This seminar provides an overview of significant issues facing actors in the global community, identifies how these challenges impact global security, and provides students with the opportunity to evaluate potential policy responses. (Prerequisites: **SSGS700** and **GLBS710**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

GLBS712 Seminar in Emerging Global Security Issues (3 semester hours)

This seminar provides an overview of emerging global security issues and their impact on national and human security. Students will focus on the development of international, state, and non-state responses to these issues. (Prerequisites: **SSGS700** and **GLBS710**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

GLBS740 Technology and Global Security (3 semester hours)

This seminar focuses on advances related to science, technology, and innovation in the global environment. It also examines the impact that advances in science, technology, and innovation have on domestic and international security, and international, bilateral, and state strategies for addressing them. (Prerequisites: **SSGS700** and **GLBS710**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

GLBS741 Health and Global Security (3 semester hours)

This seminar examines the role that global actors play in the formulation and implementation of policy, norms, practice, and domestic and international consequences with regard to current and emerging priorities in global health to address the prevention of disease and the promotion of health. It also examines the impact that global health issues have on domestic and international security, and international, bilateral, and state strategies for addressing them. (Prerequisites: **SSGS700** and **GLBS710**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

GLBS742 Democracy, Governance, and Human Rights (3 semester hours)

This seminar addresses the role that global actors play in the formulation of policy, norms, and practice with regard to democracy, governance, and human rights. It also focuses on the impact that these have on domestic and international security, and the international, bilateral, and U.S. strategies for addressing them. (Prerequisites: **SSGS700** and **GLBS710**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

GLBS744 Conflict Resolution (3 semester hours)

This seminar examines different theories and approaches related to conflict. It also addresses the impact conflict has on domestic and international security. International, bilateral, and state strategies for addressing these challenges are also addressed. (Prerequisites: **SSGS700** and **GLBS710**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

GLBS745 Defense Security Cooperation (3 semester hours)

This seminar examines defense and security cooperation such as training and education, foreign aid and military sales, alliances, and multinational cooperation in the global environment, and how these factors impact global security, and in particular, U.S. national security. (Prerequisites: **SSGS700** and **GLBS710**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

GLBS790 Independent Study (3 semester hours)

This course is an opportunity to pursue an independent research project on a global security topic under the mentorship and direction of a faculty member. A research proposal and timeline must be submitted in advance of enrollment to the faculty member and approved by the faculty member and Doctorate of Global Security Program Chair. (Prerequisites: **SSGS700** and **GLBS710**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Government Contracting and Acquisition (DEFM)

DEFM531 Advanced Business Solutions for Mission Support (3 semester hours)

This course is a study in realistic scenario-based learning, where students work in teams to practice developing sound business solutions. Student course work is designed to contribute solutions to senior leadership and local supervisors and to provide resources for the contracting career field via a course community-of-practice.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM540 Program and Acquisition Management (3 semester hours)

This course is a detailed and practical examination of DOD acquisition regulations and procedures. Duties and responsibilities of the Program Manager at each point in the systems acquisition process continuum will be stressed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM550 Program Manager's Skills (3 semester hours)

This course develops a foundation of concepts and solutions that supports the planning, scheduling, controlling, resource allocation, and performance measurement activities required for successful completion of a project. Tools and concepts such as project charter, scope statement, work breakdown structure, project estimating, and scheduling methodologies are studied. No prerequisite.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM551 Executive Program Manager's Decision Making Skills (3 semester hours)

This course is designed to meet the learning and performance needs of newly selected PEO's, DPEO's, and ACAT I and II Program Managers and Deputy Program Managers. Skills and behaviors are developed through a concentrated study of cases, role playing and scenario analysis.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Health Information Management (HIMA)

HIMA501 Technology Applications in Health Information Management (3 semester hours)

This is the first course required for students enrolled in the MS in Health Information Management degree program. This course addresses the theoretical and practical applications that information technology (IT) plays in the administration of health information. Students will study how the management and synthesis of healthcare data across a variety of levels within the healthcare system plays an integral role in strategic and tactical decision making. The course provides students with an overview of systems planning, grant and contract development, as well as e-health and electronic medical records. Students will gain a foundational knowledge of IT deployment, adoption, data security and interoperability, privacy, confidentiality, and information management planning. In addition, students will examine the legal and ethical aspects of health information management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA503 Healthcare Vocabulary and Clinical Terminologies (3 semester hours)

This course addresses the nomenclature of healthcare vocabulary and medical terminology for administrators in the health information management (HIM) field. Vocabulary used in the healthcare field provides a common language for practitioners, positively addressing global, as well as safety issues. Students will examine the issues of competing standards, and the different goals and criterions in which terminology and codes were created to address. The course will provide an advanced overview of medical terminology and anatomy used in classification systems in health information management (HIM). Students will study the structures and organization of bodily systems as they relate to the appropriate terminology.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA505 Research Methods in Health Information Management (3 semester hours)

This course focuses on the research methods, tools, instruments, and devices used in health information management. It concentrates on the logic of the scientific method, research design, and qualitative and quantitative analysis. This course evaluates methods to collect, classify, categorize, evaluate, assess, and report research data, to formulate valid research questions, and to derive logical conclusions. In addition, the course emphasizes the proficient development of research and writing skills necessary in academic and professional settings. Lastly, students will utilize all of these methods to demonstrate competence in data collection and analysis, as well as strategic and tactical decision making. The principles, practices, tools, and methodologies presented in this course are applicable throughout the program of graduate studies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA550 Clinical Workflow and Process Redesign (3 semester hours)

This course addresses processes in the administration of health information management as they relate to performance, bottlenecks, delays, duplication of effort, and other issues in order to identify areas of improvement. Students will study process mapping and examine how auditing the information content can increase productivity via information technology and automation. Issues related to computerized provider order entries (CPOE) and electronic health records (EHR) will be analyzed associated with safety and quality. Students will examine the symbiotic nature of clinical workflow and process redesign.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA600 Financial Management for Health Professionals (3 semester hours)

This course provides students with a foundation in financial management skills and principles applicable to the health care field. Students will examine the difference between accounting and financial management, different reimbursement methodologies, accounting and financial statements, revenue cycle management, and avenues for financing major capital investments. They will learn areas related to managing cash, billings, and collections, alternative forms of ownership, as well as using cost information in decision-making. Additionally, students will be exposed to the laws and regulations that affect health care financial reporting and performance such as the Patient Protection and Affordable Care Act of 2010 and the expansion of health care services into new fields.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA605 Legal Issues in Health Information Management (3 semester hours)

This course will provide students with an overview of the legal issues that influence the management of health information. Students will examine areas related to the impact of electronic health records, ethical standards, bioethics, confidentiality, informed consent, and access to health related information. In addition, students will study legal issues related to risk, quality, and utilization management, as well as health care fraud and abuse, through various federal legislation such as the Health Insurance Portability and Accountability Act (HIPAA), the Genetic Information Nondiscrimination Act, and the American Recovery and Reinvestment Act (ARRA).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA610 Healthcare Data Analytics with Lab (4 semester hours)

This course will prepare the students to collect, analyze and present the data through the understanding of basic concepts, principles, and techniques/methods of statistics as applied to knowledge management in health care. Major topics will include data collection, sharing, and analysis. Students will study the terminology, concepts, models, processes and tools associated with decision support and knowledge management systems. The lab portion of the course will focus on data, statistical and qualitative analysis, explanatory, and predictive modeling where students will evaluate how to leverage data into information and knowledge to enhance systems, quality, cost effectiveness and strategic decision making. (Prerequisite: **HIMA600**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA620 Corporate Compliance in the Healthcare Industry (3 semester hours)

This course will prepare students to navigate the area of corporate compliance within the health care industry by identifying risks and avoiding possible liability by examining a myriad of laws, regulations, policy guidance, enforcement initiatives, and certifications (e.g. HIPAA, Stark laws). The course will provide students with a foundation in the core elements of corporate compliance. Students will evaluate various tools and strategies necessary for an effective corporate compliance program to protect a health care organization and avoid penalties as a result of non-compliance.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA699 Capstone in Health Information Management (3 semester hours)

Students will examine organizational performance measures and outcomes, strategic management and planning, and the leadership and management competencies associated with success in a healthcare environment. The final project will encompass program competency model and requires students to demonstrate an understanding and application of healthcare management and administration communication skills, critical thinking, and problem solving.(Prerequisite: Students may only take this course after the completion of all CORE courses)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Healthcare Administration (HCAD)

HCAD500 Healthcare and Healthcare Systems (3 semester hours)

This course examines an overview of the origins, components, organization, demographics, and trends in the United States Healthcare System. It is intended to serve as an introduction to the complexity of the United States Healthcare System, including how our healthcare system has evolved, settings where healthcare is delivered, how healthcare is financed, healthcare workforce challenges and future trends.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD501 Technology Applications in Healthcare Organizations (3 semester hours)

This course addresses the role that information technology plays in the health delivery systems in the United States. Students will evaluate how the current and future trends in health information technology impact the quality, safety, and finances of the health care delivery system. The course provides students with a history of the Health Information Technology (HIT) evolution, an overview of current trends and challenges, the impact of HIT on the patient centered delivery system and the continuum of care, as well as the future trajectory of HIT. Students will gain a foundational knowledge of Health Information Technology and its connection with health care delivery systems and health administration. (Prerequisite: **HCAD500**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD510 Leadership and Management in Healthcare Organizations (3 semester hours)

This course examines contemporary leadership and management theories, models, and principles as they relate to healthcare organizations. Further, the course explores the ethics of leadership and the role of a healthcare leader in creating the culture and processes that support a high reliability organization. Students will develop a personal philosophy of ethical, effective leadership. (Prerequisite: **HCAD501**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD520 Legal and Ethical Aspects of Healthcare Administration (3 semester hours)

This course explores legal and ethical dimensions of health care in the context of patients' rights and responsibilities, employee rights and responsibilities, and business practices. The course examines ethical values and principles in healthcare, the Patient Bill of Rights, legal regulations in healthcare, malpractice and risk management, and basics of employment law and labor relations. Students will apply ethical and legal principles to analyze the health administrator's role in case examples involving ethical and legal dilemmas.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD530 Operational Management in Healthcare (3 semester hours)

This course examines the key elements of operational management, strategic planning processes, project management, and marketing strategies in health care organizations. Interpersonal and communication skills are discussed in the context of change management and development of written business plans. (Prerequisite: **HCAD510**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD605 Human Resource Management in Healthcare (3 semester hours)

This course serves as an advanced course in human resource management with an emphasis on the health care workforce. Students will explore the intricacies associated with recruiting, hiring, and managing healthcare workers. Organizational culture as it pertains to human resources will be examined, and strategic planning will be highlighted. (Prerequisite: **HCAD500**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD650 The Business of Healthcare (3 semester hours)

This course is designed to introduce students to the business side of healthcare. Topics include the regulatory environment, employment law, managing and marketing healthcare services. The course also looks at organized delivery systems including the labs, pharmacies, materials maintenance, and physician practice administration.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD651 Healthcare Finance (3 semester hours)

This course is designed to give healthcare administration students a foundation in economic principles of health insurance. Topics will include managed care, employer-sponsored health insurance, the functioning of Medicare and Medicaid, the history of health insurance in the United States, and special topics in health insurance. (Prerequisite: **HCAD650**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD652 Operational Quality in Healthcare (3 semester hours)

This course is designed to develop the skills that will allow students to create safe and efficient quality healthcare systems through an understanding of the quality management cycle, goal-setting, and goal obtainment metrics. Topics include creating satisfied patients, high quality service, efficient processes, and examining tools used within the field. (Prerequisite: **HCAD650** and **HCAD651**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD698 Situational Experiences for Healthcare Administrators (4 semester hours)

This advanced course offers students the chance to participate in simulations of experiences they will face as a health administrator. Students will utilize course software to make decisions regarding health care delivery systems, ethical situations, financial obstacles faced in healthcare organizations and build leadership skills. This course will provide an opportunity to apply the skills learned in previous classes in a simulation setting. (Prerequisite: **HCAD500** and **HCAD652**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD699 Healthcare Administration Capstone (3 semester hours)

This course focuses on applying theoretical knowledge of strategic management, continuous quality improvement, and compliance in a health care organization. Students will examine organizational performance measures and outcomes, accreditation readiness practices, and quality management programs. Students will explore the roles of organizational leaders involved in ensuring quality, safety, and compliance. Students will be expected to create a professional development plan, based on self- reflection and assessment of the program's competency model and personal leadership and managerial knowledge and skills. (Prerequisite: **HCAD698**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

History (HIST)

HIST500 Historical Research Methods (3 semester hours)

The course addresses the development of core research skills for advanced historical study. Through case studies analyses, the evaluation of different types of historical evidence, and the consideration of how valid research questions are formulated and applied, it is designed to refine the critical thinking, research, and writing skills that are fundamental to valid historical scholarship.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST501 Historiography (3 semester hours)

This course is the study of historical thought from its emergence in the classical world to the present. Students concentrate on how history has been interpreted, rather the facts of history themselves as well as contemplate the fundamental questions about the nature of history, and investigate the relationships between theory and evidence in historical writing. Emphasis is on the narratives historians have used to reconstruct the past, and the major historiographical schools of thought that have developed over time.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST510 Graduate Seminar in World History (3 semester hours)

This course is a comprehensive seminar in world history designed to provide a foundation in historical theory, trends, and concepts for further study of topical history at the graduate level. Students examine the broad sweep of world history, major interpretive questions in world historiography, and major periods of interaction between civilizations. This course is not designed as a refresher of undergraduate history survey courses; rather, it is a concentrated study of world history for serious history students and professionals.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST520 Graduate Seminar in U.S. History (3 semester hours)

This course is a comprehensive seminar in U.S. history designed to provide a foundation in U.S. historical theory, trends, and concepts for the further study of specialized and topical history at the graduate level. Students should be expected to read and write intensely on both broadly and narrowly addressed topics of history. This course is not designed as a refresher of undergraduate history survey courses; rather, it is a concentrated study of U.S. history for serious history students and professionals.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST521 Seminar in Public History (3 semester hours)

The Seminar in Public History examines the varied and interdisciplinary "field" of Public History--such as community/local history, historic preservation, archives, historical archaeology, museum studies, business and policy history, documentary editing and publishing, and documentary films--through readings, class discussions, occasional guest speakers, and occasional field trips. The central theme explores some of the many ways people create and convey history, some of the major themes in community and social history, and the problems and possibilities of working as historians in public settings.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST522 Archives and Manuscript Management (3 semester hours)

This course examines the theory and practice of managing archival documents, such as personal papers, institutional records, photographs, electronic records, and other unpublished materials. Topics include: manuscript and records acquisition and appraisal, arrangement and description, conservation and preservation, reference, and access. The course provides in-depth study of current issues and practices in archives, addressing fundamental problems, theoretical principles, techniques, and practical administration of archives and manuscripts; the importance of records in the modern information age; discussion of the types and varieties of archival repositories and the value of historical records beyond traditional research use.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST523 Theory and Practice of Oral History (3 semester hours)

This course explores oral history as a research methodology and studies the current “historiography of oral history.” The topics examine how oral history projects are initiated, how projects are administered, how interviews are conducted, and how oral history interviews are preserved and made available to researchers. Special emphasis is on the use of technology in making oral histories available to researchers on the Web. Students will gain practical experience in oral history interviewing and related aspects of oral history, such as transcribing, editing, and publishing oral histories.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST525 West Virginia History and Culture (3 semester hours)

This course is an historical survey of West Virginia and the Central Appalachian’s development from prehistoric times to the present time. Areas stressed include Native American settlements, colonial migrations, revolutionary activities, Civil War and statehood, industrialization, and the region’s assimilation into the national economy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST531 The Greek Civilization (3 semester hours)

This course is a study of Greek civilization from its beginnings to the collapse of the independent city-states in the 4th century BC. Emphasis is on ancient Greece’s constitutional, political, economic, social, diplomatic, military, artistic, philosophical and intellectual dynamics. Key topics include the Greek way of land and naval warfare, maritime trade and the economy, Peloponnesian and Persian Wars, the "Age of Pericles" and the Classical Age of Athens, the rise and fall of Spartan power, the rise of Athenian democracy, and the impact of Ancient Greece on the evolving Western Civilization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST532 The Roman Republic and Empire (3 semester hours)

This course is a study of Roman civilization from its beginnings to the collapse of the Western Roman Empire in the 5th century AD. The course emphasizes ancient Rome's constitutional, political, economic, social, diplomatic, military, naval, maritime, artistic, architectural, engineering, legal, philosophical and intellectual dynamics. Key topics include the Roman way of land and naval warfare, maritime trade and the economy, Punic and Gallic Wars, imperial expansion, transition from Republic to Empire, the Imperial system, Republic and Imperial constitutions, and the impact of Ancient Rome on the evolving Western Civilization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST533 Late Antiquity and Byzantium (3 semester hours)

This course covers the period from the eighth century B.C. colonization of the Mediterranean and the founding of the Byzantium seaport in 667 B.C. through the First and Second Golden Ages, to the fall of Constantinople in 1453 to the Ottoman Turks. The roles of great Byzantium leaders such as Constantine the Great, the spread of Christianity throughout the Roman Empire, the recapture of Constantinople from the crusaders, and the impact of Byzantium culture on Western intellect are studied.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST534 Medieval Europe (3 semester hours)

This course is a study of European social, political, economic and religious institutions and cultural and intellectual phenomena in the light of the changing historical environment from the end of the Ancient World to the Renaissance. Students examine major milestones from roughly 300 to 1500 AD. Special emphasis includes the importance of the Crusades, development of the Mediterranean as an important venue for the exchange of goods and ideas, and changes in medieval military organization, strategy and technology.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST535 Renaissance and Reformation (3 semester hours)

This course examines the history of the Renaissance as a European wide movement emanating from the Italian peninsula; the crisis of the church medieval and the rise of the Renaissance papacy; Humanism, with special emphasis on the great painters, architects, and sculptors; the Renaissance city-states, Machiavelli, and the Renaissance monarchies of France, England, Spain, and the Holy Roman Empire; the continuing crisis of the church medieval and the religious upheavals of Protestantism; the work of Luther, Calvin, Zwingli, and the Anabaptists; the Catholic Reformation; the age of civil and religious wars.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST536 History of the Enlightenment (3 semester hours)

This course is a study of the major social, political and cultural changes in Europe from the death of Louis XIV to the fall of Napoleon. Topics include the intellectual history of the Enlightenment, the causes of the Revolution, the development of radical ideologies, social and political instability, the French impact on Europe, and the achievements of Napoleon as civil administrator, military strategist, and commander.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST543 18th and 19th Century Europe (3 semester hours)

This course investigates the intellectual, social, and economic history of Europe from the Glorious Revolution of 1688 to the onset of the Great War in 1914. The major focus is on the Enlightenment, the Industrial Revolution, the Age of Ideologies, and the new imperialism prior to the World War I. While emphasizing the intellectual history of Europe, the course also investigates the social and economic structure of 18th and 19th century Europe.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST551 The American Revolution in Context (3 semester hours)

This course is a comparative study to demonstrate the importance of the historical context of any great military event. Context includes all aspects of a society or culture and in this case, 18th century British and colonial American political and constitutional philosophies, social norms and societal structure, economics, religious concepts, and foreign and diplomatic policy. Students examine issues such as the many historiographical opinions on the degree of American constitutional conservatism versus political and social radicalism, and the nature of the soldiery of the continental Army.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST552 The Civil War: Seminal Event in American History (3 semester hours)

This course is a study of the political, economic, cultural, and social aspects of the Civil War as a seminal event in our nation's history. Students explore the causes of the war, how a nation coped with the struggle across multiple dimensions, and how we dealt with the conflict's aftermath. Special emphasis is on the continuing debate that the impact of the Civil War had on both the North and the South.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST553 History of Colonial America (3 semester hours)

This course will examine the political and social history of the thirteen colonies, including their European background, settlement and expansion, beginnings of culture, and the imperial context. Additionally, students will study the social consequences of colonization, migration, and war in America from 1500-1775, including the interaction of British colonists with competing European cultures (French, Dutch, Portuguese, and Spanish), with Native Americans, and with African and Afro-American slaves. The course will also include consideration of the pan-Atlantic context of Early America, cross-cultural contacts, family and gender, labor systems, religious observations, crime, and other themes explored in recent social and cultural theory. (Recommended Prerequisites: **HIST500** and **HIST501**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST554 History of the American West (3 semester hours)

This course will explore the history of the trans-Mississippi West from the 16th century to the present. Included will be the numerous historical issues associated with the region, including cultural contact and conflict, economic development, visions and meanings of the West, human interaction with nature and the environment, relationship between western states and the federal government, tourism, the growth of the sunbelt cities, and the shifting nature of race, class, gender, and power in the region. (Recommended Prerequisites: **HIST500** and **HIST501**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST555 The United States in the 20th Century (3 semester hours)

This course examines the changes in American society at the end of the 19th century as it confronted the issues of industrialization, immigration, and urbanization. It explores the open conflict between the advocates of isolationism and collective security and studies the impact of World War I. It also studies the changing values of the 1920s, the stock market crash of 1929, the Great Depression, and the cultural, social, political, military, and economic growth of the United States from World War II to the present.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST556 U.S. Constitutional History (3 semester hours)

This course examines the origins, content, and judicial interpretations of the U.S. Constitution. The course involves study of the Supreme Court's evolving decisions on such issues as States' rights, civil rights, the Commerce Clause, Due Process in criminal and other proceedings, and protected freedoms (speech, religion, assembly, etc.) under the Constitution.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST557 History and Popular Culture (3 semester hours)

This course explores the history of expressive and material cultures around the world, with emphasis on industrialized nations. Topics include aesthetics, social identification, and production, consumption, and reception of cultural forms. Using literature, films, pictures, and music, students study theories of popular culture and aesthetic hierarchy; explicate historical contexts of artistic movements; discuss cultural imperialism; address problems of cultural appropriation, creativity, and identity; and examine cultural expressions of social difference and deviance. Topics also include the social history of culture in the age of mass society, including popular arts and the culture of consumption.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST558 The Great War (3 semester hours)

This course examines the origins of World War I; the combatants, strategy and tactics, technological innovation vs. conservatism; the war in France; the war at sea; America's role; the peace settlement; and the occupation. While military aspects of the conflict are studied, the primary focus places the Great War in the context of European and World history, and specific areas include political and diplomatic developments, new developments in weapons technology, economic aspects of the war, and the impact of the war on the culture and social order of the nations involved in the struggle.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST560 World War II in Context (3 semester hours)

This course is a global history of the Second World War. Emphasis is on the theaters of war and related events in Europe, Africa, the Middle East, Southeast and Southwest Asia, the Pacific, and Latin America in relation to their impact on the national and military objectives. In this context, students compare and contrast the economies, industry, society, and culture of the United States, Great Britain, Japan, and Germany as major participants during the war. The role of diplomacy and strategy, the impact of war upon society, and the fighting on land, at sea, and in the air are also examined in terms of modern warfare.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST570 Modern European History (3 semester hours)

This course analyzes modern European history emphasizing its political, intellectual, social, and cultural history from the end on the nineteenth century to the near present day. Key concepts that may be covered are nation-building, empire-building, state-building, the development of ideologies, industrialization, urbanization, ethnic nationalism, and globalization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST571 History of Africa (3 semester hours)

This course will analyze various aspects of African Civilizations including the conflicts and historical development of various pre-colonial African kingdoms to the rise the Slave Trade. In addition, emphasis will focus on the development of the plantation economy in the West, changes in the conduct of the slave trade and its impact on African economic, social, and political history. (Recommended Prerequisites: **HIST500** and **HIST501**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST573 History of the Middle East (3 semester hours)

This course will explore the Middle East by examining its history, politics, and culture while keeping an eye on the wide variety of individual experience of those living in the Middle East. Included in this process, students will focus on how Middle Eastern peoples have adapted to their physical environment as nomads, city dwellers, empire builders, and developed agriculture. In addition, this course will examine the rise of Islam, the Arabic conquests, early empires and their continuities with the Pre-Islamic past. (Recommended Prerequisites: **HIST500** and **HIST501**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST581 The Great Revolutions (3 semester hours)

This course compares and contrasts revolutions recognized as monumental in scope and/or consequences they are labeled "great"; specifically, the American, French, Mexican, Russian, Chinese, Cuban, Vietnamese, and Iranian. Students examine their causes and consequences, to include the transformation of economic, social, and political systems of social stratification. Of particular interest is the relationship among the structural and intentional elements, the impact of revolutionary crisis in a society, and various insurgent challenges to the ancient regime.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST586 History of Science (3 semester hours)

This seminar explores past and recent historiographical approaches within the history of science. Students examine a wide variety of topics primarily from the 17th through the 21st centuries, to include the fields of physical sciences, natural history, and medicine. Emphasis is placed on deciphering various theoretical approaches; the pros and cons of different research questions, subjects, and sources of evidence; and what makes the history of science valuable to our understanding of global change.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST588 History of Religion (3 semester hours)

This course explores the historical development and central beliefs and practices of each of the major world religions. Students employ a multi-disciplinary approach to religious study (e.g., the use of literary criticism, anthropology, psychology, phenomenology and other tools) to examine the importance of religious thought and expression within each religion. The scope of the course is international, and each religious movement is approached from both a chronological and geographical perspective.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST597 Graduate Seminar in European History (3 semester hours)

This course is a comprehensive seminar in European history designed to provide a foundation in historical theory, trends, and concepts for further study of topical history at the graduate level. Students examine the broad sweep of European history, major interpretive questions in world historiography, and major periods of interaction between civilizations and empires. This course is not designed as a refresher of undergraduate history survey courses; rather, it is a concentrated study of European history for serious history students and professionals.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST611 Ancient Warfare (3 semester hours)

This course is a study of warfare in the ancient world with emphasis on the great empires of the Near East and the Mediterranean, particularly the Greeks and Romans. Student examine the origins of warfare in the Neolithic period to the decline and fall of the Western Roman Empire in the fifth century. Special emphasis will be placed on the military history of Mesopotamia and the Near East (Sumerian, Akkadian, Babylonian, Hittite, Assyrian and Persian), Egypt (Old, Middle and New Kingdom), Greece (Mycenaean, Archaic, Hellenic and Hellenistic) and Rome(Republican and Imperial). The phalanx, the legion, Greek Fire and the importance of roads are discussed in detail.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST634 History, Theories, and Contemporary Issues in Historic Preservation (3 semester hours)

This course examines the history, theory, and current issues of preservation practices in the United States and beyond. The themes center on the historical roots of preservation, rather narrowly focused on repairing old buildings, and the modern, broad field of preservation in terms of individuals, societies, and cultures and their relationships to the built environment and cultural landscape. Special emphasis is on the multidisciplinary nature of the preservation field and the public nature of its practice.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST635 Museum and Exhibition Culture (3 semester hours)

This course is a study of objects, buildings, and landscapes and how to evaluate their contexts of display through three-dimensional stories over the course of two centuries, drawing mainly on examples in the United States. Students examine issues such as the relationship of collections and landscapes to identity; the intersection of commerce and culture; and the influence of museums on intellectual culture. Key themes focus on the role of museums and exhibitions in preserving a view of the past and developing an image of progress; and how they change in response to the various contexts in which and for which they exist.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST636 History and Digital Preservation (3 semester hours)

This advanced course explores the nature of the Web for historical research. Students will be exposed to techniques for evaluating and discovering “trusted” resources, as well as participation in related scholarly communities. In addition, the class provides theoretical underpinnings for the digitization of analog materials and controls for “born-digital” resources as part of a preservation program. Topics to be explored include: selection for preservation, copyright issues, digital longevity, formats and strategies for preservation, metadata to support digital preservation, maintaining the integrity and authenticity of digital materials, management of digitization and digital preservation programs, risk management, and disaster recovery

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST642 Nazi Germany and the Holocaust (3 semester hours)

This course offers a study of the origins and history of the Holocaust within National Socialist Germany and throughout Eastern Europe. Students examine the organizations involved at the grass roots level as well as the escalation of events from open murder to the implementation of concentration and death camps. Topics include the birth of National Socialism through the final days of the Holocaust, including the political, social, economic and scientific contributions during the Third Reich.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST643 The Ottoman Empire (3 semester hours)

This course investigates the roots of the Ottoman people, the development of their empire, the spread of their culture and their impact on early modern Europe. Students examine the reasons why the Ottoman Empire was one of the most successful empires in the history of the world. Starting in a corner of Anatolia with Byzantine and Seljuk lands in the 13th century, the emphasis is on how the Ottomans managed to expand their authority until they controlled territory on three continents: Asia, Europe and Africa until its demise after World War I.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST645 Russia and the Soviet Union (3 semester hours)

This course investigates the political, economic, diplomatic, and cultural history of Russia and the Soviet Union, including the decline of Imperial Russia, the Revolution of 1917, and the collapse of the Soviet Union up to the present. Special attention is given to the characteristics of Imperial Russia at the beginning of the twentieth century, the causes and course of the Russian Revolution, the Soviet system under Stalin; the Great Patriotic War, the post-Stalinist liberalization, the Cold War, the collapse of the USSR, the emergence of the post-Soviet republics, and developments in contemporary Russia.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST651 America's Indian Wars (3 semester hours)

This course is an in-depth study of the westward expansion of Europeans and the United States from colonial times to the 1890s as it resulted in military conflict with the Native American Indian tribes living between the Atlantic and the Pacific oceans. Students focus on the military strategy and tactics, leaders and groups, economic conditions, diplomatic efforts, and cultural conflicts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST652 African-American History (3 semester hours)

This course is a study in the history of African-Americans in the United States, with emphasis on the social forces underlying transitions from West Africa to the New World, from slavery to freedom, and from rural to urban life. Topics include the Atlantic slave trade, American slave societies, maroon communities, free blacks in the antebellum United States, Reconstruction and free labor, colonization, emigration, and urban migrations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST653 History of American Women (3 semester hours)

This course is a study of the historical experience of women in America from the colonial period through modern times. Topics include the evolution of women's work, education, legal and political status, religious experience and sex roles as well as age, class, race, sexual preference and region as significant variables in women's experience.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST657 Antebellum America: Prelude to the Civil War (3 semester hours)

This course is an analysis of the conditions existing in the United States in the first half of the 19th century. The course focuses on the political, cultural/social, economic, security, leadership, and other issues that played roles in starting and shaping the Civil War. Students will analyze the issues in the context of war and peace to determine whether or not such conflicts as civil wars can be avoided prior to their inception.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST658 Reconstruction and Post-Civil War America (3 semester hours)

This course is designed to examine the interrelationship between the Presidents Abraham Lincoln and Andrew Johnson and the U.S. Congress, compare/contrast the Reconstruction plans developed by both, and determine why the Reconstruction Period played out in the manner that it did.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST670 History and Culture of Latin America (3 semester hours)

This course examines the heritage of Latin America from pre-Columbian civilizations (Aztec, Maya, and Inca) and Iberian colonial patterns, through the independence movements of the early 19th century, and the global relationships that oriented the region toward Europe and the United States. Purpose is to distinguish early Latin American history, from the arrival of the first peoples on the American continents through the 19th century, and Latin American culture, economics, and politics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST680 Special Topic: History (3 semester hours)

HIST680: This course, when offered, is a one-time offering on an area of special interest that will vary each term. These are open to graduate students as an elective, or to fulfill concentration requirements.

September 2026: **HIST680** Jewish and Christian Egypt through Papyri
This course explores the world of Jewish and Christian communities in ancient Egypt as seen through the papyrological texts they have left behind. Starting from the Persian Period and continuing through to Late Antiquity, we will read, analyze, and assess translated documentary, sub-literary, and literary papyri, and compare and contrast papyrological evidence with other source types. The class also explores the various ways in which papyri may be analyzed including data analysis (with AI assistance), comparison to literary records, and the many implications of studying papyri as artifacts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST690 Independent Study: History (3 semester hours)

This course is an opportunity for History students to pursue an independent research project or examine a specific area of history under the mentorship of a single professor. Students must complete 24 credits of study before taking this course. The course will typically involve a major research paper; there will be no examination. Students will submit a proposal prior to the start of the project, and a rough draft of the paper, both of which will count toward the final grade. Prerequisite: University approval and Upper Level standing. Prior to registering, students should first contact the professor with whom they wish to mentor their independent study, coordinate an agreement on the grading requirements, and then NOTIFY their academic advisor with the name of their professor.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST691 Writing a Thesis Proposal (3 semester hours)

Preparation for the Master of Arts in History Capstone (Thesis) seminar begins on day one of a student's graduate program of study. The theories, research methods and analytical skills, and substantive knowledge obtained through their master's curriculum provide the basis for the thesis project. Students are required to develop primary and secondary source materials on their research topic and address the writing requirements as described in the syllabus and classroom assignments. The thesis proposal must provide a clear description of a question or problem and a proposed method of answering the question or solving the problem. Guidance on the format of the research proposal and a sample proposal are contained in the APUS Thesis Manual. This course should be the LAST course in your program prior to **HIST699** and should not be taken earlier in your program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST696 Practicum in Applied History (3 semester hours)

The experiential or practical component of the course aims to apply learning in an aspect of interest related to the degree and concentration in Public History. It is understood to be a supervised practicum that requires approval by APUS before entering into the relationship with the organization. The selection of an organization or site for the practicum must relate to the content of the student's course work and/or concentration. Goals of the applied practicum and integration seminar will be submitted by the student for approval using an application for approval to the Faculty member, Program Director and Dean of the School, Arts and Humanities. The organization will serve as an opportunity to experience the practice of an area of management related to the focus of the student's degree. Practicum courses are NOT included in the university retake policy. All grades for any attempts will appear on transcript and will be calculated in GPA

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST698 Comprehensive Exam in History (0 semester hours)

THIS COURSE WILL REQUIRE A TEST PROCTOR. This course prepares graduate students for the Comprehensive Examination in the Master of Arts in History program. The purpose of this course is to provide a structured weekly review of key concepts, theories, and knowledge skill sets in their degree and particular concentration. Students are required to submit responses to a number of assignments over the course period prior to taking the exam. Students apply historical methodology in preparation for the exam and consult texts, journal articles, print & media reports, and documentaries, as well as collaborate with other students enrolled in the course to help them prepare for the exam. Assignments serve as a means of final preparation for the student and calibration with the course instructor, who will grade the exam. IMPORTANT: You must have COMPLETED all other courses in the program and have a GPA of 3.0 in order to register for this course. As a History student, you must pass this comprehensive exam in order to have your degree conferred. The comprehensive exam must be taken by the course end date or a failing grade will be posted. If you fail your first course attempt to pass the comprehensive exam, you will need to get approval to register for a second attempt of the course and BOTH final course grades will show in your transcript.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST699 Master of Arts in History - Thesis (3 semester hours)

Preparation for the Master of Arts in History Capstone (Thesis) seminar begins on day one of a student's graduate program of study. The theories, research methods and analytical skills, and substantive knowledge obtained through their master's curriculum provide the basis for the thesis project. Students are required to develop primary and secondary source materials on their research topic and address the writing requirements as described in the syllabus and classroom assignments. The thesis proposal must provide a clear description of a question or problem and a proposed method of answering the question or solving the problem. Guidance on the format of the research proposal and a sample proposal are contained in the APUS Thesis Manual. This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA. Capstone courses are 16 weeks long and cannot be taken along with any other course. (Prerequisite: **HIST691**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

History (MILH)

MILH532 British Perspective of the American Revolution (3 semester hours)

This course details the British view of the Revolution and the long hidden perspective of the American Revolution. Topics include British colonial politics, diplomacy, political and military leadership, factors of influence in Great Britain during the Revolution, and post-war views of America.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH551 World War II in Europe (3 semester hours)

This course examines the Allied victory in Europe in World War II. Students assess how the American Army, trained for speed and mobility, performed during campaigns in Italy, France and Germany. The focus is on Eisenhower's generals and their decisions concerning amphibious invasions (e.g., Sicily, Salerno, Anzio and Omaha Beach), airdrops (e.g., Italy and Holland), the race across France and slogging through Italy (e.g., the Gothic siege line and the Huertgen Forest), as well as counter strokes such as Monte Cassino and the Ardennes Bulge.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH552 World War II in the Pacific (3 semester hours)

This course is a comprehensive analysis of the fighting during World War II in the China-Burma-India Theater, New Guinea, the Solomon Islands, the Aleutians, and the Philippines. Students assess the amphibious campaigns in the central Pacific theatre and evaluate the impact of one of the most massive movements of men and arms in history. Primary focus is on land warfare, its strategies, tactics, leaders and lessons learned.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH565 History of Peacekeeping: 1988 - Present (3 semester hours)

This course is a comprehensive survey of the overall evolution and functioning of United Nations peacekeeping operations from the end of the Cold War to the present. The focus of this course is the detailed analysis and comparative assessment of each peacekeeping operation as a tool of conflict management within the unique parameters in which it was established and conducted, and future trends for similar types of intervention and conflict resolution.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH621 The Cold War Era and Aftermath (3 semester hours)

This course is a seminar on the US-USSR Cold War period, which dominated geopolitics and military affairs from the end of World War II to the fall of the Berlin Wall, as well as the first decade of the post-Cold War era culminating with the events of 9/11. Students assess military conflicts and confrontations between the United States, Soviet Union, and their respective allies in the years since 1945. Focus is on the proxy wars of the US and USSR to include wars of national liberation in Africa, Asia, and Latin America; the Arab-Israeli conflict; the Indo-Pakistani conflict; and post-Cold War conflicts in Africa, Asia, and Latin America.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH622 Great Power Military Interventions (3 semester hours)

This course is an in-depth seminar on the military interventions of the United States and Soviet Union/Russia since the end of World War II. Students examine the military interventions of the United States and Soviet Union/Russia. Special emphasis includes the analysis of military interventions in Greece, Korea, Suez, Vietnam, Afghanistan, Somalia, Chechnya, and Iraq.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH637 The Seven Years War (3 semester hours)

This course is a comprehensive study of the “first global war” as events unfolded in Europe, North America, the Indian sub-continent, and on the seas during the 18th century. Students discern, as a prelude to the American Revolution, how the practice of warfare among the eighteenth century nations was firmly established among European nations. In the distrust and distaste among the French, British, and Americans, the Seven Years War set a pattern that has remained central to the American way of understanding our colonial history.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH667 The Balkans: Conflict and Peace (3 semester hours)

This course examines the military history of the region known as the Balkans and explores the turbulence behind long standing political, religious, and economic issues. Students assess the post-World War II era from 1945 to the present, by focusing on past and present conflicts and confrontations, UN and NATO interventions, transitions in government, and the pursuit of stability within the European community. Special emphasis is on further research into the rise and fall of Yugoslavia and emerging new states.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH668 The War in Vietnam (3 semester hours)

This seminar examines the origins, evolution and impact of the Vietnam War. In addition to reviewing the history of U.S. involvement in Vietnam, students explore the political, cultural and social forces and military developments that shaped the behavior of the various Vietnamese and American parties. Purpose is to develop a coherent perspective on what became one of the costliest and most divisive wars in American history.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Homeland Security (CMRJ)

CMRJ620 Policing and Corrections in Homeland Security (3 semester hours)

This course explores the evolving role of police and corrections in the homeland security enterprise. Historical, social, legal, and operational aspects are considered. Threats and strategies specific to police and correctional facilities and best practices in the field are critically assessed. Furthermore, negotiating relationships with other agencies continues to be a challenge for information sharing and dissemination between different law enforcement and correction agencies. This course examines the role the police should play in the task of preventing and responding to terror and the aftermath of terror. Special emphasis is placed on the relationships between the police and their community and how those relationships can be leveraged post 9/11.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Homeland Security (HLSS)

HLSS500 Research Methods in Homeland Security (3 semester hours)

This course is highly recommended as a second class for homeland security graduate students. This course provides basic research methods skills to assist homeland security graduate students in addressing problems and issues in the discipline. Students taking this course will become well-versed in research planning, secondary data collection, and qualitative data analysis methods, as well as how these methods relate to the larger field of social science research.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS502 Homeland Security and Defense (3 semester hours)

This course is highly recommended as a first course in homeland security. It provides a comprehensive overview of key elements of the United States homeland security enterprise. Students will examine, discuss, and analyze homeland security operational and policy concerns that have continued to evolve in the wake of the 9/11 terrorist attacks and the creation of the Department of Homeland Security.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS505 Security Risk Management (3 semester hours)

This course introduces students to risk management components including plans and strategies to mitigate risk. Students in this course will examine the role of risk management at the strategic and enterprise levels in the prevention of loss and mitigation of consequences through risk identification and control. This course will allow students to develop and apply risk management techniques to include selection of risk management measures and implementation of those measures.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS508 Privacy & Civil Liberties in Homeland Security (3 semester hours)

This course offers an examination of the challenges associated with balancing civil liberties and securing the homeland. Students will examine critical infrastructure protection, the use of technology, and the need to carry out intelligence gathering in secrecy around the context of civil liberties and civil rights. Recommendations to improve existing homeland security programs and their overall effectiveness to meet emergent future challenges while balancing civil liberties will be discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS522 Weapons of Mass Destruction and the New Terrorism (3 semester hours)

This course explores the threat of weapons of mass destruction (WMD) as a unique phenomenon within the homeland security landscape. Specifically, this course provides students with a historical perspective on the development and use of WMD from both an international and a domestic perspective. The course also explores the efforts to prevent, prepare, and respond to the use of WMDs.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS523 Domestic Terrorism and Extremist Groups (3 semester hours)

This course traces the history, emergence, and growth of domestic terrorist and extremist groups within the United States. Students will assess various groups' intentions, capabilities, and activities within contexts of and ramifications on political, national security, and legal paradigms.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS603 Resilience and Homeland Security (3 semester hours)

With an ever-changing threat vector, the need for a more resilient nation has never been more important. This course will explore different aspects of resilience and its connection to national homeland security. The course further explores resilience and its relationship to critical infrastructure nodes to methods of analysis and risk impact.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS645 Port Security (3 semester hours)

This course will survey the critical importance of ports to trade, their vulnerability to disruption and attack, and defensive measures to mitigate risk focusing on international cooperation and legislation. Special emphasis will be placed on defensive measures to protect ports from disruption or asymmetric attack, international cooperation, and national legislation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS697 Creative Project Capstone Option in Homeland Security (3 semester hours)

The Creative Project Capstone Option in Homeland Security is a 16-week capstone course for the master’s degree in Homeland Security. Creative projects as program capstones may be derived from a wide variety of organizationally defined formats, including legislative proposals (local, state, or federal), briefs, and standard operating procedures. Other formats that may also be utilized are training program manuals, procedure manuals, organizational change proposals, communication plans, and recruitment plans. Students are required to follow the requirements of the APUS Capstone Manual and the appropriate presentation style guide. NOTE: This course may not be taken until all other courses are COMPLETED and the student has a 3.0 GPA.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS699 Homeland Security Capstone (3 semester hours)

The Homeland Security Capstone is a 16-week capstone course for the master’s degree in homeland security. This course will involve a major research paper or thesis project that demonstrates the student’s understanding of and ability to implement the homeland security program objectives.
The research paper should demonstrate the student’s understanding of social science research methodology as it applies to homeland security. Students must follow the requirements of the APUS Capstone Manual and the appropriate presentation style guide. NOTE: This course may not be taken until all other courses are COMPLETED and the student has a 3.0 GPA.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Hospitality Management (HOSP)

HOSP610 Event Coordination and Management (3 semester hours)

The ability to coordinate and manage various types of events requires excellent attention to detail in achieving the events' components. In this course, you will explore different types and scopes of events coordination in various settings. You will apply multiple management styles in leading diverse work teams. Also, as part of this course, you will learn first-hand how to select an event site location, conduct a needs assessment, and develop practical proposals and agreements for a specific event project. You will analyze the challenges event planners face when coordinating and managing events, working with vendors and sponsors, and create solutions to mitigate these challenges. Finally, you will evaluate the various marketing strategies used by event professionals to market their event projects.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP620 Financial Planning and Management for Events (3 semester hours)

This course is designed to give you a fundamental understanding of the financial statements that event managers must consider when preparing their events. You will develop event budgets and goals for an event project. You will examine the factors that impact an event's profitability and identify negotiation strategies that contribute to an increase in Return-On-Investment (ROI). As part of this course, you will apply practical methods when making complex financial decision-making in producing various components of an event project. Finally, you will evaluate measures that can improve revenue optimization in an organization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP630 Event Risk Management and Safety (3 semester hours)

This course provides an overview of the risk management and safety procedures required in event planning and execution. Emphasis is placed on exploring safety regulations and health security, crisis management, and the liability issues and duty of care to event management. You will examine various methods to identify and mitigate risks in event execution. You will assess ways to implement practices that abide by the American with Disabilities (ADA) Act during site selection, event registration, and admission. Finally, you will evaluate the challenges event managers face with overcrowding and when switching from face-to-face to virtual events during an emergency.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP640 Leadership in Meeting and Event Planning (3 semester hours)

This course will examine the fundamental understanding of leadership theories and systems approaches to leadership as they apply to planning and executing events. Students will analyze the broad spectrum of sustainability and identify ways to implement best practices into event planning and design in the present and potentially the future. Students will apply the best strategies in recruiting staff and volunteers, evaluate staff performance, and create event policies. Students will further examine the challenges leaders face in today’s organizations and create a proposal to facilitate meeting and event planning in various settings.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Humanities (HUMN)

HUMN500 Humanities: Research, Study and Use (3 semester hours)

This is the first course in the graduate humanities program. It is designed to introduce the student to the theory, concept, and general approach to a program of study centered on civilization's great works, authors, and ideas. Course topics include how to approach study of the great works, authors, and ideas; a philosophy grounded in the classical/liberal tradition; and the university and curricular concepts centered on the great ideas. Students are expected to use this course to orient themselves for the remainder of the graduate humanities curriculum, prepare for a life of focused and purposeful study based on fundamental concepts and a particular modus of thought and reflection, and apply themselves within a general framework of knowledge acquisition and application. Readings for this course include Adler and Van Doren's How to Read a Book: The Classic Guide to Intelligent Reading.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HUMN510 The Ancient World (3 semester hours)

This course acquaints students with the Hebrew Scriptures and the world of the ancient Greeks. The Egyptians, Babylonians, Assyrians, and other peoples to whom the Hebrews and Greeks are indebted are also considered. Among the topics to which the course attends are the human experience of the divine, man's struggle with human and natural forces, warfare and the meaning of justice, the development of logos as human reason or cognition, and the emergence of science, technology, and artistic experience. Readings for this course include The Epic of Gilgamesh; The Bible; Homer's Odyssey; Thucydides' The Peloponnesian War; Aeschylus' The Oresteia; and Plato's The Republic.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HUMN520 Antiquity and Medieval World (3 semester hours)

This course addresses the possibility of the existence of a proper way or path through life. Texts are chosen based on their ability to clarify moral values in the middle ages and antiquity, and are loosely grouped around themes of devotion, consolation, and the otherworld. Primary texts will be read in conjunction with historical background information. Readings will include selections of the Dead Sea Scrolls, Anchorene Wisse, the letters of Abelard and Heloise, Boethius' Consolation of Philosophy, Old English stoic literature, Chaucer's "Book of the Duchess," and examples of journeys to the otherworld including Aeneus' journey to Hades in Virgil's Aeneid, selections of Dante's Divine Comedy, Beowulf's decent into Grendel's mere, faerie ballads, and The Pearl.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HUMN530 The Renaissance (3 semester hours)

HUMN530 provides an overview of major works of the Renaissance, and offers a detailed study of its primary thinkers. Issues include the birth of rationalism, individualism, skepticism, and emergent secularism. Questions address the inherent tensions between intellectual tradition and change, and the increasing dominance of the sphere of science. Readings for this course include: Petrarch's Selections from the Canzoniere and Other Works; Elizabeth I's Poems; John Donne's Selected Poems; Machiavelli's The Prince; Francois Rabelais' Gargantua and Pantagruel; Michael de Montaigne's Essays; Miguel de Cervantes Saavedra's Don Quixote; Christopher Marlowe's Doctor Faustus; Shakespeare's Sonnets and The Tempest; Edmund Spenser's "Letter to Raleigh" and The Mutabilitie Cantos.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HUMN541 Enlightenment and the Modern World (3 semester hours)

HUMN541 provides an overview of major works of the Enlightenment, and offers a detailed study of its primary thinkers. Issues include the birth of rationalism, skepticism, individual liberation and emergent secularism. Questions address the inherent tensions between intellectual tradition and change, and the increasing dominance of the sphere of science. Readings for this course include: Jane Austen's Pride and Prejudice; Mary Wollstonecraft's A Vindication of the Rights of Women; Meriwether Lewis and William Clark's Journals of the Lewis and Clark Expedition; Rousseau's Confessions; Thomas Paine's Common Sense and other Political Writings; and Ekaterina Dashkova's Memoirs.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HUMN550 Evolution of Earth and Universe (3 semester hours)

This course provides study of the logic and methods of science in relation to the development of the universe. It addresses the path by which scientific description of the universe has been made possible. It covers the origin of the universe, the nature of reality, and the relationship between observer and nature. Course topics include cosmology and the future of the human race. Readings for this course include Stephen Hawking's A Brief History of Time and other emerging relevant contemporary documents.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HUMN551 Evolution of Life and Intelligence (3 semester hours)

This course is a study of issues related to genetics, the human nervous system, and artificial intelligence. Course topics include computers, computation, and its limitations; natural and machine intelligence; and the ethical responsibility of the scientist, the politician, the philosopher, and the artist as they relate to emerging issues. Philosophical, ethical, and scientific points of view will be discussed. Readings for this course include selected works of Mary Shelley, Charles Darwin, Richard Dawkins, Paul Churchland, and Edwin O. Wilson, among others.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HUMN555 The 19th Century: Romantic and Industrial Revolutions (3 semester hours)

In this course, students will explore various representations of nineteenth century literature. Students will seek to critically identify and analyze literary meanings from interdisciplinary perspectives. They will question how the works discussed reflect and impact a range of cultural issues in the nineteenth century-- a time of radical social change. Through the lens of literature students will look at social upheaval in terms of national identities, urbanization, science, music, class, popular culture, gender, industry and, in the U.S, slavery.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HUMN561 Society, Class and Wealth (3 semester hours)

This course builds upon the study of distinctive perspectives of the social sciences. Course topics include the development of modern political and social understanding as it relates to the impact of economic issues on societies. Readings for this course include: Jean-Jacques Rousseau, Discourse on the Origin of Inequality; Max Weber, The Protestant Work Ethic and the Spirit of Capitalism; Adam Smith, Wealth of Nations; Karl Marx and Friedrich Engels, Selected Works.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HUMN571 Individuals, Societies, and the Spirit (3 semester hours)

This course continues the study of the development of the individual in modern society. Readings for this course include: William James, Varieties of Religious Experience; Emile Durkheim, Elementary Forms of Religious Life; Ernest Gellner, Nations and Nationalism; Sigmund Freud, Civilization and Its Discontents; Erik Erikson, Childhood and Society; Thomas Kuhn, The Structure of Scientific Revolutions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HUMN697 Humanities Capstone Portfolio Seminar (3 semester hours)

This course provides the framework for students to assemble a culminating portfolio including representative work developed throughout the Humanities MA degree program and will guide students to develop additional assets that demonstrate mastery of institutional and program objectives through degree completion. NOTE: This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Information Technology (INFO)

INFO531 Management Information Systems (3 semester hours)

This course addresses information systems, to include their nature and role as key management resources. This course covers the information systems infrastructure, to include databases, knowledge management systems, enterprise information portals, telecommunications, the Internet, and wireless technology. It examines the topics of e-commerce, information systems in the global economy, managing global systems, securing information systems, and ethical and social issues in information systems.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INFO620 Enterprise Database Systems (3 semester hours)

This course examines the principles, practices, and methodologies of enterprise database systems from conceptual design to implementation; this includes architectures, models, design, management, implementation, and security. Included is a total life-cycle database design and implementation project that entails conceptual design, data modeling, normalization, optimization, and implementation. This course appraises object-relational and relational databases, examines Entity-Relationship (ER), Extended Entity-Relationship (EER), and Unified Modeling Language (UML) data models, and investigates relational procedures, dependencies, keys, relationships, cardinality, and referential integrity. It also evaluates query processing, performance tuning, transaction processing, concurrency, data integrity, database recovery, data security, data warehousing, data mining, and emerging technologies. Prior knowledge in a procedural database language such as PL/SQL or T/SQL using Oracle or MSSQL respectively is highly recommended.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Information Technology (ITCC)

ITCC500 Research Methods in Information Systems and Technology (3 semester hours)

This course focuses on the research methods, tools, instruments, and devices used in Information Sciences and Information Technology; it appraises the logic of the scientific method, research design, qualitative and quantitative analysis of data for the purpose of conducting and reporting basic research in a scholarly and academic setting. Through concentration-based case studies, it investigates current trends, legal and ethical issues, global and societal impact, policies, and applications in the fields of information technology, information security, cyberlaw, digital forensics, and media management. This course evaluates methods to collect, classify, categorize, evaluate, assess, and report research data, to formulate valid research questions, and to derive logical conclusions. The principles, practices, tools, and methodologies presented in this course are applicable throughout the program of graduate studies.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITCC697 Creative Project Capstone (3 semester hours)

The Information Technology Creative Project Capstone course gives students the opportunity to address real-world issues relevant to their profession, plan and execute a project, contribute to their discipline while developing mastery of selected skills. Creative projects may originate from a wide variety of options such as standard operating procedures, training program manual, organizational change proposals, software and hardware design or development, or other information technology solutions. NOTE: This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA. THIS COURSE IS 16 WEEKS.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITCC698 Information Technology Capstone (3 semester hours)

Capstone course of studies completed toward the graduate degree in Information Technology. The student will complete a research thesis that demonstrates mastery and application of advanced research and analytic skills related to the learning outcomes of this degree program. NOTE: This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA.THIS COURSE IS 16 WEEKS.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Information Technology (ITMG)

ITMG624 Information Technology Project Management (3 semester hours)

This course explores successful project management for information technology projects. The System Development Life Cycle (SDLC) models are defined including the waterfall, spiral, incremental release, and prototyping models. Students will differentiate between these models and apply corresponding project management methods to identify critical checkpoints and reviews. Risk management, as applied to technology projects, is examined. Key project indicators are discussed, and students will explore defining measurement criteria for determining critical success factors on a project. The course defines the application of knowledge, skills, tools, and techniques to project activities and includes a tutorial for Microsoft Project. Emphasis is placed on the three dimensions of the information technology project constraints: scope, time, and cost. Students are recommended to have access to Microsoft Project. Course software requirements with the appropriate versions are listed under the course materials site.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITMG625 IT Project Management: Integration, Scope and Time (3 semester hours)

The course is an advanced study of project management; it takes a systems approach to project management and examines project integration, project management knowledge areas (domains), project life cycle, software development life cycles, phases, and process groups, such as project initiation, planning, executing, controlling, and closing. This course also appraises the challenges and the techniques for managing scope on IT projects. This course also assesses methods, tools, and techniques to perform time management. Students are recommended but not required to have access to Microsoft Project®. Course software requirements with the appropriate versions are listed under the course materials site. (Prerequisite: **ITMG624**)

Microsoft Project® is a registered trademark of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITMG630 Project Management for e-Business (3 semester hours)

E-Business projects have become even more commonplace than the neighborhood bowling alley; e-Business development time lines have shrunk dramatically while costs have increased significantly. While traditional IT project managers have filled the gap, it should be recognized that e-Business introduces challenges over and above that of traditional IT project management. This course is a study of the project management framework related to e-Business, it includes: strategic planning, risk management, web content management, customer relationship management, security and privacy management, web usability, agile application development, application deployment, search engine optimization (SEO), internet marketing, and vendor management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITMG636 IT Project Management: Developing Project Schedule (3 semester hours)

This course is an advanced study of the methods and practices associated with developing a project schedule with assigned resources. The course begins with the initiating process group and continues through scope, schedule, and resource planning. Students must have access to Microsoft Project®. Course software requirements, including the appropriate versions, are listed under the course materials site. (Prerequisite: **ITMG624**)

Microsoft Project® is a registered trademark of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITMG637 IT Project Management: The Integrated Project Plan (3 semester hours)

This course is an advanced study of information technology project management with a focus on the integrated project plan. This course will be taught from a mixture of analytical and practical methods. Topics include communication management, human resource management, project quality management, project risk management, procurement management, project stakeholder management, and project closure and lessons learned. It assesses various theories and applies these theories to help students develop effective project plans. This course also addresses the inherent risk in various kinds of plans and examines the principles of effective integrated project plans. Students are recommended to have access to Microsoft Project software. (Prerequisite: **ITMG624**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITMG638 IT Project Management: Execution, Monitoring and Control (3 semester hours)

This course is an advanced study of executing, monitoring, and controlling IT projects. Quality projects do not happen; they must be planned, promoted, and practiced intentionally and deliberately. This course examines the various models and methods for directing and managing project work and risk. This course demonstrates how to apply appropriate execution, monitoring, control, and risk responses to minimize project failure. Students must have access to project management software and tools. (Prerequisite: **ITMG624**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Intelligence Studies (INTL)

INTL501 Strategic Intelligence (3 semester hours)

RECOMMENDED AS THE FIRST COURSE IN THE PROGRAM. This course examines the current structure, function, capabilities, and contributions of individual U.S. national intelligence community members. Students appraise the intelligence cycle by an overview of the intelligence planning, collection, exploitation, analysis, production, and dissemination phases. The course also evaluates the intelligence oversight system, the restrictions on national intelligence community activities prescribed by federal law, executive and agency directives.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL502 Collection (3 semester hours)

This course is a study of intelligence collection and information gathering. It focuses on a variety of aspects related to how both the United States and foreign nations gather and process intelligence. The student will develop a comprehensive understanding of the role collection plays in the intelligence community, how various policies affect collection, and how different intelligence agencies monitor and collect intelligence.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL507 Intelligence Operations (3 semester hours)

This course provides an introduction to the theory and practice of intelligence operations. The course will focus on the intelligence resources necessary to carry out the full range of intelligence operations using the tools, techniques, and resources available to intelligence agencies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL508 Intelligence Analysis (3 semester hours)

This course focuses on intelligence analysis including the analysis of international threats to security. The course will provide students with a foundation of human cognition in an effort to help understand why we think the way we do, how we come to formulate biases, and the many analytical, perceptional, and cognitive errors we frequently make in conducting analyses. Students will be provided with a foundation from which to understand and conduct critical analysis. This course affords an opportunity to look at a variety of case studies related to both US and foreign threat analysis and action, including the evolution of responses to threats, perspectives on threat action, principles of threat analysis and response, and assessments of successes and failures of such actions. Students will develop a comprehensive knowledge of intelligence analysis, how intelligence agencies assess and counter international threats in order to guard global security interests, and how various threats affect national security policy and decision-making. (Prerequisite: **SSGS500**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL509 Intelligence Collection (3 semester hours)

This course is a study of intelligence collection and information gathering, emphasizing how the United States and foreign nations gather and process intelligence. Students will develop a comprehensive understanding of the role that intelligence collection plays in the broader intelligence community, how policies influence collection activities, and how different intelligence agencies monitor and collect information. The course explores major collection disciplines used across the national intelligence cycle, including human intelligence, signals intelligence, imagery intelligence, and open source intelligence, helping students understand how these capabilities support analysis and inform national decision-making.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL604 Interagency Operations (3 semester hours)

This course provides insight on how to improve interagency relationships among security, defense, and intelligence agencies. This course introduces the student to theoretical and practical material for understanding the behavior of individual organizations and what can be done to make organizations work more closely together at the federal, state, and local levels. Emphasis is placed on explaining why organizations act the way they do and how to improve interagency coordination.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL607 Open Source Intelligence (OSINT) (3 semester hours)

This course provides an intensive introduction to open source intelligence and its related disciplines. Students will examine the definition, nature, and development of open source intelligence (OSINT), including its policy considerations, management practices, and current trends within the intelligence community. Emphasis is placed on understanding how publicly available data and data collection methods contribute to producing actionable intelligence that supports national security objectives. The course also surveys OSINT-focused organizations, challenges, reform efforts, and future prospects, preparing students to evaluate information collected from diverse sources and apply foundational OSINT techniques in professional intelligence environments.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL610 Counterintelligence (3 semester hours)

The course focuses on both U.S. and foreign aspects of counterintelligence, including the history and evolution of counterintelligence, the differences between passive and active CI measures, principles and processes of counterintelligence and its relationship to covert action, the ethics of counterintelligence, and the evaluation of CI successes and an estimate of the damage caused by failures. The student will develop a comprehensive knowledge of the use and practices of counterintelligence, especially in protecting homeland security and national security interests against foreign adversaries. Additionally, the collection process and the changes for the future in the infusion of CI technology will be discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL613 Intelligence and Homeland Security (3 semester hours)

This course examines Intelligence Community responses to threats to the homeland U.S. from transnational and domestic actors. Students will examine intelligence roles and responsibilities, collaboration, information sharing, and limitations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL616 Ethical Challenges in the Intelligence Community (3 semester hours)

This course examines issues of ethics, morality, and legal principles in the context of Intelligence through an in-depth critical analysis of the primary ethical philosophies and legal doctrines as they apply to contemporary U.S. Intelligence. Students will research the moral, psychological, and legal issues pertaining to a variety of topics. The course concludes with an evaluation of an issue within the intelligence community related ethical-moral and legal choices.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL621 Signals Intelligence (SIGINT) (3 semester hours)

This course examines Signals Intelligence focusing on the underlying technology of SIGINT and its application to various military and civilian intelligence questions. This course will also address contemporary issues related to the Cyber-SIGINT nexus as well as the lesser-known disciplines of MASINT, FISINT, etc. Collection platforms will be studied in relation to their inherent capabilities and application against various intelligence targets. The course is held at the unclassified, open-source level.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL622 OSINT (3 semester hours)

This course constitutes an intensive introduction to OSINT and its related disciplines and will focus on the following areas: definition and nature of OSINT, OSINT policy and management, history and development of OSINT, current OSINT trends, OSINT-focused organizations, challenges, reform, and future prospects. The course constitutes an intensive introduction to OSINT and its related disciplines. (Prerequisite: **SSGS500**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL623 Human Intelligence (HUMINT) (3 semester hours)

This course provides an overview of HUMINT operations include mission-target analysis, operational planning, execution and evaluation, cover, security and communications, collection and reporting, and financial management. Students will be expected to demonstrate the ability to assess, articulate and defend the soundness of operational concepts, plans and budgets.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL627 Advanced Geospatial Intelligence (3 semester hours)

This course will focus on advanced geospatial analytic techniques and how these techniques aid in decision making in various operational environments. This course will include study of geospatial collections and teach the application of theory and practical utilization of analytical tools, techniques and procedures. Students will be exposed to and are expected to develop an understanding of emerging technology, trends and intelligence applications within the discipline of geospatial intelligence. The course will focus on geospatial concepts, techniques, and maximize focus in geospatial in support of emergencies, national and human disasters, and national security environments. (Prerequisite: **SSGS500**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL628 Intelligence for Multi-Domain Operations (3 semester hours)

This course introduces students to the new military doctrine for the next 20 years. The military began implementing MDO in 2018, and is the focus of concepts, exercises, and capability development. There are five phases in MDO; compete, penetrate, dis-integrate, exploit, and re-compete. Inherent in MDO is a larger effort to collect and analyze data. Intelligence plays an essential role in the collection and analysis of data. This class looks at how intelligence will support MDO for the foreseeable future.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL629 Social Media Intelligence: Its Foundations and Applications (3 semester hours)

The last ten years saw the rise of a new type of intelligence – Social Media Intelligence (SOCINT) – representing fertile ground for public and private organizations interested in collecting information regarding potential adversaries and competitors. As a result, SOCINT no longer stands as a subset of Open-Source Intelligence (OSINT) but embodies a discipline of its own requiring specialized knowledge, tools, and techniques. More and more, social media permeates every facet of our lives, asking individuals to give up more of their personal information and privacy, making it imperative to understand how these companies acquire our data and ultimately use/share/sell that information. Couple this with the need to understand the legal, ethical, and privacy issues of its use by organizations acquiring this type of intelligence makes SOCINT an equally important component of the overall intelligence continuum. As different nation-states begin to weaponize social media, it will be necessary for intelligence collectors to detect and deter these attempts at influence. All these issues point to an immediate need to educate individuals charged with collecting and utilizing this dynamic form of intelligence.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL631 Criminal Intelligence Analysis (3 semester hours)

This course provides the student with an introduction to the methods and techniques of criminal intelligence analysis and strategic organized crime. The rapid increase in multinational analysis and transnational organized crime, corporate drug trafficking organizations, and the impact of crime on national and international policy has created a critical need for law enforcement intelligence experts in the relatively new field of criminal intelligence. The course shows how to use criminal intelligence analysis to predict trends, weaknesses, capabilities, intentions, changes, and warnings needed to dismantle criminal organizations. This course provides knowledge needed by law enforcement professionals at the federal, state, and local level, by criminal intelligence analysts working in private industry, and by military intelligence personnel making a transition from a military to a law enforcement career. The course provides a background of the use of intelligence to dismantle criminal organizations and businesses. This course emphasizes criminal/law enforcement intelligence, as opposed to criminal investigation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL635 Indications and Warnings (3 semester hours)

The purpose of this course is to teach the student how the current I&W system is organized, how it is supposed to work in theory, and how it has actually worked in practice. In addition, students will examine the traditional and alternative approaches to the I&W process. Students will learn about the various types of intelligence indicators and how they fit into the process of intelligence prediction, which is an implied function of I&W. Students will also examine various historical case studies to learn about the four basic "sources of error" in I&W.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL637 Intelligence Profiling (3 semester hours)

This course provides an overview of the analysis of political leaders. It explores various political psychological approaches to studying leaders to include biographies, psychoanalysis, traits, characteristics and motivations. Examples of specific political leaders are discussed throughout the course to offer the student a broad knowledge of world leaders. The course also provides students with a solid foundation from which to conduct their independent analysis of political leaders.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL639 Predicting Public Health Threats: The Role of Medical Intelligence (3 semester hours)

The COVID-19 global pandemic has resulted in an awareness of the value of operational measures of specialized intelligence regarding public health and associated potential impacts on national defense, global security, diplomacy, and public policy. This class examines the role and function of medical intelligence (MI), as directed by U.S. functions of intelligence, public health, and safety. This class focuses on mechanisms to deliver decision advantages in support of American military operations, including the investigation and rapid implementation of control measures, and the collection and analysis of medically based evidence to promulgate preventive actions. Topics include evaluating the efficacy of strategic countermeasures for chemical, biological, radiological, and nuclear weapons; analyzing the application of MI for emerging biotechnology; pandemic potential of existing diseases; biosafety and biosecurity issues; and the appraisal of the effectiveness of collaboration and information dissemination between the American intelligence and public communities, the community of American allies, and other global entities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL644 Cyber and the Intelligence Cycle (3 semester hours)

This course looks at cyber and the intelligence cycle from two perspectives. The first is the application of the classic intelligence cycle against cyber targets. The second, parallel track is the use of cyber tools to optimize intelligence operations and the intelligence cycle in particular. This course will discuss the unique role of the cyber domain in the intelligence cycle. Intelligence in cyber is comprised of different characteristics than that of space, air, land and sea. Because cyber information is transmitted instantaneously, it may affect components of the intelligence cycle (collection, analysis, dissemination, etc.) simultaneously rather than sequentially, as is the case with other intelligence collections methods. Students will discuss commercial and defense concepts associated with the intelligence cycle and enterprise information technology infrastructure. Students will also address the challenges that are created due to rapid advancing technologies and existence of multiple actors. (Recommended Prerequisite: **SSGS500**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL646 Transnational Crime and Narcotics (3 semester hours)

This course will provide an overview of transnational crime and narcotics and its effects on national security, political, social, and economic development of countries around the world. The focus of this class will be the proliferation and expanding influence of organized crime groups, the increasing links among crime groups, corruption, and links to terrorism from transnational crime and narcotics. This class will examine the diverse dimensions of transnational crime and narcotics in the context of increasing globalization and the exponential impact of technology advances

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL647 Cyber Intelligence (3 semester hours)

This course provides a comprehensive introduction to the cyber intelligence field and is intended to equip students with the essential knowledge and skills often needed to navigate the complex world of cyber threats, vulnerabilities, and risks. Students will explore the full range of cyber capabilities from exploitation to defense, including several case studies that demonstrate the challenges and benefits of cyber intelligence operations. Through discussion forums and a research project, students will gain a deeper understanding of the role cyber intelligence plays in national security and the protection of critical infrastructures.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL649 Case Studies in Foreign Cyber Threats (3 semester hours)

This course will examine various case studies in Foreign Cyber Threats and explore the challenges posed by these threats. Through the review of case studies, students will become familiar with the fact that cyber threats are difficult to assess and mitigate given the existence of malicious actors, multiple motives, different but commonly used attack vectors, the internet as a shared and integrated domain, difficulty in predicting potential attacks and the damaging nature of worst-case scenarios. (Prerequisite: **SSGS500**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL650 Counterterrorism (3 semester hours)

This course will examine the evolution of intelligence and counterterrorism while analyzing a framework for combating terrorism. This course will focus on terrorism variables that present a problem to international and U.S. national security, suggest solutions, and provide alternatives to current counterterrorism policies. In this course, your studies will focus on a variety of aspects related to terrorism, counterterrorism, to include historical perspectives, analysis of terrorist organizations, and patterns of terrorism. You will be required to study a range of topics related to terrorism. You will read an arrangement of books and articles that will develop a comprehensive understanding of how counterterrorism impacts national security.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL652 Terrorism: Assessing the Past to Forecast the Future (3 semester hours)

This course will expose the students to a variety of counter-terrorism intelligence methodologies and analytic tools, and extensive academic, government, policy literature on the challenges, opportunities, and assumptions related to forecasting terrorism. The course will provide students with the analytic capability to understand the types of terrorist threats that are most likely to confront the U.S. and its allies, in addition to challenging students to evaluate the efficacy and impact of prediction-based efforts in counter-terrorism intelligence.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL653 Deception, Propaganda and Disinformation (3 semester hours)

This course provides an overview of deceptive techniques –how they work and how they can be defeated. It begins by building an understanding of fundamental psychological principles and practices and then taking a look at key information practices. From there, it will look at how some of these practices developed from WWI to the present. Throughout the course, students will be exposed to and will analyze the use of deception and other persuasion techniques in various contexts. These deceptive techniques are illustrated with a series of historical and current case studies, scenarios, and interactive simulations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL699 Intelligence Studies Capstone (3 semester hours)

The Master's Capstone in Intelligence Studies is capstone course for graduate programs in Intelligence Studies.
NOTE: This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA.
THIS COURSE IS 16 WEEKS.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL710 Seminar in Intelligence Integration (3 semester hours)

This seminar explores the organizational and integration issues facing the U.S. Intelligence Community by first evaluating underlying organizational design and theory of communities and organizations. Using organizational design as a point of reference, the seminar examines the nature of the community and its relationship to its operating environment by delving into the present-day issues facing the Intelligence Community in relation to the ever-changing global threat and the wide array of intelligence customers requiring more timely and tailored intelligence services. Lastly, given an understanding of the present-day operating environment, the seminar concludes by identifying and evaluating the vertical and integration issues facing the community while examining some potential transformation models to better posture the Intelligence Community for the future. This course is one of two required beginning courses. (Corequisite: **SSGS700**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL711 Comparative Intelligence Institutions (3 semester hours)

This course examines in comparative perspective the intelligence communities of various states around the globe, to include both allies and adversaries of the United States. Course content covers how various intelligence agencies are structured, how they formulate their respective national interests, and how they address transnational problems and cultivate potential for cross-national cooperation. Students will evaluate these issues within the perspective of strategic culture, while also learning about fundamental aspects of intelligence gathering, including core problems and criticisms, and considering the differences between global approaches to intelligence. (Prerequisite: **SSGS700** and **INTL710**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL712 US Intelligence Law and Ethics (3 semester hours)

This seminar examines ethics in U.S. government intelligence-related decision-making, the conduct of intelligence activities, and oversight, regarding hackers and intelligence leaks. It also examines the role that the law plays in the basic U.S. intelligence authorities in oversight and decision-making, and the ways in which these authorities and decision-making influence the development of new legal frameworks. (Prerequisite: **SSGS711**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL740 Intelligence Cooperation and Sharing (3 semester hours)

This seminar examines the relationship within and amongst the various U.S. domestic intelligence organizations, other domestic organizations, and foreign intelligence and law enforcement organizations. It also addresses some of the challenges face regarding cooperation and sharing information. Several case studies are provided to illustrate areas of cooperation and sharing. (Prerequisites: **SSGS711**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL741 Intelligence and Policy-Making (3 semester hours)

This seminar explores the dynamics of one of the most fundamental relationships that drives the Intelligence Community—that of the Intelligence Community and the policy-maker. The seminar first explores the theoretical principles on the relationship between the intelligence professional and the policy-maker and then examines the underlying formal and informal structures that are utilized to facilitate these relationships. The seminar endeavors to illustrate the inherent friction and perspectives between the Intelligence Community and the policy-maker while exploring some of the potential “best practices” and principles to optimize the relationship. The seminar concludes with an examination of how the intelligence professional and the policy-maker can prioritize and function within a rapidly changing global environment. (Prerequisites: **SSGS711**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL743 Intelligence and Technology (3 semester hours)

The seminar focuses on the role and influence of technology. Specifically, it examines the advances in technology and the impact they have on U.S. intelligence and security. Strategies for addressing the impact are also addressed. (Prerequisites: **SSGS711**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL790 Independent Study (3 semester hours)

This course is an opportunity to pursue an independent research project under the mentorship and direction of a faculty member. A research proposal and timeline must be submitted and approved by the faculty member and Doctoral Director in advance of enrollment. (Prerequisites: **SSGS711**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Intelligence Studies (SSGS)

SSGS500 Research Design and Methods (3 semester hours)

This course provides basic research methods skills for addressing problems and issues specific to the programs within the School of Security and Global Studies (SSGS). The course covers four basic approaches to social research including experimentation, survey research, field research, and the use of available data. Students will gain foundational knowledge in research planning, design, methodology, data collection, and analysis. This course prepares students for advanced research methods. Students in SSGS graduate studies are expected to be completely familiar with Turabian and APA writing styles. If you do not possess copies of these manuals, here is a link to the library, https://www.apus.edu/apus-library/resources-services/Writing/writing-center.html, specific to writing basics, that has quick style guides in use within SSGS. Purchase of the most recent writing guide in use in your program is highly recommended. If you are unsure what writing style is in use in your program, consult with your academic advisor.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SSGS595 Internship Program (3 semester hours)

Within this course, students have the opportunity to receive credit for completing an approved internship. Participating in an internship provides students with a valuable educational and professional opportunity. During the internship students explore and gain hands on experience in a field they have an interest in working within. Within the School of Security and Global Studies the primary responsibility for finding an internship belongs to the student, however there are a number of resources in place to help you in your search and application process. Students interested in completing an internship for credit may reach out to their Program Director, Academic Advising, or Career Services for additional information. In addition to completing formal internship hours, students will be required to keep a journal of their internship experiences and will complete a final paper.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SSGS696 Master's Project Capstone Seminar (3 semester hours)

The School of Security and Global Studies Masters Project Capstone course gives students the opportunity to address issues of public importance that are directly or closely related to their own career, occupation, profession or current position. Creative projects as program capstones may derive from a wide variety of organizationally defined formats such as legislative proposals (local, state or federal), amicus briefs, standard operating procedures, training program manual, procedure manuals, organizational change proposals, communication plans, or recruitment plans to name but a few. The format will be proposed by the student and approved by the instructor. The creative project must demonstrate originality and will follow the style requirements set by the student's academic discipline. For example, a criminal justice student would present work in accordance with the current American Psychological Association (APA) Publication Manual. NOTE: It is mandatory for students to contact their Academic Advising team when they are 2 or 3 courses out from the capstone. Guidance on the format of the research study proposal and a sample proposal are contained in the APUS Research Study Manual. NOTE: This course may not be taken until all other courses are COMPLETED. THIS COURSE IS 16 WEEKS.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SSGS700 Professional Practice I and Doctoral Program Foundations (3 semester hours)

This seminar lays the foundation for the program, introducing students to their peers and faculty members. Students will become acquainted with doctoral milestones and learn about emotional intelligence and resilience. In addition, students will be introduced to the principles of the research process, collaboration, research ethics, and academic integrity. (This course is one of two required first courses. Corequisite: **GLBS710** or **INTL710**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SSGS711 Psychology of Actors in the Global Environment (3 semester hours)

This seminar examines the role of theory and applies some of the major psychological theories and approaches regarding individuals and groups in the global environment. These groups inform the understanding, communication, and decision-making of global actors. (Prerequisite: **INTL710** or **GLBS710**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SSGS712 Nationalism and Identity (3 semester hours)

This seminar analyzes contemporary theories of nationalism and identity. Students will examine the complexities of building a nation-state: how diaspora groups challenge national identity, how subnational groups threaten national cohesion, and how gender relations reevaluate social hierarchies. By utilizing modern case studies across Europe and the Middle East, participants will utilize multidisciplinary approaches to analyze the rise of contemporary nationalism. (Prerequisites: **SSGS711**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SSGS741 Big Data and Social Media Analysis (3 semester hours)

This seminar analyzes contemporary theories of nationalism and identity. Students will examine the complexities of building a nation-state: how diaspora groups challenge national identity, how subnational groups threaten national cohesion, and how gender relations reevaluate social hierarchies. By utilizing modern case studies across Europe and the Middle East, participants will utilize multidisciplinary approaches to analyze the rise of contemporary nationalism. (Prerequisites: **SSGS711**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SSGS742 National Security Decision Making (3 semester hours)

This seminar examines different perspectives on the decision-making processes of U.S. decision-makers and other actors in the global environment. In particular, it examines and applies various disciplinary concepts, theories, and approaches to decision making related to individuals and groups, case study examples of how these are applied, and also the challenges encountered in the decision-making process. (Prerequisite: **SSGS711**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SSGS750 Cyber, Policy, and Conflict (3 semester hours)

This course will immerse students in the world of global conflicts and the role that cybersecurity plays in these conflicts. The course will focus less on the technical aspects and more on the diplomatic, political, and security aspects of the role cyber plays not only in the real world but also in the virtual world. Also, the class covers the use of artificial intelligence (AI), drones, and facial recognition as well as other emerging cyber issues. (Prerequisites: **SSGS711**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SSGS770 From Academics to the Profession: Publishing in the Social Sciences (3 semester hours)

This professional writing seminar is an introduction to the complex world of academic writing and publication. It is designed to give students in the social sciences an opportunity to overcome anxiety about professional level writing and the publishing process. Students in this course will gain practical experience in revising their work so that it may be submitted to a peer-reviewed journal for possible publication. Using Wendy Laura Belcher's best-selling Writing Your Journal Article in Twelve Weeks: A Guide to Academic Publishing Success, the course explains the publication process to students and shares strategies for achieving success in the academic writing arena, including setting up a work schedule, identifying appropriate journals for submission, working with editors, writing query letters, clarifying arguments, and organizing material. In a supportive environment, participants revise a previously completed classroom paper, conference paper, thesis, or other work into a peer-reviewed article and submit it for publication. The goal of this workshop is to aid participants in taking their papers from classroom quality to conference, and ultimately, journal quality. (Prerequisites: **SSGS711**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SSGS792 Special Topics (3 semester hours)

This is a special topics course that is designed to afford students the opportunity to examine topics not covered by the existing curriculum. View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates. The subject matter of each special topics courses may vary; special topics courses may not be offered every term. (Prerequisites: **SSGS711**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

International Relations (IRLS)

IRLS500 International Relations Theory (3 semester hours)

This course provides an analysis of the three important theoretical debates of international relations: Idealism vs. Realism, Traditionalism vs. Behavioralism, and Realism vs. Neo-realism. The course also addresses the level of analysis problem, as well as the central assumptions and key concepts of various theories of international relations, with special emphasis on the basic concepts, propositions, and current critique of realism and neo-realism.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS501 Comparative Political Systems (3 semester hours)

This course examines a broad range of governments utilizing the comparative method of analysis. Students will study democracies, monarchies, dictatorships and authoritarian forms of government. Students will participate in various class projects emphasizing contemporary problems of the various forms of governments of nation states today. This will take into consideration cultural differences and similarities, human nature, and the approaches of individual governments different from that of the American norm in carrying out their basic responsibility to maintain and strengthen society by equal justice for all of its citizens.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS502 International Political Systems (3 semester hours)

This course examines how the international political system---the patterns of interaction among world political actors---has changed and how some of its fundamental characteristics have resisted change. Students will investigate how the global system works and how the process of globalization is remaking the political and economic world.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS503 International Organizations (3 semester hours)

This course introduces issues surrounding the two major categories of international institutions: intergovernmental organizations (IGOs) such as the United Nations, and nongovernmental organizations (NGOs) such as the International Committee of the Red Cross. The course studies the theories, origins, principles, organization, activities, legal authority and performance of major international organizations as world actors in areas of economic development, international security, trade, and humanitarian assistance. IGOs serve as forums for communications, as regulators, as distributors, as organs of military security, and as peacekeepers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS504 International Political Economy (3 semester hours)

This seminar allows the student to research some of the primary theoretical perspectives and analytical approaches for studying international political economy. The course includes a survey of contemporary literature, with special emphasis on theory, the phenomenon of globalization, an exploration of trade relations, international finance, transnational corporations, economic development, North vs. South conflict, and global inequality. We will also examine how to critically evaluate research and set up a research project.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS600 Strategic Geography and Geopolitics (3 semester hours)

This course of study examines the history of political, tactical and strategic developments and concepts regarding geopolitical concerns regarding political and military planning and execution from the mid-20th Century through the modern era. The comparative analysis of these concepts from the applicable secondary literature will provide a stepping stone to understanding the nature of modern combined arms and joint forces warfare.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS602 Introduction to Global Security (3 semester hours)

Introduction to Global Security addresses the complex global security environment. Focus is placed on the role that actors in the global environment play in the formulation and implementation of international, bilateral, and state policy, norms, and practice related to security issues of global scope and concern. The course also addresses the impact of these security related concerns in the global environment on domestic and international security.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS603 Politics and War (3 semester hours)

This course examines the relationship between military affairs and statecraft, ranging from how war is a logical consequence of political behavior. Case studies in the great powers' use of force and military issues clarify the connection between politics and the use of force, including war in its international context, attitudes toward war and its causes, the notion of "vital interests," WHY humans fight, and aspects of past areas of conflict that appear relevant to the future.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS608 Global Security, Logistics, and Space (3 semester hours)

This course provides a comprehensive look at global security, logistics, and space. These three related concepts have become increasingly important as the world has begun to focus on outer space as a source of economic opportunity, communications, and international competition. This course will examine issues of conflict, governance, and sustainability, as well as theories related to national and global security and the peaceful use of outer space.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS611 Conflict Analysis and Resolution: Theory and Practice (3 semester hours)

The course will consider the rationalist approach to conflict analysis, along with other theoretical approaches to international relations theory. It will examine the generic nature of conflict, whether between individuals or nations. It also directly addresses international conflict, its origins, discernible patterns, routine components, range of outcomes, and modes of conflict prevention or amelioration. Conflict resolution theory will be applied to various cases of contemporary conflict among nations. Students will develop a thorough awareness of the origins of conflict, various approaches to conflict analysis and resolution, as well as strategies for conflict prevention.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS613 International Negotiation (3 semester hours)

This course is a study of the theory and literature on the history and practice of international negotiations for purposes of peace; mediation between opposing factions, groups, or states; settlement of hostilities; preemption; among other issues. The course includes contending approaches to international negotiations, their basic assumptions and methodologies, and their application to current conflict situations. The role of culture and cross-cultural communication in international negotiation is explored. Also included in the course is discussion and study of skills development in international negotiation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS615 Peacekeeping: Structure and Process (3 semester hours)

An examination of the strategic, operational, and tactical elements required for conducting both UN and non-UN sponsored peace operations. Special emphasis is placed on understanding the reasons for success or failure of previous and ongoing peacekeeping missions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS631 Government and Security in Korea (3 semester hours)

An examination of the governments and the militaries of the two Koreas. This course will closely examine the reasons behind the Korean peninsula playing such a pivotal role in overall Northeast Asian security. The course will examine domestic political, economic and social problems and prospects of North Korea and South Korea; the prospects for reunification; the military balance and the changing strategic environment; and the relations of Pyongyang and Seoul with their key allies. Includes an examination of U.S. relations with Korea.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS655 Latin American Security Issues (3 semester hours)

Latin America continues as one of the most important areas to the United States -- even as it remains one of the least understood. In particular, the internal dimension of security has not yet been resolved in many Latin American nations to the extent that domestic stability can be taken for granted, a reality which could have profound consequences for the United States.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS660 Seminar in Middle East Politics and Security (3 semester hours)

This course examines the evolution of modern Middle Eastern politics. The scope includes political, social, and cultural interactions both within and among the countries located in the Middle East and North Africa. The course involves investigations of the political attitudes and behaviors of prominent players in these regions and a look into the diverse aspirations of specific political, cultural, or demographic groups. In the first weeks of the course, an introduction to the history of the Middle East sets the stage for historic developments that brought about structural dilemmas of today. Evaluating the involvement of outside powers in the politics of region comprises another topic, along with an investigation of how non-state actors affect the future of the region. Discussions concern debates about the prospects of democracy and the future key nations after the Arab Spring

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS662 Middle Eastern Culture (3 semester hours)

This course covers the geography, culture, society, economy, and religions of the major ethnic and linguistic groups in the Middle East. The course will introduce students to important events and developments, such as the changing dynamics among ethnic and culture groups, the evolving sociological bases of states and societies in the Middle East, the impact of Europe and the West on the Middle East, and more recent events such as the Arab popular uprisings. Because no event or movement occurs without a context, the course examines the cultural and social frameworks.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS664 Politics and Culture in Central Asia (3 semester hours)

The region of Central Asia—located between Russia, China, India, and Europe—has emerged from obscurity in recent decades to become a key front in the war against international terrorism and radical Islam. This course explores the political and cultural history of Central Asia, as well as religious and social issues that impact the region's governmental structures, foreign relations, and security. Students will explore the impact of Russian conquest and Soviet domination of Kazakhstan, Uzbekistan, Turkmenistan, Kyrgyzstan, and Tajikistan, as well as the Soviet- Afghan War (1979-1989), before moving on to an analysis of contemporary issues in government and politics in the region. Emphasis will be on the rise of Islamism, great power politics, U.S. involvement in the region after 9/11, "managed democracy," corruption and economic development, and petropolitics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS699 International Relations Capstone (3 semester hours)

The Master's Capstone in International Relations is the capstone course for graduate programs in International Relations.
NOTE: This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA.
THIS COURSE IS 16 WEEKS.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Legal Studies (LSTD)

LSTD502 Criminal Law (3 semester hours)

This course is an advanced theory and practice of criminal law in the United States. The history, scope, and nature of criminal law will be discussed. This course will analyze the general nature of crime, constitutional limits on crime, and general principals of criminal liability. Topics include: legal language and machinery, parties to crime, classification of offenses, act and intent, capacity to commit crime, and various defenses. Primary emphasis will be the common law and modern statutory criminal codes. Students are provided knowledge of the building blocks of criminal law to include elements of crimes and defenses to criminal charges. The role of the police, criminal courts, and attorneys in the administration of the criminal justice system will be discussed in detail. The course will teach the student how to analyze and brief criminal cases, and identify and discuss criminal issues. An overview of the criminal process and rules of evidence will be provided. This course focuses on the fundamental principles, concepts, and development of criminal law and the constitutional provisions which govern it. The course further discusses the relationship of the individual to the state and includes an examination of the general framework of criminal law as a means of social control.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD503 Criminal Justice Process (3 semester hours)

This course addresses the specific constitutional rights, including the fourth, fifth and sixth amendments as those that have a direct impact on the defendant and prosecution in the judicial process. The course will review issues of the pre-arrest stage to post conviction remedies, as well as the procedural laws in the criminal justice process and their limits. The parameters of these limits will be analyzed by studying various court decisions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD504 Methods of Legal Research and Writing I (3 semester hours)

Part one of this graduate level two-part intensive legal writing program is designed to develop students' research and writing skills. Students will learn and practice the skills necessary for identifying, locating, and using legal resources, including primary sources of administrative, statutory, and case law; secondary authority; and research reference tools, to include computer research tools, commonly used in the practice of law. Students will also explore the process of legal analysis, incorporating the results of their legal research into correspondence, case briefs, legal memoranda, and motions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD505 Methods of Legal Research and Writing II (3 semester hours)

Part two of a two-part graduate level intensive legal writing program is designed to develop students' research and writing skills. Students will further develop their research, legal analytical, and writing, with emphasis on logical reasoning and clear, concise, and convincing writing. Students will complete several legal writing assignments, which will synthesize research, analytical, and technical writing skills. (Prerequisite: **LSTD504** Methods of Legal Research and Writing I)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD506 Property Law (3 semester hours)

This graduate course is an introduction to real property concepts. The course surveys present and future estates in land, ownership, and concurrent ownership. Leasehold interests, gifts and bequests, covenants and servitudes, conveyancing, various land use restrictions, and eminent domain are also considered.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD507 International Law (3 semester hours)

The course is designed to introduce students to the concepts and sources of international law that evaluate the various components, processes, and functions of the international legal process and consider how international law impacts the laws within the United States. Additionally, the current state of the international legal order is reviewed with legal opinions regarding major philosophies, components and current practices and problems of the field of international law.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD508 Contract Law (3 semester hours)

This graduate course is designed to introduce students to the concepts and sources of contract law. This course evaluates the various components of a legally binding agreement or promise and surveys the major issues affecting such enforceable agreements. Students will examine what constitutes breach of contract and the remedies available. The role of contracts in the commercial arena and in society will also be analyzed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD509 Tort Law (3 semester hours)

This graduate course will focus on the fundamental principles, concepts, and development of tort and personal injury law, while combining theoretical and practical applications of such principles and concepts. The course presents an overview of the substantive law governing compensation for injuries to property and to the person. Specific areas of study include negligence and defenses to negligence; products liability and strict liability; negligent infliction of emotional distress; injury to property; tort immunities and tort investigations. Students will examine the analytical process used both to understand court opinions and hypothetical problems in this area of the law. The course highlights the public policy objectives and social forces behind the development of tort and personal injury legislation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD510 Constitutional Law (3 semester hours)

This course provides the student with a theoretical foundation in Constitutional law. The Constitution divides power. In particular, it apportions authority along three main dimensions: between the state and federal governments; among the branches of the federal government; and between, on the one hand, all levels of government and, on the other hand, individuals. The vast majority of live constitutional questions concern a conflict along one or more of these axes. Students will study issues of policy, principle, philosophy, and constitutional implications by focusing on construction and application. This graduate course will explore advanced principles, doctrines and controversies regarding the structure of and division of powers in American government. Specific topics include judicial review, jurisdiction, standing to sue, federalism, federal and state powers and immunities, the separation of powers among the branches of the federal government, the First Amendment, and the Equal Protection Clause.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD512 Immigration Law (3 semester hours)

This graduate course focuses on the procedural and substantive law surrounding immigration. Emphasis is given to legal changes enacted in the field since September 11, 2001, as well as current events. It provides students with the background, processes, and tools necessary for a working knowledge of immigration issues. Important topics such as immigrant status, citizenship, refugees, and asylum seekers will be explored. Students will analyze immigration law and policy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD516 Homeland Security and the Law (3 semester hours)

This course is provides an understanding of the structure of homeland security law and policy. This course will familiarize students with the extensive and complex legal codes that come under the heading of Homeland Security. The course will cover statutes, policy papers, presidential directives, and other documents related to homeland security allowing for an in-depth examination of the foundations of homeland security. The course will provide the student with important legal guidance allowing the student to accurately interpret, understand, and apply homeland security law and policy. The course provides a detailed overview of the subject of homeland security and includes definitions of homeland security, terrorism, the related law, and its development. The course discusses homeland security in other countries as well i.e. Europe, China, Japan.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD517 Law, Ethics and Cybersecurity (3 semester hours)

This course focuses on the ways that law, ethics and cybersecurity overlap and intersect. Besides laws related to cybersecurity, the course examines laws related to intellectual property, civil litigation, criminal prosecutions, and privacy. This examination will provide the means to identify and analyze the policies reflected in those laws. Those policies could guide the creation of policies on a business-level, using qualitative risk assessment and planning. An exploration of ethics and cybersecurity, as well as of workplace ethics, will involve the use of an ethical framework.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD690 Independent Study: Legal Studies (3 semester hours)

This Independent Study is an opportunity for Legal Studies graduate students to pursue an independent research project under the mentorship and discretion of a faculty member. The course requires a major research paper; there will be no examination. Students will submit a request to take the independent study to the Registrar and will include the name of a faculty with whom they have coordinated. Prior to registering, students should first contact the professor with whom they wish to mentor their independent study, coordinate an agreement on the grading requirements, and then NOTIFY their academic advisor with the name of their professor. The final approval to take the independent study will be made by the Program Director.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD699 Legal Studies Capstone (3 semester hours)

This capstone legal analytical project (CLAP) is the final and ultimate experience for the Master of Legal Studies Program. It is intended to permit students to demonstrate their capacity to deeply research a narrow topic concerning a legal challenge to a segment of American society, as well as thoroughly analyze and succinctly yet thoroughly write about it. The students' chief goal is to validate that they have mastered the three fundamental legal skills of research, analysis and writing. Prerequisite: All other courses must be completed before registering for this course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Management (HRMT)

HRMT600 Human Resource Management (3 semester hours)

This advanced course in Human Resource Management adopts a strategic perspective on various functions and tasks within the field. It is designed for students pursuing careers in human resources as well as individuals aiming to enhance their managerial and leadership skills through a deeper understanding of HR practices. The course examines the philosophical foundations of human resource management and evaluates contemporary practices that support organizational employees. Students will examine current and future HR challenges and explore the importance of fostering partnerships between managers and HR professionals. This course will equip students with the skills to critically analyze, evaluate, and develop strategic HR practices that enhance organizational effectiveness and foster strong partnerships between managers and HR professionals.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT601 Compensation and Benefits (3 semester hours)

This course serves as an advanced course in compensation and benefits with particular emphasis on global compensation and benefit issues. Students will explore strategic, operational and tactical approaches to global compensation and benefits as they relate to an overall corporate multinational strategy. There will be an examination of expatriate and local staff compensation and benefit practices as students prepare effective compensation and benefits strategies through case studies, class discussions and other assignments.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT602 Employment Law and Labor Relations (3 semester hours)

This course analyzes the legal framework and principles of employment law from a managerial perspective. Students will develop decision-making skills through scenarios involving various workplace situations. Topics include the agency-employment relationship, discrimination laws, bona fide occupational qualifications, employer negligence in hiring, background checks, employment tests, vicarious liability, sexual harassment, workplace violence, labor relations, working standards, and the Family and Medical Leave Act.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT603 Human Resource Policy (3 semester hours)

This course is a comprehensive analysis of how human resource policies are formulated by evaluating the interdependence of human resource and operating functions. Students will have the opportunity to assess policies geared toward high profile HR areas such as talent management, Occupational Health and Safety Administration (OSHA) regulations, employee development and compensation. Emphasis will be placed on policies and strategies as they relate to managing an intergenerational workforce. Additional special topics include network security, workplace violence, and bullying.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT605 Strategic Human Resource Management Practices (3 semester hours)

The course examines the techniques, policies, processes, strategies, and practices used by companies and managers to leverage effectively and efficiently their human capital. Students will evaluate how HR practices are aligned with organizational objectives. Additional special topics include workforce planning and succession planning.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT610 Workforce Planning (3 semester hours)

Students in this class will master the basic concepts, theories, and skills of workforce planning. Workforce planning is a critical human resource function and practice about winning the “war for talent” in today’s workplace. This course will address issues of attracting, staffing, and retaining a high valued and productive workforce. Succession planning is a key concept to be examined as well. Other topics to be addressed in this course include aligning business and staffing needs; retirement and turnover; and developing competency models and the use of these models for staff development. The course will focus on case studies, scenarios, problem resolution, readings, and research.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Management (MGMT)

MGMT600 Organizational Management (3 semester hours)

This course evaluates techniques for structuring and resolving managerial problems in organizations. The main managerial/educational tool used in the course is the business model canvas, which is a contemporary approach to identifying and creating a functional business/management plan in an organizational context. Topics include an examination of organizational theories, organizational framing, metaphorical analysis, systems theory, and organizational diagnosis.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT601 Organizational Behavior (3 semester hours)

Required first course in the Management program. This course will provide a framework for assessing individual and group behaviors in organizational settings. The primary emphasis will be on developing practical administrative/managerial skills in improving employee performance.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT603 Organizational Development (3 semester hours)

This course consists of a collection of classic and contemporary readings in Organizational Development covering a broad range of topics including change management, organizational culture, team development, and organizational development diagnostic models. Included are experiential exercises that give students an opportunity to practice their skills and cases that allow students to draw on their experiences to apply the concepts and theories in managerial situations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT604 Organizational Crisis Management (3 semester hours)

This course examines the variables involved in crisis planning, communication, and management. To do so, we must consider the organization's vulnerabilities, the environment in which it thrives, the stakeholders who can influence its operation and the strategies best suited to maintaining or enhancing its reputation. The media plays a crucial role in crisis management, and we will discuss this factor throughout the course. We will consider how the media acts as a catalyst as well as an intermediary in this process. Some of the questions that will arise will be: Is the relationship inherently antagonistic? Should it be? By the conclusion of the course, participants should have developed a deeper understanding of the range of crises facing organizations, an enhanced appreciation of communication tactics that can be brought to bear in such situations and a greater familiarity with the historical antecedents of current crises.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT605 Leadership (3 semester hours)

This course covers the elements of contemporary leadership and delineates the principles that are important in the development of a leader for the 21st century. Discussion of the role and function of leadership will include an in-depth analysis and study of needs impacting individuals, organizations and society. The course provides students with a set of leadership skills and competencies on which to build a unique model for effective leadership that can be tested over time.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT608 Independent Study: Management Department (3 semester hours)

Independent study enables a student to pursue an academic topic in a field of special interest on a previously approved topic under the supervision of a faculty member and resulting in an academic, practical and/or artistic product. Students are required to prepare a draft proposal of project, and submit to the Program Director, Management for approval prior to registering for the course. Once approval has been obtained, advising department is notified so that student can register for course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT610 Cross-Cultural Management (3 semester hours)

This course is an examination of individual dimensions of global executive leadership, organizational behavior, inter-group relations, and strategies for internal corporate communication. Course topics include management and global trade, individual aspects of operating successfully in the global environment, the executive's role in solving conflicts and creating corporations in the world marketplace, cultural aspects of international operations management and international ethical corporate strategies.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT615 Strategic Planning (3 semester hours)

Being a strategic or visionary leader has been identified as one of the top five skills needed to be successful in the global economy. This course outlines successful Strategic Management and Planning techniques, and it addresses the fundamentals of the strategic alignment of people, resources and processes to the business vision, mission, and purpose of the organization.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT617 Leading Teams (3 semester hours)

This course utilizes an experiential format to focus on a variety of concepts and practices associated with developing and managing an effective team. As such, students will engage with classmates in virtual groups for much of the classwork. Students will have the opportunity to evaluate the different approaches to management, motivation, and performance, along with some barriers to effective team efforts.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT618 Ethics in Leadership (3 semester hours)

Given the corporate scandals of the past, why do we continue to have unethical behavior in organizations? This course addresses the ethical dimensions of leadership with a particular focus on the processes used to raise and resolve ethical dilemmas and conflicts in organizational settings. Students will have the opportunity to explore (1) why some employees may see "gray" versus "black and white" when making a business decision and (2) evaluate internal and external factors which influence and produce deviant behavior in the work environment. Policies, cultures, values and codes of conduct established by various organizations and industry groups will be critically examined.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT619 Leading Organizational Change (3 semester hours)

Today’s global business environment is complex and ever-changing. Change is now a constant and driving change can be a difficult leadership task. This course is designed to help leaders proactively lead change. Students in this course will learn strategies to effectively assess potential drivers of change, facilitate the implementation of change, and become a change agent in an organization by propelling momentum toward positive results. Students will practice skills to move ideas toward results, combat organizational and employee complacency, and overcome resistance to change.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT621 Leadership in a Time of Crisis (3 semester hours)

This course will examine leadership’s role in a time of crisis. The student will learn effective decision-making strategies and reaction strategies leaders should employ during crisis situations. The student will differentiate the types of leadership models to engage in an emergency environment. This course delivers examples on how to adapt to unique situations as well as prioritize procedures during these situations. The areas of contingency planning and disaster preparedness are also covered.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT622 Risk Management for Leaders (3 semester hours)

This course examines risk management as one of the key responsibilities of leaders. Students will learn to define risk management, best practices for measuring risk and threat assessments to guide organizational response. The course will look at leadership’s role in developing strategies to strengthen approaches to external and internal risk.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT623 Concepts and Processes of Organizational Crisis Management (3 semester hours)

This course explores the critical concepts and processes found in crisis management. The student will be able to illustrate the components required in evaluating and developing plans for crises and disasters at the organization and community level. Techniques for organizational planning with consideration of comprehensive emergency management regulatory requirements for crisis response planning will be covered. Students will create a crisis management plan as their final project.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT696 Capstone: Portfolio (3 semester hours)

This **MGMT696**, M.A. in Management Capstone: Portfolio, course is the final course in the Master's Program. This course will prepare graduate student to reflect on their graduate experience by compiling and revising artifacts from previous courses in the program into an organize e-portfolio. The e-portfolio will reflect the student's educational growth from entry in the graduate program. In addition, the graduate student will develop the skills necessary to successfully transition to and navigate post-graduate life as well as understand the civic and social responsibilities of being educated citizens. Finally, students will be given the resources to connect with APU/AMU in an ongoing relationship.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Management (NFPM)

NFPM640 Nonprofit Law, Governance, and Ethics (3 semester hours)

This course introduces students to the legal framework, governance practices, and ethical responsibilities that guide nonprofit organizations. Students examine the legal requirements that define the nonprofit sector, including state law, tax-exempt status, and the regulatory role of the Internal Revenue Service (IRS). Special emphasis is placed on the fiduciary duties of board members and executive directors, as well as governance structures and procedures used by nonprofit boards to support the organization's mission. Key topics include nonprofit accountability, risk management, bylaws, public benefit obligations, and ethical behavior in charitable organizations. Through the exploration of legal and ethical challenges faced by nonprofits, students gain foundational knowledge to lead, support, and govern nonprofit organizations with integrity and transparency.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NFPM641 The Nonprofit Organization and Executive Leadership (3 semester hours)

This course provides a comparative analysis of leadership theories, principles, and styles as they apply to nonprofit management and governance. Designed for current and emerging nonprofit leaders, the course addresses the complex challenges nonprofit organizations face, including fragmented funding, diverse stakeholder interests, and mission-driven operations. Students explore executive leadership in the nonprofit sector, the dynamics between executive directors and board members, and the legal and ethical responsibilities of nonprofit professionals. Emphasis is placed on developing leadership skills, managing staff and volunteers, understanding governance structures, and navigating the social sector to enhance organizational performance, foster community impact, and advance the mission of nonprofit organizations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NFPM642 Financial Management in Nonprofit (3 semester hours)

This course offers a comprehensive study of nonprofit financial management practices, focusing on interpreting key financial statements to monitor an organization’s financial health. Students explore nonprofit finance topics including fund accounting, financial analysis, budgeting processes, and financial controls essential for safeguarding assets and ensuring fiscal sustainability. The course prepares nonprofit leaders, executives, and board members to analyze financial reports, assess funding sources, and apply sound financial policies to support the organization's mission and strategic goals. Emphasis is placed on using financial data to guide decision-making, maintain cash flow, manage functional expenses, and promote financial accountability throughout the entire organization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NFPM643 Nonprofit Fundraising Planning and Implementation (3 semester hours)

This course provides a comprehensive overview of nonprofit fundraising, focusing on planning and implementing successful fundraising strategies. Students examine the dimensions of philanthropy in the United States, develop a nonprofit fundraising plan, and explore the motivations of individual donors, corporate giving, and foundations. Topics include donor stewardship, ethical fundraising practices, major donor cultivation, the roles of board members and fundraising staff, and the structure of fundraising programs. The course emphasizes strategic fundraising initiatives such as fundraising campaigns and events, donor engagement and retention, and the use of donor data and fundraising metrics to strengthen donor relationships. Students also evaluate how tax policy affects fundraising revenue and explore the competencies and skills essential for nonprofit professionals to achieve fundraising success and support the organization’s mission.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Marketing (MKTG)

MKTG600 Marketing Management (3 semester hours)

This course is designed to illustrate development, implementation, and reformulation of business strategy, with both domestic and international implications. Emphasis is placed on the need for, awareness of, and accommodation to changes in an organization's internal and external environments. Generic types of business strategies and techniques for analyzing strategies are also covered.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG601 Strategic Internet Marketing (3 semester hours)

This course investigates today’s global environment of electronic commerce and that influence on today’s business enterprises. The learning’s in Strategic E-Commerce Marketing spotlight E-Commerce opportunities, issues, options and techniques necessary to create an appropriate ECommerce marketing plan for an enterprise. The course also provides the students with the real world experience of developing a pseudo working website in coincidence and in support of the Marketing plan. Other issues examined include channel structures given an electronic environment and the impact on supply chain management, e-tools, and ECommerce marketing as viewed through the traditional marketing mix. Critical evaluations of web sites, web tools, promotions, advertising, selling and communications are also explored.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG602 Global Marketing Strategy (3 semester hours)

This course is a study of the elements involved in such key global marketing functions as product, price, place and promotional activities. Students will evaluate global marketing opportunities, develop strategy, and simulate implementation of it as it relates to total organizational strategy.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG603 Consumer Behavior, Emotions, and Narratives (3 semester hours)

This course examines the concepts of consumer behavior in the marketplace. Behavioral aspects of the marketing process from manufacturer to consumer are considered. Consumers' actions during the search, purchase, use, and evaluation of products and services to fulfill needs are explored. This course illuminates how marketers can use the concepts of consumer behavior to influence individuals' purchases of products and services.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Mathematics (MATH)

MATH530 Applied Statistics (3 semester hours)

This is an interactive course designed to help students achieve a greater understanding of the statistical methods and models available to analyze data and to solve problems associated with making decisions and testing hypotheses in uncertain conditions. The course is designed for students seeking a thorough appreciation of how statistical tools can support sound decision making efforts in a wide range of situations. Topics covered include inferential statistics, averages, measures of variation, the Normal distribution and its uses, sampling distributions, hypothesis testing for large and small samples, regression and correlation, and Chi-Square distributions. The skills, tools and methodologies needed to analyze systems and to make decisions are provided. State of the art analytical tools and quantitative methods, including computer-based solutions are discussed. The emphasis of the course will be on the proper use of statistical techniques and their implementation rather than on mathematical proofs. However, some mathematics is necessary in order to understand the proper application of the techniques introduced and discussed during the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Military History (MILH)

MILH510 Studies in U.S Military History (3 semester hours)

This course examines the military heritage of the United States from the colonial period to the present time. Through an in-depth study of the extensive literature in American military history, students assess the key individuals, military policies, postures, organizations, strategies, campaigns, tactics, and battles that define the American military experience.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH511 Great Military Philosophers (3 semester hours)

This course examines the origin and development of military concepts and ideas by studying the wisdom of the great military thinkers of the past. Among the philosophers are Sun Tzu and Machiavelli, Clausewitz and Jomini, Mahan and Corbett, Douhet and Mitchell, T.E. Lawrence, and the counterinsurgency theorist and practitioner David Galula. Students compare and contrast these great thinkers to gain an understanding of the nature and conduct of war at the strategic, operational, and tactical levels.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH531 Strategy, Tactics & Leadership of the American Revolution (3 semester hours)

This course is an examination of the American Revolution with emphasis on the operational contributions of American and British military leadership. Students assess the basic concepts and principles of the war's strategic and operational levels, the tactical employment of forces, and the element of leadership to the planning and execution of the war by both sides. Special emphasis is on comparing and contrasting American and British peer-level commanders.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH532 British Perspective of the American Revolution (3 semester hours)

This course details the British view of the Revolution and the long hidden perspective of the American Revolution. Topics include British colonial politics, diplomacy, political and military leadership, factors of influence in Great Britain during the Revolution, and post-war views of America.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH536 The American Revolution (3 semester hours)

This course addresses the War for American Independence from the outset in April 1775 with the events at Concord and Lexington, Massachusetts through the return of the British main force to New York in the summer of 1778 to the final victory at Yorktown. The course analyzes not only the specific events - battles, campaigns, and engagements - but also addresses the nature of strategic decision-making, political issues, leadership, and nature of the opposing forces as well as the context of the War for American Independence in general.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH541 Civil War Strategy and Tactics (3 semester hours)

This course is a study of the American Civil War with emphasis on operational contributions of Union and Confederate military leadership. Students examine Civil War battles on two levels: the strategic doctrine as formed by the major commanders and tactical developments that affected the conduct of battle at a lower echelon of command. Special emphasis is on the interplay between these levels in order to gain a comprehensive view of strategy and tactics in both armies from 1861-1865.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH542 Civil War Command and Leadership (3 semester hours)

This course is a study of national, theater, and operational command structures of the Union and Confederacy, the leadership styles of key military leaders on both sides, and the evolution of command and control in the war. Major themes include the relationship between the commanders in chief and the generals who led the armies in the field, the relationships between the generals themselves, and the ways in which the relationships described above either served to facilitate or debilitate the causes those commanders served.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH551 World War II in Europe (3 semester hours)

This course examines the Allied victory in Europe in World War II. Students assess how the American Army, trained for speed and mobility, performed during campaigns in Italy, France and Germany. The focus is on Eisenhower's generals and their decisions concerning amphibious invasions (e.g., Sicily, Salerno, Anzio and Omaha Beach), airdrops (e.g., Italy and Holland), the race across France and slogging through Italy (e.g., the Gothic siege line and the Huertgen Forest), as well as counter strokes such as Monte Cassino and the Ardennes Bulge.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH552 World War II in the Pacific (3 semester hours)

This course is a comprehensive analysis of the fighting during World War II in the China-Burma-India Theater, New Guinea, the Solomon Islands, the Aleutians, and the Philippines. Students assess the amphibious campaigns in the central Pacific theatre and evaluate the impact of one of the most massive movements of men and arms in history. Primary focus is on land warfare, its strategies, tactics, leaders and lessons learned.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH555 World War II: Politics, Political Leadership and Diplomacy (3 semester hours)

This course is an in-depth study of the politics, political leadership, and diplomacy that defined the Axis and Allied Powers during World War II. Topics address the factors that facilitated their rise to power; the key political structures, relations, and personalities; the inter-Axis relations among political elites versus the Allied powers; and the diplomatic efforts employed by the Axis powers as they postured against the Allies and the rest of the world during the war.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH565 History of Peacekeeping: 1988 - Present (3 semester hours)

This course is a comprehensive survey of the overall evolution and functioning of United Nations peacekeeping operations from the end of the Cold War to the present. The focus of this course is the detailed analysis and comparative assessment of each peacekeeping operation as a tool of conflict management within the unique parameters in which it was established and conducted, and future trends for similar types of intervention and conflict resolution.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH620 War Since 1945 (3 semester hours)

This course is a seminar in global conflict and confrontations since the end of World War II. Students assess specific military conflicts since 1945 to include limited wars by the United States and Soviet Union; counterinsurgencies and wars of national liberation; the Arab-Israeli conflict; post-Cold War conflicts; and conflict post-9/11. Recommended prior to enrolling in MILH 621, The Cold War and Its Aftermath, and MILH 622, Great Power Military Interventions, which cover the Cold War period in greater detail.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH621 The Cold War Era and Aftermath (3 semester hours)

This course is a seminar on the US-USSR Cold War period, which dominated geopolitics and military affairs from the end of World War II to the fall of the Berlin Wall, as well as the first decade of the post-Cold War era culminating with the events of 9/11. Students assess military conflicts and confrontations between the United States, Soviet Union, and their respective allies in the years since 1945. Focus is on the proxy wars of the US and USSR to include wars of national liberation in Africa, Asia, and Latin America; the Arab-Israeli conflict; the Indo-Pakistani conflict; and post-Cold War conflicts in Africa, Asia, and Latin America.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH622 Great Power Military Interventions (3 semester hours)

This course is an in-depth seminar on the military interventions of the United States and Soviet Union/Russia since the end of World War II. Students examine the military interventions of the United States and Soviet Union/Russia. Special emphasis includes the analysis of military interventions in Greece, Korea, Suez, Vietnam, Afghanistan, Somalia, Chechnya, and Iraq.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH637 The Seven Years War (3 semester hours)

This course is a comprehensive study of the “first global war” as events unfolded in Europe, North America, the Indian sub-continent, and on the seas during the 18th century. Students discern, as a prelude to the American Revolution, how the practice of warfare among the eighteenth century nations was firmly established among European nations. In the distrust and distaste among the French, British, and Americans, the Seven Years War set a pattern that has remained central to the American way of understanding our colonial history.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH646 Civil War Cavalry and Intelligence (3 semester hours)

This course examines the theory, practice and operations of the cavalry and intelligence gathering and analysis on both sides during the Civil War. The first part will cover the development of the mounted arm and its traditional role. The theory of cavalry tactics taught by West Point will provide a knowledge base for the ideas and developed tactics by Civil War officers. The second part will address personalities, to include Nathan Bedford Forrest, Jeb Stuart, Wade Hampton, John Buford, George Custer, and others. Areas investigated, relevant to intelligence, will include espionage, Bureau of Military Information, secret services, cavalry forays, covert activities, and secret missions (including the Lincoln assassination plot). Focus of the course will be to compare and contrast the efforts of both the Union and Confederacy to stay ahead in the game of "knowing the enemy."

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH654 World War II and the Eastern Front (3 semester hours)

This course is an analysis of the German-Soviet campaign during World War II. Students will examine the three major phases of this conflict that begins with the Wehrmacht invasion of the Soviet Union in 1941, urban warfare in Stalingrad in the fall of 1942, and history’s largest tank battle at Prohorovka in 1943. Finally, this course will detail the Soviet counterattack across the Vistula and Oder Rivers that ended with the die Gotterdammerung in Berlin.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH667 The Balkans: Conflict and Peace (3 semester hours)

This course examines the military history of the region known as the Balkans and explores the turbulence behind long standing political, religious, and economic issues. Students assess the post-World War II era from 1945 to the present, by focusing on past and present conflicts and confrontations, UN and NATO interventions, transitions in government, and the pursuit of stability within the European community. Special emphasis is on further research into the rise and fall of Yugoslavia and emerging new states.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH668 The War in Vietnam (3 semester hours)

This seminar examines the origins, evolution and impact of the Vietnam War. In addition to reviewing the history of U.S. involvement in Vietnam, students explore the political, cultural and social forces and military developments that shaped the behavior of the various Vietnamese and American parties. Purpose is to develop a coherent perspective on what became one of the costliest and most divisive wars in American history.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH669 Arab-Israeli Conflict: Contemporary Politics & Diplomacy (3 semester hours)

This course examines the Middle East peace process surrounding the Arab-Israeli conflict and focuses on the historical perspectives, the roles of the various Middle Eastern countries in the process, Western intervention efforts, and the inherent successes and failures over the years. Purpose is to develop a comprehensive understanding of the background and history of conflict resolution, the hope for peace in the future, and the ability of the various nations to coexist.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH680 Special Topic: Military History (3 semester hours)

This course examines, through case studies and hypotheticals, specific Special Operations missions. The initial focus will be World War II and several of its more famous clandestine actions. The course will then progress to the Vietnam War, through the 1980s, and into the shaded world of the War on Terror. After the Second World War the primary focus is the components of what is now called the Special operations Command. Through an analytic essay, a formal decision brief, and weekly forums students will contemplate the factors behind the decision to employ Special Operations forces and discern why missions both succeed and fail.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH690 Independent Study: Military History (3 semester hours)

This course is an opportunity for Military History students to pursue an independent research project or examine a specific area of history under the mentorship of a single professor. Students must complete 24 credits of study before taking this course. The course will typically involve a major research paper; there will be no examination. Students will submit a proposal prior to the start of the project, and a rough draft of the paper, both of which will count toward the final grade. Prerequisite: University approval and Upper Level standing. Prior to registering, students should first contact the professor with whom they wish to mentor their independent study, coordinate an agreement on the grading requirements, and then NOTIFY their academic advisor with the name of their professor.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH698 Comprehensive Exam in Military History (0 semester hours)

THIS COURSE WILL REQUIRE A TEST PROCTOR. This course prepares graduate students for the Comprehensive Examination in the Master of Arts in Military History program. The purpose of this course is to provide a structured weekly review of key concepts, theories, and knowledge skill sets in their degree and particular concentration. Students are required to submit responses to a number of assignments over the course period prior to taking the exam. Students apply historical methodology in preparation for the exam and consult texts, journal articles, print & media reports, and documentaries, as well as collaborate with other students enrolled in the course to help them prepare for the exam. Assignments serve as a means of final preparation for the student and calibration with the course instructor, who will grade the exam. IMPORTANT: You must have COMPLETED all other courses in the program and have a GPA of 3.0 in order to register for this course. As a Military History student, you must pass this comprehensive exam in order to have your degree conferred. The comprehensive exam must be taken by the course end date or a failing grade will be posted. If you fail your first course attempt to pass the comprehensive exam, you will need to get approval to register for a second attempt of the course and BOTH final course grades will show in your transcript.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH699 Military History Capstone (3 semester hours)

Preparation for the Master of Arts in Military History Capstone (Thesis) seminar begins on day one of a student's graduate program of study. The theories, research methods and analytical skills, and substantive knowledge obtained through their master's curriculum provide the basis for the thesis project. Students are required to develop primary and secondary source materials on the research topic and address the writing requirements as described in the syllabus and classroom assignments. The thesis proposal must provide a clear description of a question or problem and a proposed method of answering the question or solving the problem. Guidance on the format of the research seminar proposal and a sample proposal are contained in the APUS Thesis Manual. NOTE: This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA. THIS COURSE IS 16 WEEKS.
(Prerequisite: **HIST691**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Military Studies (MILS)

MILS510 Strategic Military Leadership (3 semester hours)

This course provides an understanding of strategic leadership as applied to military and civilian aspects of government. Through a broad examination of strategic leadership principles and theories, and relevant case studies, students explore the interaction of strategic leaders with the media, civil society, and the nation’s political leaders. Students learn how successful strategic leaders have used transformational leadership skills to innovate, motivate, and transform people and enterprises. (Prerequisites: **NSEC500** or **MILS500**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS512 Great Military Leaders (3 semester hours)

This course is an in-depth analysis of the characteristics of leadership common to great military leaders. It focuses on those personalities and decision-making skills that are inbred and/or learned by the great leaders. Students compare and contrast the characteristics of great military leaders and choose a specific leader to assess the persona of that individual. Special emphasis is on investigating the biographical literature and what sources reveal about personality and leadership style.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS514 The Making of Strategy (3 semester hours)

This course addresses the application of strategy and process of the making of strategy, both of which deal with the preparation and use of military power to serve the ends of politics. The treatment is chronological, as determined by the various case studies, and two themes run throughout: the relationship of strategy and the strategic level of war to other levels of war, especially policy and the political level of war; and the difficulty inherent in the process of the making of strategy. Note: Not available for students who have previously taken **MILS520**.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS521 Strategy, Tactics, & the Operational Art (3 semester hours)

This course is a comprehensive study that explores the strategic, operational, and tactical dimensions of war through an examination of military theory in the context of historical experience. Purpose is to promote critical thinking about war based on the clash of ideas and critical inquiry and analysis. Toward that end, students examine some of the masters in the art of war in terms of their ideas and influence regarding strategy, tactics, and especially operational art.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS534 Air and Space Power Theory: Strategy and Tactics (3 semester hours)

This course provides an overview of air and space power theory through the examination of major aspects of air and space power in their historical and contemporary contexts. Students will study the use of air power in past conflicts, examine contemporary roles of air and space power, and determine the evolving near-term roles of air and space power in warfare. (Prerequisites: **MILS500** or **NSEC500** for students on previous catalog versions)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS560 Joint Warfare Theory and Practice (3 semester hours)

This course covers the theory and practice of joint warfare, by examining major conflicts since the mid-19th and joint warfare in the 1980s and 1990s. Students assess, through case studies, the impact of the Goldwater-Nichols Act of 1986 on the Department of Defense and U.S. national security strategy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS561 Joint Warfare Planning and Implementation (3 semester hours)

This course is a study of the contemporary factors essential and necessary to function effectively in joint or coalition warfare exercises at joint or combined headquarters. Students learn steps, techniques and concepts for effective joint operations planning and implementation appropriate to the operational or strategic levels of war.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS562 Joint Warfare Command and Control (3 semester hours)

This course examines doctrinal aspects of command and control through a study of joint warfare theory in the current Joint Professional Military Education (JPME) curriculum. Emphasis is on Joint Vision, Joint Expeditionary Task Forces, Joint Air Support, and Accelerated Cumulative Warfare. Students use the Joint Military Operations Historical Collection series to explore antecedents to modern applications from the Battle of Vicksburg to Operation Uphold Democracy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS563 Case Studies in Joint Warfare (3 semester hours)

This course offers a series of case studies in joint warfare from World War II to the present. Students examine the U.S. military experience with joint operations, combined operations, and coalition warfare and assess the changing nature of joint warfare in the Cold War, post-Cold War, and post-9/11 global environments in light of specific operations against nation-states and non-state/transnational actors, such as terrorist networks. Special emphasis is on analysis of how joint and combined doctrine has evolved and influenced the American way of war.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS570 Seminar in Asymmetrical Warfare (3 semester hours)

This course is an in-depth seminar in asymmetrical warfare in relation to the U.S. military history and operational experience. Students explore the changing nature of asymmetrical warfare in terms of current theory, conjecture, and definition. Key issues of asymmetry and adaptation are assessed in relation to insurgency, counterinsurgency force doctrine, and action-reaction-counteraction cycle. Special emphasis is on the value of approaches that employ innovative tactics, weapons, or technologies across the spectrum of military operations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS572 Special Operations Forces Application (3 semester hours)

This course examines the history and mission of United States special operations forces and roles within operational and tactical environments. Students explore special operations doctrine and tactics from past to present in the global war on terror. Students compare and contrast the use of special operations forces for pre-conflict, operations, and post-conflict scenarios in Afghanistan, Iraq, and the Philippines.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS583 Insurgency and Revolution (3 semester hours)

This course provides a critical analysis of the origins, structures, and contemporary importance of insurgency and revolutionary movements in the modern world. Drawing on major theories and analytical frameworks, the course examines how revolutionaries and insurgent movements emerge, organize, and pursue fundamental change through various forms of conflict, including armed conflict, guerrilla warfare, and prolonged war, often aimed at the overthrow of existing government authority.

Using comparative case studies tested against the historical record, students analyze the political, economic, and social conditions that shape insurgency, including struggles for control within and against established institutions and authoritarian regimes. Emphasis is placed on understanding ideology, strategy, and the effectiveness of revolutionary action across different historical and geopolitical contexts. By the end of the course, students develop a foundational ability to analyze how insurgent and revolutionary movements evolve over time and to assess future challenges associated with revolution and insurgency.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS620 Studies in Future War (3 semester hours)

This course considers the nature of future military conflict, the history of future war doctrine, and the impact of current conflict on the conceptualization of the "next war." Students examine current, past, and future low-intensity as well as high-intensity conflicts, and the appropriate use of military force in the power projection role to influence a diplomatic resolution to a conflict. Rogue nations, and related cultural clashes, and religious factors are related to planning for future war.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS635 Air Power in Joint Warfare (3 semester hours)

This course is a study of the air component of joint warfare in the modern age. Students address the air component strengths and weaknesses in working in interagency, inter-service environments as seen through analysis of several modern military operations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS655 Naval Power in Joint Warfare (3 semester hours)

This course is a comprehensive study of the naval doctrines, strategies, and force components involved in joint warfare in the modern age. Students address the naval component strengths and weaknesses in working in interagency, interservice environments as seen through analysis of several modern military operations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS671 The Non-State Soldier (3 semester hours)

This course is a study of militant foreign ethnic/religious groups not outwardly affiliated with a sovereign state. Students address specific individuals and groups as case studies in order to draw out the implications and principles associated with actual non-state military, terrorist, events and actions. Focus is on the individuals and cells that carry out the military and terrorist plans to further insurgencies and revolutions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS680 Special Topic: Military Studies (3 semester hours)

This course, when offered, is a one-time offering on an area of special interest that will vary. NOTE: Open to graduate students as an elective. NOTE: Open to graduate students as an elective. Any substitution as a Concentration or Major course must have Dean Approval through your academic advisor.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS690 Independent Study: Military Studies (3 semester hours)

This course is an opportunity for Military Studies students to pursue an independent research project or examine a specific area of history under the mentorship of a single professor. Students must complete 24 credits of study before taking this course. The course will typically involve a major research paper; there will be no examination. Students will submit a proposal prior to the start of the project, and a rough draft of the paper, both of which will count toward the final grade. Prerequisite: University approval and Upper Level standing. Prior to registering, students should first contact the professor with whom they wish to mentor their independent study, coordinate an agreement on the grading requirements, and then NOTIFY their academic advisor with the name of their professor.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILS699 Military Studies Capstone (3 semester hours)

Preparation for the Master of Arts in Military Studies Capstone (Thesis) seminar begins on day one of a student's graduate program of study. The theories, research methods and analytical skills, and substantive knowledge obtained through their master's curriculum provide the basis for the thesis project. Students are required to develop primary and secondary source materials on the research topic and address the writing requirements as described in the syllabus and classroom assignments. The thesis proposal must provide a clear description of a question or problem and a proposed method of answering the question or solving the problem. Guidance on the format of the research seminar proposal and a sample proposal are contained in the APUS Thesis Manual. NOTE: This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA. THIS COURSE IS 16 WEEKS.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

National Security Studies (NSEC)

NSEC501 Institutions of National Security (3 semester hours)

The course will cover the roles, missions, organization, capabilities, unique cultures, and strategic purposes of the President, the Departments of State and Defense, Congress, the National Security Council, the Armed Forces, the Intelligence Community, and non-governmental organizations (NGOs). Students will also learn how these actors interact to formulate national security strategy. In addition, students will examine some successes and failures of the interagency process and will gain an appreciation of the capabilities, limitations, and organizational cultures of the players in the national security community.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NSEC503 U.S. National Security (3 semester hours)

This course is highly recommended as the first course for national security studies students. It assesses the major concepts of strategic thinking that underpin the national security decision-making process in the U.S.

The course surveys national security policies since the end of the Cold War and examines regional security concerns to the U.S. In addition, it covers the concept and principal components of national security strategy and evaluates the most important theories that explain how states and non-state actors interact in the international arena. Students will examine the current challenges to U.S. national security interests, including terrorism and the proliferation of Weapons of Mass Destruction, and will evaluate future national security policies and challenges.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NSEC504 International Security (3 semester hours)

During this course, the student analyzes the domestic and international contexts that shape the behavior of state and non-state actors, and which affect the formulation of national security policies. The course provides an assessment of major social, cultural, political, military, economic, technological, and historical issues that influence the international context; the roles and influence of international organizations and non-state actors; and the key transitional challenges to national security such as weapons proliferation and terrorism. The student will examine the issues and national security interests of the U.S. in regions of the world, how the U.S. has carried out its foreign policy in those regions to protect its national security, and the security interests of the nations in those regions. This course will prepare the student to conduct strategic assessments of selected organizations, regions, states, and other actors on the international stage.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NSEC506 Cyber Policy and Practice in National Security (3 semester hours)

This course will provide an overview of current cyber policy and strategy for non-practitioners in a national security framework. Students will study the cyber threat environment; laws and policies that govern cyber security; current and historical structure, functions, and capabilities of private and governmental agencies comprising the cyber community; and future trends that affect national security.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NSEC608 Regional Security Cooperation (3 semester hours)

This course examines the forces reshaping world politics and analyzes the institutions that are fostering new forms of global governance. The course will allow the student to analyze models of international cooperation and identify the states that have most actively challenged the existing order. There will be a focus on the examination of leading and emergent international institutions such as the G-20, the nascent regime for sovereign wealth funds, the International Atomic Energy Agency, and the forums organized to foster cooperation in the war on terror.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NSEC610 National Security and Globalization (3 semester hours)

This course will examine the implications of rising world-wide economic interdependence upon relevant aspects of U.S. national security policy. The phenomenon of globalization will be analyzed from an economic standpoint and related security issues, such as the effectiveness of sanctions, the ability to regulate commerce in weapons and technology, and the changing global balance in military capabilities will be considered in this context.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NSEC611 Covert Action and National Security (3 semester hours)

This course examines covert action in a national security context and will focus on intelligence, counterintelligence, unconventional warfare, and assassination issues. Other topics that will be discussed in this course include espionage spycraft, technology and agent activity, and the political and executive aspects of presidential powers exercised in covert actions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NSEC612 National Security and Diplomacy (3 semester hours)

This course assesses the role of diplomacy in national security policy development and implementation. It investigates diplomacy as an element of national power and how diplomacy is used by senior diplomats and military officials in the international sphere.

The course provides an overview of the history, development, and trends in diplomacy. It will also examine different methods of building relationships, cross-cultural norms and communication challenges in the international environment, as well as the integration of traditional and public diplomacy with other elements of national power.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NSEC613 Current and Emerging Threats to U.S. National Security (3 semester hours)

This course examines contemporary globalization, its links to emergent
threats, and potential U.S. responses. To familiarize students with the types and effects of emergent threats, the course considers several topics including the history and future of: cyber conflict, bioterrorism and public health, climate change, radicalization of U.S. citizens, transnational organized crime, terrorism WMD, state failure and civil war, and emerging technologies. The relationship between globalization and emergent threats is explored with a focus on U.S. national security strategy. The course is about the politics of emergent threats and does not require any specialized technical background.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NSEC614 Political Psychology of Terror Groups (3 semester hours)

This course focuses on analyzing terror groups from a political psychological perspective. In particular, the course approaches terror groups from two different political psychological perspectives, individual and group processes. Together these two perspectives provide a solid foundation from which to understand terror groups.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NSEC690 Independent Study: National Security Studies (3 semester hours)

An opportunity for National Security Studies students to pursue an independent research project or examine a specific area of national security under the mentorship of a single professor. Students must complete 24 credits of study before taking this course. Participation is at the discretion of the faculty member. The course typically involves six or more telephone calls and production of a major research paper; there will be no examination. Students will submit a proposal prior to the start of the project, and a rough draft of the paper at week 10, both of which will count toward final grade. Prior to registering, students should first contact the professor with whom they wish to mentor their independent study, coordinate an agreement on the grading requirements, and then NOTIFY their academic advisor with the name of their professor.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NSEC699 National Security Studies Capstone (3 semester hours)

The National Security Studies Capstone is a 16-week capstone course for the master’s degree in national security studies. This course will involve a major research paper or thesis project that will demonstrate the student’s understanding of and ability to implement the degree program objectives.

For the research paper, the student will also demonstrate an understanding of social science research methodology as it applies to national security studies. Students must follow the requirements of the APUS Capstone Manual and the appropriate presentation style guide. NOTE: This course may not be taken until all other courses are COMPLETED and the student has a 3.0 GPA.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Nursing (NURS)

NURS500 Research and Evidence-Based Practice (3 semester hours)

Advanced degree nurses must integrate evidence-based principles into their daily practice, and promote research-based decision-making in themselves and others. This course focuses on the critical analysis of research and its application to current nursing practice. Ethical issues in the design and conduct of research are addressed. (Prerequisite: **NURS502**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS502 Population-Based Healthcare (3 semester hours)

This course examines how population-based theories and practice inform community/public nursing practice. An emphasis is placed on the ecology of health and the interconnectedness of the biological, behavioral, physical, and socio environmental domains. Students will analyze root causes of health disparities including cultural, political, social, racial, class, gender and economic factors and examine the role of social justice to improving population health. Strategies for collaboration and advocacy with diverse population and groups will be explored.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS504 Informatics and Technology (3 semester hours)

Rapidly changing healthcare systems demand that advanced degree nurses possess knowledge of the effective use of informatics and technology to enhance patient care in a variety of settings. This course provides students with the knowledge and skills necessary to improve patient outcomes through effective use of these technological resources. Topics include electronic medical records, data analysis, safe management of patient care technology, health literacy, and related ethical issues. (Prerequisite: **NURS502**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS505 Healthcare Systems and Health Policy (3 semester hours)

Today’s healthcare providers must promote health, influence the health delivery system, and participate in policy advocacy to improve the healthcare outcomes of populations. In this course, students will examine the effects of legal and regulatory processes on healthcare delivery at institutional, local, state, and federal levels. Topics covered in this course will include healthcare policy development, accrediting agencies, quality improvement, and patient quality and safety. (Prerequisite: **NURS502**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS507 Leadership for the Master's Prepared Nurse (3 semester hours)

Today’s nurse leaders must possess the essential communication, critical-thinking and decision-making skills required to effectively manage teams providing high quality healthcare to various populations. This course addresses issues related to inter-professional collaboration, quality improvement initiatives, data-driven decision making, leadership and communication styles and their effect on interaction with members of healthcare teams.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS601 Advanced Health Assessment (3 semester hours)

This course builds on the undergraduate foundation in health assessment and provides the foundation for the advanced assessment skills required by the Nurse Educator. Teaching methodologies will facilitate the development of skills in conducting comprehensive and systematic assessments of patients throughout the lifespan. This will include physical and psychosocial assessment, risk assessment and functional assessments in various populations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS604 Advanced Pathophysiology and Pharmacology (3 semester hours)

This course builds on the undergraduate knowledge of pharmacology and the relationship of pharmacological therapies to patient health and outcomes, as well as pathophysiological conditions. Students study the actions and effects of medications as well as complementary and alternative therapies on the human system across the life span. Using a variety of theories and frameworks, students use clinical reasoning to evaluate ambiguous and complex clinical presentations. Students discuss the role of the advanced practice nurse educator in ensuring safe medication practice in a variety of settings.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS606 Nursing Curriculum Development, Assessment and Evaluation (3 semester hours)

This course will provide the student with the theoretical basis of curriculum development, assessment and evaluation. Students will focus on the process of curriculum design and development; integrating these concepts into the economic, social, regulatory, technological, and ethical influences and trends which impact current nursing practice. (Prerequisite: ALL CORE COURSES IN THE PROGRAM and **NURS601** and **NURS604**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS610 Learner-Centered Teaching Methodologies (3 semester hours)

The nurse educator must be proficient in developing and designing curriculum supportive of various learners in a variety of settings. This course introduces students to theoretical models and teaching methodologies to create stimulating learner-centered environments in both clinical and academic settings. This course explores the pedagogy of delivering effective nursing curricular content in learning environments that combine face-to-face and distance formats (blended learning) and those that deliver instruction completely online.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS620 Educational Assessment and Evaluation for Nurse Educators (3 semester hours)

The evaluation of learning is a critical component of advanced practice nursing education.
This course explores the strategies and models that nurse educators use to evaluate the effectiveness of their teaching. Students use evaluation data to improve and revise curriculum. Content in this course is applicable to audiences in both academic and clinical education environments.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS654 Program Development and Evaluation in Community and Public Health Nursing (4 semester hours)

This is a practicum course supporting community and public health nurses practicing at an advanced level. The practicum allows students to build on their previous knowledge in learning to design public health programs to improve health outcomes. Topics include assessing community and public health needs along with planning programs to meet those needs. Students work with the practicum coordinator and faculty to identify a qualified preceptor and select a practicum site. Students will complete 40 of the 160 hours of clinical practice required for completion of the program. (Prerequisites: **PBHE520**, **PBHE527**, **PBHE550**, and **PBHE607**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS694 Community and Public Health Nursing Practicum with Capstone Project (4 semester hours)

This practicum provides community and public health nursing students the opportunity to implement population health programs. The emphasis is on working in the community setting to improve the health of communities and populations. The final 120 hours of clinical practice are required for completion of this practicum. The students will also focus on examining the implications of implementing population health programs. Students will evaluate personal leadership skills utilized to improve patient outcomes through evidence-based practices, quality improvement methods, outcomes measurement, and systems knowledge. All core and specialty courses must be completed before taking this course. (Prerequisites: **PBHE520**, **PBHE527**, **PBHE550**, and **PBHE607**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS695 Practicum in Nursing Education (3 semester hours)

This practicum provides nurse educator students the opportunity to apply specialized learning essential to strengthen and advance their own nursing practice in a particular area or focus in a direct care role. Students work with the practicum coordinator and faculty to identify a qualified preceptor and to select the practicum site for a wide variety of clinical practice settings consistent with AACN®'s Master's Essentials (2011). 160 hours of clinical practice are required for completion of this practicum. All core and specialty courses must be completed before taking this course. This course requires an additional cost for the use of Typhon student practicum tracking software, to be purchased by the student prior to the start of the practicum.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS696 Practicum in Nursing Leadership (3 semester hours)

This practicum is completed with a nurse leader in a selected setting and will apply the leadership theories and concepts essential to the nurse leader role. The practicum provides the student the opportunity to apply their learning to their area of interest. Students engage in leadership activities such as committees, staff education, or quality improvement projects. Students work with their faculty member to select the practicum site. 160 clinical hours are required for completion of this practicum. All core and specialty courses must be completed before taking this course. This course requires an additional cost for the use of Typhon student practicum tracking software, to be purchased by the student prior to the start of the practicum.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS699 Evidence-Based Practice Capstone Project (3 semester hours)

In this capstone course, students will apply the knowledge acquired throughout their graduate study. They will develop an evidence-based project proposal relevant to a problem or issue in current professional nursing practice. Components include problem identification, thorough literature review, proposal of a solution, an implementation plan, a process of evaluation, and dissemination of findings. Proposals and research are appropriate to the student's area of specialty study: education or leadership.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Political Science (POLS)

POLS501 Political Philosophy (3 semester hours)

This course takes the student into the exciting world of ideas that have always captivated mankind and inspired the great advances in Western civilization. The course examines some eternal questions: On what philosophical precepts does the rule of law depend? What are the philosophical justifications for respect for the individual? What legal and moral implications arise from these precepts? How should we behave? How should we govern ourselves and each other? Through reading, studying, and reflecting upon the works of the great philosophers ranging from Socrates to Marx and beyond, the class will enter into these “great conversations” and examine how political philosophers throughout time have relevance to the modern world.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS510 The U.S. Presidency, Congress, & Bureaucracy (3 semester hours)

The course covers a combination of theories and applications that will provide the student with basic tools required to understand, navigate, and communicate with the three administrative elements of the federal government. The emphasis of the course is based on a study of composing, legislating, implementing, and enforcing public policy set against a background of both historical and current elements.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS511 Political Parties and Interest Group Behavior (3 semester hours)

This course examines the organization and behavior of political parties and interest groups within the American political system. The course emphasizes the extent to which these organizations operate differently across the national, state, and local levels of government.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS512 Diversity in American Politics (3 semester hours)

This course is a study of diverse groups as political players in society -- their history as outsiders, strategies for gaining political power, the evolution of public policies that affect the lives and opportunities of these groups mainly in the United States. In this course, students will explore core political constructs such as governance, policymaking, participation, conflict, and attitudes through the lens of gender, race and ethnicity. The course focuses primarily upon the experiences of several groups: African Americans, Hispanics, Asians, Arabs, women, and gays and lesbians. The goal of this course is to provide students with the necessary theoretical and methodological foundations needed to understand and analyze gender, racial, and ethnic politics in the United States

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS620 Legislatures and Legislative Behavior (3 semester hours)

This course focuses on legislative structure and decision-making. Through reading, studying, and reflecting upon legislatures, legislators, and legislative processes, students will examine the U.S. legislative structure and conduct an analysis of comparative legislative behavior.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS630 The Presidency: Institution and Performance (3 semester hours)

This course offers a perspective on the U.S. presidency that examines the institutional development while assessing the leadership behavior of office holders from George Washington through the present. Through reading, studying, and reflecting upon Presidential administrations and Presidential leadership styles, students will examine the development of the presidency and the role of the President in U.S. government and abroad.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS640 Judicial Politics, Process, and Policy Making (3 semester hours)

This course introduces students to the role of the judiciary in American politics and policymaking and explores the questions asked and the methods employed by political scientists studying courts and the legal system. An equally important objective of this course is to familiarize students with the seminal works in judicial research, with particular emphasis on Supreme Court cases. Students will study the judicial process in the United States from a variety of perspectives in order to examine the role of law and courts in the larger political arena and social environment.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS650 Federalism: The American Governance Process (3 semester hours)

This course focuses on the political, legal, financial, and administrative relationships among national, state, and local governmental units. Topics include the nature of federal and other political systems and the issues presented in each system at all levels; the evolution of the American federal system from its origins through present day; intergovernmental cooperation and conflict; and the various theory and concepts associated with a breakdown of responsibilities among federal, state, and local governments.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS690 Independent Study: Political Science (3 semester hours)

An opportunity for political science and international peace and conflict resolution students to pursue an independent research project or examine a specific area of their academic discipline under the mentorship of a single professor. Students must complete 24 credits of study before taking this course. Participation is at the discretion of the faculty member. Students will typically produce a major research paper (50+ pages); there will be no examination. Prerequisite: University approval and Upper Level standing. Prior to registering, students should first contact the professor with whom they wish to mentor their independent study, coordinate an agreement on the grading requirements, and then NOTIFY their academic advisor with the name of their professor.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS697 Portfolio and Critical Reflection Paper Capstone in Political Science (3 semester hours)

The course is tailored specifically to political science master’s program. The capstone course may be taken only after the completion of all other coursework. Students must successfully complete this requirement before the award of a degree. Students must apply for graduation and have a minimum GPA of 3.0 in order to be able to register for the course. The portfolio will consist of artifacts demonstrating competency in each of the program objectives. Students are expected to retain these artifacts as they progress through their program to prepare for this course. The portfolio contains a substantive analysis that contextualizes each artifact, articulates how the artifact demonstrates mastery of the learning outcome, and evaluates the student’s intellectual growth through the program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS698 Comprehensive Examination in Political Science (0 semester hours)

The comprehensive final examination is for students in the Master of Arts in Political Science program. The "Comprehensive Exam" is tailored specifically to each program and must be taken after students have completed 36 hours of study (i.e. during the semester following the final course) and must be successfully completed before the award of a degree. The purpose of this course is to provide students with a structured and self-paced review of key concepts, theories, and knowledge skill sets in the field of political science. Preparation for a comprehensive examination, however, is the student's responsibility.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Psychology (PSYC)

PSYC502 Tests and Measurements (3 semester hours)

This course serves to introduce students to the topic of psychological testing. In addition to describing the various types of psychological testing, it will also provide information about test design and construction, administration and scoring, and reliability and validity.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC503 Introduction to Scholarly and Technical Writing (3 semester hours)

This course provides an overview of the primary concepts, genres and mechanics of academic writing at the graduate and professional level. Students will develop writing and editing skills that will assist them in their success as graduate students and future professionals. Discussions, assignments, readings and editing will be utilized to successfully accomplish the goals of this course.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC506 Cyberpsychology: Where Psychology and Technology Meet (3 semester hours)

This is an introductory course in Cyberpsychology studying the methods that social media (SM) uses to influence consumer decisions and drive effective marketing techniques. The primary topic covered includes the role of social media platforms in social interaction. Students will become familiar with what SM was intended to do, as well as what it has evolved into and why it poses a risk to normal behavior and decision-making. Additional topics covered include an examination of factors that influence election outcomes, factors that guide thought processes and awareness through targeted messaging, and the use of blacklisting or shadow-banning content. The implications of these processes on consumer behavior will also be discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC507 Social Science Perspectives on Cyberdeviance (3 semester hours)

This is an introductory course to cyberdeviance with a unique emphasis on the social science components of criminality in cyber settings. Primary topics include the definition of cybercrime, cyberterrorism, cyberwarfare, and cyberbullying with consideration of possible motivation for such occurrences as well the intrapsychic impacts of such circumstances. Further topics include identify theft, hacking, the global implications of cybercrime, child pornography, law enforcement responses to cybercrime, sociological and psychological implications of cybercrime, and the prospective future of cybercrime as technology continues to evolve.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC509 Child Development (3 semester hours)

This course examines theory and research relating to cognitive, physical, socio-emotional, and moral development from birth to age 18 years. Emphasis is placed on typical development with some examination of challenges faced during development. Cultural differences and commonalities are reviewed. Applications of theory to educational settings are also examined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC510 Lifespan Development (3 semester hours)

This course reviews social, emotional, cultural, cognitive, biological, and learning theories and research related to human development. Emphasis is on both healthy development and challenges experienced by individuals and groups across the human life cycle. Cultural differences and commonality noted in the developmental process are examined.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC511 Learning and Cognition (3 semester hours)

This course guides students through advanced level, in-depth and detailed study of classic and contemporary models of human cognition and learning through the lenses of the principle schools of psychology. Specific theories addressed include: functionalistic, associationistic, and cognitive.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC512 Introduction to Industrial/Organizational Psychology (3 semester hours)

This course provides an overview of the primary concepts and theory in industrial and organizational psychology. Focus will be on understanding human behavior in organizations and the workplace. Concepts such as motivation, leadership, employee training and recruitment, performance measurement, and work/life balance will be discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC513 Deployment Psychology (3 semester hours)

This course will explore the unique psychology associated with military deployment, both for the person being deployed and their family and loved ones. Military culture, common psychological difficulties such as depression and PTSD, as well as provider self-care and burnout will be discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC514 Disaster Psychology (3 semester hours)

Students will explore research and historical real world examples of natural and man-made disasters to consider best practices in managing effective emergency response. Specific focus will be on understanding and mitigating post-traumatic stress, as well as military related disasters and emergencies. Students will learn about emergency response, recovery, and follow-up for victims of disaster.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC515 Social Psychology (3 semester hours)

This course is a graduate level study of cultural issues and social influences on human functioning. Classic foundations combine with new research, recent methodological and up-to-date theoretical innovations to form the basis of a study that integrates scholarship and applied social psychology for everyday living.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC520 Personality and Counseling Theories (3 semester hours)

This course explores the processes of normal and abnormal personality development and models of counseling and psychotherapy including psychoanalytic, behavioral, cognitive, and existential approaches.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC521 Organizational Behavior (3 semester hours)

In this course, students will learn about human behavior in a variety of organizational contexts. The influence of inter and intrapersonal behavior, motivation, group dynamics, leadership, organizational culture/structure, and ethics in organizational behavior will be explored through study of organizational behavioral theory, research, and case studies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC522 Leadership and Change (3 semester hours)

This course will provide students with instruction on the theory and application of leadership behaviors, particularly in the context of leading change. Concepts such as influence, motivation, decision-making, conflict/ negotiation strategies and mentoring will be explored.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC525 Physiological Psychology (3 semester hours)

This advanced level course focuses on the physiological processes underlying normal and pathological behavior. Neurological features of disorders such as schizophrenia and depression are examined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC526 Psychopathology (3 semester hours)

This course guides graduate level learners in in-depth study of classic and contemporary theories and treatment of abnormal human functioning. Students will undertake extensive investigation of cultural factors related to the expression and effective assessment of pathology.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC550 Professional Ethics and Standards (3 semester hours)

This course is an advanced-level study of the ethical, legal, and professional issues relevant to the practice of professional psychology, including therapy, research, and assessment.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC601 Qualitative Methods in Social Science Research (3 semester hours)

This course provides an overview of the cross-section of research methods that fall under the rubric of qualitative methodology. In examining these multiple approaches to qualitative methods, this course will discuss issues of research ethics, interviewing methods, conversation and discourse analyses, content analyses, and unobtrusive measures. The completion of this course will have applications in pure research, as well as in clinical assessments.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC602 Quantitative Methods in Social Science Research (3 semester hours)

This research methods course provides an in-depth examination of quantitative research methods used in sociology and related social sciences. Students will practice designing quantitative research that collects observational, interview, survey, and other types of data.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC610 Multicultural Issues in Human Behavior (3 semester hours)

This graduate level course covers the historical, research and theoretical underpinnings of multicultural psychology. It guides students in a comprehensive examination of cultural groups and in-depth analysis of contemporary multicultural trends and issues related to ethnicity, race, gender, sexual orientation, socioeconomic status, disability, age and religion. Students will research issues in cultural psychology through the development and design of their own empirical study.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC620 Substance Abuse and Addiction (3 semester hours)

This course guides graduate learners in advanced level study of addictive disorders, including the historical and social context of the addictive process and the neurobiology of substance dependence. Course foci include the assessment of addiction, the substances of abuse, issues experienced by special populations, and available treatments for substance abuse and addiction.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC630 Crisis and Emergency Intervention (3 semester hours)

This course offers an in-depth analysis of crisis and trauma events, survivor responses and needs, and competent strategic interventions. A theoretical approach draws on systems and developmental constructs to provide an assessment and intervention model that is both holistic and integrated within particular environments. Unique crisis events are addressed, including sexual assault, domestic violence, disasters (both natural and man-made), service provider stress, complicated bereavement, child abuse and neglect, and school crises.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC640 Advanced Topics in Industrial/Organizational Psychology (3 semester hours)

This course provides an in-depth exploration of the industrial organizational theory and research. With a focus on application and problem solving in organizational and work contexts, students will evaluate theories and investigate research on motivation, leadership, employee training, performance management, and work/life balance. (Prerequisite: **PSYC512**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC699 Integrative Capstone Project in Psychology (3 semester hours)

This capstone course is for students completing the master of arts in psychology degree. Students will complete a multi-part, multi-format comprehensive examination to demonstrate their mastery of the knowledge and skills outlined in the program's expected outcomes. Review materials are provided as well as opportunities to interact with peers and the instructor, who will answer student questions and support the students' progress. NOTE: This course may not be taken until all other courses are COMPLETED and the student has a 3.0 GPA.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Public Administration (MAPP)

MAPP501 Foundations of Governance and Policy (3 semester hours)

In an increasingly complex geopolitical environment, concepts of "governance," "polity," and "policy" need exploration, definition, and clarity. This course lays the multi-disciplinary groundwork for this program, introducing the roots of the field and the expectations of the program. Students will explore the process of policy making, the conditions which influence administrative decisions, and the theoretical underpinnings of the discipline.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MAPP502 Public Writing (3 semester hours)

The art of good public writing involves many stages: good memos and grant proposals do not just “happen” overnight. And competent reports or engaging press releases do not constitute everything you know about their central subject. They are the product of much thought, research and frequently much revision. The good news is that, like any technique, it is one that can be learned through practice and useful feedback. MAPP 502 is designed to provide just this, with a special emphasis on developing self-evaluation techniques for you to draw from and use professionally long after you have completed your Master’s degree.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MAPP503 Digital Government (3 semester hours)

This course offers an in-depth panorama of the strategies used to design, implement and evaluate effective policies, government information and democratic procedures and practices as they are publicized online in a digital world. We examine the merits of recent initiatives in e-government and e-governance from the perspective of policy administrators and elected officials as well as the increasing array of ways that citizens and civil society groups and organizations can use, and interact with online government information and services. We also look at the problems that many government agencies encounter in their attempts to provide information and services digitally plus what challenges and opportunities may be in store for the e-governance strategies of the future. The course covers issues surrounding democratic accountability and transparency, security and privacy, citizen e-participation, e-performance reporting and public relations in online government communications. It pays special attention to giving students the opportunity to develop practical skills in how to design and develop effective, specific and comprehensive e-government strategies at the local or state level.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MAPP504 Economics and Public Policy (3 semester hours)

This course critically assesses the role the government plays in the economy and how this affects federal, state and local public policy making and vice versa. We first deconstruct and critique basic economic concepts like public goods and externalities and cover the central theoretical principles that apply to public economics. We then use these to evaluate the federal budget, taxation and income redistribution with a special focus on social security, education, health care and defense policy. Students will develop a critical sense of their own economic policy positions and apply these to their area of concentration.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MAPP697 Public Policy Project Capstone (3 semester hours)

The Public Policy Project Capstone course gives students the opportunity to choose a current policy in which they are interested and conduct an in-depth policy analysis from many critical perspectives. This will be supported by submissions of a policy brief, target audience assessment, budgetary analysis and timeline and a strategic media plan. The creative project must demonstrate originality and will follow the style requirements set by the department currently the American Psychological Association (APA) Publication Manual. NOTE: This course may not be taken until all other courses are COMPLETED.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Public Administration (PADM)

PADM505 Ethics in Government (3 semester hours)

This course addresses the moral versus legal aspects of public administration. Ethical controversies and real and hypothetical solutions to the issues will be addressed through the components of individual attributes, organizational structure, organizational culture and societal expectations. The administrator's role in ethical decision-making will be examined along with external and internal controls. The course will offer studies in leading and building organizations of integrity and with respect for individual and group variations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PADM510 Administrative Theory (3 semester hours)

This course covers the major administrative theories that drive macro-level public behavior. It will begin with a consideration of the broad significance of the study of public organizations for individuals in modern society. It will then examine how theorists and practitioners have sought to develop more formal perspectives on public management. It will examine those ideas that are of greatest relevance to the construction of an integrated theory of public organizations. The progression of the course follows the evolution of administrative theory from the pioneering work of Weber, Taylor.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PADM520 Public Administration in Society (3 semester hours)

The study and practice of public administration is explored in its political context. The student is introduced to the environment within which public administration functions and the dynamics of behavior within large organizations. How choices are made among competing policies, factors affecting the implementation of policy, and the role of policy evaluation in shaping policy choices are examined. Managing large-scale bureaucratic organizations is analyzed including the role of leadership, the management of personnel and finances, and the role of communication in inter- and intra-organizational relations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PADM530 Public Policy (3 semester hours)

This course examines the way government policies emerge from the political process and are implemented through participating institutions. In this class students will investigate how good analysis can contribute to informed policy-making and review the factors that go into developing effective implementation strategies. In addition, today's need for enhanced public accountability and the challenging problems of measuring program performance are examined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PADM610 Public Management (3 semester hours)

This course examines a range of management issues and strategies within the context of managing public organizations. The core focus is on an enhanced understanding of the theoretical and practical approaches to public management, an examination of enduring and day-to-day dilemmas faced by competent public managers, and the application of relevant theories to public management within the United States.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PADM611 Law and Public Policy (3 semester hours)

This course provides an introduction to the law and legal system as it applies to public administration and policy. It covers the interrelation of norms, moral codes and formal laws. The attempt to address social concerns with new laws and regulations has created increased pressure in the courts and legislative chambers. This course examines the sources, influences, operation and consequences of law and public policy formation, and analyzes public policy initiatives from political and legal aspects as to their intentions, achievable aims, and intended and unintended outcomes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PADM612 Public Finance (3 semester hours)

This course covers public budgeting from the public manager's perspective. Whether you are currently or hope to be a manager for federal, state or local government or a local or national nonprofit, this course will give you a good overview of budgeting, and how it relates to you. Topics include budgetary history, revenue and expenditure management, budgeting processes and operating techniques.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PADM615 Program Appraisal (3 semester hours)

This course is designed to develop fundamental skills essential for students to evaluate public programs. Knowledge of the policy process and research methods is brought together in the ethical assessment of program needs, processes, and outcomes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PADM620 Local Political Administration (3 semester hours)

This course will expand the student's understanding of the leading approaches to public administration with a focus on the local and state levels of government. It will cover topics including decision-making, budget and taxation, and electoral and legal differences between state and local governments and other states. It will cover the legislative process, and how it fits into the larger federal system. Students will see the implications to the larger federal issues they have studied and their application to state and local bureaucracies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PADM697 Creative Project Capstone in Public Administration (3 semester hours)

The Public Administration Creative Project Capstone course gives students the opportunity to address issues of public importance that are directly or closely related to their own career, occupation, profession or current position. Creative projects as program capstones may derive from a wide variety of organizationally defined formats such as legislative proposals (local, state or Federal), amicus briefs, standard operating procedures, training program manual, procedure manuals, organizational change proposals, communication plans, or recruitment plans to name but a few. The format will be proposed by the student and approved by the instructor. The creative project must demonstrate originality and will follow the style requirements set by the department currently the American Psychological Association (APA) Publication Manual.
NOTE: It is mandatory for students to contact their Academic Advising team when they are 2 or 3 courses out from the capstone.
THIS COURSE IS 16 WEEKS.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Public Health (PBHE)

PBHE501 Public Health in America (3 semester hours)

This course introduces students to the role of public health systems in America. The function of federal, state, and local public health agencies will be examined, as well as current political, environmental, epidemiologic, legal and ethical issues impacting the field public health. Students will also explore future challenges facing public health professionals in the 21st century.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE502 Health Policy (3 semester hours)

This course is designed to give the student an in-depth understanding of the roles that government and the consumer (the patient) can, and do, play in the ever-evolving health care industry. This course places special emphasis on politics and ethics and the results when they clash, as well as how politics and ethics form the mental attitudes of decision makers. This course is rich in information on the various political and ethical dilemmas facing the patients in the new millennium.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE520 Biostatistics with Lab (4 semester hours)

Biostatistics is a fundamental course in public health. This course will prepare the students to collect, analyze and present the data through the understanding of basic concepts, principles, and techniques/methods of statistics as applied to public health. Major topics will include descriptive statistics, statistical models, probability, probability distribution, point and confidence interval estimation, sampling, hypothesis testing, general principles of study design, and comparison of discrete and continuous data such as t-test, ANOVA, correlation, and regression. The lab portion of the course will focus on the application of Biostatistics by using statistical software. The students will learn to apply the concepts learned in the course (PBHE 520, Biostatistics with Lab.) Major topics will include descriptive statistics, probability, probability distribution, point and confidence interval estimation, sampling, hypothesis testing, and comparison of discrete and continuous data such as t-test, ANOVA, correlation, and regression. Students will develop advanced skills in SPSS to run statistical procedures and interpret output. Students will ask questions of data sets, write-up results in briefs, and develop the skills to critique analysis & findings in peer-reviewed literature. NOTE: Students are required to purchase and use the statistical software, SPSS, to successfully complete this course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE526 Public Health and Environment (3 semester hours)

The study and analysis of a variety of environmental problems, issues, and exposures emphasizing the interrelationship between humans and the myriad environmental concerns.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE527 Social and Behavioral Aspects of Health (3 semester hours)

This course reviews the conceptual, empirical, and theoretical contributions of the Social and Behavioral Sciences as they contribute to an understanding of health and illness.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE531 Public Health Program Planning and Evaluation (3 semester hours)

This course is an analysis of public health program planning, implementation and evaluation, with examination of consumer participation, data collection, consultation, negotiation, training, budgeting, and writing program reports.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE532 Ethical Issues in Public Health (3 semester hours)

This course will investigate ethical issues in public health through discussion of case studies and applicable ethical theories.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE540 Emergency Management Health and Medical Issues (3 semester hours)

This course is a fascinating study of the concepts of medical and healthcare issues in emergency management in mass-casualty and high-impact incidents. The student will learn about the planning and coordination--from the national to the local levels--necessary to respond to disasters that are natural (such as earthquakes, floods, tornadoes and heat waves); industrial, technological and transportation (such as hazardous materials, air crashes and mass gatherings); conflict-related (such as terrorist attacks and mass shootings); as well as the education, training and research done before, during and after these events.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE550 Research Methods in Public Health (3 semester hours)

This course teaches the student to design their own empirical research, and evaluate the research of others, in any of the sub-fields of public health. The course begins with an introduction to the field of public health. It introduces the philosophy of social science and several theoretical approaches used in public health. The course then concentrates on teaching the details of public health research design. The course takes the student step-by-step through qualitative, comparative, and quantitative research design and analysis methods. (Prerequisite: **PBHE520**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE601 Health Care Administration (3 semester hours)

This course is a study of the forces that now shape, and will shape, health care in the new millennium. The emphasis is on administration. It also provides the student with a summary of the skills necessary to be an effective administrator in this evolving industry. Additionally, it details the various elements that exist in the current system, so as to provide the departure point for new ideas, proposals and restructuring under both voluntary and involuntary (legislated) provisions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE605 Quarantine (3 semester hours)

This course is a study of the theoretical, historical, and contemporary issues associated with quarantine as a public health and safety measure. Students will learn of quarantine strategy, implementation, effectiveness, and debate. The course topics will include consideration of quarantine as a health and safety measure in the modern homeland security strategy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE606 Disaster Health Management (3 semester hours)

This course focuses on the principles, types, and forms of health management systems that exist to serve public needs during society's most threatening crises. Topics range from international and national political and policy views of disaster health management down to local levels where leading hospitals and emergency managers must respond to public health disasters on a daily basis.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE607 Epidemiology (3 semester hours)

This course provides a graduate level study of epidemiologic concepts and approaches to population problems in public health. It covers a wide spectrum of topics, to include outbreak investigation, test properties, and study design. The course will provide understanding of disease and disease transmission, rates and proportions associated with different forms of outbreak, and epidemiological risk management methods and measures. Students are required to utilize Epi info software to complete their assignments. (Prerequisite: **PBHE550**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE696 Public Health Comprehensive Examination (3 semester hours)

This course serves as the culminating experience for the Master of Public Health degree. Students must pass this course for degree conferral. The Comprehensive Examination ensures that the student has mastered the program competencies, the Council on Education for Public Health (CEPH®) competencies, and the knowledge expected of a professional in the public health field. The course is 8 weeks of self-study using classroom resources and resources from the courses throughout the MPH program followed by an exam structured to mirror the CPH (Certified in Public Health) Exam. The two-part comprehensive exam includes multiple choice questions that mirror the CPH exam followed by in-depth take-home essay questions that address University program and CEPH competencies. The multiple-choice question portion of the Comprehensive Examination will be proctored and students will follow the Comprehensive Exam policies and guidelines as written in the EOP Manual for Master's Programs. Note: The CPH is an exam administered by the National Board of Public Health Examiners for professionals in the public health field (https://www.nbphe.org/). After successful completion of this exam, students are encouraged to sit for the CPH exam (but this is not part of the University's MPH degree program).

CEPH® is a registered trademark of the Council on Education for Public Health.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE697 Public Health Practicum (4 semester hours)

This course is intended to give the student practical experience in public health. This practicum is spent in an appropriate program, under the guidance of an administrator qualified by education and/or experience. The practicum consists of a 180-200 hours supervised practical application of previously studied theory and is completed by the student throughout a 16-week course. Development and utilization of original activities is stressed, and periodic progress reports are required. Students must secure a supervised position prior to beginning this course. Students are encouraged to consult with their academic advisor with any questions, prior to registration. This course requires an additional cost for the use of Typhon student practicum tracking software, to be purchased by the student prior to the start of the practicum. This fee will be paid directly to the Typhon group. Typhon will give the students the ability to develop a professional portfolio and access the system for 5 years. (Prerequisite: Students may take the practicum after all other CORE courses are completed).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE699 Public Health Capstone (3 semester hours)

This course will involve a major research paper or thesis option that demonstrates understanding of the program objectives. The research paper and thesis will demonstrate understanding of social science research methodology. A Research Manual with explicit guidance for the research paper and thesis option will be available. The student shall select their research paper or thesis option professor from designated APUS faculty. NOTE: This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA. THIS COURSE IS 16 WEEKS.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Religion (RELS)

RELS533 Islam (3 semester hours)

This course will enable students to examine Islam and Islamist movements in historical, political, and cultural contexts, and to understand Islam and the Islamic world more broadly. It does not focus on Islamism specifically, but does include it. The breadth of the course content reflects the inconsistent and uncertain usage of the term Islam. Strictly defined, Islam refers only to the religion founded by Muhammad. It is not a political, ethnic, geographic or cultural term any more (or less) than Christianity is. After investigating the origins and expansion of Islam through history, a central theme explored concerns the various expressions of Islam in the Middle East and beyond, and the relationship of theology to polity within Islamic societies and predominantly Muslim nations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Reverse Logistics Management (RLMT)

RLMT500 Reverse Logistics Management (3 semester hours)

This course is a comprehensive review of the major applications of reverse logistics principles, problems and best practices in manufacturing, retail and the military. The student will study applications from apparel, aviation, automotive, electronics, food and beverage, retailers, and sporting goods. It includes an analysis of Green applications and Carbon Footprint credits for companies.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT501 Practical Applications in Economics Analysis (3 semester hours)

This course is a comprehensive study of problem formulation and calculating return on investment (ROI) in project management, such as applications for reverse logistics. The student will develop engineering economic analysis solutions to case study problems of returns, recalls, recycling, repackaging, waste management, as part of learning how to design a reverse logistics network or supply chain.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT502 Decision Making Strategies in Reverse Logistics Management (3 semester hours)

This course investigates the advanced analysis methods and techniques used to solve the pricing and packing needs of products entering the reverse logistics supply chain. The course emphasizes the most successful methods from business statistics, production and operations management, management science, and operations research fields of study. Students will be required to synthesize material from several major fields of study in order to apply it in this course. Methods of analysis will be investigated to solve these problems including probability concepts and their applications, statistical quality control, process design, forecasting, inventory control, waiting line models, transportation and assignment methods, decision analysis, and simulation modeling

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT503 Reverse Logistics Policies and Regulations (3 semester hours)

This course covers government rules, regulations, policies, etc. that govern reverse logistic operations. These policies and regulations will be analyzed toward their impact on product production, manufacturing, and retail industry. The impact of the overall reverse logistics network designs and distributions will be studied from case studies. The impact on the financial elements of a company engaging in reverse logistics practices will be examined from a return on investment and sound business planning.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT600 Global Reverse Logistics Management (3 semester hours)

This course is a comprehensive examination of the global factors affecting reverse logistics drivers from major companies to small businesses. The student will examine and analyze disaster logistics, and how it affects the resiliency of a global supply chain.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT610 Technology in Reverse Logistics Operations (3 semester hours)

This course studies the use of GPS, RFID and bar coding technology used to track and trace products through the forward supply chain and the reverse logistics process. The student will study the complex issues of data synchronization facing today’s reverse logistics manager.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT620 Resource Commitment and Performance in Reverse Logistics (3 semester hours)

Students in this course analyze the resources needed to establish and implement a reverse logistics operations in manufacturing and in retail stores. Emphasis is placed on analysis and way to measure the return on investment and other performance measures to ensure a successful reverse logistics operation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT630 Recalls and Returns Management (3 semester hours)

This course is a focused and comprehensive examination of the recalls programs of major manufacturing companies around the world, as a thorough study of how a returns program can enhance the revenue stream of a retail store.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT645 Advanced Green Logistics (3 semester hours)

This course examines the organization, planning, and controlling of recycling, reclaimed materials, and reclaim centers projects that are designated as Green. The student is provided practical knowledge on Green project planning, managing Green project scope, and sustainment and environmental risk management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT650 Reverse Logistics in the Retail Industry (3 semester hours)

This course is a focused and comprehensive examination of how different retail industries implement reverse logistics programs. The focus is on food and beverage, apparel, automotive, sports, hotel operations, and consumer electronics. Attention is focused on data synchronization inventory management comparing the forward and reverse logistics chains.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

School of Health Sciences (SPHS)

SPHS515 Sport History and Culture (3 semester hours)

This course focuses on the study of historical, cultural, and sport policy variables within athletic development management. Students will evaluate the relationships between athletes and stakeholders through the theoretical concepts of sociology, physiology, and kinesiology, psychology, sport management, business, and coaching. They will analyze the role of specific sports policies and play from the perspective of an athlete, coach, and stakeholder. Nuances of specific sports are examined through historical sporting events, athletic achievements, and national and international governance of amateur and professional sport.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Science and Society (STEM)

STEM693 Independent Study for Masters Students (3 semester hours)

Master’s students interested in more than one area of study can take an independent study course, which is occasionally offered depending upon student interest. Students can study their chosen subjects under the guidance of a faculty mentor. These courses are limited in their offerings and scope, and the format will vary based on the student’s interest and the topics to be covered. Approval of the Department Chair is needed prior to enrollment.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM695 STEM Internship for Graduate Students (3 semester hours)

Participating in an internship provides students with a valuable educational and professional opportunity. During internships, students explore and gain hands on experience in a field they have an interest in working within. Within the School of Science, Technology, Engineering, and Math the primary responsibility for finding an internship belongs to the student, however there are a number of resources in place to help you in your search, and with the application process.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Security Management (SCMT)

SCMT507 Assets Protection & Loss Prevention Management (3 semester hours)

The course focuses on advanced administration and management issues related to corporate security functions, including strategic and operational management, risk management, contract security services, management of emergencies and loss prevention. Students will assess vulnerabilities and recommendations of the 9/11 Commission Report on terrorist attacks upon the Unites States. Facility protection standards are used to determine appropriate courses of action, from a security management perspective, using threat models and risk assessment concepts. Research is required and application of critical thinking is applied to address external threats and countermeasures. Practical exercises are conducted to apply research findings.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT508 Evaluation of Security Programs (3 semester hours)

The course provides a comparative analysis of relevant security programs in the public and private sectors. The concept of defensible space, internal and external access control and psychological security barriers are examined and evaluated during this course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT509 Contemporary Issues in Security Management (3 semester hours)

This course is an in-depth study of contemporary issues in security management. The course will focus on tools that the professional security manager can use to increase productivity and lower operational cost. Topics explored: personnel security issues (background checks), budgeting, security liability, human resources issues and equal opportunity rights.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT510 Security Management Ethics (3 semester hours)

This course is an examination of issues of professional and ethical behavior within the security industry. Key issues examined include professional behavior of the individual and the agency. Current topics such as sexual harassment, professionalism, and industry standards are discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT511 Chief Security Officer Fundamentals (3 semester hours)

This course will provide an overview of the Chief Security Officer (CSO) graduate certificate program while focusing on the knowledge and skills required to function at the senior corporate level of management. Students will develop an understanding of how to communicate security's value to the C-Suite. Students will learn how to identify, build and use metrics to measure success or risk. Students will develop an understanding of the need for cross-functional collaboration and leadership.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT529 International Terrorism (3 semester hours)

This course examines the global terrorism phenomenon and the social, economic, political, and religious conditions of select states, groups, and individuals that influence the terrorist mindset. Students examine the definitions, origins and development of terror as a means of influencing public policy decisions and in fostering transitions in public power to promote group goals. Specific historical instances of the use of terror are evaluated, assessed, and analyzed. Examples of groups such as the Al-Qaeda terrorist network are assessed including focused discussions on current events. Topics include: geography and geopolitics of terrorism, origins and history of terrorism, characteristics and goals of terrorism, role of politics and religion in terrorism, media impact on terrorism recruiting, and Al-Qaeda in Iraq organization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT536 Protective Services (3 semester hours)

This course provides a detailed history of protective services. Topics covered include training and background requirements, obtaining contracts, selecting, training, and managing a security team, security surveys, dealing with clients, legal issues, importance of networking, information sources, and special considerations for clients in high profile industries.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT537 Computer Crime (3 semester hours)

This course will examine cybercrime and the legal, social and technical issues cybercrime presents. With a multi-disciplinary perspective, we will focus on ways information technology is used to commit crimes, investigative techniques used to discover the crimes, and the challenges involved in prosecuting cybercrimes These challenges include jurisdictional issues, application of traditional laws to cybercrimes, and privacy issues encountered during prevention, investigation and prosecution.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT538 Industrial Espionage (3 semester hours)

This course provides a framework for understanding and protecting against industrial espionage. It reviews the history of industrial espionage, current methods of information elicitation, and explores counterespionage options to defend organizations. Students will also learn how companies place their proprietary and protected information at risk as well as how to prevent unwanted information disclosure. Topics such as the Economic Espionage Act of 1996 and operational counterintelligence are covered. The purpose of the course is to teach how to recognize and neutralize serious threats to both business and government entities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT544 Security Architecture (3 semester hours)

This course stresses the core principles of the CPTED (Crime Prevention through Environmental Design) concept. Students learn how to work with architects, city, and municipal planners to ensure new or refurbished construction is designed in such a way as to minimize or eliminate criminal activity. Topics covered include initial planning considerations, gathering information from multiple sources, formulating and implementing the plan based on core CPTED principles, and the need for modifications and review over time.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT545 Airport Security Design (3 semester hours)

This course provides a comprehensive overview of the current state-of-the-art in airport security. Air terminal security is covered from the aspect of physical security considerations, baggage screening, training requirements for security personnel, employee screening and awareness programs, aircraft security, ground and air security technologies, integrating security systems for maximum coverage and protection, effective local, state, and federal liaison, counter and anti-terrorism measures, narcotics and contraband - the use of working dog teams, and apron access and security considerations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT553 Security Program Administration (3 semester hours)

The course provides the graduate-level security professional with the tools necessary to effectively plan for, implement, monitor, and administer a security organization in a modern, global, and technologically advanced security program. Upon completion of the course, the student demonstrates expertise in administrating a security program from the following aspects: fiscal, human resource management, change management, global talent management, and resource management perspectives. Students will also assess the concepts of return on investments (ROI) including cost-benefit aspects of asset protection and liaison with other management officials in the organization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT699 Security Management Capstone (3 semester hours)

Preparation for the Security Management research seminar begins on day one of a student's graduate program of study. The theories, research methods and analytical skills, and substantive knowledge obtained through their master's curriculum provide the basis for the research seminar project. Students will support the research seminar effort, including gathering bibliographic and reference materials on the thesis topic including developing individual course research papers that may become sections of the final research seminar. Students will address the requirements as described in the syllabus and classroom assignments. The research seminar proposal shall be prepared in accordance with the standards of the academic discipline. The research seminar proposal must provide a clear and lucid description of a question or problem and a proposed method of answering the question or solving the problem. Guidance on the format of the research seminar proposal and a sample proposal are contained in the APUS Thesis Manual.
NOTE: This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA.
THIS COURSE IS 16 WEEKS.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Sociology (SOCI)

SOCI500 Social Theory in Action (3 semester hours)

This course integrates classical and contemporary sociological theory through application. Students will explore epistemology, examining theory as a framework for studying society. Students will focus on key sociological theories that apply to their research topic interests.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI501 Professionalism for Sociologists: Ethics, Collaboration, and Career Planning (3 semester hours)

This course explores key professional skills for sociologists. Students examine key ethical issues for social science researchers by learning the position of key sociological professional societies on current social issues. Students learn strategies for developing their professional networks. Students will learn how to manage projects and create and document collaborative agreements with colleagues. Students will learn to create short- and long-term career plans. Students will build professional profiles through an online portfolio.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI510 Introduction to Graduate Studies in Sociology (3 semester hours)

This course provides an overview of sociology as a field of study, including the historical development of the discipline. Students are introduced to the three main theoretical perspectives of sociology as well as the terms and concepts related to human behavior in society. An emphasis is placed on the impact of social forces on individuals, groups, organizations, institutions, and societies. Students will discuss social problems, social justice, and social change, as well as how sociologists research social phenomena and how to explore potential career paths in sociology.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI530 Introduction to Design Thinking (3 semester hours)

Organizations and businesses face a changing social landscape in which their products and services are inextricably linked with the needs of the people who create and consume those products and services. Stakeholders looking to innovate and seize opportunity, or needing creative solutions to challenges, must thoughtfully integrate knowledge and tools from different disciplines to strike a balance between what is feasible from the organizational perspective and what is needed from the consumer perspective. For stakeholders facing multifaceted challenges, design thinking is an important process and tool that supports creative innovation and user-focused solutions. Students in this course will become familiar with design thinking as an approach and tool, learning how to apply it to their professional and personal goals.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI531 Applied Design Thinking (3 semester hours)

Design thinking is an approach that helps bridge organizational needs and consumer needs, with deep focus on consumer-driven data that informs innovation and practice. Students learn how to apply design thinking principles through work on case studies as well as application to an issue in their field of study or career. This course focuses on building mixed methods research skills like participant observation, focus groups, interviews, and surveys - to create and test data-informed solutions, and report findings to organizational stakeholders. (Prerequisite: **SOCI530**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI532 Applying Design Thinking to Discipline-specific challenges (3 semester hours)

This course focuses on an applied project related to the student's major field of study or career path. Integrating knowledge and skills from the other courses in the design thinking graduate certificate will be critical in this course. Students will identify a multi-faceted problem or challenge that they want to address from a design thinking perspective, collect and evaluate stakeholder insights and data, and then design and assess multiple solutions. (Prerequisite: **SOCI531**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI603 Advanced Data Analysis for Social Science (3 semester hours)

This is an intermediate course focused on the use of statistical models used in qualitative and quantitative research design and analysis. Students will assess the validity and reliability of different types of statistical tests. Data will be interpreted using analysis of variance or covariance, multiple linear regression, logistic regression, and factor analysis. Students will develop advanced skills in SPSS to run statistical procedures and interpret output. Students will ask questions of data sets, write-up results in briefs, and develop the skills to critique analysis & findings in peer-reviewed literature. NOTE: Students are required to purchase and use the statistical software, SPSS, to successfully complete this course.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI610 Grant Writing and Fundraising for Social Scientists (3 semester hours)

In this course, students will develop grantsmanship skills specific to social scientists working in academic and public service career fields. Students will learn how to secure funding for competitive research projects. Students will learn to identify appropriate sources of grant funding, tailor their proposals to different funding audiences, write successful grant proposals, manage research budgets, and produce summary presentations and reports for funders. In addition to grant writing, students will explore other fundraising sources and skills for social scientists.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI620 Social Analysis of Education Systems (3 semester hours)

In this course the social aspects of education and the modern school system in the United States will be examined. The sociological perspective will be used as a lens to explore how life opportunities are shaped by experiences in school; how schools reproduce, reinforce, and challenge relationships of inequality in social, economic, and political structures. Students will explore the development of the modern schools system in the United States. Students will examine career opportunities for sociologists in education.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI621 Medical Sociology (3 semester hours)

In this course students will assess disparities in health, illness, and healthcare accessibility and quality through application of sociological theory. Students will identify how social processes shape experiences of health, illness, and reform in the healthcare system. Students will examine the role of sociologists in health related career fields such as healthcare administration, public health, and more.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI690 Independent Study: Sociology (3 semester hours)

This course is an opportunity for sociology students to pursue an independent research project or examine a specific area of sociology under the mentorship of a single professor. Students must complete 24 credits of study before taking this course. The course will typically involve a major research paper. Prior to registering, students should first contact the professor with whom they wish to mentor their independent study, coordinate an agreement on the grading requirements, and then notify their academic advisor with the name of their professor.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI698 Sociology Capstone (3 semester hours)

This course provides students with an opportunity to synthesize and articulate knowledge gained during the master's in sociology program. Students will complete a research project and paper and successfully submit this capstone project to the University's Library. Students will receive substantial guidance and support from their instructor and classmates throughout the course. NOTE: This course may not be taken until all core courses are COMPLETED and the student has a 3.0 GPA.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Space Studies (SPST)

SPST500 Research Methods in Space Studies (3 semester hours)

MUST BE TAKEN AS THE SECOND COURSE IN THE SPACE STUDIES PROGRAM. This course is designed to build the student's ability to organize and conduct research in the space studies discipline, and to enable the student to present findings in a clear, concise, coherent manner. It is devoted to thinking about research logically, creatively, critically, structurally and scientifically. Course material covers qualitative research designs, theory building, role of argumentation in presenting a research report (thesis), as well as describing and analyzing quantitative variables.
IT IS HIGHLY RECOMMENDED THAT YOU HAVE PREVIOUSLY COMPLETED COLLEGE ALGEBRA BEFORE TAKING THIS COURSE

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST501 Introduction to Space Studies (3 semester hours)

This course serves as an introduction to the APUS Space Studies Master's program. It describes on the main concentrations in Space Studies: Astronomy, Aerospace Science, Space Policy, and Space Entrepreneurship. It also focuses on the technical writing proficiency expectation for graduate study and the importance of the peer review process in scientific literature. The course explores both current and future directions in NASA space exploration. It also introduces the new United States Space Force (USSF), and considers the implications of the USSF for the direction of our country's space exploration policy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST502 Introduction to Orbital Mechanics (3 semester hours)

CORE COURSE: What is an orbit? How does a spacecraft fly to the Moon or Mars? What does NORAD use to track all of the satellites currently in orbit around Earth? How does a spacecraft move from one orbit to another? These questions and more are answered in this course. From Kepler and Newton to the modern telecommunications, navigation, and remote sensing spacecraft, knowledge of orbital mechanics is essential for the modern Space Manager to be able to plan future space missions and to converse with orbital analysts that perform the day-to-day calculations determining IT IS HIGHLY RECOMMENDED THAT YOU HAVE PREVIOUSLY COMPLETED COLLEGE ALGEBRA BEFORE TAKING THIS COURSE. (Prerequisites: **SPST500** and **SPST501**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST503 Chronology of Space (3 semester hours)

This course takes an in-depth look at the past and current structure, tasking, goals and objectives of the U.S. National Aeronautics and Space Administration (NASA). Emphasis is placed on the roles of the individual research centers, space centers and laboratories that form the NASA organization. The origins and impact of the ‘space race’ are discussed in detail.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST504 Remote Sensing Satellites (3 semester hours)

CORE COURSE: Earth orbiting remote sensing satellites play a key role in the lives of human beings. This course is a study of the major components of contemporary remote sensing satellites, the various methods of remote sensing capability, and the advantages and disadvantages of each method. Course topics also include study of remote sensing orbits, launch vehicles, and technology. IT IS HIGHLY RECOMMENDED THAT YOU HAVE PREVIOUSLY COMPLETED COLLEGE ALGEBRA BEFORE TAKING THIS COURSE. (Prerequisites: **SPST500** and **SPST501**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST611 Aircraft Propulsion Systems (3 semester hours)

This course is an introduction to aircraft propulsion systems, including their design and development, turbo propulsion combustion technology, engine/airframe performance matching, inlets and inlet/engine integration, exhaust nozzle aerodynamics, engine operability, and aeroelasticity and unsteady aerodynamics IT IS HIGHLY RECOMMENDED THAT YOU HAVE PREVIOUSLY COMPLETED COLLEGE ALGEBRA AND CALCULUS I BEFORE TAKING THIS COURSE.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST612 Rocket Propulsion (3 semester hours)

Even though the Chinese introduced rockets about 800 years ago, most of the important rocket development has taken place in the 20th Century. This course introduces rocket theory including specific impulse, thrust chamber design, nozzle design, heat transfer, and propellant composition and places particular emphasis on the development and use of liquid and solid rockets. The course concludes with a discussion of the future of rocketry including hybrid rockets, thrust vector control, and electric rockets. The material in this course is applicable and essential for any military or civilian Space Operator, Manager, or Designer who wants to achieve a better understanding of how rockets are designed and how they operate.
IT IS HIGHLY RECOMMENDED THAT YOU HAVE COMPLETED COLLEGE ALGEBRA PRIOR TO TAKING THIS COURSE

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST613 Satellite Communications (3 semester hours)

CORE COURSE: This course is a study of the principles, architectures, technologies, management, economies, advantages, and disadvantages of satellite communications. Spacecraft launch vehicles, orbits, communications modulations, radio wave propagation, payload designs/types, and spacecraft bus and antenna types are all addressed. Students will learn to devise/formulate actual satellite communications link budgets and evaluate the impact of each variable used within the equation. IT IS HIGHLY RECOMMENDED THAT YOU HAVE PREVIOUSLY COMPLETED COLLEGE ALGEBRA BEFORE TAKING THIS COURSE. (Prerequisites: **SPST500** and **SPST501**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST615 Aerodynamics (3 semester hours)

This course introduces the student to core concepts of aerodynamics, including fundamentals of inviscid, incompressible flow; compressible flow; shock waves/properties; compressible flow through nozzles, diffusers, and wind tunnels; subsonic compressible flow over airfoils; linear theory; elements of hypersonic flow, and boundary layers. IT IS HIGHLY RECOMMENDED THAT YOU HAVE PREVIOUSLY COMPLETED COLLEGE ALGEBRA AND CALCULUS I BEFORE TAKING THIS COURSE.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST616 Aircraft Design (3 semester hours)

This course is an introduction to aircraft design. The Design Process, Airfoil and Geometry Selection, Thrust-To-Weight Ratio and Wing Loading, Sizing, Crew Station, Payload, and Passengers, Propulsion and Fuel System, Landing Gear and Subsystems, Aerodynamics, Basic Propulsion, Structures and Loads, Stability, Control, and Handling Qualities, Performance and Flight Mechanics, as well as Cost Analysis, are some of the areas covered in the course. PREREQ: **SPST615** AERODYNAMICS. IT IS HIGHLY RECOMMENDED THAT YOU HAVE PREVIOUSLY COMPLETED COLLEGE ALGEBRA AND CALCULUS I BEFORE TAKING THIS COURSE.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST619 The Psychology and Physiology of Space (3 semester hours)

This course is an overview of the human ability to function, work and live for extended periods of time in the environments of space, and interface with the systems supporting successful space travel. An important element of the space medicine / human factors is to develop standards, requirements, and policies to guide the planning, space systems design, and operation. This function also includes the ability to perform repairs and planetary surface investigation, future prospecting, and resource utilization. (Prerequisites: **SPST500** and **SPST501**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST621 Current and Emerging Space Powers (3 semester hours)

Space exploration and exploitation have become global activities. While the United States and the Soviet Union were battling for supremacy during the Cold War and striving for “firsts” in the Space Race, several nascent space powers were blossoming in the background. Not limited to the U.S. and USSR, the dream of spaceflight sprouted in lands as diverse as France, Germany, China, Japan, India, Israel and Brazil. The European Space Agency, the Chinese Space Program, the Japanese Space Program and the Indian Space Program have become space powerhouses. A study of these various programs is essential to gain a thorough understanding that space exploration is not only a global enterprise, but also an important concern for our own national security.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST622 Space Policy (3 semester hours)

Since the beginning of the Space Age, U.S. Civil Space Policy has been a cornerstone in determining space organizational structures, mission objectives, and resource distribution. From the launch of Explorer 1 through the Apollo Program Moon landings and continuing on to the Space Shuttle and International Space Station operations, the U.S. Government has been heavily involved in establishing space exploration and exploitation. A study of the various players in the space community, the various government interfaces, and an emphasis on budget development is important to study the roles that policy has played in our nation's space program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST623 National Space Organization (3 semester hours)

This course is a comparative study of the major industrialized nations' space organizations. It begins with the US and presents an overview of NASA and non-NASA government agencies supporting space exploration. Comparative views are presented for other countries which then allows the student to select the country of their choice (as approved by the instructor) to compare/contrast its space organization with that of the United States. Students will review the fundamental roles of significant space organization, budgets, and goals and objectives in comparison and contrast between the US and another country.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST628 Space Operations Structure and Design (3 semester hours)

This course is a study of management issues involved in the vision, planning, design, structure and operations of new and existing facilities and vehicles. The course will include a review of existing vehicles and facilities and those that will be required in the upcoming quarter century.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST630 Planetary and Solar System Studies (3 semester hours)

This course examines the exploration of the solar system with a focus on the methods used to explore the Sun, planets, moons, and small solar system bodies. Special emphasis is also placed on the space environment and its effects on current and future exploration activities. The threat of comet, asteroid, and meteoroid impacts on Earth will also be addressed. This course requires access to the web site MASTERING ASTRONOMY, and use of labs from the GEAS project website, which is supported by the NSF, and are used with permission. The link for GEAS labs is http://astronomy.nmsu.edu/geas/labs/html/home.shtml

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST631 Astrophysical Studies (3 semester hours)

This course examines the study of stars and galaxies with special emphasis on the methods and instrumentation used in the exploration of the universe around us. Focus is also placed on cosmology, the study of the past, present, and possible future of the universe. (Prerequisite: **SPST630**).
This course requires access to the web site MASTERING ASTRONOMY, and use of CLEA Labs, which are Windows only programs. If you are not using a Windows program, please verify that your system will be compatible with CLEA labs prior to registering for the course. The link for CLEA labs is http://www3.gettysburg.edu/~marschal/clea/CLEAhome.html

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST633 Astronomical Instrumentation (3 semester hours)

This course examines the design and construction of astronomical instruments, including mechanical design and machining, optics and commensurate optical system design, and both real-time and near-real time computer control. UV, X-ray, and gamma-ray spectrum instrumentation will also be addressed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST635 History of Astronomy (3 semester hours)

This course reviews the historical significance and discoveries made by astronomers ranging from the early Greeks and Mayans through the discoveries of recent times using modern techniques and tools such as the Hubble Space Telescope. As both a history class and a science class, this course bridges the two by examining the interconnection of the events and people involved in astronomy through the ages as well as analyzing the observations that have formed the core of humanity's effort to understand and describe what we see around us. The majority of the course materials are primary sources, as students will read many of the original papers that have brought us to our current understanding of the universe. A major component of this course is learning to interpret history for different audiences in a wide variety of writing assignments.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST640 Space Cooperation and Diplomacy (3 semester hours)

This course will examine the importance of international space cooperation and diplomacy, enabling all nations, states, and consortiums to enjoy the benefits of space technology and ensuring the safety, stability, and security of outer space. Students will work in teams or individually and think critically about the importance of cooperating with both allies and if necessary, adversaries, to develop potential solutions to the world’s most critical and complex problems in space. Some of the topics of discussion will include the history of civilian and military space development; the ongoing debate on weapons in space; the past and current policy and guidance on space activities; the current threats to the safety and stability of space operations; the types of International cooperation; and a discussion of the cooperation strategies the US should pursue.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST650 Fundamentals of Earth and Planetary Sciences (3 semester hours)

A required course for the graduate concentration in Earth and Planetary Sciences, this survey course provides an overview of key concepts, dominant paradigms, and research frontiers in Earth and planetary sciences. The course provides a required foundation for all incoming students pursuing the Earth and Planetary Sciences concentration within Space Studies. Topics include an overview of the solar system, planetary geology, planetary atmospheres, and planetary mapping. (Prerequisite: **SPST501**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST651 Planetary Geology (3 semester hours)

Over the past decades, spacecraft exploration and related laboratory research on extraterrestrial materials have given us a new understanding of planets and how they are shaped by geological processes. This course will focus on geologic processes, adopting a comparative approach that demonstrates the similarities and differences between planets, and the reasons for these. This course will integrate data from past and present space exploration missions to compare processes operating on the surface of the Earth to processes operating on the surface of other celestial objects. Aspects of mineralogy, petrology, geochemistry, volcanology, sedimentology, geomorphology, tectonics, geophysics, and remote sensing will be used to examine this data and apply it to the geology of rocky bodies in the solar system as well as known exoplanets. (Prerequisite: **SPST650**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST652 Geology of the Moon and Mars (3 semester hours)

This course examines the processes which have shaped, and continue to shape, both the surfaces and interiors of the Moon and Mars, such as impact cratering, volcanism, and tectonics. A detailed review of past and current manned/unmanned geological exploration of each body will also be addressed. Critical aspects of the Lunar and Martian geology and environments relevant to human exploration and possible future settlements will be emphasized.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST653 Small Bodies of the Solar System (3 semester hours)

This class will cover a variety of objects within the solar system considered "small." This includes dwarf planets, moons, asteroids, meteorites, comets, and planetary rings. We will cover the composition, history, and role of these objects within the solar system. We will also address their influence on the Earth and other bodies, and what they tell us about the formation of planetary systems around other stars.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST654 Planetary Mapping (3 semester hours)

This course provides an introduction to the concepts and techniques used for mapping Earth and other planets. This includes the fundamentals of remote sensing and the applications of geographic information systems in terrestrial and extraterrestrial environments.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST655 Planetary Atmospheres (3 semester hours)

This course provides an overview of planetary atmospheres. The atmospheres of Earth, Venus, Mars, and Saturn's moon Titan are considered in detail. Atmospheres of planets orbiting other stars (exoplanets) are also considered.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST671 Space Law (3 semester hours)

This course examines space law from its origins at the commencement of space exploration to current day activities, including civilian, commercial and military/governmental issues/rulings. The Outer Space Treaty, Registration Convention, Rescue and Return Agreement, Liability Convention, and the Moon Treaty will be covered in detail, as will several other past, standing and pending legal works.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST695 Space Studies Capstone Portfolio (3 semester hours)

The portfolio course is designed as an alternative to the **SPST699** Capstone Thesis course. The proposed Capstone Portfolio course is an opportunity for students to demonstrate mastery of all the program learning objectives, including a platform to articulate other scholarly work with the professional digital portfolio being built using portfolium software. Students are expected to submit all required components of the portfolio, including keystone assignments from the program which demonstrate mastery of all program objectives. The proposal will also include a forty - fifty page document that is a reflection of the student's graduate experience, summarizing accomplishments, including past and future research efforts. The student will be expected to present the portfolio in an interview-style assessment to a committee of program faculty at the culmination of the course. NOTE: This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA. THIS COURSE IS 8 WEEKS.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST699 Space Studies Capstone (3 semester hours)

Preparation for the Master of Science in Space Studies Thesis begins on day one of a student's graduate program of study. The theories, research methods, analytical skills, and substantive knowledge obtained through the Space Studies curriculum provide the basis for the thesis project. In this course, instructors guide students through the thesis process. Students are expected to submit all required components of the research process, including a thesis proposal. The thesis proposal must provide a clear description of a contestable question or problem and a proposed method of answering the question or solving the problem. The thesis requires students to present an original argument using proper academic writing conventions including carefully documented primary and/or secondary sources. Guidance on the format of the thesis and proposal are contained in the APUS End of Program Manual.
NOTE: This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA.
THIS COURSE IS 16 WEEKS.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Sports and Health (SPHS)

SPHS500 Statistics for Sports and Health Sciences (3 semester hours)

This course will introduce the student to graphical presentation of data, histograms and confidence intervals for binomial probabilities. One-sample and two-sample t-test as well as regression and correlation with two variables will also be discussed. The student will learn the concept of hypothesis testing and confidence intervals, multivariate regression and correlation, partial correlation coefficients, analysis of variance and covariance, and multiple comparison procedures. The analysis of research data will be emphasized in this course to provide the student with real world examples in the field of Sports and Health Sciences.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHS501 Advanced Exercise and Sport Physiology (3 semester hours)

Designed for learners involved in the fields of health and exercise science, this course surveys and critically evaluates the basic principles of human physiology with direct application to acute and chronic exercise. Particular attention is paid to lifestyle risk factors that can lead to heart disease.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHS502 Motor Learning (3 semester hours)

An evaluation of the physical, physiological, and psychological factors that affect motor skill acquisition, performance, retention, and transfer. With a focus on voluntary movement, topics include nervous system control of movement, sensory and perceptual contributions to motor learning, information processing, optimal conditions for learning motor skills, preferred modes of feedback delivery during learning, and individual variability in motor skill acquisition. Students will apply the principles of motor learning to coaching, fitness, and rehabilitation settings. Additionally, they will analyze motor learning settings and determine adjustments to be made in those settings to foster motor skill acquisition for a variety of populations.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHS503 Nutrition for Sports Performance (3 semester hours)

Nutrition plays an integral part of our daily lives. It becomes even more important for athletes, who push the physical limits of their body. Providing adequate fuel is essential and can make a difference between success and failure. Yet most athletes and coaches lack basic nutrition knowledge important for enhancing strength, speed and endurance. This class will focus on the nutritional needs and requirement of athletes. First, the student will recognize and establish sound nutrition principles and the nutrients that play a role in determining these principles. Nutrients and other food constituents are integrated into the human body. These affect the athlete's metabolism, health, and performance. The student will trace the metabolic fate of dietary components and recognize how each nutrient and/or food constituent affects metabolism, health and performance. Using this knowledge, the student will design several healthy diets that optimize performance. (Prerequisite: **SPHS502**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHS504 Advanced Methods of Strength and Conditioning (3 semester hours)

This course is designed to introduce the student to theoretical and practical concepts of strength exercise assessment, strength exercise interpretation and strength exercise prescription. Current research on strength training and methods is incorporated into the classroom for analysis and application. The student will develop appropriate techniques and methods used to recommend strength exercise prescription and programming for healthy and unhealthy clients. (Prerequisite: **SPHS501**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHS505 Sport Psychology (3 semester hours)

Sport Psychology is the scientific study of how individuals behave in sport and exercise, and the practical application of that knowledge to performance enhancement strategies. Students in this course will investigate human behavior patterns in sports and exercise settings. Human behavior is complex, dynamic, and social. There are no easy answers when you try to determine why people behave in a certain fashion. However, this course will focus on interpreting and applying fundamental behavioral tendencies related to biological and psychological models of personality structure, motivational orientations, psychological interventions, and social dynamics. In addition, students will create useful psychological interventions that demonstrate their ability to distinguish the need for normal sport enhancement strategies from serious psycho/physical behaviors that require other professionally trained experts. Psycho/social relationships to sport performance will be analyzed. Behavior management strategies, modeling, aggression, and group dynamic models will be critiqued as students design philosophies that guide training and intervention strategies.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHS506 Essentials of Human Performance and Exercise Science (3 semester hours)

This course is designed to introduce the student to theoretical and practical concepts of exercise assessment, exercise interpretation and exercise prescription. The student will develop appropriate techniques used to recommend exercise prescription for healthy and unhealthy clients. (Prerequisite: **SPHS501**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHS507 Advanced Biomechanics (3 semester hours)

The purpose of this course is to provide the student with an understanding, appreciation, and ability to analyze human movement using a biomechanics approach. This course will expose the student to the laws and principles governing human motion. Emphasis will be placed on the analysis of exercise and sport movements. Research with applications to a variety of sport, exercise, and clinical settings will also be included to provide the student with knowledge of current topics of interest in the field.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHS508 Current Topics in Exercise Science and Human Performance (3 semester hours)

Contemporary research related to wide variety of areas related exercise science and human performance are discussed and explored in this course. Students discuss relevant issues facing society regarding exercise, fitness, athletic performance, kinematic movement, motor development, and biomechanical analysis. The course challenges students to analyze and synthesize current and relevant topics and offer solutions to benefit exercise science research and related industries. (Prerequisites: **SPHS501** and **SPHS503**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHS509 Optimal Sports Performance (3 semester hours)

This course is designed to provide an understanding of postural assessment and integrated performance profile as it relates to human performance. This course will focus on identifying and correcting musculoskeletal abnormalities and performing integrate performance assessments. The student will develop appropriate techniques used to recommend exercise prescription for individuals post assessments. This course incorporates advanced sports performance assessments and exercise techniques utilizing the Optimum Performance Training Model (OPT Model) and prepares students for the Performance Enhancement Specialist examination offered by the National Academy of Sports Medicine (NASM-PES). (Prerequisite: **SPHS501**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHS510 Ethical and Leadership Principles of Health and Wellness Management (3 semester hours)

This course investigates methods, principles, leadership skills, and ethical decision-making responsibilities of professionals in the field of health and wellness. Readings, interactive tools, discussions, and independent activities provide students opportunities to equip themselves with skills in management, communication, team building, and personal and professional growth. Students apply these skills by taking on ethical and leadership opportunities that shape health and wellness principles and practice. This course provides practical tools they can use to approach leadership roles and ethical decisions that are implicit within health and wellness management. (Prerequisite: **SPHS501**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHS511 Critical Thinking in the Sports and Health Industries (3 semester hours)

Critical Thinking in the Sports and Health Industries course will prepare both Sports Management and Sports and Health Science graduate student to address issues associated with critical thinking in these major areas of study. Students will be afforded the opportunity to begin to compile artifacts and signature assignments related to their field of study of Sports Management or Sports and Health Sciences. The course is intended to provide a foundation from which the student may use the knowledge and practices gained in this course throughout the rest of their graduate program.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHS520 Current Topics in Health and Wellness Management (3 semester hours)

This course appraises contemporary topics, concepts, principles, and theories affecting health and wellness dimensions relative to our culture and global population. Topics include disease treatment and prevention, nutrition, exercise and fitness, stress management, personal safety, and special populations. Students will explore current issues impacting personal health and wellness across society and generate strategies designed for improving quality of life and developing a healthy lifestyle for a widespread population. (Prerequisites: **SPHS501** and **SPHS503**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHS525 Exercise for Chronic Disease: Musculoskeletal Concerns (3 semester hours)

This course will explore the use of exercise as a preventive and restorative modality for individuals with, or at risk for, chronic musculoskeletal concerns. This course will provide a deeper understanding of how to apply exercise physiology, biomechanics, and exercise prescription principles for those in need of remedial exercise programming and will prepare the learner to design and implement these fitness programs. (Prerequisite: **SPHS506**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHS530 Program Design for Health and Wellness Management (3 semester hours)

This course examines administration aspects of health and wellness program design. Students learn to assess, develop, implement, evaluate, and modify health and wellness programs. Strategies for improving muscular strength, endurance, and weight-loss will be critiqued. Program design tactics and appropriate rates of progression will be analyzed for beginners and adult populations. (Prerequisites: **SPHS501** and **SPHS503**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHS535 Exercise for Chronic Disease: Physiological Concerns (3 semester hours)

This course will explore the use of exercise as a preventive and restorative modality for individuals with, or at risk for, chronic physiological and metabolic concerns. This course will provide a deeper understanding of how to apply exercise physiology, biomechanics, and exercise prescription principles for those in need of exercise programming, with particular attention to working with clients with cardiovascular and other metabolic diseases (esp. type 2 diabetes) so that learners can effectively manage many common chronic diseases, particularly in primary and secondary prevention.(Prerequisite: **SPHS525**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHS540 Health and Wellness Coaching and Behavior Change (3 semester hours)

This course examines a range of health related coaching skills including observation, active listening, asking the right questions, and motivating clients to facilitate changes toward health and fitness goals. Students explore coaching strategies for various health and wellness professional settings such as corporate wellness and health promotion, community health organizations, personal training, senior adult, and clients with lifestyle-related diseases. Competencies in health and wellness coaching include building rapport with clients; helping clients identify goals, helping clients identify strategies for action plans geared toward reaching their goals, and building accountability measures to ensure compliance and success. (Prerequisites: **SPHS501** and **SPHS503**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHS697 Sports and Health Sciences Capstone (3 semester hours)

This course requires students to complete a culminating research project based from theories, research methods and analytical skills, and substantive knowledge obtained through their master's curriculum in sports and health sciences. Research options involve concepts and applications covered throughout the student's learning experience in the master's curriculum; including bioenergetics of exercise and training, techniques in exercise, program design and prescription, and administration of testing and assessment of fitness, health, and wellness.
NOTE: This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Sports Management (SPMT)

SPMT502 The Sports Industry (3 semester hours)

This course studies the sports industry across all of its disciplines, functions, economics, leaders, and organizations. It is a macro view of sports as a major component of the modern corporate, social, economic, and recreation world. The industry is studied in detail in many different aspects as it exists in society. The history, contemporary situation, and future outlook of the sports industry are addressed.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT601 History, Culture, and Social Contexts of Sport (3 semester hours)

Students in this course will use analytical techniques to examine the theoretical, historical, social, and cultural aspects of sport. For the historical aspect, they will explore sociological issues over the ages from ancient times through to modern times. Students will discuss how sport and human life intermix in relation to cultural aspects. In addition, several issues of the social context will be identified and discussed with an emphasis on the philosophical, physical, religious, and other contemporary topics in sport.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT602 Collegiate Sports Administration (3 semester hours)

Students in this course will explore principles, techniques, and process related to the management of college athletics. It is important in today's dynamic environment of collegiate athletics that students employ effective leadership and management principles. Through analyzing case studies, students will demonstrate problem solving related to handling athletic personnel and program issues. Studying collegiate athletic administration involves interpreting NCAA® By-laws, including a comparison between division I, II, and III compliance regulations. To ensure readiness for athletic management, students will evaluate the duties of an athletic director and create a strategic plan for an athletic department, including a mission statement and comprehensive budget. Lastly, students will determine the critical steps to getting hired in collegiate athletics. Students will also prepare a portfolio, including an application letter and resume customized for applying for a position in athletic administration at the collegiate level.

NCAA® is a registered trademark of the National Collegiate Athletic Association.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT603 High School Athletic Administration (3 semester hours)

This course is a study of one of the most complex professions in secondary education – high school athletic administration. The topics include leadership and management roles in sports/athletic administration, high school sports finance and budgeting, student-athlete issues, association regulations and guidelines, and other issues focused on the array of sports disciplines, coaches, and programs at the high school level.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT605 Coaching Leadership (3 semester hours)

Students in this course will learn what it takes to be a successful leader in the coaching profession. Leadership involves one or more people influencing others in effort to achieve a common goal; coaching leadership focuses on the playing arena. Students will learn strategies to effectively communicate with their players, fellow coaches, parents, administrators and other constituents who impact their program. Coaches need to be able to think on their feet, make decisions under stressful situations, while always keeping the needs of their players and team foremost in their mind. Motivation, management and creative problem solving are critical to successful coaching leadership. Students will compare and contrast how some of the most successful coaches in the business have created their formulas for success; looking at common themes of successful coaches while also learning the importance of incorporating one's own personality into the process. Students will create a coaching manual that can become their personal coaching bible starting with their coaching philosophy and culminating with their goals and strategies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT606 Techniques in Coaching Strategy (3 semester hours)

Students in this course will use analytical techniques to examine coaching strategies. Methods, practices, and approaches that apply across a number of sports disciplines will be discussed. Students will study several issues related to coaching preparation. Students will research, strategize, and reflect on past, present, and future coaching strategies. Course topics will address coaching philosophy, technique, time management, character, teaching, nutrition, and physical training. Methods for learning will include critical thinking, decision making, and analytical skills necessary to form an effective coach.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT608 Sports Law (3 semester hours)

This course is an introduction to sports-related legal issues and concepts. Its focus is on providing an overview of the major legal issues associated with sports, sports management, and the sports industry. Students will conduct research, read, and write on issues associated with the sports legal industry. Topics include but are not limited to discrimination, legislation, regulation and rights, competition, contract, labor, tort and trademark law, and administrative, antitrust and constitutional law.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT609 Sports Marketing, Promotion, and Public Relations (3 semester hours)

This course focuses on the marketing, promotions, public relations, and communications involved in the multi-billion dollar sports industry. The course provides research, case analysis, and other opportunities to learn of the effective principles, theories, practices, and methods involved with all aspects of sports communications.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT610 Sports Finance (3 semester hours)

The main thrust of this course is the application of principles and practices of financial management, as it applies to organizations in the sport industry. This course seeks to develop the financial skills necessary to gain an understanding of an array of financial concepts that impact sport managers. Students will examine financial strategies related to sport entities and organizations and will be introduced to current economic and financial issues that impact the sport industry. Included in the course are the basics of accounting, budgets and budgeting systems, performance measures creation, and financial statement evaluation for the purpose of cost analysis and planning. Other topics include budget development, funding, capital projects, economic impact, and supply and demand in the sport industry.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT612 Sports Event Management (3 semester hours)

This course provides students with the fundamental knowledge and skills for designing and managing sport and recreation facilities and organizing sport events. Included in the course are topics related to planning for events and tournaments, scheduling of facilities and events, and overall management of events. Students will examine several different types of sporting events from local tournaments to the Olympics. The course will also delineate the factors involved in the planning, design and management of events while examining the social, economic and environmental impacts of sporting events on the host community. Throughout the course students are encouraged to attend and/or volunteer at sporting events to put the course knowledge in to practice.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT613 Sports Entrepreneurship (3 semester hours)

This course focuses on the entrepreneurial opportunities in the sports industry, to include sports management, sports franchise, sports agency, and small sports business management professions and programs. The course focuses heavily on the business plan, financial, and planning issues associated with entrepreneurial and small business ventures. Students will develop their own entrepreneurial sports plan as an independent research project for this course.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT614 Coaching Theory, Methods, and Issues (3 semester hours)

This course focuses on current coaching theories, methods, practices, and outcomes. Students will consider the origin, development, and arguments surrounding the character of American sport. Topics include a study of coaching principles, practical coaching situations, great coaches and their methods, decision making in coaching, coaching ethics, and other contemporary issues in 21st century collegiate and high school coaching. Students are also exposed to the importance of computers and the Internet to today's coaches.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT620 Leadership and Management in Sport (3 semester hours)

This course examines contemporary and productive management principles and concepts used throughout the sports industry and various sport organizations. Through this course, students will learn skills related to creative problem solving and strategic planning, while developing the skills to lead, organize, and delegate in managerial and leadership positions.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT630 Sales and Promotions in Sport (3 semester hours)

This course focuses on the fundamentals roles of developing, activating, and managing sport sponsorship through sales and promotion. Through shared practical examples, this course will view how to generate ticket sales through sport promotion and how to utilize e-commerce as a promotional tool in sports.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT650 Legal Issues in High School Athletic Administration (3 semester hours)

This course examines legal issues and considerations facing interscholastic athletic administrators. Major issues explored in this course include managing risk and liability within an interscholastic athletic department and complying with Title IX. In addition, this course will focus on development of an effective risk management program designed for interscholastic athletics. (Prerequisite: **SPMT603**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT696 Experiential Learning and Practicum Experience in Sports Management (6 semester hours)

This course is designed to provide students experiential learning in the field of sports management. Students will apply knowledge gained throughout the sports management graduate program to a professor-approved practicum site. The practicum consists of 160-180 hours of supervised field work over 16 weeks. Throughout the 16 weeks, students will share their practicum experiences with their instructor and classmates through course dialogue and complete a concluding activity designed to culminate programmatic objectives of their graduate program. The experience will entail a partnership between the student, an outside organization, and a supervising professor who is responsible for directing the intellectual content and outside activities of the practicum. To qualify, the student must identify and obtain approval for an organization/project of interest and select and obtain approval for a workplace mentor prior to registering for the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT697 Sports Management Capstone (3 semester hours)

This course requires students to complete a culminating research project based from theories, research methods and analytical skills, and substantive knowledge obtained through their master's curriculum in sports management. Research options involve concepts and applications covered throughout the student's learning experience in the master's curriculum; including marketing, finance, leadership, sociology, legal considerations, and sociology relative to sports management and the sports industry. NOTE: This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT698 Comprehensive Exam for Sports Management (0 semester hours)

THIS COURSE REQUIRES A PROCTORED EXAM. This comprehensive final examination is for students in the Master of Sciences in Sports Management. IMPORTANT: You must have COMPLETED all other courses in the program and have a GPA of 3.0 in order to register for this course. As a Sports Management student, you must pass this comprehensive exam in order to have your degree conferred. The comprehensive exam must be taken by the course end date or a failing grade will be posted. If you fail your first course attempt to pass the comprehensive exam, you will need to get approval to register for a second attempt of the course and BOTH final course grades will show in your transcript.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT699 Sports Management Practicum and Integration Project (3 semester hours)

The experiential or practical component of the course aims to apply learning in an aspect of interest related to the degree and concentration in Sports Management. The Masters of Science in Sports Management requires students to complete a cumulative hourly requirement of volunteering their services in a specific industry work environment. It is understood to be a supervised practicum which requires approval by APUS before entering into the relationship with the organization. The selection of an organization or site for the practicum must relate to the content of the student's course work and/or concentration. Students will be involved with the experiential learning process through volunteering and completing an Integration process which describes concepts and skills developed through the experience. This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Supply Chain Management (SCMG)

SCMG501 Technology in Supply Chain Management (3 semester hours)

This course is the study of the impact of new technologies and methodologies in implementation of innovations in operational, tactical, and strategic initiatives in supply and demand settings. The impact on application of synchronized performance measurements by introducing technology enabled approaches will be reviewed. The critical role of new technology in reduction of cycle time, meeting the far exceeding customer demand, and creation of an effective and efficient setting will be analyzed. Topics such as computational and visibility capabilities and tracking system will be discussed.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMG502 Global Issues in Supply Chain Management (3 semester hours)

This course is a review of challenges and opportunities that we may encounter in management of a supply and demand chain due to Globalization. The course is intended to highlight stumbling blocks
which prevent seamless integration of operations, sales and marketing, and finance. Topics such as commercial and global risk, risk mitigating techniques, their use, and legal and ethical issues in a global setting will be discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMG503 Sustainable Supply Chain Strategy (3 semester hours)

This course is a study of supply chain management as an indispensable part of a business's sustainability program. It is critical to know the level of environmental, social, and economic impact and viability of your vendors and customers is becoming increasingly common as all industries move towards a more sustainable future. Government pressures are unlikely to be the driver of this change, but you're already seeing corporate pressures on suppliers and vendors. This course will examine the intersection of the components of sustainability and the tools required to achieve optimum balance with corporate profitability, supplier relationships and customer service.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMG604 Managerial Supply Chain Risk Management (3 semester hours)

This course is a study of the integration of organizational objectives with objectives to optimize operational performance and minimize operational vulnerability. This course will delve into understanding the implementation of strategies to manage every day and exceptional risks along the supply chain through continuous risk assessment with the objective of reducing vulnerability and ensuring continuity. Managing supply chain risk utilizes tools to balance risk exposure with supplier relationships and customer service. Topics include risk concepts, risk management strategies, risk resilience, risk appetite, risk response planning, risk compliance and risk governance.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMG605 Case Studies in Supply Chain Management (3 semester hours)

This course is the study of a series of case studies in supply chain management which demonstrate the application of supply chain principles to optimize organizational outcomes and achieve corporate objectives. Supply chain practitioners often state that theory is fine but case studies are better. But blending the two is the best. Supply chains exist throughout commercial and public sectors. Case studies will be offered in both including the US Department of Defense, the world's largest supply chain. Cases will show the global nature of supply chains and will demonstrate its foundations including SCOR processes such as Plan, Source, Make, Deliver, Return and Enable.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMG609 Supply Chain Analytics (3 semester hours)

This course is the study of how data analytics will be used in quantitative and qualitative mode to create actionable intelligence across supply and demand chain. We will discuss the use of analytics in the context of supply chain management in descriptive, Topics such as inferential, and prescriptive modes in sourcing, operations, logistics, marketing, sales, and finance. The modeling aspects of integrated supply chain activities for the purpose of decision support system will be studied.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Transportation and Logistics (TLMT)

TLMT500 History of Transportation (3 semester hours)

This course is designed to provide the graduate student with a study of the major historical events in the transportation industry. Topics include agricultural, industrial, information, interstate, and transtate transportation events and precedents. The course will provide both broad analysis of the industry and specific seminal events in its history.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT501 Transportation Policy and Planning (3 semester hours)

This course demonstrates the 21st century importance of strategic transportation and logistics planning in contributing to corporate profits, customer service enhancements leading to higher sales and a marketing weapon to gain sustainable competitive advantage. The importance of moving information becomes equal to the movement of goods. Managerial perspectives are offered on aligning corporate planning, technology, financial controls and logistics performance measurement. We will also gain an overview on the interaction among stakeholders in the public and private sectors in aligning public policy with global uncertainties.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT502 Comparative Transportation Systems (3 semester hours)

This course is designed to provide students with a solid knowledge of multi-modal transportation systems, the characteristics of individual transportation modes, international differences in transportation management, and transportation economics as they apply to multi-modal transportation management. Topics include comparative analysis of the various modes (motor carriers, railroads, water carriers, air carriers and pipelines), international differences in transportation management, economics of transportation systems, and the role of transportation systems in the modern organization.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT600 National Transportation Management (3 semester hours)

This course aligns transportation management with a comprehensive overview of intermodal transportation and logistics management. We will look at recent trends in the field and its important stakeholders. Business logistics/supply chain will be viewed from managerial perspectives impacting physical distribution, materials management, transportation management, and logistics and supply chain management. The course covers the planning, organizing, and controlling of these activities including sub-activities such as transportation basics, inventory and location strategies.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT601 Transportation Economics (3 semester hours)

The course provides the student with a coherent and integrated framework, based on micro and macro economic principles, for understanding aggregate transportation activity. Issues include: regulation, tariffs, interstate commercial policy, international trade, and transportation exchange rates.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT602 RFID Uses in Logistics (3 semester hours)

The course will teach students how to analyze and advise decision makers in the use of RFID technology compared to the use of bar code tracking systems in logistics and transportation applications. Students will be able to describe the history, rationale and management impacts of why this technology was mandated by the Department of Defense and Walmart in January 2005 to be used on all shipping pallets and containers. Students will classify and explain how different active and passive RFID technology can be used to increase product movement and storage visibility along supply chains. Students will examine and compare how a real-world application of this technology is improving logistics visibility in a military or retail environment. Students will design an implementation plan to incorporate RFID technology as part of a real-world business model. Students will work in a team environment as well as individuals in creating a series of written papers on the current state of the art in using RFID technology to meet the retail or military transportation and logistics needs. Students will conduct an informal survey of military or retail decision makers to learn how to appraise qualitative as well as quantitative data and reports of the use of this technology

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT603 Strategic Intermodal Transportation (3 semester hours)

This course examines the United States and worldwide commercial freight transportation systems, with an emphasis on international intermodal surface transportation. Modal/intermodal economic and operating characteristics will be surveyed, along with cost, pricing, and regulation of transportation services. In addition, students will be introduced to electronic data interchange (EDI) in commercial transportation and the use of computer software applications in transportation management—all with the goal of providing students with an in-depth understanding of the principles of intermodal transportation systems, a grasp of transportation terminology, and the interrelationship between the Defense Transportation System (DTS) and the global commercial transportation infrastructure.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT605 Cargo Security Management (3 semester hours)

This course is designed to address the multi-billion dollar annual loss globally due to cargo theft. Topics include: asset protection in the transportation industry, analysis of freight system vulnerability, development of an effective cargo security plan, review of industry standards, and best practices in the industry.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT607 Port and Terminal Operations (3 semester hours)

An in-depth look at the workings of maritime port operations and intermodal transportation systems. Course topics include the governance and administration of ports and marine terminals, the role of regulatory agencies, navigation and safety, port operations and development including the process to fund and carry out dredging projects. Cargo handling for containers and dry and liquid bulk operations will be discussed along with a look at productivity of terminal operations. Comparisons will be made with other regions of the world. A review of major steamship lines, their trading patterns and future trends among the industry will be covered along with technological advances in vessels and terminal operating equipment. A strong emphasis will be placed on current issues in port policy.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT611 Global Logistics Management (3 semester hours)

This course provides an understanding of leading-edge logistics management, as well as principles and techniques available to achieve optimum operational efficiencies. Topics include: development of logistics, logistical economic significance, the importance of logistics management in transportation operations, application of supply chain management concepts, role of information systems, elements and management of global logistics, distinctions and characteristics of international versus domestic logistics, global transportation options, traffic management, global transportation decision-making, management of inventory costs, measurement and control of integrated logistics systems, and development of effective world-wide logistics strategies.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT698 Comprehensive Exam in Transportation and Logistics (0 semester hours)

This course is the comprehensive final examination for students in the Master of Arts in Transportation and Logistics Management program. IMPORTANT: You must have COMPLETED all other courses in the program and have a GPA of 3.0 in order to register for this course. As a Transportation and Logistics Management student, you must pass this comprehensive exam in order to have your degree conferred. The comprehensive exam must be taken by the course end date or a failing grade will be posted. If you fail your first course attempt to pass the comprehensive exam, you will need to get approval to register for a second attempt of the course and BOTH final course grades will show in your transcript.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Course Materials

Students are encouraged to review the Course Materials section of the Student Handbook for detailed policy information.

Through the AMU Book Grant, eBooks are provided at no cost to students enrolled in courses for academic credit. However, this grant does not cover required software or laboratory equipment. Students registered in courses requiring these materials are responsible for purchasing them independently. For complete information regarding course materials, please refer to the Student Handbook and the AMU Course Materials Guide.

Note: Federal regulations establish specific conditions under which Title IV Federal Student Aid (FSA) recipients with credit balances may access funds to obtain required course materials. Eligible students will be notified and provided with instructions to access these resources prior to the seventh day of their course. For full details, please review the Course Materials Allowance policy in the Student Handbook.

1. Please note that some degree programs specify science courses to fulfill general education requirements, while others allow for a choice of any science course from the list above.

Philosophy of General Education

The university's general education curriculum provides a broad-based, integrative, and practical learning experience meant to prepare students for responsible civic and cultural engagement in a global context. By completing general education coursework, you will have gained skills and knowledge in arts, humanities, literature, communication, civics, political science, social science, mathematics and applied reasoning, and natural sciences. This level of knowledge and skill helps our students to become effective leaders, creative thinkers, responsible citizens, and ethical decision makers.

The general education categories span six broad areas of study that encompass existing disciplines frequently found in liberal education, while providing the flexibility to explore topics of interest relevant to your degree program. Completion of the courses listed below fulfills the university's general education requirements within all associate and bachelor's degree programs, but your program may have unique requirements. We encourage you to carefully review the course requirements in your academic plan.

Arts & Humanities (6 semester hours)

Courses in the arts, humanities, and literature provide students with the opportunity to analyze and interpret artifacts within the appropriate historical, cultural, economic, social, or religious contexts. Students gain an appreciation for the myriad ways art, music, literature, cinema, theater, media, sports, and other artistic and creative forms of community and self-expression contribute to the production and reception of ideas, and how these shape all aspects of society both within and across cultural boundaries.

Competency: Explain the value and contribution of the humanities in contemporary society.

Communication: Written, Oral, and Multimedia (9 semester hours)

Communication includes interpersonal, intercultural, and professional exchanges of information, including interactive, social, public and mass exchanges. Categories of communication include digital, oral, and written, as well as engaging in multi-modal forms of communication mediated by technology (new media), popular social media, and traditional and non-traditional public relations.

Competency: Be conversant in one or more forms of communication (digital, written, and oral).

Code	Title	Semester Hours

HIST270	History of Science	3
STEM185	The History and Context of STEM	3

Mathematics and Applied Reasoning (3 semester hours)

Focuses on the development of quantitative and qualitative logical literacy. Students will prepare for advanced study by practicing analytical concepts and problem solving techniques. This category focuses on the conceptual and theoretical tools students need to make decisions based on the evaluation of data, and to gather, organize, analyze, and draw inferences from information.

Competency: Utilize qualitative and quantitative analysis in addition to scientific reasoning to problem-solve effectively.

Code	Title	Semester Hours
ACCT100	Accounting I	3
ACCT105	Accounting for Non Accounting Majors	3

MATH110	College Algebra	3
MATH111	College Trigonometry	3
MATH112	Pre-Calculus	3
MATH120	Introduction to Statistics	3
MATH125	Math for Liberal Arts Majors	3
MATH225	Calculus	3

Natural Sciences (3 - 4 semester hours)

Provides students with the ability to use the inquiry-based process of science to describe, evaluate, and consider alternative explanations for scientific findings. Students will apply key concepts, facts, and theories about living systems and the physical universe, and use describe the scientific method and the quantitative tools of science. Students will relate that information to problems of wide global and societal concern.

Competency: Describe the inquiry-based scientific process to formulate hypotheses, make observations, design experiments, collect and analyze data, and reach conclusions.

The Richard G. Trefry Library

The Trefry Library is an electronic academic library serving American Military University (AMU) students, faculty, staff, and alumni. It is comprised of thousands of online resources including licensed article/scholarly journal databases, ebooks, and video collections chosen specifically to support the educational programs at AMU. Our team of professional librarians is available 365 days a year at librarian@apus.edu to assist with research strategies, website navigation, and identifying and utilizing appropriate credible and scholarly information resources.

Students can access the library directly from the classroom or ecampus. Faculty access is provided through the classroom and the Faculty Connect portal. As a benefit to our AMU graduates, lifelong access to many of the library's resources is available through their ecampus page.

The Trefry Library offers an array of online resources and self-help tools like library video tutorials to assist with searching techniques and navigating databases, librarian created guides designed to help direct scholarly research in hundreds of disciplines, math tutorial videos, streaming film & music, the Pronunciator language lab, and information literacy resources. We offer information on how to access live one-on-one tutoring on a wide variety of subjects, and our writing reference resources provide supplemental writing support for AMU writers across disciplines.

The mission of the Richard G. Trefry Library is to provide quality resources to support learning across all disciplines. Our goal is to assist students in the development of information literacy skills relevant to the digital era to promote research, discovery, and critical thinking. We offer research and reference guidance, using methods of communication that fit the lifestyle of today’s students. We support the university’s mission by providing virtual access to American Military University students and faculty worldwide.

Examinations and Proctors

AMU professors use examinations as one method of evaluating student performance during a course. Examinations may be proctored or unproctored, and professors can set any exam so that a proctor is required. Proctors are individuals who ensure the integrity of the examination process by monitoring student work during the exam and verifying that the student complied with exam instructions regarding the use of outside materials, doing their own work, etc. If a proctor is required, the student must locate a suitable proctor who will be able to give the student access to a computer for 3-4 hours and who has an email address. Proctors must meet certain qualifications, as described in the Examinations and Proctor section of the Student Handbook.

Prior to exam day, the professor will email a password to your proctor. On the day of your exam, your proctor will provide the password and monitor you as you take your final exam online.

Student Learning Outcomes and Assessment

At American Military University (AMU), assessment is a cornerstone of our commitment to academic excellence and student success. We view assessment not as a compliance exercise, but as a vital process that informs continuous improvement and advances our institutional mission. By systematically analyzing evidence of student learning, we ensure that our programs foster the knowledge, skills, and dispositions needed for graduates to thrive in a dynamic global landscape.

Our approach is guided by broad learning categories originally adopted from Lumina Foundation's Degree Qualifications Profile (DQP), which remain central to our vision of student achievement. These categories specified below provide a framework for understanding and enhancing learning across all levels.

Assessment occurs at multiple levels: academic programs, general education, and institution-wide initiatives. We use data-driven insights to strengthen curricula, refine teaching practices, and support student development. This ongoing cycle of evaluation and improvement aligns with our mission and reflects our dedication to preparing students for meaningful careers, responsible citizenship, and lifelong learning.

Institutional Student Learning Outcomes

AMU students are expected to demonstrate proficiency in the following learning areas upon completion of any academic program in any discipline:

- **Specialized/Industry Knowledge** addresses what students in any specialization, major field of study, or career pathway should demonstrate with respect to that specialization.
- **Broad and Integrative Knowledge** asks students to bring together learning from industry knowledge, experience, and/or different fields of study to discover and explore the implications of concepts and questions that bridge essential areas of learning/practice as well as integrate their knowledge to advance solutions in support of a humane, just, and democratic society.
- **Intellectual/Critical Thinking Skills** includes analytic inquiry, use of information resources, engaging diverse perspectives, ethical reasoning, quantitative fluency and communicative fluency.
- **Applied and Collaborative Learning** emphasizes what students can do with what they know. Students are asked to demonstrate their learning by addressing unscripted problems in scholarly inquiry, at work and in other settings outside the classroom, individually and in teams.
- **Civic/Democratic and Global Learning** recognizes higher education's responsibilities both to democracy and the global community. Students engage in integration of their knowledge and skills by addressing and responding to civic, social, environmental, economic, equity, inclusion, and social justice challenges at local, national, and global levels.
- **Digital Information Literacy** is concerned with responsibly, safely, ethically, effectively and efficiently accessing, evaluating, collaborating, organizing, and distributing information in the digital world. It includes using tools, technologies, techniques, and best practices, to develop responsible and safe consumers and communicators of information in the digital information world to support research and to solve real world problems.

Program Level Student Learning Outcomes

AMU students are expected to achieve student learning outcomes at the **degree program level** upon graduation from a particular degree program. Student learning at the degree program level is assessed through coursework, end-of-program experiences, and surveys to ensure the student has achieved proficiency in the knowledge and skills expected of a professional in the respective discipline. Signature assessments and standardized tests are examples of measures used to evaluate the effectiveness of students achieving desired learning outcomes at the degree program level.

Course Level Student Learning Outcomes

AMU students are expected to achieve **course level** student learning outcomes upon completion of a course. Course developed exams, simulations, case studies, discussion boards, collaborative research projects, and writing assignments are examples of measures used to evaluate the effectiveness of students achieving desired learning outcomes at the course level.

Assessment of Student Learning Outcomes

AMU is committed to student learning assessment and its impact on the quality of teaching and learning. The learning outcomes assessment cycle at AMU:

- Enables the University to evaluate the effectiveness of its academic courses and programs in terms of achieving the desired learning outcomes for its students.
- Is used for continuous improvement at all levels of the institution.
- Ensures that students are prepared for success in work and citizenship in a diverse, global society.
- Protects the privacy of its students including ensuring the confidentiality of student work submitted for assessment as well as the feedback resulting from assessment activities.

Through this comprehensive approach to assessment, AMU ensures that learning remains purposeful, measurable, and aligned with our mission.

Admission and Registration

The university's admissions team is comprised of dedicated staff members who work to support you from the first time you request information about the university through completion of your first week of courses here. The team provides you with guidance on enrolling in a program, understanding policies and procedures, and also acts as your liaison with financial aid, student services, and other departments at the university. If you have any questions, an admissions team member is ready to help!

Need to speak with a team member?

The Admissions Team is available Monday - Thursday from 8 a.m. to 8 p.m., Fridays from 8 a.m. to 4:30 p. m., and Saturdays from 11 a.m. to 3 p.m. All hours are Eastern Time (ET). You can reach us by phone at 877-379-8773 or email at info@apus.edu.

Application and Registration Process

To begin your enrollment process, you will need to review our policies and procedures and declare your academic goal during completion of the online application for admission. Upon completion of the application, a member of the Admissions Team will work with you throughout the enrollment process.

Admissions Criteria and Status

Undergraduate Admissions Criteria

- You must have at least a high school diploma or equivalent (i.e. GED, international high school equivalent, etc.) to apply to the University.
- Please be prepared to submit a legible color copy of your valid government-issued photo ID (civilian students) or government issued JST or CCAF transcript (military students) upon request.
- You may be required to fulfill additional admission requirements based on the program you select during the admission application.

- If you are a transfer student, you will be asked to submit your transcripts from any other schools where you earned college-level academic credit.

Master's Level Admissions Criteria

- You are required to possess and provide documentation showing a bachelor's degree or higher from a regionally or nationally accredited institution or the international equivalent.
- Please be prepared to submit a legible color copy of your valid government-issued photo ID (civilian students) or government issued JST or CCAF transcript (military students) upon request.
- You may be required to fulfill additional admission requirements based on the program you select during the admission application.

Admission Status

You will be admitted to the University after you have submitted the online application for admission and verified that you meet any additional admission requirements. After you are admitted to the University, a member of the Admissions Team will be available to walk you through all the follow-up steps and discuss any remaining documentation that will be required.

Doctoral Program Admissions

The Doctoral Admission Representative engages with you, answers your questions about completing the application, and ensures that the necessary documentation is complete.

Admissions Requirements

The programs' public web pages provide the definitive list of admissions requirements. The list below provides an outline for reference.

- *Prior Education and Professional Practice:* MA/MS in the discipline, or closely-related discipline, plus 3-5 years work experience in the field, or closely-related field.
- *Curriculum Vitae (CV) or Resume:* This biographical statement document includes work history, professional accomplishments, service to the profession, and, as appropriate, teaching and research experience.
- *Grade Point Average (GPA):* A master's degree with a minimum GPA of 3.0 (or equivalent) is required.
- *Photo ID*: Submit a legible color copy of your valid government-issued photo ID.
- *Three Doctoral Reference Forms:* Students will be prompted to enter the contact information for at least three academic or professional reference providers.
- *Official Transcripts:* All official transcripts verifying the award of a master's degree must be sent to AMU from the issuing institution and arrive in sealed envelopes or by official electronic copy. No faxed or unsealed transcripts sent by you will be accepted, even for preliminary review purposes. Once received, all admission documents are a permanent part of your student record and the property of AMU. They cannot be returned to you.
- *Unofficial Transcript:* Applicants must provide an unofficial or official copy of other graduate-level work as well as an undergraduate transcript, showing a conferred BA/BS degree.
- *Doctoral Admissions Essay*: Please follow the writing prompt provided to you.
- *Admissions Interview*: Applicants may be interviewed by the Doctoral Admissions Committee.
- *English Proficiency*: If you are from a country whose native language is not English (regardless of current residence), you must provide proof of English proficiency, in one of the following ways:
  - Transcripts from a conferred bachelor's degree or higher in residence at a regionally accredited college/university in the United States.
  - Transcripts from at least 12 semester hours of graduate coursework with a GPA of 3.0 (out of 4.0) in residence at a regionally-accredited institution in the United States.

- Standardized Test Scores. Please review the Admission of International Students section of the Student Handbook for more information.
- Nonrefundable Application Fee of $100 (You may request a fee waiver due to financial hardship through the Doctoral Admissions Representative).
- Applications will only be evaluated once the admissions package is complete.

Categories of Admission

1. Admission to Doctoral Program: This category is used if you satisfy all requirements. There is no provisional admission status due to Federal Student Aid requirements.
2. There is no direct Post-Baccalaureate entry. You must have already earned a master's degree in the discipline or a closely related discipline, and have 3-5 years of experience in the field or a closely related field.

Course Registration

You may register for courses upon acceptance to the University after all of your admission requirements have been met. If you are using Federal Student Aid as your payment type, you will need to select an academic year when you register for courses.

If you have credits to transfer from another university, you may wish to wait until after you have submitted your transfer credit evaluation form and the evaluation is complete before you register for courses.

Master's programs typically have a first required course. During course registration, you may be presented with multiple sessions per course.

Tuition, Fees, and Financing

We understand that choosing where to start or continue your college education comes with some level of uncertainty, which is why we offer easy-to-understand tuition rates, low-cost fees with no surprises, and plenty of help with financial aid. As you'll quickly discover, our competitive tuition rates make earning your degree here not only a smart investment in your future, but a responsible financial decision.

Tuition and Fees

American Military University operates nearly exclusively through tuition revenue and provides affordable education. The following is the current tuition/fee schedule:

Undergraduate Tuition and Fees

Tuition Rates per Credit Hour

- Undergraduate: $360 | Preferred Military Rate of $250[1]
- Audit: $100

8- and 16-Week Sessions	2 semester hours	3 semester hours	4 semester hours
Undergraduate Academic Credit	$720/$500[1]	$1080/$750[1]	$1440/$1000[1]
Audit	$200	$300	$400

Veteran Grant: All veterans and family members (parents, spouses, legal partners, siblings, and dependents) are eligible to receive a 10% Veteran Grant on standard undergraduate-level courses. Course grants cannot be combined with any other special rates, promotions, or grants and only one can be applied per course.

Opportunity Grant: All non-Military or Veteran affiliated students are eligible to receive a 10% Opportunity Grant on standard undergraduate and master's-level courses. Course grants cannot be combined with any other special rates, promotions, or grants and only one can be applied per course.

Student Fees

Admission Fee	$0
Registration Fee	$0
Late Registration Fee	$50
Average Undergraduate Course Materials (per course)	$0
Undergraduate Prior Learning Assessment Fee	$250
Completion Fee: Certificate	$25
Graduation Fee for Associate Degrees	$250
Graduation Fee for Bachelor Degrees	$350
Transcripts (each):	
Official electronic[2]	$15
Official paper[2]	$20

Masters and Graduate Certificate Tuition and Fees

Tuition Rates per Credit Hour

- Master's Degree and Graduate Certificate: $470 | Preferred Military Rate of $250[1]
- Audit: $100

8- and 16-Week Sessions	2 semester hours	3 semester hours	4 semester hours
Master's Degree and Graduate Certificate Academic Credit	N/A	$1410/$750[1]	$1880/$1000[1]
Audit	$200	$300	$400

Veteran Grant: All veterans and family members (parents, spouses, legal partners, siblings, and dependents) are eligible to receive a 15% Veteran Grant on standard master's-level courses. Course grants cannot be combined with any other special rates, promotions, or grants and only one can be applied per course.

Opportunity Grant: All non-Military or Veteran affiliated students are eligible to receive a 10% Opportunity Grant on standard undergraduate and master's-level courses. Course grants cannot be combined with any other special rates, promotions, or grants and only one can be applied per course.

Student Fees

Admission Fee	$0
Registration Fee	$0
Late Registration Fee	$50
Graduate Technology Fee (per course)	$85
Average Graduate Course Materials (per course) - Active-duty military students	$50
Average Graduate Course Materials (per course)	$100

Graduate Prior Learning Assessment Fee	$325
Completion Fee: Certificate	$25
Graduate Comprehensive Exam (0 credit hour courses only)	$250
Graduation Fee for Master Degrees	$350
Transcripts (each):	
Official electronic[2]	$15
Official paper[2]	$20

Doctoral Tuition and Fees

Tuition

Tuition Rates per Credit Hour

- Doctoral Program Rate: $863[3]

8- and 16-week Sessions

1 semester hour	$863
2 semester hours	$1726
3 semester hours	$2589

Student Fees

Admission Fee	$0
Application Fee	$100
Registration Fee	$0
Late Registration Fee	$50
Doctoral Course Materials[4]	$0
Graduation Application Fee	$250
Transcripts (each):	
Official electronic[2]	$15
Official paper[5]	$20

Cost of Attendance

Learn more about AMU's cost components and full cost of attendance.

1. **Preferred Military Rate**: All U.S. active-duty servicemembers, National Guard members, Reservists, and military families, (parents, spouses, legal partners, siblings, and dependents) are eligible for the Preferred Military Rate of $250/credit for undergraduate and master's-level courses. The Preferred Military Rate, which is applied automatically, supersedes all other university grants and special rates, and cannot be combined with any other special promotions. Please note that a technology fee applies to master's-level courses.
2. Plus applicable state and local sales tax

3. Tuition rate is effective starting with the May 2025 courses.
4. Covered by tuition
5. Plus applicable state and local sales tax

Satisfactory Academic Progress (SAP)

Satisfactory Academic Progress (SAP) indicates the successful completion of coursework towards a degree or certificate.

- According to federal regulations, students who fail to make SAP in their education program will lose their eligibility to receive Federal Student Aid (FSA) funds (i.e., financial aid).
- SAP rules apply to all students applying for financial aid, including those who have not previously received financial aid.
- AMU evaluates a student's SAP at the end of each payment period (i.e., semester). If AMU determines that a student has failed to meet the University's SAP standards, the student may be placed on a "financial aid warning" semester during which they may retain their FSA eligibility. This determination is made at AMU's discretion.
  - Students are only eligible for financial aid warning status if the following criteria is met:
    - The student had no "unearned F's" in the previous semester.
    - The student was previously meeting SAP without a warning or appeal in the most recent completed semester or was in the first payment period of their program when they failed to meet SAP.
- If AMU determines that a student has failed to meet the University's SAP standards and determines that a financial aid warning is inappropriate, the student will lose their FSA eligibility. Students who lose their FSA eligibility may appeal the loss provided there are extenuating circumstances that inhibited their academic progress (e.g., student illness or injury, death of a relative.)
- Students who submit an appeal must provide:
  - A statement that explains the extenuating circumstances that contributed to the student's failure to meet SAP and what has changed in the student's situation that will allow the student to either meet SAP at the next evaluation or to meet the requirements of an academic plan that would lead to meeting SAP in the future.
  - Documentation that confirms the extenuating circumstances and date(s) during which the events occurred.
- If an appeal is approved, the student is placed on "financial aid probation" and their FSA eligibility is reinstated for one semester. The student must meet SAP at the next evaluation or meet the requirements of the academic plan in order to remain FSA eligible for future semesters.
- If a student's appeal is unsuccessful, the student may take classes to demonstrate improvement for a future appeal, but they cannot receive FSA to pay for those classes. A student cannot meet SAP simply by paying for their classes on their own but must earn the necessary GPA or completion rate.
- To otherwise restore FSA eligibility, students must achieve the GPA and credit hour completion targets as defined in the policy.

SAP is evaluated based on grades posted at the end of each semester (defined as a 16-week period of academic study).

- The criteria used to measure Satisfactory Academic Progress include:
  - Cumulative grade point average (qualitative)
  - Credit hour completion/Program Pace (quantitative)
- The requirements of each criterion must be met and are described in detail below.

Cumulative Grade Point Average (CGPA)

- Cumulative GPA is the qualitative measure of SAP, meaning that it looks at the quality of the grades that each student earns in their courses.
- CGPA is initially calculated after 6 undergraduate credits, or 6 graduate credits are completed at AMU. Evaluation thereafter occurs at the end of each semester according to the table below.
- Only credits completed at AMU with a final grade of A through F are included in the CGPA calculation.
- If a failed course is retaken, the later grade will replace the failed grade and factor into the CGPA.
- To meet SAP requirements, students must maintain a CGPA that meets or exceeds our minimum as shown in the chart below.

- Students who fail to meet CGPA requirements will be determined ineligible for FSA.

SAP Criteria on Cumulative GPA (CGPA) and Credits Completed

	Total Credits Completed (including transferred credits[1])	Minimum CGPA Required for Financial Aid
Undergraduate Students	6-12	1.50
	13+	2.00
Masters and Graduate Students	6-8	2.50
	9+	3.00
RN to MSN	6-8	2.50
	9+	3.00
Doctoral	6+	3.00

Credit Hour Completion and Program Pace

Credit hour completion is the quantitative measure of SAP, meaning that students must complete a certain percentage of courses toward certificate or degree completion in order to maintain FSA eligibility. Each academic program within AMU has a defined number of credit hours required for completion. To maintain SAP, students must achieve a minimum percentage of credits completed (i.e., earned) versus credits attempted.

- A student must complete their program within 150% of the published length of the program. For example, a student in a two-year program must be on track to complete their program within three years.
- Any course in which the student remains beyond Week One (add/drop) will count towards attempted credits regardless of the grade received.
- Undergraduate courses with a final undergraduate grade of A through D- will be counted towards credits attempted and completed.
- Graduate courses with a final grade of A through C will be counted towards credits attempted and completed.
- Final grades that fall below the minimums (D- for undergraduates and C for graduates) are not counted as credits completed but will be considered credits attempted.
- Courses with grades of incomplete (“I”) will not be considered attempted until a final grade is earned by the student, or the Registrar or instructor converts the “I” grade to an “F”.
- Doctoral courses with a final grade of Satisfactory (“S”) will be counted towards credits attempted and completed.
- Doctoral courses with a final grade of Unsatisfactory (“U”) are not counted as credits completed but will be considered credits attempted.
- Courses from which a student has withdrawn (“W”) will be counted towards credits attempted.
- Courses dropped within the add/drop period will not be counted towards credits attempted.
- Course retakes: All attempted courses are factored into the credit hour completion percentage.
- Remedial courses do not count towards attempted credits; however, AMU does not offer remedial courses.
- Repeated courses will count as attempted courses.
- For students who change programs, credits that apply to the new program will be counted in credit hour completion and program pace.

Note: All students are required to log into each of their courses during Week One and submit an academic activity. Students who do not submit this assignment during the first week of class will be administratively dropped from any courses for which this assignment has not been completed.

SAP Criteria Based on Credits Attempted versus Credits Completed

	Credits Attempted	Credits Completed %

Undergraduate Students	6-12	50%
	13-24	60%
	25-36	65%
	37+	67%
Masters and Graduate Students	6-9	50%
	10-18	60%
	19+	67%
RN to MSN	6-9	50%
	10-18	60%
	19+	67%
Doctoral	6-9	67%
	10+	75%

Credits transferred from another college or university are included in determining the credits completed percentage for the quantitative measure - completed hours divided by attempted hours. Likewise, the total of AMU and transfer credits that a student has from another college or university will be factored into determining where they fall on the chart above.

Financial Aid Appeal Process

If AMU determines that a student has not met SAP, the student will be placed on “Financial Aid Denial” status, meaning they have lost their FSA eligibility. Any student placed on “Financial Aid Denial” status may appeal their denial due to extenuating circumstances (i.e., situations that have had a negative effect on the student’s ability to successfully meet SAP standards, such as student illness or injury, death of a relative, or other special circumstances).

An electronic SAP Appeal Form is made available to students who are not meeting SAP through their ecampus. This form may be found in the ecampus FINANCE CENTER under the subsection for “Satisfactory Academic Progress”. Students who complete an appeal are required to provide supporting documentation. A hard copy SAP appeal form is also available, as needed.

Appeals must include a written statement submitted to AMU Financial Aid Services that addresses the extenuating circumstances that contributed to the student’s failure to meet SAP and what has changed in the student’s situation that will allow the student to either meet SAP at the next evaluation or to meet the requirements of an academic plan that would lead to meeting SAP in the future. The student also must provide documentation to support the existence of the extenuating circumstances. The deadline to submit the completed appeal form, with supporting documentation, to Financial Aid Services is the Thursday of the start week of the semester after the student has been informed of their “Financial Aid Denial” status. No appeals will be accepted for after that date. An appeals Committee will consider all appeals. Students will be notified by email of the committee’s decision. All decisions made by the committee are final.

Loss of Financial Aid Eligibility

Students failing to meet or maintain SAP during any period of evaluation will be placed on "Financial Aid Denial” status and will lose FSA eligibility. Students who receive veterans’ education benefits will also lose eligibility for that funding. Students will be notified of their “Financial Aid Denial” status by AMU financial aid staff. To regain FSA eligibility, students must successfully appeal the determination or otherwise satisfy all SAP requirements.

Re-establishing Financial Aid Eligibility

Students placed on “Financial Aid Denial” status may reestablish their FSA eligibility by attending and earning the GPA and semester hour requirements of the SAP policy without the use of FSA funding. Once students meet SAP requirements, AMU will package and disburse eligible aid for which they have applied.

Financial Aid "Warning" Period

The school may reinstate eligibility for aid for one payment period and may do so without a student appeal. This “financial aid warning” status may be granted only to students who were making SAP in the prior payment period in which they were enrolled or who were in the first payment period of their program when they failed to meet SAP. Students who qualify for the “warning” period will be notified by email.

- Students do not qualify for financial aid warning status if there are any “unearned F’s” in last semester
- Typically, a financial aid warning is granted only once. AMU in its discretion may permit a second warning status if the student meets SAP standards at the next evaluation, then subsequently fails to meet SAP.

Doctoral Satisfactory Academic Progress (SAP)

Satisfactory Academic Progress (SAP) indicates the successful completion of coursework towards a degree or certificate.

- According to federal regulations, students who fail to make SAP in their education program will lose their eligibility to receive Federal Student Aid (FSA) funds (i.e., financial aid).
- SAP rules apply to all students applying for financial aid, including those who have not previously received financial aid.
- AMU evaluates a student’s SAP at the end of each payment period (i.e., semester). If AMU determines that a student has failed to meet the University’s SAP standards, the student may be placed on a “financial aid warning” semester during which they may retain their FSA eligibility. This determination is made at AMU’s discretion.
  - Students are only eligible for financial aid warning status if the following criteria is met:
    - The student had no “unearned F’s” in the previous semester.
    - The student was previously meeting SAP without a warning or appeal in the most recent completed semester or was in the first payment period of their program when they failed to meet SAP.
- If AMU determines that a student has failed to meet the University’s SAP standards and determines that a financial aid warning is inappropriate, the student will lose their FSA eligibility. Students who lose their FSA eligibility may appeal the loss provided there are extenuating circumstances that inhibited their academic progress (e.g., student illness or injury, death of a relative.)
- Students who submit an appeal must provide:
  - A statement that explains the extenuating circumstances that contributed to the student’s failure to meet SAP and what has changed in the student’s situation that will allow the student to either meet SAP at the next evaluation or to meet the requirements of an academic plan that would lead to meeting SAP in the future.
  - Documentation that confirms the extenuating circumstances and date(s) during which the events occurred.
- If an appeal is approved, the student is placed on “financial aid probation” and their FSA eligibility is reinstated for one semester. The student must meet SAP at the next evaluation or meet the requirements of the academic plan in order to remain FSA eligible for future semesters.
- If a student’s appeal is unsuccessful, the student may take classes to demonstrate improvement for a future appeal, but they cannot receive FSA to pay for those classes. A student cannot meet SAP simply by paying for their classes on their own but must earn the necessary GPA or completion rate.
- To otherwise restore FSA eligibility, students must achieve the GPA and credit hour completion targets as defined in the policy.

SAP is evaluated based on grades posted at the end of each semester (defined as a 16-week period of academic study).

- The criteria used to measure Satisfactory Academic Progress include:
  - Cumulative grade point average (qualitative)
  - Credit hour completion/Program Pace (quantitative)
- The requirements of each criterion must be met and are described in detail below.

Cumulative Grade Point Average (CGPA)

- Cumulative GPA is the qualitative measure of SAP, meaning that it looks at the quality of the grades that each student earns in their courses.

- CGPA is initially calculated after 6 undergraduate credits, or 6 graduate credits are completed at AMU. Evaluation thereafter occurs at the end of each semester according to the table below.
- Only credits completed at AMU with a final grade of A through F are included in the CGPA calculation.
- If a failed course is retaken, the later grade will replace the failed grade and factor into the CGPA.
- To meet SAP requirements, students must maintain a CGPA that meets or exceeds our minimum as shown in the chart below.
- Students who fail to meet CGPA requirements will be determined ineligible for FSA.

SAP Criteria on Cumulative GPA (CGPA) and Credits Completed

	Total Credits Completed (including transferred credits[1])	Minimum CGPA Required for Financial Aid
Doctoral	6+	3.00

Credit Hour Completion and Program Pace

Credit hour completion is the quantitative measure of SAP, meaning that students must complete a certain percentage of courses toward certificate or degree completion in order to maintain FSA eligibility. Each academic program within AMU has a defined number of credit hours required for completion. To maintain SAP, students must achieve a minimum percentage of credits completed (i.e., earned) versus credits attempted.

- A student must complete their program within 150% of the published length of the program. For example, a student in a two-year program must be on track to complete their program within three years.
- Any course in which the student remains beyond Week One (add/drop) will count towards attempted credits regardless of the grade received.
- Undergraduate courses with a final undergraduate grade of A through D- will be counted towards credits attempted and completed.
- Graduate courses with a final grade of A through C will be counted towards credits attempted and completed.
- Final grades that fall below the minimums (D- for undergraduates and C for graduates) are not counted as credits completed but will be considered credits attempted.
- Courses with grades of incomplete (“I”) will not be considered attempted until a final grade is earned by the student, or the Registrar or instructor converts the “I” grade to an “F”.
- Doctoral courses with a final grade of Satisfactory (“S”) will be counted towards credits attempted and completed.
- Doctoral courses with a final grade of Unsatisfactory (“U”) are not counted as credits completed but will be considered credits attempted.
- Courses from which a student has withdrawn (“W”) will be counted towards credits attempted.
- Courses dropped within the add/drop period will not be counted towards credits attempted.
- Course retakes: All attempted courses are factored into the credit hour completion percentage.
- Remedial courses do not count towards attempted credits; however, AMU does not offer remedial courses.
- Repeated courses will count as attempted courses.
- For students who change programs, credits that apply to the new program will be counted in credit hour completion and program pace.

Note: All students are required to log into each of their courses during Week One and submit an academic activity. Students who do not submit this assignment during the first week of class will be administratively dropped from any courses for which this assignment has not been completed.

SAP Criteria Based on Credits Attempted versus Credits Completed

	Credits Attempted	Credits Completed %
Doctoral	6-9	67%
	10+	75%

Credits transferred from another college or university are included in determining the credits completed percentage for the quantitative measure - completed hours divided by attempted hours. Likewise, the total of AMU and transfer credits that a student has from another

college or university will be factored into determining where they fall on the chart above.

Financial Aid Appeal Process

If AMU determines that a student has not met SAP, the student will be placed on “Financial Aid Denial” status, meaning they have lost their FSA eligibility. Any student placed on “Financial Aid Denial” status may appeal their denial due to extenuating circumstances (i.e., situations that have had a negative effect on the student’s ability to successfully meet SAP standards, such as student illness or injury, death of a relative, or other special circumstances).

An electronic SAP Appeal Form is made available to students who are not meeting SAP through their ecampus. This form may be found in the ecampus FINANCE CENTER under the subsection for “Satisfactory Academic Progress”. Students who complete an appeal are required to provide supporting documentation. A hard copy SAP appeal form is also available, as needed.

Appeals must include a written statement submitted to AMU's Financial Aid Services that addresses the extenuating circumstances that contributed to the student’s failure to meet SAP and what has changed in the student’s situation that will allow the student to either meet SAP at the next evaluation or to meet the requirements of an academic plan that would lead to meeting SAP in the future. The student also must provide documentation to support the existence of the extenuating circumstances. The deadline to submit the completed appeal form, with supporting documentation, to Financial Aid Services is the Thursday of the start week of the semester after the student has been informed of their “Financial Aid Denial” status. No appeals will be accepted for after that date. An appeals Committee will consider all appeals. Students will be notified by email of the committee’s decision. All decisions made by the committee are final.

Loss of Financial Aid Eligibility

Students failing to meet or maintain SAP during any period of evaluation will be placed on "Financial Aid Denial” status and will lose FSA eligibility. Students who receive veterans’ education benefits will also lose eligibility for that funding. Students will be notified of their “Financial Aid Denial” status by AMU's financial aid staff. To regain FSA eligibility, students must successfully appeal the determination or otherwise satisfy all SAP requirements.

Re-establishing Financial Aid Eligibility

Students placed on “Financial Aid Denial” status may reestablish their FSA eligibility by attending and earning the GPA and semester hour requirements of the SAP policy without the use of FSA funding. Once students meet SAP requirements, AMU will package and disburse eligible aid for which they have applied.

Financial Aid "Warning" Period

The school may reinstate eligibility for aid for one payment period and may do so without a student appeal. This “financial aid warning” status may be granted only to students who were making SAP in the prior payment period in which they were enrolled or who were in the first payment period of their program when they failed to meet SAP. Students who qualify for the “warning” period will be notified by email.

- Students do not qualify for financial aid warning status if there are any “unearned F’s” in last semester
- Typically, a financial aid warning is granted only once. AMU in its discretion may permit a second warning status if the student meets SAP standards at the next evaluation, then subsequently fails to meet SAP.

Drop/Withdrawal/Extension and Refund Policies

Students registered for a course are expected to complete all scheduled requirements (as listed in the classroom’s course syllabus) within the allotted timeframe: 8 weeks, or 16 weeks. If a student changes their mind about taking a course, or circumstances prevent them from completing a course for which they are registered, they may consider requesting a course drop, withdrawal or extension. Students should be aware that any change to their enrollment status due to dropping, being administratively dropped, or withdrawing from any course may impact their financial aid.

Withdrawal Counseling

Students experiencing difficulties that may prevent them from completing their coursework on time should discuss their situation with their instructor. In extreme situations, they may wish to consult the Student Handbook to determine whether they should submit a formal request for a course extension or withdraw from the course entirely. Procedures for both actions are explained in the Student Handbook. Students who elect to submit a request for a course extension forfeit the option to withdraw from the course; but in most cases, a course extension is preferable because it allows time for students to complete the course and advance towards their academic goals. In addition, a course withdrawal will reduce the number of credit hours being taken during the semester and may have a negative impact on students' status as a full- time or part-time student, academic progress, and eligibility for some forms of financial aid. Required forms are available in the student eCampus.

Drop/Withdrawal Policies and Refunds

Course Drop

If a student decides to drop from a course, the online Drop/Withdrawal Course Form must be submitted by the posted deadline that occurs before the first week of the course has ended. AMU will not consider appeals for a drop after the first week has ended based on late book arrival as it is the student's responsibility to drop the course on time.

There are student funding approval and payment deadlines for each course. The deadlines are posted on the Academic Calendar. Students who do have not their funding approved (i.e.; a confirmed Federal Student Aid package or TA approval) or have not submitted payment by the deadline will automatically be dropped from courses.

During Week One students are required to log into all courses and submit a minimum 250-word introductory forum post for each course. Students who do not submit this forum post during the first week of class will be automatically dropped from any courses in which the forum post has not been completed. A course drop will reduce the number of credit hours being taken during the semester and may have a negative impact on student's status as a full-time or part-time student, academic progress, and eligibility for some forms of financial aid.

Course Withdrawal

If a student earning academic credit submits an online Drop/Withdrawal Course Form after the first week of the course, then they will be withdrawn and receive a grade of "W" as long as the withdrawal was requested during the allowed timeframe. A “W” grade does not carry a grade point value and has no effect on the student's cumulative AMU GPA. However, a withdrawn course is considered an attempted course and will be factored into the quantitative measure of Satisfactory Academic Progress (SAP) for financial aid.

Students taking courses as Audit (not seeking academic credit) will receive a "W" if they withdraw at any time during the course. Students taking Audit courses are not eligible for any tuition refund after week 1 of their course. Course Withdrawals may be requested after the start of the second week until the beginning of the last week of the course. The date of withdrawal will be the date the request is received.

Tuition Refunds

Tuition refunds are given for courses taken for academic credit under the guidelines listed below.

Institutional Refunds are processed as follows:

- After a course begins, refunds will be based on the weekly course schedule.
- Please find the appropriate session length on the Refund Schedule below to determine the refund.

Students should allow 30 days for the processing of tuition refunds.

Tuition Refund Schedules

The institution refund schedules below apply unless a specific state refund policy applies for a student and the state policy is more beneficial to the student than the below schedules.

2-Week Course - Tuition Refund Schedule

Withdrawal Request Date	Tuition Refund Percentage
Before or During Week 1	100%
During Week 2	No Refund

8-Week Course - Tuition Refund Schedule

Withdrawal Request Date	Tuition Refund Percentage
Before or During Week 1	100%
During Week 2	75%
During Weeks 3 and 4	50%
During Weeks 5 through 8	No Refund

16-Week Course - Tuition Refund Schedule

Withdrawal Request Date	Tuition Refund Percentage
Before or During Weeks 1 or 2	100%
During Weeks 3 and 4	75%
During Weeks 5 through 8	50%
During Weeks 9 through 16	No Refund

Military TA Refund Schedule

2-Week Course - Tuition Refund Schedule

Withdrawal Request Date	Tuition Refund Percentage
Before or During Week 1	100%
During Week 2	No Refund

8-Week Course - Tuition Refund Schedule

Withdrawal Request Date	Tuition Refund Percentage
Before or During Week 1	100%
During Week 2	75%
During Weeks 3 and 4	50%
During Week 5	40%
During Weeks 6 through 8	No Refund

16-Week Course - Tuition Refund Schedule

Withdrawal Request Date	Tuition Refund Percentage
Before or During Weeks 1 or 2	100%
During Weeks 3 and 4	75%
During Weeks 5 through 8	50%

During Weeks 9 and 10	40%
During Weeks 11 through 16	No Refund

The Department of Defense requires the University to return any unearned Military Tuition Assistance (TA) funds to the Department should a service member withdraw from a course that was paid for using TA. If a service member withdraws from any course on or before the 60% completion date (during week 5 for an 8-week course and during week 9/10 for a 16-week course), a prorated refund will be issued back to the Department for the TA funds that were provided. The schedules above determine the prorated amount of TA funds refunded to the Department based on the date of service member's withdrawal from a course. For example, if a service member withdraws from a course at the 60% mark (during week 5 for an 8-week course and during week 9/10 for a 16-week course), 40% of TA funds used for the course will be returned to the Department. In instances when a service member stops attending due to a documented military service obligation, the University will work with the affected service member to identify solutions that may not result in a student debt to the University for the portion of TA funds returned to the Department.

Financial Assistance

American Military University (AMU) offers several educational financing options including Federal Student Aid (FSA), grants and loans, alternative (private) loans, and an automatic debit payment plan. Students who intend to use FSA are encouraged to complete the Free Application for Federal Student Aid (FAFSA) as soon as possible, establish an AMU Federal Student Aid (FSA) Academic Year online and enter the online Financial Aid Office five weeks (or at least 10 days) prior to the start of the semester.

Additionally, AMU is authorized to accept funds from the U.S. Department of Defense Tuition Assistance (TA) programs as well as the Veterans Administration GI Bill® programs (including REAP and Veteran Readiness And Employment (VR&E), formerly Vocational Rehabilitation).

Students employed in the private sector should consult with their Human Resources department regarding employer-based tuition assistance programs. We also encourage you to research grants from the state in which you currently reside. To find out more about grants in your home state, please contact our Financial Aid Office.

Automatic Debit Plan (ADP)

American Military University offers an Automatic Debit Plan (ADP) to enable students to spread tuition payments over time by having them automatically charged to a credit card on a preset schedule. The amount and number of payments is proportional to the length of the course and ensures course tuition is paid prior to the end of the academic period. Students in 16-week courses make four ADP payments. Students in 8-week courses make two ADP payments. To be eligible for the ADP plan, any student must be registered for credit-bearing courses. Audit students are not eligible for ADP.

ADP Schedules

16-Week ADP Schedule

Upon Registration	1/4 tuition due + technology fee
15th of Session's First Month	1/4 of tuition due (i.e., for May 5th course, payment due 5/15/XX)
15th of Session's Second Month	1/4 of tuition due (i.e., for May 5th course, payment due 6/15/XX)
15th of Session's Third Month	1/4 of tuition due (i.e., for May 5th course, payment due 7/15/XX)

8-Week ADP Schedule

Upon Registration	1/2 tuition due + technology fee
15th of Session's First Month	1/2 tuition due (i.e., for May 5th course, final 1/2 due 5/15/XX)

ADP Late Payments

If a credit card is declined, the student will be notified to immediately contact stuaccounts@apus.edu and make the payment. If payment is not received, the student's account is placed on “balance due hold”.

Veterans Benefits Information

Applying for Benefits

Students interested in applying for VA educational benefits (GI Bill®) should complete an application for benefits on the VA website. Please note, the VA School Certifying Officials (SCO) at American Military University (AMU) cannot determine eligibility for VA education benefits. The Department of Veterans Affairs may approve or deny benefits, based on the information provided on the application.

When completing an application for benefits, please use the following information for the school:

American Military University
111 West Congress Street
Charles Town, WV 25414

Once the VA has completed review of the student's application, they will mail a Certificate of Eligibility (COE), outlining the student's entitlement information, which will need to be provided to AMU. Students may upload a copy of their COE securely through the Secure Document Upload portal using their ecampus login credentials, or email it to VAQuestions@apus.edu.

VA Enrollment Information

Enrollment certifications cannot be submitted to the VA until AMU receives a copy of the student's Certificate of Eligibility (COE) and they have successfully enrolled in a class. Once the student's paperwork is processed and they have started classes, the VA School Certifying Official (SCO) will electronically submit an enrollment certification to the VA. All VA enrollment certifications will be submitted after the session add/drop period, at which time the student will receive an email from the VA as verification.

Enrollment Verification

The VA requires that any students using GI Bill® benefits verify their enrollment at the end of every month after their courses begin. Students can verify their enrollment online, via text message, via email, or by calling the Education Call Center (ECC) at 888-442-4551. For more information regarding monthly enrollment verification, students can visit the VA website.

Using Tuition Assistance and GI Bill® Benefits

Federal law prohibits active-duty service members from receiving VA education benefits for the same course for which they receive Military Tuition Assistance (TA). If a student is using Chapter 33 benefits, TA must be applied to the registration first, and any remaining tuition can be submitted to the VA under Chapter 33 benefits. Active-duty service members who are eligible for Chapter 30 benefits can use non-active-duty TA in conjunction with VA education benefits. Students who are using Chapter 30 benefits and who are approved for active-duty TA may use Tuition Assistance Top-Up if the course cost is not fully funding by TA.

Students who wish to apply for TA Top-Up should contact VAQuestions@apus.edu to request a TA Top-Up Request Form. AMU will submit an enrollment certification to the VA to include the amount of tuition and fees not funded by TA. **Please note**, the use of Top-Up will exhaust a portion of the student's GI Bill® benefits. For more information regarding the Top-Up option, please visit the VA website.

VA Payments

Students using benefits under Chapters 30, 35, and 1606 will receive monthly payments from the VA based on their monthly enrollment status. Payments are sent from the VA after the student has verified their monthly attendance. AMU requires students using Chapters 30,

35, and 1606 to make payment arrangements with the university prior to the start of courses. An enrollment certification **will not** be submitted to the VA until payment arrangements have been finalized.

Tuition and fees for Chapter 33 are paid directly to AMU. If a student is not receiving the 100% benefit rate, payment arrangements for the remaining amount will need to be made to the university prior to course access being granted. Current VA payment rates may be viewed on the VA website.

The following information pertains to students with a primary payment type of Post 9/11 GI Bill® or Veteran Readiness and Employment (VR&E - Chapter 31):

The university permits any student using benefits under the Post 9/11 GI Bill® (Chapter 33) or Veteran Readiness and Employment (VR&E - Chapter 31) to attend or participate in their program of study when the individual provides a Certificate of Eligibility (COE) or Purchase Order (PO) for entitlement to educational assistance ending on the earlier of the following dates: (1) The date on which payment from the VA is made to the university; and (2) 90 days after the date the university certified tuition and fees following the receipt of the COE or PO.

If the VA has not made payment within 90 days of AMU submitting an enrollment certification, (1) AMU will not impose any penalties on students, including the assessment of late fees, the denial of access to courses, library resources, or other student services; and (2) AMU will not require that a covered student borrow additional funds because of the student's inability to meet their financial obligations to AMU due to delayed VA payment. If, however, AMU is notified by the VA that a student has exhausted VA entitlements or is not eligible for veterans' education benefits, the student will be responsible for tuition and applicable fees, and AMU collection policies will apply.

Basic Allowance for Housing (BAH)

Post 9/11 GI Bill® students (other than those on active duty) will receive a monthly housing allowance (BAH) for online courses, which is equal to half of the national average for BAH. Students **must** be enrolled at a rate of pursuit greater than half time (.51%) to receive this benefit. The housing allowance is pro-rated based off the student's enrollment status, percentage of eligibility, and dates of course enrollments. Current VA payment rates may be viewed on the VA website.

Using VA Benefits at Multiple Institutions

The VA requires students to declare an institution at which they will receive a degree or certification. VA education benefits cannot be used at multiple institutions without the declaration of a primary or "parent" school and subsequent secondary or "guest" school. For more information regarding using benefits at AMU and another institution, please contact VAQuestions@apus.edu.

VA Consent to Enrollments Submitted

When a student selects a VA payment option at the time of registration, they are consenting that they wish to have their enrollment for that particular course(s) submitted to the VA on their behalf. Students who register selecting a payment option other than VA will be prompted to provide consent at the time of registration to have the course(s) submitted to the VA on their behalf. Students who register prior to submitting required VA documents to AMU may be required to complete a Veterans Benefits Certification Request Form to identify courses or terms they would like to have submitted to the VA.

Change of Academic Program

When a student using VA education benefits changes their academic program with AMU, the VA will be notified of the change in academic pursuit. A credit evaluation will be completed by AMU for the new program and any credits that are applicable towards the new program of study will be applied. When registering for courses under the new program, students must provide consent for AMU to submit an enrollment certification to the VA on their behalf. If a student changes their program mid-term, they should avoid enrolling in courses under their new program until the term in which they are enrolled ends. The VA will not pay for any course(s) where there is an overlap with programs.

Yellow Ribbon Program

The Yellow Ribbon Program is an agreement between the VA and participating institutions to cover all, or a portion of tuition and fees charged after a student has met or exceeded the yearly tuition cap. As a participating university in the Post 9/11 GI Bill® Yellow Ribbon Program, AMU agrees to make additional funds available for a qualifying student's education program without an additional charge to their GI Bill® entitlement.

It is important that students designate themselves as an active-duty service member or veteran when completing the university's admission application. Current students are encouraged to check their contact information (Updating Contact Information on File with the University) to be sure it shows their current military status and update if necessary.

Students should visit the VA Benefits website to determine if they may be eligible for this benefit. Eligible students must complete a Yellow Ribbon Application Form for courses for which they are using Post 9/11 GI Bill® funding. Students may contact VAQuestions@apus.edu for questions about this program.

Course Drops/Withdrawals

AMU is required to report changes in enrollment to the VA. If a student drops or withdraws from a course(s), an amended enrollment certification will be sent to the VA within 30 days of the change in enrollment. A reduction or termination of enrolled credit hours could result in:

- A student debt with the VA for BAH and books/supplies if they are using the Post 9/11 GI Bill®;
- A student debt with the VA for tuition and fees if they are using the Montgomery GI Bill®

Under the Post 9/11 GI Bill®, tuition and fee debts will be issued to the school if a student withdraws from a course(s) after the add/drop period. The VA will request repayment of tuition and fees and will send a debt letter to AMU. If the VA debt letter requests school repayment that exceeds the institutional refund policy, students may be assigned a debt to the school. For more information regarding GI Bill® debts, to include ways to prevent a debt from occurring, please visit the VA website.

Mitigating Circumstances

Mitigating circumstances are circumstances beyond the student's control that prevent the student from continuing in school or that cause the student to reduce credits. The VA requires schools to determine any potential mitigating circumstances. If mitigating circumstances cannot be validated, the VA may request repayment of BAH, books/supplies, or tuition and fees, as of the first date of the term. View more information on mitigating circumstances.

Rounding Out

The practice of "rounding out" provides eligible GI Bill® students who are in their last term with the option to take additional classes to bring their course load to full-time status and receive up to full-time benefit payments or the maximum allowable monthly housing allowance. Classes that have been previously completed cannot be used to round out the student's course load. Students may contact VAQuestions@apus.edu for more information about this program.

Graduations

When a student using VA education benefits has successfully completed the requirements for their program of study and has officially conferred from the program of study, AMU will report the student's graduation to the VA via electronic certification. Students using Chapter 33 benefits and students using the Chapter 30 benefits who are on active duty may have the mandatory graduation fee accessed by AMU paid for by the VA as long as their GI Bill® benefits were used for their last course required to complete their program of study.

Course Extensions

If a student is granted a course extension from their professor, they will **not** receive VA education benefits during the extension period. The VA will automatically discontinue benefits on the day after their original term ending date. Benefits will not start until a new course has been enrolled in and an enrollment certification has been sent to the VA. Submission of a course extension for VA education benefits will likely result in an adjustment to the student's rate of pursuit and an overpayment which will require future repayment.

Unsatisfactory Academic Progress, Conduct and Attendance

VA requires AMU to report when students using GI Bill® benefits are not meeting the institution's academic standards. When AMU is made aware of a student who is no longer meeting academic standards, notification will be electronically reported to the VA.

Excessive Credits

Students who are using VA education benefits may not register for courses that are not applicable to their current program of study. Any course that is deemed not applicable to the student's current program of study will be considered an excessive credit and an enrollment certification for the course will not be submitted to the VA. If a previously submitted enrollment results in an excessive credit, the enrollment must be terminated. The resulting termination will likely result in a reduction in tuition and fees, BAH and/or books and supplies payment for the course/term and may require repayment of this debt.

Prior Credits

The VA requires that all prior credit must be evaluated by AMU prior to a student's initial enrollment. Students must identify any prior credit that has been earned. Additionally, a Joint Services Transcript (JST) or Community College of the Air Force (CCAF) transcript must be received by AMU for all students who will be using VA education benefits for any courses. Students who are currently having prior credits evaluated are strongly encouraged to register only for courses for which they know they will not receive prior credit. If prior credit is later given for a course a student is currently taking using VA education benefits, AMU must terminate the enrollment certification with the VA, as this would constitute an excessive credit. Terminations of enrollment will likely result in a reduction in tuition and fees, BAH and/or books and supplies payment for the course for which a prior credit was awarded.

Courses for Transfer Programs

Students who are enrolled in an Undergraduate Courses for Transfer program at AMU are restricted by VA policy on which courses can be submitted under VA education benefits. A student must be below a junior in academic standing. **Please note**, the junior status also includes any credits previously taken at other institutions. Only general education courses can be submitted to the VA while a student has an undeclared program, unless a valid Parent School Letter is on file stating the course(s) taken at AMU will transfer to the students primary or "parent school" school. Pre-requisite courses and courses which apply to a CCAF degree may also be approved for submission to the VA.

Tutorial Assistance

Tutorial assistance is available to help students pay for tutoring necessary to advance their education if they are receiving VA educational benefits at the half-time or greater rate of pursuit and have a deficiency in a subject, making tutoring necessary. For more information on VA Tutorial Assistance, please visit the VA website.

Enrollment Status Definitions & Requirements for VA Benefits

AMU offers courses in an 8-week and 16-week formats. Courses start the first Monday of each month at AMU. All VA enrollments are based on a student's monthly enrollment status. Overlapping course starts may result in differing enrollment statuses than those below.

Course Load and Student Status for VA Benefits

Student status for VA education benefits is based on monthly course load. The chart below applies to VA benefit requirements for full, three quarter, or half-time benefit levels.

Session of Courses	Monthly Course Load	Student Status	Rate of Pursuit [1] [2]
Master's Level: 8-Week Courses	Session of Courses	Monthly Course Load	Student Status
	4+ Credit Hours	Full-time	1.00
	3 Credit Hours	Three-quarter time	.75
Master's Level: 16-Week Courses	Session of Courses	Monthly Course Load	Student Status
	9+ Credit Hours	Full-time	1.00
	6 Credit Hours	Three-quarter time	.75
	3 Credit Hours	Half-time	.38
Undergraduate: 8-Week Courses	Session of Courses	Monthly Course Load	Student Status
	6+ Credit Hours	Full-time	1.00
	5 Credit Hours	Three-quarter time	.83
	4 Credit Hours	Three-quarter time	.67
	3 Credit Hours	Half-time	.56
	2 Credit Hours	Less than Half-time	.38
Undergraduate: 16-Week Courses	Session of Courses	Monthly Course Load	Student Status
	12+ Credit Hours	Full-time	1.00
	9 Credit Hours	Three-quarter time	.75
	6 Credit Hours	Half-time	.50
	4 Credit Hours	Less than Half-time	.33
	3 Credit Hours	Less than Half-time	.25

Doctoral Student Enrollment Status for VA Benefits

Doctoral: 16-Week Courses

Credit Hours per 16-Week Term	Student Status
4+ credit hours or enrolled in dissertation course (DOCT899)	Credit Hours per 16-Week TermFull-time
1 to 2 credit hours	Credit Hours per 16-Week TermHalf-time

Doctoral: 8-Week Courses

Credit Hours per 8-Week Term	Student Status
4+ credit hours or enrolled in dissertation course (DOCT899)	Credit Hours per 8-Week TermFull-time

3 credit hours	Credit Hours per 8-Week TermThree-quarter time
1 to 2 credit hours	Credit Hours per 8-Week TermHalf-time

Please note: The above charts do not apply to Federal Student Aid (FSA). If a student is applying for Federal Student Aid, there are different standards by which enrollment is measured. Please refer to the Enrollment Status Definitions & Requirements for FSA.

American Public University part of American Public University System

American Public University System's Information Technology Building

Message from the President

Today's fast-changing world has placed increased demands on employees to reskill, upskill, and adapt. AI continues to impact the workplace and is forcing organizations to change how they approach work. This has also influenced how higher education institutions should teach.

With this unprecedented change in mind American Public University is offering several new, career-relevant concentrations and courses, while also reimagining many that already exist. We are creating a comprehensive ecosystem that spans the entire student journey - from admissions to advising, plus course content and co-curricular activities.

This integrated approach is designed to elevate our students' "signature skills" - Digital Literacy, Critical Thinking, and Growth Mindset. The result? Our graduates are equipped to thrive. For example, every single course in our Dr. Wallace E. Boston Business School now includes Artificial Intelligence.

Students can register for an exciting new degree program, four new concentrations, and high-demand coursework. One new program, the Master of Science in Computer Science through our School of Science, Technology, Engineering and Mathematics (STEM), reflects the growing importance of advanced computing with AI skills

The four new concentrations are: Quantum Computing (within the Bachelor of Science in Computer Science); Robotics and Autonomous Systems (within the Bachelor of Engineering in Electrical Engineering); Blockchain and Digital Currency (within the Bachelor of Science in Information Technology); and Climate Change and Resilience (within the Bachelor of Science in Environmental Science).

We have also expanded course content thanks to a ground-breaking licensing agreement with the Massachusetts Institute of Technology's Computer Science and Artificial Intelligence Laboratory (MIT CSAIL). A Machine Learning in Business course is now available through our STEM School.

These exciting changes come are part of our three-year initiative we call "global digital journey" – which doubles down on our commitment to student-centric learning.

By prioritizing the cultivation of essential skills, embracing technology, and fostering a culture of innovation, we are creating a model that not only prepares students for success but also empowers them to shape an exciting future.

Founded in 1991 by a visionary retired Marine Corps officer who saw an innovative way to offer high-quality and affordable education to U.S. servicemembers, we have transformed into an innovative, global institution serving a wide-ranging population of nearly 90,000 students through American Military University and American Public University.

We pride ourselves on digital learning for real life. We are proud to be a leading provider of affordable, career-relevant, and accessible online education to learners of all backgrounds.

As the No. 1 provider of higher education to the U.S. military and veterans*, we offer over 200 online degree and certificate programs at all degree levels, including doctoral programs. Today, we have over 166,000 alumni from more than 80 countries, as well as all 50 states territories.

Our University has been recognized for our innovative approach to online learning by the prestigious Online Learning Consortium (OLC) on several occasions for best practices** and was named Institution of the Year by the Council of College and Military Educators (CCME) in 2024. Our accredited University, designed for working professionals, is in the top 22% for students' return on educational investment, compared to 4,396 colleges and universities nationwide, according to the Georgetown University Center on Education and the Workforce (2025).***

We strive to keep our tuition affordable so that a high-quality education remains within reach for all, including underserved populations and first-generation learners.

What makes us different?

We are future focused, and purpose driven. Check out our "Hubs of Expertise" webpage to see how we're powering experiential learning while leveraging our strengths.

Above all, we provide outstanding programs, dynamic student support, and robust career services, all designed to help prepare you for whenever needed. Our comprehensive student support includes several digital student services that enable:

- Access to 24/7 mental health support via apps and instant messaging (TalkCampus),
- Personalized career services at no additional cost for our students and alumni through our Career Services team (careerservices@apus.edu),
- An AI-powered resume-building platform (Hiration), for no additional cost.
- Peer mentoring, career development, and networking at no cost (PeopleGrove).

Our nearly 1,800 full- and part-time faculty members are forward-thinking scholar-practitioners who bring best practices and deep expertise into the classroom, whether in cybersecurity, artificial intelligence, supply chain logistics, and business management, among other fields. Our faculty includes accomplished executives in government, business, and non-profit organizations.

Our learners are highly motivated and often balancing school with family and their careers. As a student, you'll quickly discover a supportive and empowering community of faculty, staff, and fellow scholars who help create an enriching and engaging classroom experience and help you build a professional network.

I invite you to be a part of our vibrant community. Find out how our university can help you prepare for tomorrow's challenges.

Nuno Fernandes
President

*Based on FY 2019 Department of Defense tuition assistance data, as reported by Military Times, 2020, and Veterans Administration student enrollment data as of 2023.

**APUS has been honored with the online Learning Consortium's Gomory Award for Quality Online Education and is a five-time recipient of the consortium's Effective Practice Award.

***Ranking based on 20-year net present value (NPV).

Mission, Vision, and Core Values

Mission Statement

American Public University's mission is to provide high quality higher education with emphasis on educating the nation's military and public service communities by offering respected, relevant, accessible, affordable, and student-focused online programs that prepare them for service and leadership in a diverse, global society.

Vision

American Public University seeks to advance social, economic and environmental well-being through the transformative power of education with:

- Dynamic, engaging, quality learning experiences
- Best-in-class student interface
- Diverse and career relevant degree programs
- Communities of lifelong learners and practice in selected disciplines
- Evaluation of transfer credit and competency-based learning
- Affordability relative to public institutions
- Strategic partnerships with key stakeholders; and,
- Thought leadership that contributes to effective change in higher education

Core Values

American Public University is guided in fulfilling its mission by these shared principles and core values:

- **Accessibility:** The University provides educational access to a diverse community of traditional and non-traditional learners in an environment that supports a lifetime of learning and freedom of inquiry and expression.
- **Innovation:** The University implements imaginative and forward-thinking solutions to its changing environmental and student needs.
- **Integrity:** The University holds itself accountable for conducting operations in an ethical manner and practices fairness, honesty, and objectivity.
- **Learning:** The University fosters an environment of knowledge and understanding that promotes a life of learning.
- **Quality:** The University is committed to high standards of distinction, excellence and continuous improvement in all aspects of its evolving operations.

History

The American Public University System traces its history to June 11, 1991 with the establishment of American Military University (AMU) in Virginia. Visionary retired Marine Corps Major James P. Etter founded AMU as a graduate school of military studies for the purpose of providing military officers an opportunity to earn an advanced degree to better prepare them for success.

AMU offered all programs exclusively through distance learning. At that time, it was one of the first American degree-granting institutions operating exclusively at a distance. This method was adopted to accommodate the special needs of military students who moved often and served under uncertain conditions associated with training, exercises, and extended deployments. Distance learning enabled these students the flexibility and accessibility to continue their studies under these demanding conditions with an institution that followed them through mail, e-mail, phone, and fax.

The University began operations and first accepted students in January 1993 with 18 graduate students registering for 22 courses in Land, Naval, or Air Warfare. AMU's curriculum was gradually expanded to include related disciplines such as Unconventional Warfare, Civil War Studies, Intelligence, Defense Management, and National Security Studies.

In June 1995, AMU achieved initial accreditation with the Accrediting Commission of the Distance Education and Training Council (DETC). With this national accreditation, AMU students became eligible for Department of Defense Tuition Assistance Programs, the Veterans Administration Entitlement Programs, and federal and corporate tuition reimbursement benefits.

In January 1996, AMU introduced its undergraduate program with three initial areas of study: Military History, Military Management, and Intelligence Studies. These programs were intended to provide military personnel an opportunity to earn a relevant baccalaureate degree. Later, AMU began offering an Associate of Arts degree in General Studies to fulfill the needs of service members seeking a two-year degree. The University continued to expand its curriculum in response to the needs of its students and the military. Accordingly, the University introduced programs such as Criminal Justice, Management, International Relations, Homeland Security, Security Management, Transportation and Logistics Management, Sports Management, Emergency and Disaster Management, and, later, a full range of liberal arts programs to meet the diverse interests and aspirations of a growing student body. With these new degree programs, AMU began attracting students across public service, including law enforcement, fire and rescue, emergency planning, government, and defense contractors.

In 1998, AMU began transitioning its programs and services online to leverage the accessibility of online electronic classrooms, administrative services, and learning support facilities. At this time, AMU also outsourced its bookstore and textbook fulfillment services to an industry leader and began developing its proprietary student information system, Partnership At a Distance, or PAD. This system enabled students to apply for admission, complete online orientation, register for courses, check degree progress, and apply for graduation from the convenience of their home or office, with constant access to these online services.

In 2002, AMU expanded into the American Public University System and American Public University (APU) was established to serve the educational needs of the public service community. Adopting the slogan of "Educating Those Who Serve", the APUS Mission expanded "to serve the nation's military and public service community with superior, relevant, and affordable distance learning programs which prepare them for leadership and service in a diverse, global society".

In 2007, the American Public University System mission evolved to better define its charge: “to educate the nation’s military and public service communities by providing respected, relevant, affordable, and student-focused online programs, which prepare them for service and leadership in a diverse, global society”.

American Public University System relocated headquarters Charles Town, West Virginia in 2003, and in 2006 earned accreditation from the Higher Learning Commission (HLC), an institutional accrediting agency recognized by the U.S. Department of Education and the Council for Higher Education Accreditation.

American Public University System is a wholly-owned subsidiary of American Public Education, Inc. (NAS:APEI) which, in November 2007, went public with an initial public offering.

Leadership

American Public University is led by a team of experienced higher education and industry professionals who are committed to advancing our mission and serving our students. Our leadership provides strategic direction and oversight to ensure academic quality, student support, and responsible stewardship of university resources. The individuals listed below guide the University’s priorities and operations in support of accessible, career-relevant online education for military, public service, and civilian learners.

Executive Leadership Team

- Nuno Fernandes – President
- Dr. Elizabeth Johnson – Provost
- Erika Orris – Senior Vice President, Operations
- Maria Guerrero – Vice President, Finance
- Lindsey Larson – Vice President & Chief of Staff, Strategic Initiatives, Student and Alumni Affairs
- Mauricia Blackwell – Vice President, Human Resources

Academic Leadership Team

- Caroline Simpson – Associate Provost, Academic Operations
- Dr. Mitchell Colver – Associate Provost, Engagement & Retention
- Dr. Jeremi Bauer – Associate Provost, Assessment & Dean, Dr. Wallace E. Boston School of Business
- Dr. Brian Freeland – Dean, School of Health Sciences and Dean, School of Science, Technology, Engineering & Math
- Dr. Juliette Rouge – Dean, School of Security and Global Studies
- Dr. Nicholas Wernicki – Dean, School of Arts, Humanities & Education

Operations Leadership Team

- Gregory Hill – Vice President, Enrollment Management
- Carolyn Todaro – Vice President of Student Success
- Travis Durepo – Vice President, Military Operations and Workforce Strategy
- Jill Beck – Associate Vice President, Financial Aid Advising

Strategic Partnerships

- Eric Morris – Vice President, Strategic Partnerships

Military Relations

- Dan Roby – Vice President, Military Relations

Policies

- Early Course Access
- Grading Policies
- Repeat Coursework
- Residential Credit Policy
- Student Code of Conduct
- Student Rights and Responsibilities

Early Course Access

Accessing a course 3 days before the start date allows for one weekday (Friday) where the student can reach University services and resources during normal business hours in addition to a full weekend to prepare for courses. Providing access to a course prior to its start date equips students with the opportunity to gain insight in a course, feel more comfortable with the assignments and materials, and to make informed decisions on their goals and academic journey.

Grading Policies

The American Public University (APU) grading system is provided in the following chart. Additional information regarding the posting of grades and the petitioning of grades is available in the Student Handbook.

Grade	Quality Points	Description
A	4.0	All: Very high quality, clearly above average work
A-	3.67	
B+	3.33	
B	3.0	Undergraduate: Above average | Master's: Expected performance level | Doctoral: Accepted performance level Minimum passing grade for NURS498
B-	2.67	Master's: Minimum passing grade for End of Program requirements | Doctoral: Below Average
C+	2.33	
C	2.0	
C-	1.67	Undergraduate: Below Average | Master's: Failing
D+	1.33	Undergraduate: Unsatisfactory | Master's: Failing
D	1.0	Undergraduate: Unsatisfactory | Master's: Failing
D-	.67	Undergraduate: Unsatisfactory | Master's: Failing
F	0.0	All: Failing
P	NONE	All: Pass
PD	None	Master's Comprehensive Exam Only: Pass with Distinction*
Pass	3.0	Master's Capstone
Fail	None	Master's Comprehensive Exam or Capstone

I	None	All: Incomplete
DP	None	All: Dropped
W	None	All: Withdrawn
WP	None	All: Withdrawn Passing
WF	None	All: Withdrawn Failing
X	None	Audit grade: No Academic Credit awarded
TC	None	Undergraduate and Master's: Transfer Credit
PLA	None	Undergraduate and Master's: Credit from review of Prior Learning Experience
R	None	Course is no longer counted in APU GPA as it was retaken. However, the previous grade would still be counted by third parties, such as the federal government for Financial Aid eligibility and by the military for calculating a GPA for TA eligibility.
S	None	Undergraduate and Master's: Satisfactory - No Academic Credit awarded | Doctoral: Satisfactory progress during dissertation course
U	None	Undergraduate and Master's: Unsatisfactory - No Academic Credit awarded | Doctoral: Unsatisfactory progress during dissertation course

*Excluding the Master of Public Health comprehensive exam

Repeat Coursework

Retaking a Passed Course

American Public University (APU) allows the opportunity for all undergraduate, master's, and graduate certificate students to retake a passed course, limited to one retake per passed course. The new grade, regardless of whether it is lower than the first attempt, will replace the previous grade earned in the student's GPA. The previous grade will show as "R" on the student's transcript. Students should contact Academic Advising at advising@apus.edu to make the retake request for passed courses. Please note that not all funding sources will pay for the student's second passed retake, so students should check with their funding source before registration.

Retaking a Failed Course

Students are eligible for a one-time course retake for a failing grade. They may retake the same course if it is still offered at APU or a course equivalency has been established for the curriculum.

The original failing grade will show as "R" on the student's transcript, and the previous failing grade will be removed from their GPA as long as they complete the course retake. However, students will still see their original failing grade on their personal online academic plan and their individual online grade reports.

If a student fails any required course in their program twice, they will need to contact their Academic Advising team to discuss available options for continuing their studies.

Prior to August 2008

- If the course start date for your retaken course was prior to August 1, 2008, the retake does not impact the original failing grade. Both failing grades will be displayed on the transcript and both will be incorporated into the GPA.

August 2008 to April 2014

- If the course start for your retaken course was on or after August 1, 2008, the retake removes the impact of the original failing grade on your GPA.

On or After April 2014

- Any courses starting in April 2014 or after, will only be allowed one retake.
- All failed attempts of the course prior to April 2014 will count as one failure, so as of April 2014, you will still have one attempt available to pass any previously failed course.
- If you fail a required course twice in your program, you will need to change your major to a program where that course is not required.

Important to Know

- The course retake policy only applies if the exact course that you previously failed is still offered or if a course equivalency has been established in the curriculum.
- This policy does not apply to comprehensive exam or capstone/thesis/practicum courses. Please see the Student Handbook for the retake policy on these course types.
- Original failing grades of retaken courses will still be used to calculate SAP (Satisfactory Academic Progress) for financial aid and for the 150% rule of course credit attempted vs course credit earned for graduation eligibility.
- The retake policy does not apply to courses that you took in programs that you have already completed. For example, if you failed a course in your Associates program, and have already had that degree conferred, you cannot have the original failing grade forgiven in your GPA by retaking it now in your Bachelor's program.
- The Army does not follow APU's course retake policy when it is calculating your overall GPA for TA eligibility. The Army's GPA is independent of a GPA with a soldier's home college. It is calculated by averaging the grades for each completed course in the soldier's Army Education records.
- Undergraduate Only: If you previously took a split science lecture/lab course combination, and failed one of the component courses, you will not be able to retake this science combination. You will need to take a different Science course selection to fulfill your general education. If the specific course you failed is a required course in your program, please contact your Academic Advisor to help you with this process.

Residential Credit Policy

All courses completed at American Public University (APU), either through a conferred degree or expired program, will be considered Residential Credit for the student's current program as well as future program where the courses are applicable. Residential Credit will not be counted towards transfer credit maximums and will not carry previously earned course grades, thus not impacting the grade point average in the subsequent program. The Initial Enrollment Date and Program Deadline for subsequent programs will be reset based on the first course completed in the new program.

Students wishing to earn an Associate's degree where all completed courses overlap with the requested Bachelors' requirements may not enroll in the requested program unless they enroll in a program where credentials may be earned along the way. If a student requests a change to an Associate's program, where all courses from a conferred Bachelor's degree overlap with the Associates degree, then they may not be eligible. Additionally, students may not earn duplicative degrees (example - Bachelor of Arts in Criminal Justice to Bachelor of Science in Criminal Justice or vice versa).

Student Code of Conduct

- APU Community Standards
- Standards of Student Conduct
- Jurisdiction of the University
- Prohibited Student Conduct
- Student Conduct Procedures
- Sanctions
- Student Conduct Appeals
- Prevention and Support Resources

- Student Code of Conduct Review Policy
- Generative AI Policy

American Public University Community Standards

All students, faculty, and staff have the right to a safe, respectful learning environment that is free of harassment or any other disruptive behavior.

APU Community Honor Code

APU University Community Honor Code Statement

All members of the university community have the right to an experience that is courteous, welcoming, ethical, and professional. We are all stakeholders in the institution and must work to achieve and abide by these standards.

1. We emphasize a sense of belonging among our vast community; all members of the community are respected, and their unique thoughts and contributions are valued.
2. We practice and promote academic integrity, professional conduct, and a welcoming learning environment.

Together we are American Public University. At all times we:

- Serve as an active member of the university community, living our values.
- Uphold the expectation of respect and dignity for all persons.
- Practice and promote academic integrity, a welcoming learning environment, and professional conduct.
- Accept responsibility for our actions.

Honor Pledge

As a member of the American Public University learning community, I understand and will abide by the University's policy of academic integrity as described in the Student Handbook and the University catalog. Furthermore, I agree to the provisions of the APU Honor Code, and I will not engage in, condone, or assist others in any act of dishonesty, plagiarism, unethical research practices, or other personal or academic misconduct. I also understand that I am a member of the academic community, and my behavior reflects that community.

I understand that I will be subject to appropriate disciplinary and/or academic sanctions if I commit any violations of the University's academic integrity or conduct policies. Finally, I understand that my success, in part, is tied to abiding by these expectations.

APU Student Academic Integrity and Professional Conduct Policy

Members of the APU learning community include faculty, staff, students, and alumni, all of which are considered representatives of the University. As such, their behavior inside and outside the classroom reflects that community. To ensure that the learning community is seen by others in a positive light, the University expects integrity within academic and non-academic contexts. The University, furthermore, reserves the right to investigate complaints made from internal and external parties on conduct violations.

Academic integrity refers to upholding and maintaining honesty and responsibility in scholarship inside and outside of the classroom. In this manner, academic integrity encompasses all scholarly activity carried out as part of academic work. Scholarly activities include, but are not limited to, engagement within the classroom, assignments, tests, quizzes, presentations, field-based assignments or work, and various forms of research.

The APU Student Code of Conduct requires students to be honest in the submission of their scholarly work within and outside of the classroom. Examples of academic integrity include, but are not limited to, submitting original work in the classroom, and providing proper attribution when drawing ideas from other sources, course discussions, or any other assignment or learning activity. In addition, academic integrity also encompasses research endeavors and would include abiding by Institutional Research Board (IRB) requirements when carrying out research on human or surrogate subjects, managing data responsibly/accurately, and representing research findings transparently in accordance with professional and research ethics. Additionally, academic integrity means respecting the intellectual property of APU and not reposting or reusing course materials in ways that violate the University's Student Code of Conduct.

Failure to uphold academic integrity constitutes "academic misconduct." Academic misconduct encompasses behaviors that create an unfair academic advantage for oneself or disadvantage for others and include, but are not limited to, plagiarism (including self-plagiarism),

cheating, falsification/fabrication, theft and/or damage to university intellectual property, facilitation of academic dishonesty, disturbances of learning environments (e.g., classrooms, library, webinars, etc.), and failing to abide by ethical research standards and University IRB requirements.

In addition to maintaining academic integrity, APU students are also expected to maintain integrity through their professional conduct. Professional conduct refers to the acceptable behavior an individual is expected to exhibit while a student at the university. To uphold professional conduct means to act with honesty, integrity, and respect for others. Like professional organizations and bodies in many disciplines, American Public University expects community members to behave with ethical and moral integrity, exemplary conduct, and respect towards one another. These expectations encompass both virtual settings and in-person contact. Additionally, some examples of professional conduct include considering and responding to alternative viewpoints respectfully, refraining from personal attacks and inflammatory language, representing oneself honestly in professional or academic activities and achievements, interacting with others with dignity and compassion, and generally maintaining an environment that is free of conflicts, antagonism, or disruptions. Additionally, some Schools and Programs within APU provide handbooks and specific guidelines for professional and constructive dispositions when interacting with APU community members.

APU will not tolerate any forms of dishonesty and misconduct inside or outside the classroom; students will be required to adhere to the APU Student Code of Conduct.

Standards of Student Conduct

In keeping with the APU Honor Code, students must uphold the principles of academic integrity and professional conduct.

Academic integrity refers to upholding and maintaining honesty, ethical practices, and responsibility in scholarship or academic work inside and outside of the classroom.

Professional conduct refers to upholding and maintaining honesty, integrity, and respect for others while a student at APU or while participating in any University-sponsored or affiliated activities, and when representing the University at any external event.

APU Statement of Desired Student Community Behavior

Students complete and submit their own academic work without unfair advantage; behave honorably, collegially, and professionally; respect the dignity, beliefs, and property of others; and encourage such behavior within the APU community.

Jurisdiction of the University

The Student Code of Conduct shall apply to conduct that occurs on any University premises, or at any University-sponsored activities, whether in-person or online, including courses, personal and group communications, clubs and organizations, and University social media. Conduct includes any behavior that affects the University and/or the pursuit of its objectives. Jurisdiction under this policy applies to students who are registered or enrolled for credit or non-credit bearing coursework, whether full or part-time status, students who are participating in APU sponsored programs or activities, and those who are maintaining an ongoing relationship with APU. An ongoing relationship includes students who are on an approved program hold but who are not registered or taking classes at the time of the complaint being filed. The Student Code of Conduct applies to a student’s conduct even if the student withdraws from school while a disciplinary matter is pending.

Prohibited Student Conduct

The following conduct disrupts the educational environment of the University and will not be tolerated.

Academic Misconduct

Academic misconduct is a failure to uphold academic integrity and encompasses behaviors that create an unfair academic advantage for oneself or others, or a disadvantage for others. These include, but are not limited to, plagiarism, wrongful reuse of work, cheating, falsification/fabrication, facilitation of academic dishonesty, abuse of APU intellectual property, and failing to abide by ethical research standards and University IRB requirements. The reuse of work is considered wrongful and a form of academic misconduct when it is done without prior approval because it is an intent to deceive (which is a form of academic dishonesty) by falsely presenting all or a portion of a work previously created for one purpose as original work produced for another purpose. The wrongful reuse of work provides a student with an unfair academic advantage by allowing them to receive undeserved academic credit multiple times for the same academic work. Wrongful reuse of work is prohibited by APU because, in most cases, it circumvents the learning process by using knowledge already acquired in place of knowledge intended to be discovered and/or acquired within the situation of a given learning experience (assignment, course, etc.).

APU supports and promotes academic honesty and personal integrity. Any form of academic dishonesty has no place in higher education. APU does not tolerate dishonest efforts by its students. Students who are guilty of academic dishonesty and students who knowingly assist another student in dishonest behavior are equally responsible. The following behaviors all constitute academic misconduct:

Academic Dishonesty

Academic dishonesty is defined as fraud, deceit, or dishonesty in an academic assignment, or using or attempting to use materials, or assisting others in using materials that are prohibited or inappropriate in the context of the academic assignment in question. Examples include, but are not limited to, the following:

- allowing others to do an assignment or portion of an assignment for a student, including the use of a commercial term-paper service,
- inappropriate use of Artificial Intelligence (AI) to generate content as defined by course instructions,
- purchasing test solutions and sharing test solutions in a public area,
- wrongful reuse of work,
- collaborating on an exam or assignment with any other person or AI provider without prior approval from the instructor,
- doing academic work for another person and allowing that person to represent the work as their own

Facilitation of Academic Dishonesty

The facilitation of academic dishonesty refers to the use, publication, representation and/or other dissemination of APU materials and content to any third-party without the permission of the university. Examples include, but are not limited to, the submission of APU or student content to websites (including term-paper services), gaining unauthorized access to another student record or classroom, or providing unauthorized access to a student record or classroom to a non-student.

Inability to Establish Identity of Individual Submitting Coursework

Inability to Establish Identity of Individual Submitting Coursework is a form of cheating wherein APU determines that the student who is officially enrolled in a course is not the person who is completing and submitting the coursework.

Plagiarism

Plagiarism is the adoption or incorporation of another's ideas without proper attribution of the source. It is more simply defined as taking the writings of another person or people or content generated by an Artificial Intelligence provider and representing them to be one's own. Plagiarism may include text mining, defined as weak paraphrasing or combining content from other authors whereby the ideas of the original author(s) are not clearly or formally documented. In addition, it is plagiarism to keep the same sentence structure and change a few words without providing proper attribution of the source. To avoid plagiarism, all should follow the accepted practices of academic writing when summarizing, paraphrasing, and quoting.

Problematic Referencing and Citation

Problematic referencing and citation includes but is not limited to the use of unverifiable references, the citation of material that cannot be located within the source material, citations that do not have a corresponding reference, and references that do not have a corresponding in-text citation.

Research Misconduct

Research misconduct includes the following actions that deviate from ethical practice:

- *Failure to receive Institutional Review Board (IRB) approval* when conducting human subjects research, including but not limited to, interviews and surveys, without the appropriate review and approval by the IRB.
- *Falsification of data* is deliberately changing any form of evidence in such a way that it substantially affects its usefulness.
- *Conflict of interest* occurs when an individual serves or represents two distinct entities and neglects or breaches a duty to one entity to benefit the other; or when a person uses their position with one entity to advance a personal gain or the gain of another entity.
- *Fraud and misrepresentation* are deliberate attempts to deceive others to secure unlawful or unfair advantage. This category of misconduct includes providing false or misleading information to or intentionally deceiving coauthors, granting agencies, editors, or other interested parties regarding the results or the status of a research project.
- *Noncompliance* is failing to comply with the published regulations of federal agencies, state agencies, the university, or granting agencies that support an individual's research.
- *Misappropriation of research funds* is any deliberate act or omission in the handling of research funds that violates university policy, or the policies of granting agencies, either state, federal, or private entities.

Self-plagiarism

Self-plagiarism refers to submitting one's own published work more than once for credit. Examples include published articles, content from books, field reports, etc. However, properly citing one’s own published work in a publication is not considered plagiarism.

Theft and/or damage to university intellectual property

Theft and/or damage to university intellectual property refers to the use, publication, or other dissemination to any third party of any other APU student’s information, coursework, or other academic contributions, without that student’s consent. It also encompasses the use, publication, or other dissemination of APU content to any third party without the permission of the university. Additionally, theft includes the failure to return material loaned to any student by APU staff or faculty.

Wrongful Reuse of Work

Wrongful Reuse of Work or material refers to submitting one's own work more than once without permission from current faculty. This includes submitting an assignment, forum post or discussion, or other work in its entirety, or a portion thereof, along with the reuse of the same research, including but not limited to journals, books, publications, etc. An exception to this would be the resubmission of a discussion post that introduces the student to their peers and faculty.

- Original work - Student’s first submission of work a student has created.
- Reused work - Work the student has previously submitted in the same or another class, to include work submitted at other institutions.

Appropriate reuse of work entails receiving permission from faculty. For example, if a student wants to build out an idea presented in an assignment in one class and use it to develop their end of program thesis/project/assignment, they need to first gain permission from their current faculty prior to incorporating any previously submitted work into their current assignment submissions.

Any material not created explicitly for the assignment for which it is submitted must be approved at least one week in advance by the instructor. The decision is at the sole discretion of the instructor, is final, and cannot be appealed.

Professional Misconduct

Professional misconduct encompasses behaviors that are disruptive, illegal, dishonest, or abusive.

Alcohol and Drug Use

APU prohibits the unlawful possession, use, sale, consumption, purchase, manufacture, and/or distribution of illicit drugs or alcohol by students, faculty, or staff on APU property or at an APU-sponsored activity or event. Prohibited conduct is subject to the sanctions and rights contained in this policy and other University policies and procedures. APU may approve the consumption of alcohol at APU-sponsored activities and events. Individuals consuming alcohol at an APU-sponsored activity or event are expected to behave in accordance with usual business standards, applicable codes of conduct, company policies, and applicable law. See the Alcohol and Drug Policy section of the Student Handbook for more information.

Complicity

Complicity is the act of helping, procuring, encouraging, and/or cooperating with another person in the commission of a violation of the Student Code of Conduct.

Cyber Harassment

Cyber harassment is the willful and repeated use of cell phones, computers, and other electronic communication devices to harass and threaten one or more students, faculty, or staff, which occurs in the school setting or with the use of technology with an effect of doing any of the following:

- Substantial interference with a student's education;
- Creation of a threatening environment; and
- Substantial disruption of the orderly operation of the university.

Examples of cyber-harassment include, but are not limited to:

- Using the Internet, cell phone, email, or any other form of electronic communication to intimidate someone;
- Online (including via social media) personal verbal or written attacks;
- Offensive harassing messages;
- Publicly disclosing someone's personal information;
- Breaking into an account and sending damaging messages;
- Creating a fictitious online account using legitimate personal information and then placing damaging or harassing information in the account.

Cyberstalking

Cyberstalking is threatening behavior or unwanted advances directed at another individual using the Internet and other forms of online and computer communications. Cyberstalking and cyber-harassment are prohibited, whether in the classroom, online, social networking sites, email, or any other form of electronic communication. The use of the University email server to send harassing messages to individuals outside of the University is also prohibited. See the Harassment, Discrimination, and Retaliation section of the Student Handbook for more information.

Disruption/Disturbances of Learning Environments

Disruption/Disturbances of Learning Environments includes conduct that materially and substantially interferes with or obstructs the teaching or learning process in the context of a classroom, educational setting, or APU sponsored activity whether in-person or online. Disturbances in the learning environment may create an unfair academic advantage for oneself or a disadvantage for another member of the academic community. Disruptions may include disrespectful behavior, failure to comply with directives from University faculty or staff, badgering-type behavior wherein an individual is being excessively contacted, or any form of harassment or abuse.

Disrespectful Behavior

Disrespectful Behavior is abusive or inappropriate behavior, which may include, but is not limited to, personal attacks, inflammatory usernames and/or images in online workspaces, perceived shouting within e-communications or in-person, using profanity or crude language, or engaging in discourse that does not meet acceptable standards of civility.

Failure to Comply

Failure to Comply is failure to follow the directions of university faculty or staff or other official APU representative while under the University's jurisdiction or resisting or obstructing University representatives.

Falsification/Fabrication

Falsification/Fabrication includes the submission of any falsified APU student information to any third party, including diplomas, transcripts, and registration information. This includes the submission of false or misleading information for malicious intent to university offices, to include a falsified or fabricated account of faculty engagement or behavior. It includes the submission of fraudulent information on a student or loan application, including any information provided in the application. Furthermore, it includes the submission of any falsified medical documentation, death certificates, or other third-party documentation for disability accommodations, Satisfactory Academic Progress (SAP) appeals, or appeals of academic dismissal. Furthermore, it includes the failure to supply upon request, appropriate or sufficient documentation to verify information submitted to APU as part of any university process or procedure, including processes/procedures initiated while the individual completes the University's admission process.

Harassment

Harassment is unwelcomed and disrespectful conduct and communication. Discrimination is any treatment - including harassment - based on a protected characteristic. The University does not engage in and will not tolerate harassment or discrimination based on sex, race, color, religion, national origin, age, marital status, veteran status, handicap, disability, or any other characteristics protected by applicable federal, state, or local law. See the Harassment, Discrimination, and Retaliation section of the Student Handbook for more information.

Hazing

Hazing is defined as any action or situation that recklessly or intentionally endangers the mental or physical health or safety of a person; or that willfully destroys or removes public or private property for the purpose of initiation, admission, affiliation, or as a condition for continued membership in any student organization. Any student organization that engages in, encourages, or permits hazing will be subject to disciplinary action.

To report hazing, contact Jennifer Hawkins, APU Student Conduct Officer and point of contact for formal complaints at disputes@apus.edu. Reports may also be filed anonymously using the APU Student Hotline, hosted by third-party hotline provider, EthicsPoint.

Physical Abuse

Physical Abuse includes, but is not limited to, physical assault; threats of violence; rape, sexual assault, sex offenses, and other conduct that threatens the health or safety of any person.

Retaliation

Retaliation is the use of intimidation, threat, coercion, or discrimination against any person for the purpose of interfering with their rights and privileges as an APU community member in accordance with the University's Harassment, Discrimination, and Retaliation policy. See the Harassment, Discrimination, and Retaliation section of the Student Handbook for more information.

Sexual, Racial, and Other Forms of Harassment

Sexual, Racial, and Other Forms of Harassment includes conduct that is so severe and/or pervasive, and objectively offensive that this harassment substantially impairs a person's access to APU-sponsored activities or programs. As a result of this harassment, the person is effectively denied equal access to the University's resources and opportunities based on the person's identity, including, but not limited to, race, color, national or ethnic origin, sex, religion, age, sexual orientation, gender identity, marital status, military/veteran status, physical or mental disability, or perceived membership in any of these classifications. See also the Title IX Policy at APU for the definitions of sexual harassment, sexual assault, dating violence, domestic violence, and stalking.

Solicitation

APU prohibits all types of solicitation in working areas during working time to include:

- Solicitation from students towards APU staff or faculty.
- Solicitation by students in the classroom, on the web, or by contacting other students, faculty, or staff via any means of communication.

Violation of the University's solicitation policy may result in immediate disciplinary action. The only exceptions to this policy are "flyers" for activities or charitable causes sponsored by APU, which may be distributed without prior approval. See the Solicitation section of the Student Handbook for more information.

Stalking

Stalking is engaging in a course of conduct directed at a specific person that would cause a reasonable person to (a) fear for the person's safety or the safety of others, or (b) suffer substantial emotional distress. As used in this definition, "course of conduct" means two or more acts, including, but not limited to, acts in which the stalker directly, indirectly, or through third parties, by any action, method, device, or means, follows, monitors, observes, surveils, threatens or communicates to or about a person, or interferes with a person's property; "substantial emotional distress" means significant mental suffering or anguish that may, but does not necessarily, require medical or other professional treatment or counseling; and "reasonable person" means a person under similar circumstances and with similar identities to the victim. See also the Title IX Policy at APU.

Theft/Abuse of University Property or Electronic Resources

Theft/Abuse of University Property or Electronic Resources refers to theft or abuse of the University's electronic resources such as computer and electronic communications facilities, systems, data, and services. Abuses include, but are not limited to, unauthorized entry, use, transfer, or tampering with the University's communications of others; interference with the work of others and with the operation of computer and electronic communications facilities, systems, and services; or using University resources to carry out illegal or unethical activities. This prohibited conduct also includes theft, destruction, or damage to any University property, whether on campus or at a university-sponsored event.

Threatening or Terrorizing Behavior

Threatening or Terrorizing Behavior means any written or oral statement, communication, conduct, or gesture directed toward any member of the APU community which causes a reasonable apprehension of physical or psychological harm or death to self or others, or damage to property. It does not matter whether the person communicating the threat is able carry it out, or whether the threat is made on a present, conditional, or future basis. Communications that can be perceived as an indirect threat, or innuendo, are highly inappropriate and may also fall under the threatening or terrorizing behavior definition.

Wrongful Use of Platforms

Wrongful Use of Platforms includes, but is not limited to, any deliberate attack on, destruction and/or taking of, or vandalism of University websites, networks, or other resources.

Student Conduct Procedures

Reported Infraction

Upon receipt of a student conduct complaint, the University will acknowledge the receipt of the report, then create and classify the case file as either Academic or Professional Misconduct.

Both Academic and Professional Misconduct violations typically follow a stepwise process for remediation (delineated below) unless the act is a flagrant violation of university policy. Flagrant violations of academic conduct standards are defined as actions that are clearly inconsistent with academic integrity standards and demonstrate an egregious disregard for the code of conduct. When a flagrant violation of university policy occurs, the University reserves the right to escalate the violation directly to the Student Conduct Board for sanctioning, which may include expulsion.

Student Academic Misconduct Violations

Academic misconduct violations, also known as academic integrity violations, herein, are reported to the appropriate University Official who investigates the case using the documentation submitted by the complainant and determines the level of remediation required.

Undergraduate Student Academic Integrity Violation Ladder

1st Academic Integrity Violation: Letter of misconduct issued with formal sanctions, notification of academic misconduct notation in student file, and an accountability package requirement. A hold may be placed on the student's account and will remain until the accountability package is completed.

2nd Academic Integrity Violation: Letter of misconduct issued with formal sanctions, notification of academic misconduct notation in student file, and an accountability package requirement. A hold may be placed on the student's account and will remain until the accountability package is completed.

3rd Academic Integrity Violation: Integrity hearing held with the Student Conduct Board. The student is given an opportunity to present a written statement that presents their case. The Student Conduct Board reviews all case materials including all prior violations. The Student Conduct Board issues formal sanctions up to and including expulsion.

Graduate and Professional Student Academic Integrity Violation Ladder

At APU, graduate and professional student culture is defined as a community of emerging scholars and practitioners who share a commitment to research and scholarly integrity along with a passion for engagement in the production of new knowledge and the application of that knowledge in innovative interdisciplinary contexts. As such, graduate students are held to a higher standard for academic integrity than undergraduates based on graduate expectations for academic rigor and appropriate use of sources. Graduate students are expected to practice academic integrity in all their work by appropriately crediting others' words and ideas and by avoiding any form of plagiarism.

1st Academic Integrity Violation: Letter of misconduct issued with formal sanctions, notification of academic misconduct notation in student file, and an accountability package requirement. A hold may be placed on the student's account and will remain until the accountability package is completed.

2nd Academic Integrity Violation: Integrity hearing held with Conduct Board. The student is given an opportunity to present a written statement that presents their case. The Student Conduct Board reviews all case materials, including all prior violations. The Student Conduct Board issues formal sanctions up to and including expulsion.

Professional Misconduct Violations

Each case is investigated by the Office of Student Conduct which determines if the complaint has merit and then determines the level of violation. If the issue presented is not a code violation but has merit for concern, the student will be provided with educational

accountability information.

Levels of violation:

- Level 1 violation: may include minor policy violations or egregious violations that leave little room for the misinterpretation of behavior;
- Level 2 violation: an egregious violation of the Student Code of Conduct where multiple violations are on record;
- Level 3 violation: an egregious violation of the Student Code of Conduct and grounds for immediate expulsion.

For each violation, the Office of Student Conduct conducts a formal investigation and remediates the situation.

Level 1 Professional Misconduct Violation: The student is informed of the report and code violation(s) if any. If the case has merit, the student may receive a formal warning, or the student may be formally sanctioned and issued an accountability package. A hold may be placed on the student's account and will remain until the accountability package is completed.

Level 2 Professional Misconduct Violation: The student is informed of the report and code violation(s). At this time, the student is offered an opportunity to explain their position/experience and submit additional documentation relevant to the case. The Office of Student Conduct carries out a formal investigation of the matter and additional evidence is collected as necessary. Following a formal investigation, the student is presented with formal charges and is asked to acknowledge their responsibility in the matter.

- If responsibility is acknowledged, the Office of Student Conduct administers disciplinary sanctions.
- If the charges are disputed, the Student Conduct Board is convened to review the case.

Level 3 Professional Misconduct Violation: The student is informed of the reports and code violation(s) and is removed from all courses and placed on suspension. At this time, the student is offered an opportunity to explain their position/experience and submit additional documentation relevant to the case. The Office of Student Conduct carries out a formal investigation of the matter and additional evidence is collected as necessary. Following a formal investigation, the student is presented with formal charges and is asked to acknowledge their responsibility in the matter.

- If responsibility is acknowledged, the Office of Student Conduct administers disciplinary sanctions.
- If the charges are disputed, the Student Conduct Board is convened to review the case.

Student Conduct Board

The Student Conduct Board, referred to as Board, herein, is assembled from APU administrators, faculty, staff, and designees from the School Dean's Office. During case reviews, Board membership will vary to ensure the review is equitable and impartial. From the assembled Board, a Board Chair will be identified. A quorum of any case review meeting of the Board will consist of a Chair, and five (5) Board members. The Dean of Graduate Studies and Research or designee will be present at all Board meetings for cases involving graduate or professional student academic integrity violations. The Board is convened at the request of the Office of Student Conduct to review cases.

Student Conduct Board Review

When a Board review is required, the Office of Student Conduct compiles all reports, documents, and interactions with the student into a Student Conduct Board Review Packet (SCBRP). The Office of Student Conduct will:

1. Provide the student with a copy of the SCBRP
2. Provide the student with an opportunity to add additional relevant documentation within a specified timeframe, and
3. Provide the student a hearing notice with date, time, and committee members

The Board then reviews the completed SCBRP and renders a decision regarding the University code violation(s), and disciplinary sanction(s). The Board Chair, through the Office of Student Conduct, submits the decision to the student.

Sanctions

Sanctions are penalties levied when students are found responsible for violating the APU Student Code of Conduct. Sanctions may include, but are not limited to:

- Accountability Package (AP) - Task(s) and/or assessments a student must complete that serve to remediate the student conduct violation in question. AP items may include professional development modules (e.g., academic integrity, effective communication, and emotional intelligence), reflection papers or other written assignments, and/or professional coaching.
- Admission Denial - The denial or revocation of a student's admission to APU. See General Admission Policies.
- Alcohol and Drug Sanctions - As applicable and consistent with local, state, and federal law, violation of this policy may result in university disciplinary action for an APU student, up to and including, expulsion, along with a referral to law enforcement. APU may impose one or more disciplinary actions and sanctions, including required participation in a substance abuse rehabilitation or treatment program at the cost of the individual, as a condition to continued enrollment with APU.
  - Violators of this policy may be subject to criminal prosecution under local, state, and federal law. Controlled substance and misuse of alcohol laws vary by state and locality and may apply based on where the violation occurred. Federal criminal penalties may include, but are not limited to, penalties under the Controlled Substances Act (21 U.S.C. §§ 801 *et seq.*) and its implementing regulations, which can include fines, forfeitures, and imprisonment. Additional information is available from the U.S. Drug Enforcement Administration. Also see the Alcohol and Drug Policy in the Student Handbook.
- Disciplinary Probation - A student may be placed on disciplinary probation when the student has not complied with previous documented sanctions (i.e., failure to complete an accountability package requirement) or altered their behavior, or when their behavior is particularly egregious. A student may attend classes while on disciplinary probation, however the student must work to complete any outstanding sanction requirements. Additionally, a student may be prohibited from participating in university-sponsored activities while under disciplinary probation.
- Disciplinary Suspension - While on disciplinary suspension, students are prohibited from enrolling in or attending classes and other university-sponsored activities for a specified period determined by the Office of Student Conduct.
- Expulsion - The permanent removal of a student from the university. A student may be expelled for repeated documented offenses or for a one-time flagrant violation of university policy.
- Failure of Assignment and/or Course - Academic integrity violations may result in the student failing the assignment and/or failing the course.
- Involuntary Course Withdrawal - The withdrawal of a student from their course(s) when their continued enrollment in the course is perceived to create an unfair academic advantage for themselves or disadvantage to other students or are perceived to be a possible danger to other students or to themselves. Additionally, students under investigation for academic or professional misconduct may also be involuntarily removed from the classroom and may have a hold placed on further enrollment until the investigation concludes.
- Involuntary University Withdrawal - The removal of a student from the university if the student's continued enrollment is perceived to create an unfair academic advantage for oneself or disadvantage to other students or are perceived to be a possible danger to other students or to themselves.
- Legal Action - Only a duly authorized agent officially appointed by the President of APU shall have the right, if deemed necessary, to initiate legal proceedings against a student for violation of public law in any University-sponsored site in which University property and/or vested interests are involved. See Legal Action.
- Letter of Misconduct - A formal letter issued to the student, documenting the student's APU Student Code of Conduct violation. A copy of the letter will be placed in the student's record and may be included in background investigation requests. A Letter of Misconduct on record will deem a student ineligible for inclusion on the Dean's list, President's list, or student honor societies.
- Plagiarism Notation - A formal notation of academic misconduct placed on the student's record. Plagiarism notations may be included in background investigation requests and may deem a student ineligible for inclusion on the Dean's list, President's list, or student honor societies.

Student Conduct Appeals

Following the receipt of an adverse action or sanction, the student has seven (7) days to appeal the decision. The appeal is reviewed by the Board or appropriate academic leadership; individuals who review the appeal shall not have participated in the initial review of student misconduct.

If new factual evidence arises, the Board may consider a second review. The maximum appeal timeline is 12 months from the date of the decision; however, the university reserves the right to adjust the timeline based on the circumstances of the case.

Prevention and Support Resources

Alcohol and Drug Abuse

Alcohol and other drug abuse are a significant public health problem and has a detrimental effect on the community in terms of increased medical and workers compensation claims, medical disability costs, decreased productivity, theft, and absenteeism. Additionally, alcohol and other drug abuse pose significant health risks to individuals including addiction, permanent injury, and death.

The University encourages anyone who needs information related to alcohol or drug abuse to use directory information, online searches, the telephone book, or referrals from friends and/or professionals. At a national level, there are also organizations dedicated to providing information and support:

- **Substance Abuse and Mental Health Services Administration (SAMHSA)** - An agency of the US Department of Health & Human Services providing information online regarding alcohol, drugs, and treatment programs.
  - General Address: www.samhsa.gov
  - Specific Address for Treatment Programs: findtreatment.gov
  - 1-800-729-6686
- **The National Clearinghouse for Alcohol and Drug Information** - Part of US Department of Health and Human Services & SAMSHA's Clearinghouse
  - http://www.samhsa.gov/
  - 1-800-729-6686
- **About.com Substance Abuse** - Explore the complicated disease of addiction. Information on basic questions concerning drugs and addiction.
- **National Institute on Drug Abuse**
  - General Link/Address: www.nida.nih.gov
  - Specific Link/Address on Club Drugs: https://nida.nih.gov/research-topics/drugs-a-to-z
  - 1-310-443-1124
- Found under APU Alcohol and Drug Policy

Plagiarism Avoidance

To avoid plagiarism, a student must credit the sources used when writing an essay, research paper, or other assignment in accordance with the appropriate style manual (APA, Chicago, MLA, Bluebook, etc.) or format required in the course. Specific approaches to appropriate citation are found in writing style guides, which can be found in the Resources section of the Trefry Library.

Professional Advice Policy

APU faculty are prohibited from providing advice to students in a professional capacity outside of the academic context. This includes, but is not limited to, legal advice, financial advice, or medical advice. This does not prohibit faculty from providing career advice.

Mental Health & Wellness

The University aims to support the mental and emotional health of all our students. APU offers a variety of resources related to supporting mental health. Students have access to the following:

Chaplain Services

APU Chaplains can provide students with techniques and tools related to stress, anxiety, substance abuse, suicide ideations, etc. University Chaplains provide a listening ear and can help students navigate university and local resources related to their specific needs. APU students can work with the Chaplain Services Team for assistance, guidance, and advice related to academic and/or personal needs. Chaplains can be reached at chaplain@apus.edu.

Counseling and Therapy Services

All APU students have access to sessions with licensed counselors and therapists via the Uwill teletherapy program. Students can sign up by visiting the Uwill website and creating a profile using their mycampus.apus.edu email address.

Additional Resources

- Military One Source: Free, Confidential Face-to-Face Non-Medical Counseling
- Lifeline for Vets: Veteran Resources
- NVF Lifeline for Vets – 1-888-777-4443
- VA Suicide Hotline – 1-800-273-8255
- National Suicide Hotline - 1-800-273-TALK (8255)
- Stop Soldier Suicide - 1-800-273-8255 #1

Additionally, external wellness resources are provided via the Success Center, which is accessible via the online campus.

Student Code of Conduct Review Policy

The University will review the Student Code of Conduct policies and data related to any disciplinary actions taken hereunder at least every two (2) years (i.e., in each even-numbered year) to determine the policy's effectiveness, to identify and implement any necessary changes, and to ensure sanctions are consistently and fairly enforced.

As part of its biennial review, the University will determine and document:

- The number of violations and fatalities that occur on University property or as part of any University-sponsored activity or event, and that are reported to University officials; and
- Of those reported violations and fatalities, the number and type of sanctions imposed by APU.

APU will make available upon request the results of the biennial review including the data and methods supporting its conclusions.

APU will annually distribute this policy to students, faculty, and staff. In addition, during the year, APU also will provide a copy of the policy to students who enroll and employees who are hired after the initial distribution for the year.

Generative AI Policy

The University supports the transparent and ethical use of generative artificial intelligence (GenAI), which refers to technologies that can create text, images, or multimedia. All use of GenAI programs must comply with all University policies, including without limitation, the University's academic integrity policy in the "Prohibited Student Conduct" section of the Student Handbook and any guidelines provided by individual departments.

Some classes and individual assignments may encourage or require the use of Gen-AI tools. When AI use is encouraged or required, it will be clearly stated in the assignment directions.

Examples of appropriate GenAI use include:

- Using GenAI to brainstorm creative ideas for projects and assignments
- Using GenAI as a research assistant to gather relevant information
- Exploring complex topics by asking GenAI to provide clear explanations and to break down intricate concepts
- Using GenAI as a study aid to create study guides, flashcards, and summaries of complex topics

Examples of inappropriate use include:

- Allowing GenAI to write your assignment or discussion board posts for you
- Failing to verify that the content GenAI generates is accurate, complete, current, and unbiased
- Failing to appropriately cite content generated or phrases recommended by AI or provide appropriate attribution
- Using GenAI during tests, exams, or quizzes without permission

Students are responsible for the accuracy of their coursework. Content produced by research or writing tools that use AI may contain errors and must be carefully verified. While AI may be used to begin the process of researching and to provide editing assistance, AI-generated content is not considered original, so it must be cited as borrowed ideas, images, or wording. Any use of AI that appears in a submission must be attributed or cited appropriately, e.g., (OpenAI, 2024). Because content generated by GenAI or similar tools may not meet originality standards, students should use such tools cautiously and follow all disclosure and academic integrity requirements.

Failure to adhere to this GenAI Policy or any other policies and guidelines, may result in disciplinary action up to and including dismissal from the University.

Student Rights and Responsibilities

An academic community is based on personal integrity and respect for others. American Public University (APU) follows the letter and spirit of applicable federal and state laws pertaining to the administration of an institution of higher education (e.g., laws governing student records, equal opportunity, etc.) and adheres to the guidelines published by appropriate professional groups with respect to admissions procedures, required credentials of faculty, and business ethics. Information regarding student rights and responsibilities, including appeals processes, can be found in the Student Code of Conduct section of the catalog.

Student Engagement in Classes

Effective April 1, 2015, students who receive failing grades in their first two (2) course attempts in their program as a result of not submitting a substantial percentage of the required course work will be dismissed from the university at the conclusion of those courses. This applies to students who fail all of their initial courses as a result of not submitting substantial course work to earn a passing grade. Students who apply for a program change (i.e. Associates to Bachelors, Bachelor's to Masters, and so on) will also need to pass their first two courses in their new program to be considered in compliance with the Student Activity Policy.

If you have ongoing courses in your current academic semester when you fail your initial courses, you will be placed on Deferred Involuntary Withdrawal status and allowed to complete any current courses that are beyond the first week, though any future course registrations will be dropped.

Catalog Changes

This publication is not a contract between American Public University (APU) and any party or parties and should not be regarded as such. At the date of publication, reasonable effort was made to ensure that this publication and its provisions were factually accurate. However, this publication is not a complete statement of all policies, procedures, and program information.

APU reserves the right to make changes and additions to the information in this publication without notice. In cases where significant modification or discontinuation of a program occurs, students can expect to be contacted by a university staff member to discuss and resolve the matter with the students' interests in mind.

Academic Schools

The program you choose and the courses you take must be relevant to your career interests and today's marketplace. That's why our academic leaders meet regularly with hundreds of industry experts to help shape our curriculum. Most of our faculty members are scholar-practitioners, serving in leadership roles in their respective disciplines. You'll find them speaking at highly respected industry conferences, sharing expert insights on our blogs, conducting research that's specific to their disciplines, and working with respected academic and corporate partners to share knowledge and achieve innovative advancements in their fields. As a student, you get to regularly engage in online forums and communities with these influential experts as well as with other students who share your interests. Offering quality online education programs is priority one at American Public University.

School of Arts, Humanities & Education

Overview

The School of Arts, Humanities & Education teaches foundational skills needed in the professional world. These skills include collaboration, critical thinking, problem-solving, and written and oral communication. Our General Education courses provide a broad-based education in literature, languages, and social sciences. Degree programs provide a good foundation for a wide variety of professional interests. Undergraduate programs include English, Sociology, Psychology, and Communications; Master's programs provide deeper, more specialized knowledge in several fields, including Psychology, Sociology, and History.

Dr. Wallace E. Boston School of Business

Overview

The mission of the Dr. Wallace E. Boston School of Business is to prepare students to be principled leaders in the global business community through a flexible learning environment that leverages technology. We have developed a well-rounded curriculum that examines business and economics in a global context focused on the practical application of knowledge through case studies, simulations, and best practices. Our programs are taught by real-world practitioners and scholars who provide an engaging learning journey, enhanced by their professional experience. Our top priority is your success. The School honors the legacy of President Emeritus Dr. Wallace E. Boston, who retired as the University's president in June 2020. A pioneer of affordable and flexible online education, Dr. Boston developed his business acumen as a CFO, CEO, and COO of several major health organizations. It is his commitment to student access and success that drives the learning experience throughout this School and the University.

School of Health Sciences

Overview

The School of Health Sciences is dedicated to helping prepare our students for the healthcare, nursing, exercise and fitness, and overall public health industries. Our engaging, interactive learning environment blends theory, research, and practical application to give our students a competitive advantage. Because our faculty are practitioners and experts in their subjects, they can tap in to the real-world resources students need to stay current and relevant in a rapidly changing industry.

School of Science, Technology, Engineering & Math

Overview

Space programs, environmental programs, electrical engineering, cybersecurity, natural science, mathematics, information technology — the School of Science, Technology, Engineering & Math (STEM) provides learning in a wide variety of disciplines. Our faculty consists of expert practitioners from the field, so our students don't just get armchair treatment. In every STEM program, we help students prepare for careers applicable to that program. You will receive practical, usable foundational materials that will help you build the groundwork to establish yourself in a professional setting.

School of Security & Global Studies

Overview

The programs taught in the School of Security & Global Studies truly embody our motto, "Educating Those Who Serve.” Students in this school have an understanding of the world that appreciates the differences in political, economic, and social cultures. Our faculty members are highly credentialed and respected leaders in their fields, and many of them currently work in the U.S. government. Likewise, our graduates are employed in leadership positions at agencies ranging from the Departments of State, Defense, and Homeland Security to the intelligence services, as well as private businesses throughout the world. We are committed to helping students think in ways they haven’t thought before, and to apply educational theories to real-world challenges.

APU Faculty List

Academic Programs

American Public University offers several options for study: associate degrees, bachelor's degrees, master's degrees, undergraduate and graduate certificates, undergraduate and graduate NanoCerts®, and doctoral programs.

All associate and bachelor degree programs include a general education component. Associate degree programs require a minimum of 60 semester hours which must be completed within seven (7) years of the students' first enrollment date. Bachelor's degree programs require a minimum of 120 semester hours. Students are allowed ten (10) years from the date of first enrollment to complete a bachelor's degree. Bachelor's programs include general education, major and elective requirements; many offer an opportunity to focus on a specific area of concentration.

Master's degree programs range from 30 to 48 semester hours (10-15 courses) of study and require either a comprehensive exam, a thesis, or an integrative practicum and a GPA of 3.0 for graduation. Students must have completed a bachelor's degree program from an accredited institution to be admitted to a master's degree program.

Certificate programs are available to students who seek a shorter program focused on career development or knowledge of a specific discipline. Certificates range from 12 to 24 semester hours; typically 4-8 courses.

Professional practice doctorate programs are comprised of 58 semester hours in coursework, 3 residencies; require a dissertation and a minimum GPA of 3.0 for graduation.

Program Completion Rates, Median Debt, and More

For more information about the completion rates and median debt of students who completed each program, as well as other important information—visit www.APUS.edu/disclosure.

Associate Programs

Associate degree programs are ideal if you seek a two-year program as either your final degree in higher education or the foundation for further study at the bachelor's level. The Interdisciplinary Studies associate degree is designed to provide a solid foundation for further academic achievement. Discipline-specific associate degrees provide you with an opportunity to focus on courses that develop knowledge, skills, and abilities that are readily applicable to personal or professional interests. All associate degrees require a minimum of 60 semester hours and a 2.0 GPA for graduation.

Associate of Arts

- Business Administration
- Communication
- Counter Terrorism Studies
- Criminal Justice
- Early Childhood Care and Education

- Health Sciences
- Technical Management

Suspended Programs

- Associate of Arts in Hospitality (Suspended July 2026)

Associate of Applied Science in Administration

Program Description

The Associate of Applied Science in Administration will strengthen the student's understanding of administration functions such as supervision, human relations, human resource management, and management information systems. The program is specifically designed to help students identify administration roles and opportunities, as well as provide support to management within different organizations. This degree is designed to build upon prior education, work, or military experience.

Degree Program Objectives

Upon successful completion of this program, the student will be able to:

- Apply the basic principles of administration management.
- Demonstrate skills in supervision, human resource management, human relations and management information systems.
- Solve administration management problems through case study scenarios.
- Model strong problem-solving, administrative, and communication skills.

Associate of Applied Science in Health Sciences

Program Description

The Associate of Applied Science in Health Sciences is designed for students interested in or currently working in the rapidly growing healthcare industry, and for those who have completed military training in the medical and health sciences. This program offers you the opportunity to gain basic general education and earn college credits to complement your medical knowledge and healthcare training. This AAS degree is ideal for students with an interest in a variety of healthcare careers; including medical assistants, laboratory technicians, dental assistants, nursing, and numerous other careers within the healthcare industry.

Note: Students that receive transfer credit for the Army Health Care Specialist (68W10), Navy Hospital Corpsman (B-300-0010/HM-0000), or Air Force Aerospace Medical Service Apprentice (L8AQJ4N031 01AA) course will NOT be awarded any additional transfer credit for National Registry for Emergency Medical Technician (NREMT®) Basic certification. The NREMT-Basic certification is considered duplicate regardless of certification date and location of military training.

The National Registry for Emergency Medical Technician (NREMT®) Basic certification is a registered trademark of the National Registry of Emergency Medical Technicians.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Apply learning practices from health sciences training to associate degree level education courses.
- Demonstrate effective verbal and written communication skills.
- Integrate concepts from military health sciences training with broader general education knowledge acquired at the university.
- Demonstrate a commitment to learning and broadening skills for increased responsibility in military medical services.
- Demonstrate interest in pursuing higher learning opportunities generated by successful completion of the Associate in Applied Science degree.

Major Required (28 semester hours)

Military health-related courses, completed at the Medical Education and Training Campus (METC), Ft. Sam Houston, TX. Up to all 28 semester hours can be transferred based on METC course completion.

Students that receive transfer credit for the Army Health Care Specialist (68W10), Navy Hospital Corpsman (B-300-0010/HM-0000), or Air Force Aerospace Medical Service Apprentice (L8AQJ4N031 01AA) course will **not** be awarded any additional transfer credit for National Registry for Emergency Medical Technician (NREMT) Basic certification. The NREMT- Basic certification is considered duplicate regardless of certification date and location of military training.

And select from the following courses to fulfill any of the 28 semester hours remaining:

BIOL133	General Biology I with Lab	4
BIOL134	General Biology II with Lab	4
CHEM133	General Chemistry I with Lab	4
BIOL250	Human Anatomy and Physiology with Lab I	4
PHYS133	Elements of Physics I with Lab	4
BIOL202	Principles of Microbiology with Lab	4
SCIN211	Principles of Genetics with Lab	4
Total Semester Hours		**28**

Elective Requirements (17 semester hours)

Select any courses comprised of lower (100-200) level courses not already taken to fulfill requirements listed above. Additional general education courses may be taken to fulfill elective requirements	17
Total Semester Hours	**17**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.

Associate of Applied Science in Technical Management

Program Description

The Associate of Applied Science in Technical Management is designed to enable students to build upon prior education and work experience gained through a community college or military technical courses/occupations. In this AAS degree, students will explore management, business, and planning functions through an analytical approach. Students will also focus on development concepts and the latest technologies to improve their technical expertise in design and systems integration.

In the courses for this associate program, students will examine leadership and management motivational models, theories, and concepts as they relate to developing a healthy culture and successful workforce within a technical environment. Students will also analyze and interpret data obtained via analytical approaches.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Examine leadership and management motivational models, theories, and concepts as they relate to developing a healthy culture and successful workforce within a technical environment.
- Evaluate complex developmental concepts and latest technologies.
- Develop technical expertise in design, development, and integration of systems.
- Analyze and interpret data obtained via analytical approaches.

Students enrolled in the Associate of Applied Science in Technical Management program will have to apply for the awarding of the Certificate in Technical Management.

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.

Associate of Arts in Management

Program Description

Our Associate of Arts in Management introduces you to the theoretical concepts and practical applications needed to effectively lead and manage a workforce, with a focus on either human resources or retail management. This associate degree program seeks to expand your academic and professional development by providing the practical skills often required for entry-level supervisory positions and responsibilities in business or government environments. Knowledge from this online associate program can also serve as a springboard to a bachelor's degree.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Demonstrate critical thinking, problem solving and communication skills necessary to be a successful supervisor in a business environment.
- Explain key concepts, methods and practices for managing human capital in an organization.
- Compare and contrast ethical theories as they relate to organizational and individual behavior.
- Prepare a development program for a potential direct report.

Concentration in Human Resources (9 semester hours)

This concentration is designed to offer a practical base of knowledge that prepares students to deal with the complexities and challenges of managing today's global workforce. Topics of study include recruitment, selection, team dynamics, ethics, performance management, compensation, benefits, labor and employee relations, and policy and records management.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Supervise people in the workforce environment.
- List the necessary steps to take in the recruiting, grievance and corrective action processes.
- Communicate an organization’s mission, vision, goals and objectives to direct reports.
- Discuss the challenges that human resources face in modern organizations.
- Describe team-management skills with a focus on the group dynamics and ethics of an increasingly varied workforce.

Concentration Requirements (9 semester hours)

HRMT200	Human Resource Fundamentals	3
HRMT201	Employee Training and Development	3
HRMT202	Interviewing Fundamentals	3
Total Semester Hours		**9**

Concentration in Retail Management (9 semester hours)

This concentration provides students with practical skills and theoretical knowledge needed to become effective retail managers in the global environment. The program is designed to focus on interpersonal, managerial, human resource, leadership, communication, and critical thinking skills necessary to assess and evaluate retail management practices.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explain the functions and applications of various retail management processes in the areas of store operations.
- Assess the needs of today’s retail managers in the use of information technology, financial resources, and human resources in the retail workplace.
- Apply retail managerial concepts to issues impacting the effectiveness of retail managers in today’s competitive and global organizations.

- Recognize the importance of ethical conduct, social responsibility, and corporate responsibility in the global retail environment.

Concentration Requirements (9 semester hours)

Select 3 courses from the following:		9
RTMG200	Customer Relations

Associate of Arts in Business Administration

Program Description

The online associate degree in Business Administration serves as a general introduction to education and business fundamentals and further develops the skills you may need for an entry-level position in business or government. You'll study basic finance, management, marketing, and leadership concepts while increasing your written communication and computer skills in this online program. You may also apply credits earned in this associate degree toward the completion of a business administration bachelor's degree or related business program.

This associate degree in Business Administration has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®). Skills gained in this program are helpful if you wish to pursue the Microsoft Office Specialist (MOS) Word 2013 certification.

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Use skills in oral and written communication as well as mathematics, relevant general education coursework, and specific business knowledge in the basics of accounting, economics, management, and marketing.
- Discuss the basic business principles and operations, including management, marketing, and finance.
- Apply critical thinking, problem solving, and team-building skills in a business management environment.
- Examine basic tools for managing in organizations based on a fundamental knowledge of both individual and organizational behavior.

Associate of Arts in Communication

Program Description

The Associate of Arts in Communication imparts the interpersonal and group communication skills required for success in all professions in today's technological, global, and diverse world. You'll learn effective public speaking techniques and how to develop compelling presentations, while studying communication history, theory, and ethics. This online associate degree provides a good foundation for those interested in the fields of journalism, marketing and public relations, business management, public policy, or corporate training. Knowledge gained from this associate degree can also serve as a springboard to a related baccalaureate degree.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Describe the various theoretical models and separate parts of the communication process.
- Prepare and deliver a presentation appropriate to a selected communication setting or event.
- Articulate the issues relevant to interpersonal and/or intercultural communication.
- Apply relevant techniques to interpersonal and/or intercultural communication.
- Demonstrate knowledge of the history, models, theories, and concepts of mass communication.
- Demonstrate an understanding of the ethics of communication.

Associate of Arts in Counter Terrorism Studies

Program Description

The Associate of Arts in Counter Terrorism Studies explores the origins and motivations for terrorism, and terrorist strategy and tactics. Terrorism presents real challenges to government and national security communities due to the many different domestic and international

terrorist groups, each with their own leadership, motivations, political objectives, and tactics. The fact that these groups continue to evolve and mature in their capability means even greater challenges lay ahead for the U.S. military and government agencies involved in combating terrorism and in ensuring national security.

This online associate degree program offers you a greater understanding of the complexities of this field. Courses in this program are taught by highly credentialed and experienced instructors, many who hold key positions in government agencies or other intelligence organizations.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Explore the theory and history of terrorism and political violence.
- Identify different domestic and international terrorist groups, their leadership, and their tactics.
- Recognize the motivations of terrorist leaders and their followers.
- Determine the evolving nature of domestic and international terrorism.
- Define government agencies involved in combating terrorism and in ensuring homeland security.
- Describe countermeasures available to U.S. agencies fighting terrorism.

Associate of Arts in Criminal Justice

Program Description

The Associate of Arts in Criminal Justice offers you a basic foundation in criminal justice theory and concepts, legal issues, terrorism, and law enforcement objectives and administration. This associate degree program is designed to help you develop new skills necessary in the law enforcement or criminal justice fields, or to enhance your knowledge gained on the job if you are already employed as a law enforcement officer, investigator, agent, criminologist, or in other law-enforcement related fields.

Our criminal justice programs are among the most popular at the university, bringing you peer interactions and an expanded network of criminal justice professionals who are dedicated to safeguarding their communities and nation. Courses in this program are taught by highly credentialed and experienced instructors, many who hold key positions in government agencies or criminal justice organizations.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Examine historical, philosophical, and constitutional perspectives/limitations of law enforcement.
- Describe the collection and preservation of evidence in basic crime scene investigations.
- Identify the origins of modern terrorism, its impact on society, and the impact of cross-cultural communication.
- Differentiate the criminological, sociological, legal, and political influences on the American criminal justice system.
- Restate theories of juvenile delinquency.

Associate of Arts in Early Childhood Care and Education

Program Description

The Associate of Arts in Early Childhood Care and Education helps to prepares you to work with young children from birth to 5 years of age in a variety of private and public childcare and educational settings.

In addition, courses in the program can help you prepare to pursue the Child Development Associate (CDA) certification sponsored by the Early Childhood Education Training Institution and the Council for Professional Recognition by providing the required academic requirements for that certification. There are additional requirements regarding work experience, portfolios and evaluations that the University does not provide or help meet.

Knowledge gained in this online associate program can also serve as a springboard to a related baccalaureate degree.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Describe the scope and principal theories of early childhood care and education.
- Describe how existing knowledge and practice in early childhood care and education is tested and revised.
- Use appropriate research documents on early childhood care and education, and cite appropriately.
- Demonstrate the ability to apply concepts learned in the classroom to real-life settings.
- Describe their own cultural background and how this background has influenced his or her own beliefs and practices in the field of child development and family studies.

Associate of Arts in History

Program Description

The Associate of Arts in History degree program offers fascinating insight into the pivotal events and people that influenced modern civilization, and covers historical periods across a global perspective. This online degree provides a basic historical education which can be used as a stepping-stone in fields where historical knowledge is beneficial. Graduates with a history degree are found in education, or local, state, or national museums as a curator, guide, archivist, or consultant. You may also apply this degree toward the requirements for the Bachelor of Arts in History or related bachelor's degree.

Many university faculty members teaching these courses are published historians who bring unique perspectives and relevant research into the classroom. You'll also connect and interact online with other students who share your enthusiasm for history.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Identify major historical developments and be able to examine the past from diverse perspectives.
- Apply historical reason to the study of the past and think in terms of causation, context, chronology, change, and continuity.
- Implement historical method through posing questions and conducting research analyzing evidence and articulating defensible conclusions.

Associate of Arts in Interdisciplinary Studies

Program Description

The Associate of Arts in Interdisciplinary Studies offers you the opportunity to develop diverse knowledge, skills, and abilities that provide a solid foundation for academic achievement. In this degree program, you'll combine general education courses with elective courses of your choice, helping you focus on fields most relevant to your interests, career, and goals. Successful achievement of this associate degree shows employers in all fields that you are capable of college-level studies and can persist in completing a degree program. Completion of this program can also serve as a springboard to a baccalaureate degree.

Note: This program does not qualify for Federal Student Aid.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Demonstrate knowledge of different cultures and societies.
- Communicate and collaborate effectively in personal and professional contexts.
- Identify academic disciplines and career paths that fit with personal and professional goals.

Associate of Arts in Military History

Program Description

The Associate of Arts in Military History degree explores the origins of armed conflict in ancient times to patterns of Western warfare in the modern era. From the American Revolution to present day, the curriculum examines national military powers, war doctrines, crucial battles, and political leaders and their foreign policies that led to conflict. This online associate degree also emphasizes professional research, writing, and critical thinking skills. An associate degree can be beneficial in fields where historical knowledge is needed, such as curators, guides, archivists, or consultants, or for continuing toward a bachelor's level education. Many university faculty members teaching these courses are published historians or military leaders who bring unique perspectives and relevant research into the classroom. You'll also connect and interact online with other students who share your enthusiasm for history.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Identify major historical developments and be able to examine the past from diverse perspectives.
- Apply historical reason to the study of the past and think in terms of causation, context, chronology, change, and continuity.
- Implement historical method through posing questions and conducting research analyzing evidence and articulating defensible conclusions.

Associate of Arts in Real Estate Studies

Program Description

The Associate of Arts in Real Estate Studies examines the basic experience, education, licensing requirements, and personal attributes required to succeed in the real estate field. This online associate degree provides a good foundation in real estate topics for both aspiring and current real estate professionals including: salesperson; agent or broker; residential property inspector or appraiser; mortgage broker or loan officer; and property manager. Knowledge from this online associate program can also serve as a springboard to a bachelor's degree.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Discuss career opportunities that exist in the real estate industry and the personal, educational, experiential, and licensing requirements that pertain to each.
- Identify broad perspectives on the principles, practices, legal and ethical issues that are important to successful practitioners in each type of real estate careers.
- Apply specific skill sets important to each area of real estate practice including financial analysis, property appraisal, internet-based marketing and research, contract negotiation, investment evaluation, personal marketing, time management and organizational skills.
- Examine requirements to qualify for any licensing exams and/or other entry requirements (in the state(s) they plan to practice) pertinent to the area of real state that they identify as of interest.
- Develop clear strategies, goals and objectives, and action plans to launch a successful real estate career upon graduation, discharge, or retirement.

Associate of Arts in Supply Chain Management

Program Description

The Associate of Arts in Supply Chain Management will strengthen the student's understanding of supply chain management functions such as: transportation, reverse logistics, order processing, warehousing, and acquisitions management. The degree is specifically

designed to help students identify logistics and supply chain roles and opportunities within different organizations. This associate degree will help students master the concepts and common nomenclature to engage in supply chain management dialogue.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Describe the basic principles of supply chain management.
- Demonstrate skills in transportation, logistics, reverse logistics, and acquisitions management.
- Learn how to solve and supply chain problems through case study scenarios.
- Model strong analytical and problem-solving skills.

Associate of Arts in Weapons of Mass Destruction Preparedness

Program Description

The Associate of Arts in Weapons of Mass Destruction Preparedness provides you with a fundamental understanding of terrorism, terrorist weapons, security vulnerabilities, extremist groups, counterterrorism tactics, and national security. The U.S. military, government agencies, and defense contractors need knowledgeable individuals to help them plan for, deter, and recover from terrorist incidents. This online associate degree helps you to provide additional knowledge for those interested in the fields of a security officer, law enforcement officer, or security specialist with organizations concerned with national security, public safety, and counterterrorism.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Recognize the threat to the U.S. posed by both domestic and international terrorist groups and state actors armed with weapons of mass destruction.
- Describe the threat posed to society by chemical agents.
- Relate the threat posed to society by biological agents.
- Identify the threat posed to society by radiological and nuclear terrorism.
- Review the use of detection and monitoring equipment and personal protection and decontamination practices for the first responder.

Associate of Science in Accounting

Program Description

The Associate of Science in Accounting teaches the basics of accounting fundamentals including the tools needed for building financial statements. You'll study basic business strategies and economic concepts in this accounting degree program, providing practical skills often required for entry-level positions as a bookkeeper, accountant, or auditor. This online associate program is also ideal for students who are thinking of entering the business world as an entrepreneur or manager of a small business.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Describe the general role of accounting in business in relation to its use by managers, investors, businesses, and regulatory agencies.
- List Generally Accepted Accounting Principles (GAAP) and recall how GAAP is established.
- Utilize the steps in the accounting cycle to prepare financial statements from raw financial data.
- Complete accounting analyses and explain how this information is used to assist in making managerial decisions and controlling the financial aspects of business operations.
- Recognize the ethical framework for accountants adopted by professional accounting organizations, such as the American Institute of Certified Public Accountants (AICPA®) and the Institute of Management Accountants (IMA).
- Discuss basic business and economic terms and concepts.
- Employ office productivity applications to create business and accounting related reports and presentations.

AICPA® is a registered trademark of the American Institute of Certified Public Accountants.

General Concentration (3 semester hours)

This concentration is for those students who want to enter the business world as an entrepreneur or manager of a small business. It prepares students for entry-level positions in bookkeeping, accounting, and auditing. The curriculum provides a solid foundation in business strategy, financial statements, cost information, economics, management, and ethical issues. Students will be presented the various financial statements and learn how to record, present, and analyze financial data.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Describe the general role of accounting in business in relation to its use by managers, investors, businesses, and regulatory agencies.

- List Generally Accepted Accounting Principles (GAAP) and recall how GAAP is established.
- Utilize the steps in the accounting cycle to prepare financial statements from raw financial data.
- Complete accounting analyses and explain how this information is used to assist in making managerial decisions and controlling the financial aspects of business operations.
- Recognize the ethical framework for accountants adopted by professional accounting organizations, such as the American Institute of Certified Public Accountants (AICPA®) and the Institute of Management Accountants (IMA).
- Discuss basic business and economic terms and concepts.
- Employ office productivity applications to create business and accounting related reports and presentations.

AICPA® is a registered trademark of the American Institute of Certified Public Accountants.

Concentration Requirements (3 semester hours)

Select 1 course from the following:		3
ACCT300	Financial Accounting	
ACCT302	Intermediate Accounting II	
ACCT303	Intermediate Accounting III	
ACCT305	Accounting Information Systems	
ACCT401	Cost Accounting	
ACCT406	Managerial/Cost Accounting	
ACCT410	Governmental and Not-for-Profit Accounting	
ACCT415	Law for Accountants	
ACCT420	Individual Federal Taxes	
Total Semester Hours		**3**

Elective Requirements (3 semester hours)

Select any courses comprised of lower (100-200) level courses not already taken to fulfill requirements listed above. Additional general education courses may be taken to fulfill elective requirements	3
Total Semester Hours	**3**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.

Associate of Science in Computer Technology

Program Description

The Associate of Science in Computer Technology provides practical knowledge and skills designed to help prepare you for technical positions in information and related computer industries, regardless of your background. Pursuing this degree will afford you the opportunity to complement your mandatory industry certifications, such as CompTIA Security+® and CompTIA A+®, with a degree. The program covers a variety of core subjects to include soft skills in human relations, basic computing, web development fundamentals, productivity applications, and programming essentials. Additional electives allow you to choose from dozens of specific courses in order to advance your knowledge and skills in the information technology arena. Successful completion of this online program helps prepare you for a bachelor’s degree in the computer and information technology field.

After completing this associate degree in computer technology, you may consider pursuing your Microsoft Office® Specialist (MOS) Excel and Certified Internet Webmaster (CIW®) certifications. Please view course descriptions for complete details.

CompTIA Security+® is a registered trademark of the Computing Technology Industry Association, Inc.

CompTIA A+® is a registered trademark of the Computing Technology Industry Association, Inc.

Microsoft Office® is a registered trademark of Microsoft Corporation.

CIW® is a registered trademark of Certification Partners, LLC.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes

- Explain the value of using effective interpersonal skills to communicate and collaborate.
- Identify computing requirements appropriate to solve problems.
- Build a basic computer system using appropriate hardware and software technologies.
- Apply current techniques, skills, and tools for application use and web development.
- Demonstrate the use of technology in an assigned project

Associate of Science in Cybersecurity

Program Description

The Associate of Science in Cybersecurity is designed to advance the student's practical knowledge and skills in the cybersecurity industry, regardless of one's background. Organizations of all sizes face constant cyberthreats and cyberattacks from both internal and external attackers. The cybersecurity associate degree provides a fundamental understanding of cybersecurity theory and know-how often required to implement effective cybersecurity defenses in public and private sectors. Students who complete this associate degree may wish to consider pursuing the University's cybersecurity bachelor's degree for further knowledge and skill.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Identify common uses of cryptography in creating a secure infrastructure.
- Implement various mitigation strategies to cyber threats and provide security solutions.
- Demonstrate a fundamental knowledge of local and wide area networks.
- Explain legal and ethical issues related to technology implications.

Associate of Science in Data Science

Program Description

The Associate of Science in Data Science will cover foundational aspects of data science. Courses will cover functional coding and methods; analytical methods; descriptive, predictive and prescriptive analytics; and machine learning. Graduates will be able to deliver reproducible data analyses and solutions. Graduates will understand ethical, privacy, and security considerations in the conduct of data analyses. Graduates will be able to communicate the story in the data through the use of data visualization techniques.

This program has specific admission requirements.

Degree Program Objectives

Upon completion of this program of study, students will be able to:

- In response to a specific challenge or problem, gather appropriate data.
- Pre-process data, as appropriate, for anticipated final processing and analyses.
- Evaluate a variety of methods used to conduct a data analysis for a specified situation and given data then generate and effectively communicate a comprehensive report on this evaluation including all aspects of the results.
- Deliver reproducible analyses and results.
- Effectively communicate technical results to both or either a technical or non-technical audience.
- Explain the ethical, privacy, and security issues related to data science analyses and communication.
- Obtain real-world experience through project-based coursework and the associate-level seminar.

Programmatic Admission Requirements

For admission to the AS of Data Science, applicants must have completed preparation in mathematics equivalent to pre-calculus or higher. A review of high school or college transcripts showing completion of this requirement will be conducted during the admission process.

Please visit our APU undergraduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-755-2787 or info@apus.edu.

Associate of Science in Fire Science

Program Description

The Associate of Science degree in Fire Science provides you with scientific knowledge of fire behavior, prevention, suppression, and equipment. In addition to learning how and why fires start, spread, and are controlled, you'll examine the history and philosophy of fire prevention bureaus, use of fire codes, and identification and correction of fire hazards.

The mission of the Associate in Fire Science program is to prepare students with introductory fire protection concepts and theories that complement on-the-job fire services training.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Describe the historical development of fire protection and response from its origins through contemporary times.

- Identify and differentiate the various forms of fire, their fundamental scientific principles, and their associated mitigation and response strategies.
- Describe the legal and regulatory duties and responsibilities of the fire department as a public organization.
- Analyze the design principles of fire service pumping apparatus and water use in fire protection.
- Evaluate fire and emergency services safety and survival principles to ensure effective response in emergency situations.
- Examine the role of building construction in fire protection and how it influences fire spread and containment.
- Examine the theoretical and practical applications of fire prevention principles, regulations, and technologies by combining historical context, detailed discussions, and industry insights to contribute to community fire prevention efforts.
- Analyze the interaction between combustion processes, fire behavior, and flow paths related to fireground strategies to effectively predict, mitigate, and manage fire incidents.

Associate of Science in Legal Studies

Program Description

The Associate of Science in Legal Studies offers a foundation in legal doctrine, along with the analytical, technical, and communication skills often required in the legal field. This associate degree program will aid you in doing your part to help solve aspects of the complex societal challenges associated with the public's ability to access justice by providing a foundation for those interested in nonlawyer paraprofessional fields, such as paralegal, legal assistant, legal analyst or technician. By equipping you for ethical service and leadership, the knowledge gained from this online program is applicable to many industries seeking individuals with legal expertise, such as law firms, government agencies, nonprofits, and corporations or businesses with legal departments.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Apply legal research and writing skills in realistic legal contexts.
- Develop critical thinking and legal analytical skills.
- Demonstrate proficiency with law office equipment and software.

Associate of Science in Public Health

Program Description

The Associate of Science in Public Health degree offers introductory courses in sociology, psychology, health, and wellness while looking at the American healthcare system. This online associate degree offers a focus on interpersonal communication, leadership, and motivation, skills often required for entry-level careers in community healthcare or occupational health and safety settings.

Note: The university also offers a bachelor's in public health which can either be a logical next step after earning the associate or may be considered instead of the associate. We recommend you speak with an admission representative to discuss the appropriate starting level to meet your educational goals.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Explain how and why they are a part of a global community and how the health of one nation or community affects the planet as a whole.
- Explain why the profession of public health is dynamic, political, and controversial. To face health issues, a professional must define the public as diverse, with many views, beliefs, values and concerns.
- Possess the training and competence in the use of technologies to deliver health care services to their communities.
- Choose and use the appropriate policies, educational programs, and incentives to develop and maintain individual and community lifestyles that promote optimal health.
- Develop a continuum of supportive public health services appropriate for their community.
- Resolve conflicts over public health and health care issues.
- Ensure that the findings of current public health research are communicated to their communities in an appropriate manner.
- Assure communities of the right to receive sufficient information from suppliers of health care technologies, health care providers, and relevant governmental agencies.
- Explain and assist in the development of a safe community environment.
- Maintain involvement with their communities to assure appropriate education regarding public health matters.
- Maintain the utmost ethical standards in their personal and professional conduct.

Associate of Science in Space Studies

Program Description

Take your introductory journey into space studies with the online Associate of Science in Space Studies.

Using a curriculum designed by former NASA astronaut, the program offers insight into current and historical concepts in astronomy, earth science, space policy, and space flight, taught by expert practitioners. Faculty include scientists and current NASA engineers.

In addition, you'll enjoy access to a state-of-the-art, remote-controlled observatory and a fully online 24-inch aperture telescope. You can also participate in ongoing telescope research projects, such as our supernova research project.

Up to 60 class credits from this online associate degree may be transferred to our bachelor's program in space studies, saving you time and money.

Degree Program Objectives

In addition to the institutional and general education level learning objectives, this degree also seeks the following specific learning outcomes of its graduates:

- Apply knowledge of mathematics, earth science, and space science to identify and solve space/earth studies problems.
- Conduct experiments, analyze, and interpret data.
- Communicate effectively with a range of audiences.
- Assess ethical and professional responsibilities and the impact of technical and/or scientific solutions in global, economic, environmental, and societal contexts.
- Function on multidisciplinary teams.

Associate of Applied Science in Culinary and Foodservice Management

Program Description

The AAS in Culinary and Foodservice Management program combines practical culinary experience students gained serving in the U.S. military, or through formal culinary training, with theory and knowledge related to foodservice operations management.

Students will complete coursework related to foodservice sanitation, foodservice operations, purchasing, cost controls, nutrition in foodservice, and facilities design. This knowledge will complement the skills acquired through employment to help prepare students with professional interests in culinary arts or foodservice management.

This program has specific admission requirements.

Degree Program Objectives

Upon successful completion of this program, the student will be able to:

- Demonstrate food safety practices that will ensure safe food production from purchase to service.
- Demonstrate application of theory and concepts as they relate to the various responsibilities of a foodservice manager.
- Implement strategies to effectively manage and improve restaurant performance, based on operational theory and procedures.
- Apply strategic management principles to accomplish goals and objectives of hospitality operations.

Programmatic Admission Requirements

This program is designed for students who have practical professional culinary arts experience and training. *Culinary experience is required.* Such experience could include:

- JST with Culinary Specialist MOS or Foodservice Specialist MOS
- CCAF Services Specialist AFSC with documented culinary training
- High school diploma with culinary certificate, credential, or badge
- Community college or culinary school culinary certificate
- Resume/CV with 5 years of experience in the civilian food service or culinary job markets; applicable titles could include, but are not necessarily limited to: sous chef, line cook, prep cook, chef de partie, tournant, grill cook, junior cook

Please visit our APU undergraduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-755-2787 or info@apus.edu.

Bachelor's Programs

Bachelor degree programs are designed to help provide the knowledge, skills, and abilities for entry into the workforce, career transition, or graduate study. Bachelor degree programs require a minimum of 120 semester hours and a GPA of 2.0 for graduation. In most cases, these are comprised of general education, major, and elective requirements. In many programs, you have the opportunity to select specific concentrations within the degree program or opt for a general program. You may also elect to “minor” in a second academic discipline.

Bachelor

- Bachelor of Business Administration
- Bachelor of Engineering, Engineering: Electrical Engineering

Bachelor of Arts in International Relations and Global Security

Program Description

The Bachelor of Arts in International Relations and Global Security analyzes the nature of modern global relationships and provides you with an improved understanding of diplomacy, foreign policy analysis, international organizations, global development, and international relations theory. This online bachelor's degree explores the interconnectedness of global economies, societies, and cultures. You will focus on civic engagement and social responsibility while developing broad critical thinking skills in politics, economics, culture, and history. This online program provides an excellent foundation for those interested in fields encompassing government agencies, the diplomatic service, international organizations, world trade and finance, and international media.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Distinguish the political, economic, social, and security theories, methods, and historic patterns of international relations as applied to contemporary issues and actors within the world system.
- Explain the process and implications of interdependence among individuals, groups, states, and regions in the context of globalization.
- Analyze the theories, assumptions, and causes of conflict within international systems as related to the institutions of international law, diplomacy, and world order, including the prospects for sustainable peace.
- Assess the unique principles, structure, organization, and impact of international organizations and other non-state actors within the international system of states.
- Evaluate the multidimensional effects of globalization and integration as applied to issues in human security, conflict resolution, and sustainable economic development.

Students must choose a concentration for this degree program and may select from a Concentration in Comparative Politics and Area Studies, Concentration in Globalization and Human Security, Concentration in International Studies, Concentration in Middle Eastern Studies, or Concentration in Peacekeeping.

Concentration in Comparative Politics and Area Studies (24 semester hours)

Takes an in-depth look at politics in systematic and comparative terms by focusing on domestic politics in various countries. Explores the political history, social background, culture, and institutions of those countries; the roles of various actors in developing and implementing domestic and international policy; and globalization's impact on public policies.

Students in this concentration undertake an in-depth examination of cross-national analysis. Students will learn how to think about politics in systematic and comparative terms by focusing on the domestic politics in a variety of countries.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Comprehend the roles of various actors in the development and implementation of both domestic and international policy.
- Explore the political history, social background, culture, and institutions of various countries.
- Identify the various manifestations of globalization and its impact on various public policies as they relate to cultural, economic, political, and social institutions.

Concentration Requirements (24 semester hours)

IRLS213	Political Geography	3
IRLS300	Comparative Political Systems	3
IRLS392	Globalization and the Market Economy	3
IRLS412	Comparative Foreign Policy	3

IRLS463	Arab-Israeli Conflict: Contemp. Politics & Dipl.	
Total Semester Hours		**24**

Concentration in Globalization and Human Security (24 semester hours)

Takes an historical look at human rights topics and discusses how human rights and human security are intertwined. Delves into environmental security threats such as climate change, water scarcity, consumption patterns, urbanization, food security, and globalization. Some courses in this concentration may lead to eligibility to obtain a certificate of completion from the United Nation's Peace Operations Training Institute.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify the major security threats and opportunities facing the global civil society.
- Describe the interconnected political, social, cultural, and economic forces that affect human security.
- Analyze the various methods designed to increase human security.

Concentration Requirements (24 semester hours)

IRLS310	Introduction to Human Security	3
IRLS400	Human Rights	3
IRLS405	National and Transnational Justice	3
IRLS409	Environmental Security	3
Select 4 courses from the following:		12

Concentration in Middle Eastern Studies (24 semester hours)

Provides a comprehensive understanding of Middle Eastern societies, cultures, religions, history, politics, and conflicts. Topics include essential tenets and central practices of different cultures within Middle Eastern societies, as well as ethnic, cultural, and religious divides that exist in the Middle East and their impact on internal and regional stability.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the development of political and economic institutions.
- Describe how political, economic, social and military structures work within the region.
- Determine how conflict and shifting alliances shaped the politics of the region.
- Summarize the challenges facing Middle Eastern countries individually and as a region.
- Compare and contrast the different cultures and religions within the Middle East.
- Evaluate existing cooperation efforts and the long-term viability of those efforts for success.
- Analyze the role religion plays in the political, social, and economic fabric of the region.

Concentration Requirements (24 semester hours)

Total Semester Hours		**24**

Concentration in Peacekeeping (24 semester hours)

Traces the principles and foundations of peace operations within the context of international and regional mechanisms. Topics include the nature of conflict and diplomatic negotiations in the post-Cold War era, and the role of UN and regional peacekeeping initiatives in specific peacebuilding and peacekeeping operations in conflict areas. Completion of this concentration may lead to eligibility to obtain a certificate of completion from the Peace Operations Training Institute.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Understand the nature of conflict and diplomatic negotiations in the post-Cold War era.
- Identify the evolving theory and practices of United Nations peacekeeping operations.
- Describe the role of UN and regional peacekeeping initiatives in specific peace-building, peacemaking, and peace-keeping operations in conflict areas.

Elective Requirements (45 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	45
Total Semester Hours	**45**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Applied Science in Health Sciences

Program Description

The Bachelor of Applied Science (BAS) in Health Sciences is for students interested in entering or currently working in the rapidly growing healthcare industry. The degree is ideal for those who have completed military training in the medical and health sciences and are seeking to advance their knowledge in the field.

Through an interdisciplinary approach, the BAS in Health Sciences is designed to meet the transforming practices within health sciences. You will study a core curriculum in natural sciences, sports and health sciences, public health, information systems management, health

information management, and healthcare administration. Best of all, if you already earned the AAS Health Sciences degree, you'll find a seamless, quick transfer to this online bachelor's program.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Analyze healthcare policy issues from an economic and financial perspective.
- Create a plan for efficient healthcare system management.
- Evaluate and develop solutions and strategies for complex problems within the healthcare industry.
- Apply ethical standards for decision-making in healthcare organizations.
- Assess technologies and healthcare informatics for implementation in healthcare organizations.

Bachelor of Applied Science in Technical Management

Program Description

The Bachelor of Applied Science in Technical Management is designed to build upon students' prior education and work experience gained through a community college or military technical courses/occupations. This degree is intended to provide the knowledge and skills often required in management and supervisory roles.

This program will explore management theories, concepts, and practices necessary to organize, motivate, and lead human capital.

In the courses for this program, students will conduct management research focused on business problems, collect and analyze data, and communicate their findings by using qualitative and quantitative research methods. Students will also develop critical thinking, analysis, planning, and communication skills and examine complex organizational issues such as staffing, budgeting, strategic management, quality control, project management, supply chain management, marketing management, information systems, and operations.

In addition, students will identify and solve problems related to a specialty area using technical management, project management, technical research management, management information systems, and transportation security management and develop an analytical framework using a variety of approaches to apply leadership and management theory and practice to address the challenges of today's global organizations. Students will also develop the ability to evaluate technical management issues in the context of ethical, technological, structural, cultural, human, and environmental factors.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Conduct business problem focused management research, including collection and analysis of data, and communication of findings by using qualitative and quantitative research methods.
- Develop and foster critical thinking, analysis, planning, and communication skills.
- Examine complex organizational issues that include staffing, budgeting, strategic management, quality control, project management, supply chain management, marketing management, information systems, production and operations.
- Demonstrate a proficiency in identifying and solving problems related to the specialty area using Technical Management, Project Management, Technical Research Management, Management Information Systems, and Transportation Security Management.
- Develop an analytical framework using a variety of approaches to apply leadership and management theory and practice to address the challenges of global organizations in this century.
- Evaluate technical management issues in the context of ethical, technological, structural, cultural, human and environmental factors.

Students must choose a concentration for this degree program and may select from a Concentration in Logistics and Supply Chain Management, Concentration in Management of Information Systems, Concentration in Project Management, Concentration in Technical Management, or Concentration in Technical Resource Management.

Concentration in Logistics and Supply Chain Management (15 semester hours)

The concentration in Logistics and Supply Chain Management introduces the student to the common logistical and supply chain management functions in an enterprise. Students will learn about a broad rand of topics including logistics, demand, risk, and supply chain management.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Evaluate the practices and processes required for successful logistics management.
- Develop strategic planning skills, using a broad range of logistics and supply change management tools, to solve complex business problems.
- Analyze the critical role supply chain and logistics management play within organizations.

Concentration Requirements (15 semester hours)

SCMG301	Supply Chain Risk Management	3
SCMG305	Global Demand Management	3
TLMT313	Supply Chain Management	3
TLMT341	Logistics Management	3
TLMT441	Advanced Business Logistics	3
Total Semester Hours		**15**

Concentration in Management of Information Systems (15 semester hours)

The management of information systems concentration introduces the student to the common database management systems used in business and management. Students will study the common management information systems (MIS) architecture, databases, local area networks, and network security. Students will focus on management research, including collection and analysis of data, and communication of findings by using qualitative and quantitative research methods.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Evaluate the most common management information systems.
- Develop a broad working knowledge of the most common local area networks, management information systems, and database systems.
- Analyze network and security threats.

Concentration Requirements (15 semester hours)

BUSN350	Analytics II	3
INFO331	Management Information Systems	3
INFO222	Database Concepts	3
ISSC231	Networking Concepts	3
ISSC422	Information Security	3
Total Semester Hours		**15**

Concentration in Project Management (15 semester hours)

The project management concentration prepares the student to identify and solve technical management projects that rely upon systems and technology in the fast-changing business and management environments. The students will focus on project management, budget development, management information systems, Microsoft Project manager applications, and organizational behavior.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Evaluate the practices and processes required to be a successful technical management project manager.
- Develop strategic planning skills, using a broad range of technical management tools, to solve complex project problems.
- Analyze the critical role project manager's play in the technical management workplace.

Concentration Requirements (15 semester hours)

BUSN333	Project Management for Business Analysts	3
FINC405	Budget Development and Execution	3
INFO331	Management Information Systems	3
ITMG223	IT Project Management Using Microsoft Project®	3
MGMT311	Organizational Behavior	3
Total Semester Hours		**15**

Concentration in Technical Management (15 semester hours)

The technical management concentration introduces the student to the systematic approach to solving complex business and management problems. Students will focus on management research, including collection and analysis of data, and communication of findings by using qualitative and quantitative research methods.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Evaluate technical management systems.
- Develop a broad knowledge of technical management.
- Analyze technical management/business management problems.

Concentration Requirements (15 semester hours)

FINC201	Financial Management Principles	3
INFO331	Management Information Systems	3
ITMG223	IT Project Management Using Microsoft Project®	3
MGMT410	Strategic Management	3
TLMT313	Supply Chain Management	3
Total Semester Hours		**15**

Concentration in Technical Resource Management (15 semester hours)

The technical resource management concentration introduces the student to the systematic approaches to solving technical systems problems. Students will learn to identify cost-savings, logical approaches to dealing with increasing business and management resource demands. Students will also focus on business critical thinking strategies, financial management, budget development, and human resource development.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Evaluate organizational technical management problems.
- Develop proficiency in handling complex technical development concepts, to include the latest computer software tools and technologies.
- Analyze project scheduling and resource management functions.

Concentration Requirements (15 semester hours)

FINC201	Financial Management Principles	3
BUSN333	Project Management for Business Analysts	3
BUSN410	Critical Thinking Strategies for Business Decisions	3
FINC405	Budget Development and Execution	3

Total Semester Hours		**15**

Final Program Requirement (3 semester hours)

MGMT495	Senior Seminar in Management [2]	3
Total Semester Hours		**3**

Elective Requirements (45 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	45
Total Semester Hours	**45**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Arts in Business

Program Description

The Bachelor of Arts in Business focuses on producing well-rounded graduates who possess knowledge from a variety of disciplines, a solid understanding of business principles, and critical thinking skills. Students will study a core curriculum of management, marketing, law, finance, accounting, and economics, while having the flexibility to apply previously earned course credits and select elective courses from within the Dr. Wallace E. Boston School of Business that meet personal interests and goals. This business program is designed to provide flexibility and affordability, and is applicable for careers in any number of business, government, military, or other professions.

This program offers the opportunity to learn from experienced instructors who have considerable managerial experience in Fortune 500 companies, and to communicate with fellow business students by participating in online community forums.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Discuss economic factors associated with government, business, and consumer environments and apply theoretical techniques to analyze markets.
- Apply concepts of contract, tort, Uniform Commercial Code (UCC), and property law to business situations.
- Articulate the external and internal environments of a business organization and formulate appropriate strategies in the context of competitive forces and environmental factors.
- Collect information through the use of various data tools and apply critical thinking concepts to enhance business problem solving capabilities.
- Practice quantitative skills necessary in business organizations through work in accounting, finance, and statistics.
- Integrate market and marketing information into a strategic plan.
- Explain and apply fundamental accounting and financial management operations to enhance business decision making processes.
- Apply management, human resource, and personnel practices to organizational problem solving.

Bachelor of Arts in Communication

Program Description

The Bachelor in Arts in Communication prepares students to become communication professionals by creating clear, concise, and content rich messages in a diverse and ever changing world. Courses in the degree include public speaking, small group, interpersonal, and mass communication, theory and research, communication ethics, social media, and students can choose between a concentration in strategic communication or digital communication and media design. Graduates of this program will have knowledge applicable to the public or private sector.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Describe the Communication discipline and its central questions.
- Employ communication theories, perspectives, principles, and concepts.
- Engage in communication inquiry.
- Create messages appropriate to the audience, purpose, and context.
- Critically analyze messages.
- Demonstrate the ability to accomplish communicative goals (self-efficacy).
- Apply ethical communication principles and practices.
- Utilize communication to embrace difference.
- Influence public discourse.

Students must choose a concentration for this degree program and may select from a Concentration in Digital Communication and Media Design or Concentration in Strategic Communication.

Concentration in Digital Communication and Media Design (18 semester hours)

The digital communication and media design concentration prepares students to know how to communicate in the ever-changing digital landscape. This concentration will give students the skills to understand how analytics relate to communication, the role of big data and communication, the importance of web, mobile, and visual communication, and how to build a digital presence.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Develop, design, implement, and use, digital communication and media technologies.
- Critically evaluate the communication needs of a target audience using communication analytics.
- Understand and use all available web, mobile, and social media platforms to best communicate with an intended audience.
- Gain tools and insights into the complex and ever changing digital communication landscape for long-term success.

Concentration Requirements (18 semester hours)

COMM356	Digital Communication and Media Design Principles	3
COMM365	Communication Analytics	3
COMM375	Web and Mobile Communication	3
COMM385	Visual Communication	3
COMM415	Building a Digital Presence	3
COMM456	Digital Communication and Media Design Career Management and Future Technologies	3
Total Semester Hours		**18**

Concentration in Strategic Communication (18 semester hours)

The strategic communication concentration prepares students to be a communication leader in their institution or organization. This concentration will give students the skills to create a communication strategy that includes input from stakeholders, considers the diversity and uniqueness of the target audience, is flexible and nimble, and uses all available communication platforms to deliver a well-crafted and professional message.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Develop, design and implement communication strategies.
- Critically evaluate the communication needs of a target audience using communication analytics.

- Use persuasive, informative, and inclusive language to reach the widest possible audience.
- Gain tools and insights into the complex and ever changing communication landscape for long-term strategic communication success.

Concentration Requirements (18 semester hours)

COMM351	Strategic Communication	3
COMM361	Global Communication	3
COMM370	Situational Communication	3
COMM380	Communication of Listening	3
COMM410	Leadership Communication	3
COMM450	Strategic Communication Career Management and Ethics	3
Total Semester Hours		**18**

Final Program Requirement (3 semester hours)

COMM498	Capstone [2]	3
Total Semester Hours		**3**

Elective Requirements (27 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	27
Total Semester Hours	**27**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment.

Bachelor of Arts in Criminal Justice

Program Description

The Bachelor of Arts in Criminal Justice provides you with sound knowledge in the areas of U.S. law enforcement, criminology, investigations, law, and community relations. A wide range of course offerings enable you to focus on juvenile issues, causes of crime and criminal behavior, corrections and incarceration, investigative procedures and techniques, leadership, maritime law, or forensics. This bachelor's degree will complement your professional career path if you are currently in the criminal justice field, or can provide a good foundation for those interested in the fields of criminology, agent, or investigator in federal, state or local law enforcement, judicial, and other organizations.

Our criminal justice programs are among the most popular at the university, bringing you peer interactions and an expanded network of criminal justice professionals who are dedicated to safeguarding their communities and nation. Courses in this program are taught by highly credentialed and experienced instructors, many who hold key positions in government agencies or criminal justice organizations.

Note: For a more in-depth study in forensics, consider our Bachelor of Science in Criminal Justice.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

Criminal Justice Administration and Organization

- Recognize and explain the major international, U.S., and localized law enforcement systems and organization.
- Describe and analyze the political and public administrative aspects of law enforcement organizations.

Criminal Justice Theories and Concepts

- Communicate and apply the major theories and concepts of crime, criminal justice, and criminology.
- Conduct research associated with criminal justice and criminology theories.

Criminal Justice Operations, Practices, and Processes

- Assess the operations, practices, and processes associated with leading standards of evidence and law.

While learning objectives that are specific to the academic discipline have been identified for each degree program, the University System also outlines general education outcomes (Level 1 and 2) that are sought throughout the institution and at each degree level.

Concentration in Maritime Law Enforcement (15 semester hours)

Analyzes policy and operational strategies used to ensure the security of border and coastal access including defensive measures to protect ports from disruption. Explores laws and doctrines governing navigation and shipping, as well as the law of the sea. Looks at chemical, biological, and radiological classification and response to incidents involving hazardous materials.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze various policy and operational strategies used to ensure the security of border and coastal access.
- Examine ports to trade and their vulnerability to disruption and attack, as well as defensive measures to protect ports from disruption.
- Identify chemical, biological, and radiological bases for classification of, and emergency response to incidents involving, hazardous material.
- Assess the impact of terrorism on U.S. national security.
- Explore the laws and doctrines governing navigation and shipping, as well as the law of the sea.

Concentration Requirements (15 semester hours)

EDMG240	Chemistry of Hazardous Materials	3
HLSS311	Border and Coastal Security	3
HLSS312	Port Security	3
INTL451	Terrorism and U.S. National Security	3
LSTD401	Maritime Law	3
Total Semester Hours		**15**

Concentration in Organizational Law Enforcement Leadership (15 semester hours)

Provides a solid foundation in the leadership process and its benefits to law enforcement, including identifying one's personal style, judging the value of an array of leadership roles, and making socially responsible decisions. Topics include gender roles in leadership, conflict resolution, human resource innovation in the workplace, budgeting, and managing an organization during a paradigm shift.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify your personal leadership style and explain the benefits of your leadership style on the organization.
- Analyze necessary organizational leadership skills in given situations and prepare a plan of action for improving organizational leadership abilities.
- Contrast the value of an array of leadership roles.
- Develop critical thinking skills about decisions in a manner that is socially responsible and responsive.
- Demonstrate a persuasive and collaborative approach which encourages a teaming environment.
- Employ organizational accountability to build innovative organizations that respond to ever changing environments.

Concentration Requirements (15 semester hours)

FINC300	Foundations of Financial Management	3
HRMT407	Human Resource Management	3
HRMT411	Dispute Resolution	3
MGMT312	Leadership & Motivation	3
MGMT313	Organizational Change	3

Total Semester Hours		**3**

Elective Requirements (45 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	45
Total Semester Hours	**45**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Arts in Emergency and Disaster Management

Program Description

The Bachelor of Arts in Emergency and Disaster Management offers a practical education aimed at emergency management and public safety. It introduces you to the all-hazards approach and provides an in-depth understanding of risk assessment, hazard identification, prevention and management techniques, the multiple phases of emergency and disaster management, and counterterrorism. It also covers the prevention, management, mitigation, and recovery from man-made and natural disasters. From the smallest incident to the largest catastrophe, our emergency and disaster management program stresses the fact that all disasters are local, which is a foundational emergency management concept. Many courses within the program offer laboratory simulations that build upon one another across the curriculum to reflect events and scenarios that you might encounter in the real world of emergency management. The simulations will provide you with an opportunity to become familiar with a true-to-life disaster scenario, working with tools used in the field.

This program is taught by highly credentialed and experienced instructors, many of whom are board-certified emergency managers (CEM) or hold key positions in government agencies or national safety and security organizations. This program is accredited by the International Fire Service Accreditation Congress(IFSAC).

The mission of the Bachelor in Emergency and Disaster Management program is to prepare students at the journeyman level by providing an in-depth understanding of the theories and best practices associated with effective protection of the public in emergency situations and enabling graduates to assume leadership roles in emergency planning, mitigation, response and recovery, and adaptation functions.

The IFSAC is a registered trademark of the The Board of Regents for the Oklahoma Agricultural and Mechanical Colleges.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Identify the goals of disaster management from prevention/reduction of loss due to hazards, disasters, and emergencies.
- Differentiate between response strategies for the various emergency and disaster incidents.
- Examine the phases of the cycle of disasters.
- Compare and contrast the roles and responsibilities of the individuals and agencies in an emergency and disaster incident.
- Analyze factors and coping strategies involved in emergencies and disasters.
- Demonstrate emergency and disaster preparedness from planning to recovery.

Total Semester Hours	**27**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment.

Bachelor of Arts in English

Program Description

A bachelor's degree in English from American Public University System (APUS) will help you organize and articulate your thoughts in speech and writing, helping you achieve personal and professional success. You will not only gain skills that help to prepare you for the workplace but you will also build confidence in your ability to communicate effectively and efficiently in all situations.

The English department provides students with courses in Composition, Professional Writing, Linguistics, and World, British, and American Literature. Through a carefully planned program of planned and elective courses, you will hone your professional and personal communication skills by learning to investigate, analyze, and synthesize information. The program culminates in a final senior seminar where you will create your own work of academic research.

Our faculty are not only teachers; they are also active members of their professional fields and organizations. Among them are scholars, novelists, editors, poets, journalists, and bloggers, and as a student, you will have the ability to regularly interact with them. The Trefry Library at APUS gives you 24/7 access to the world with thousands of books and journals, media sources, and research guides. The English department at APUS welcomes you to our family.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Articulate ideas effectively and efficiently in speech and in writing.
- Demonstrate the ability to use a variety of critical theories in the analysis and synthesis of text.
- Analyze themes, multiple interpretations, and critical connections in texts.
- Assess a variety of different perspectives that challenge personal cultural experiences and expectations.

- Create texts of critical thought by integrating a variety of different viewpoints.

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Literature, or Concentration in Writing and Communication.

General Concentration (18 semester hours)

The General concentration allows you to choose your own focused area of study. You will select six (6) courses from among World, British, and American literatures and from a wide variety of offerings in professional and creative writing

Objectives

Upon successful completion of this concentration, the student will be able to:

- Attain a wide breadth of knowledge in analyzing and synthesizing texts.
- Compose texts that incorporate diverse perspectives through critical analysis and evaluation.

Concentration Requirements (18 semester hours)

Select 6 courses from the following:	18
LITR215	Literature of American Encounters, Revolution, and Rebellion
LITR218	From Abolition to #MeToo: Literature of the American Civil Rights Movement
LITR222	Pivotal Figures in Early British Literature
LITR225	British Literature from Wordsworth through the Wasteland
LITR231	Leadership in World Literature: Antiquity to the Early Modern Period
LITR233	Literature of the Newly Globalized World: The Individual's Struggle to Adapt
LITR311	Monsters, Heroes, Romance, and the Human Condition Through the Centuries
LITR315	British Poetry from Blake to the Beatles
LITR331	Gothic Literature - Nightmare Creators from Lord Byron to Anne Rice
LITR333	Women Writers: Finding a Voice, Sharing a Vision and Establishing Identity
LITR335	Exploring Relationships through Folk Narrative
LITR336	The Imaginary Real: Magical Realism in Latin American Literature
LITR339	Flowers Bloom in the Desert: Literature of the Middle East
LITR350	America's Genre: The Art and Genius of the Short Story
LITR354	American Poetry from Bradstreet to Bukowski
LITR357	The Past is Always Tense: Contemporary African-American Literature
LITR403	The Work and Life of Ernest Hemingway
LITR408	Mark Twain: The Voice of American Literature
ENGL125	Introduction to Creative Writing
ENGL220	Technical Writing

ENGL221	Scientific Writing	
ENGL226	Effective Business Communication	
ENGL280	Exploring Society & Cultures via Science Fiction	
ENGL320	Freelance Writing	
ENGL322	The Personal Essay	
ENGL420	Advanced Creative Writing	
Total Semester Hours		**18**

Concentration in Literature (18 semester hours)

The Literature concentration focuses on developing analysis and synthesis skills. Through the examination of diverse viewpoints in the chosen literature, you will be exposed to the ideas of great thinkers, you will widen your perspective of the world in general, and you will develop the ability to defend spoken and written arguments using primary source. You should take at least one (1) course from each of the World, British, and American offerings, and it is strongly recommended that you take the three (3) remaining from either the World, British, or American offerings.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explore the themes, multiple interpretations, and critical connections within American, British, and World literatures.
- Critique literary texts using analysis and synthesis.
- Formulate critical insights from texts and articulate them in speech and in writing.

Concentration Requirements (18 semester hours)

Select 6 courses from the following:		18
LITR215	Literature of American Encounters, Revolution, and Rebellion	
LITR218	From Abolition to #MeToo: Literature of the American Civil Rights Movement	
LITR222	Pivotal Figures in Early British Literature	
LITR225	British Literature from Wordsworth through the Wasteland	
LITR231	Leadership in World Literature: Antiquity to the Early Modern Period	
LITR233	Literature of the Newly Globalized World: The Individual's Struggle to Adapt	
LITR311	Monsters, Heroes, Romance, and the Human Condition Through the Centuries	
LITR315	British Poetry from Blake to the Beatles	
LITR331	Gothic Literature - Nightmare Creators from Lord Byron to Anne Rice	
LITR333	Women Writers: Finding a Voice, Sharing a Vision and Establishing Identity	
LITR335	Exploring Relationships through Folk Narrative	
LITR336	The Imaginary Real: Magical Realism in Latin American Literature	
LITR339	Flowers Bloom in the Desert: Literature of the Middle East	
LITR350	America's Genre: The Art and Genius of the Short Story	
LITR354	American Poetry from Bradstreet to Bukowski	
LITR357	The Past is Always Tense: Contemporary African-American Literature	
LITR403	The Work and Life of Ernest Hemingway	

LITR408	Mark Twain: The Voice of American Literature	
STEM280	Exploring Society and Cultures via Science Fiction	
Total Semester Hours		**18**

Concentration in Writing and Communication (18 semester hours)

The Writing and Communication concentration focuses on developing your articulation skills through practice of the writing process. This concentration gives you the opportunity to focus on five (5) professional and/or creative writing courses and one (1) course of literature that highlights writing-in-practice. You will have the opportunity to develop a portfolio of practical and professional writing.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Examine effective and efficient written and oral communication across industries.
- Interpret diverse viewpoints in written communication.
- Create professional texts that conform to industry-specific expectations and facilitate communication.

Concentration Requirements (18 semester hours)

Select 6 courses from the following:		18
ENGL125	Introduction to Creative Writing	
ENGL220	Technical Writing	
ENGL221	Scientific Writing	
ENGL226	Effective Business Communication	
ENGL320	Freelance Writing	
ENGL322	The Personal Essay	
ENGL420	Advanced Creative Writing	
Total Semester Hours		**18**

Final Program Requirement (3 semester hours)

ENGL498	Senior Seminar in English [2]	3
Total Semester Hours		**3**

Elective Requirements (39 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	39
Total Semester Hours	**39**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Arts in Entrepreneurship

Program Description

The Bachelor of Arts in Entrepreneurship offers you a practical, hands-on understanding of what it takes to be a successful entrepreneur in today's competitive marketplace. You'll learn about leveraging business opportunities into viable business entities as you study idea generation, marketing, management, operations, capital funding, and the legal aspects of beginning a new venture. This bachelor's degree program is ideal if you want to gain knowledge about starting your own venture, taking over a family-owned company, or working within a startup organization.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Identify strengths, weaknesses, opportunities, and threats in the product, service, or nonprofit environments.
- Design an appropriate business strategy to support an entrepreneurial business based on research, critical thinking, and leadership skills.
- Evaluate analytical skills necessary to operate a business efficiently and effectively that meet strategic planning and goals.
- Interpret concepts of contract, tort, Uniform Commercial Code (UCC), regulations, and employment law to entrepreneurial business enterprises.
- Recommend various methods necessary to grow an entrepreneurial venture through financial analysis and capital funding options.

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Business Analytics, Concentration in Food and Beverage Industry, Concentration in Small Business, or Concentration in Sports Fitness.

General Concentration (12 semester hours)

This concentration is designed to equip graduates with a practical, hands-on understanding of what it takes to run a successful business in today's business environment. Students will learn about leveraging and a variety of business opportunities into viable business entities. Studies include marketing, management, operations, finance, accounting, and the legal aspects of running a business. This concentration is applicable for any student who has a desire to start his/her own business, plans to take over a family owned business, or otherwise currently works in an entrepreneurial enterprise.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Discuss economic factors associated with government, business, and consumer environments and apply theoretical techniques to analyze markets.
- Apply concepts of contract, tort, Uniform Commercial Code (UCC), and property law to entrepreneurial business enterprises.
- Compose an entrepreneurial business strategy based on in depth analysis of internal and external factors and competitive and environmental forces.
- Apply critical thinking and decision-making skills by collecting data through various research tools in order to develop alternatives and solve problems objectively.
- Practice quantitative skills necessary in to grow an entrepreneurial business through work in accounting, finance, and statistics.
- Develop a marketing plan to support an entrepreneurial business that leverages its overall business strategy.
- Practice analytical skills necessary to operate a business efficiently and effectively.

Concentration Requirements (12 semester hours)

ENTR216	Service Innovation and Delivery	3
ENTR310	The Family Owned Business	3
ENTR313	Non-Profit Entrepreneurship	3
ENTR421	The Value of Networking	3
Total Semester Hours		**12**

Concentration in Business Analytics (12 semester hours)

This concentration provides the student with an array of study and course work in business analytics, tools to use for analytics, decision-making, and applied analytics.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Compare operational statistical theories and software options for objective decision-making.
- Use managerial level statistical methods to integrate into objective decision-making processes.
- Apply analytical concepts to support decision-making.

Concentration Requirements (12 semester hours)

BUSN250	Analytics I	3
BUSN350	Analytics II	3
BUSN450	Advanced Analytics	3
ANLY460	Applied Analytics I	3
Total Semester Hours		**12**

Concentration in Food and Beverage Industry (12 semester hours)

The restaurant industry is the second largest private-sector employer in the United States and it adds jobs at a stronger rate than all other industries combined. By 2023, the restaurant industry is projected to add 1.3 million jobs (National Restaurant Association, 2015). In 2015 alone, restaurants are expected to add over 300,000 jobs. Further, restaurant industry sales account for 4% of the U.S. gross GDP. Starting and owning their own food and/or drink establishment is one of the top three goals of our current entrepreneurship students.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Describe food service industry trends in nutrition and health and explain how food service operations may incorporate these trends into menu development
- Design and implement cost control systems as they relate to foodservice operations.
- Develop menus, and analyze recipes, their structures and conversion properties.
- Incorporate industry standards to inform decisions related to safe and efficient food service operations

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
HOSP200	Food and Beverage Management	
HOSP202	Quantity Food Preparation	
HOSP207	Principles of Cost Control in Foodservice Operations	
HOSP304	Nutrition in the Food Service Industry	
HOSP316	History and Culture of Wine	
Total Semester Hours		**12**

Concentration in Small Business (12 semester hours)

This concentration is designed for students who want to focus on possibly being a small business owner. Graduates examine leadership, customer service, operations, social media, and marketing specific to a small business. Developed to bring specialized knowledge to entrepreneurs, this program will expose students to key concepts and principles to be a successful small business owner.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Summarize employment practices for small business owners.
- Recommend a customer service model for a new small business.
- Conduct appropriate marketing functions for your business venture.
- Assess relevant areas for cost improvement for a small business.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
ENTR200	Leadership in Small Business Ventures	
ENTR340	Small Business Customer Service	
ENTR415	Marketing the Successful Small Business	
ENTR420	Social Media to Grow Small Business	
ENTR425	Operating a Small Business	

ENTR430	Virtual Small Business	
Total Semester Hours		**12**

Concentration in Sports Fitness (12 semester hours)

The fitness industry is growing and many individuals express an interest in being an entrepreneur in this field. Research shows growth estimates ranging from 9.76 billion dollars in 2008 to a $24 billion industry today. The fitness industry services some 51 million Americans of all ages and income levels. The fitness industry has been forecasted to grow 23% by 2025 and encompasses different types of gyms. Sports fitness is a growing industry due in part to increased awareness of health and wellness. In this concentration, students will focus on wellness, conditioning, trends and culture.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Discuss factors affecting endurance training and methods for developing endurance.
- Examine the body's responses to weight training, training and conditioning, and strength training exercises.
- Analyze the health benefits gained from strength training.
- Apply concepts related to health promotion and disease prevention.
- Design a functional training program.
- Examine the issues and trends associated with fitness and wellness.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
PBHE209	Wellness: Health Promotion and Disease Prevention	
SPHE295	Foundations of Nutrition	
SPHE420	Exercise Programming and Testing	
SPHE460	Business Aspects of Fitness and Wellness	
SPHE461	Current Issues and Trends in Fitness and Wellness	
SPMT316	Sports and Recreation Facility Management	
Total Semester Hours		**12**

Final Program Requirement (3 semester hours)

ENTR498	Entrepreneurship Senior Capstone [2]	3
Total Semester Hours		**3**

Elective Requirements (36 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	36
Total Semester Hours	**36**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Arts in Government Contracting and Acquisition

Program Description

The Bachelor of Arts in Government Contracting and Acquisition helps to prepare you for opportunities in the contract management profession, including government contracting within federal agencies or military and civilian defense establishments. In this online degree program, you'll complete simulation-based scenario assignments created from real-world case studies. This program takes advantage of the Contract Management Body of Knowledge (CMBOK®) as defined by the National Contract Management Association.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

The CMBOK® is a registered trademark of the Nation Contract Management Association.

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Explain the acquisition cycle and process, and the use and application of a contract audit.
- Explain contract requirements, types of contracts, and contingency contracting authorities and structure.
- Demonstrate how a Defense Contract Audit Agency audit report can be prepared to meet a negotiation objective, along with the workings of a competitive discussion.
- Explain the elements of cost in overhead, and calculate a price and cost objective using simple regression analysis, learning curve analysis, and statistics.
- Explain the FAR requirements for forward pricing rates, billing rates, and final overhead rates.
- Explain the Joint Theater Support Contracting Command (JTSCC).
- Explain ethics standards expected of government and contractor personnel, along with appropriate laws, regulations, and policies for a routine procurement.

Bachelor of Arts in History

Program Description

The Bachelor of Arts in History degree explores history's fascinating events, people, and cultures that determined the course of modern civilization. Whether you're interested in the Antiquities, Western Civilization, Colonial or American History, the Civil War, World War II, the Cold War, Middle East history, or an analysis of Iran, this dynamic history program offers compelling choices. This bachelor's program emphasizes critical and analytical thinking, and effective research and writing skills. Graduates with history degrees can often be found as curators, archivists, educators, or in professions involving research, writing, editing, advocacy, politics, or historical preservation.

Many university faculty members teaching these courses are published historians who bring unique perspectives and relevant research into the classroom. You'll also connect and interact online with other students who share your enthusiasm for history.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Demonstrate knowledge of key historical facts, values, and ideas that have shaped civilizations throughout history.
- Analyze primary sources in their historical context.
- Analyze secondary sources and identify various approaches to historical interpretation through critical reading.
- Evaluate historical arguments based on primary sources and the historical method.
- Demonstrate ability to conduct independent historical research in primary and secondary sources and complete a major research paper.

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in American History, Concentration in European History, or Concentration in Global History.

General Concentration (39 semester hours)

Students who pursue a General History Concentration will examine a wide array of historical events to include their causes, consequences, and social impact. They will learn critical and analytical thinking and effective writing and research methods. Students explore the philosophies, personalities, strategies, leadership, and other factors that influenced the world. Topics cover American History, Ancient and Classical History, as well as European and Global History.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Demonstrate a broad knowledge of historical literature that is relevant to the discipline.
- Summarize historical experiences that go beyond a single time period and national or cultural experience.
- Identify historical forces that have shaped social change and contemporary human problems.
- Interpret documents, and other forms of evidence, in their historical context.
- Apply historical methods to critically evaluate the past.
- Articulate, in writing, a persuasive and well-structured historical argument.

Concentration Requirements (39 semester hours)

HIST230	History of East Asia	3
HIST301	Ancient Greece	3
HIST302	Ancient Rome	3
HIST402	Colonial America	3
HIST403	The Early Republic, 1783-1815	3
HIST406	Civil War And Reconstruction, 1861-1877	3
HIST350	History of the Middle East	3
HIST310	History of Modern Europe	3
HIST408	The United States: 1900 to Second World War	3
HIST409	The United States: WW II to the Present	3
Select 3 courses from the following:		9
HIST303	The Middle Ages	
HIST304	The Renaissance	
HIST305	France in the Age of Enlightenment	
HIST306	The British Empire	
HIST307	The Age of Dictators: Europe 1914-1945	
HIST308	History of European Colonialism	
HIST480	Special Topic: History	
HIST490	Independent Study: History	
Total Semester Hours		**39**

Concentration in American History (39 semester hours)

Students in the American History Concentration are encouraged to take HIST101-American History to 1877 and HIST102-American History after 1877 as part of their General Education Requirements.

Students who pursue a concentration in American History will study U.S. history from the Colonial Period to the present. This includes an examination of the philosophies, personalities, strategies, leadership, and other factors that influenced the United States. Topics cover foreign policy and military operations as well as the domestic political, economic, and social components of America.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Assess the social, economic, and political situation in the United States from colonization to the present.
- Illustrate America's evolving relationship with the rest of the world.
- Demonstrate knowledge of the major events, ideas, trends, and problems in American history.
- Explain how the past has shaped the present.
- Interpret documents, and other forms of evidence, in their historical context.
- Apply historical methods to critically evaluate the past.
- Articulate, in writing, a persuasive and well-structured historical argument.

Concentration Requirements (39 semester hours)

Concentration in European History (39 semester hours)

Students in the European History Concentration are encouraged to take HIST121-Western Civilization before The Thirty Years' Wars, and HIST122-Western Civilization after the Thirty Years' War as part of their General Education Requirements.

Students who pursue a concentration in European History will focus on Europe's history from ancient Greece to the present. Students will examine the political, philosophical, scientific, and social changes that laid the foundation for early Europe to the key developments that gave rise to modernity. Topics include the development of political, economic, and cultural institutions in early European societies and the rise of Europe as a global power in the modern period.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Understand influences of the past on contemporary European events and problems.
- Analyze significant problems and situations as they relate to the current issues and the investigation of history.
- Demonstrate a wider perspective that recognizes the political, economic, and cultural interdependence of differing societies and people.
- Assess the specific contributions and perspectives of diverse members of European society.
- Interpret documents, and other forms of evidence, in their historical context.
- Apply historical methods to critically evaluate the past.
- Articulate, in writing, a persuasive and well-structured historical argument.

Concentration Requirements (39 semester hours)

Concentration in Global History (39 semester hours)

Students enrolled in the Concentration in Global History will examine the cultural interconnections, trade networks, conflicts, and major events that have taken place in the world from pre-history to the present. Students will study the political, philosophical, scientific, and social changes that shaped the world. Special emphasis will be placed on how the various regions of the globe interacted with one another over the millennia to create the modern world.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Assess the ways that different cultural groups have interacted through conquest, migration, commercial exchange, and cultural diffusion.
- Explain the development of different social, economic, and political systems.
- Describe the practices, ideals, and developments of major belief systems.
- Evaluate the social, economic, and political effects of the Industrial Revolution.
- Interpret documents, and other forms of evidence, in their historical context.
- Apply historical methods to critically evaluate the past.
- Articulate, in writing, a persuasive and well-structured historical argument.

Bachelor of Arts in Homeland Security

Program Description

The Bachelor of Arts degree in Homeland Security offers you a comprehensive education in the basics of terrorism, counterterrorism, hazard management, intelligence, and other components of national security. This program helps students develop the knowledge and skills to contribute new ideas, identify and critique unexamined assumptions of policy and strategy, and have the ability to translate good intentions into effective action.

This online bachelor's degree is designed to meet this market need. Through this bachelor’s program, you will receive a holistic liberal arts education that covers the range of domestic security efforts, helping to prepare you for advancement or new entry into the homeland security field. This degree program is taught by highly credentialed and experienced instructors, many who hold key positions in government agencies or public safety organizations.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Examine the historical and evolving concept of homeland security within the broader political and national security system of the contemporary nation-state.
- Recognize the detailed mitigation, planning, response, and recovery phases to and from a homeland security incident.
- Differentiate among the various homeland security threats, to include those that are manmade, technological, and natural.
- Discuss the strategic, operational, and tactical threats presented by chemical, nuclear, and biological agents, to include agent characteristics and delivery systems.
- Distinguish among and assess the various homeland security approaches, techniques, and processes, such as analytics, indications, warnings, and forecasting.
- Explain the key administrative and command and control elements of the evolving homeland security relationships among the intelligence community; Department of Homeland Security; interagency processes and institutions; federal, state, and local intergovernmental relations; and a comprehensive U.S. homeland security strategy.

Elective Requirements (45 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	45
Total Semester Hours	**45**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Arts in Hospitality Management

Program Description

The Bachelor of Arts in Hospitality Management provides a foundation of research, critical thinking, and writing skills, along with the practical know-how required for success in global hospitality workplaces. This online degree program is helpful if you want to gain

knowledge about managing or owning a restaurant, and provides practical skills often required for entry- to mid-management positions in the event planning, lodging and travel destination, and tourism fields. You'll be taught by experienced faculty, many who draw on their own experiences in hospitality to share their knowledge of industry best practices used around the world today.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Apply concepts and principles of hospitality service excellence in marketing, law, revenue management and strategic planning, to the unique aspects of hospitality operations.
- Judge current political, economic, and social issues that affect food service, lodging and travel and tourism industries.
- Apply strategic management principles to accomplish goals and objectives of hospitality operations.
- Assess unique hospitality characteristics and principles that are the business of hospitality management.

Students must choose a concentration for this degree program and may select from a Concentration in Business and Hospitality Financial Analytics, Concentration in Food Service, Concentration in Lodging and Tourism, or Concentration in Meeting and Event Planning.

Concentration in Business and Hospitality Financial Analytics (21 semester hours)

This concentration introduces big data analytics for hospitality management professionals in general terms which can be applied to hospitality organizations. Students will analyze, evaluate, and organize data to facilitate problem solving and decision making in areas where data is collected and utilized. Students will focus on the analysis methods used within the hospitality industry in order to make financially sound business decisions to focus on financial outcomes.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Integrate various business analytics tools and statistical analysis methods to assist in problem solving and business decision making.
- Implement Excel-based models to process and analyze business data.
- Develop policies and procedures for controlling the purchasing function in the hospitality industry.
- Analyze the value of various financial analyses to test the effectiveness of control systems.
- Evaluate the quality of revenue management decision making as applied to the hospitality industry.
- Construct revenue management strategies to assemble a customer-centric plan that would improve profits, despite varying economic conditions.

Concentration Requirements (21 semester hours)

HOSP203	Hotel and Restaurant Purchasing	3
HOSP207	Principles of Cost Control in Foodservice Operations	3
BUSN250	Analytics I	3
MATH302	Statistics	3
HOSP325	Revenue Management for the Hospitality Industry	3
BUSN350	Analytics II	3
BUSN450	Advanced Analytics	3
Total Semester Hours		**21**

Concentration in Food Service (21 semester hours)

Examines current trends, issues, and challenges in the food service industry, such as the layout, design, equipment, and human engineering involved in a food service facility. Topics include cost control, dietary guidelines, table service, and the history and culture of wine.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Examine and discuss the leading issues associated with food service in the 21st Century including food service trends, issues, and challenges.
- Design and implement cost control systems as they relate to foodservice operations.
- Incorporate industry standards to inform decisions related to safe and efficient food service operations.

Concentration Requirements (21 semester hours)

Select 7 courses from the following:		21
HOSP200	Food and Beverage Management	
HOSP202	Quantity Food Preparation	
HOSP203	Hotel and Restaurant Purchasing	
HOSP207	Principles of Cost Control in Foodservice Operations	
HOSP304	Nutrition in the Food Service Industry	
HOSP316	History and Culture of Wine	
MGMT101	Principles of Supervision	

Total Semester Hours	**21**

Concentration in Lodging and Tourism (21 semester hours)

Explores and evaluates essential topics in the lodging and tourism industries and their contribution to a global economy. Includes marketing concepts, legal issues, revenue management, service quality, technology, and career options in the hospitality industry.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Describe the makeup and size of the lodging and tourism industries and how they contribute to a global society.
- Explain the interrelationship and the importance of cooperation between visitors bureaus and lodging facilities locally and globally.
- Describe laws associated with lodging and tourism management.
- Demonstrate understanding of revenue management concepts and the importance of budgeting and forecasting.
- Summarize career opportunities in the lodging and tourism segments.

Concentration Requirements (21 semester hours)

Select 7 courses from the following:		21
HOSP203	Hotel and Restaurant Purchasing	
HOSP207	Principles of Cost Control in Foodservice Operations	
HOSP212	Fundamentals of Tourism Management	
HOSP309	Convention Sales and Services	
HOSP310	Management of Lodging Operations	
HOSP320	Business and Conference Hospitality Mgmt	
HOSP325	Revenue Management for the Hospitality Industry	
HOSP350	Managing Technology in the Hospitality Industry	
HOSP410	Advanced Tourism and Hospitality Management	
HOSP415	Destinations and Cultures	
Total Semester Hours		**21**

Concentration in Meeting and Event Planning (21 semester hours)

Provides a thorough overview of the meeting, exposition, and convention industry, including the environmental concerns involved in event management. Courses cover industry organizations, such as convention bureaus, as well as emergency preparedness, liability and insurance, and the use of technology.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply the steps involved in planning meetings and special events.
- Evaluate the administration and logistics of a given event scenario.
- Explain the environmental concerns involved in managing an event.
- Analyze elements of a client culture affecting meeting and event planning.

Concentration Requirements (21 semester hours)

HOSP308	Meeting and Convention Planning	3

HOSP309	Convention Sales and Services	3
HOSP320	Business and Conference Hospitality Mgmt	3
HOSP350	Managing Technology in the Hospitality Industry	3
HOSP410	Advanced Tourism and Hospitality Management	3
HOSP413	Meeting and Event Risk Management	3
HOSP415	Destinations and Cultures	3
Total Semester Hours		**21**

Final Program Requirement (3 semester hours)

HOSP495	Senior Seminar in Hospitality Management [2]	3
Total Semester Hours		**3**

Elective Requirements (36 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	36
Total Semester Hours	**36**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Arts in Human Development and Family Studies

Program Description

The Bachelor of Arts in Human Development and Family Studies focuses on the classic and contemporary theories of human life development from infancy through adulthood including family and societal issues.

In addition, courses in the program can help you prepare to pursue these certifications:

- Certified Family Life Educator (CFLE®) sponsored by the National Council on Family Relations. To qualify for the academic portion of the CFLE, you'll need to complete all core requirements as well as these specific courses:
  - CHFD220 - Human Sexuality
  - CHFD350 - Family Life Education
  - CHFD360 - Family Resource Management
  - CHFD348 - Marriage and the Family
  - CHFD445 - Family Communications
  - CHFD446 - Families and Social Action
  - CHFD498 - Senior Seminar in Child and Family Development

  NOTE – There is a work experience requirement for full certification by the CFLE which the University does not provide. More information is available at the CFLE website: https://www.ncfr.org/cfle-certification/become-certified/cfle-approved-application.
- Certified Child Life Specialist (CCLS®) sponsored by the Association for Child Life Professionals. To qualify for the academic portion of the CCLS, you'll need to complete all core requirements as well as these specific courses:

- HDFS401 - Child Life Theory and Practice
- HDFS402 - Benefits of Therapeutic Play
- HDFS403 - Death, Dying and Grief
- CHFD340 - Family Development

- Child Development Associate (CDA®) certification sponsored by the Early Childhood Education Training Institution and the Council for Professional Recognition. Courses in the program can help you prepare to pursue the CDA certification sponsored by the Early Childhood Education Training Institution and the Council for Professional Recognition by providing the required academic requirements for that certification. There are additional requirements regarding clinical hours that the University does not provide and students must secure their own placement. Additional information on those clinical requirements can be found at www.childlife.org.

Important note: This bachelor's degree does not award professional licensure and does not qualify you to apply for a teaching licensure. In addition, individual states often require additional hands-on training, internships, or site visits not provided by our University. Students are encouraged to become familiar with all licensure/certification requirements in the state in which they plan to seek possible employment.

CFLE® is a registered trademark of the National Council on Family Relations.

CCLS® is a registered trademark of the Child Life Council.

CDA® is a registered trademark of the Council for Professional Recognition.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Demonstrate fluency in the terminology, tools, and methods used in the field of child and family development.
- Describe the contributions of multiple theories or practices to the field of child and family development, both within and across disciplines.
- Demonstrate the ability to synthesize multiple information sources and points of view into a discussion of major child and family development issues.
- Present a project or paper linking knowledge from work, community, or research activities with knowledge acquired in the study of child and family development.
- Explain different perspectives on contested issues in child and family development, including an articulation of how these issues might be addressed in social, political, or personal settings.

Bachelor of Arts in Human Resource Management

Program Description

The Bachelor of Arts in Human Resource Management is designed for human resource professionals interested in understanding all of the functions within the field. The program will provide an overview of issues impacting the global workforce from a generalist and specialist perspective. While in the program, students will explore strategies to motivate, compensate, recruit, appraise, and develop an organization's talent base. Collaboration and case studies will support the importance of the human resource function to the strategic direction and effectiveness of an organization.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Examine various laws, rules, regulation, and policies affecting human capital in today's global workforce.
- Evaluate the effectiveness of various compensation packages and employee incentive programs in enhancing recruitment, retention, and overall job satisfaction.
- Describe leading trends and issues in the field of human resource management.
- Summarize the role of the human resource department toward the strategic direction of the organization.

SPST180	Introduction to Astronomy	
Total Semester Hours		**30**

Major Required (24 semester hours)

HRMT200	Human Resource Fundamentals	3
HRMT201	Employee Training and Development	3
HRMT202	Interviewing Fundamentals	3
HRMT407	Human Resource Management	3
HRMT427	International Human Resource Management	3
HRMT419	Recruitment and Staffing	3
MGMT315	Management Communications	3
MGMT314	Management Ethics	3
Total Semester Hours		**24**

Students must choose a concentration for this degree program and may select from a General Concentration or Concentration in Employment Law.

General Concentration (15 semester hours)

The general concentration delves into behavior in organizations, training and development, compensation, performance management, and technology to support the human resource management function. Students will compare compensation packages and reward systems and differentiate between various performance management methods.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explain the concept of total rewards in relation to employee compensation and benefits.
- Describe how human resource development is linked to the overall goals and strategies of an organization.
- Develop an understanding of basic systems and the criteria for success in using HR software in organizations.
- Compare and contrast successful and unsuccessful performance management systems.
- Prepare a strategy to motivate a group of employees with varying backgrounds and perspectives.

Concentration Requirements (15 semester hours)

HRMT412	Compensation and Benefits	3
HRMT415	Human Resource Management Information Systems	3
HRMT416	Human Resource Development	3
HRMT430	Performance Management	3
MGMT311	Organizational Behavior	3
Total Semester Hours		**15**

Concentration in Employment Law (15 semester hours)

The employment law concentration allows for deeper discovery of employee compensation and benefits. Students will also learn about dispute resolution, negotiation, employment law, and labor relations.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify government regulations for compensation and benefits.
- Contrast mediation to adversarial dispute resolution models like arbitration and trial.
- Discuss several significant ethical issues involved in negotiation.
- Assess the impact of employment law/human relations in organizations.
- Examine sources of power considered during negotiation.

Concentration Requirements (15 semester hours)

HRMT412	Compensation and Benefits	3
HRMT411	Dispute Resolution	3
HRMT413	Employment and Labor Relations	3
HRMT300	Negotiation I	3
HRMT301	Negotiation II	3
Total Semester Hours		**15**

Final Program Requirement (3 semester hours)

MGMT496	Capstone: Portfolio [2]	3
Total Semester Hours		**3**

Elective Requirements (48 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	48
Total Semester Hours	**48**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment.

Bachelor of Arts in Intelligence Studies

Program Description

The Bachelor of Arts in Intelligence Studies is designed to enhance your ability to research, analyze, and convert data into clear and coherent intelligence. This online bachelor's degree focuses on national and international intelligence operations, analysis, ethics, collection methods, research, and counterintelligence. This degree program is helpful if you are currently employed in the intelligence field, or are interested in military, civilian, or corporate intelligence specialists fields.

Core courses in this program impart substantive knowledge and analytic skills required by all professionals in the intelligence community, while the concentration choices enable you to focus on a functional area or intelligence sub-field. This degree program is taught by highly credentialed and experienced instructors, many who hold key positions in government agencies or other intelligence organizations.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Describe the evolution, structures, functions, capabilities, and activities of the U.S. national intelligence community.
- Detail the structures, functions, capabilities, and contributions of national intelligence consumers to include the national command authority, executive departments, Congress, military services, joint/unified commands, and law enforcement agencies.
- Specify the intelligence cycle including intelligence planning, data collection, data exploitation, analysis, production, and dissemination phases.
- Differentiate among the fundamental capabilities and limitations and means of tasking human, geographic/imagery, signals, measurement and technical and open intelligence data sources.
- Detail the current permissions and restrictions on U.S. national intelligence community activities as prescribed by federal law, executive and agency directives, and the intelligence oversight system.
- Conduct basic research and compose professional and academic analyses on issues critical to intelligence consumers.

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Asian Area Studies, Concentration in Counterintelligence, Concentration in Criminal Intelligence, Concentration in Cyber, Concentration in Geospatial Intelligence (GEOINT), Concentration in Intelligence Analysis, Concentration in Intelligence Collection, Concentration in Intelligence Operations, Concentration in Latin America Area Studies, Concentration in Middle East Area Studies, or Concentration in Terrorism Studies.

General Concentration (15 semester hours)

This general concentration allows you to select from other concentration courses offered in this program.

Concentration Requirements (15 semester hours)

Select 5 courses from the following:		15
HLSS320	Intelligence and Homeland Security	
INTL402	Intelligence Analysis	
INTL408	Counterintelligence Operations	
INTL409	Counterintelligence Analysis	
INTL410	Counterintelligence	
INTL412	Espionage/Counterespionage	
INTL413	Denial and Deception	
INTL419	Applied Geospatial Intelligence	
INTL421	Signals Intelligence and Security	
INTL422	Open Source Collection	
INTL423	Human Intelligence	

INTL424	Interrogation	
INTL431	Criminal Intelligence Analysis	
INTL432	Geographic Information Systems I	
INTL433	Geographic Information Systems II	
INTL440	Cyber Warfare	
INTL442	Tactical Intelligence	
INTL446	Intelligence and Narcotics	
INTL450	Terrorism and Counterterrorism	
INTL451	Terrorism and U.S. National Security	
INTL453	Illicit Finance	
INTL454	Forecasting Terrorism	
Total Semester Hours		**15**

Concentration in Asian Area Studies (15 semester hours)

Takes an in-depth look at Asia, including its security issues and the role of intelligence within the region. Topics include analysis techniques, including hypothesis generation, red-teaming, and adversarial collaboration; and the conflict between traditional norms and modern institutions.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the role Intelligence plays within a specific country or region.
- Examine the impact of US policy on the region.
- Assess the security issues of the region.
- Explain the role of religion in the political, economic, and cultural life of the area.

Concentration Requirements (15 semester hours)

INTL402	Intelligence Analysis	3
Select 4 courses from the following:		12
IRLS213	Political Geography	
IRLS300	Comparative Political Systems	
IRLS310	Introduction to Human Security	
IRLS331	Asian Politics	
IRLS409	Environmental Security	
IRLS412	Comparative Foreign Policy	
RELS360	East Asian Religions	
RELS370	South Asian Religions	
Total Semester Hours		**15**

Concentration in Counterintelligence (15 semester hours)

Demonstrates U.S. intelligence agencies use of counterintelligence and covert action to guard America's global interests and protect national security. Examines the counterintelligence professional’s role in overt and covert operations, and delves into research methods and tools used in counterintelligence.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Acquire a general knowledge of Counterintelligence research, analysis, and operations.
- Analyze threats in the counterintelligence arena.
- Examine the role of the Counterintelligence professional in both overt and covert operational styles.
- Demonstrate proficiency in the use of selected research methods and tools as they pertain to the counterintelligence environment.

Concentration Requirements (15 semester hours)

Select 5 courses from the following:		15
INTL408	Counterintelligence Operations	
INTL409	Counterintelligence Analysis	
INTL410	Counterintelligence	
INTL412	Espionage/Counterespionage	
INTL413	Denial and Deception	
INTL422	Open Source Collection	
INTL423	Human Intelligence	
INTL424	Interrogation	
INTL440	Cyber Warfare	
Total Semester Hours		**15**

Concentration in Criminal Intelligence (15 semester hours)

Addresses intelligence processes and procedures in criminal justice, various techniques used to understand violence, and the differences between crime, war, and terrorism. Covers criminal intelligence analysis and strategic organized crime; cyber warfare’s use in military, terrorist, and, criminal organizations; and the illegal drug trade’s impact on national security and intelligence gathering.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explain intelligence processes and procedures in the criminal justice community.
- Analyze the differences between crime, war, and terrorism.
- Evaluate the various techniques and methodologies used within the Criminal Justice community to understand the different aspects of violence and accomplish their goals.

Concentration Requirements (15 semester hours)

INTL402	Intelligence Analysis	3
INTL431	Criminal Intelligence Analysis	3
Select 3 courses from the following:		9

CMRJ303	Criminology	
CMRJ320	Law Enforcement Intelligence Applications	
CMRJ329	Criminal Profiling	
CMRJ335	Crime Analysis	
INTL411	International Criminal Organizations	
INTL440	Cyber Warfare	
INTL446	Intelligence and Narcotics	
INTL453	Illicit Finance	
Total Semester Hours		**15**

Concentration in Cyber (15 semester hours)

Offers an overview of cyber warfare and the potential impact of its use by military, terrorist, and criminal organizations, as well as the various methods of collection and analysis. Looks at the use of strategic and operational level communications (COMINT) and electronics (ELINT) intelligence. Topics also include the change in laws to account for crimes in the digital age.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze advanced intelligence data collection methods in supporting analyses on issues critical to intelligence community consumers.
- Examine the full spectrum of the intelligence collection cycle and articulate effectively intelligence needs in future collection planning.
- Assess the range of collection methods being used to fill intelligence gaps as well as the potential impact of future collection systems and capabilities and their ability to satisfy customers' intelligence requirements.

Concentration Requirements (15 semester hours)

INTL421	Signals Intelligence and Security	3
INTL422	Open Source Collection	3
INTL440	Cyber Warfare	3
Select 2 courses from the following:		6
CMRJ201	Criminal Justice Administration	
ISSC231	Networking Concepts	
ISSC351	Computer Forensics	
ISSC421	Computer and Network Security	
ISSC422	Information Security	
ISSC451	Cybercrime	
ISSC452	Cybersecurity	
ITMG281	Law, Privacy, and Digital Data	
Total Semester Hours		**15**

Concentration in Geospatial Intelligence (GEOINT) (15 semester hours)

Within this concentration students will gain foundational knowledge on the use and application of geospatial intelligence. Students will complete a variety of applied assignments that will require the use of geospatial intelligence tools to complete their work. Upon completion of the program students will have received instruction on core competencies specific to geospatial collection and analysis.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze threats using tools and techniques specific to geospatial analysis.
- Examine the role of geospatial intelligence within the intelligence cycle.
- Demonstrate proficiency in the use of selected research methods and tools as they pertain to geospatial intelligence.

Concentration Requirements (15 semester hours)

Select 5 courses from the following:		15
GEOG200	Fundamentals of Geographic Information Systems I	
GEOG201	Fundamentals of Geographic Information Systems II	
INTL419	Applied Geospatial Intelligence	
INTL432	Geographic Information Systems I	
INTL433	Geographic Information Systems II	
INTL402	Intelligence Analysis	
INTL422	Open Source Collection	
INTL442	Tactical Intelligence	
INTL440	Cyber Warfare	
Total Semester Hours		**15**

Concentration in Intelligence Analysis (15 semester hours)

Provides an understanding of how to interpret information generated from a variety of different organizations and sources into a highly cogent and professional intelligence product. Explores using existing knowledge to find meaning behind what is not immediately apparent to forecast events or consequences and draw conclusions with a high degree of reliability and precision.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Examine advanced intelligence analysis methods in composing professional and academic analyses on issues critical to intelligence community consumers.
- Evaluate and interpret information generated from a variety of different organizations and sources into a highly cogent and professional intelligence product.
- Employ a broad, subtle, and nuanced understanding of existing knowledge to find meaning behind what is not immediately apparent to forecast events or consequences and draw conclusions with a high degree of reliability and precision.

Concentration Requirements (15 semester hours)

INTL402	Intelligence Analysis	3
Select 4 courses from the following:		12
INTL409	Counterintelligence Analysis	
INTL413	Denial and Deception	
INTL419	Applied Geospatial Intelligence	
INTL422	Open Source Collection	
INTL431	Criminal Intelligence Analysis	

INTL432	Geographic Information Systems I	
INTL433	Geographic Information Systems II	
INTL446	Intelligence and Narcotics	
INTL450	Terrorism and Counterterrorism	
INTL453	Illicit Finance	
INTL454	Forecasting Terrorism	
Total Semester Hours		**15**

Concentration in Intelligence Collection (15 semester hours)

Considers collective methods used to fill gaps in intelligence, as well as the potential impacts of future collection systems and their ability to satisfy intelligence requirements. Also covers: the full spectrum of the intelligence collection cycle; intelligence needs in future collection planning; and advanced methods of collecting data to support intelligence community consumers.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze advanced intelligence data collection methods in supporting analyses on issues critical to intelligence community consumers.
- Examine the full spectrum of the intelligence collection cycle and articulate effectively intelligence needs in future collection planning.
- Assess the range of collection methods being used to fill intelligence gaps as well as the potential impact of future collection systems and capabilities and their ability to satisfy customers' intelligence requirements.

Concentration Requirements (15 semester hours)

Select 5 courses from the following:		15
INTL410	Counterintelligence	
INTL413	Denial and Deception	
INTL419	Applied Geospatial Intelligence	
INTL421	Signals Intelligence and Security	
INTL422	Open Source Collection	
INTL423	Human Intelligence	
INTL424	Interrogation	
INTL440	Cyber Warfare	
INTL442	Tactical Intelligence	
Total Semester Hours		**15**

Concentration in Intelligence Operations (15 semester hours)

Surveys the nature and challenges to military planning of operations other than war, such as peacekeeping operations, low-intensity conflicts, and humanitarian relief efforts. Looks into ways to facilitate cooperation with others across the intelligence community, as well as intelligence management skills necessary for planning, management, and leadership positions.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Employ intelligence management skills required by planning and management positions in the intelligence community.

- Identify ways to facilitate cooperation with other individuals and organizations across the intelligence community to advance projects and corporate goals.
- Examine the nature and challenges to military planning of combined operations and operations other than war including peacekeeping operations, low intensity conflicts, and humanitarian relief operations.

Concentration Requirements (15 semester hours)

Select 5 courses from the following:		15
HLSS320	Intelligence and Homeland Security	
INTL408	Counterintelligence Operations	
INTL410	Counterintelligence	
INTL412	Espionage/Counterespionage	
INTL413	Denial and Deception	
INTL440	Cyber Warfare	
INTL442	Tactical Intelligence	
INTL446	Intelligence and Narcotics	
INTL453	Illicit Finance	
IRLS409	Environmental Security	
IRLS414	Principles of Peacekeeping	
IRLS415	Peacekeeping Logistics	
Total Semester Hours		**15**

Concentration in Latin America Area Studies (15 semester hours)

Explores the politics, cultures, history, and predominant language of Latin America, as well as U.S. intelligence operations there to guard America's global interests and protect national security. Topics include security issues in the region and the part intelligence plays in the war on drugs.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the role Intelligence plays in the War on Drugs.
- Examine the impact of U.S. policy on the region.
- Assess the security issues of the region.
- Explain the role of the political, economic, and cultural life of the area.

Concentration Requirements (15 semester hours)

INTL402	Intelligence Analysis	3
Select 4 courses from the following:		12
HIST360	History of Latin America	
INTL446	Intelligence and Narcotics	
IRLS213	Political Geography	
IRLS300	Comparative Political Systems	
IRLS310	Introduction to Human Security	

IRLS355	Latin American Politics	
IRLS409	Environmental Security	
IRLS412	Comparative Foreign Policy	
SPAN100	Spanish I	
SPAN101	Spanish II	
Total Semester Hours		**15**

Concentration in Middle East Area Studies (15 semester hours)

Delves into the intelligence community and its relationship to the Middle East through the region's language, politics, history, and culture. Topics include a study of Judaism, Christianity, and Islam; major Middle Eastern literary works dating back to ancient times; the origins and evolution of the Arab-Israeli conflict; and past and present U.S. foreign policy in the Muslim world.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the role Intelligence plays within a specific country or region.
- Examine the impact of U.S. policy on the region.
- Assess the security issues of the region.
- Explain the role of religion in the political, economic, and cultural life of the area.

Concentration Requirements (15 semester hours)

INTL402	Intelligence Analysis	3
ARAB100	Arabic I	3
Select 3 courses from the following:		9
HIST350	History of the Middle East	
IRLS213	Political Geography	
IRLS360	Global Politics of Islam	
IRLS460	Government & Security in the Middle East	
IRLS463	Arab-Israeli Conflict: Contemp. Politics & Dipl.	
IRLS468	Politics and Security in the Persian Gulf	
LITR339	Flowers Bloom in the Desert: Literature of the Middle East	
RELS330	Religions of the Middle East	
RELS353	Islam	
Total Semester Hours		**15**

Concentration in Terrorism Studies (15 semester hours)

Evaluates leading terrorist organizations and their agendas, as well as the causes of and threats from domestic and international terrorism. Explores information sharing limits under the PATRIOT Act and the Intelligence Reform and Terrorism Prevention Act. Teaches how to identify the leading terrorist organizations, understand their agendas, and develop the critical thinking skills and methodological techniques to defeat them.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Appraise the causes of and threats from U.S. domestic and international terrorism.
- Analyze the limits of information sharing under the guidelines of both the U.S. PATRIOT Act and the Intelligence Reform and Terrorism Prevention Act.
- Identify the leading terrorist organizations, understand their agendas, and develop the critical thinking skills and methodological techniques to defeat them.

Concentration Requirements (15 semester hours)

Select 5 courses from the following:		15
INTL402	Intelligence Analysis	
INTL431	Criminal Intelligence Analysis	
INTL440	Cyber Warfare	
INTL446	Intelligence and Narcotics	
INTL450	Terrorism and Counterterrorism	
INTL451	Terrorism and U.S. National Security	
INTL453	Illicit Finance	
PSYC360	Psychology of Terrorism	
SCMT319	Global Terrorism	
Total Semester Hours		**15**

Final Program Requirement (3 semester hours)

INTL498	Senior Seminar in Intelligence Studies [2]	3
Total Semester Hours		**3**

Elective Requirements (45 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	45
Total Semester Hours	**45**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Arts in Interdisciplinary Studies

Program Description

The Bachelor of Arts in Interdisciplinary Studies offers you a chance to focus on two or more disciplines while helping build communication and critical thinking skills. Academic discipline choices are focused on employment trends for students with an interdisciplinary

background: business and management; natural and social sciences, communication and media; and social services. This degree allows you to build and focus upon unique areas of study with fewer constraints than a traditional major. Graduates of this program apply their skills and abilities in communication, business and management, and social service. The interdisciplinary foundation of the program helps to prepare you for diverse employment choices as well as for discipline focused graduate studies.

Note: This program does not qualify for Federal Student Aid.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Demonstrate knowledge of and respect for different cultures and societies.
- Communicate and collaborate effectively in personal and professional contexts.
- Apply an interdisciplinary perspective to solving problems.
- Explain how interdisciplinary knowledge supports success in different careers in service and leadership.

Bachelor of Arts in Management

Program Description

The Bachelor of Arts in Management helps to prepare you to transition from the technical aspects of a profession to leading and managing individuals in their respective fields. You will explore management theories, concepts, and practices necessary to organize, motivate, and lead human capital. Successful completion of the online degree program provides practical skills often required for managerial positions and responsibilities in business, as well as nonprofit, government, and military organizations.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Evaluate the functions and applications of various management processes in the areas of planning, organizing, staffing, directing, leading, and controlling.
- Develop strategies for organizational challenges using management theories, principles, and practices.
- Analyze the impact of international, legal, social, political, economic, technological, and environmental issues as they relate to organizational behavior in terms of the individual, group/team, and overall organizational performance.
- Examine the importance of ethical conduct, communication, social responsibility, and corporate responsibility in the global environment.
- Demonstrate skills in critical thinking, data interpretation, and decision making necessary for developing systematic processes and approaches in the management of human capital and achievement of organizational effectiveness.

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Business Project Management, Concentration in Digital Retailing, Concentration in Entrepreneurship, Concentration in Human Resource Management, Concentration in Leadership, Concentration in Sports Entertainment Management, or Concentration in Talent Acquisition and Retention.

General Concentration (15 semester hours)

A general concentration allows you to take courses across a number of areas of study within your program based on your own interests.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Practice management skills related to the area of study.
- Apply critical thinking and decision-making skills to the area of study.
- Develop management strategies for an organizational setting in the area of study.

Concentration Requirements (15 semester hours)

Select 5 courses from the following:		15
ACCT105	Accounting for Non Accounting Majors	
BUSN201	Introduction to Construction Management	
BUSN250	Analytics I	
CMRJ101	Evidence and Procedures	
CMRJ206	Juvenile Delinquency	
CMRJ303	Criminology	
CMRJ306	Criminal Investigation

MKTG307	Consumer Behavior	
SPMT440	Sports Event Management and Planning	
SPMT450	Sports Governance	
Total Semester Hours		**15**

Concentration in Business Project Management (12 semester hours)

The concentration in Business Project Management enhances the student's understanding of how businesses depend on project management to move the organization toward its strategic goals. Through this concentration, the student will be introduced to the theories, concepts, and practices that align with project management.

Students will come to understand how projects begin during the sales cycle and continue to be assessed after the project is delivered. Students will be exposed to skill sets to track and monitor projects, develop a schedule and integrate it with costs and risks, prepare presentations for leadership and stakeholders, and create status reports. Companies depend on project management to stay competitive in developing new offerings, determining the technology needed within the enterprise, updating processes and procedures, and implementing projects for customers.

The concentration is designed for business professionals and military personnel interested in project management within the business environment.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the fundamentals of project management.
- Demonstrate varying problems from a risk management standpoint.
- Define the role of projects and project management.
- Create a project charter, a scope statement, a Work Breakdown Structure (WBS), Risk Management Plan, Quality Management Plan, and Stakeholder Management Plan.
- Explain the need for ethical project management.

Concentration Requirements (12 semester hours)

BUSN451	Introduction to Business Project Management	3
BUSN452	Project Schedule and Scope Management	3
BUSN453	Project Integration, Quality, Resource, and Stakeholder Management	3

RTMG202	Risk Management	3
Total Semester Hours		**12**

Concentration in Digital Retailing (15 semester hours)

The concentration includes the world of digital retailing for retail management professionals. Digital retailing encompasses multiple facets of technology from smart stores with product experts, instant data access, to expanded use of artificial intelligence, virtual and augmented reality, expanded mobile/cashier-less capabilities, consumer protection, and seamless customer experiences with e-commerce, m-commerce, and brick and mortar locations. In addition, students have the opportunity to study digital marketing and cyber security.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explore the evolution of retail markets from pre-industrial to modern day digital retailing.
- Differentiate the various forms of online and digital retailing.
- Evaluate risks inherent to digital retailing including cybersecurity, fraud, and safety protection.

Concentration Requirements (15 semester hours)

RTMG312	Digital Retail Analytics	
RTMG313	Digital Retail Strategies	
RTMG314	Digital Merchandising	
RTMG315	Retail Cybersecurity	
Total Semester Hours		**15**

Concentration in Entrepreneurship (12 semester hours)

Focuses on key concepts and principles of being a successful entrepreneur or small business owner. You will examine leadership practices, feasibility of ideas, funding, and customer service specific to a small business.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Establish entrepreneurial factors affecting product and services in the reverse logistic environment.
- Apply customer service skills to entrepreneurial projects, programs or organizations.
- Analyze entrepreneurial ventures to understand sources of funding and other legal requirements

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
ENTR150	Idea Generation	
ENTR200	Leadership in Small Business Ventures	

ENTR210	Entrepreneurs as Leaders	
ENTR300	Foundations of Entrepreneurship	
ENTR310	The Family Owned Business	
ENTR311	Business Plan Foundations	
ENTR340	Small Business Customer Service	
ENTR425	Operating a Small Business	
Total Semester Hours		**12**

Concentration in Human Resource Management (15 semester hours)

Delves into the laws, rules, regulations, policies, trends, and issues affecting both human capital in the workplace and the field of human resource management. Compares compensation packages and incentives used to recruit and retain employees. Includes the selection, training, and development of employees, as well as performance appraisal and reward systems.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Examine various laws, rules, regulations, and policies affecting human capital in today's workplace.
- Compare and contrast compensation packages and incentives used to recruit and retain employees for various positions in an organization
- Assess leading trends and issues in the field of Human Resource Management

Concentration Requirements (15 semester hours)

HRMT407	Human Resource Management	3
HRMT412	Compensation and Benefits	3
HRMT415	Human Resource Management Information Systems	3
HRMT416	Human Resource Development	3
HRMT419	Recruitment and Staffing	3
Total Semester Hours		**15**

Concentration in Leadership (15 semester hours)

Provides a foundation in the leadership process and motivation. Examines management techniques in organizational change and transformation, and the processes of conflict resolution. Additional topics include common leadership theories exercised in business, military, and political contexts in public and nonprofit organizations.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Examine measurement tools that will assist one with determining levels of self-awareness, emotional intelligence, and personality.
- Demonstrate techniques that will lead others to greater personal self-awareness through general counseling and active listening.
- Develop strategies on creating change in the workplace, including how to build teams and lead staff during critical times.
- Evaluate the principles of leader development in organizations and the tools that allow development and growth to occur (i.e. 360-degree assessments, mentoring).

Concentration Requirements (15 semester hours)

HRMT411	Dispute Resolution	3

MGMT312	Leadership & Motivation	3
MGMT313	Organizational Change	3
MGMT331	Leading Yourself Foundations	3
MGMT414	Strategic Planning	3
Total Semester Hours		**15**

Concentration in Sports Entertainment Management (15 semester hours)

Helps to prepare graduates to position themselves for jobs within the sports and events world, and is ideal for the individual focused on mastering the sports world from a business management perspective. It combines the necessary technical components of the sports industry with the foundation skills for orchestrating such events (human capital behavior and motivation, organization resources and development, culture and relationships, sport and law and emerging issues in sports and entertainment).

Objectives

Upon successful completion of this concentration, the student will be able to:

- Demonstrate technical and managing skills to develop an event in the sport and entertainment industry.
- Integrate coursework and networking opportunities to help create a pathway into the sports and entertainment business world.
- Apply concepts and theory to the sport and entertainment world by developing an ePortfolio to showcase skills acquired in the program.

Concentration Requirements (15 semester hours)

LSTD209	Sports Law, Risk, and Regulation	3
SPMT279	Social Issues in Sports	3
SPMT200	Foundations of Sports Management	3
SPMT230	Integrated Communication in Sports	3
SPMT440	Sports Event Management and Planning	3
Total Semester Hours		**15**

Concentration in Talent Acquisition and Retention (15 semester hours)

Given the current economy, many business leaders believe that their #1 priority is to hire and retain specific talent for their organizations. Companies are seeking opportunities to attract passive candidates, but the market is competitive. This concentration seeks to assist students with developing strategies that entice potential candidates to work in various fields.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Develop strategies for hiring employees that will embrace the organization’s culture.
- Create onboarding strategies that promote higher productivity.
- Analyze techniques that encourage recruiters to think like marketers.
- Implement an employer brand to attract potential candidates.
- Outline a development plan to further an employee’s career.

Concentration Requirements (15 semester hours)

MKTG201	Fundamentals of Marketing	3
MGMT312	Leadership & Motivation	3
MKTG305	Advertising	3

HRMT419	Recruitment and Staffing	3
HRMT416	Human Resource Development	3

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment.

Bachelor of Arts in Marketing

Program Description

The Bachelor of Arts in Marketing provides a variety of knowledge and skills applicable to nearly any industry where marketing efforts such as advertising, public relations, promotions and events, market research, sales, and ecommerce play a significant role in the growth of the organization. This bachelor's program is designed to increase your self-motivation, self-confidence, and your ability to work well with others. You'll discover creative problem solving and be taught how to take appropriate business risks and spot market trends in the corporate, government, and military sectors.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Integrate the marketing function with fundamental business enterprise concepts and principles of management, finance, strategic planning, and information systems.
- Apply marketing principles to a particular business.
- Use marketing research to identify and exploit business opportunities.
- Critically analyze an organization's marketing function and assemble and apply the various marketing strategies and techniques that align with the organization's mission.
- Develop a strategic marketing plan.

Concentration in Analytics (12 semester hours)

Data procurement and analysis is a vital role in marketing and business. It helps ensure that the business is operating efficiently, that marketing programs that are implemented are effective, and creates better tools for marketers to use during the decision-making process. In addition to the institutional, general education, and program level learning objectives, the Concentration in Analytics is designed to provide additional information to marketing students to enhance their skills to make more objective-based decisions in today's business environment.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify business needs and problem domains.
- Analyze processes and behavior requirements for problem solutions.
- Diagram current and proposed business processes using various tools and techniques.
- Recommend business solutions.
- Develop business processes and improvements.
- Develop functional business capabilities.
- Facilitate and manage recommended projects.

Concentration Requirements (12 semester hours)

BUSN330	Fundamentals of Business Analysis I	3
BUSN331	Fundamentals of Business Analysis II	3

Concentration in Digital Marketing (12 semester hours)

Digital marketing serves as a primary means of reaching existing and potential customers in the modern world of business. Knowledge of the tools utilized in the digital marketing space are becoming essential for marketing professionals. The digital marketing concentration is designed to build on the knowledge gained in the Bachelors of Arts Marketing program and to provide focus on marketing from a digital perspective and developing an integrated marketing strategy.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explain the principles and practices of digital marketing.
- Analyze Web technology tools available to manage and enhance marketing programs.
- Apply digital marketing concepts and skills to promote integrated marketing strategies.

Concentration Requirements (12 semester hours)

WEBD122	Introduction to Web Analytics	3
WEBD323	Search Engine Optimization	3
MKTG310	Digital Marketing	3
MKTG425	Integrated Marketing Communications	3
Total Semester Hours		**12**

Concentration in Internet-Web Technology (12 semester hours)

Internet and web technology play a vital role in marketing and business. Internet and web technology serves as a primary means to touch existing and potential customers. To be effective, marketers need to have a working understanding and knowledge of the tools utilized in the Internet/Web Technology space. Without this underpinning knowledge it can be difficult to translate the needs of the marketing organization to the IT professionals that perform the coding and technological work. In addition to the institutional, general education, and program level learning objectives, the Concentration in Internet and Web Technology is designed to provide additional information to marketing students to enhance their skills to make more objective-based decisions in today's business environment.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze Web technology tools available to manage and enhance marketing programs.
- Explain the principles and practices of Internet/Web technology.
- Apply Web analytics, Web videography, search engine optimization, and Web content management systems skills to promote marketing program effectiveness.

Concentration Requirements (12 semester hours)

WEBD122	Introduction to Web Analytics	3
WEBD311	Internet Concepts	3
WEBD321	Web eCommerce Development	3
WEBD323	Search Engine Optimization	3
Total Semester Hours		**12**

Concentration in Retail Management (12 semester hours)

According to the National Retail Federation, Retail directly and indirectly supports 42 million jobs, provides $1.6 trillion in labor income and contributes $2.6 trillion annually to U.S. GDP. As the retail industry grows, the marketing aspects of retail management will be key to growth, expansion, and survival. Marketers need to have an understanding of the retail management space and to look beyond traditional formats, products, and services to ensure successful marketing practices are being utilized and practiced.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Define the importance of retail strategy formulation and the impact of retailing on the economy in the global environment.
- Examine and identify the retailing process and how today's managers assess and implement strategies used in the management of information technology, financial, and human resources.
- Explore and examine analytical techniques for diagnosing the competitive position of retail focused strategy, and identifying and analyzing specific retail options.
- Explore and examine major differences between a successful versus poorly run retail operation to include visual communication, store design, employee recruitment, and consumer value propositions.
- Explore and examine the many factors of merchandise blending and how to determine which components are needed for successful assortments for the consumer.
- Explore and examine the dynamic and competitive nature of the retail industry.

Concentration Requirements (12 semester hours)

Total Semester Hours	**39**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Arts in Military History

Program Description

The Bachelor of Arts in Military History is designed for students seeking greater understanding of military historiography studies in the context of a general liberal arts education. The online bachelor's program is designed differently than many military history programs because it focuses primarily on armed conflict and how their outcomes shaped civilizations throughout history. This history major also emphasizes critical and analytical thinking, and effective research and writing skills. Graduates with military history degrees can be found in historical preservation careers as curators, archivists, or educators, or in other professions requiring strong communication skills.

Many university faculty members teaching these courses are published historians or military leaders who bring unique perspectives and relevant research into the classroom. You'll also connect and interact online with other students who share your enthusiasm for history.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Demonstrate knowledge of key historical facts, values, and ideas that have shaped civilizations throughout history.
- Analyze primary sources in their historical context.
- Analyze secondary sources and identify various approaches to historical interpretation through critical reading.
- Evaluate historical arguments based on primary sources and the historical method.
- Demonstrate ability to conduct independent historical research in primary and secondary sources and complete a major research paper.

Students must choose a concentration for this degree program and may select from a General Concentration or Concentration in American Military History.

General Concentration (30 semester hours)

Students who pursue the General Concentration will learn about the "big picture" through exposure to five historical perspectives. They will learn critical and analytical thinking, and effective writing and research methods. Students study the philosophies, personalities, strategies, leadership, and other factors that influenced the world. Topics cover Ancient and Classical Military History, American Military Campaign Histories, Diplomacy and Peacekeeping, Strategy and Operations, and Current Issues and Future Trends.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify a broad knowledge of the historical literature that pertains to the topics of study included in the degree program and locate the linkage between historical studies and allied disciplines.
- Interpret historical forces that have shaped social change and contemporary human problems and discern an understanding of the historical experiences that go beyond a single time period and national or cultural experience.
- Analyze historical material and make judgments, to establish causal relationships between facts, to find order and patterns, and to answer why and how - not just simply report.
- Analyze the contributions of the major military philosophers and leaders to the understanding of military history.
- Examine the dynamics of diplomacy and peacekeeping as they have existed throughout history and in the present.
- Discuss the major military events, technologies, and nations that shaped our past and contemporary world.
- Examine the operational art and warfare options practiced in historical and modern scenarios.

Concentration Requirements (30 semester hours)

Concentration in American Military History (30 semester hours)

A student enrolled in the Concentration in American Military History is recommended to take HIST101-American History to 1877 and HIST221-African American History before 1877 as part of their General Education Requirements.

Students who pursue this concentration will focus on American Military History from Colonial America to the present. Students study the philosophies, personalities, strategies, leadership, and other factors that influenced American Military History. Topics focus on military operations but also cover foreign policy and domestic political, economic, and social components of early America to the Persian Gulf War.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify causes of America's break from the British Empire.

- Compare and contrast the philosophy of early American leaders.
- Analyze the reasons America pushed westward and what that expansion entailed.
- Identify and give examples of the causes of the Civil War as well as differentiate the outcomes of that war in the North and the South.
- Assess the social, economic, and political situation in America leading up to the 20th century.
- Identify the causes of the Great Depression and recognize the attempts that were made to bring America out of it.
- Analyze America's reasoning for joining both World Wars as well as identify military policy and strategy that contributed to eventual victory.
- Elaborate on the political background of the Cold War and what factors led to diplomatic struggles between the United States and the Soviet Union.
- Integrate the cultural revolution of the 1960s and what was happening in Vietnam.
- Identify major political, cultural, and economic developments from the 1980s to the 21st Century.

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	33
Total Semester Hours	**33**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Students will need permission from the Department Chair to take this course.
3. Prerequisite: HIST491-Writing a Research Proposal, Senior Standing, and completion of all major courses prior to enrollment. May not be taken concurrently with HIST491.

Bachelor of Arts in Philosophy

Program Description

The Bachelor of Arts in Philosophy degree is designed to expose students to the fundamentals of Western philosophy. Courses in this program will enable students to explore the history of Western philosophy, logic, ethics, the philosophy of science, and the fundamentals of metaphysics and ethics.

Through the use of logic and argumentation, students will learn to think critically and objectively, write clearly and effectively, and navigate complex intellectual, social, and legal issues. This program helps to prepare students for professional responsibilities often requiring a high level of analytical thought in fields such as ethics, instruction, business, or social justice organizations.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Examine the historical development and evolution of philosophy from its origins through contemporary times.
- Evaluate the various schools of philosophical and moral thought, as well as the historical context and the rationale behind their respective development.
- Apply logic by demonstrating the proper use of inductive, deductive, and abductive reasoning.
- Evaluate various criteria for justifying claims of knowledge and morality.
- Construct philosophical positions in various compositions and critically analyze philosophical questions.
- Apply philosophical inquiry to contemporary events.

Bachelor of Arts in Political Science

Program Description

The Bachelor of Arts in Political Science does more than teach about politics – it empowers you with the skills needed to inquisitively question political systems. Questions like: How does a federal republic differ from a democracy? How does a party system affect governance? These are the types of questions that political scientists explore, but they also represent issues that require ordinary citizens to make informed judgments. Knowledge gained in this online program can be applied to the gaining and holding of elected positions, or to government and military service or other professions where strong interpersonal and communication skills are required.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

Political Theory and Systems

- Analyze the fundamental theories and philosophies of government, governance, economy, and civil society.
- Compare and contrast the political elements of representative democracy and with other political systems.

The United States Political System

- Assess the three institutions of government that create and implement federal policy.
- Analyze the historical evolution and contemporary manifestations of the federal system.

Political Parties and Interest Groups

- Analyze the various roles of interest groups in the United States in both historical and modern democratic processes.
- Assess the impact of political parties on federal, state, and local government.
- Analyze the concept of diversity in American politics, to include gender, ethnicity, and age.

Students must choose a concentration for this degree program and may select from a Concentration in American Government, Concentration in International Relations, or Concentration in Political Theory.

Concentration in American Government (15 semester hours)

Expands on the fundamental elements introduced in POLS210-American Government. Includes a more in-depth look into the American federal system, details on the U.S. judicial system and constitutional law, the operation of U.S. intelligence community, and the factors that affect political decision making in the U.S.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the interdisciplinary field of political psychology and how it relates to the study of American politics.
- Explain the philosophical basis and functioning of the American republic.
- Analyze threats against the United States from nation states, non-state actors, and transnational groups.
- Identify historical events and figures that have contributed to the present-day court system in America.
- Describe how and why the Constitution developed.

Concentration Requirements (15 semester hours)

POLS211	American Government II	3
LSTD204	Introduction to the Courts	3

INTL301	U.S. Intelligence Community	3
LSTD301	Constitutional Law	3
POLS401	The Psychology of American Politics	3
Total Semester Hours		**15**

Concentration in International Relations (15 semester hours)

Explores various international issues affecting the world today, such as human rights and the global economy. Topics include the United Nations, NATO, national and transnational justice, and international civil order. Completion of this concentration may lead to eligibility to obtain a Peace Operations Training Institute certificate.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explain how global issues, such as globalization and human rights, affect international relations.
- Discuss how international organizations, such as the United Nations and NATO, define collective security, particularly regarding peacekeeping operations.
- Describe how international justice is established and enforced.
- Examine various global development initiatives to reverse failed and failing nation-states.

Concentration Requirements (15 semester hours)

IRLS211	International Relations II	3
IRLS301	International Organizations	3
IRLS302	International Development	3
IRLS405	National and Transnational Justice	3
IRLS417	International Civil Order	3
Total Semester Hours		**15**

Concentration in Political Theory (15 semester hours)

This concentration includes a heavy grounding in philosophy, which is designed to help describe how political theory has evolved through the centuries. Courses cover ancient philosophers, such as Aristotle, to more modern figures like Marx, as well as major contemporary political issues like capital punishment, abortion, and freedom of thought.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Discuss the development and evolution of political theory from their origins to contemporary times.
- Analyze and evaluate political theoretical arguments from historical to contemporary sources.
- Apply political theoretical inquiry to contemporary events.
- Evaluate how philosophy influences political theory over time.
- Critique current political theories for validity.

Concentration Requirements (15 semester hours)

PHIL101	Introduction to Philosophy	3
PHIL300	Logic	3
PHIL302	Ancient Western Philosophy	3

PHIL401	Modern Philosophy from Descartes to Kant	3
PHIL420	Contemporary Philosophy	3

Elective Requirements (45 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	45
Total Semester Hours	**45**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Arts in Psychology

Program Description

The Bachelor of Arts in Psychology examines the workings of the human mind by studying aspects of developmental, organizational, and abnormal psychology. Emphasis is on applying the science of human behavior to vocational, personal, academic, and clinical settings. This online bachelor's degree is intended for students who are interested in public-facing professions such as politics, law, counseling, human services, education, law enforcement, military service, human-computer interaction, and public management.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Articulate the major theoretical, historical, and conceptual ideas that underpin the broad discipline and specialty areas of psychological science.
- Evaluate psychological research using scientific and quantitative reasoning.
- Identify the education, roles, ethical standards, and professional responsibilities of psychologists in research, practice, and academic contexts.
- Create clear and concise professional communications appropriate to different audiences.
- Develop evidence of skills, qualifications, and work ethics that graduate programs and employers desire in psychology graduates.

Bachelor of Arts in Religion

Program Description

The Bachelor of Arts in Religion allows students to study the cultural, political, and spiritual aspects of religion while being exposed to the theological tenets of religious thought and expression. This degree program uses a multidisciplinary approach to religious study from the viewpoints of both participant and critic.

Students will also examine the origin, history, beliefs, and practices of the world's major religions. This degree program is intended to help prepare students for professional responsibilities that focus on human services, foreign diplomatic services, or pastoral assistance.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Describe the term "religion" and identify religion's influence throughout society.
- Analyze the universal and unique forms of religious expression, such as sacred places, symbols, ethics, and rituals.
- Assess the concepts that comprise a religious worldview such as the creation of the world, good and evil, salvation, and the meaning of suffering.
- Analyze various political, social, and other forms of religious life that are evident in different societies.
- Demonstrate knowledge of the cultural, social, scientific and religious aspects of society.
- Explain the role that faith can play in a balanced worldview.

Students must choose a concentration for this degree program and may select from a Concentration in Christian Studies or Concentration in Non-Profit Leadership.

Concentration in Christian Studies (15 semester hours)

In this concentration, students will focus on the philosophy and teachings of Jesus Christ and his apostles, and the subsequent intellectual and cultural movements and institutions based on Christianity. Includes instruction in Christian sacred scripture, Christian literature and philosophy.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Describe the life and teaching of Jesus Christ and his apostles.
- Apply Christian philosophy to current events.
- Explore foundations of Christian faith and religious devotion based on Bible studies.
- Apply spiritual, philosophical, and literary concepts from a general Christian perspective.

Concentration Requirements (15 semester hours)

RELS206	Contemporary Christianity	3
RELS211	Introduction to the Old Testament	3
RELS212	Introduction to the New Testament	3
RELS311	Introduction to the Bible	3
RELS422	The Teachings of Jesus	3
Total Semester Hours		**15**

Concentration in Non-Profit Leadership (15 semester hours)

In this concentration, students will focus on the theory and practice of providing socially responsive religious and educational leadership within religious non-profit organizations. Students will gain knowledge about serving as administrative non-ordained religious leaders of faith communities and non-profit religious organizations. Based on specific courses selected within the concentration, includes instruction in religious studies, accounting, strategic planning, leadership, business management, and public relations for religious non-profit organizations.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply socially responsive theoretical approaches to leading religious non-profit organizations.
- Identify specific business-management practices to sustain a religious non-profit organization.
- Explore and discuss the administrative and organizational needs of a religious non-profit organization, including accounting, strategic planning, business management, and public relations.

Concentration Requirements (15 semester hours)

RELS305	Theology of Social Responsibility	3
Select 4 courses from the following:		12
ACCT105	Accounting for Non Accounting Majors	

BUSN100	Basics of Business	
BUSN410	Critical Thinking Strategies for Business Decisions	
ENTR313	Non-Profit Entrepreneurship	
FINC300	Foundations of Financial Management	
MGMT312	Leadership & Motivation	
MGMT414	Strategic Planning	
MKTG304	Public Relations	
MKTG307	Consumer Behavior	
Total Semester Hours		**15**

Final Program Requirement (3 semester hours)

PHRL498	Religion and Philosophy Capstone [2]	3
Total Semester Hours		**3**

Elective Requirements (33 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	33
Total Semester Hours	**33**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Arts in Reverse Logistics Management

Program Description

Our Bachelor of Arts in Reverse Logistics Management is designed to educate a new generation of professionals in reverse logistics management, retail management, and engineering management in complex military or business environments. In today's competitive business climate, organizations are always under pressure to adapt to new procedural and technological trends to improve the visibility of product and cargo flows through an ever-widening and complex supply chain. This online degree program provides you with knowledge of current applications of reverse logistics and opportunities to study practical applications in domestic and international transportation and logistics scenarios.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Classify and explain the issues and problems of implementing a reverse logistics system in a manufacturing, retail or military operation.
- Explain best practices of a reverse logistics operation.
- Classify and explain the differences between forward and reverse logistics.
- Explain how reverse logistics can be used to track and trace goods as returns, recalls, recycling and as waste.
- Explain how to differentiate the financial impact of reverse logistics from financial components within a business environment.
- Develop an implementation plan to use reverse technology processes and technology within a manufacturing, retail or military organization.

Total Semester Hours		**30**

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Entrepreneurship, Concentration in Retail Management, Concentration in Supply Chain Management, or Concentration in Transportation and Logistics Management.

General Concentration (12 semester hours)

This general concentration allows you to select from other concentration courses offered in this program. Selecting the general concentrations enables you to create your own focused area of study.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
MGMT312	Leadership & Motivation	
RLMT307	Food and Beverage Reverse Logistics	
RLMT309	Reverse Logistics Management and Operations	

RLMT400	Recalls Best Practices and Issues	
TLMT318	Hazardous Materials Transportation	
Total Semester Hours		**12**

Concentration in Entrepreneurship (12 semester hours)

Provides entrepreneurial techniques and concepts that you can apply to startup businesses or to create new reverse logistics systems in an existing organization. You will strengthen your customer service skills as you learn how to put the customer first and to deliver superior service to both internal and external customers.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Establish entrepreneurial factors affecting product and services in the reverse logistic environment,
- Apply customer service skills to entrepreneurial projects, programs or organizations.
- Analyze entrepreneurial ventures to understand sources of funding and other legal requirements.

Concentration Requirements (12 semester hours)

ENTR150	Idea Generation	3
ENTR216	Service Innovation and Delivery	3
Select 2 courses from the following:		6
ENTR311	Business Plan Foundations	
ENTR315	Financing a New Venture	
ENTR320	Practical Law for the Entrepreneur	
Total Semester Hours		**12**

Concentration in Retail Management (12 semester hours)

This concentration provides students with practical skills and theoretical knowledge needed to effectively apply reverse logistics management to a retail environment. The concentration will assist the student in understanding and applying retail strategy, innovation and operations to reverse logistics.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Determine the needs of today’s retail operations and how to effectively apply reverse logistics.
- Evaluate and apply retail management strategies to better deploy reverse logistics in the retail environment.
- Demonstrate the importance of reverse logistics in a retail operation to reduce waste, encourage reuse for smoother and more efficient retails operations.

Concentration Requirements (12 semester hours)

BUSN320	Principles of E Business	3
RTMG301	Retail Innovation	3
RTMG302	Retail Operations	3
RTMG310	Digital Retail	3
Total Semester Hours		**12**

Concentration in Supply Chain Management (12 semester hours)

This concentration provides students with practical skills and theoretical knowledge needed to effectively apply reverse logistics management as part of supply chain management. This concentration will assist the student in understanding and applying the principles of supply chain management, risk management in a supply chain, and global supply chain management to reverse logistics.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Determine the needs of supply chain operations and how to effectively apply reverse logistics.
- Evaluate and apply supply chain management strategies to better deploy reverse logistics in an organization.
- Demonstrate the importance of reverse logistics and supply chain risk management.

Concentration Requirements (12 semester hours)

SCMG201	Principles of Supply Chain Management	3
TLMT313	Supply Chain Management	3
SCMG305	Global Demand Management	3
SCMG301	Supply Chain Risk Management	3
Total Semester Hours		**12**

Concentration in Transportation and Logistics Management (12 semester hours)

Delves into the different historical, procedural, and technological trends in transportation and logistics as well as reverse logistics. You will gain an understanding of the interface between forward and reverse logistics, as well as the entire supply chain for different organizations.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply systems analysis to transportation, logistics and supply chain management.
- Understand the transportation systems' political, regulatory and legal issues.
- Assess the strengths and weaknesses of major transportation and logistics systems.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
TLMT311	Introduction to Transportation Management	
TLMT313	Supply Chain Management	
TLMT318	Hazardous Materials Transportation	
TLMT341	Logistics Management	
TLMT441	Advanced Business Logistics	
Total Semester Hours		**12**

Final Program Requirement (3 semester hours)

RLMT495	Senior Seminar in Reverse Logistics Management [2]	3
Total Semester Hours		**3**

Elective Requirements (45 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	45
Total Semester Hours	**45**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Arts in Security Management

Program Description

The Bachelor of Arts in Security Management offers students the opportunity to learn the principles and theories associated with various types of security, from international security to information security focused on protection of assets. You will study global terrorism, legal and ethical issues, physical security, program evaluation, and security administration. Graduates of this online bachelor's degree are inclined toward professions that involve general public or private management, federal or local government civil service, military service, law enforcement, and private security.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Identify organizational security risk exposure; identify cost-effective mitigation strategies; and prepare for recovery strategies.
- Employ the use of risk analysis and vulnerability assessment processes.
- Critically examine the variety and extent of losses from criminal acts, natural disasters, and security breaches facing society.
- Analyze concepts of information security, personnel security, and physical security and determine the planning approaches to prevent business losses.
- Analyze the trends affecting security and loss prevention and determine the approaches to reduce losses facing businesses and institutions.
- Evaluate, from a multi-disciplinary approach, non-traditional approaches to crime prevention.
- Distinguish between traditional criminal justice roles, functions, and concepts as a reactive institution to the security roles as a preventive societal institution.

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Government Security, Concentration in Information Security, or Concentration in Loss Prevention Management.

General Concentration (15 semester hours)

A general concentration allows you to take courses across a number of areas of study within your program based on your own interests.

Objectives

A general concentration allows you to take courses across a number of areas of study within your program based on your own interests.

Concentration Requirements (15 semester hours)

Select 5 courses from the following:		15
HLSS311	Border and Coastal Security	
HLSS312	Port Security	
ISSC422	Information Security	
SCMT379	School and Campus Security	
SCMT392	Industrial Espionage	
SCMT396	Protective Services	
Total Semester Hours		**15**

Concentration in Government Security (15 semester hours)

Offers an overview of many of the primary laws and policies that drive the U.S. government’s security apparatus, such as the U.S. Constitution, executive orders, and the National Industrial Security Program Operating Manual. Evaluates industrial and economic espionage threats and techniques in all forms and modes of attack, as well as information assurance techniques in U.S. government security applications.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Interpret the fundamental government requirements for establishing and maintaining full spectrum security programs.
- Categorize government, industry and military infrastructure within the scope of the concept of Critical Infrastructure Protection.
- Evaluate and counter industrial and economic espionage threats and techniques in all forms and modes of attack.
- Analyze Personnel Security as a key component in the protection of National Security Information, to include background investigations, continuing evaluation and security awareness.
- Appraise the criteria for properly constructing U.S. government-sponsored facilities and securing such facilities appropriately.
- Utilize Information Assurance techniques and technologies in U.S. government security applications.

Concentration Requirements (15 semester hours)

ISSC361	Information Assurance	3
SCMT301	Foundations of U.S. Government Security	3
SCMT302	Protecting U.S. Government Facilities	3
SCMT303	U. S. Government Personnel Security	3
SCMT392	Industrial Espionage	3
Total Semester Hours		**15**

Concentration in Information Security (15 semester hours)

Covers techniques and technologies used to design, develop, and deploy effective information security solutions against attacks; security planning and policy principles that focus on a variety of security guidelines, policies, and plans; and industrial espionage threats and techniques that use information technology modes of attack.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Use analytical, logical, and critical thinking abilities to analyze organizational information security requirements.
- Apply techniques and technologies to design, develop, and deploy effective information security solutions to defend against attacks.
- Develop computer and network security solutions and apply audit practices and processes to secure organizational assets and prevent losses.
- Appraise security planning and policy principles that focus on a variety of security guidelines, policies and plans.
- Evaluate and counter industrial espionage threats and techniques that use information technology modes of attack.
- Relate law enforcement intelligence applications and templates to support investigations, security and counterintelligence, trend development and forecasting, and efficient use of open source information.

Concentration Requirements (15 semester hours)

Select 5 courses from the following:		15
CMRJ320	Law Enforcement Intelligence Applications	
ISSC262	Red and Blue Team Security	
ISSC421	Computer and Network Security	
ISSC422	Information Security	
ISSC471	IT Security: Auditing	
ISSC481	IT Security: Planning and Policy	
ITMG281	Law, Privacy, and Digital Data	
SCMT392	Industrial Espionage	
Total Semester Hours		**15**

Concentration in Loss Prevention Management (15 semester hours)

Examines risk situations, management concepts and techniques, and the impact of safety and compliance policies from a company perspective. Topics include: various strategies and safety aspects of risk management; supply chain management’s role in retail operations; risks associated with the global distribution chain and mitigation; and the types of loss experienced by retailers.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify the types of loss retailers' experience.
- Compare and contrast various Risk Management strategies.
- Explain compliance and safety aspects of Risk Management.
- Describe the strategic and operational role of human resource management.
- Examine the role of Supply Chain Management in retail operations.
- Analyze the risks associated with the global distribution chain and mitigation.
- Prepare for LPQ Certification.

Concentration Requirements (15 semester hours)

RTMG202	Risk Management	3
SCMG301	Supply Chain Risk Management	3
RTMG302	Retail Operations	3
HRMT407	Human Resource Management	3

Total Semester Hours	**45**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Arts in Sociology

Program Description

The Bachelor of Arts in Sociology applies the unique approach of sociology to study all forms of human behavior from the individual and small group interactions of everyday life to larger institutions that shape our global experiences as humans. Sociology aids in developing a sociological imagination, the ability to examine the lived experiences of oneself and others. From different theoretical perspectives, sociology delves into issues such as healthcare; politics; religion; race and ethnicity; sex and gender; and the impact of social conflict, inequity, and injustice on society.

Students will develop key skills in collaboration, information literacy, critical thinking, writing, and social science research methods and analysis. Students will also identify ways to engage in social movements that promote social justice in their career fields and daily lives. Sociological knowledge and skills are especially well suited as preparation for varied fields including civil service, research, education, healthcare, social service, business, management, social media, or law.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Differentiate major paradigms, classic and contemporary theories that inform the study of sociology.
- Apply a sociological imagination to everyday social behavior as well as current social issues and crises.
- Identify how social stratification influences social inequality and social injustice.
- Discuss how the individual self-concept is directly influenced by social processes and social structures.
- Describe the functions and influence of social institutions on societies.
- Evaluate appropriate ethical considerations, methodological approaches and analysis techniques for sociological research.
- Assess the impact of social change and technology on social life and social relationships.

Total Semester Hours		**30**

Students must choose a concentration for this degree program and may select from a Concentration in Community Action, Concentration in Digital Society, Concentration in Education, Concentration in Health, Concentration in Public Policy, or Concentration in Social Justice.

Concentration in Community Action (15 semester hours)

This interdisciplinary concentration will help prepare sociology students for professional responsibilities that relate to community organization and action. Students will explore organizations, agents of social change, religious organizations, and the role of the family in communities.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply the sociological imagination to understanding different types of communities and the motivation of communities to engage in action.
- Analyze communities using organizational sociology theories.
- Identify career paths for sociologists with expertise in community organization and action.

Concentration Requirements (15 semester hours)

SOCI312	Organizational Sociology	3

SOCI403	Social Change	3
SOCI420	Sociology of Religion	3
SOCI421	Sociology of the Family	3
CHFD446	Families and Social Action	3
Total Semester Hours		**15**

Concentration in Digital Society (15 semester hours)

This interdisciplinary concentration will prepare sociology students for professional responsibilities that involve digital communication and media, social media management, and social media analysis. Students will examine how sociological theory applies to digital society, explore online social communities to examine the effectiveness of design and interaction, and identify ways to collect and analyze online social data.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply sociological theory to our digital society.
- Examine data provided in online digital communities.
- Identify career paths for sociologists with expertise in digital communication and social media.

Concentration Requirements (15 semester hours)

SOCI340	Digital Society	3
SOCI341	Social Analysis of Digital Communities	3
COMM255	Digital Tools and Media in Communication	3
ITMG281	Law, Privacy, and Digital Data	3
ITMG371	Contemporary Internet Topics	3
Total Semester Hours		**15**

Concentration in Education (15 semester hours)

This interdisciplinary concentration will help prepare sociology students for education related fields. Students will explore organizations, social movements and social change, learning theory, and strategies for measuring and evaluating education programs and institutions.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Compare and contrast education practices and systems using a sociological perspective.
- Evaluate the historical and current relationships between education, inequality, and socioeconomics.
- Identify career paths for sociologists in education related fields.

Concentration Requirements (15 semester hours)

SOCI312	Organizational Sociology	3
SOCI403	Social Change	3
EDUC340	Adult Learning Theory	3
CHFD350	Family Life Education	3
EDUC402	Measurement and Evaluation	3

Total Semester Hours	**15**

Concentration in Health (15 semester hours)

This interdisciplinary concentration will help to prepare sociology students for health related fields. Students will explore sociological factors that play a role in health and illness, the history of healthcare institutions, the process of aging and death. Students will examine public health issues in both national and international contexts using a sociological lens.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the historical and current relationships between health, inequality, and socioeconomics using sociological theories.
- Apply a sociological perspective to evaluating different healthcare systems.
- Identify career paths for medical sociologists in public health and other healthcare related fields.

Concentration Requirements (15 semester hours)

SOCI307	Sociology of Aging	3
SOCI423	Sociology of Health and Illness	3
SOCI424	Sociology of Death and Dying	3
PBHE209	Wellness: Health Promotion and Disease Prevention	3
PBHE211	Public Health in America	3
Total Semester Hours		**15**

Concentration in Public Policy (15 semester hours)

This interdisciplinary concentration will help to prepare sociology students for fields related to understanding the sociological and bureaucratic factors that relate to public policy in local, national, and international settings. Students will apply sociological theory to understand organizations, political institutions, law, and social change.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze social problems and the public policies and programs designed to solve them.
- Apply a sociological perspective to historical and current issues in public policy such as voting rights, incarceration, and workplace rights.
- Identify career paths for sociologists in public service, administration, and other organizations.

Concentration Requirements (15 semester hours)

SOCI311	Political Sociology	3
SOCI312	Organizational Sociology	3
SOCI422	Sociology of the Law	3
SOCI403	Social Change	3
POLS410	Public Policy	3
Total Semester Hours		**15**

Concentration in Social Justice (15 semester hours)

This interdisciplinary concentration will help to prepare sociology students for professional responsibilities in promoting and supporting social justice issues in local, national, and international settings. Students will examine social justice issues related to race and ethnicity as well as gender and sex. Courses will also examine social movements and social change as well as leadership and organizational culture.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Examine causes and consequences of poverty at local, national, and international levels.
- Evaluate availability and effectiveness of social welfare programs and explore new strategies for increasing social justice.
- Identify career paths for sociologists in organizations addressing social justice and social welfare issues.

Concentration Requirements (15 semester hours)

SOCI306	Race and Ethnicity	3
SOCI312	Organizational Sociology	3
MGMT312	Leadership & Motivation	3
SOCI403	Social Change	3
SOCI404	Gender and Society	3
Total Semester Hours		**15**

Final Program Requirement (3 semester hours)

SOCI498	Senior Seminar in Sociology [2]	3
Total Semester Hours		**3**

Elective Requirements (42 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	42
Total Semester Hours	**42**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: SOCI111 and completion of all major and elective courses prior to enrollment. To be taken as the last course before graduation.

Bachelor of Arts in Supply Chain Management

Program Description

The Bachelor of Arts in Supply Chain Management focuses on the management of supply chain processes, activities, and costs related to serving customers. This degree includes an emphasis on capacity planning, demand management, order management, warehouse management, reverse logistics, and transportation and acquisitions management. Students will take coursework specifically highlighting problem-solving, critical thinking and development of accurate management performance measures related to the supply chain. This versatile degree helps to provide knowledge and skills in a variety of industries. Businesses, regardless of size, rely on the supply chain to get products to their customers.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Classify supply chain solutions using problem-solving and decision-making skills.
- Demonstrate an overall knowledge of supply chain management areas of capacity planning, demand management, order management, warehouse management, and transportation.
- Apply supply chain management principles to business situations.
- Identify supply chain management best practices.
- Explain how to improve the operational efficiencies of a supply chain.

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Government Contracting and Acquisitions, Concentration in Reverse Logistics Management, or Concentration in Transportation and Logistics Management.

General Concentration (15 semester hours)

This general concentration allows you to select from different concentration courses offered within this program, enabling you to create your own focused area of study.

Concentration Requirements (15 semester hours)

DEFM310	Program and Acquisition Management I	3

Select 2 courses from the following:		6
TLMT331	Fundamentals of Intermodal Transportation	
TLMT341	Logistics Management	
TLMT351	Packaging	
TLMT352	Distribution Systems	
TLMT441	Advanced Business Logistics	
Select 2 courses from the following:		6
RLMT302	Environmental Issues in Reverse Logistics	
RLMT305	Cost and Benefit Analysis of Reverse Logistics	
RLMT307	Food and Beverage Reverse Logistics	
RLMT309	Reverse Logistics Management and Operations	
RLMT400	Recalls Best Practices and Issues	
Total Semester Hours		**15**

Concentration in Government Contracting and Acquisitions (15 semester hours)

This Concentration in Government Contracting and Acquisitions is designed to educate students regarding how government contracts and acquisition work. Students will have an opportunity to understand how government contracts are being used in their military or government-related civilian organizations. This concentration will educate the student to the Federal Acquisition Regulation (FAR) regulations and how they apply to government contracts. The student will learn about and apply the concepts of costs, overhead components, and assets as they apply to government contracts and acquisitions.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply different techniques and methods to analyze different contractors' proposals and contracts.
- Comprehend the basics of government contracting as well as the political, regulatory and legal issues.
- Synthesize overhead and other contractual factors and costs.
- Apply the Federal Acquisition Regulations as they pertain to government contracts.

Concentration Requirements (15 semester hours)

DEFM310	Program and Acquisition Management I	3
DEFM311	Program and Acquisition Management II	3
DEFM420	Cost Analysis and Negotiation Techniques	3
DEFM421	Joint Contingency Contracting	3
DEFM424	Overhead Management of Defense Contracts	3
Total Semester Hours		**15**

Concentration in Reverse Logistics Management (15 semester hours)

The concentration in Reverse Logistics Management is designed to educate a new generation of professionals in reverse logistics as a key component in logistics management, retail management, engineering management, and in accounting best practices, to all components of today's complex business environment. Students will have an opportunity to understand how reverse logistics is being used in their military or civilian logistics organization. It will provide students with the knowledge base of current applications of reverse logistics use and opportunities to study practical applications in domestic and international transportation and logistics scenarios. In

today’s competitive global transportation and logistics business climate, organizations are always under pressure to adapt to new procedural and technological trends to improve the visibility of product and cargo flows through an ever-widening and complex supply chain. Retail and military logistics decision makers are still uncertain in many cases on how to apply the use of reverse logistics to their business model. Some see reverse logistics as part of the supply chain; others see reverse logistics as marketing or sales.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Classify and explain the issues and problems of implementing a reverse logistics system in a manufacturing, retail or military operation.
- Explain best practices of a reverse logistics operation.
- Classify and explain the differences between forward and reverse logistics.
- Explain how reverse logistics can be used to track and trace goods as returns, recalls, recycling and as waste.
- Explain how to differentiate the financial impact of reverse logistics from financial components within a business environment.
- Develop an implementation plan to use reverse technology processes and technology within a manufacturing, retail or military organization.

Concentration Requirements (15 semester hours)

RLMT302	Environmental Issues in Reverse Logistics	3
RLMT305	Cost and Benefit Analysis of Reverse Logistics	3
RLMT307	Food and Beverage Reverse Logistics	3
RLMT309	Reverse Logistics Management and Operations	3
RLMT400	Recalls Best Practices and Issues	3
Total Semester Hours		**15**

Concentration in Transportation and Logistics Management (15 semester hours)

The concentration in Transportation and Logistics Management delves into the different historical, procedural, and technological trends in transportation and logistics as well as reverse logistics. You will gain an understanding of the interface between forward and reverse logistics, as well as the entire supply chain for different organizations.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply systems analysis to transportation, logistics and supply chain management.
- Understand the transportation systems’ political, regulatory and legal issues.
- Assess the strengths and weaknesses of major transportation and logistics systems.

Concentration Requirements (15 semester hours)

TLMT331	Fundamentals of Intermodal Transportation	3
TLMT341	Logistics Management	3
TLMT351	Packaging	3
TLMT352	Distribution Systems	3
TLMT441	Advanced Business Logistics	3
Total Semester Hours		**15**

Final Program Requirement (3 semester hours)

TLMT498	Senior Seminar in Transportation and Logistics [2]	3
Total Semester Hours		**3**

Elective Requirements (42 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	42
Total Semester Hours	**42**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Arts in Transportation and Logistics Management

Program Description

The Bachelor of Arts in Transportation and Logistics Management focuses on the principles, policies, trends, and current issues within air, maritime, or ground transportation. Transportation and logistics management is at the core of global supply chain management, encompassing manufacturing, distribution, retailing, recreation, and national security industries. This versatile degree helps to prepare you for possible job opportunities in many industries including the military, government, and large corporations whose success depends on the global fulfillment of customers' requirements.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Apply systems analysis to transportation, logistics, and supply chain management.
- Relate the multidimensional impact of transportation on the economy, public systems, national and local infrastructure, and the environment.
- Examine the transportation systems' political, regulatory, and legal issues.
- Describe and assess the strengths and weaknesses of the major modes of international transportation.
