Total Semester Hours		**30**

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Air Cargo, or Concentration in Reverse Logistics Management.

General Concentration (15 semester hours)

A general concentration allows you to take courses across a number of areas of study within your program based on your own interests.

Concentration Requirements (15 semester hours)

Select 5 courses from the following:		15
BUSN310	Business Theory	
BUSN419	International Business Management	
EDMG420	Risk Communications	
HLSS311	Border and Coastal Security	
HLSS312	Port Security	
INFO331	Management Information Systems	
POLS410	Public Policy	
TLMT318	Hazardous Materials Transportation	
TLMT342	International Logistics Management	
TLMT353	Logistics Management and Operations	
TLMT381	Hazardous Materials Management	
TLMT405	Best Practices in Reverse Logistics	
TLMT411	Air Transportation	
TLMT415	Airport Operations	
TLMT416	Air Cargo Operations and Security	
TLMT442	International Trade and Regulations	
Total Semester Hours		**15**

Concentration in Air Cargo (15 semester hours)

This concentration is designed to educate a new generation of airport and air operations professionals in air freight forwarding services as a key component in global logistics management, retail management, transportation management, and in accounting best practices to all components of today's complex cargo movement business environment. Students will have an opportunity to understand how air cargo rules of operation are being used in their military or civilian air logistics organization. It will provide students with the knowledge base of current applications and opportunities to study practical applications in domestic and international air transportation and air logistics scenarios.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Classify and explain the issues and challenges of implementing an air freight forwarding management system.
- Explain best practices of air cargo operations.
- Analyze the relationships and interaction among private and public sector stakeholders who secure airport operations from a variety of potential disruptions.
- Understand the role of the airport manager in the management, administration, financing and operating within small, medium, and large hub airports.
- Acquire an in-depth analysis of the complex balance of airport management and air cargo handling companies.
- Understand physical facility planning for cargo management, the economics of airport operation and the organizational structure of related companies who support the movement of air cargo through airports.

Concentration Requirements (15 semester hours)

TLMT415	Airport Operations	3
TLMT416	Air Cargo Operations and Security	3
Select 3 courses from the following:		9
HLSS311	Border and Coastal Security	
MGMT312	Leadership & Motivation	
MGMT331	Leading Yourself Foundations	
TLMT342	International Logistics Management	
TLMT411	Air Transportation	
Total Semester Hours		**15**

Concentration in Reverse Logistics Management (15 semester hours)

This concentration is designed to educate a new generation of professionals in reverse logistics as a key component in logistics management, retail management, engineering management, and in accounting best practices, to all components of today's complex business environment. Students will have an opportunity to understand how reverse logistics is being used in their military or civilian logistics organization. It will provide students with the knowledge base of current applications of reverse logistics use and opportunities to study practical applications in domestic and international transportation and logistics scenarios. In today's competitive global transportation and logistics business climate, organizations are always under pressure to adapt to new procedural and technological trends to improve the visibility of product and cargo flows through an ever-widening and complex supply chain. Retail and military logistics decision makers are still uncertain in many cases on how to apply the use of reverse logistics to their business model. Some see reverse logistics as part of the supply chain; others see reverse logistics as marketing or sales.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Classify and explain the issues and problems of implementing a reverse logistics system in a manufacturing, retail or military operation.
- Explain best practices of a reverse logistics operation.
- Classify and explain the differences between forward and reverse logistics.
- Explain how reverse logistics can be used to track and trace goods as returns, recalls, recycling and as waste.
- Explain how to differentiate the financial impact of reverse logistics from financial components within a business environment.
- Develop an implementation plan to use reverse technology processes and technology within a manufacturing, retail or military organization.

Concentration Requirements (15 semester hours)

Select 5 courses from the following:		15
RLMT302	Environmental Issues in Reverse Logistics	
RLMT303	Technology in Reverse Logistics	
RLMT305	Cost and Benefit Analysis of Reverse Logistics	
RLMT307	Food and Beverage Reverse Logistics	
RLMT309	Reverse Logistics Management and Operations	
RLMT400	Recalls Best Practices and Issues	
Total Semester Hours		**15**

Final Program Requirement (3 semester hours)

TLMT498	Senior Seminar in Transportation and Logistics [2]	3
Total Semester Hours		**3**

Elective Requirements (42 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	42
Total Semester Hours	**42**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Business Administration

Program Description

The Bachelor of Business Administration (BBA) is a professionally focused degree designed to produce graduates who possess practical knowledge and the associated critical thinking skills desired in today's competitive business world. You'll study a core curriculum of management, marketing, law, finance, accounting, economics, and business strategy. Additional concentration options allow you to pursue focused specializations. This comprehensive and affordable business program provides a good foundation to students interested in business, government, military, or other professions.

This program offers you the opportunity to learn from experienced instructors who have considerable managerial experience in Fortune 500 companies, and to communicate with fellow business students by participating in online community forums.

This Bachelor of Business Administration has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Explain and apply fundamental accounting and financial management operations to enhance business decision-making processes.
- Discuss economic factors associated with government, business, and consumer environments and apply theoretical techniques to analyze markets.
- Apply management, human resource, and personnel practices to organizational problem solving.
- Integrate market and marketing information into a strategic plan.
- Apply concepts of contract, tort, Uniform Commercial Code (UCC), and property law to business situations.
- Articulate the external and internal environments of a business organization and formulate appropriate strategies in the context of competitive forces and environmental factors.
- Collect information through the use of various data tools and apply critical thinking concepts to enhance business problem solving capabilities.
- Describe how information systems transform business processes within the modern corporate organization.

Concentration in Business Analysis (12 semester hours)

Offers a comprehensive review of business requirements gathering, tools, techniques, and documentation suites. Offers project management techniques to define project cycles, measure and estimate efforts, and set priorities.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify business needs and problem domains.
- Analyze processes and behavior requirements for problem solutions.
- Diagram current and proposed business processes using various tools and techniques.
- Evaluate and recommend business solutions.
- Develop business processes and improvements.

- Develop functional business capabilities.
- Facilitate and manage recommended projects.

Concentration Requirements (12 semester hours)

BUSN330	Fundamentals of Business Analysis I	3
BUSN331	Fundamentals of Business Analysis II	3
BUSN333	Project Management for Business Analysts	3
BUSN336	Strategic Policy Decision-Making	3
Total Semester Hours		**12**

Concentration in Business Project Management (12 semester hours)

The Bachelor of Business Administration with a concentration in Business Project Management enhances your understanding of how businesses depend on project management to move the organization toward its strategic goals. Through this concentration, you will be introduced to the theories, concepts, and practices that align with project management.

You will come to understand how projects begin during the sales cycle and continue to be assessed after the project is delivered. You will be exposed to skill sets to track and monitor projects, develop a schedule and integrate it with costs and risks, prepare presentations for leadership and stakeholders, and create status reports. Companies depend on project management to stay competitive in developing new offerings, determining the technology needed within the enterprise, updating processes and procedures, and implementing projects for customers.

The concentration is designed for business professionals and military personnel looking to transition into project management within the business environment.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the fundamentals of project management.
- Demonstrate varying problems from a risk management standpoint.
- Define the role of projects and project management.
- Create a project charter, a scope statement, a Work Breakdown Structure (WBS), Risk Management Plan, Quality Management Plan and Stakeholder Management Plan.
- Explain the need for ethical project management.

Concentration Requirements (12 semester hours)

BUSN451	Introduction to Business Project Management	3
BUSN452	Project Schedule and Scope Management	3
BUSN453	Project Integration, Quality, Resource, and Stakeholder Management	3
RTMG202	Risk Management	3
Total Semester Hours		**12**

Concentration in Data Analytics (12 semester hours)

This concentration offers an introduction to the field of data analytics as it is used to handle real-world problem solving and factual decision-making that is based on solid data collection and sound analysis.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Compare and contrast data and information within organization contexts.
- Classify and organize existing sources of data using spreadsheet software tools.
- Analyze historical and current data trends and the implications on organizational decision-making.

Concentration Requirements (12 semester hours)

BUSN250	Analytics I	3
BUSN350	Analytics II	3
BUSN450	Advanced Analytics	3
BUSN336	Strategic Policy Decision-Making	3
Total Semester Hours		**12**

Concentration in Digital Retailing (12 semester hours)

The Digital Retailing concentration explores multiple facets of technology including smart stores with product experts, instant data access, expanded use of artificial intelligence, virtual and augmented reality, expanded mobile/cashier-less capabilities, consumer protection, and seamless customer experiences with e-commerce, m-commerce, and brick-and-mortar locations. In addition, students have the opportunity to increase their knowledge of various retail technologies in the areas of digital retail analytics, strategies, marketing, merchandising, and cybersecurity.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explore the evolution of retail markets from pre-industrial to modern-day digital retailing.
- Differentiate the various forms of online and digital retailing.
- Evaluate risks inherent to digital retailing including cybersecurity, fraud, and safety protection.

Concentration Requirements (12 semester hours)

RTMG310	Digital Retail	3
Select 3 courses from the following:		9
BUSN320	Principles of E Business	
ISSC452	Cybersecurity	
MKTG310	Digital Marketing	
RTMG311	Digital Retail Technologies	
RTMG312	Digital Retail Analytics	
RTMG313	Digital Retail Strategies	
RTMG314	Digital Merchandising	
RTMG315	Retail Cybersecurity	
Total Semester Hours		**12**

Concentration in DoD Project Management (12 semester hours)

The Bachelor of Business Administration with a concentration in DoD Project Management enhances your understanding of the government acquisition cycles and how these cycles are tightly coupled with program management. You will learn the policies that government and military personnel must understand to see programs to fruition.

The concentration is designed for federal employees and military personnel looking to enhance their knowledge of the government's acquisition cycle by understanding the steps an acquisition must go through in order for a contract to be awarded to a civilian contractor.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the fundamentals of defense systems acquisition management.
- Evaluate the diverse, interrelated and changing nature in the different disciplines of defense systems acquisition management.
- Analyze the regulations and governing structures of defense systems acquisition management.
- Define the role of projects and project management.
- Create a project charter, a scope statement, a Work Breakdown Structure (WBS) and Responsibility Assignment Matrix (RAM).
- Explain key elements of a communication plan to keep stakeholders abreast of progress, problems, and controls.
- Describe the steps required to plan a project.
- Explain the key features of an executive program manager's role in today's workforce
- Demonstrate the necessary knowledge, skills, and abilities to be a successful executive in today's government contracting and acquisition organizations.
- Create an executive level action plan for practical and measurable government contracting and acquisition policy and procedures changes.
- Create explain the role and pitfalls of ethics in executive decision-making.

Concentration Requirements (12 semester hours)

DEFM310	Program and Acquisition Management I	3
DEFM311	Program and Acquisition Management II	3
DEFM312	Defense Budget Development and Execution	3
DEFM410	Program Appraisal	3
Total Semester Hours		**12**

Concentration in Information Technology Management (12 semester hours)

Focuses on enhancing organizational productivity through technology. Topics include: technical skills critical in a business environment; system development life cycle (SDLC) models; project management techniques such as PERT and Gantt charts; and Internet concepts such as protocols, web browsers, search engines, FTP, network security, and online gaming.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Examine Internet protocols, middleware, interfaces, security, and applications.
- Evaluate workplace productivity, legal ramifications, and policies related to Internet access,
- Outline the process and the phases pertaining to managing information systems projects.
- Appraise the technology, communications, and policy issues related to managing virtual teams.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
ITCC200	Application Software Integration	
ITMG121	Fundamentals of IT Project Management	
ITMG281	Law, Privacy, and Digital Data	
ITMG421	Virtual Management	
WEBD311	Internet Concepts	

Total Semester Hours	**12**

Concentration in International Business Management (12 semester hours)

Examines the challenges of managing multicultural and distributed teams in an international workforce. Reviews the tools and techniques used to mitigate financial risk in international business. Helps to develop marketing decision skills in the global context.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Compare and contrast the management strategies around the world.
- Examine the challenges of managing multicultural and distributed teams.
- Appraise the roles and responsibilities of the Human Resource Manager in the context of an international workforce.
- Analyze the interactions and trends between the world economies; also assess the tools and techniques used to mitigate financial risk in conducting international business.
- Evaluate the tools, methods, and practices of marketing in the global context.

Concentration Requirements (12 semester hours)

BUSN419	International Business Management	3
IRLS392	Globalization and the Market Economy	3
IRLS402	International Law and Regimes	3
MKTG407	International Marketing	3
Total Semester Hours		**12**

Concentration in Leading the Digital Workplace (12 semester hours)

The Bachelor Business Administration concentration in Leading the Digital Workplace is designed to equip the student with practical risk and management knowledge related to the digital and remote working environments. The concentration enhances the student's skills in addressing challenging issues managers face during the digital transformation of the workplace. Typical topics include the lack of face-to-face supervision, social disconnect, access to information, productivity, and culture. This concentration is suitable for managers in business, government, military, and other professional settings.

This concentration offers the student the opportunity to learn from accomplished professionals who have considerable experience in Fortune 500 companies, the military, government, and other industries. During the program, students will be encouraged to share experiences with other business students. This Bachelor of Business Administration concentration in Leading the Digital Workplace has been designed in consultation with industry experts.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Understand the elements of managing and leading remote organizations.
- Apply the behaviors and traits of effective managers.
- Analyze relevant issues in management such as ethics, globalization, and strategic management.
- Develop strategies to anticipate and remediate the effects of a remote workforce.
- Identify various scenarios and ethical issues that can emerge from a remote workforce.
- Demonstrate an understanding of effective communication.
- Articulate the components of a remote operating plan.
- Incorporate the resource requirements in a remote operating plan.
- Develop a stakeholder management plan.

- Create an eportfolio of assignments.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
ITMG281	Law, Privacy, and Digital Data	
BUSN341	Operational Business Continuity	
BUSN340	Operational Crisis Management	
BUSN343	Operational Emergency Preparedness	
BUSN342	Operational Sustainability and Crisis Management	
MGMT312	Leadership & Motivation	
MGMT313	Organizational Change	
MGMT315	Management Communications	
HRMT407	Human Resource Management	
Total Semester Hours		**12**

Concentration in Marketing (12 semester hours)

Integrates marketing functions with principles of management, finance, strategic planning, and information systems. Topics include: marketing plan development; marketplace analysis; psychology and sociology concepts of consumer behavior; and research techniques.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Integrate the marketing function with fundamental business enterprise concepts and principles of management, finance, strategic planning, and information systems.
- Develop a strategic marketing plan.
- Apply concepts in psychology and sociology relevant to consumer behavior.
- Analyze business markets, customer markets, and buyer markets using concepts and techniques of research for marketing decisions including problem definition, research objectives, execution and research management, and presentation of findings.

Concentration Requirements (12 semester hours)

BUSN320	Principles of E Business	3
MKTG307	Consumer Behavior	3
MKTG400	Marketing Research	3
MKTG401	Marketing Strategy	3
Total Semester Hours		**12**

Concentration in Operational Crisis Management (12 semester hours)

The Bachelor of Business Administration concentration in Operational Crisis Management is designed to equip the student with practical risk and crisis management knowledge. The concentration enhances the student's skills in addressing difficult issues crisis managers face to protect the organization, its stakeholders, and assets from man-made and natural disasters. Typical issues focus on how to analyze risk and potential crises that affect the success of the organization. This concentration is suitable for managers in business, government, military, and other professional settings.

This concentration offers the student the opportunity to learn from accomplished professionals who have considerable experience in Fortune 500 companies, the military, government, and other industries. During the program, you will be encouraged to share your

experiences with other business students. This Bachelor of Business Administration concentration in Operational Crisis Management has been designed in consultation with industry experts.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply the facts to plan for various man-made and natural disasters and emergencies.
- Develop strategies to anticipate and remediate the effects of disastrous events and workplace emergencies.
- Identify various scenarios and ethical issues that can emerge from different types of disasters.
- Identify strategies to return the organization back to normal as quickly as possible.
- Demonstrate an understanding of effective communication in an emergency.
- Articulate the components of a risk mitigation plan.
- Incorporate the resource requirements into a continuity plan.
- Describe the crisis management team members and their roles.
- Develop a stakeholder management plan.
- Define the scope of a crisis management plan.
- Create an eportfolio of assignments.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
BUSN340	Operational Crisis Management	
BUSN341	Operational Business Continuity	
BUSN342	Operational Sustainability and Crisis Management	
BUSN343	Operational Emergency Preparedness	
HLSS302	Introduction to Homeland Security and Defense	
ISSC422	Information Security	
Total Semester Hours		**12**

Concentration in Real Estate Construction and Portfolio Development (12 semester hours)

This concentration provides the student with an introduction to construction management, along with real estate management, commercial and residential real estate portfolio development.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Research and appraise historic, current, and developing methodologies in construction management and real estate portfolio development in a wide variety of real estate business fields.
- Evaluate construction management strategies and techniques.
- Compare and contrast commercial and residential real estate portfolio development.

Concentration Requirements (12 semester hours)

BUSN201	Introduction to Construction Management	3
BUSN301	Residential Real Estate Portfolio Development	3
BUSN302	Commercial Real Estate Portfolio Development	3
BUSN425	Real Estate Management	3

Total Semester Hours	**12**

Concentration in Real Estate Marketing Management (12 semester hours)

This concentration consists of four courses. The concentration provides the student with an array of study and coursework in real estate communication and negotiation, residential real estate management, marketing, and portfolio development.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Research and appraise historic, current, and developing methodologies in real estate marketing management in a wide variety of real estate business fields.
- Evaluate marketing management strategies and techniques.
- Compare and contrast communication and negotiation best practices and techniques.

Concentration Requirements (12 semester hours)

BUSN306	Real Estate Communication and Negotiation	3
BUSN308	Real Estate Marketing	3
BUSN301	Residential Real Estate Portfolio Development	3
BUSN425	Real Estate Management	3
Total Semester Hours		**12**

Final Program Requirement (3 semester hours)

BUSN499	Senior Seminar in Business Administration [2]	3
Total Semester Hours		**3**

Elective Requirements (45 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	45
Total Semester Hours	**45**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Engineering Engineering: Electrical Engineering

Program Description

The Bachelor of Engineering, Engineering: Electrical Engineering program focuses on the theories, practices, competencies, tools, and technologies associated with electrical engineering. You will get both online classroom instruction and hands-on lab experience to help prepare you as an electrical engineer. This Bachelor of Engineering, Engineering: Electrical Engineering provides knowledge and skills that are often required in fields including aerospace, telecommunications, defense, automotive, medical, construction, chemical, and more.

This program is not designed to prepare graduates for any state-issued professional license or certification and therefore has not been approved by any state professional licensing agency.

For admission to the Bachelor of Engineering, Engineering: Electrical Engineering program applicants must have completed preparation in mathematics equivalent to pre-calculus or higher.

The goal of the Bachelor of Engineering, Engineering: Electrical Engineering program is to provide our students with a sound Engineering education which they can apply in a variety of contexts. Specifically, in three to seven years after graduation, we expect that graduates of our program will demonstrate the following:

Program Educational Objectives

1. Utilize the critical and systemic thinking skills, and technical and professional competencies, acquired through their education.
2. Create value for society through the ethical practice of their professional abilities in developing solutions to technical and societal challenges.
3. Continue to increase their knowledge and competence through self-development or formal schooling.

Courses in the Bachelor of Engineering, Engineering: Electrical Engineering include foundations in math, computer science, and physical sciences. Course topics include:

- Essential elements of analog circuit design
- Fundamentals of circuit analysis - Ohm’s law, Kirchhoff’s law, etc.
- International System of Units
- Digital and logic circuit analysis and design in 6 main parts
- Energy conversion and transport
- Electromagnetic field theory
- Passive microwave circuit analysis and design
- Radar and RF signal propagation, transmission, and reception

Note: At-home lab exercises require you to purchase additional course materials which are estimated to be up to $8,000. These materials are not covered by the university undergraduate book grant.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these student outcomes:

Student Outcomes

- an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
- an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
- an ability to communicate effectively with a range of audiences
- an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
- an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
- an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
- an ability to acquire and apply new knowledge as needed, using appropriate learning strategies

Programmatic Admission Requirements

For admission to the Bachelor of Engineering, Engineering: Electrical Engineering program, applicants must have completed preparation in mathematics equivalent to pre-calculus or higher. A review of high school or college transcripts showing completion of this requirement will be conducted during the admission process.

Please visit our APU undergraduate admission page for more information on institutional admission requirements.

CHEM133	General Chemistry I with Lab	
Select 1 course from the following:		3
STEM470	Cybersecurity, Surveillance, Privacy and Ethics	
STEM471	Analytics, Algorithms, AI, and Humanity	
Total Semester Hours		**78**

Students must choose a concentration for this degree program and may select from a General Concentration or Concentration in Robotics and Autonomous Systems.

General Concentration (14 semester hours)

This general concentration allows you to select from all concentration courses offered within this program, enabling you to create your own focused area of study.

Transfer students from an ABET® accredited engineering program who select the General Concentration may apply up to 18 semester hours of upper-division engineering courses in place of the General Concentration courses with the Program Director's approval.

ABET® is a registered trademark of the Accreditation Board of Engineering and Technology, Inc.

Concentration Requirements (14 semester hours)

Select 2 courses from the following:		6
ELEN421	RF/Microwave Engineering I	
ELEN430	Embedded Systems Design	
ELEN432	Microcontroller Based Systems	
Select 2 courses from the following:		8
ELEN427	Radar Systems Theory	
ELEN435	Introduction to Power Electronics	
ELEN440	Mechatronics	
Total Semester Hours		**14**

Concentration in Robotics and Autonomous Systems (14 semester hours)

The Robotics and Autonomous Systems concentration offers students a dynamic, interdisciplinary education at the intersection of engineering, electrical engineering, computer science, and artificial intelligence. Designed to prepare students for the rapidly evolving world of intelligent machines, this program emphasizes hands-on learning, collaborative problem-solving, and real-world applications across industries such as healthcare, manufacturing, aerospace, and defense.

Students will explore topics including robot design, embedded systems, control systems, machine learning, and autonomous navigation, gaining the technical and communication skills needed to thrive in team-based environments.

Graduates will be equipped for careers in robotics engineering, AI development, systems integration, and research, with the versatility to adapt to emerging roles in a technology-driven industry.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Design, build, and utilize robotic systems for various applications, including in manufacturing, healthcare, aerospace, and defense.
- Apply interdisciplinary knowledge from electrical engineering, computer science, and artificial intelligence to design, build, and evaluate robotics and autonomous systems.
- Demonstrate proficiency in programming, control theory, and systems integration to develop intelligent machines capable of operating in dynamic environments.
- Utilize hands-on experience and collaborative problem-solving skills to address real-world engineering challenges in industries such as manufacturing, aerospace, healthcare, and defense.

Concentration Requirements (14 semester hours)

ELEN424	Robotics	3
ELEN425	AI-Driven Robotics Development	3
ELEN437	Robotics Design and Experimentation Lab	4
ELEN438	Perception and Planning for Autonomous Systems with Lab	4
Total Semester Hours		**14**

Final Program Requirement (6 semester hours)

ELEN498	Senior Seminar Design	3
ELEN499	Senior Seminar Project [2]	3
Total Semester Hours		**6**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. To be taken as the last course before graduation.

Bachelor of Science in Accounting

Program Description

The Bachelor of Science in Accounting offers you the necessary theoretical knowledge, practical skills, and research know-how to address complex accounting issues. This online degree program helps to provide additional knowledge for those interested in financial fields in the public, private, and not-for-profit sectors, such as accounting, auditing or examiners.

This program has been designed in consultation with industry business leaders, is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®), and has earned additional ACBSP Specialized Accounting Accreditation.

This program is not designed to prepare graduates for any state-issued professional license or certification and therefore has not been approved by any state professional licensing agency.

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Explain the roles accountants perform in society.
- Discuss Generally Accepted Accounting Principles (GAAP) and their controlling authorities and relate these concepts with appropriate accounting practices.
- Analyze and prepare financial information for management and stakeholders utilizing appropriate accounting analyses and reports.
- Demonstrate a basic knowledge of the ethical framework for accountants adopted by professional accounting organizations, such as the American Institute of Certified Public Accountants (AICPA®) and the Institute of Management Accountants (IMA®).
- Articulate a basic knowledge of legal and business terms and concepts relating to the practice of accounting.

AIPCA® is a registered trademark of the American Institute of Certified Public Accountants.

IMA® is a registered trademark of the Institute of Management Accountants.

Programmatic Admission Requirements

You will be required to submit a signed statement of understanding (SOU) to enroll in this program.

Please visit our APU undergraduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-755-2787 or info@apus.edu.

General Concentration (27 semester hours)

This concentration helps to prepare students to for a variety of accounting fields such as public accounting, governmental accounting, and not-for-profit accounting. Students gain the theoretical knowledge, practical skills, and research skills needed to address complex accounting issues.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explain the roles accountants perform in society.
- Discuss Generally Accepted Accounting Principles (GAAP) and their controlling authorities and relate these concepts with appropriate accounting practices.
- Analyze and prepare financial information for management and stakeholders utilizing appropriate accounting analyses and reports.
- Demonstrate a basic knowledge of the ethical framework for accountants adopted by professional accounting organizations, such as the American Institute of Certified Public Accountants (AICPA) and the Institute of Management Accountants (IMA).
- Articulate a basic knowledge of legal and business terms and concepts relating to the practice of accounting.

Concentration Requirements (27 semester hours)

ACCT301	Intermediate Accounting I	3
ACCT302	Intermediate Accounting II	3
ACCT303	Intermediate Accounting III	3
ACCT401	Cost Accounting	3
ACCT420	Individual Federal Taxes	3
ACCT460	Auditing & Assurance Services	3

Select 3 courses from the following:		9
ACCT202	Introduction to Payroll	
ACCT300	Financial Accounting	
ACCT305	Accounting Information Systems	
ACCT406	Managerial/Cost Accounting	
ACCT410	Governmental and Not-for-Profit Accounting	
ACCT415	Law for Accountants	
Total Semester Hours		**27**

Final Program Requirement (3 semester hours)

ACCT499	Senior Seminar in Accounting [2]	3
Total Semester Hours		**3**

Elective Requirements (18 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	18
Total Semester Hours	**18**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Science in Business Analytics

Program Description

The Bachelor of Science in Business Analytics teaches you how to apply data analytics and mining techniques to help you meet your organization's business objectives. You'll be given problem-solving exercises working with fictional data sets and analysis for hands-on learning. The curriculum will prepare you to collect and analyze data in order to help you to tackle difficulties in business processes and create better tools for decision-making. Regardless of your industry, acquiring training in business intelligence is good preparation for those interested in fields such as business analyst, analytic system designer, or data scientist.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Integrate the various statistical analytics outputs and applications.
- Implement the models used by Excel to process statistical data.

- Deconstruct student experiences with real time analytics applications and work problems.
- Produce a functional or chronological analytic project, along with an appropriate display and interpretation of results, findings, and recommendations for decision makers.
- Integrate key issues and topics in a reflective essay from the overall program experience.

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Accounting, Concentration in Entrepreneurship, Concentration in Human Resources, Concentration in Marketing, Concentration in Retail Management, or Concentration in Security and Intelligence.

General Concentration (9 semester hours)

A general concentration allows you to take courses across a number of areas of study within your program based on your own interests.

Concentration Requirements (9 semester hours)

ANLY460	Applied Analytics I	3
ANLY461	Applied Analytics II	3
ANLY462	Applied Analytics III	3
Total Semester Hours		**9**

Concentration in Accounting (9 semester hours)

This concentration offers the opportunity to Business Analytics students to get exposure and a bit of knowledge about Accounting processes and management and how students can leverage data and analytics tools to Accounting areas. This concentration satisfies the growing trend of Accounting Analytics. Students who successfully complete this concentration will be able to apply analytics tools to solve accounting problems and support decision making in accounting.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Research and appraise historic, current, and developing methodologies in business and big data analytics and apply them appropriately to accounting & financial transactions.
- Demonstrate knowledge of the ethical framework for accountants adopted by professional accounting organizations, and accounting principles.
- Analyze, evaluate, and organize financial data to facilitate managerial decision making in accounting.
- Conduct an in-depth analysis of an organization's financial information and provide a written assessment of the results.

Concentration Requirements (9 semester hours)

Select 3 courses from the following:		9
ACCT202	Introduction to Payroll	
ACCT300	Financial Accounting	
ACCT301	Intermediate Accounting I	
ACCT302	Intermediate Accounting II	
ACCT303	Intermediate Accounting III	
ACCT305	Accounting Information Systems	
ACCT406	Managerial/Cost Accounting	
ACCT410	Governmental and Not-for-Profit Accounting	
ACCT415	Law for Accountants	
ACCT420	Individual Federal Taxes	
Total Semester Hours		**9**

Concentration in Entrepreneurship (9 semester hours)

This concentration offers a unique skill for entrepreneurs who are looking to make informed decision and to solve business problems.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Research and appraise historic, current, and developing methodologies in business and big data analytics and apply them appropriately to manage the operations of a wide variety of Entrepreneurship aspects.
- Demonstrate knowledge of the data analytics framework adopted by and for Entrepreneurship functions associated with owning and operating a business.
- Analyze, evaluate, and organize Entrepreneurship data, to facilitate problem solving, and decision making in all functions associated with owning and operating a business, where data is collected and utilized.

Concentration Requirements (9 semester hours)

Select 3 courses from the following:		9
ENTR150	Idea Generation	
ENTR311	Business Plan Foundations	
ENTR320	Practical Law for the Entrepreneur	
ENTR315	Financing a New Venture	
Total Semester Hours		**9**

Concentration in Human Resources (9 semester hours)

This concentration offers the opportunity to Business Analytics students to get exposure and a bit of knowledge about Human Resource processes & management, and how students can leverage data and analytics tools to HR areas like Compensation and Benefits, Information Systems, or Recruitment and Staffing. This concentration satisfies the growing trend of HR Analytics. Students who successfully complete this concentration will be able to apply analytics tools to solve HR problems and support decision making in HR.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Research and appraise historic, current, and developing methodologies in business and big data analytics and apply them appropriately to Human Resource Management and operations.
- Demonstrate knowledge of the ethical framework for accountants adopted by businesses professional organizations, and Human Resource Management principals.
- Analyze, evaluate, and organize employee's financial data, administrative data, information data, and Human Resource Management data, to facilitate managerial decision making.
- Conduct an in-depth analysis of an organization's personnel and Human Resource Management information, and provide a written assessment of the results.

Concentration Requirements (9 semester hours)

Select 3 courses from the following:		9
HRMT407	Human Resource Management	
HRMT412	Compensation and Benefits	
HRMT415	Human Resource Management Information Systems	
HRMT419	Recruitment and Staffing	
Total Semester Hours		**9**

Concentration in Marketing (9 semester hours)

This concentration offers the opportunity to Business Analytics students to get exposure to marketing and the means of reaching existing and potential customers in the modern world of business. Knowledge of the tools utilized in the marketing space are becoming essential for business professionals. The marketing concentration is designed to build on the knowledge gained in the Bachelor’s of Science in Business Analytics program and to provide focus on marketing from a data analysis perspective and developing an integrated marketing strategy.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Research and appraise historic, current, and developing methodologies in business and big data analytics and apply them appropriately to Marketing.
- Demonstrate knowledge of the ethical framework for marketers and marketing professionals adopted by businesses professional organizations, and marketing principals.
- Analyze, evaluate, and understand market dynamics & trends, sales and marketing data, to facilitate managerial decision making.
- Conduct an in-depth analysis of an organization's sales and marketing information, and provide a written assessment of the results.

Concentration Requirements (9 semester hours)

Select 3 courses from the following:		9
MKTG305	Advertising	

MKTG400	Marketing Research	
MKTG401	Marketing Strategy	
MKTG403	Marketing Management	
Total Semester Hours		**9**

Concentration in Retail Management (9 semester hours)

This concentration offers a unique qualification and skill for problem solving for students interested in joining the retail industry as it grows to amass trillions of dollars in revenues worldwide, especially online retail data and transactions.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Research and appraise historic, current, and developing methodologies in business and big data analytics and apply them appropriately to manage the operations of a wide variety of retail businesses fields.
- Demonstrate knowledge of the data analytics framework adopted by and for retail management (including merchandizing, customer service, etc.) professionals and/or organizations, and analysis principals.
- Analyze, evaluate, and organize retail management data, to facilitate problem solving, and decision making in all areas of retail management where data is collected and utilized.

Concentration Requirements (9 semester hours)

Select 3 courses from the following:		9
RTMG300	Retail Strategy	
RTMG302	Retail Operations	
RTMG303	Retail Merchandising Operations	
RTMG304	Digital Retail Inventory Management	
Total Semester Hours		**9**

Concentration in Security and Intelligence (9 semester hours)

This concentration offers the opportunity to Business Analytics students to get exposure and a bit of knowledge about Security and Intelligence processes related to national and international security elements, and how students can leverage data and analytics tools to Security and Intelligence areas like Threat Analysis, Intel and Homeland Security, Intelligence Analysis, Cyber Warfare, Narcotics, Terrorism and US National Security. This concentration satisfies the growing trend of Intelligence Analytics. Students who successfully complete this concentration will be able to apply analytics tools to solve Security and Intelligence problems and support decision making.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Research and appraise historic, current, and developing methodologies in business and big data analytics and apply them appropriately to Terrorism, Security & Intelligence fields.
- Demonstrate knowledge of the data analytics framework adopted by security & intelligence professionals and/or organizations, and analysis principals.
- Analyze, evaluate, and organize Terrorism, Security, War & Intelligence data, to facilitate tactical & strategic problem solving, and decision making.
- Conduct an in-depth analysis of an organization's Security & Intelligence information, and provide a written assessment of the data analytics results & interpretations.

Concentration Requirements (9 semester hours)

Select 3 courses from the following:		9
INTL401	Critical Analysis	
INTL434	Threat Analysis	
HLSS320	Intelligence and Homeland Security	
INTL402	Intelligence Analysis	
INTL440	Cyber Warfare	
INTL446	Intelligence and Narcotics	
INTL451	Terrorism and U.S. National Security

Total Semester Hours		**9**

Final Program Requirement (6 semester hours)

ANLY499	Analytics Senior Seminar [2]	6
Total Semester Hours		**6**

Elective Requirements (36 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	36
Total Semester Hours	**36**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Science in Computer Science

Program Description

The Bachelor of Science in Computer Science at APUS comprises a rigorous, balanced curriculum including topics in both hardware and software, focusing on cyber operations. Students will have a comprehensive program of study in computer science and also be able to take a deep-dive by selecting a concentration in specific areas of interest such as communications and artificial intelligence. Our online computer science degree is designed to enable working professionals to gain knowledge in rapidly growing fields within computer science, e.g. software and application developers, computer scientists, system software developers, computer programmers, and more. The Bachelor of Science in Computer Science at APUS can prepare students for challenging professional endeavors or for ongoing graduate work in Computer Science.

This program has specific admission requirements.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions.
- Design, implement, and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline.
- Communicate effectively in a variety of professional contexts.
- Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles.
- Function effectively as a member or leader of a team engaged in activities appropriate to the computer science discipline.
- Apply computer science theory and software development fundamentals to produce computing-based solutions.

Programmatic Admission Requirements

For admission to the BS of Computer Science, applicants must have completed preparation in mathematics equivalent to pre-calculus or higher. A review of high school or college transcripts showing completion of this requirement will be conducted during the admission process.

Please visit our APU undergraduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-755-2787 or info@apus.edu.

Students must choose a concentration for this degree program and may select from a Concentration in Artificial Intelligence, Concentration in Cyber Operations, or Concentration in Quantum Computing.

Concentration in Artificial Intelligence (18 semester hours)

The Artificial Intelligence concentration for the BS in Computer Science teaches students to design and execute computational systems that interpret and understand. Students can research and apply machine-learning methods and develop problem-solving models applicable to a variety of domains. Furthermore, students can learn how to build systems that collect and respond to various sensors and measurements, and develop networks that communicate and respond to environmental signals. Self-taught intelligent systems play a significant role in this domain. This concentration of Artificial Intelligence utilizes the basics of computer science and applies advanced methods needed for effective knowledge modeling.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Understand principles of machine learning and artificial intelligence.
- Gain hands-on experience with a variety of machine learning models under different constraints (supervised, unsupervised, semi-supervised, environment feedback).
- Become proficient in handling different types of data including structured and unstructured, using traditional and advanced machine learning techniques.
- Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation, and learning.
- Demonstrate awareness and a fundamental understanding of various applications of AI and machine learning techniques.

Concentration Requirements (18 semester hours)

CSCI200	Introduction to Artificial Life I	3
CSCI381	Machine Learning	3
CSCI386	Advanced Topics in Machine Learning	3
CSCI484	Introduction to Artificial Intelligence	3
CSCI486	Deep and Reinforcement Learning	3
STEM471	Analytics, Algorithms, AI, and Humanity	3
Total Semester Hours		**18**

Concentration in Cyber Operations (18 semester hours)

The Cyber Operations concentration provides students with skills and in-depth expertise to protect and build safe software systems. Students obtain a thorough understanding of the technical needs, risks, and vulnerabilities of computer systems as they learn how to use tools and techniques to investigate, analyze, and respond to cyber-attacks. The concentration examines various aspects of society and focuses on both theoretical and practical dimensions. Students learn about a wide variety of computer security-related subjects, such as networks, mobile technologies, and cloud computing. Students will also have the ability to discuss the social implications of cybersecurity through courses such as STEM470-Cybersecurity, Surveillance, Privacy and Ethics.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Have a firm understanding of the System Development Life Cycle (SDLC) and be able to apply concepts for a secure system development.
- Understand cyber threat environment, and be able to monitor, detect, analyze, and expel threats from information system.
- Secure systems to ensure Confidentiality, Integrity and Availability (CIA) of the information and protect data and networks from intrusions and malicious actors.
- Design networks utilizing Risk Management Framework (RMF) methodology, risk analysis, security policies, and monetary damages assessment.
- Plan and implement security strategies, policies, disaster recovery plans, continuity of operation plans, and audits in a broad range of local and wide area networks.

Concentration Requirements (18 semester hours)

CSCI370	Software Reverse Engineering	3
CSCI390	Cellular and Mobile Technologies	3
CSCI475	Development of Secure Software Systems	3
ISSC326	Cloud Computing	3
CSCI431	Embedded Systems	3
STEM470	Cybersecurity, Surveillance, Privacy and Ethics	3
Total Semester Hours		**18**

Concentration in Quantum Computing (18 semester hours)

The Quantum Computing concentration within the Bachelor of Science in Computer Science program equips students with foundational knowledge and skills at the intersection of computer science, quantum mechanics, and mathematics. This concentration introduces students to quantum computing principles, the design and analysis of quantum algorithms, and quantum information science, preparing them to engage with cutting-edge computing technologies.

Students will explore topics such as quantum systems, quantum circuits, and quantum hardware, while applying theoretical frameworks to simulate and program quantum computers using modern tools. Coursework emphasizes both theoretical and applied dimensions of computing, integrating physics, data analysis, and machine learning concepts to understand how quantum technologies achieve computational advantages over classical systems.

Graduates will be prepared for careers or graduate study in quantum software development, quantum algorithm design, or emerging quantum technologies, contributing to the next generation of innovation in computer science and engineering.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Design, analyze, and implement quantum algorithms using principles of quantum mechanics and computational theory.
- Apply quantum information science and quantum programming tools to model complex computing systems.
- Integrate mathematics, physics, and computer science concepts to solve problems in quantum computing research.
- Evaluate the performance and potential of quantum technologies compared to classical computers.
- Prepare for careers in quantum computing, data science, or advanced engineering fields.

Concentration Requirements (18 semester hours)

CSCI351	Quantum Computing Systems	3

CSCI355	Quantum Algorithm Engineering	3
CSCI375	Quantum Information Theory and Cybersecurity	3
CSCI455	Quantum Machine Learning and AI Integration	3
CSCI465	Advanced Quantum Software Architecture	3
CSCI476	Applications of Quantum Algorithms in AI and Cybersecurity	3
Total Semester Hours		**18**

Final Program Requirement (6 semester hours)

CSCI498	Senior Project Design	3
CSCI499	Senior Project Implementation	3
Total Semester Hours		**6**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.

Bachelor of Science in Computer Technology

Program Description

The Bachelor of Science in Computer Technology degree provides practical knowledge and skills designed to prepare you for technical positions in the information and related computer industries regardless of your background. Pursuing this degree will afford you the opportunity to complement your mandatory industry certifications such as CompTIA Security+® and CompTIA A+® with a degree. The program covers a variety of subject areas to include soft skills in human relations, computer-based systems organization processes and components, web development fundamentals, productivity applications, programming essentials, communication and network technologies, database systems and information security management. Additional concentrations allow you to choose from dozens of specific courses in order to specialize in the technology area of interest for your current career. Successful completion of this online program provides practical skills often required for entry-level careers in the computer and information technology field.

Coursework in this program also meets various industry certifications including Microsoft Office® Specialist (MOS), Certified Internet Webmaster (CIW®), Cisco Certified Network Associate (CCNA®), Amazon Web Services (AWS®), and CompTIA A+, CompTIA Security+, and CompTIA Network+®. Please view course descriptions for complete details.

The program also has a completer option, which allows associate of science or arts degree holding students to transfer in a minimum of 60 semester hours of credits to expedite completing the degree - please see your advisor for more details.

Security+® and A+® are registered trademarks of CompTIA Properties, LLC.

Microsoft Office® is a registered trademark of Microsoft Corporation.

CIW® is a registered trademark of Certification Partners, LLC.

CCNA® is a registered trademark of Cisco Technology, Inc.

AWS® is a registered trademark of Amazon.com, Inc.

Network+® is a registered trademark of CompTIA Properties, LLC.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes

- Demonstrate effective interpersonal skills to communicate and collaborate.
- Analyze computing requirements to solve problems.
- Design computer systems or technology-based projects using appropriate hardware and software technologies.
- Develop computer systems and technology-based projects using analytical, logical, and critical thinking skills.
- Demonstrate understanding of ethical, legal, security, and social responsibilities as a professional in the technology industry.
- Apply current skills and tools of software applications development, network architecture, data productivity and information security analysis.

Students must choose a concentration for this degree program and may select from a Concentration in Cloud Computing, Concentration in Information Security and Assurance, Concentration in Networking, or Concentration in Web Development.

Concentration in Cloud Computing (15 semester hours)

The concentration offers an introduction to the field of cloud computing. You will learn about cloud architecting, the fundamentals of building IT infrastructure on Amazon Web Services (AWS); it will teach you solutions architects and how to optimize the use of the AWS Cloud by understanding AWS services and how these services fit into cloud-based solutions, while maintaining recommended security and privacy. The concentration aligns with AWS Certification.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify appropriate cloud services such as Infrastructure-as-a-Service, Platform-as-a-Service, and Software-as-a-Service necessary to fulfill business requirements.
- Select key resources to model service specifications and service contracts to perform service orchestration.
- Design logical Service-Oriented Architecture (SOA) to convert into services implementable in today's cloud environments.

- Demonstrate use of key tools to analyze an organization’s assets and verify if the cloud security and privacy implications are justifiable in implementing cloud computing.
- Apply key principles of cloud computing and the security and privacy involved with this technology.

Concentration Requirements (15 semester hours)

ITNW210	Cloud Foundations	3
ITNW211	Cloud Architecting	3
ISSC326	Cloud Computing	3
ISSC426	Cloud Security and Privacy	3
ISSC345	Service Oriented Architecture	3
Total Semester Hours		**15**

Concentration in Information Security and Assurance (15 semester hours)

This concentration expands your knowledge of information technology security and, it helps you better apply critical security measures. Protecting sensitive or proprietary information is of paramount importance. Malicious security threats are on the rise and necessitates critical security strategies that incorporate information assurance, solid attack and defense tactics, risk management, auditing, planning and policies that will maintain the credibility and survival of the organization. The concentration focuses on addressing these information security needs in the industry.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze user requirements to design, develop and deploy effective information security solutions.
- Apply information assurance initiatives to protect an organization’s information assets.
- Develop a security architecture consisting of tools, techniques, and technologies to prevent the penetration of networks, to detect attacks, and to defend an organization using effective countermeasures.
- Develop effective assessment strategies to implement effective and proactive risk mitigation measures and risk management practices.
- Examine various technologies and tools to assist with discovery and auditing in the world of security management.
- Construct security plans and actionable and maintainable policies to create a holistic approach to cybersecurity for an organization.

Concentration Requirements (15 semester hours)

ISSC361	Information Assurance	3
ISSC262	Red and Blue Team Security	3
ISSC363	IT Security: Risk Management	3
ISSC471	IT Security: Auditing	3
ISSC481	IT Security: Planning and Policy	3
Total Semester Hours		**15**

Concentration in Networking (15 semester hours)

This networking concentration extends your understanding of the principles and practices of computer networks. You will study network devices such as routers and switches, and explore network protocols that support data transmission and communication. Topics include IP addresses, VLANs, Inter-VLAN routing, static and dynamic routing, Single-Area OSPF, Access Control Lists (ACLs), DHCP, and NAT. You will also examine wireless networks, ad-hoc connections, and network security to protect devices, resources, and users, enhancing your skills in network design within computer science.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify user requirements to design, develop and deploy effective network solutions.
- Analyze network designs, topologies, architectures, protocols, communications, administration, operations, and resource management for wired, wireless, and web-based networks.
- Demonstrate the ability to configure routers, switches, static routing, dynamic routing, and Virtual LANs (VLAN).
- Demonstrate the use of common network protocols.
- Develop network security practices, processes, and plans used to maintain an effective and productive network.
- Apply relevant wireless and mobile network security measures to address security threats.

Concentration Requirements (15 semester hours)

ITNW200	Cisco I	3
ITNW201	Cisco II	3
ISSC343	Wireless Networks	3
ISSC421	Computer and Network Security	3
ISSC442	Wireless and Mobile Network Security	3
Total Semester Hours		**15**

Concentration in Web Development (15 semester hours)

This concentration focuses on the principles and practices necessary to design, develop, and deploy web applications. You will study Internet communication and technology, Web browsing, multimedia on the Web, databases and Web search engines, business e-mail and personal information management, Internet services and tools. You will also explore search engine optimization (SEO) techniques, design effective user interfaces for websites, examine Web e-commerce development and how businesses and organizations may to use the Web to the buy and sell products and services online, and use Extensible Markup Language (XML) standard to create data formats to electronically share structured data.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explain the principles and practices of Web technologies.
- Apply search engine optimization (SEO) strategies.
- Design effective user interfaces for websites, with an emphasis on designing for mobile technologies.
- Summarize the growing trends of e-commerce development and how it is transforming businesses.
- Demonstrate use of Extensible Markup Language (XML) standard to create a document structure.

Concentration Requirements (15 semester hours)

WEBD311	Internet Concepts	3
WEBD323	Search Engine Optimization	3
WEBD300	User Interface Design	3
WEBD321	Web eCommerce Development	3
WEBD341	Enterprise Data Exchange Using XML	3
Total Semester Hours		**15**

Final Program Requirement (3 semester hours)

ITCC498	Computer Technology Advanced Capstone [2]	3
Total Semester Hours		**3**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. To be taken as the last course before graduation.

Bachelor of Science in Criminal Justice - Digital Forensics

Program Description

The Bachelor of Science in Criminal Justice offers an in-depth scientific study of crime, criminal behavior, digital forensics investigations, and the importance of scientific analysis as evidence presented in the criminal justice system. Forensic science is the application of scientific methods and analysis of scientific data to support the law. You will study the theory of forensic science, including the nature and scope of the discipline, the application of forensic science to crime, police investigation and the adjudication process, and the legal and ethical issues associated with forensics. You will also examine the importance of scientific analysis of digital evidence and its place in the judicial system, while receiving a solid foundation of analytical and communication skills required in complex criminal justice fields.

Our criminal justice programs are among the most popular at the university, bringing you peer interactions and an expanded network of criminal justice professionals who are dedicated to safeguarding their communities and nation. Courses in this program are taught by highly credentialed and experienced instructors, many who hold key positions in government agencies or criminal justice organizations.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

Criminal Justice Administration and Organization

- Recognize and explain the major international, U.S., and localized law enforcement systems and organization.
- Describe and analyze the political and public administrative aspects of law enforcement organizations.

Criminal Justice Theories and Concepts

- Communicate and apply the major theories and concepts of crime, criminal justice, and criminology.
- Conduct research associated with criminal justice and criminology theories.

Criminal Justice Operations, Practices, and Processes

- Assess the operations, practices, and processes associated with leading standards of evidence and law.

Digital Forensics

- Examine common incident response procedures via basic computer investigation processes and a good computer forensics lab for the development of investigative reports following first responder procedures.
- Investigate forensics of wireless network attacks caused by mobile and wireless peripheral devices, and then evaluate security and access procedures within wireless Internet use of subject search warrants and chain of custody in a forensic investigation.
- Explore web attacks, router forensics, email tracking techniques, email crime, and network forensics through investigation logs.
- Discuss corporate espionage and prevention techniques and computer-related crimes, such as sexual harassment and child pornography and the law.

- Analyze image files using forensic processes, recovered files on deleted partitions, data acquisition and duplication procedures, and steganography tools to create a forensic investigation case.
- Analyze file systems, hard disks, various types of digital media, tools, and applications that utilize password cracking on various operating systems.

Total Semester Hours		**30**

Concentration in Digital Forensics (27 semester hours)

Offers an in-depth scientific study of crime, criminal behavior, crime scene investigation theories, and the importance of scientific analysis as evidence. Focuses on cybercrime and computer forensics with emphasis on wireless networks and devices, operating systems, intrusions, and the related investigative procedures.

Concentration Requirements (27 semester hours)

Select 9 courses from the following:		27
ISSC343	Wireless Networks	
ISSC351	Computer Forensics	
ISSC451	Cybercrime	
ISSC455	Digital Forensics: Investigation Procedures and Response	
ISSC456	Digital Forensics: Investigating Wireless Networks and Devices	
ISSC457	Digital Forensics: Investigating Network Intrusions and Cybercrime Security	
ISSC458	Digital Forensics: Investigating Data and Image Files	
ISSC459	Digital Forensics: Hard Disc and Operating Systems	
LSTD400	Criminal Legal Process	
Total Semester Hours		**27**

Final Program Requirement (3 semester hours)

CMRJ497	Criminal Justice Capstone - Digital Forensics [2]	3
Total Semester Hours		**3**

Elective Requirements (30 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	30
Total Semester Hours	**30**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment.

Bachelor of Science in Cybersecurity

Program Description

The Bachelor of Science in Cybersecurity exposes students to the exciting and ever-changing world of cybersecurity. It is designed to help prepare students to be professional, contributing members of the cybersecurity community and to seek opportunities in diverse environments such as corporations, government agencies, public organizations, private companies, and consulting firms. Students will be given the option to explore multiple areas of cybersecurity, including cyber defense, cybercrime, cyberoperations, cyberlaw, and cyberintelligence.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Compare and contrast the various aspects of cybersecurity including the relationship between cyber defense, cyber operations, cyber exploitations, cyber intelligence, cybercrime, and cyber law within federal and state laws.
- Demonstrate an understanding of the processes and goals of cyber forensics investigations including the importance of search warrants and chain of custody in a forensic investigation of computer-related crimes.
- Develop strategies and plans for security architecture consisting of tools, techniques, and technologies to detect and prevent network penetration, and to design effective cybersecurity countermeasures.
- Analyze network designs, topologies, architectures, protocols, communications, administration, operations, and resource management for wired, wireless, and satellite networks that affect the security of the cyberspace.

BIOL180	Introduction to Biology	
BIOL181	Introduction to Human Anatomy and Physiology	
CHEM180	Introduction to Chemistry	
ERSC180	Introduction to Meteorology	
ERSC181	Introduction to Geology	
EVSP180	Introduction to Environmental Science	
PHYS180	Introduction to Physics	
SPST180	Introduction to Astronomy	
Total Semester Hours		**30**

Major Required (42 semester hours)

ISSC242	Hardening Operating Systems	3
ENTD261	Scripting Languages for the Administrator	3
ISSC231	Networking Concepts	3
ISSC290	Securing Databases	3
ITMG281	Law, Privacy, and Digital Data	3
ISSC262	Red and Blue Team Security	3
ISSC266	Cryptography Concepts	3
ISSC325	Biometrics	3
ISSC421	Computer and Network Security	3
ISSC422	Information Security	3
ISSC451	Cybercrime	3
ISSC452	Cybersecurity	3
ISSC481	IT Security: Planning and Policy	3
INTL440	Cyber Warfare	3

Total Semester Hours	**42**

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Critical Infrastructure, Concentration in Digital Forensics, Concentration in Privacy and Surveillance, or Concentration in Wireless and Mobile Security.

General Concentration (15 semester hours)

A general concentration allows you to take courses across a number of areas of study within your program based on your own interests.

Objectives

This general concentration allows you to choose from a variety of elective courses from homeland security, intelligence, information systems security, and IT project management.

Concentration Requirements (15 semester hours)

ISSC343	Wireless Networks	3
ITMG481	Ethics in Information Technology	3
INFO222	Database Concepts	3
ISSC368	IT Security: Physical and Peripheral Defense	3
ISSC456	Digital Forensics: Investigating Wireless Networks and Devices	3
Total Semester Hours		**15**

Concentration in Critical Infrastructure (15 semester hours)

The Bachelor of Science in Cybersecurity with a concentration in Critical Infrastructure provides you with the knowledge to best understand the Industrial Control Systems (ICS) and Supervisory Control and Data Acquisition (SCADA) systems that run the everyday systems that we depend on from gas, electric, and other utilities to the production of your favorite foods. The concentration will delve into how these systems differ from the devices used by your average computer user, as well as how one can best protect these unique systems from hackers to nation states. You will be exposed to various aspects of systems from Programmable Logic Controllers (PLC) to nuclear power plants. This is a unique field with consistent growth as everyone depends on critical infrastructure virtually nonstop around the clock.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Evaluate risks of Industrial Control Systems (ICS) and Supervisory Control and Data Acquisition (SCADA) systems.
- Explore various federal agencies' roles in protecting the nation's critical infrastructure.
- Identify critical infrastructure components.
- Determine appropriate solutions to mitigate critical infrastructure threats.

Concentration Requirements (15 semester hours)

HLSS310	Critical Infrastructure Protection	3
ISSC477	ICS and SCADA Security Architecture	3
ISSC478	SCADA Risk Management	3
ISSC479	SCADA Security Standards	3
ISSC480	Threats to SCADA Networks	3
Total Semester Hours		**15**

Concentration in Digital Forensics (15 semester hours)

Bringing cybercriminals to justice requires individuals with computer forensics skill sets who have the ability to quickly collect, analyze, and present cybercrime evidence. Become familiar with digital forensic measures for security incident response with a concentration in Digital Forensics.

Study how to prevent the loss of sensitive proprietary information and deter future cyberattacks. In addition, you'll learn about common incident response procedures, web attacks, router forensics, email crime, corporate espionage, and steganography in your online courses in digital forensics.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Demonstrate knowledge of incident response procedures, computer investigation processes, digital forensics lab work, and investigative reports.
- Illustrate understanding of wireless network attack forensics, wireless internet use security and access procedures, search warrants, and chain of custody.

Concentration Requirements (15 semester hours)

ISSC455	Digital Forensics: Investigation Procedures and Response	3
ISSC456	Digital Forensics: Investigating Wireless Networks and Devices	3
ISSC457	Digital Forensics: Investigating Network Intrusions and Cybercrime Security	3
ISSC458	Digital Forensics: Investigating Data and Image Files	3
ISSC459	Digital Forensics: Hard Disc and Operating Systems	3
Total Semester Hours		**15**

Concentration in Privacy and Surveillance (15 semester hours)

The Privacy and Surveillance concentration provides students with a multifaceted approach not only addressing commonly used tools and methods of surveillance but also privacy considerations. Students will be exposed to how surveillance is both intentional and unintentional. The risk of using various forms of hardware and software will be discussed. Legal and ethical consideration surrounding the impact surveillance has on privacy rights will be addressed.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Demonstrate knowledge of common surveillance technologies.
- Illustrate understanding of how technology impacts population segments differently.

Concentration Requirements (15 semester hours)

INTL305	Law and Ethics in Intelligence	3
ISSC473	IoT Surveillance	3
ISSC474	Networking Surveillance	3
ISSC475	Bias in Surveillance	3
ISSC476	Surveillance Legislation and Policy	3
Total Semester Hours		**15**

Concentration in Wireless and Mobile Security (15 semester hours)

This concentration for the Bachelors of Science in Cybersecurity will allow students to specialize in the methodologies used to secure the networks, hardware – devices, software – apps, and the laws and regulations, policies and procedures, and ethical responsibilities for privacy and security of mobile devices using mobile and wireless network infrastructures. The concentration will emphasize countermeasures taken to harden the security of various aspects of mobile technologies associated to government, military, industry, educational, and private enterprises.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Extrapolate threats and vulnerabilities introduced into the network infrastructures of wireless, mobile, cellular, and satellite technologies.
- Examine current mobile application models, their security framework, and methodologies on hardening the security to safeguard the devices running them and adapt them to higher privacy standards.
- Appraise security hardening techniques for wireless or mobile device technologies based on wireless security principles and current industry standards.
- Investigate forensics of wireless network attacks caused by mobile and wireless peripheral devices, and then evaluate security and access procedures within wireless Internet use of subject search warrants and chain of custody in a forensic investigation.

Concentration Requirements (15 semester hours)

ISSC412	Mobile Application Security	3
ISSC415	Mobile Device Security	3
ISSC442	Wireless and Mobile Network Security	3
ISSC456	Digital Forensics: Investigating Wireless Networks and Devices	3
ISSC457	Digital Forensics: Investigating Network Intrusions and Cybercrime Security	3
Total Semester Hours		**15**

Final Program Requirement (3 semester hours)

ISSC499	Senior Seminar in Cybersecurity [2]	3
Total Semester Hours		**3**

Elective Requirements (30 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	30
Total Semester Hours	**30**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Completion of a minimum of 106 hours towards your program including ENGL101 or ENGL110 and should be taken as the last course before graduation.

Bachelor of Science in Data Science

Program Description

The Bachelor of Science in Data Science offers students technical depth in data science. Students pursuing this degree will cover the foundational aspects of data science, then progress through more difficult tools, techniques, and methodologies used in data science. Students can tailor their program of study through concentrations including deep learning and business intelligence. Upon completion of this program, students will be able to confidently approach problems or challenges in virtually any discipline: business, finance or economics, engineering, healthcare, or the physical or social sciences. Graduates will be able to deliver reproducible data analyses and solutions. Graduates will understand ethical, privacy, and security considerations in the conduct of data analyses. Graduates will be able to communicate the story in the data through the use of data visualization techniques.

This program has specific admission requirements.

Degree Program Objectives

Upon completion of this program of study, students will be able to:

- Recognize requirements for data. Efficiently collect the required data from a variety of sources and organize it appropriately.
- Determine the best method to conduct an analysis for a specified situation and given data. Conduct the analysis or analyses and completely evaluate all aspects of the results.
- Deliver reproducible analyses and results.
- Effectively communicate any or all aspects of an analysis and all aspects of the results of that analysis to either or both a technical or non-technical audience. Information communicated could include the method used for analysis, any parameter settings that would affect the analysis or results, and an error analysis, etc.
- Explain the ethical, privacy, and security issues related to data science analyses and communication.
- Obtain real-world experience through project-based coursework and the Senior Project.
- Stand out with a specific technical area of expertise by completing a concentration in any of the available concentrations.

Programmatic Admission Requirements

For admission to the BS of Data Science, applicants must have completed preparation in mathematics equivalent to pre-calculus or higher. A review of high school or college transcripts showing completion of this requirement will be conducted during the admission process.

Please visit our APU undergraduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-755-2787 or info@apus.edu.

Students must choose a concentration for this degree program and may select from a Concentration in Business Intelligence, Concentration in Deep Learning, or Concentration in Flex.

Concentration in Business Intelligence (18 semester hours)

The Business Intelligence Concentration is intended for students with professional interests in business analytics and prediction/optimization. The courses included in this concentration provide the foundation for this path. Students will study relevant aspects of business as well as data analysis tools and methods required to transform data into knowledge that supports actionable decision-making.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explain how data is used to form knowledge in business applications.
- Describe the use of data analytics to generate descriptive and predictive analyses.
- Explain how optimization can be used to create regions of solutions for business problems.
- Evaluate risk associated with predictive analytics.

Concentration Requirements (18 semester hours)

ACCT105	Accounting for Non Accounting Majors	3
BUSN100	Basics of Business	3
BUSN250	Analytics I	3
BUSN350	Analytics II	3
BUSN410	Critical Thinking Strategies for Business Decisions	3
Select 1 course from the following:		3
BUSN450	Advanced Analytics	

DATS465	Risk Modeling and Assessment	
Total Semester Hours		**18**

Concentration in Deep Learning (18 semester hours)

The Concentration in Deep Learning first provides foundational knowledge. Probabilistic graphical models provide the basis for designing artificial neural networks. The tools and methods of machine learning covered continue developing foundational knowledge. Next, deep learning, that has grown from the study of artificial neural networks, is studied in detail. Last, students can choose to learn about advanced methods in data science or today's state-of-the-art programs in artificial neural networks, e.g. TensorFlow® by the Google Brain Team operated by Jupyter® notebooks in Python®.

TensorFlow® is a registered trademark of Google, Inc.

Jupyter® is a registered trademark of NumFOCUS, Inc.

Python® is a registered trademark of Python Software Foundation.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Conduct analyses using appropriate machine learning tools.
- Design, develop, and utilize a variety of artificial neural networks including recurrent and convolutional networks.
- Explain the basic principles of deep learning, e.g. the use of multiple types of layers, optimization, and hyperparameters.

Concentration Requirements (18 semester hours)

CSCI381	Machine Learning	3
CSCI386	Advanced Topics in Machine Learning	3
CSCI484	Introduction to Artificial Intelligence	3
CSCI486	Deep and Reinforcement Learning	3
DATS344	Probabilistic Graphical Models	3
Select 1 course from the following:		3
DATS401	Analytical Methods III	
DATS433	Artificial Neural Networks using TensorFlow	
Total Semester Hours		**18**

Concentration in Flex (18 semester hours)

The Flex Concentration offers students breadth in data science. Students will learn foundational material in machine learning, sentiment analysis, advanced methods in data science, and simulation. This concentration is a good option for students intending to go onto a master's program in data science where they can pursue in-depth knowledge.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Conduct a variety of data analyses using appropriate tools and methods for specified problems or challenges.
- Explain why the method and tools selected to conduct an analysis are the best for that specific analysis.
- Develop and present final reports on data analyses.

Concentration Requirements (18 semester hours)

CSCI381	Machine Learning	3
CSCI386	Advanced Topics in Machine Learning	3
DATS401	Analytical Methods III	3
DATS451	Sentiment Analysis I	3
DATS473	Simulation Techniques I	3
MATH330	Linear Optimization	3
Total Semester Hours		**18**

Final Program Requirement (3 semester hours)

DATS499	Senior Capstone Project	3
Total Semester Hours		**3**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.

Bachelor of Science in Environmental Science

Program Description

The bachelor of science in environmental science provides scientific coursework in both the natural and social sciences while focusing on the complex relationship among science and public policy. Courses for this online bachelor's degree offer a fundamental understanding of environmental policy and analysis. The courses will also cover environment management issues, such as sustainability, the stewardship of natural resources, pollution management, fish and wildlife management, hazardous materials, and geographic information science (GIS).

This degree program is designed to aid students in developing the skills necessary to pursue various career paths, such as Environmental Protection Agency (EPA) inspector, environmental engineer, civil engineer, or urban or regional planner. In addition to the core scientific studies, this bachelor’s degree will help students to improve their critical thinking, analytical skills, and communication skills, which are valuable assets in all industries.

Courses in this online degree are taught by expert practitioners. Many instructors are leaders in the field and hold positions at the U.S. Fish and Wildlife Service, Environmental Protection Agency, Bureau of Land Management, the Nature Conservancy, and other prominent government and nongovernment organizations.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Demonstrate a solid foundation in the theory and application of the environmental sciences.
- Implement the scientific method and appropriate tools to investigate and solve problems.
- Apply critical thinking skills in assessing and evaluating problems.
- Communicate scientific knowledge to diverse audiences.
- Evaluate societal and cultural influences on environmental challenges within their historical context and their impacts on ecosystems, public health, productivity, and social and economic justice.
- Devise solutions to environmental issues that are science-based, ethical, and sustainable.

EVSP310	Water Science	3
EVSP311	Soil Science	3
EVSP312	Introduction to Sustainability	3
EVSP416	General Ecology	3
EVSP322	Remote Sensing and Geographic Information Systems	3
PHIL320	Environmental Ethics	3
EVSP411	Environmental Policy, Regulation, and Law	3
EVSP413	Environmental and Ecosystems Management	3
Total Semester Hours		**44**

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Climate Change and Resilience, or Concentration in Fish and Wildlife Management.

General Concentration (12 semester hours)

A general concentration allows you to take courses across a number of areas of study within your program based on your own interests.

Concentration Requirements (12 semester hours)

EVSP316	U.S. Federal Environmental Organization	3
EVSP320	Energy and Resource Sustainability	3
EVSP321	Land Use and Planning	3
EVSP418	Green Infrastructure and Renewable Technologies	3
Total Semester Hours		**12**

Concentration in Climate Change and Resilience (12 semester hours)

The undergraduate Climate Change and Resilience Concentration offers students an interdisciplinary approach to understanding, addressing climate change, as well as adapting to its risks and impacts on both ecological and human systems. This includes the environmental, economic, and social factors that affect how natural and human systems respond to ongoing changes in climate. Students who choose this concentration gain foundational knowledge that will help them inform the management of resources, support adaptation and mitigation strategies, and foster resilience in vulnerable systems.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Describe the fundamental concepts and principles of climate science, adaptation, and resilience.
- Compare risk and vulnerability of natural and human systems to climate-related outcomes.
- Assess adaptation strategies across different sectors, with a focus on optimizing resources and supporting long-term benefits.
- Explain policies, regulations, and laws that influence how societies are addressing climate change, including considerations for mitigation and the protection of systems such as water supply.
- Develop interdisciplinary approaches that integrate ecological, social, cultural, and economic perspectives to advance climate change and resilience concentration goals through effective planning and use of finance and other key supports.

Concentration Requirements (12 semester hours)

EVSP350	Introduction to Climate Change and Resilience	3
EVSP351	Climate Change Mitigation and Adaptation Strategies	3
EVSP440	Ecosystem-Based Adaptation	3
EVSP441	Climate Change Engagement	3
Total Semester Hours		**12**

Concentration in Fish and Wildlife Management (12 semester hours)

Offers an overview of concepts and principles of fish and wildlife resource management. Examines the agencies responsible for resource management and the competencies of professional fish and wildlife managers. Management techniques and methods, public lands management, and the regulations, policies, and politics that influence U.S. fish and wildlife management are also covered.

NOTE: Students wishing to enroll in SCIN311, SCIN314, SCIN401, or SCIN402 for their concentration work MUST also take BIOL134 as a prerequisite. BIOL134 is NOT included in the BS Environmental Science major and is needed for these more specialized courses offered through the Natural Sciences program. This requirement cannot be waived. Please note that students can complete the Concentration in Fish and Wildlife Management without taking these specialized courses, but if these courses are desired the additional BIOL134 prerequisite must be completed as part of the student's elective hours.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Describe the fundamental concepts and principles of the management of fish and wildlife resources.
- Explain the impact of human activities on the survival and management of fish and wildlife populations.
- Identify the federal, state, and local agencies responsible for the management of fish and wildlife resources.
- List the competencies needed to become a professional fish or wildlife manager.
- Compare the effectiveness of fish and wildlife management techniques and methods.
- Explain the regulations, policies, and politics that influence the management of fish and wildlife in the U.S.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
EVSP330	Fish and Wildlife Policies, Programs, and Issues	
EVSP341	Introduction to Wildlife Management	
EVSP342	Population Ecology	
EVSP417	Conservation Biology	
SCIN311	Fishery Biology	
SCIN314	Botany	
SCIN401	Mammalogy	
SCIN402	Ornithology	
Total Semester Hours		**12**

Final Program Requirement (3 semester hours)

EVSP498	Senior Seminar in Environmental Science [2]	3
Total Semester Hours		**3**

Elective Requirements (30 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	30
Total Semester Hours	**30**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Science in Esports

Program Description

The B.S. in Esports provides students with in-depth knowledge of the esports ecosystem in order to prepare them for a variety of professional responsibilities in the esports and/or related industries. This program will develop students to be critical, reflective thinkers across a variety of topics and areas in esports. This degree program provides knowledge that can be applied to professional responsibilities in interscholastic or intercollegiate esports coaching, esports front office management, or esports media and communications management. Upon completing this degree program, students will have gained practical skills often required for entry-level esports or related responsibilities and/or advanced esports degree programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Describe the impact of business principles on esports processes.
- Examine the application of ethical solutions in the esports industry.
- Apply management concepts associated with the operation of esports events and facilities.
- Examine the social and historical influences of esports on contemporary society.
- Develop a comprehensive understanding of the production of digital content for the esports industry.
- Implement strategies to support and accelerate the development of esports athletes at all levels.

Students must choose a concentration for this degree program and may select from a Concentration in Esports Business Administration or Concentration in Esports Coaching and Athlete Development.

Concentration in Esports Business Administration (18 semester hours)

The Esports Business Administration concentration prepares students for the business elements of the esports industry. Students will gain a foundational knowledge of traditional business practices while completing their degree in esports. This is ideal for students interested in a variety of business and management fields in and related to esports.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Demonstrate principles related to traditional business and their application to esports.
- Examine the impact of global business competencies to the esports industry.
- Develop a strategic plan for an esports business.

Concentration Requirements (18 semester hours)

BUSN310	Business Theory	3
BUSN320	Principles of E Business	3
FINC300	Foundations of Financial Management	3
INFO331	Management Information Systems	3

MGMT310	Principles and Theory of Management	3
MKTG201	Fundamentals of Marketing	3
Total Semester Hours		**18**

Concentration in Esports Coaching and Athlete Development (18 semester hours)

The Esports Coaching and Athlete Development concentration will help to prepare students for careers in esports performance and coaching. Students will gain an understanding of coaching methods across games and genres in esports, as well as how to optimize esport athlete performance through training techniques and conditioning practices.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Demonstrate a holistic understanding of the factors which affect esports athlete development.
- Assess the effectiveness of various coaching, player development, and training methodologies.
- Construct and execute effective performance plans for esports athletes and teams.

Concentration Requirements (18 semester hours)

PBHE209	Wellness: Health Promotion and Disease Prevention	3
SPHE315	Training and Conditioning	3
SPHE318	Coaching Theory and Methodology	3
SPHE423	Advanced Strength and Conditioning	3
SPHE417	Leadership Concepts in Coaching	3

Total Semester Hours	**42**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.

Bachelor of Science in Fire Science Management

Program Description

The Bachelor of Science in Fire Science Management provides the principles, theory, and practices associated with leading-edge fire science and management issues associated with tactical fire operations, fire safety, firefighting leadership, and community fire issues, among others. This online bachelor’s degree offers you a comprehensive education in fire behavior, suppression methods, protection,

safety, and prevention, along with an emphasis on emergency and disaster management and response. This degree program is taught by highly credentialed and experienced instructors, many who hold key positions in government agencies or public safety organizations.

The mission of the Bachelor in Fire Science Management program is to help prepare students at the journeyman level by providing an in-depth understanding of the theories and best practices utilized in fire services, both prevention and protection, and enabling graduates to engage successfully with the community to achieve fire prevention goals and to become a leader in fire protection and response activities.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Analyze the current and historical strategies, practices, and policies that guide the modern field of fire science.
- Demonstrate the role of fire science personnel in leading, managing, and collaborating with colleagues, subordinates, constituents, and the community.
- Apply theory and practical methods to issues in fire science.
- Summarize the methods and resources needed to effectively manage fire services.
- Examine assessment and planning tactics to improve organization and community risk management for fire services.
- Describe strategies and methods to accomplish fire science operations.
- Differentiate the various practices involved in fire science, their fundamental scientific principles, and their associated mitigation and response strategies.
- Interpret the legal and regulatory duties and responsibilities that have an impact on the fire science field.

Bachelor of Science in Health Information Management

Program Description

Our Bachelor of Science in Health Information Management (HIM) helps to provide you with the knowledge and skills often required as a health information administrator in a variety of settings such as hospitals, insurance companies, and government agencies. With a focus on operations management, this online bachelor's degree utilizes a multidisciplinary approach to its curriculum.

Billions of dollars have been invested in newer health information technology, leading to a greater need for trained, educated HIM professionals knowledgeable in data management, information policy, finance, information systems, and administrative and clinical knowledge.

The Bachelor of Science in Health Information Management is accredited by the Commission on Accreditation for Health Informatics and Information Management Education (CAHIIM®).

Note: Some courses in the program require you to install software for virtual online lab accessibility. The cost of software and/or lab equipment is not covered under the undergraduate book grant and will need to be purchased when you register for class. Please see the course materials section of those courses for more information prior to registration.

Please be advised that due to the COVID-19 outbreak, many hospitals are not allowing internship placements at this time. We are making you aware as this may adversely impact your time to completion. Please speak with the practicum placement coordinator if you have questions by emailing kross@apus.edu.

CAHIIM® is a registered trademark of the Commission on Accreditation for Health Informatics and Information Management Education.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Assess organizational compliance with state and federal governmental regulations, accreditation, licensure, and certification requirements.
- Construct accurate quantitative evaluations related to health care statistics, financial management, and accounting standards and best practices.
- Analyze legal and ethical concerns related to confidentiality, security, and privacy issues in the management of health information in the digital world.
- Implement supervisory and management skills across business functions.
- Demonstrate knowledge of specialized medical language, classification systems, and reimbursement methodology common in the field of health information management.
- Synthesize material on health information management from multiple competing sources.
- Summarize the significance of being a health information administrator in terms of challenges, trends, and developments in a social context.
- Identify significant public policy issues in health information management.

Bachelor of Science in Healthcare Administration

Program Description

The Bachelor of Science in Healthcare Administration helps to prepare students to meet the challenging and changing demands of leadership within healthcare organizations, systems, and facilities. Students will gain knowledge and practical skills from a variety of disciplines; including healthcare, public health, health information management, and business. Skills in communication, organizational management, leadership, critical thinking, and practical decision making are pertinent competencies which apply to the healthcare administration field. The healthcare administration degree program consists of core courses in the key areas of accounting, legal and ethical principles, reimbursement methodologies, delivery systems and documentation, economics and finance, compliance, quality and safety, research management, and strategic planning and marketing, and informatics and analysis. This degree is designed for students with an interest in healthcare operations within healthcare facilities and systems.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Evaluate and develop solutions and strategies for complex problems within the healthcare industry.
- Analyze healthcare issues and policies and develop strategies for maintaining quality, safety, and value of healthcare programs.
- Implement process improvement tools to identify problems and improve processes within healthcare programs.
- Apply ethical standards for decision-making in healthcare organizations.
- Assess contemporary and future marketing strategies to achieve organizational goals.
- Assess technologies and healthcare informatics for implementation in healthcare organizations.

Major Required (48 semester hours)

PBHE111	Introduction to Health Care Administration	3
PBHE112	Health Services Organization	3
PBHE215	Healthcare: Moral Issues	3
HIMA240	Healthcare Reimbursement Methodologies	3
HIMA250	Healthcare Delivery Systems and Documentation	3
HCAD300	Legal and Ethical Principles in Healthcare	3
HCAD301	Healthcare Principles and Policies	3
HCAD302	Healthcare Quality and Safety	3
MGMT311	Organizational Behavior	3
PBHE315	Health Economics and Finance	3
HCAD400	Strategic Planning and Marketing in Healthcare	3
HCAD401	Finance and Budgeting for Healthcare Administrators	3
HRMT407	Human Resource Management	3
HIMA410	Informatics and Analytics	3
HIMA460	Healthcare Data Management and Governance	3
PBHE427	Epidemiology	3
Total Semester Hours		**48**

Students must choose a concentration for this degree program and may select from a Concentration in Addiction Treatment Facility Management, Concentration in Correctional Healthcare Facility Management, Concentration in Emergency Management, Concentration in Leadership, or Concentration in Mental Healthcare Facility Management.

Concentration in Addiction Treatment Facility Management (15 semester hours)

Focuses on theories and necessary skills to successfully manage an outpatient addiction treatment facility. Addiction and substance abuse will be explored. Emphasis will also be placed on the business skills that are essential for a leader in this setting including: leadership and motivation, dispute resolution, strategic planning, and the principles of sales.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the reasons people commonly abuse substances.
- Evaluate current treatment modalities & report on their effectiveness.
- Examine various leadership approaches and distinguish the purposes for each.
- Discuss the different types of sales presentations and what goes into their planning.

Concentration Requirements (15 semester hours)

PSYC324	Psychology of Addiction & Substance Abuse	3
HRMT411	Dispute Resolution	3
MGMT312	Leadership & Motivation	3
BUSN310	Business Theory	3
MKTG301	Principles of Sales	3
Total Semester Hours		**15**

Concentration in Correctional Healthcare Facility Management (15 semester hours)

Focuses on theories and intricacies involved with managing a healthcare program in a correctional setting. Corrections and incarceration, criminology, and ethics in criminal justice will be explored. The psychology of addiction and substance abuse will also be discussed.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Compare and contrast state and federal correction organization and administration.
- Analyze the cost and health issues associated with older inmates.
- Compare and contrast biological and psychological theories of crime.
- Demonstrate an in-depth knowledge of budget preparation, approval, and execution processes.
- Outline strategies employed by leaders in criminal justice organizations to effectively prevent ethics violations.

Concentration Requirements (15 semester hours)

CMRJ316	Corrections and Incarceration	3
PSYC324	Psychology of Addiction & Substance Abuse	3
CMRJ303	Criminology	3
BUSN310	Business Theory	3
CMRJ308	Ethics in Criminal Justice	3
Total Semester Hours		**15**

Concentration in Emergency Management (15 semester hours)

Focuses on theories and necessary skills to be a successful emergency manager within the healthcare leader role. Emergency planning and disaster are explored. Special operations in emergency medical services and specific techniques to control disaster, such as quarantine, are also discussed.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Evaluate theoretical, historical, and contemporary issues associated with quarantine as a public health and safety measure.
- Analyze specialized issues associated with emergency medical services in mass casualty, biological, chemical and radiological incidents.
- Define and discuss the roles and responsibilities of the Incident Command System used in crises, disasters, and emergency management response systems.
- Examine media management during local/national disasters and the levels of governmental response.

Concentration Requirements (15 semester hours)

EDMG220	Emergency Planning	3
EDMG230	Emergency and Disaster Incident Command	3
EDMG420	Risk Communications	3
PBHE413	Special Operations in Emergency Medical Services	3
PBHE426	Quarantine	3
Total Semester Hours		**15**

Concentration in Leadership (15 semester hours)

Focuses on theories and necessary skills to prepare the successful manager to lead in today's evolving healthcare organization. Leadership and motivation, dispute resolution, and organizational change will be explored. Additionally, management ethics and virtual management will be discussed.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Appraise the various models and approaches to organizational change.
- Assemble Leadership skills required in a virtual team and challenges faced by Virtual team leaders as well as tips, techniques and best practices for leading high performance.
- Analyze and critique leadership and motivation case studies using relevant models, theories, concepts, and terms.
- Evaluate the various leadership skills necessary at all stages of organizational change.
- Examine the application of leadership concepts and ethical theories in the business environment.

Concentration Requirements (15 semester hours)

HRMT411	Dispute Resolution	3
ITMG421	Virtual Management	3
MGMT312	Leadership & Motivation	3
MGMT313	Organizational Change	3
MGMT314	Management Ethics	3
Total Semester Hours		**15**

Concentration in Mental Healthcare Facility Management (15 semester hours)

Focuses on theories and necessary skills to successfully manage an outpatient mental healthcare facility. Addiction and substance abuse, personality theories, and child welfare and advocacy will be explored. Dispute resolution and leadership and motivation will also be discussed.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze how substances affect the mind and body and society.
- Analyze the reasons people commonly abuse substances.
- Examine the major theories of human personality.
- Analyze and critique leadership and motivation case studies using relevant models, theories, concepts, and terms.
- Examine various leadership approaches and distinguish the purposes for each.

Concentration Requirements (15 semester hours)

PSYC324	Psychology of Addiction & Substance Abuse	3
PSYC221	Personality Theories	3
CHFD230	Child Welfare and Advocacy	3
HRMT411	Dispute Resolution	3
MGMT312	Leadership & Motivation	3
Total Semester Hours		**15**

Final Program Requirement (3 semester hours)

HCAD498	Senior Seminar in Health Sciences [2]	3
Total Semester Hours		**3**

Elective Requirements (24 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	24
Total Semester Hours	**24**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Science in Information Technology

Program Description

The Bachelor of Science in Information Technology is designed to produce academically sound and functionally competent IT professionals who can build and deploy networks, databases, web properties, and other IT-related assets. Core programming skills along with problem-solving skills and techniques are offered to help bring you a well-rounded technology education. Additional concentrations allow you to choose from dozens of specific courses in order to specialize in the IT area of interest for you. IT personnel are needed in all

industries, and this online bachelor's program helps prepare you for a variety of possible careers including programmer, systems analyst, project manager, web developer, database designer, and more.

Coursework in this program also meets various industry certifications including Certified Internet Webmaster (CIW®). Please view course descriptions for complete details.

CIW® is a registered trademark of Certification Partners, LLC.

Degree Program Objectives

In addition to the institutional and general education level learning objectives, this degree also seeks the following specific learning outcomes of its graduates:

- Assess the significance of the system development life cycle and its effectiveness.
- Build a software program with software quality and reusability using the principles and concepts of Object-Oriented Programming (OOP).
- Design a network that incorporates the principles of network technologies.
- Design a database that applies the fundamentals of database management systems.
- Analyze the computer and network security issues, policies, proactive measures, and software tools to counter security breaches and threats.
- Apply industry driven techniques for designing, developing, deploying, and securing enterprise applications on the desktop and on the Web.
- Demonstrate use of analytical, logical, and critical thinking to design, develop, and deploy effective Information Technology solutions.

Concentration in Blockchain and Digital Currency (15 semester hours)

The purpose of this concentration is to teach students about the relevant elements of blockchain and Cryptocurrency technologies for professionals, including decentralized organizations (DAOs), blockchain application, regulations and investments, use cases of digital assets including NFTs and cryptocurrencies. The concentration also focuses on practical Java programming for crypto and blockchain.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explain the history and economics behind cryptocurrencies and decentralized ledger and blockchain technologies
- Identify different layers of blockchain technologies stack and how they affect the governance of blockchain systems
- Summarize blockchain and cryptocurrency opportunities and vulnerabilities
- Apply the use of blockchain and cryptocurrencies technologies
- Analyze investment strategies associated with blockchain and cryptocurrency
- Demonstrate use of practical Java programming for blockchain

Concentration Requirements (15 semester hours)

ENTD225	Introduction to Blockchain and Cryptocurrency	3
ENTD226	Applications of Blockchain	3
FINC303	Blockchain Technology for Business	3
ENTD381	Object Oriented Programming With Java®	3
ENTD326	Blockchain and Crypto Programming	3
Total Semester Hours		**15**

Concentration in Programming (15 semester hours)

The programming concentration provides students with a strong foundation in object-oriented programming and exposure to multiple programming languages. As the field of information technology continues to evolve, this curriculum equips students with marketable skills for developing applications across platforms. With the rapid growth of software development, companies increasingly seek custom solutions, making expertise in computer programming essential. Courses within this concentration emphasize building mobile apps, games, and enterprise software while reinforcing programming principles, practices, and problem-solving strategies.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explain the principles and practices applicable to programming.
- Analyze guidelines and techniques related to object-oriented programming using different programming languages.
- Summarize current trends of software development and their impact of business.
- Apply programming techniques to create software across multiple platforms.
- Develop applications that demonstrate knowledge and technical proficiency.

Concentration Requirements (15 semester hours)

ENTD261	Scripting Languages for the Administrator	3
ENTD320	Intermediate Python® Programming	3
ENTD381	Object Oriented Programming With Java®	3

ENTD382	Intermediate Object-Oriented Programming With Java®	3
ENTD411	Application Development	3
Total Semester Hours		**15**

Concentration in Programming Full Stack/Python® Visualization (15 semester hours)

The Programming Full Stack/Python® Visualization concentration is designed to help equip students with the required skills and knowledge for proficiency in both full-stack web development and data visualization using Python. This concentration provides a well-rounded learning experience that covers both front-end and back-end web development, along with the techniques and tools needed to create effective visual representations of data.

Course in this concentration offer an in-depth understanding of a multi-tier architecture approach to applying more productive skills and techniques when replacing or upgrading independent tiers within a system without impacting other critical layers. Students will develop the knowledge and skills typically used to redevelop or modernize various layers associated with the user interface, business logic, and data storage. Students will also learn how to optimize front-end web server requirements and address back-end database or data storage concerns efficiently while also maintaining presentation, application processing, and data management functions.

Python® is a registered trademark of the Python Software Foundation.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explain full-stack web development theories, principles, and techniques
- Analyze data using Python's data manipulation libraries
- Create visually appealing charts, graphs, and dashboards to present data
- Build dynamic and interactive web applications that deliver seamless user experience

Concentration Requirements (15 semester hours)

WEBD221	Intermediate Web Development	3
WEBD241	Web Development Using JavaScript®	3
WEBD343	jQuery	3
ENTD320	Intermediate Python® Programming	3
INFO401	Data Exploration and Visualization	3
Total Semester Hours		**15**

Concentration in Project Management (15 semester hours)

This concentration addresses the processes and goals of project management. It explores realistic application of project management process using project management strategies, tactics, and software. Other vital concepts and principles, such as negotiation techniques affecting how governments and organizations think about project management, are also examined. This concentration also expands on the processes and goals of negotiation. It explores a basic understanding of negotiation and the fundamentals of reaching an agreement while maintaining mutual gains. It helps you become more effective in delivering win-win agreements and distinguishing the differences between integrative negotiation and distributive bargaining when selecting the appropriate strategy for a project. This concentration builds your skills and abilities to initiate, plan, execute, monitor, control, and close projects. The concentration also focuses on quality delivery and the monitoring of risks in government and private sector contracting and acquisition activities.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify the models and strategies of project management.

- Explain the use of project management tools in an organization.
- Interpret the different techniques of project management.
- Apply effective strategies of project management in negotiating.

Concentration Requirements (15 semester hours)

ITMG121	Fundamentals of IT Project Management	3
ITMG223	IT Project Management Using Microsoft Project®	3
HRMT300	Negotiation I	3
DEFM200	Fundamentals of Contracting and Acquisition	3

Total Semester Hours		**3**

Elective Requirements (30 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	30
Total Semester Hours	**30**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant, Senior standing, and completion of all major courses prior to enrollment. This course should be taken as the last course before graduation.

Bachelor of Science in Information Technology Management

Program Description

The Bachelor of Science in Information Technology Management focuses on the problem-solving skills and techniques needed to provide computer-based solutions to practical problems. You'll be taught how to develop and communicate technological solutions, manage systems operations, improve and evaluate products, provide customer support, and facilitate technology transfer in both the public and private sectors. You'll also learn to apply ethical judgments and critical thinking to assess the impact of information technology on contemporary social, political, and economic issues. This bachelor's degree program helps to prepare you for a broad range of IT possibilities often required in a number of fields.

Some courses in this program meet the topical requirements for CompTIA Project+ ®Certification, the Microsoft Office Word® 2013 Certification, and the Internet Business Foundations curriculum of the CIW® Foundations Certification.

CompTIA Project+® is a registered trademark of the Computing Technology Industry Association.

Microsoft Office Word® is a registered trademark of Microsoft Corporation.

CIW® is a registered trademark of Certification Partners, LLC.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Develop key strategies and tactics using the theories, practices, and tools of information technology and business enterprise management.
- Apply effective strategies to address user needs.
- Demonstrate understanding of ethical practices, communication and teamwork as a professional in the technology industry.
- Demonstrate use of computer applications to enhance productivity.
- Apply industry driven techniques for initiating, planning, executing, monitoring, and controlling projects.
- Build business plans and projects with an understanding of principles and practices of business solutions, e-commerce, software development, database systems, networks, information systems, information security, and information technology project planning.

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Cybersecurity Management, or Concentration in Negotiation.

General Concentration (15 semester hours)

This concentration expands on the processes and goals of project management; it explores realistic application of Project Management tools using MS Project software, contemporary internet topics associated with project management, cyberlaw and privacy in a digital age,

and vital components of ethics affecting how governments and organizations think about project management. This concentration builds your skills and abilities to initiate, plan, execute, monitor, control, and close projects, while producing management quality and monitoring risks.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify the models and strategies of project management.
- Explain the use of project management tools in an organization.
- Interpret the different techniques of project management.
- Apply effective strategies of project management.

Concentration Requirements (15 semester hours)

ITMG223	IT Project Management Using Microsoft Project®	3
ITMG371	Contemporary Internet Topics	3
ITMG281	Law, Privacy, and Digital Data	3
ITMG421	Virtual Management	3
ITMG481	Ethics in Information Technology	3
Total Semester Hours		**15**

Concentration in Cybersecurity Management (15 semester hours)

This concentration expands on the processes and goals of cybersecurity management; it explores basic understanding of information security, information assurance, legal issues, and vital components of cybercrimes affecting how governments and organizations think about and manage information security. The course provides you industry-based cybersecurity management strategies, techniques, guidelines, procedures and recommendations. It positions you to manage information technology operations more effectively.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify the models and strategies used in cybersecurity management.
- Explain the need of effective security measures in an organization.
- Analyze the differences between information security and information assurance.
- Develop effective cybersecurity management strategies to address cyber crimes.

Concentration Requirements (15 semester hours)

ISSC422	Information Security	3
ISSC361	Information Assurance	3
ISSC331	Legal Issues in Information Security	3
ISSC451	Cybercrime	3
ISSC452	Cybersecurity	3
Total Semester Hours		**15**

Concentration in Negotiation (15 semester hours)

This concentration expands on the processes and goals of negotiation; it explores basic understanding of negotiation, supply chain risk management, fundamentals of contracting and acquisition, and vital components of cost analysis and negotiation techniques influencing

how governments and organizations think about bargaining and integrative negotiation. It helps you become more effective in delivering win-win agreements and distinguish the differences between integrative negotiation and distributive bargaining.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify the models and strategies for reaching resolution of conflicts.
- Explain the use of negotiation process in an organization.
- Analyze the differences between distributive bargaining and Integrative Negotiation.
- Interpret the different forms of negotiation and conflict resolution methods.
- Develop effective strategies to manage negotiations within relationships.
- Apply negotiation-based decisions to facilitate successful results.

Concentration Requirements (15 semester hours)

HRMT300	Negotiation I	3
HRMT301	Negotiation II	3

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. To be taken as the last course before graduation.

Bachelor of Science in Legal Studies

Program Description

The Bachelor of Science in Legal Studies offers in-depth knowledge of the U.S. court system, legal writing and research, legal practice, and various types of law, while emphasizing governance, civil and criminal processes, and the theory and philosophy of justice. This degree will aid you in doing your part to help solve aspects of the complex societal challenges associated with the public's ability to access justice by providing a broad understanding of law and the legal field. By equipping you for ethical service and leadership, the knowledge gained from this degree is often required in environments such as law firms, corporations, and local and national government agencies.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Appraise the merits of legal research and writing skills as applied in realistic contexts.
- Differentiate factual, conceptual and procedural patterns through the use of critical thinking and legal analytical skills.
- Collaborate on finding legal solutions with technology.

Major Required (24 semester hours)

ENGL101	Proficiency in Writing	3
LSTD204	Introduction to the Courts	3
LSTD205	Legal Research and Writing	3
LSTD207	Civil Practice and Procedure	3
LSTD210	Legal Ethics	3
LSTD211	Introduction to Legal Technology	3

LSTD301	Constitutional Law	3
LSTD303	Family Law	3
Total Semester Hours		**24**

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Criminal Law Support, Concentration in Legal Communications, Concentration in Legal Data Analytics, Concentration in Legal Data Security, Concentration in Legal Entrepreneurism, Concentration in Legal Ethics, or Concentration in Legal Office Administration.

General Concentration (24 semester hours)

Concentration Requirements (24 semester hours)

Select 8 courses from the following:		24
LSTD209	Sports Law, Risk, and Regulation	
HOSP204	Introduction to Hotel and Restaurant Law	
BUSN311	Law and Ethics in the Business Environment	
EVSP411	Environmental Policy, Regulation, and Law	
HOSP302	Hospitality Law	
ITMG281	Law, Privacy, and Digital Data	
LSTD304	Military Law	
LSTD306	International Law	
LSTD401	Maritime Law	
LSTD402	Immigration Law and Policy	
LSTD453	Evidence	
POLS410	Public Policy	
SOCI422	Sociology of the Law	
Total Semester Hours		**24**

Concentration in Criminal Law Support (24 semester hours)

This 24-semester-hour concentration provides a comprehensive conceptual and skills-based exposure to the substantive law, ethics, and procedures needed to effectively assist lawyers in preparing for and presenting legal cases before criminal courts.* (*Practice of law is defined by state bar associations. Students must check with their respective state bar associations to learn more about attorney and non-lawyer legal professional licensing requirements.)

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explore and react appropriately to a range of realistic criminal law contexts.
- Differentiate the factual, conceptual, ethical, and procedural patterns relating to criminal law matters through the application of critical thinking and legal analytical skills.
- Use technology to find legal solutions to criminal law-related challenges.
- Gain skills often needed to competently and ethically support lawyers in criminal law-related matters.

Concentration Requirements (24 semester hours)

CMRJ201	Criminal Justice Administration	3

LSTD203	Criminal Law and Procedure for the Paralegal	3
LSTD302	Criminal Law	3
LSTD201	Litigation	3
LSTD300	Administrative Law and Policy	3
CMRJ101	Evidence and Procedures	3
LSTD453	Evidence	3
LSTD212	Basic Contracts Law	3
Total Semester Hours		**24**

Concentration in Legal Communications (24 semester hours)

This 24-semester-hour concentration provides a comprehensive conceptual and skills-based exposure to the substantive legal and communications-related topics, ethics, and procedures needed to effectively assist lawyers in their public communications.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Communicate with the public in multiple ways about legal contexts.
- Differentiate factual, conceptual, ethical, and procedural patterns relating to legal matters through the use of critical thinking and legal analytical skills.
- Use technology to find public communication-related solutions to legal challenges.
- Gain skills often needed to competently and ethically deliver public communications about a variety of legal matters.

Concentration Requirements (24 semester hours)

COMM200	Public Speaking	3
COMM280	Ethics in Communication	3
COMM300	Communication Research Skills	3
COMM350	Journalism	3
COMM351	Strategic Communication	3
MKTG304	Public Relations	3
COMM370	Situational Communication	3
COMM380	Communication of Listening	3
Total Semester Hours		**24**

Concentration in Legal Data Analytics (24 semester hours)

This 24-semester-hour concentration provides a comprehensive conceptual and skills-based exposure to the substantive legal and business concepts, ethics, and procedures needed to effectively assist lawyers in understanding and maximizing the power of their data.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Scrutinize legal data in multiple ways to maximize its use in appropriate legal and business ways.
- Differentiate factual, conceptual, ethical, and procedural patterns relating to legal data through the use of critical thinking and legal analytical skills.

- Use technology to find solutions to challenges associated with legal data.
- Gain skills often needed to competently and ethically work with offices that handle legal data.

Concentration Requirements (24 semester hours)

BUSN311	Law and Ethics in the Business Environment	3
BUSN250	Analytics I	3
BUSN350	Analytics II	3
BUSN330	Fundamentals of Business Analysis I	3
BUSN331	Fundamentals of Business Analysis II	3
BUSN336	Strategic Policy Decision-Making	3
BUSN450	Advanced Analytics	3
ITMG481	Ethics in Information Technology	3
Total Semester Hours		**24**

Concentration in Legal Data Security (24 semester hours)

This 24-semester-hour concentration provides a comprehensive conceptual and skills-based exposure to the substantive legal and business concepts, ethics, and procedures needed to effectively assist lawyers in protecting their data, including that which belongs to their clients.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Scrutinize legal data in multiple ways to protect its use in appropriate legal and business ways.
- Differentiate factual, conceptual, ethical, and procedural patterns relating to legal data through the use of critical thinking and legal analytical skills.
- Use technology to find solutions to challenges associated with legal data.
- Gain skills often needed to competently and ethically protect legal data.

Concentration Requirements (24 semester hours)

INFO222	Database Concepts	3
ISSC231	Networking Concepts	3
ISSC290	Securing Databases	3
ISSC331	Legal Issues in Information Security	3
ISSC361	Information Assurance	3
ISSC363	IT Security: Risk Management	3
ISSC421	Computer and Network Security	3
ITMG481	Ethics in Information Technology	3
Total Semester Hours		**24**

Concentration in Legal Entrepreneurism (24 semester hours)

This 24-semester-hour concentration provides a comprehensive conceptual and skills-based exposure to the substantive legal and business concepts, ethics, and procedures needed to effectively operate a business to help create new solutions to challenges impacting the legal field.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explore innovative business concepts to try to solve issues related to society's inability to access justice when they need it.
- Differentiate factual, conceptual, ethical, and procedural patterns relating to legal and business challenges through the use of critical thinking and legal analytical skills.
- Use technology to find solutions to challenges associated with legal entrepreneurism.
- Gain skills often needed to competently and ethically try to help solve at least some portion of the access-to-justice problem.

Concentration Requirements (24 semester hours)

BUSN311	Law and Ethics in the Business Environment	3
ENTR421	The Value of Networking	3
ENTR150	Idea Generation	3
ENTR215	Innovation Design and Prototyping	3
ENTR300	Foundations of Entrepreneurship	3
ENTR311	Business Plan Foundations	3
ENTR320	Practical Law for the Entrepreneur	3
LSTD212	Basic Contracts Law	3
Total Semester Hours		**24**

Concentration in Legal Ethics (24 semester hours)

Students in this concentration learn the substantive law and procedures needed to effectively assist lawyers in making ethical decisions on behalf of their clients. The same knowledge and skills can support those students desiring to become non-lawyer legal professionals who are authorized to act independently of lawyers.* It also offers students opportunities to practice relevant skills in realistic scenarios. (*Practice of law is defined by state bar associations. Students must check with their respective state bar associations to learn more about attorney and non-lawyer legal professional licensing requirements.)

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explore and react appropriately to a range of realistic legal contexts that involve ethical dilemmas.
- Differentiate the factual, conceptual, ethical, and procedural patterns relating to legal matters involving ethical questions through the application of critical thinking and legal analytical skills.
- Use technology to find legal solutions to ethical challenges.
- Gain skills often needed to competently and ethically support lawyers, or act independently (if legally authorized) in matters involving ethical questions.

Concentration Requirements (24 semester hours)

PHIL200	Introduction to Ethics	3
COMM280	Ethics in Communication	3
PHIL300	Logic	3
PHIL330	Philosophy of Law	3
Select 4 courses from the following:		12
BUSN311	Law and Ethics in the Business Environment	

CMRJ308	Ethics in Criminal Justice	
ITMG481	Ethics in Information Technology	
MGMT314	Management Ethics	
PBHE215	Healthcare: Moral Issues	
PHIL320	Environmental Ethics	
POLS301	Ethics in Politics	
SCMT371	Legal and Ethical Issues in Security Management	
SOCI422	Sociology of the Law	
SPMT326	Ethics in Sports	
Total Semester Hours		**24**

Concentration in Legal Office Administration (24 semester hours)

This 24-semester-hour concentration provides a comprehensive conceptual and skills-based exposure to the substantive legal and business concepts, ethics, and procedures needed to effectively operate legal offices.

Note: EDMG220, FINC300, FINC405, and HRMT407 may be taken as elective courses to expand your knowledge of this specific concentration area.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explore business concepts to help operate legally-oriented businesses properly.
- Differentiate factual, conceptual, ethical, and procedural patterns relating to legal and business challenges through the use of critical thinking and legal analytical skills.
- Use technology to find solutions to challenges associated with legal office administration.
- Gain skills often needed to competently and ethically manage legal business operations.

Concentration Requirements (24 semester hours)

BUSN330	Fundamentals of Business Analysis I	3
BUSN331	Fundamentals of Business Analysis II	3
BUSN333	Project Management for Business Analysts	3
BUSN336	Strategic Policy Decision-Making	3
BUSN410	Critical Thinking Strategies for Business Decisions	3
HRMT101	Human Relations Communication	3
LSTD212	Basic Contracts Law	3
MGMT101	Principles of Supervision	3
Total Semester Hours		**24**

Final Program Requirement (3 semester hours)

Select 1 course from the following:		3
LSTD497	Senior Seminar in Legal Studies [2]	
Total Semester Hours		**3**

Elective Requirements (39 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	39
Total Semester Hours	**39**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Science in Mathematics

Program Description

The Bachelor of Science in Mathematics degree explores advanced mathematical theory and analytical methods, while sharpening the student's critical-thinking skills for solving complex science and technology problems. You will study advanced models for real-world data modeling projects and be taught how to analyze and effectively communicate mathematical theory. Our online math degree is designed for working professionals seeking to expand their knowledge in multiple areas including computer programming, finance, education, logistics, management, engineering, space studies, and more. This flexible degree is also ideal in preparing you for post-graduate education.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Demonstrate the ability to think critically and systemically through the application of mathematical reasoning.
- Construct mathematical models, solutions, and proofs that are clear, correct, and complete.
- Apply mathematics to solve complex, real-world problems and interpret the impact of those solutions in a global and societal context.
- Apply the awareness of ethical ramifications of the use of mathematical models and solutions to address real-world problems.
- Communicate with a wide range of audiences.
- Function effectively on teams with members from diverse disciplines and backgrounds.

Students must choose a concentration for this degree program and may select from a Concentration in Applied Mathematics, Concentration in Data Science, or Concentration in Operations Research.

Concentration in Applied Mathematics (21 semester hours)

Offers an overview of how to investigate and solve problems through advanced mathematical theory and analysis. Explores qualitative and quantitative methods of mathematical knowledge. Looks at communicating the theories, methods, and results of advanced analyses verbally or in writing.

In addition to the institutional, general education, and program level learning objectives, the Concentration in Applied Mathematics seeks the following specific learning outcomes of its graduates.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply advanced mathematical theory and analytical methods to investigate and solve problems.
- Use critical thinking skills in assessing and evaluating problems.
- Formulate advanced mathematical models.
- Implement advanced mathematical models to solve problems or provide insights into complex issues.
- Apply qualitative and quantitative methods from the mathematical domains.
- Synthesize mathematical knowledge to solve problems in science and technology.
- Communicate the theory, methods, and results of advanced mathematics analyses verbally and in writing.

Concentration Requirements (21 semester hours)

MATH305	Real Analysis	3
MATH330	Linear Optimization	3
MATH412	Graph Theory	3
MATH470	Measurement Theory	3
MATH418	Topology	3
MATH460	Principles of Applied Mathematics	3
Select 1 course from the following:		3
MATH325	Linear Regression I	
MATH340	Multivariate Statistics	
MATH375	Inventory Models and Systems	
Total Semester Hours		**21**

Concentration in Data Science (21 semester hours)

Provides the foundational building blocks for data science including analytical methods, functional methods and coding, exploratory data analysis, data visualization, and an exploration of the effect of new technologies such as analytics and AI on humanity. Teaches how to obtain data, how to perform data munging and pre-processing, and how to conduct data analyses on a wide variety of data across all disciplines and domains. Examples for data analyses are taken from business, finance, economics, healthcare, and the physical and social sciences.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Obtain required data and pre-process it for use in data analyses.
- Understand and use a wide variety of specific data types within the broad classifications of both continuous and categorical data.
- Determine the best tools, techniques and/or methods to use in conducting a data analysis.

- Conduct data analyses using a wide variety of tools and methods, modifying those tools and methods as appropriate to achieve increased efficiency in processing and increased effectiveness of the results.
- Communicate information visually by “telling the story” in the data and in the results of the analyses.
- Understand the implications of designing, developing, and implementing new technologies such as analytics and AI.

Concentration Requirements (21 semester hours)

DATS200	Functional Methods and Coding	3
DATS201	Analytical Methods I	3
DATS211	Introduction to Data Science	3
DATS301	Analytical Methods II	3
DATS311	Intermediate Data Science	3
CSCI381	Machine Learning	3
DATS411	Advanced Data Science	3
Total Semester Hours		**21**

Concentration in Operations Research (21 semester hours)

Examines how advanced analysis and operations research is used in the investigation and solution of scientific and technological problems. Covers why critical thinking, problem assessment and evaluation, and the formulation of operational models is essential for solving problems or gaining insights. Teaches how to communicate operations research.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply advanced analytical and operations research methods to investigate and solve problems.
- Use critical thinking skills in assessing and evaluating problems.
- Formulate operational models.
- Implement operational models to solve problems or provide insights into complex issues.
- Apply qualitative and quantitative methods from the mathematical domains.
- Synthesize advanced mathematical knowledge to solve problems in science and technology.
- Communicate the theory, methods and results of operations research analyses verbally and in writing.

Concentration Requirements (21 semester hours)

BUSN312	Operations Research	3
MATH330	Linear Optimization	3
MATH340	Multivariate Statistics	3
MATH375	Inventory Models and Systems	3
MATH410	Design of Experiments	3
MATH415	Operational Simulation	3
MATH420	Game Theory and Decision Models	3
Total Semester Hours		**21**

Final Program Requirement (3 semester hours)

MATH499	Senior Seminar in Mathematics [2]	3

Total Semester Hours	**3**

Elective Requirements (18 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	18
Total Semester Hours	**18**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Science in Natural Sciences

Program Description

The Bachelor of Science in Natural Sciences helps you to build a solid foundation in biology, chemistry, physics, mathematics, and earth science. This online science program gives you hands-on, at-home laboratory exercises to complement the concepts covered in the classroom. You'll be taught the history and philosophy of science as well as the scientific method that is essential to research. This online bachelor's degree helps you develop your skills in scientific analysis, research, communication, and documentation, and study the relationship between the human and the natural world. Knowledge gained from this program can be applied in a variety of fields or to pursue higher-level graduate study in the natural science fields.

In addition, the B.S. in Natural Science meets all content standards of the National Science Teachers Association (NSTA®) for secondary science education. Therefore, upon completion of this program, you will be eligible to pursue teaching certification through a post-baccalaureate program in education if your goal is to become a high school or middle school science teacher. (This is not a teacher-preparation program and does not lead to licensure. It only covers the needed science content. Students are encouraged to contact their state licensing boards to determine if this program will help them meet their goals.)

This program has specific transfer credit requirements, including time limits on previous courses completed.

NSTA® is a registered trademark of the National Science Teaching Association.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Demonstrate a solid foundation in the theory and application of the natural sciences.
- Apply the scientific method and appropriate tools to investigate and solve problems.
- Demonstrate critical thinking skills in assessing and evaluating problems.
- Formulate scientific models and apply them to solve problems or provide insights into complex issues.
- Apply qualitative and quantitative methods from the scientific domains.
- Use quantitative techniques to solve complex problems.
- Effectively communicate scientific findings verbally and in writing, to both scientific and lay audiences.

Concentration in Biology (28 semester hours)

In addition to the general biology courses required in this major, this concentration offers advanced courses to enable you to study biology at a deeper level across multiple scales. The concentration investigates the principles of genetics, heredity, and biological evolution, as well as the structure and function of organisms from the single cell to the complex mammals.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Describe the organization, functions, and biochemical pathways required for life at the cellular level.
- Integrate the laws of chemistry and physics with the principles of cell biology.
- Relate the structures and functions of multicellular organisms with the maintenance of homeostasis.
- Integrate the principles of genetics, heredity, and biological evolution.
- Relate the survival of individual organisms with the principles of population biology, the environment, and biological evolution.
- Describe common research methods in biology.

Concentration Requirements (28 semester hours)

BIOL240	Elements of Biological Chemistry	3
BIOL241	Cell Biology	3
SCIN202	Introduction to Microbiology	3
SCIN211	Principles of Genetics with Lab	4
EVSP416	General Ecology	3
Select 4 courses from the following:		12
BIOL301	Molecular Biology	
EVSP342	Population Ecology	
EVSP417	Conservation Biology	
GEOG200	Fundamentals of Geographic Information Systems I	
SCIN311	Fishery Biology	
SCIN314	Botany	
SCIN316	Plant Identification, Taxonomy, and Systematics	
SCIN401	Mammalogy	

SCIN402	Ornithology	
SPST200	Introduction to Space Studies	
SPST306	Human Space Flight	
Total Semester Hours		**28**

Final Program Requirement (6 semester hours)

SCIN400	Research Methods in Natural Sciences	3
SCIN499	Senior Seminar in Natural Sciences [2]	3
Total Semester Hours		**6**

Elective Requirements (20 semester hours)

Students in the Biology concentration are encouraged to consider the following courses as part of their electives: BIOL201-Principles of Anatomy and Physiology with Lab, BIOL202-Principles of Microbiology with Lab, or the Human Anatomy and Physiology with Lab sequence (BIOL250 and BIOL251).

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	20
Total Semester Hours	**20**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: SCIN400-Research Methods in Natural Sciences, senior standing, and completion of all major courses before enrollment. SCIN499 is to be taken as the last course before graduation.

Bachelor of Science in Nursing

Program Description

The online Bachelor of Science in Nursing degree is open to registered nurses who have earned an associate degree in nursing and have a current, active, and unencumbered license. The mission of the program is to provide quality, affordable, and accessible higher education to professional registered nurses by fostering lifelong learning through a spirit of inquiry in order to prepare students for service and leadership roles in a diverse and global society.

This online nursing program offers you a seamless transition from your associate degree to BSN degree, and provides a foundation for further graduate studies in nursing.

In this online RN to BSN program, you will work with credentialed and experientially qualified faculty to promote interprofessional collaboration and engagement. Online faculty-facilitated discussions and signature assignments provide you the opportunity to review and evaluate a variety of case studies and patient presentations.

The Bachelor of Science in Nursing (BSN) program is accredited by the Commission on Collegiate Nursing Education.

Note: This program is currently not open for admission to residents of the District of Columbia and Washington.

This program has specific admission requirements.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Improve performance in the professional nursing role by developing leadership, management, sound clinical judgment and communication skills to improve the health of individuals, families, and communities.
- Use interprofessional communication and collaborative skills with patients, families, and members of healthcare teams to achieve effective and efficient coordination of care.
- Utilize evidence-based clinical practice guidelines and leadership principles to promote a culture of safety and achieve outcomes that are grounded in institutional values and professional ethics.
- Apply informatics and healthcare technologies to access critical information, to collaborate with other professionals, and to facilitate optimal patient-centered care.
- Apply scientific principles and the nursing process to evaluate responses to therapies and changes in patient health status.
- Integrate knowledge of human and organizational behavior to lead teams and promote cultures of safety.
- Analyze the impact of financial, regulatory, and political decisions on local, national and global health outcomes.
- Synthesize knowledge of ethical, socioeconomic, and cultural factors to decrease health disparities, to advocate for vulnerable populations, and to provide culturally relevant healthcare to individuals, groups, and communities.
- Employ a spirit of inquiry to embrace the value of lifelong learning and participate in professional activities that promote and shape the future of nursing.

Programmatic Admission Requirements

This program is currently not open for admission to residents of the District of Columbia and Washington.

To apply to this program, you must hold the following:

- Associate degree in nursing or diploma from an accredited or board approved institution in nursing.
- Current, active and unencumbered U.S. Registered Nursing (RN) license
- Signed statement of understanding (SOU)

Please visit our APU undergraduate admission page for more information on institutional admission requirements.

Note: You must complete this program within 5 years of starting your first nursing (NURS) course.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-755-2787 or info@apus.edu.

2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must have a 'B' or better and to be taken as the last course before conferral

Bachelor of Science in Public Health

Program Description

The Bachelor of Science in Public Health degree provides a professionally focused understanding of public health in America and abroad including the science, psychology, and sociology associated with public health issues. You will study public law, policy, and administration associated with the administration of public health along with its management, finances, and structure.

This online degree program is intended for professionals interested in the public health fields such as a community health worker or educator, dietitian, nutritionist, health services manager, or occupational health and safety technician.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Apply organizational design principles to the unique healthcare organization construct.
- Perform macro- and microeconomic analyses of healthcare production and costs.
- Critically analyze the healthcare system in the United States.
- Create a plan for efficient healthcare system management.
- Develop an ethical system to analyze moral issues in public health services delivery.
- Discuss epidemiological issues in society.
- Appraise the U.S. medical care system, its problems, and potential for reform.
- Analyze international and comparative public health concepts, approaches, and systems.

HIMA110	Introduction to Health Information Management	
HIMA250	Healthcare Delivery Systems and Documentation	
HIMA310	Electronics Health Records Fundamentals	
HIMA360	Health Informatics Project and Enterprise Management	
HIMA410	Informatics and Analytics	
HIMA460	Healthcare Data Management and Governance	
Total Semester Hours		**21**

Concentration in Emergency and Disaster Management (21 semester hours)

Focuses on the theoretical, historical, and contemporary issues associated with quarantine as a public health and safety measure. Public health consequences of nuclear, biological, and chemical incidents, emergency planning and response measures in place among U.S. agencies, and emerging detection and management technologies will be explored. Psychological and physiological human response to natural and man-made disasters and media management will be discussed.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Evaluate theoretical, historical, and contemporary issues associated with quarantine as a public health and safety measure.
- Analyze specialized issues associated with emergency medical services in mass casualty, biological, chemical and radiological incidents.
- Define and discuss the roles and responsibilities of the Incident Command System used in crises, disasters, and emergency management response systems.
- Identify the historical development and use of chemical and biological weapons and their impacts.
- Examine media management during local/national disasters and the levels of governmental response.
- Examine normal and abnormal physiological and psychological reactions to natural and man-made disasters, and discuss the recovery process and principles of mental health care for victims of mass disasters.

Concentration Requirements (21 semester hours)

EDMG220	Emergency Planning	3
EDMG230	Emergency and Disaster Incident Command	3
PBHE413	Special Operations in Emergency Medical Services	3

PBHE426	Quarantine	3
EDMG340	Consequence Management	3
EDMG420	Risk Communications	3
PSYC431	Psychology of Disaster	3
Total Semester Hours		**21**

Concentration in Nutrition and Wellness (21 semester hours)

Focuses on nutrition and health, and analyzes human food choices from an ecological, political, and sociological perspective. Looks at the psychological effects of exercise and discusses issues related to personality factors and exercise motivation. Provides instruction on psychological skills training program development, which incorporates theories of anxiety reduction, imagery training, and effective goal setting.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Evaluate the role of nutrition on individual health. Describe issues related to the personality factors in exercise and the psychological effects of exercise.
- Discuss challenges related to motivation and the fundamentals of achievement motivation to guide practice and performance.
- Explain concepts related to social, environmental. and occupational factors in health and illness.
- Analyze human food choices from an ecological, political, and sociological perspective.

Concentration Requirements (21 semester hours)

SOCI315	Food and Culture	3
SPHE340	Nutrition Throughout the Lifecycle	3
SPHE314	Exercise Physiology	3
SOCI423	Sociology of Health and Illness	3
SPHE460	Business Aspects of Fitness and Wellness	3
SPHE461	Current Issues and Trends in Fitness and Wellness	3
SPHE470	Psychology of Sport	3
Total Semester Hours		**21**

Concentration in Public Health Informatics (21 semester hours)

Focuses on healthcare information management and its historical development, along with theoretical and practical applications of the health care delivery systems. Examines the emerging technology of electronic health records, and offers fundamental knowledge of the concepts of health informatics applications. Presents key skills and techniques that can be applied immediately to the management and governance of healthcare data.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Define and use specialized medical vocabulary and accepted medical abbreviations and symbols needed in health information management.
- Describe characteristics of health care delivery and settings in the United States.
- Evaluate the type and content of the health record and interpret health records standards, policies and procedures.
- Evaluate initial and ongoing training programs for healthcare organizations.

- Utilize technology for data collection, storage, analysis, interpreting, and reporting of healthcare information.
- Identify, evaluate, and analyze health information needs across the healthcare continuum.

Concentration Requirements (21 semester hours)

HIMA100	Medical Terminology	3
HIMA110	Introduction to Health Information Management	3
HIMA250	Healthcare Delivery Systems and Documentation	3
HIMA310	Electronics Health Records Fundamentals	3
HIMA360	Health Informatics Project and Enterprise Management	3
HIMA410	Informatics and Analytics	3
HIMA460	Healthcare Data Management and Governance	3
Total Semester Hours		**21**

Final Program Requirement (3 semester hours)

PBHE498	Senior Seminar in Public Health [2]	3
Total Semester Hours		**3**

Elective Requirements (29 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	29
Total Semester Hours	**29**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Science in Space Studies

Program Description

Prepare for the political, economic, legal, commercial, scientific, and technical challenges associated with human exploration in space with the Bachelor of Science in Space Studies.

Very few space studies academic programs match the breadth and scope of this innovative online program and its concentration options, including space entrepreneurship. This space studies program uses a curriculum initially designed by a former NASA astronaut. Many faculty include scientists and engineers currently working for NASA, the space industry, and national astronomical observatories.

You'll also have the opportunity to use the university's state-of-the-art, remote-controlled observatory, with a fully online 24-inch aperture telescope.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Apply knowledge of mathematics, earth science, and space science to identify and solve space/earth studies problems.
- Conduct experiments, analyze, and interpret data.
- Communicate effectively with a range of audiences.
- Assess ethical and professional responsibilities and the impact of technical and/or scientific solutions in global, economic, environmental, and societal contexts.
- Function on multidisciplinary teams.

Students must choose a concentration for this degree program and may select from a Concentration in Aerospace Science, Concentration in Astronomy, Concentration in Earth Science, Concentration in Space Entrepreneurship, Concentration in Space Policy, or Concentration in Unmanned Aircraft Systems (UAS).

Concentration in Aerospace Science (15 semester hours)

The aerospace science concentration provides an in-depth study of space transportation systems. You take courses with comprehensive overviews of such topics as rocket propulsion, orbital mechanics, launch/reentry systems, and spacecraft design.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Solve the laws of orbital mechanics, including spacecraft maneuvers such as transfer orbits and rendezvous.
- Analyze liquid and solid rocket propulsion fundamentals including propellants, combustion principles, components, and general turbo-pump, and motor design.
- Assess the technology related to various launch and reentry systems.
- Synthesize the fundamentals of modern space transportation systems, from Apollo to NASA's new Space Launch System.

Concentration Requirements (15 semester hours)

SPST305	Introduction to Orbital Mechanics	3
SPST310	Rocket Propulsion	3
SPST330	Launch and Reentry Systems	3
SPST425	Satellite and Spacecraft Systems	3
SPST445	Space Transportation Systems	3
Total Semester Hours		**15**

Concentration in Astronomy (15 semester hours)

The astronomy concentration is designed to prepare you for employment in the observatory, planetarium, or science center environment. A range of courses are offered that prepare you for graduate work in the space studies field. You'll acquire experience with the university's new 24-inch robotic telescope.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Demonstrate an in-depth understanding of operation of the modern observatory and planetarium.
- Analyze the celestial objects found within our Solar System and their study by space probe.
- Evaluate the importance of space weather and its potential harmful effects on our technological society.
- Synthesize celestial objects found beyond the Solar System, including stars, exoplanets, and galaxies.

Concentration Requirements (15 semester hours)

SPST340	Tools of the Observatory	3
SPST341	Tools of the Planetarium	3
SPST342	Habitable Worlds	3
SPST440	Stars and Galaxies	3
SPST441	Cosmology	3
Total Semester Hours		**15**

Concentration in Earth Science (15 semester hours)

In this concentration, you will study the relationship between the physical, chemical, and biological processes operating in and on the Earth. You will learn about the history of the Earth and the evolution of systems such as the oceans and atmosphere, as well as detailed information about soils, streams, weather, and climate. The relationship between humans and the Earth is examined from multiple perspectives.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Use the scientific method and scientific tools to solve programs related to the Earth.
- Demonstrate a comprehensive understanding of the interrelated physical, chemical, and biological processes operating in the Earth system.
- Identify the process and features associated with the Earth's interior, landscapes, oceans, and atmosphere.
- Construct a history of the Earth, focusing on physical, chemical, and biological changes.
- Present earth science information clearly, in multiple formats (written, oral, graphically).
- Integrate knowledge of earth science into an understanding of societal issues and problems.
- Demonstrate good scientific ethics.
- Identify different earth materials, including those of economic value.

Concentration Requirements (15 semester hours)

ERSC204	Earth System History	3
ERSC302	Geomorphology	3
ERSC304	Remote Sensing and GIS for Earth Sciences	3
ERSC401	Natural Hazards and Society	3
ERSC402	Earth and Planetary Sustainability	3
Total Semester Hours		**15**

Concentration in Space Entrepreneurship (15 semester hours)

This concentration consists of five courses. The concentration provides the student with an array of study and course work in idea feasibility, the legal realm of entrepreneurship, funding the venture, marketing, prototyping, and technological innovation.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Determine feasibility of a business idea.
- Assess the legal requirements of being an entrepreneur.

- Analyze various methods necessary to grow an entrepreneurial business through funding options.
- Distinguish innovative technology from non-innovative technology for competitive advantage.

Concentration Requirements (15 semester hours)

ENTR150	Idea Generation	3
SPST307	Space Policy	3
ENTR315	Financing a New Venture	3
SPST426	Space Habitats	3
SPST427	Space Resources	3
Total Semester Hours		**15**

Concentration in Space Policy (15 semester hours)

Space policy is designed to cultivate leaders in the space industry – both in NASA as well as the commercial space operations industry. This concentration is ideal if you have an administrative/business interest. Coursework considers space diplomacy, with extensive emphasis on space operations and organizations.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Examine the political and commercial significance of major national and international space missions, projects, and operations.
- Evaluate organizations that are critical to the success of the technological advance of space infrastructure in the United States.
- Synthesize the status of space cooperation and diplomacy between various space faring nations.
- Synthesize space laws and how the governing institutions affect applications such as remote sensing, communications, navigation, launch services, satellite exports, and arms control.

Concentration Requirements (15 semester hours)

SPST304	National Space Organization	3
SPST306	Human Space Flight	3
SPST307	Space Policy	3
SPST415	Space Station Systems and Operations	3
SPST485	Space Wargaming	3
Total Semester Hours		**15**

Concentration in Unmanned Aircraft Systems (UAS) (15 semester hours)

Unmanned Aircraft Systems (UAS) concentration within the Space Studies program prepares students with foundational knowledge of unmanned aircraft systems (drones). This concentration covers both the theoretical principles and practical commercial applications of UAS technology. Students will learn about the design, deployment, and management of unmanned aircraft systems and drone operations in a commercial setting.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify and explain the functions of different UAS hardware components
- Demonstrate the ability to design, build, and operate functional drones

- Evaluate and address challenges in various commercial drone applications while considering public health, safety, welfare, and broader global, cultural, social, environmental, and economic factors
- Synthesize knowledge of FAA Part 107 UAS regulations, including safe operational requirements, in preparation for the Part 107 Remote Pilot Certificate

Concentration Requirements (15 semester hours)

SPST351	Introduction to Unmanned Aircraft Systems (UAS)	3
SPST352	Unmanned Aircraft Systems (UAS) Components and Modeling	3
SPST353	Unmanned Aircraft Systems (UAS) Applications	3
SPST451	Unmanned Aircraft Systems (UAS) Payload and Sensor Technologies	3
SPST452	Remote Pilot Certification Preparation	3
Total Semester Hours		**15**

Final Program Requirement (3 semester hours)

SPST499	Senior Seminar in Space Studies [2]	3
Total Semester Hours		**3**

Elective Requirements (22 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	22
Total Semester Hours	**22**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Science in Sports and Health Sciences

Program Description

Our Bachelor of Science in Sports and Health Sciences is a scientific study of human movement and human behavior relative to exercise, fitness, nutrition, health, and wellness. This degree is designed to prepare you to meet challenges in these dynamic and emerging fields of study. You will engage in core issues and concepts in areas such as anatomy and physiology, nutrition, kinesiology, and exercise programming and testing. The degree provides practical skills often required for entry-level positions in the fitness industry, corporate wellness programs, and strength and conditioning of athletes.

This B.S. degree in Sports and Health Sciences is affiliated with the guidelines of the American Sport Education Program (ASEP).

Note: Material for lab courses will only be provided once. If you need replacement lab equipment for any reason or need to retake the course later, you will need to purchase your own lab refills.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Apply fundamental concepts of human anatomy, physiology, nutrition, health, and kinesiology to applications in sports and fitness.
- Perform motivational strategies and tactics designed to guide practice and performance in physical activity.
- Design a healthful diet for varying populations based off sound nutritional principles and concepts generated from the Dietary Guidelines for Americans.
- Critically analyze steroids usage on athletic performance including associated muscle reaction and medical risks.
- Illustrate appropriate procedures for treating upper and lower body sport injuries.
- Construct exercise programs applicable in fitness, rehabilitation, and athletic training settings.
- Evaluate suitability of common exercises based on muscle action for exercise program design.

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Coaching Studies, Concentration in Exercise Science, Concentration in Fitness and Wellness Professional Studies, or Concentration in Nutrition for Health and Fitness.

General Concentration (18 semester hours)

This general concentration allows you to select from all concentration courses offered within this program, enabling you to create your own focused area of study.

Objectives

This general concentration allows you to select from all concentration courses offered within this program, enabling you to create your own focused area of study.

Concentration Requirements (18 semester hours)

Select 6 courses from the following:		18
LSTD209	Sports Law, Risk, and Regulation	
MATH302	Statistics	
PBHE209	Wellness: Health Promotion and Disease Prevention	
PBHE315	Health Economics and Finance	
PBHE427	Epidemiology	
SPHE315	Training and Conditioning	
SPHE317	Sports Medicine	
SPHE318	Coaching Theory and Methodology	
SPHE324	Biomechanics	
SPHE360	Scientific Principles of Coaching	
SPHE417	Leadership Concepts in Coaching	
SPHE423	Advanced Strength and Conditioning	
SPHE426	Principles of Corrective Exercise	
SPHE460	Business Aspects of Fitness and Wellness	
SPHE461	Current Issues and Trends in Fitness and Wellness	

SPMT316	Sports and Recreation Facility Management	
SPHE416	Athletic Programs Administration	
Total Semester Hours		**18**

Concentration in Coaching Studies (18 semester hours)

Explores strategies of effective communication with athletes, coaches, officials, administrators, and parents. The curriculum evaluates technical and tactical sport skills, as well as leadership strategies and their application to coaching principles. A focus on coaching leadership can also be applied to other business endeavors and personal life.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify strategies to effectively communicate athletes, fellow coaches, officials, school administrators, and parents.
- Examine methods for teaching and evaluating technical and tactical sport skills.
- Analyze and evaluate leadership strategies and apply them to coaching principles.

Concentration Requirements (18 semester hours)

LSTD209	Sports Law, Risk, and Regulation	3
SPHE318	Coaching Theory and Methodology	3
SPHE423	Advanced Strength and Conditioning	3
SPHE417	Leadership Concepts in Coaching	3
SPHE416	Athletic Programs Administration	3
SPHE360	Scientific Principles of Coaching	3
Total Semester Hours		**18**

Concentration in Exercise Science (18 semester hours)

Offers scientific knowledge used to train athletes and clients in fitness and athletic performance, including exercise prescription principles for training variation, injury prevention, and reconditioning. Examines sports nutrition and supplementation, lower and upper extremities function during exercise, and mental training strategies aimed at improving athletic performance.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply scientific knowledge to train athletes and clients for the primary goals of improving athletic performance and fitness.
- Apply exercise prescription principles for training variation, injury prevention, and reconditioning.
- Analyze sport movements and design movement-oriented exercise prescriptions.

Concentration Requirements (18 semester hours)

MATH302	Statistics	3
SPHE315	Training and Conditioning	3
SPHE317	Sports Medicine	3
SPHE324	Biomechanics	3
SPHE423	Advanced Strength and Conditioning	3
SPHE426	Principles of Corrective Exercise	3

Total Semester Hours	**18**

Concentration in Fitness and Wellness Professional Studies (18 semester hours)

Examines health care financing and economic principles, as well as environmental, sociocultural, and other factors that influence fitness and wellness practices. Topics include the physical, intellectual, and social components of wellness, as well as sports facility and event management and other business aspects, including risk management, marketing, leadership, and personnel.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the structure of healthcare financing and economic principles.
- Evaluate environmental, sociocultural, and economic factors that influence fitness and wellness professional practices throughout society.
- Integrate healthy lifestyle and behavior practices for improving overall well-being.

Concentration Requirements (18 semester hours)

PBHE209	Wellness: Health Promotion and Disease Prevention	3
PBHE315	Health Economics and Finance	3
PBHE427	Epidemiology	3
SPHE460	Business Aspects of Fitness and Wellness	3
SPHE461	Current Issues and Trends in Fitness and Wellness	3
SPMT316	Sports and Recreation Facility Management	3
Total Semester Hours		**18**

Concentration in Nutrition for Health and Fitness (18 semester hours)

Nutrition and physical activity are essential components of health and well-being. The Nutrition for Health and Fitness concentration extends the core nutrition theories beyond basic sports nutrition concepts taught in the Sports and Health Sciences curriculum. Students will learn to apply cultural food practices, advanced nutrition topics, wellness and disease prevention principles, and skills to integrate nutrition coaching/well-being techniques to health and fitness programs.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply fundamental principles and concepts of nutrition science (e.g., nutrients, hydration, and alcohol consumption), cultural food practices, and disease prevention to essential health and fitness principles.
- Evaluate current fitness and wellness topics using appropriate nutrition and physical activity principles.
- Develop strategies that help clients select appropriate foods, manage cultural food restrictions, and overcome life/training hurdles to build healthy eating habits that improve their well-being.

Concentration Requirements (18 semester hours)

PBHE209	Wellness: Health Promotion and Disease Prevention	3
SOCI315	Food and Culture	3
SOCI423	Sociology of Health and Illness	3
SPHE461	Current Issues and Trends in Fitness and Wellness	3
SPHE340	Nutrition Throughout the Lifecycle	3

SPHE435	Advanced Nutrition	3
Total Semester Hours		**18**

Final Program Requirement (3 semester hours)

SPHE490	Senior Seminar in Sports and Health Science [2]	3
Total Semester Hours		**3**

Elective Requirements (31 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	31
Total Semester Hours	**31**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. Must be taken as the last course before graduation.

Bachelor of Science in Sports Management

Program Description

The Bachelor of Science in Sports Management is designed for students who are interested in sports management, coaching, and administration in collegiate, community, or high school sports. This online bachelor's degree provides students with an improved understanding of sports administration, coaching theory and strategy, and business skills such as marketing, promotion, public relations, finance, and sports law. It is an ideal choice for students interested in sports-related fields such as interscholastic or intercollegiate coaching, sports management, or front-office administration. This program has achieved specialized accreditation through the Commission on Sport Management Accreditation (COSMA).

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Describe the impact of legal principles on sport management processes.
- Apply management concepts associated with the operations of sport facilities.
- Appraise the socio-historical context of sport as related to contemporary society.
- Examine the application of ethical solutions in the sport management industry.
- Apply financial management principles to managing a sport organization.
- Analyze the dimensions of a sport marketing plan.

Bachelor of Science in Biology

Program Description

The Bachelor of Science in Biology helps you build a solid foundation in biology, chemistry, physics, and mathematics. This online biology program offers virtual hands-on laboratory courses that reinforce key concepts through experimentation. You'll study the scientific method, explore biological systems, and gain an understanding of cell biology, molecular biology, genetics, and evolution—the fundamental principles shaping the life sciences.

The program emphasizes the theory and application of the biological sciences while developing your skills in scientific analysis, research, and communication. Students will investigate the relationships between humans and the natural world, preparing for a variety of careers or graduate study in biomedical sciences, environmental science, biotechnology, or other life science fields.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Demonstrate a solid foundation in the biological sciences and related natural sciences.
- Apply the scientific method to investigate and solve problems in biology.
- Use critical thinking and data analysis to evaluate biological systems.
- Formulate and test scientific hypotheses using laboratory and quantitative biology methods.
- Communicate effectively across a variety of scientific and professional audiences.

Students must choose a concentration for this degree program and may select from a Concentration in General Biology, Concentration in Preprofessional Health Studies, or Concentration in Synthetic Biology.

Concentration in General Biology (23 semester hours)

In addition to the general biology courses required in this major, the General Biology concentration offers advanced science courses that allow you to study biology at multiple scales. You'll explore genetics, cell biology, molecular biology, plant biology, ecology, and evolution, gaining a broad understanding of the diversity of living organisms and their interactions within biological systems.

Students will learn to apply scientific hypotheses, perform data analysis, and design experiments that examine organismal structure, function, and development. The concentration prepares students for research or graduate study in the biological sciences, as well as for careers in education, biotechnology, or environmental science.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Describe the organization, functions, and biochemical pathways required for life at the cellular level.
- Integrate the laws of chemistry and physics with the principles of cell biology.
- Relate the structures and functions of multicellular organisms with the maintenance of homeostasis.
- Apply the principles of genetics, heredity, and biological evolution.
- Describe and evaluate research methods in biology and interpret experimental data.

Concentration Requirements (23 semester hours)

SCIN314	Botany	3
BIOL241	Cell Biology	3
BIOL202	Principles of Microbiology with Lab	4
EVSP416	General Ecology	3
SCIN401	Mammalogy	3
BIOL250	Human Anatomy and Physiology with Lab I	4
Select 1 course from the following:		3
MATH226	Calculus II	
MATH303	Probability and Statistics for Engineers and Scientists	
Total Semester Hours		**23**

Concentration in Preprofessional Health Studies (23 semester hours)

The Preprofessional Health Studies concentration focuses on biology and chemistry courses relevant to the health sciences. Students will study microbiology, human anatomy and physiology, and organic chemistry, building a strong foundation in the natural sciences to prepare for admission to medical, dental, pharmacy, veterinary, and other health professional schools.

This concentration emphasizes research methods, biological systems, and the scientific method as tools for solving problems in the healthcare and medical fields. Students planning to enter the health professions will gain knowledge of human cell biology, genetics, and the biochemical principles underlying the structure and function of the human body.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Integrate the principles of genetics, heredity, and biological evolution.
- Describe the organization of the human body from the cellular level to organ systems.
- Relate the structures to the functions of the organs of the human body.
- Apply inorganic and organic chemistry to understand human physiology.
- Summarize the interactions and impact of microorganisms on human health.
- Demonstrate an understanding of research methods and scientific data analysis relevant to health science.

Concentration Requirements (23 semester hours)

BIOL202	Principles of Microbiology with Lab	4
BIOL250	Human Anatomy and Physiology with Lab I	4
BIOL251	Human Anatomy and Physiology with Lab II	4
CHEM233	Organic Chemistry I with Lab	4
CHEM234	Organic Chemistry II with Lab	4
Select 1 course from the following:		3
MATH226	Calculus II	
MATH303	Probability and Statistics for Engineers and Scientists	
Total Semester Hours		**23**

Concentration in Synthetic Biology (23 semester hours)

The Synthetic Biology concentration offers an interdisciplinary curriculum that bridges molecular biology, genetics, cell biology, and engineering. Students will examine how to design and construct synthetic biological systems by combining biological components, genes, and proteins to create new or improved biological functions.

Through coursework in molecular biology, genetic engineering, and systems biology, students develop the computational and laboratory skills necessary for synthetic biology research. The program explores topics such as gene expression, genome editing, and the ethical implications of creating engineered organisms with new capabilities for applications in biotechnology, medicine, and environmental science.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Describe the organization, functions, and biochemical pathways required for life at the molecular and cellular levels.
- Integrate the laws of chemistry with the principles of genetics, molecular biology, and systems engineering.
- Differentiate the strategies by which gene expression is regulated in natural and synthetic organisms.

- Explain genetic engineering and synthetic biology techniques used in modern biological research.
- Discuss the practical applications and ethical considerations of synthetic biology in addressing challenges in medicine, biotechnology, and public health.

Concentration Requirements (23 semester hours)

MATH226	Calculus II	3
MATH303	Probability and Statistics for Engineers and Scientists	3
BIOL241	Cell Biology	3
CHEM233	Organic Chemistry I with Lab	4
CHEM234	Organic Chemistry II with Lab	4
BIOL301	Molecular Biology	3
BIOL404	Synthetic Biology	3
Total Semester Hours		**23**

Final Program Requirement (6 semester hours)

SCIN400	Research Methods in Natural Sciences	3
SCIN499	Senior Seminar in Natural Sciences	3
Total Semester Hours		**6**

Elective Requirements (18 semester hours)

It is recommended that students take 3 credits of a SCIN course to fulfill their elective requirements.

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	18
Total Semester Hours	**18**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.

Bachelor of Science in Artificial Intelligence

Program Description

The Bachelor of Science in Artificial Intelligence prepares students to design, develop, and apply artificial intelligence systems across industries. This undergraduate program emphasizes AI fundamentals, core AI concepts, and practical experience with machine learning, deep learning, and data analysis. Through hands-on learning and a focus on ethical considerations and responsible AI practices, students build the technical skills and critical thinking needed to implement AI-driven solutions in diverse professional settings.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Analyze real-world scenarios and apply their understanding of artificial intelligence models and systems to identify solutions.
- Design, implement, and evaluate artificial intelligence-based solutions to meet a given set of requirements in the context of the discipline’s theory and technologies.

- Utilize modern artificial intelligence-based tools to augment productivity in developing AI software systems and in all workplace activities.
- Communicate effectively in a variety of professional contexts.
- Recognize professional responsibilities and make informed judgments in artificial intelligence practice based on legal and ethical principles.
- Function effectively as a member or leader of a team engaged in artificial intelligence projects.

Degree Program Requirements

General Education (30 semester hours)

Arts & Humanities (6 semester hours) [1]		
Select 2 courses from the following:		6
ARAB100	Arabic I	
ARAB101	Arabic II	
ARTH200	Art Appreciation	
ARTH240	Survey of Photography	
ARTH241	Film and Literature	
DSIN141	Image Enhancement using Adobe Photoshop®	
LITR215	Literature of American Encounters, Revolution, and Rebellion	
LITR218	From Abolition to #MeToo: Literature of the American Civil Rights Movement	
LITR222	Pivotal Figures in Early British Literature	
LITR225	British Literature from Wordsworth through the Wasteland	
LITR231	Leadership in World Literature: Antiquity to the Early Modern Period	
LITR233	Literature of the Newly Globalized World: The Individual's Struggle to Adapt	
MUSI200	Music Appreciation	
MUSI212	Jazz and Rock	
MUSI250	World Music and Cultures	
PHIL101	Introduction to Philosophy	
PHIL110	Critical Thinking	
PHIL200	Introduction to Ethics	
PHIL202	Philosophy of Science	
PHIL270	Thinking & Acting Ethically	
RELS101	Introduction to the Study of Religion	

RELS201	Introduction to World Religions	
SPAN100	Spanish I	
SPAN101	Spanish II	
Civics, Political & Social Sciences (6 semester hours)		
Select 2 courses from the following:		6
ANTH100	Introduction to Anthropology	
ANTH200	World Archaeology	
CHFD220	Human Sexuality	
COLL114	Planning Your Future with Purpose in STEM	
COMM211	Social Media and Society	
COMM240	Intercultural Communication	
ECON101	Microeconomics	
ECON102	Macroeconomics	
EDUC200	Humane Education: A Global Interdisciplinary Perspective	
ENGL280	Exploring Society & Cultures via Science Fiction	
GEOG101	Introduction to Geography	
HOSP110	Practical Food Safety and Awareness	
IRLS210	International Relations I	
POLS101	Introduction to Political Science	
POLS210	American Government I	
PSYC101	Introduction to Psychology	
RELS250	Death and Dying	
RELS270	Hope and Resilience	
SOCI111	Introduction to Sociology	
SOCI212	Social Problems	
SOCI220	American Popular Culture	
Communication: Writing, Oral, and Multimedia (9 semester hours)		
COMM120	Information and Digital Literacy	3
ENGL110	Making Writing Relevant	3
Select 1 course from the following:		3
COMM150	Emerging Technology for College Success	
COMM200	Public Speaking	
COMM285	Interpersonal Communications	
ENGL101	Proficiency in Writing	
ENGL115	Argumentation and Rhetoric	
ENGL210	Introduction to Literature	

ENGL220	Technical Writing	
ENGL221	Scientific Writing	
ENGL226	Effective Business Communication

Total Semester Hours		**3**

Elective Requirements (30 semester hours)

Select any courses that have not been used to fulfill requirements listed above. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	30
Total Semester Hours	**30**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.

Undergraduate Minors

Because it is important for students to develop an understanding of multiple academic disciplines, you may pursue a minor in addition to your major. For example, a military history major might select an intelligence studies minor. The combination of the major and the unrelated minor will enable you to expand your thinking beyond the single discipline, and allow you to present a broader academic portfolio to potential employers or graduate schools

You may not minor in a discipline directly related to your major discipline. You may be able to fulfill the majority of the course requirements for a minor by carefully selecting and aligning your electives within your degree program, and you may apply transfer credit towards courses that count towards the minor.

- American Military History
- Area Studies-Asian Studies
- Area Studies-European Studies
- Area Studies-Latin American Studies
- Area Studies-Middle Eastern Studies
- Business Administration
- Child Development
- English
- Family Development
- History
- Intelligence Studies
- International Relations
- Management
- Marketing
- Military History
- Philosophy
- Psychology
- Religion
- Security Management
- Sociology
- Sustainability Studies

Undergraduate Minor - American Military History

Program Description

Not open to students pursuing a major in Military History or History.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

- Discuss the major American wars and conflicts and their causes and results from colonial times to the present.
- Describe the major battles and campaigns of these wars and conflicts and the strategies and tactics employed.
- Express in clear terms the evolving nature of U.S. military policy and the effect of political influences.
- Evaluate the impact of war on society.

Minor Requirements (18 semester hours)

MILH202	Survey of American Military History	3
Select 5 courses from the following:		15
HIST406	Civil War And Reconstruction, 1861-1877	
MILH320	The American Revolution	
MILH355	World War I	
MILH360	World War II	
MILH370	The Korean War	
MILH371	The Vietnam War	
Total Semester Hours		**18**

Undergraduate Minor - Area Studies: Asian Studies

Program Description

There are certain academic disciplines in which knowledge of a specific geographic area would provide a competitive edge. This area studies minor allows students to concentrate in the politics, culture, and economic structure of a specific geographic region. This minor will enable students to apply their academic experience in their major discipline to a geographic region. This allows students to present a broader academic portfolio to potential employers or graduate schools. This Area Studies minor requires 18 semester hours. Additionally, students are encouraged to undertake the study of a language appropriate to this geographic area.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

General Knowledge of Regional Politics and Security

- Investigate the concepts and theories of comparative analysis of different political regimes and economic markets.
- Explain the role of international, regional, and non-governmental organizations in the regional context.
- Compare and contrast the political, economic, social, and military components of national and regional power.
- Articulate the importance of key nations to the strategic interests of the United States.

Economics

- Determine the significant political, economic, security, diplomatic, and social challenges facing a selected region -- individually as separate nations and collectively as a region.
- Describe the economic policies, challenges, and opportunities facing a particular region.

History

- Examine the origins, course, and character of the civilization of a selected area from pre-written history until the present.
- Describe the key historical events that shape the region’s current policies and processes.

Philosophies, Religions, and Popular Culture

- Evaluate the importance of philosophical, cultural, and religious schools of thought underlying development in the selected area of study.
- Identify the role culture plays in the political, cultural, economic, and social policies of a region.
- Analyze the rise and spread of the major philosophies and religions in the selected area of study.
- Describe the impact of the predominant religions in the selected region.

- Analyze the role of literature as an expression of culture and politics of the selected region through a reading of the national literature.

Minor Requirements (18 semester hours)

HIST230	History of East Asia	3
IRLS310	Introduction to Human Security	3
IRLS300	Comparative Political Systems	3
IRLS331	Asian Politics	3
IRLS392	Globalization and the Market Economy	3
IRLS412	Comparative Foreign Policy	3
Total Semester Hours		**18**

Undergraduate Minor - Area Studies: European Studies

Program Description

There are certain academic disciplines in which knowledge of a specific geographic area would provide a competitive edge. This area studies minor allows students to concentrate in the politics, culture, and economic structure of a specific geographic region. This minor will enable students to apply their academic experience in their major discipline to a geographic region. This allows students to present a broader academic portfolio to potential employers or graduate schools. This Area Studies minor requires 18 semester hours. Additionally, students are encouraged to undertake the study of a language appropriate to this geographic area.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

General Knowledge of Regional Politics and Security

- Investigate the concepts and theories of comparative analysis of different political regimes and economic markets.
- Explain the role of international, regional, and non-governmental organizations in the regional context.
- Compare and contrast the political, economic, social, and military components of national and regional power.
- Articulate the importance of key nations to the strategic interests of the United States.

Economics

- Determine the significant political, economic, security, diplomatic, and social challenges facing a selected region -- individually as separate nations and collectively as a region.
- Describe the economic policies, challenges, and opportunities facing a particular region.

History

- Examine the origins, course, and character of the civilization of a selected area from pre-written history until the present.
- Describe the key historical events that shape the region’s current policies and processes.

Philosophies, Religions, and Popular Culture

- Evaluate the importance of philosophical, cultural, and religious schools of thought underlying development in the selected area of study.
- Identify the role culture plays in the political, cultural, economic, and social policies of a region.
- Analyze the rise and spread of the major philosophies and religions in the selected area of study.
- Describe the impact of the predominant religions in the selected region.
- Analyze the role of literature as an expression of culture and politics of the selected region through a reading of the national literature.

RELS330	Religions of the Middle East	
Total Semester Hours		**18**

Undergraduate Minor - Business Administration

Program Description

Not open to students pursuing a major in Business Administration.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

- Use various data tools to collect information and develop business problem-solving competencies.
- Analyze business environments and formulate suitable strategies in the context of competitive forces and environmental factors.
- Apply theoretical techniques to analyze government, business, and consumer markets.
- Integrate market analyses and marketing information into a strategic plan.
- Describe how Management Information Systems contribute to business processes to meet current and future technological needs within the organization.
- Apply basic financial management operations to enhance business decision-making processes.

Minor Requirements (18 semester hours)

BUSN310	Business Theory	3
BUSN330	Fundamentals of Business Analysis I	3
FINC300	Foundations of Financial Management	3
INFO331	Management Information Systems	3

MGMT310	Principles and Theory of Management	3
MKTG201	Fundamentals of Marketing	3
Total Semester Hours		**18**

Undergraduate Minor - Child Development

Program Description

Not open to students pursuing a major in Human Development and Family Studies.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

- Assess developmental changes and processes influencing child development.
- Identify scientific approaches and the application of research and theory to working with children.
- Examine socio-cultural and historic constructs related to child development.
- Interact with culturally diverse youth in family and societal settings.
- Demonstrate critical thinking and observation skills related to the study of child development.

Minor Requirements (18 semester hours)

CHFD307	Child and Adolescent Development	3
CHFD308	Infant-Toddler Development	3
CHFD314	Students with Special Needs	3
CHFD411	Child Psychopathology	3
EDUC111	Observation Techniques	3
PSYC101	Introduction to Psychology	3
Total Semester Hours		**18**

Undergraduate Minor - English

Program Description

Not open to students pursuing a major in English.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

- Demonstrate the ability to effectively express ideas and evidence in writing.
- Discuss representative literary texts and critical theory to enhance a life-long learning process.
- Analyze written materials and understand why multiple interpretations of written materials are possible and relevant in a diverse society.
- Demonstrate knowledge of the evolution of the English language and how it is used in communication, literary and non-literary.

Minor Requirements (18 semester hours)

ENGL402	WordPlay: A Biography of the English Language	3

LITR350	America's Genre: The Art and Genius of the Short Story	3
LITR319	Society, Identity and Politics: Contemporary Topics in Critical Theory	3
LITR410	All of the World's a Stage: Differences in the Dramatic World of Shakespeare	3
Select 1 course from the following:		3
LITR222	Pivotal Figures in Early British Literature	
LITR225	British Literature from Wordsworth through the Wasteland	
Select 1 course from the following:		3
LITR315	British Poetry from Blake to the Beatles	
LITR354	American Poetry from Bradstreet to Bukowski	
Total Semester Hours		**18**

Undergraduate Minor - Family Development

Program Description

Not open to students pursing a major in Human Development and Family Studies.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

- Examine theories concerning general psychology.
- Explore classic and contemporary theoretical explanations of family dynamics.
- Recognize how social forces influence family definitions, composition, and change.
- Examine trends in family formation and dissolution within the context of social change.

Minor Requirements (18 semester hours)

CHFD225	Introduction to the American Family	3
CHFD340	Family Development	3
CHFD445	Family Communications	3
PSYC101	Introduction to Psychology	3
PSYC343	Adult Development	3
SOCI421	Sociology of the Family	3
Total Semester Hours		**18**

Undergraduate Minor - History

Program Description

Not open to students pursuing a major in Military History or History.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

- Identify a broad knowledge of literature pertaining to history.
- Describe and locate the linkage between historical studies and allied disciplines.
- Compare and contrast the historical experiences that go beyond a single time period and national or cultural experience.
- Interpret historical forces that have shaped social change and contemporary human problems.
- Analyze history from diverse perspectives of ancient and contemporary historical cultures, nations, and regions.

Minor Requirements (18 semester hours)

HIST300	Research Methods in History	3
Select 2 courses from the following:		6
HIST301	Ancient Greece	
HIST302	Ancient Rome	
HIST303	The Middle Ages	
HIST304	The Renaissance	
HIST305	France in the Age of Enlightenment	
HIST306	The British Empire	
HIST307	The Age of Dictators: Europe 1914-1945	
Select 2 courses from the following:		6
HIST402	Colonial America	
HIST403	The Early Republic, 1783-1815	
HIST404	Jacksonian America, 1815-1846	
HIST405	Antebellum America, 1846-1861	
HIST406	Civil War And Reconstruction, 1861-1877	
HIST407	The Gilded Age, 1877-1900	
HIST408	The United States: 1900 to Second World War	
HIST409	The United States: WW II to the Present	
Select 1 course from the following:		3
HIST310	History of Modern Europe	
HIST320	History of Russia	
HIST340	History of Africa	
HIST350	History of the Middle East	
HIST360	History of Latin America	
Total Semester Hours		**18**

Undergraduate Minor - Intelligence Studies

Program Description

Not open to students pursuing a major in Intelligence Studies.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

- Describe the evolution, structures, functions, capabilities, and activities of the U.S. national intelligence community.
- Detail the structures, functions, capabilities, and contributions of national intelligence consumers to include the national command authority, executive departments, Congress, military services, joint/unified commands, and law enforcement agencies.
- Specify the intelligence cycle including intelligence planning, data collection, data exploitation, analysis, production, and dissemination phases.
- Differentiate among the fundamental capabilities and limitations and means of tasking human, geographic/imagery, signals, measurement, and technical and open intelligence data sources.
- Conduct basic research and compose professional and academic analyses on issues critical to intelligence consumers.

Minor Requirements (18 semester hours)

Select 2 courses from the following:		6
HLSS320	Intelligence and Homeland Security	
INTL305	Law and Ethics in Intelligence	
INTL402	Intelligence Analysis	
INTL410	Counterintelligence	
INTL412	Espionage/Counterespionage	
INTL431	Criminal Intelligence Analysis	
Select 4 courses from the following:		12
INTL200	Introduction to Intelligence Studies	
INTL301	U.S. Intelligence Community	
INTL304	Intelligence Collection	
INTL401	Critical Analysis	
SSGS300	Research Design and Methods	
Total Semester Hours		**18**

Undergraduate Minor - International Relations

Program Description

Not open to students pursuing a major in International Relations.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

- Comprehend various theories about the nature of conflict and cooperation in the post-Cold War era.
- Explore the norms and purposes of international structures and regimes.
- Critically assess the unique principles, structure, and organization of the major international organizations.
- Assess the economic and political processes in international development; diagnose social issues in international development; appraise the need for sustainable international development.

- Identify the various manifestations of globalization and its impact on various public policies as they relate to cultural, economic, political, and social institutions.

Minor Requirements (18 semester hours)

IRLS200	Information Literacy and Global Citizenship	3
IRLS300	Comparative Political Systems	3
IRLS301	International Organizations	3
IRLS302	International Development	3
Select 2 courses from the following:		6
IRLS310	Introduction to Human Security	
IRLS322	African Politics	
IRLS331	Asian Politics	
IRLS343	Government and Security of Russia	
IRLS344	European Politics	
IRLS355	Latin American Politics	
IRLS360	Global Politics of Islam	
IRLS392	Globalization and the Market Economy	
IRLS400	Human Rights	
IRLS405	National and Transnational Justice	
IRLS409	Environmental Security	
IRLS412	Comparative Foreign Policy	
IRLS413	International Conflict Resolution	
IRLS414	Principles of Peacekeeping	
IRLS415	Peacekeeping Logistics	
IRLS417	International Civil Order	
IRLS460	Government & Security in the Middle East	
IRLS463	Arab-Israeli Conflict: Contemp. Politics & Dipl.	
IRLS468	Politics and Security in the Persian Gulf	
Total Semester Hours		**18**

Undergraduate Minor - Management

Program Description

Not open to students pursuing a major in Management.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

- Relate and discuss the potential functions and applications of management processes in the areas of planning, organizing, staffing, directing, leading, and controlling.
- Identify and examine the needs of today's managers in assessing and implementing strategies used in the management of information technology in the workplace.
- Recognize and describe issues as they relate to organizational behavior in terms of individual, group/team, and overall organization.
- Examine and explore potential management problems and opportunities and discuss possible strategies and applications to be used in addressing such managerial concerns.
- Recognize and discuss ethical conduct and the social responsibility of business in the lives of internal and external stakeholders.
- Analyze the external and internal environmental forces affecting business organizations that affect the effectiveness of managers in today's competitive and global organizations.

Minor Requirements (18 semester hours)

INFO331	Management Information Systems	3
MGMT310	Principles and Theory of Management	3
MGMT311	Organizational Behavior	3
MGMT314	Management Ethics	3
MGMT315	Management Communications	3
MGMT410	Strategic Management	3
Total Semester Hours		**18**

Undergraduate Minor - Marketing

Program Description

Not open to students pursuing a major in Marketing.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

- Integrate the marketing function with fundamental business enterprise concepts and principles of management.
- Apply basic marketing principles to a particular business.
- Develop a strategic marketing plan.
- Apply various marketing strategies and techniques to align an organization's marketing function with the overall mission and strategy of the organization.
- Develop a marketing plan for a business or a department.

Undergraduate Minor - Military History

Program Description

Not open to students pursuing a major in Military History or History.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

- Discuss the major world wars and conflicts and their causes and results from antiquity to the present.
- Interpret historical forces that have shaped social change and contemporary human problems.
- Analyze the historical experiences that go beyond a single time period and national or cultural experience.
- Express in clear terms the evolving nature of security issues and their effects on global stability.
- Evaluate the impact of war on society.

Minor Requirements (18 semester hours)

MILH201	Introduction to Military History	3
MILH202	Survey of American Military History	3
MILH221	War From Antiquity to 1700	3
MILH222	War from 1700 to the Present	3
MILH303	Readings in Military Leadership	3
MILH304	Readings in Military Philosophy	3
Total Semester Hours		**18**

Undergraduate Minor - Philosophy

Program Description

Not open to students pursuing a major in Philosophy.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

- Reflect upon the love of wisdom, what inclines people to seek it, and to analyze what it is the philosopher does in the pursuit of truth.
- Analyze a variety of traditional and non-traditional ethical theories.
- Gain basic competence in the following forms of reasoning: informal logic, syllogistic logic, propositional logic, predicate logic, and inductive logic.
- Define key trends in the development of western thought.
- Interpret how Western philosophers and their ideas have shaped the development of political, social and economic systems.

- Relate current Western views of the world to their underpinnings in early writings and philosophies.
- Differentiate between the influences of ancient Judaism, Greece, Rome, and Christian thinking on Western thought.
- Analyze the differing philosophies in terms of how they conflict or complement one another.

Minor Requirements (18 semester hours)

PHIL101	Introduction to Philosophy	3
PHIL300	Logic	3
PHIL302	Ancient Western Philosophy	3
PHIL303	Medieval Philosophy	3
PHIL401	Modern Philosophy from Descartes to Kant	3
PHIL420	Contemporary Philosophy	3
Total Semester Hours		**18**

Undergraduate Minor - Psychology

Program Description

Not open to students pursuing a major in Psychology.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

- Discuss the history and foundation of psychology.
- Identify major theorists of developmental psychology.
- Differentiate between biological psychological conditions and personality disorders.
- Evaluate how to design, execute, analyze, and interpret psychological research.
- Explore the application of evaluation principles to developmental theories in a scientific format.

Minor Requirements (18 semester hours)

CHFD342	Human Life Span Development	3
PSYC101	Introduction to Psychology	3
PSYC300	Research Methods in Psychology	3
PSYC303	Learning and Cognition	3
PSYC305	History and Systems of Psychology	3
PSYC406	Psychopathology	3
Total Semester Hours		**18**

Undergraduate Minor - Religion

Program Description

Not open to students pursuing a major in Religion.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

- Describe and evaluate the scholarly methods used in the study of religion.
- Identify the basic concepts that make up a religious worldview (e.g., creation of the world, good and evil, salvation, and suffering).
- Identify and give examples of the universal forms of religious expression (e.g., sacred places, symbols, ethics, and rituals).
- Analyze the historical development and interaction among the major world religions.
- Identify and evaluate the key beliefs and characteristics of each of the current major world religions.
- Determine and appraise the various expressions of religious life (e.g., social and political) that are evident in different societies over time.

Minor Requirements (18 semester hours)

RELS101	Introduction to the Study of Religion	3
RELS201	Introduction to World Religions	3
RELS202	Religion in America	3
RELS311	Introduction to the Bible	3
PHIL410	God and World	3
SOCI420	Sociology of Religion	3
Total Semester Hours		**18**

Undergraduate Minor - Security Management

Program Description

Not open to students pursuing a major in Security Management.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

- Evaluate security management principles including the concepts of information security, personnel security, and physical security and determine the planning approaches to prevent business losses.
- Assess management theories and apply concepts of planning, resources, and authority to security organizations.
- Identify and discuss the major aspects of physical security, associated threats, and application of countermeasures.
- Establish how security managers test and align functional performance or their security organization incorporating legal issues and ensuring ethical approaches.
- Detect how a corporate security manager can effectively communicate strategic security issues and actions to other business departments and managers including drawing conclusions about assessing tangible and intangible assets.

Minor Requirements (18 semester hours)

SCMT370	Principles and Theory of Security Issues	3
SCMT371	Legal and Ethical Issues in Security Management	3
SCMT373	Evaluation of Security Programs	3
SCMT374	Contemporary Issues in Security Management	3
SCMT390	Security Administration	3

SCMT397	Physical Security	3
Total Semester Hours		**18**

Undergraduate Minor - Sociology

Program Description

Not open to students pursuing a major in Sociology.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

- Examine methods for conducting research in social psychology.
- Discuss applied social psychology topics such as law, business, and health.
- Identify and discuss the major social issues that influenced the development of sociological theory.

Minor Requirements (18 semester hours)

SOCI111	Introduction to Sociology	3
SOCI212	Social Problems	3
SOCI213	Society, Interaction, and the Individual	3
SOCI303	Classical Sociological Theory	3
SOCI331	Research Methods for Sociology	3
SOCI403	Social Change	3
Total Semester Hours		**18**

Undergraduate Minor - Sustainability Studies

Program Description

This minor in Sustainability Studies offers background in resource and energy sustainability, which can be incorporated into many major disciplines, highlighting the interdisciplinary nature of the application of concepts in sustainability and green technologies. You will learn about founding principles in sustainability and integrate your knowledge of social and economic concepts with resource use and energy consumption. In addition, courses in the minor offer case study examples of application of sustainability practices from local planning to global resources scales.

Not open to students pursuing a major in Environmental Science.

Minor Objectives

Upon successful completion of this minor, the student will be able to:

- Explain the foundational principles of resource and energy sustainability.
- List current and emerging renewable energy technologies.
- Explain society’s dependence on fossil fuel and traditional energy sources.
- Explain the social and economic barriers that prevent the acceptance and use of sustainable products, goods and services.
- Apply the principles of sustainability to land use and development planning.

- Assess the impact of green infrastructure and sustainable design on global resource sustainability.

Minor Requirements (18 semester hours)

EVSP312	Introduction to Sustainability	3
EVSP320	Energy and Resource Sustainability	3
EVSP321	Land Use and Planning	3
EVSP322	Remote Sensing and Geographic Information Systems	3
EVSP418	Green Infrastructure and Renewable Technologies	3
EVSP421	Water Resources Management	3
Total Semester Hours		**18**

Master's Programs

The master's programs require 30 to 48 semester hours of course work. In addition to a required research methodology course, each major consists of core and major or concentration requirements. Core requirements provide the theoretical underpinning for future academic work. Major and concentration requirements allow students to select special areas of interest depending on their professional and personal goals. Additionally, most degree programs have elective requirements. Lastly, each student completes the final program requirements with a comprehensive exam, a thesis or an integrative practicum; the options may vary according to the degree program.

Master of

- Business Administration
- Public Administration
- Public Health
- Public Policy

Master of Arts

- Criminal Justice
- Emergency and Disaster Management
- Entrepreneurship
- History
- Homeland Security
- Human Resource Management
- Intelligence Studies
- International Relations and Global Security
- Legal Studies
- Management
- Military History
- Military Studies
- National Security Studies

- Master of Science in Athletic Development Management (Suspended July 2026)

Master of Arts in Emergency and Disaster Management and Homeland Security

Program Description

This dual degree in Emergency and Disaster Management & Homeland Security is comprised of two separate master's programs offered at this university. Taking these online graduate programs in tandem in a dual degree gives you the core courses of both programs along with a selection of electives culminating in an end-of-program assessment.

This online dual master's degree offers a natural symbiosis between these two fields: emergency management professionals who save lives by responding to disasters such as floods, fires, earthquakes, etc., and homeland security personnel who provide a secure and collaborative information sharing environment for communication during critical incidents. This dual master's degree program will allow you to gain competency in these two fields simultaneously.

This program is taught by highly credentialed and experienced instructors, many who are board-certified emergency managers (CEM) or who hold key positions in government agencies or national safety and security organizations. This program is accredited by the International Fire Service Accreditation Congress.

The mission of the Master's in Emergency and Disaster Management/Homeland Security is to help prepare students to assume leadership roles in the protection of the US homeland in emergency circumstances by providing students with the theory, operations, and best practices across the entire field and challenging them to demonstrate how to effectively apply them.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Organize emergency management functions and activities using contemporary emergency and disaster management concepts and federal guidelines.
- Design inter-disciplinary training to assure integration between all aspects of an Emergency Operations function including: planning and pre-event preparedness; threat and vulnerability assessments; capability and capacity evaluation; public policy issues; mitigation strategies; exercises and training; program evaluation.
- Formulate policies procedures and protocols to allow seamless agency integration in both small and large Emergency Operations Centers (EOCs) assuring compliance with the National Response Plan, National Incident Management System.
- Perform economic and social analyses necessary to provide funding recommendations to appropriate fiscal authorities, develop and manage budgets.
- Evaluate specific domestic security challenges for the 21st Century that face the United States and other industrialized nations.
- Develop proposed changes at federal, state, and/or local levels, to reflect the evolving strategic policy issues associated with a statutory and presidential direction for homeland security.
- Analyze the statutory, policy, strategy and legal differences between the different organizations involved in homeland security.

- Synthesize existing policies, procedures and protocols by DHS and inter-agency community to allow seamless agency integration through prevention, protection, incident response and recovery scenarios.
- Validate literal and procedural alignment / compliance with the National Response Framework, National Incident Management System, and Homeland Security Presidential Directives (HSPDs).

Master of Arts in Criminal Justice

Program Description

The Master of Arts in Criminal Justice focuses on developing the professional skills often necessary in leadership positions within the criminal justice field. This online master's program addresses national and local security issues as well as effective countermeasures and subsequent changes in the U.S. criminal justice system. You will explore criminal law, juvenile and delinquent behavior, security, and terrorism in a post-9/11 world. Our criminal justice programs are among the most popular at the university, bringing you peer interactions and an expanded network of criminal justice professionals who are dedicated to safeguarding their communities and nation. This program is taught by highly credentialed and experienced instructors, many who hold key positions in government agencies or criminal justice organizations.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Distinguish between the major systems of Criminal Justice and how the functions of police, prosecution, courts, and corrections interface.
- Analyze biological and psychological theories and philosophies of criminal behavior as they influence modern developments in punishment, sentencing, and corrections.
- Evaluate definitions, objectives, and issues of new or emergent criminal threats such as terrorism and how they compare and contrast with traditional criminal behavior theories.
- Assess the rule of law and changes to it as it pertains to direct and indirect influence and impact on social reactions to crime, corrections, and victims of crime.
- Critically examine landmark criminal justice cases from the Supreme Court down to local levels, and determine their cultural, social, and economic impact.
- Apply the concepts of professional and ethical behavior within the criminal justice system.

Concentration in Business Administration (15 semester hours)

Layers on business skills required for effective leadership and management in criminal justice organizations. Covers concepts of accounting principles, financial tools, and economic analysis for effective managerial decision making, while exploring the role of decision-making models and tools for resolving business problems.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Develop an understanding of accounting principles, financial tools and economic analysis in order to develop effective decision making skills necessary for an effective manager.
- Compare and contrast the skills to effectively utilize decision making models and tools in order to resolve complex business problems.
- Devise an understanding of the most successful methods of operating management, statistics, research, and management science.
- Synthesize the skills necessary to formulate effective leadership skills and competencies in criminal justice management.

Concentration Requirements (15 semester hours)

BUSN604	Fundamentals of Business Analysis	3
BUSN625	Applied Decision Making	3
MGMT605	Leadership	3

Concentration in Emergency Management and Disaster Management (15 semester hours)

Probes emergency management principles and theory, including hazard analysis, mitigation, planning, communication, response, recovery, terrorism, and the capabilities and limitations of the emergency management system. Covers effective interagency cooperation at the federal, state, and local levels.

Objectives

Upon successful completion of this concentration, the student will be able to:

Develop an understanding of emergency management principles and theory.

- Synthesize the public law, regulation, and policies that either facilitate and/or restrict emergency management.
- Devise an understanding of hazard analysis, mitigation, planning, communication, response, recovery and terrorism.
- Summarize the knowledge needed to develop interagency cooperation, what the shortfalls are within interagency efforts and what the principles are for effective inter-organizational behavior and action.
- Compare and contrast the capabilities and limitations of the emergency management system.

Master of Arts in Emergency and Disaster Management

Program Description

The Master of Arts in Emergency and Disaster Management provides graduate-level knowledge to improve critical thinking and decision-making skills required in the planning and management of public crises. This online master's degree program exposes you to the history, theory, response, recovery, and economics of EDM. Through case study examination, you'll study natural, technical, and human-induced public emergencies, disasters, and catastrophes. Knowledge gained from this online program can supplement experience previously gained in the public safety field.

This program is recognized by the Foundation of Higher Education for Disaster and Emergency Management and Homeland Security. The university is the first online institution to receive this important distinction. This program is taught by highly credentialed and experienced instructors, many who are board-certified emergency managers (CEM) or who have professional experience in government agencies or national safety and security organizations.

The mission of the Master's in Emergency and Disaster Management is to help students gain the knowledge often required in leadership roles in the protection of the public in emergency circumstances by providing students with the theory, operations, and best practices across the entire field and challenging them to demonstrate how to effectively apply them.

Spanish language learners may complete the Emergency and Disaster Management program through select courses.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Develop a research proposal for emergency and disaster management and report the findings including an estimation of economic impacts.
- Select, evaluate, and prioritize research projects and proposals in community preparedness and emergency response.
- Organize emergency management functions and activities using contemporary emergency and disaster management concepts and federal guidelines.
- Formulate plans that clearly differentiate disaster response actions including recovery operations and their funding from routine emergency operations.
- Design and promote inter-disciplinary training to assure integration between all aspects of an emergency operations function including: planning and pre-event preparedness; threat and vulnerability assessments; capability and capacity evaluation; public policy issues; mitigation strategies; exercises and training; program evaluation.
- Develop plans and policies that ensure the strong organizational and personal relationships necessary to be able to work with the key federal agencies to ensure interagency cooperation at all levels during any large scale incident.
- Formulate policies procedures and protocols to allow seamless agency integration in both small and large emergency operations centers (EOCs) assuring compliance with the National Response Plan and National Incident Management System.
- Perform economic and social analyses necessary to provide funding recommendations to appropriate fiscal authorities; develop and manage budgets.

Master of Arts in Entrepreneurship

Program Description

The Master of Arts of Entrepreneurship is designed for students seeking to pursue a business venture or manage an entrepreneurial enterprise. You will be exposed to practical application of business theory in ideation, marketing, management, capital, and the virtual experience involved with being an entrepreneur. Developed to provide specialized knowledge for those interested in entrepreneurship, this online graduate degree provides specialized knowledge taught by faculty members who will help lend direction to your entrepreneurial plans.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Spanish language learners may complete the Entrepreneurship program through select courses in the Concentration in Small Business.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Develop an innovative mindset that is proactive, customer-focused, and grounded in evidence-based decision-making.
- Design strategies that incorporate business canvas tools supporting the mission and vision of an organization for growth and sustainability nationally and internationally.
- Analyze key business metrics including financial reports, funding, legal compliance, and forecasting.
- Integrate business models and approaches for identifying and solving business problems and change management at the individual, group, and leadership levels.
- Develop a strategic business plan and pitch.

Master of Arts in History

Program Description

The Master of Arts in History degree takes you on an academic journey exploring the key historical events, people, and cultures that fundamentally shaped the world today. Through research, discussion, and analysis, you will obtain a knowledgeable perspective of how future societies progressed through time. Concentrations in this online graduate program offer you the flexibility of focusing on the most favored eras in history including American, Ancient and Classical, European, Global, and Public History. This master's degree attracts professional educators, historians, and enthusiasts alike, and is also helpful in developing professional skills that include quality writing and communications, research and analysis, and the ability to present compelling arguments.

University faculty members teaching these courses are published historians who bring unique perspectives and relevant research into the classroom. You'll also connect and interact online with other students who share your enthusiasm for history.

Note: When enrolling in this program, you will be asked to select either a capstone course or a supervised practicum as your end-of-program requirement. Some residency conditions may apply to the practicum option View practicum requirements.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Demonstrate a broad knowledge of historical individuals and events and the global complexity of human experiences over time and place.
- Distinguish the historical schools of thought that have shaped scholarly understanding of the profession.
- Apply persuasive arguments that are reasoned and based on suitable evidence.
- Evaluate secondary resources, through historiographical analysis, for credibility, position, and perspective.
- Assess a variety of primary sources, digital and archival, in the process of deeply researching the past.
- Generate research that makes original contributions to knowledge, through the use of advanced historical methods.
- Produce a high-quality research paper that meets professional standards typical for a conference presentation or academic publication.

Degree at a Glance

Thesis Option: Students who wish to pursue a PhD, or those who have professional goals that might require a thesis, can petition the History and Military History Department Chair to take the thesis option instead of the comprehensive exam. The thesis petition should be forwarded to the chair before the student has completed 24 credit hours. The petition requires students to have developed a solid topic and should include the signatures of two faculty members, one of whom has agreed to serve as the thesis advisor.

Core Requirements	6
Select one of the following concentrations:	30
American History	
Ancient and Classical History	
European History	
Global History	
Public History	
Final Program Requirement	0-3
Total Semester Hours	**36**

Degree Program Requirements

Core Requirements (6 semester hours)

HIST500	Historical Research Methods [1]	3
HIST501	Historiography	3
Total Semester Hours		**6**

Students must choose a concentration for this degree program and may select from a Concentration in American History, Concentration in Ancient and Classical History, Concentration in European History, Concentration in Global History, or Concentration in Public History.

Concentration in American History (30 semester hours)

Covers the United States from the Colonial period through the 20th century. Topics cover foreign policy and military operations, the Supreme Court's interpretations of the Constitution, and pop culture, as well as the domestic political, economic, and social components of the U.S.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Compare and contrast historical context of 18th century British and colonial American political and constitutional philosophies, social norms and societal structure, economics, religious concepts, and foreign and diplomatic policy.
- Discern and assess the political, economic, cultural, and social aspects of the Civil War including the causes and the conflict's aftermath.
- Explain changes in American society such as industrialization, immigration, and urbanization; isolationism and collective security; World War I; changing values; stock market crash; the Great Depression, and the cultural, social, political, military, and economic growth to the present.
- Critique the history of expressive and material culture; historical contexts of various artistic movements; cultural imperialism; cultural appropriation, creativity, and identity; and expressions of social difference and deviance in the United States.
- Discern the origins, content, and judicial interpretations of the U.S. Constitution and the Supreme Court's evolving decisions on issues such as States' rights, civil rights, the Commerce Clause, due process in criminal and other proceedings, and protected freedoms.

Concentration Requirements (30 semester hours)

HIST553	History of Colonial America	3

HIST520	Graduate Seminar in U.S. History	3
HIST551	The American Revolution in Context	3
HIST657	Antebellum America: Prelude to the Civil War	3
HIST552	The Civil War: Seminal Event in American History	3
HIST652	African-American History	3
HIST653	History of American Women	3
HIST555	The United States in the 20th Century	3
Select 2 courses from the following:		6
HIST554	History of the American West	
HIST557	History and Popular Culture	
HIST560	World War II in Context	
HIST586	History of Science	
HIST680	Special Topic: History [2]	
HIST690	Independent Study: History [2]	
Total Semester Hours		**30**

Concentration in Ancient and Classical History (30 semester hours)

Covers the broad sweep of European history and provides a foundation in historical theory, trends, and concepts for further study of topical history at the graduate level. Topics include Greek civilization through the 4th century B.C., the fall of the Roman empire, the development of the Ottoman culture, and the Crusades.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explain and critique Ancient Greece's political, economic, social, and intellectual movements.
- Explain and critique Roman history from its beginnings until the Age of Constantine including the political and social developments in the Republic and the early empire.
- Examine and appraise great Byzantium leaders, the spread of Christianity throughout the Roman Empire, the recapture of Constantinople from the crusaders, and the impact of Byzantium culture on Western intellect.
- Explain and assess European social, political, economic, and religious institutions and cultural and intellectual phenomena in the light of the changing historical environment from the end of the Ancient World to the Renaissance.
- Explain and assess the medieval church and rise of the Renaissance papacy; growth of humanism, including painters, architects, and sculptors; city-states and monarchies of the Holy Roman Empire; religious upheavals of Protestantism; Anabaptists; the Catholic Reformation.

Concentration Requirements (30 semester hours)

HIST531	The Greek Civilization	3
HIST597	Graduate Seminar in European History	3
HIST532	The Roman Republic and Empire	3
HIST533	Late Antiquity and Byzantium	3
HIST611	Ancient Warfare	3
HIST534	Medieval Europe	3

HIST535	Renaissance and Reformation	3
HIST643	The Ottoman Empire	3
Select 2 courses from the following:		6
HIST571	History of Africa	
HIST573	History of the Middle East	
HIST586	History of Science	
HIST588	History of Religion	
HIST680	Special Topic: History [2]	
HIST690	Independent Study: History [2]	
Total Semester Hours		**30**

Concentration in European History (30 semester hours)

Explores developments in Europe dating back to the death of Louis XIV. Looks at the political, philosophical, scientific, and social changes that laid the foundation for early Europe to key developments that led to the major European wars of the 19th and 20th centuries.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Distinguish the major social, political, and cultural changes of the Enlightenment in Europe from the death of Louis XIV to the fall of Napoleon.
- Investigate the intellectual, social, and economic history including the industrial revolutions, the age of ideologies, the new imperialism, and the coming of the Great War.
- Discern the origins of World War I in Europe and assess the combatants, strategy and tactics, technological innovation; war in France; war at sea; the peace settlement; and the occupation.
- Compare and contrast the economies, industry, society, and culture of the United States, Great Britain, Japan, and Germany during World War II.
- Assess modern European history since the Congress of Vienna including social, economic, cultural and political experiences common to Europe and how developments differentiated from those in most other parts of the world.

Concentration Requirements (30 semester hours)

HIST536	History of the Enlightenment	3
HIST597	Graduate Seminar in European History	3
HIST543	18th and 19th Century Europe	3
HIST643	The Ottoman Empire	3
HIST560	World War II in Context	3
HIST570	Modern European History	3
HIST642	Nazi Germany and the Holocaust	3
HIST645	Russia and the Soviet Union	3
Select 2 courses from the following:		6
HIST534	Medieval Europe	
HIST535	Renaissance and Reformation	

HIST558	The Great War	
HIST680	Special Topic: History [2]	
HIST690	Independent Study: History [2]	
MILH555	World War II: Politics, Political Leadership and Diplomacy	
Total Semester Hours		**30**

Concentration in Global History (30 semester hours)

Examines major events, personalities, and accomplishments that occurred all over the world. Topics include the political, philosophical, scientific, and social changes that shaped the history of Latin America, Asia, Africa, and the Middle East.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Contrast and compare the history, scope, and consequences of the American, French, Mexican, Russian, Chinese, Cuban, Vietnamese, and Iranian revolutions.
- Analyze the relationships among technology, culture, and politics in a variety of social and historical settings ranging from 19th century factories to 21st century techno dance floors.
- Explore the recent historiographical approaches within the history of science from the 17th through the 20th centuries from the physical sciences to natural history and medicine.
- Examine the practice of piracy in ancient times in the 18th century and the rise of modern piracy with high-speed boats and automatic weapons in the 21st century.
- Distinguish the historical development, central beliefs, and practices of each of the major world religions.

Concentration Requirements (30 semester hours)

HIST571	History of Africa	3
HIST510	Graduate Seminar in World History	3
HIST573	History of the Middle East	3
HIST581	The Great Revolutions	3
HIST586	History of Science	3
HIST670	History and Culture of Latin America	3
HIST588	History of Religion	3
HIST560	World War II in Context	3
Select 2 courses from the following:		6
HIST558	The Great War	
HIST611	Ancient Warfare	
HIST643	The Ottoman Empire	
HIST680	Special Topic: History [2]	
HIST690	Independent Study: History [2]	
MILH552	World War II in the Pacific	
Total Semester Hours		**30**

Concentration in Public History (27 semester hours)

Whether in archives, museums, cultural resources, historical editing, or heritage tourism, public history is the presentation and interpretation of the past to the public. Public historians should not merely learn the technical aspects of a given field; they should also be versed in the historiography and methodologies of contemporary scholarship so that they can apply skills and knowledge in the public realm. In that regard, even if they work in a variety of professional venues usually outside the academy, public historians share roles as researchers and interpreters of history with their academy colleagues. Public historians are found in archives, museums, historic preservation agencies, historic sites, cultural resource firms, national parks and forests, editorial positions, and historical agencies.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Categorize and assess important historical developments in public history and identify the intellectual, ethical, and professional issues that public historians confront.
- Evaluate and verify current institutional collection policy and practices based on standard archival and records practice.
- Establish and reconstruct the processing of a collection: arrangement and description, preservation and digitization, and develop the skills necessary to successfully undertake applied research.
- Test and apply the use of oral history techniques and methodology to demonstrate how oral history supports a diverse resource base and audience across interdisciplinary fields.
- Distinguish and prioritize issues such as the relationship of collections and landscapes to identify the intersection of commerce and culture; and the influence of museums and exhibitions in preserving a view of the past and developing an image of progress.
- Prescribe and test the selection criteria for strategies for preservation, metadata to support digital preservation, maintaining the integrity and authenticity of digital materials, management of digitization and digital preservation programs, risk management, and disaster recovery.
- Manage and improve field experience and practicum in applied public history.

Concentration Requirements (27 semester hours)

HIST521	Seminar in Public History	3
HIST520	Graduate Seminar in U.S. History	3
HIST522	Archives and Manuscript Management	3
HIST523	Theory and Practice of Oral History	3
HIST555	The United States in the 20th Century	3
HIST557	History and Popular Culture	3
HIST634	History, Theories, and Contemporary Issues in Historic Preservation	3
HIST635	Museum and Exhibition Culture	3
HIST636	History and Digital Preservation	3
Total Semester Hours		**27**

Final Program Requirement (0-3 Semester Hours)

Students may also take a thesis option, requiring HIST691 and HIST699. To take this option, students must have successfully petitioned the Department Chair and completed their Core courses as well as 24 concentration credit hours. This is open to students from all concentrations.

HIST698	Comprehensive Exam in History [3]	0
HIST696	Practicum in Applied History [4]	3
Total Semester Hours		**0-3**

1. Required as the first course in this program.
2. Students will need permission from the Department Chair to take this course.
3. Taken once all other degree requirements have been met. Students who select a concentration in American History, Ancient and Classical History, European History, or Global History must take this course unless they have petitioned the Chair to take the Thesis Option. The Thesis Option is open to students of all concentrations and requires successful completion of HIST691 and HIST699.
4. Taken once all other degree requirements have been met. Students who select a concentration in Public History must take this course unless they have petitioned the Chair to take the Thesis Option. The Thesis Option is open to students of all concentrations and requires successful completion of HIST691 and HIST699.

Master of Arts in Homeland Security

Program Description

The Master of Arts in Homeland Security offers an advanced-level understanding of homeland defense, intelligence methods, terrorism, weapons of mass destruction, consequence management, interagency government issues, emergency management, public health, and information security. This program helps students develop the knowledge and skills to contribute new ideas, identify and critique unexamined assumptions of policy and strategy, and have the ability to translate good intentions into effective action.

This degree program is designed to enhance your leadership skills and improve your knowledge of national security and defense as these are often required skills for an analyst or manager in government agencies, the military, or similar organizations dedicated to protecting public safety. This master's program is taught by highly credentialed and experienced instructors, many who hold key positions in government agencies or public safety organizations.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Evaluate specific domestic security challenges for the 21st century that face the United States and other industrialized nations.
- Evaluate and propose changes at federal, state, and/or local levels, to reflect the evolving strategic policy issues associated with a statutory and presidential direction for.
- Recognize terrorist group proclivities in order to forecast the risks, types, and orders of magnitude of terrorist threats most likely to confront the nation-state.
- Define and describe by example the statutory, policy, strategy and legal differences between homeland security and homeland defense.
- Describe the roles/missions of USNORTHCOM and the DSCA mission, and compare and contrast these with the DHS mission.
- Recognize the interdisciplinary nature of homeland security functions and be able to assess and integrate various functional areas.
- Evaluate existing policies, procedures and protocols by DHS and the inter-agency community to allow seamless agency integration through prevention, protection, incident response and recovery scenarios.
- Validate literal and procedural alignment/compliance with the National Response Framework, National Incident Management System, and Homeland Security Presidential Directives (HSPDs).

NSEC614	Political Psychology of Terror Groups
PADM530	Public Policy
PBHE605	Quarantine
PBHE606	Disaster Health Management
SCMT529	International Terrorism
SCMT537	Computer Crime
SCMT545	Airport Security Design
SSGS595	Internship Program
TLMT600	National Transportation Management
TLMT605	Cargo Security Management
TLMT607	Port and Terminal Operations
Total Semester Hours	**12**

Concentration in Business Administration (12 semester hours)

Analyzes the legal, regulatory, and compliance issues affecting managers in homeland security. Covers the decision-making and financial tools needed to conduct business analysis and to communicate possible solutions and implementation plans. Studies the role and function of leadership, and the impact of effective leaders on individuals, organizations and society.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the legal, regulatory, and compliance issues affecting managers in today's market place and emphasize the importance of continuing education for managers for future legal changes.
- Evaluate and analyze advanced analysis methods and techniques to determine their interdisciplinary applicability to meet current and business needs and evaluate the need for changes in policies and procedures.
- Distinguish and implement analytical financial tools to conduct business analysis and to communicate possible solutions and implementation plans for business decisions.
- Focus on business strategies and approaches used by organizations in their mission to sustain and obtain various marketing segments to increase their growth potential and integrate business functions into a coherent business strategy.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
BUSN625	Applied Decision Making	
EDMG503	Emergency and Disaster Planning and Management	
EDMG530	Economics of Disaster	
MGMT605	Leadership	
MGMT615	Strategic Planning	
Total Semester Hours		**12**

Concentration in Counter-Terrorism Studies (12 semester hours)

Delves into the causes of and threats from domestic and international terrorism. Covers counterterrorism intelligence methodologies and analytic tools, as well as the challenges, opportunities, and assumptions related to forecasting terrorism. Topics include analysis of terror groups from a political psychological perspective, problems presented by terrorism to U.S. national security, and links to terrorism from transnational crime and narcotics.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Appraise the causes of and threats from U.S. domestic and international terrorism.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
HLSS522	Weapons of Mass Destruction and the New Terrorism	
INTL646	Transnational Crime and Narcotics	
INTL650	Counterterrorism	
INTL652	Terrorism: Assessing the Past to Forecast the Future	
NSEC614	Political Psychology of Terror Groups	
SCMT529	International Terrorism	
Total Semester Hours		**12**

Concentration in Criminal Justice (12 semester hours)

Examines the rule of law and its changes as they pertain to influencing and impacting social reactions to crime, corrections, and homeland security. Compares the new criminal threats of terrorism in relation to traditional criminal behavior theories. Topics include criminal justice major systems; interface between police, prosecution, courts, and corrections; and immigration law.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Distinguish between the major systems of Criminal Justice, how the functions of police, prosecution, courts, and corrections interface and understand the role of immigration law as it related to criminal justice and the homeland security framework.
- Evaluate definitions, objectives, and issues of new or emergent criminal threats such as terrorism and how they compare and contrast with traditional criminal behavior theories.
- Assess the rule of law and changes to it as it pertains to direct and indirect influence and impact on social reactions to crime, corrections, and the homeland security enterprise.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
CMRJ524	Organized Crime	
CMRJ526	Drug Cartels and the Narcotics Threat	
CMRJ620	Policing and Corrections in Homeland Security	
LSTD510	Constitutional Law	
INTL646	Transnational Crime and Narcotics	
LSTD512	Immigration Law	
Total Semester Hours		**12**

Concentration in Cyber (12 semester hours)

Covers cyber intelligence from its nascent stages to its current operational and policy impact, including its effect on intelligence collection, operations, and analysis across America's intelligence and defense communities. Topics include: Signals Intelligence (SIGINT) application to military and civilian intelligence questions; laws and ethics pertaining to intellectual property and right to privacy; and the collection of electronic evidence.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the cyber discipline from a multi-disciplinary perspective.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
EDMG600	Emergency Management Perspectives on Cybersecurity	
INTL621	Signals Intelligence (SIGINT)	
ISSC630	Advanced Cybercrime Analysis	
ISSC631	Cyber Ethics: Privacy and Intellectual Property	
LSTD517	Law, Ethics and Cybersecurity	
NSEC506	Cyber Policy and Practice in National Security	
SCMT537	Computer Crime	
Total Semester Hours		**12**

Concentration in Emergency Management and Public Health (12 semester hours)

Provides an overview of what is known about natural hazards, disasters, recovery, and mitigation; how research findings have been translated into policies and programs; and a sustainable hazard mitigation research agenda. Deals with the interaction, coordination, and facilitation between federal, state, and local agencies during preparation, response, and recovery operations. Also looks at public health management during disaster and crisis.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Organize emergency management functions and activities using contemporary emergency and disaster management concepts and federal guidelines.
- Formulate plans that clearly differentiate disaster response actions including recovery operations and their funding from routine emergency operations.
- Design and promote inter-disciplinary training to assure integration between all aspects of an Emergency Operations function including: planning and pre-event preparedness; threat and vulnerability assessments; capability and capacity evaluation; public policy issues; mitigation strategies; exercises and training; program evaluation.
- Develop plans and policies that ensure the strong organizational and personal relationships necessary to be able to work with the key federal agencies to ensure interagency cooperation at all levels during any large scale incident.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
EDMG503	Emergency and Disaster Planning and Management	
EDMG509	Interagency Disaster Management	
EDMG515	Hazard Mitigation and Resilient Communities	
PBHE540	Emergency Management Health and Medical Issues	
PBHE605	Quarantine	
PBHE606	Disaster Health Management	
Total Semester Hours		**12**

Concentration in Intelligence Studies (12 semester hours)

Traces the evolution, structures, functions, capabilities, and activities of the national intelligence community, both pre- and post-9/11. Evaluates the intelligence cycle, including planning, data collection and exploitation, analysis, production, and dissemination. Threats to homeland security and techniques for improving cooperation and intelligence sharing among agencies are also covered.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Examine the evolution, structures, functions, capabilities, and activities of the national intelligence community, both from the pre-and post-September 11, 2001, perspectives.
- Assess traditional and non-traditional threats to homeland security.
- Appraise the intelligence cycle, including intelligence planning, data collection, data exploitation, analysis, production, and dissemination phases.
- Evaluate the latest techniques and procedures for improving interagency cooperation and intelligence sharing.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:	12

INTL501	Strategic Intelligence	
INTL507	Intelligence Operations	
INTL509	Intelligence Collection	
INTL616	Ethical Challenges in the Intelligence Community	
INTL646	Transnational Crime and Narcotics	
Total Semester Hours		**12**

Concentration in Transportation Security (12 semester hours)

Upon successful completion of this concentration, the student will be able to:

- Assess the various components of the maritime based transportation system as it related to the homeland security enterprise.
- Apply economic principles to evaluate the performance of maritime transportation system.
- Analyze the history, pattern, and impact of laws and regulation on the various modes of maritime based transportation in the United States.
- Evaluate the importance of transportation at the organizational and national levels.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
HLSS505	Security Risk Management	
HLSS645	Port Security	
SCMT545	Airport Security Design	
TLMT600	National Transportation Management	
TLMT605	Cargo Security Management	
TLMT607	Port and Terminal Operations	
Total Semester Hours		**12**

Final Program Requirement (3 semester hours)

Select 1 course from the following:		3
HLSS697	Creative Project Capstone Option in Homeland Security [2]	
HLSS699	Homeland Security Capstone [2]	
Total Semester Hours		**3**

Elective Requirements (3 semester hours)

Select any graduate courses not already taken to fulfill the requirements listed above.	3
Total Semester Hours	**3**

1. Required as the first course in this program.
2. Taken once all other requirements have been met.

Master of Arts in Human Resource Management

Program Description

The Master of Arts in Human Resource Management explores advanced concepts in human resource management. Coursework reviews the laws, rules, regulations, and issues impacting the global workforce and human resource management. During the program, students will conduct research and develop strategies in areas such as employee motivation and retention, employment laws, and employee development. Students will also research best practices around compensation packages, benefits, and incentives. Research will support the importance of the human resource function to the strategic plan of the organization.

Spanish language learners may complete the Human Resources Management program through select courses in the General Concentration.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Differentiate individual and group behavior in organizations to increase awareness of the problems and opportunities in managing human resources.
- Evaluate various laws, rules, regulations, and policies affecting human capital in today's global workforce.
- Design effective compensation packages and employee incentive programs to enhance employee recruitment, retention, and overall job satisfaction.
- Examine leading trends and issues in the field of Human Resource Management.
- Recommend strategic initiatives involving the human resource department that align with the strategic direction of the organization.
- Examine the effectiveness of internal and external recruitment efforts toward staffing and retention goals.

Master of Arts in Intelligence Studies

Program Description

The Master of Arts in Intelligence Studies provides you with advanced-level understanding of strategic intelligence analysis, collection, and operations. Core courses in this graduate program impart substantive knowledge and analytic skills often required in professionals seeking leadership positions in the intelligence community. Additional concentration choices enable you to focus on a functional area or intelligence sub-field. This degree program is designed for students seeking advanced knowledge in the intelligence field, or for those who wish to build upon undergraduate knowledge as for potential entry into the field. This degree program is taught by highly credentialed and experienced instructors, many who hold key positions in government agencies or other intelligence organizations.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve program specific learning outcomes and be able to:

- Examine the evolution, structures, functions, capabilities, and activities of the national intelligence community, both from the pre- and-post-9/11 perspectives.
- Explain the structures, functions, capabilities, and contributions of national intelligence consumers to include the national command authority, executive departments, Congress, military services, joint/unified commands, and law enforcement agencies.

- Appraise the intelligence cycle, including intelligence planning, data collection, data exploitation, analysis, production, and dissemination phases.
- Investigate the fundamental capabilities, limitations, and means of tasking human, geographic/imagery, signals, measurement, and technical and open intelligence data sources.
- Assess and predict traditional and non-traditional threats to national and international security.
- Conduct advanced research and compose professional and academic analyses on issues critical to intelligence consumers.
- Evaluate the latest techniques and procedures for improving interagency cooperation and intelligence sharing.

Total Semester Hours		**18**

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Criminal Intelligence, Concentration in Cyber, Concentration in Homeland Security, Concentration in Intelligence Analysis, Concentration in Intelligence Collection, Concentration in Intelligence Management, Concentration in Intelligence Operations, or Concentration in Terrorism Studies.

General Concentration (12 semester hours)

This general concentration allows you to select from all the intelligence courses within this program, enabling you to create your own focused area of study.

Objectives

This general concentration allows you to select from all the intelligence courses within this program, enabling you to create your own focused area of study.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
INTL604	Interagency Operations	
INTL607	Open Source Intelligence (OSINT)	
INTL610	Counterintelligence	
INTL613	Intelligence and Homeland Security	
INTL621	Signals Intelligence (SIGINT)	
INTL623	Human Intelligence (HUMINT)	
INTL627	Advanced Geospatial Intelligence	
INTL631	Criminal Intelligence Analysis	
INTL635	Indications and Warnings	
INTL637	Intelligence Profiling	
INTL644	Cyber and the Intelligence Cycle	
INTL646	Transnational Crime and Narcotics	
INTL647	Cyber Intelligence	
INTL649	Case Studies in Foreign Cyber Threats	
INTL650	Counterterrorism	
INTL652	Terrorism: Assessing the Past to Forecast the Future	
INTL653	Deception, Propaganda and Disinformation	
Total Semester Hours		**12**

Concentration in Criminal Intelligence (12 semester hours)

Examines the historical roots of organized crime and its current role within the American criminal justice system. Provides an overview on U.S. counter-drug efforts and basic information on illicit drugs, with a focus on world regions where drugs are typically manufactured and transported. Teaches counterintelligence principles and criminal intelligence analysis for predicting trends, weaknesses, capabilities, intentions, changes, and warnings needed to dismantle criminal organizations.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply intelligence processes and procedures in the criminal justice community.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
CMRJ524	Organized Crime	
CMRJ526	Drug Cartels and the Narcotics Threat	

INTL610	Counterintelligence	
INTL631	Criminal Intelligence Analysis	
INTL646	Transnational Crime and Narcotics	
INTL647	Cyber Intelligence	
LSTD517	Law, Ethics and Cybersecurity	
Total Semester Hours		**12**

Concentration in Cyber (12 semester hours)

Addresses the cyber discipline from a multidisciplinary perspective. Topics include current and historical structure, functions, and capabilities of private and governmental agencies comprising the cyber community; laws related to intellectual property, civil litigation, criminal prosecutions, and privacy; cybercrime investigation and prevention; and the ethical, economic, and societal issues that face today's information-entrenched society.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the cyber discipline from a multidisciplinary perspective.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
INTL607	Open Source Intelligence (OSINT)	
INTL621	Signals Intelligence (SIGINT)	
INTL644	Cyber and the Intelligence Cycle	
INTL647	Cyber Intelligence	
INTL649	Case Studies in Foreign Cyber Threats	
ISSC630	Advanced Cybercrime Analysis	
ISSC631	Cyber Ethics: Privacy and Intellectual Property	
LSTD517	Law, Ethics and Cybersecurity	
NSEC506	Cyber Policy and Practice in National Security	
Total Semester Hours		**12**

Concentration in Homeland Security (12 semester hours)

Traces intelligence and homeland security processes in defending the U.S., such as the efforts to prevent, prepare, and respond to the use of weapons of mass destruction. Looks at: terrorist groups from different political psychological perspectives; threats to U.S. borders, such as illegal immigration, narcotics smuggling, and money laundering; and risk management in loss prevention.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply intelligence processes and procedures in the defense of the United States.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12

HLSS502	Homeland Security and Defense
HLSS505	Security Risk Management
HLSS522	Weapons of Mass Destruction and the New Terrorism
HLSS523	Domestic Terrorism and Extremist Groups
INTL613	Intelligence and Homeland Security
NSEC614	Political Psychology of Terror Groups
Total Semester Hours	**12**

Concentration in Intelligence Analysis (12 semester hours)

Studies advanced intelligence analysis methods in composing professional and academic analyses on issues critical to intelligence community consumers. Topics include: an analysis of political leaders; an overview of transnational crime and narcotics and the effects on the political, social, and economic development of countries around the world; and the challenges and benefits of cyber intelligence operations.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply advanced intelligence analysis methods in composing professional and academic analyses on issues critical to intelligence community consumers.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:	12
INTL635	Indications and Warnings
INTL637	Intelligence Profiling
INTL646	Transnational Crime and Narcotics
INTL647	Cyber Intelligence
INTL652	Terrorism: Assessing the Past to Forecast the Future
INTL653	Deception, Propaganda and Disinformation
NSEC614	Political Psychology of Terror Groups
Total Semester Hours	**12**

Concentration in Intelligence Collection (12 semester hours)

Studies advanced intelligence data collection methods in supporting analyses on issues critical to intelligence community consumers. Analyzes the phases, processes, and challenges of cybercrime investigations, as well as U.S. and foreign aspects of counterintelligence and the technical, legal, and social issues relating to the search and seizure of digital evidence and computer forensics.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply advanced intelligence data collection methods in supporting analyses on issues critical to intelligence community consumers.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:	12
INTL607	Open Source Intelligence (OSINT)

INTL610	Counterintelligence	
INTL621	Signals Intelligence (SIGINT)	
INTL623	Human Intelligence (HUMINT)	
INTL627	Advanced Geospatial Intelligence	
INTL644	Cyber and the Intelligence Cycle	
ISSC630	Advanced Cybercrime Analysis	
Total Semester Hours		**12**

Concentration in Intelligence Management (12 semester hours)

Lays the groundwork to understanding management principles in the intelligence community environment. Topics include: ethical dilemmas and conflicts in organizational settings; strategic planning techniques used by industrial companies; the evolution and philosophical foundation of the human resource field; methods of managing an organization; and human behavior principles in individual, group, team, and organizational settings.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply management principles in the intelligence community environment.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
HRMT600	Human Resource Management	
MGMT600	Organizational Management	
MGMT601	Organizational Behavior	
MGMT615	Strategic Planning	
MGMT618	Ethics in Leadership	
Total Semester Hours		**12**

Concentration in Intelligence Operations (12 semester hours)

Explores intelligence management skills required for leadership within the intelligence community. Examines covert action in the context of national security, including the political and executive aspects of the presidential powers involved. Addresses core elements of information operations, including the disciplines of electronic warfare (EW), computer network operations (CNO), psychological operations (PSYOP), and operations security (OPSEC).

Objectives

Upon successful completion of this concentration, the student will be able to:

- Employ intelligence management skills required by planning and management positions in the intelligence community.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
INTL604	Interagency Operations	
INTL610	Counterintelligence	
INTL637	Intelligence Profiling	

INTL647	Cyber Intelligence	
INTL653	Deception, Propaganda and Disinformation	
NSEC611	Covert Action and National Security	
Total Semester Hours		**12**

Concentration in Terrorism Studies (12 semester hours)

Studies the causes and threats of domestic and international terrorism, including the threat of weapons of mass destruction as a unique phenomenon within the homeland security landscape. Also includes terrorist and extremist groups within the U.S., policies for combating terrorism and terrorist tactics worldwide, and various counterterrorism intelligence methodologies and analytic tools.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Appraise the causes of and threats from U.S domestic and international terrorism.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
HLSS522	Weapons of Mass Destruction and the New Terrorism	
HLSS523	Domestic Terrorism and Extremist Groups	
INTL650	Counterterrorism	
INTL652	Terrorism: Assessing the Past to Forecast the Future	
MILS671	The Non-State Soldier	
NSEC614	Political Psychology of Terror Groups	
Total Semester Hours		**12**

Final Program Requirement (3 semester hours)

Select 1 course from the following:		3
INTL699	Intelligence Studies Capstone [2]	
SSGS696	Master's Project Capstone Seminar [2]	
Total Semester Hours		**3**

Elective Requirements (3 semester hours)

Select any graduate courses not already taken to fulfill the requirements listed above.	3
Total Semester Hours	**3**

1. Required as the first course in this program.
2. Taken once all other requirements have been met.

Master of Arts in International Relations and Global Security

Program Description

The Master of Arts in International Relations and Global Security offers students the opportunity to develop broad, integrated knowledge in the core of the discipline, including a comparative study of complex international systems. This master's program enables you to acquire transferable business skills including written and oral communication, working with a team, and problem solving.

This program offers:

- Inter-cultural understanding, cooperation, and cosmopolitanism reflected in the staff and student body.
- An insight into the dynamics of international relations across a number of issue areas and the different ways of approaching them to prepare students for a number of career paths.
- An insight into the nature of change as an endemic feature of politics on a national, regional, and global scale.
- An understanding of the causes of change and mechanisms to manage change.
- An insight into the role of various international actors - state and non-state - as participants on the international scene.
- Training in research methods in the social sciences.
- A solid foundation in the philosophical aspects of the study of international relations.
- Insights into the complex relationship between the concerns of domestic and international politics.

Degree Program Objectives

In addition to the institutional and degree level learning outcomes objectives, this degree also seeks the following specific learning outcomes of its graduates. Graduates in this degree program will be able to:

- Analyze classical and alternative theories of international relations, the heritage and development of the discipline, and the major debates concerning world order, diplomacy, and international law underlying its inherent nature as an interdisciplinary study within the field of political science.
- Evaluate the changing role of the state in the context of globalization, regionalism, and security, including the impact of non-state actors, competing interests, and emerging norms within international systems.
- Assess the nature and distribution of economic, political, and military resources in the context of interdependence and delimited by cultural, social, and historical issues.
- Distinguish the interactions of state, non-state, and supra-national actors through a dynamic appreciation of contemporary issues and differing levels of analysis.
- Examine the major theories of conflict and change within the context of globalization and the role of traditional and emerging norms and institutions in the pacific settlement of disputes, human rights, and environmental issues.

In addition to the program objectives, this Masters Degree in International Relations and Global Security will provide the student with transferable skills that include:

- Communication: You will be encouraged to communicate effectively and fluently in speech and writing; to organize information clearly and coherently; and to use communication and information technology for the retrieval and presentation of information.
- Information technology: You will be required to produce written documents and undertake online research.
- Working with others: You will be encouraged to define and review the work of others; to work cooperatively on group tasks; to understand how groups function; and to collaborate with others and contribute effectively to the achievement of common goals.
- Improving own learning: You will develop autonomy in learning, be expected to work independently, and demonstrate initiative and self-organization. You will enhance your research skills toward presenting a clear statement of the purposes and expected results of the research, and develop appropriate means of estimating and monitoring resources and use of time.
- Problem Solving: The courses and classroom exercise will emphasize the need to identify and define problems and help you to explore alternative solutions.

Degree at a Glance

Core Requirements	18

Total Semester Hours	**36**

Degree Program Requirements

Core Requirements (18 semester hours)

IRLS611	Conflict Analysis and Resolution: Theory and Practice [1]	3
SSGS500	Research Design and Methods	3
IRLS500	International Relations Theory	3
IRLS502	International Political Systems	3
IRLS503	International Organizations	3
IRLS602	Introduction to Global Security	3
Total Semester Hours		**18**

Students must choose a concentration for this degree program and may select from a Concentration in Comparative and Security Issues, Concentration in Conflict Resolution, Concentration in International and Transnational Security Issues, or Concentration in Peacekeeping.

Concentration in Comparative and Security Issues (12 semester hours)

Explores regional issues and actors to determine the significant political, economic, security, diplomatic, and social challenges facing a selected region. Topics include peace through coercive power, nonviolence, world order, personal, and community transformation in a specific geographic region, as well as comparative analysis of different political regimes.

Objectives

Upon successful completion of this concentration the student will be able to:

- Evaluate the potential for conflict in a specific region based on existing theories of causation.
- Apply the approaches to peace through coercive power, nonviolence, world order, personal and community transformation in a specific geographic region.
- Understand the concepts and theories of comparative analysis of different political regimes.
- Determine the significant political, economic, security, diplomatic, and social challenges facing a selected region - individually as separate nations and collectively as a region.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
IRLS501	Comparative Political Systems	
IRLS600	Strategic Geography and Geopolitics	

IRLS603	Politics and War	
IRLS631	Government and Security in Korea	
INTL649	Case Studies in Foreign Cyber Threats	
IRLS655	Latin American Security Issues	
IRLS660	Seminar in Middle East Politics and Security	
RELS533	Islam	
SSGS595	Internship Program	
Total Semester Hours		**12**

Concentration in Conflict Resolution (12 semester hours)

Analyzes the principles and foundations of peace, conflict theory, conflict analysis and resolution, and negotiation strategies and concepts. Looks at the factors necessary to build a lasting peace. Topics include the complexity and limitations of negotiating across cultures and historical divides, and the value of multiparty mediation.

Objectives

Upon successful completion of this concentration the student will be able to:

- Evaluate the potential for conflict in a society/state/region based on theories of causation.
- Assess the approaches to peace through coercive power, nonviolence, and world order constructs.
- Reconstruct the phenomenon of peace through examples and case studies.
- Synthesize the rationale for negotiation versus historical tendencies toward coercion.
- Evaluate the development of multiparty mediation and assess the value of such an approach.
- Analyze the complexity and limitations of negotiating across cultures and historical divides.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
IRLS613	International Negotiation	
IRLS615	Peacekeeping: Structure and Process	
LSTD507	International Law	
MILH565	History of Peacekeeping: 1988 - Present	
NSEC612	National Security and Diplomacy	
SSGS595	Internship Program	
Total Semester Hours		**12**

Concentration in International and Transnational Security Issues (12 semester hours)

Examines international and transnational issues that affect the global community as a whole and nation-states as individual entities. Examines the distinct nature of conflict in the post-Cold War era, norms and purposes of international structures and regimes, and various manifestations of globalization and their impact on political, economic, and social systems.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Construct a theory about the distinct nature of conflict in the post-Cold War era.

- Assess the norms and purposes of international structures and regimes.
- Critique the various manifestations of globalization and the impact on various political, economic and social systems.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
IRLS504	International Political Economy	
IRLS603	Politics and War	
INTL613	Intelligence and Homeland Security	
IRLS655	Latin American Security Issues	
INTL646	Transnational Crime and Narcotics	
INTL649	Case Studies in Foreign Cyber Threats	
LSTD507	International Law	
SSGS595	Internship Program	
Total Semester Hours		**12**

Concentration in Peacekeeping (12 semester hours)

Evaluates the principles and foundations of peace operations within the context of international and regional mechanisms. Addresses the evolving theory and practices of United Nations, along with specific peace-building, peacemaking, and peacekeeping operations in conflict areas.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Assess the evolving theory and practices of United Nations Peacekeeping operations.
- Evaluate the role of UN and regional peacekeeping initiatives in specific peace-building, peace-making, and peace-keeping operations in conflict areas.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
IRLS603	Politics and War	
IRLS615	Peacekeeping: Structure and Process	
LSTD507	International Law	
MILH565	History of Peacekeeping: 1988 - Present

Select any graduate courses not already taken to fulfill the requirements listed above.	3
Total Semester Hours	**3**

1. Required as the first course in this program.
2. Taken once all other requirements have been met.

Master of Arts in Legal Studies

Program Description

The Master of Arts in Legal Studies offers you a better understanding of the law. This degree program will aid you in understanding the complex societal challenges associated with the public's ability to access justice. This program is not intended for practicing law, but rather to build upon your existing knowledge of the law by further expanding your comprehension of legal doctrines, legal concepts, and workplace legal issues. By equipping you for ethical service and leadership, this master's degree helps prepare you to deepen your knowledge of the law and ethical issues.

Note: Although some states do not require a Juris Doctor degree for Bar entry, this program does not prepare you for the practice of law or admission to the Bar of any state based solely on your completion of this program.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Integrate legal research and writing skills into a variety of communications.
- Facilitate the creation of new solutions to complex societal legal problems through critical thinking and analysis.
- Design innovative legal solutions with technology.

Master of Arts in Management

Program Description

The Master of Arts in Management seeks to prepare students to become authentic, transformational leaders capable of managing organizational change. Through this online master's program, you will examine the theories, concepts, and practices necessary to become an effective visionary capable of developing and leading strategic workplace initiatives. Successful completion of this degree builds skills and knowledge often needed for mid- to senior-level managerial positions in corporate, nonprofit, government, or military sectors.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBPS® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Spanish language learners may complete the Management program through select courses in the General Concentration.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Conduct business problem focused management research, including collection and analysis of data, and communication of findings by using qualitative and quantitative research methods.
- Develop a strategic business plan applying the theories and practices of management and planning for a particular organizational setting.
- Develop an analytical framework using a variety of approaches to apply leadership and management theory and practice to address the challenges of global organizations in this century.
- Examine complex organizations from a level of analysis perspective, including the individual, interpersonal, group, and organizational level perspectives.
- Evaluate management issues in the context of ethical, technological, structural, cultural, human and environmental factors.

Concentration in Business Project Management (12 semester hours)

The concentration in Business Project Management enhances the student's understanding of how businesses evolve, adapt, and maintain an enterprise through project management. Through this concentration, students will be introduced to the theories, concepts, and practices that align with project management. Students will develop a skill set to track and monitor projects.

Companies depend on project management to stay competitive in developing new offerings, determining the technology needed within the enterprise, updating processes and procedures, and implementing projects for customers.

The concentration is designed for business professionals and military personnel interested in project management within the business environment.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Evaluate how to properly monitor a project.
- Articulate why a project needs to align with the organization’s strategic plan.
- Analyze the project costs and actuals.
- Create a risk management plan.
- Build a project schedule that integrates the various parts of the project to define the critical path
- Integrate the various parts of the project to determine the health of the project through cost/schedule metrics.
- Articulate the ethical and legal aspects of project management.
- Analyze the various business tools used to define quality control and quality assurance.

Concentration Requirements (12 semester hours)

BUSN663	Project Management for the Business Professional	3
BUSN664	Advanced Business Project Schedule and Scope Management	3
BUSN665	Advanced Business Project Risk and Quality Management	3
BUSN666	Advanced Business Project Integration, Resource, and Stakeholder Management	3
Total Semester Hours		**12**

Concentration in Entrepreneurship (12 semester hours)

Focuses on key concepts and principles of being a successful entrepreneur/intrapreneur or small business owner. You will examine leadership practices, feasibility of ideas, funding, and customer service specific to a small business.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Develop an idea for a new business venture.
- Use various methods to critically evaluate specific operational functions.
- Determine your target market and market segmentation.
- Create a marketing plan for your venture.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
ENTR500	Ideation	
ENTR617	Legal Practices for Entrepreneurs	
ENTR620	Small Business Operations

Total Semester Hours		**12**

Concentration in Human Resource Management (12 semester hours)

Compares various managerial approaches to employment law. Discusses rewards systems, measurement of employee performance, and other compensation packages. Probes policies and procedures involving legislative, regulatory, and organizational issues affecting human resource management in a global workforce. Topics include workplace safety and the recruitment, development, and training of human capital.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Compare and contrast various managerial approaches to employment law.
- Evaluate the strategic factors influencing the various levels of rewards systems in the marketplace.
- Assess methods used to measure performance and determine pay level and associated compensation packages.
- Analyze the role and function of the Senior Human Resource Professional in the development and implementation of policies and procedures encompassing legislative, regulatory, and organizational issues affecting the management of human resources in today's global workforce.

Concentration Requirements (12 semester hours)

HRMT602	Employment Law and Labor Relations	3
HRMT603	Human Resource Policy	3
HRMT605	Strategic Human Resource Management Practices	3

Concentration in IT Project Management (12 semester hours)

This concentration focuses on meeting industry needs for IT managers in order to manage cost, time, scope, quality, risk, and people to ensure that projects come in on time and under budget. It also addresses strategic planning and business systems analysis.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Evaluate the principles and practices for organizing, allocating, and managing project resources.
- Analyze the project management framework, including the stakeholders, domains, phases, processes, integration, and lifecycle.
- Examine the potential complexities and pitfalls in initiating and closing projects, and assess methods to mitigate this risk.
- Evaluate the unique challenges in managing the scope, time, and cost of Information Technology projects.
- Examine various project cost models and analyze the principles of earned value management (EVM).
- Assess the principles, strategies, challenges, and measures for managing quality and risk on IT projects.
- Analyze the phases, procedures, deliverables, and best practices for business systems analysis.

Concentration Requirements (12 semester hours)

ITMG624	Information Technology Project Management	3
ITMG625	IT Project Management: Integration, Scope and Time	3
ITMG636	IT Project Management: Developing Project Schedule	3
ITMG637	IT Project Management: The Integrated Project Plan	3
Total Semester Hours		**12**

Concentration in Organizational Crisis Management (12 semester hours)

The concentration in Organizational Crisis Management covers crisis management concepts and activities from the organizational leader's perspective. The courses in the concentration cover organizational change, risk management, organizational processes related to crisis management, and leadership roles in crisis management.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Establish protocols for crisis management communication as it relates to the organization.
- Recommend organizational crisis planning strategies.
- Evaluate processes for continuity planning.
- Explain the impact on the organization of poor crisis planning.
- Describe the role of leadership in organizational crisis management.

Concentration Requirements (12 semester hours)

MGMT604	Organizational Crisis Management	3
MGMT621	Leadership in a Time of Crisis	3
MGMT623	Concepts and Processes of Organizational Crisis Management	3
MGMT622	Risk Management for Leaders	3
Total Semester Hours		**12**

Concentration in Organizational Leadership (12 semester hours)

Examines various leadership theories and models used by contemporary leaders in management. Looks at the effective leader's role in the workplace as it relates to decision making, conflict resolution, motivation, and risk taking. Addresses contemporary leadership theories and models to develop and nurture followership, varied workplace settings, ethics, motivation, and knowledge management.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Evaluate various leadership theories and models used by contemporary leaders in the field of management to develop and nurture followership.
- Assess leadership approaches to a variety of workplace settings, ethics, motivation, and knowledge management.
- Examine the roles and functions of an effective leader in today's workplace as it relates to the areas of decision making, conflict resolution, motivation, and risk taking.

Concentration Requirements (12 semester hours)

MGMT603	Organizational Development	3
MGMT605	Leadership	3
MGMT604	Organizational Crisis Management	3
MGMT618	Ethics in Leadership	3
Total Semester Hours		**12**

Concentration in Public Administration (12 semester hours)

Addresses the management of public organizations and interpersonal relationships at the federal, state, and local levels. Various positions and issues involving politics, policy, economics, administration, and management in the public sector are covered. Topics include human resource strategy and the role of federal, state, and local public health agencies.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply theories and approaches to managing public organizations and administering federal, state, and local levels and evaluate the interpersonal relationships among these levels of government.
- Evaluate positions and issues that intersect the dynamics of politics, policy, economics, administration and management in the public sector.
- Analyze public policy initiatives from political and administrative aspects as to their intentions, achievable aims and outcomes.

Concentration Requirements (12 semester hours)

PADM510	Administrative Theory	3
PADM520	Public Administration in Society	3
PADM530	Public Policy	3
Select 1 course from the following:		3

Concentration in Strategic Consulting (12 semester hours)

This concentration focuses on developing a business plan for a strategic consulting practice, assessing organization and business consulting models, and presenting recommendations on improving an organization's practices and processes. Topics include interpersonal relations, group behavior, and managing individuals and groups in a virtual environment.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Implement a change management program in an organization.
- Assess the systems and processes in an organization when addressing strategic, organizational and managerial challenges.
- Present senior management with recommendations on how to improve an organization's practices and processes.
- Lead a project on innovation.

Master of Education: Teaching

Program Description

The Master of Education in Teaching is designed for currently licensed classroom teachers seeking a graduate degree in teaching. The online program links academic theory with best practices for effective teaching in the classroom. You will examine the significance of various educational historical developments, philosophies, pedagogical approaches, research methodologies, and educational theories and paradigms. In addition to the core requirements imparting classroom management skills, student assessment techniques, planning, and more, this graduate program offers unique concentrations for further focus.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Demonstrate commitment to students and their learning.
- Evaluate the subjects they teach and how to teach those subjects to students.
- Manage and monitor student learning.
- Systematically assess their practice and learn from experience.
- Engage as members of learning communities.
- Integrate problem-based inquiry in course experiences.
- Interact with program mentors, academic specialists, colleagues, parents, and community stakeholders.
- Integrate the use of action research to enhance student achievement and address problems in practice.

Programmatic Admission Requirements

The following documentation is required for admission into this program, and must be provided prior to course registration:

- Signed statement of understanding (SOU)

Important notes:

- This program is not designed to lead to certification or licensure. In order to make an informed decision about your education, prior to applying here we strongly encourage you to explore any state-specific or other requirements applicable to you, including with respect to certification, licensure, and certificate enhancements.
- You are required to take EDUC503 as the first course in this degree program, but other courses may be taken in conjunction with EDUC503.

Please visit our APU graduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-382-1783 or info@apus.edu.

Concentration in Curriculum and Instruction for Elementary Teachers (12 semester hours)

This concentration is for currently licensed K-12 teachers who wish to further their studies with an advanced degree focused on elementary education curriculum and instruction for grades K-6. Upon successful completion of this concentration, the student will be able to demonstrate an understanding of the issues that continue to influence professional practice in the field. Candidates will use research, experience, and professional judgment to collaborate and work with others in the planning, implementation, and evaluation of effective instruction and services for elementary students. Candidates will have an advanced understanding of the developmental characteristics, culture, and background of elementary aged, special needs learners and how the differences among them influence the learning condition. The program meets the needs of students with interests within the traditional public and private school arenas and includes an emphasis on the National Board for Professional Teaching Standards (NBPTS), research-based teacher leadership skills, and 21st Century professional practices in instruction. Completion of the concentration does not lead to state certification or licensure. The program includes a total of 36 semester hours and is comprised of 12 online courses including a capstone action research project conducted on a school or other pre-approved professional site.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Demonstrate an understanding of the issues that continue to influence professional practice in the field.
- Use research, experience, and professional judgment to collaborate and work with others in the planning, implementation, and evaluation of effective instruction and services for elementary students.
- Understand developmental characteristics, culture, and background of elementary aged, special needs learners and how the differences among them influence the learning condition.

  The program meets the needs of students with interests within the traditional public and private school arenas and includes an emphasis on the National Board for Professional Teaching Standards (NBPTS), research-based teacher leadership skills, and 21st Century professional practices in instruction

Concentration Requirements (12 semester hours)

EDUC549	Elementary School Arts Across the Curriculum	3

EDUC561	Issues and Ideas in Special Education	3
EDUC671	Integrated Elementary Mathematics and Sciences	3
EDUC672	Integrated Elementary Language Arts and Social Studies	3
Total Semester Hours		**12**

Concentration in Instructional Leadership (12 semester hours)

This concentration is designed for individuals who want to broaden their knowledge of instructional leadership in K-12 settings and includes an emphasis on research-based teacher leadership skills and 21st century professional practices in instruction.

Upon successful completion of this concentration, the student will be able to evaluate and effectively use performance-based assessments and implement assessment, instruction, evaluation, and intervention plans as appropriate for diverse learner needs. Successful candidates will demonstrate effective interpersonal communication skills to work well with school personnel, pupils, and parents, acknowledging and appreciating diversity in its many forms and being able to assess and instruct without influence of bias. Candidates will also use educational technology as an effective tool to promote student learning as well as a means to improve communication among colleagues, staff, parents, students, and the larger community. The program meets the needs of students with interests within the traditional public and private school arenas and includes an emphasis on the National Board for Professional Teaching Standards (NBPTS) and research-based teacher leadership skills.

Completion of the concentration does not lead to state certification or licensure.

The program includes a total of 36 semester hours and is comprised of 12 online courses including a capstone action research project conducted on a school or other pre-approved professional site.

Objectives

Studies how educational professionals create instructional practices that raise levels of teaching and learning to improve outcomes in educational settings. Explores teacher leadership, professional learning communities (PLCs), reshaping school culture, and shared leadership. Looks at technology as a tool to promote learning and to improve communication, and examines contemporary issues related to special education instruction.

Concentration Requirements (12 semester hours)

EDUC522	Supervision of Instruction	3
EDUC561	Issues and Ideas in Special Education	3
EDUC629	Personalized and Individualized Online Learning	3
EDUC665	Emerging Issues and Trends in Education Leadership	3
Total Semester Hours		**12**

Concentration in Online Learning (12 semester hours)

This concentration will provide a learning framework for potential students who wish to teach online at either the K-12 or higher education levels. The demand for teachers with in-depth knowledge of how to use technology together with curriculum design and teaching methods is growing dramatically. The online learning environment continues to expand and there is a need for experienced and knowledgeable instructors to deliver instruction in a distance learning or web-based environment. In this program, comprehensive aspects of online learning will be explored so that the graduating student will have a firm knowledge base with which to function in the online-learning instructional setting. The concentration will present students with an overarching philosophy that raising student achievement is best achieved in instructional environments where the software, web-based, or online instruction is interactive and individualized or personalized. Completion of the concentration does not lead to state certification or licensure.

Objectives

Provides a foundation for developing problem-solving skills necessary for functioning in online, face-to-face, and hybrid instructional settings. Topics include online learning instructional formats and their impact on student achievement, personalized learning, emerging trends and issues as they relate to technology instruction, and copyright infringement's implication for course development.

Concentration Requirements (12 semester hours)

EDUC622	Ethics and Legal Issues in Online Learning	3
EDUC623	Online Learning and Student Achievement	3
EDUC624	Assessment of Online Learning	3
EDUC629	Personalized and Individualized Online Learning	3
Total Semester Hours		**12**

Concentration in Special Education (12 semester hours)

This concentration is for currently licensed K-12 teachers who wish to further their studies with an advanced degree focused on working with students with special needs. The program provides a strong, research-based background in professional teaching practices and provides development for teachers who are knowledgeable of the foundations and theoretical basis for special education, the developmental characteristics of special needs learners, and the instructional practices that best serve them. Upon successful completion of this concentration, the candidate will be able to demonstrate an understanding of the foundations of special education including the philosophy, history, legislation, and theory that continue to influence professional practice in the field. Candidates will be able to use research, experience, and professional judgment to collaborate and work with others in the planning, implementation, and evaluation of effective instruction and services for students with disabilities. Candidates will demonstrate knowledge of the developmental characteristics, culture, and background of special needs learners and how these differences influence the learning condition. The program meets the needs of students with interests within the traditional public and private school arenas and includes an emphasis on the National Board for Professional Teaching Standards (NBPTS), the Counsel for Exceptional Children (CEC) standards, research-based teacher leadership skills, and 21st Century professional practices in instruction. Completion of the concentration does not lead to state certification or licensure. The program includes a total of 36 semester hours and is comprised of 12 online courses including a capstone action research project conducted on a school or other pre-approved professional site.

Objectives

Explores the foundations of special education, including the philosophy, history, legislation, and theory that continue to influence professional practice in the field. Emphasizes the use of research, experience, and professional judgment to collaborate and work with others in the planning, implementation, and evaluation of effective instruction and services for students with disabilities.

1. Required as the first course in this program.
2. Taken once all other requirements have been met.

Master of Arts in Military History

Program Description

The Master of Arts in Military History explores the historiography of military and warfare that shaped future civilization. While pursuing this online master's degree, you'll discover the strategy, command, leadership tactics, and technological advances in weaponry that altered the outcome of some of the most significant battles in history. The graduate curriculum not only examines military battles, it addresses social structures, military attitudes, organizational relationships between officers and troops, and the interrelationships between military and civilian societies. Additionally, this online military history program emphasizes valuable research, as well as writing and communication skills required by professionals in government, military services, or general business.

Many University faculty members teaching these courses are published historians or military leaders who bring unique perspectives and relevant research into the classroom. You'll also connect and interact online with other students who share your enthusiasm for history.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Demonstrate a broad knowledge of historical individuals and events and the global complexity of human experiences over time and place.
- Distinguish the historical schools of thought that have shaped scholarly understanding of the profession.
- Apply persuasive arguments that are reasoned and based on suitable evidence.
- Evaluate secondary resources, through historiographical analysis, for credibility, position, and perspective.
- Assess a variety of primary sources, digital and archival, in the process of deeply researching the past.
- Generate research that makes original contributions to knowledge, through the use of advanced historical methods.
- Produce a high-quality research paper that meets professional standards typical for a conference presentation or academic publication.

Degree at a Glance

Thesis Option: Students who wish to pursue a PhD, or those who have professional goals that might require a thesis, can petition the History and Military History Department Chair to take the thesis option instead of the comprehensive exam. The thesis petition should be forwarded to the chair before the student has completed 24 credit hours. The petition requires students to have developed a solid topic and should include the signatures of two faculty members, one of whom has agreed to serve as the thesis advisor.

HIST501	Historiography	3
MILH511	Great Military Philosophers	3
Total Semester Hours		**12**

Students must choose a concentration for this degree program and may select from a Concentration in American Military History, Concentration in American Revolution, Concentration in Civil War, Concentration in War Since 1945, or Concentration in World War II.

Concentration in American Military History (24 semester hours)

This Concentration in American Military History focuses on the major conflicts from the Revolution to the Cold War period. The course selection includes the methodology and historiography of the military periods under study and an examination of theoretical concepts including the nature of warfare, strategy, and leadership as well as civil-military relations and foreign relations. The courses offer students a clear understanding of key historical events and human behavior in relation to the history of American warfare including the economics, politics, and social issues.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the characteristics of leadership common to great military leaders and decision-making skills that are inbred and/or learned by the great leaders throughout military history.
- Dissect and critique the American Revolution from its antecedents to its legacy including events leading to the revolt, Declaration of Independence, strategy and tactics, campaigns, and the aftermath of war on the new nation.
- Discern and assess the political, economic, cultural, social, and military aspects of the Civil War specifically including their impact on causative factors, conduct of the war, and post-war aftermath.
- Compare and contrast all theaters of World War II and events in Europe, Africa, the Middle East, Southeast and Southwest Asia, the Pacific, and Latin America as well as the role of diplomacy and strategy, the impact of war upon society, and the fighting on land, at sea, and in the air.
- Examine the Cold War between the Soviet Union and the United States with emphasis on the actual scene of superpower conflict in the Third World and an analysis of the varied levels of power and their interrelationships that made the Cold War unique.

Concentration Requirements (24 semester hours)

MILH637	The Seven Years War	3
MILH536	The American Revolution	3
HIST552	The Civil War: Seminal Event in American History	3
HIST558	The Great War	3

Concentration in American Revolution (24 semester hours)

APUS offers one of the nation's only graduate concentrations on the American Revolution. Students study the philosophies, personalities, strategies, leadership, and other factors that led to, influenced, and resulted from the United States of America's foundation and permanent break from Great Britain. As a major event in the larger sweep of the Enlightenment, the following aspects of the American Revolution are analyzed: principles of colonialism, monarchy, democracy, republic, and nation-building; military leadership, strategies and individual soldiers on each side; international diplomacy; economics; and American culture.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Dissect and critique the American Revolution from its antecedents to its legacy including events leading to the revolt, Declaration of Independence, strategy and tactics, campaigns, and the aftermath of war on the new nation.
- Analyze the American Revolution in reference to the operational contributions of American and British military leadership using selected land battles as examples of the strategies and tactics involved.
- Evaluate an early and pivotal campaign in the American Revolution by critiquing the strategy, tactics, and results of campaign on the subsequent course of the Revolution and post-war Anglo-American relations.
- Explain the perspective of the American Revolution from the British viewpoint in relation to colonial policies, diplomacy, military leadership, and other influences in Great Britain during and after the war.
- Assess and critique the conclusive military strategy of the American Revolution and why the strategy was distinctive from other military theatres of operation.

Concentration Requirements (24 semester hours)

HIST553	History of Colonial America	3
MILH637	The Seven Years War	3
HIST551	The American Revolution in Context	3
MILH531	Strategy, Tactics & Leadership of the American Revolution	3
MILH532	British Perspective of the American Revolution	3
MILH536	The American Revolution	3
HIST657	Antebellum America: Prelude to the Civil War	3
Select 1 course from the following:		3
HIST554	History of the American West	
HIST652	African-American History	
HIST653	History of American Women	
HIST680	Special Topic: History [2]	
HIST690	Independent Study: History [2]	
Total Semester Hours		**24**

Concentration in Civil War (24 semester hours)

Often referred to as the "seminal event" in American history, this program studies the political, cultural, economic, and military issues related to the War Between the States. The degree covers (1) major figures, such as Abraham Lincoln and Jefferson Davis, Robert E. Lee and Ulysses S. Grant, (2) obscure figures unknown to the casual observer yet critical to how one understands of the war, and (3) minor figures that are rarely provided the coverage deserved of history such as the common soldier on each side of the conflict. The major campaigns are analyzed using cutting edge texts and professors' expert analyses. The war itself is viewed in context; the issues leading up to it and resulting from it are critically analyzed. Graduates of the program can expect to be on their way to becoming "experts" in the Civil War; several graduates of this program have published books and/or articles related to the war.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Place events of the Antebellum period, the Civil War, and Reconstruction into the broader scope of American History by assessing the similarities and differences in social, cultural, economic, and political developments in North and South.
- Discern and assess the political, economic, cultural, social, and military aspects of the Civil War to specifically include their impact on causative factors, conduct of the war, and post-war aftermath.
- Examine the operational contributions of Union and Confederate military leaders by critiquing selected land battles of the war as examples of the strategies and tactics involved.
- Compare and contrast the national, theater, and operational command structures of the Union and Confederacy in relation to leadership styles of key military leaders on both sides and the evolution of command and control during the war.
- Identify, assess, and explain the diverse historical assessments and interpretations of the Antebellum, Civil War, and Reconstruction eras as presented in the writings of prominent and influential historians.

Concentration Requirements (24 semester hours)

HIST657	Antebellum America: Prelude to the Civil War	3
HIST552	The Civil War: Seminal Event in American History	3
MILH541	Civil War Strategy and Tactics	3
MILH542	Civil War Command and Leadership	3
MILH646	Civil War Cavalry and Intelligence	3
HIST658	Reconstruction and Post-Civil War America	3
HIST651	America's Indian Wars	3
Select 1 course from the following:		3
HIST554	History of the American West	
HIST652	African-American History	
HIST653	History of American Women	
HIST680	Special Topic: History [2]	
HIST690	Independent Study: History [2]	
Total Semester Hours		**24**

Concentration in War Since 1945 (24 semester hours)

Students will focus on the American culture of war from World War II to the present. It traces the history and evolution of American strategic, operational, and tactical doctrine during the Cold War as well as United Nations peace-keeping operations in this time period. Topics cover national security interests including foreign policy and military operations and their relation to domestic political, economic, and social components as well as the major foreign wars and the emergence of the United States as a world power. In addition, students

have the opportunity to examine our response to selected regional issues in the Balkans, Middle East, and other threat situations in the world.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Examine the Cold War between the Soviet Union and the United States with emphasis on the actual scene of superpower conflict in the Third World and an analysis of the varied levels of power and their interrelationships that made the Cold War unique.
- Contrast the evolution and functioning of United Nations peacekeeping operations during the Cold War period to include comparative assessments of each peacekeeping operation as a tool of conflict management.
- Analyze of the origins and structures of insurgency and revolution to include the actual history of specific groups of insurgents and revolutionaries such as the Chinese Communists, the Viet Minh/Viet Cong, and the militant Islamist insurgents.
- Assess great and middle power military interventions into civil wars during the 1990s and extraordinary security enjoyed by the great and middle powers of the Western world in the Cold War's aftermath.
- Evaluate turbulent areas in the history of the world with emphasis on modern political and military issues including the Balkans, Israel, Iraq, Afghanistan, and other regions.

Concentration Requirements (24 semester hours)

HIST555	The United States in the 20th Century	3
MILH620	War Since 1945	3
MILH621	The Cold War Era and Aftermath	3
MILH622	Great Power Military Interventions	3

Concentration in World War II (24 semester hours)

Students in the World War II concentration study the history, politics, leaders, strategies, and campaigns under which the 20th century's history, (and some would argue, the modern world's), seminal events unfolded. The World War II student takes a course of study that includes study of the major political and military leaders of both Allied and Axis powers as well as study of the war's major theaters. Students then have the opportunity to study of major and lesser campaigns and battles, military strategy and leadership, and World War II political and military institutions.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Discern and critique the strategies, tactics, leaders and lessons learned during the fighting in the China-Burma-India Theater, New Guinea, the Solomon Islands, the Aleutians, and in the Philippines.

- Explain and assess the strategy, tactics and leadership from the blitzkriegs into France, the Balkans, and the Soviet Union to the campaigns in North Africa and Italy.
- Explain and assess the Allied victory in Europe to include the generalship and decisions concerning the amphibious invasions, airdrops, and the crossing of the Rhine.
- Distinguish the politics, political leadership, and diplomacy in Germany, Japan, and Italy that enabled the rise of the respective countries' Axis leadership that ruled during World War II.
- Distinguish the political leadership that defined the Allied powers of the United States, Great Britain, and Russia before, during, and after World War II.

Concentration Requirements (24 semester hours)

HIST555	The United States in the 20th Century	3
HIST560	World War II in Context	3
MILH551	World War II in Europe	3
MILH552	World War II in the Pacific	3
MILH555	World War II: Politics, Political Leadership and Diplomacy	3
MILH654	World War II and the Eastern Front	3
HIST642	Nazi Germany and the Holocaust	3
Select 1 course from the following:		3
HIST680	Special Topic: History [2]	
HIST690	Independent Study: History [2]	
MILH620	War Since 1945	
MILH621	The Cold War Era and Aftermath	
MILH668	The War in Vietnam	
Total Semester Hours		**24**

Final Program Requirement (0 semester hours)

Students may also take a thesis option, requiring HIST691 and HIST699. To take this option, students must have successfully petitioned the Department Chair and completed their Core courses as well as 24 concentration credit hours. This is open to students from all concentrations.

MILH698	Comprehensive Exam in Military History [3]	0
Total Semester Hours		**0**

1. Required as the first course in this program.
2. Students will need permission from the Department Chair to take this course.
3. Taken once all other requirements have been met. Students may also petition the Chair to take the Thesis Option, which requires successful completion of HIST691 and HIST699.

Master of Arts in Military Studies

Program Description

The Master of Arts in Military Studies focuses on strategic military operations in peace and conflict with concentrations in joint warfare, irregular warfare, or strategic leadership. You will study military art through historical and contemporary context and apply theory, established doctrine, and the laws of war to emerging defense and security challenges facing the U.S. You will also learn to identify viable courses of action when doctrine or revolutionary changes in strategy and operation occur.

The curriculum for this online master's program was developed with input from academic professionals, senior military leaders, and those serving in the national security arena. Coursework provides useful skills and knowledge for professional government or military service, or as a research scholar or military instructor. It also helps to prepares you to publish scholarly works and to pursue a doctorate in a related field. While popular among students from the armed forces and government agencies, this major is open to any student interested in military philosophy, strategy, and operations.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Analyze the origins, development, capabilities, and vulnerabilities of both friendly and hostile military forces.
- Assess the major trends, theories, laws of war, events, and people that have shaped military studies in both an historical and modern context.
- Evaluate the variables and influences affecting military forces to include the following: leadership, doctrine; strategy, tactics, operations, joint operations and integrated systems, technology, cultures, and the multidimensional battle space.
- Judge examples of successful and unsuccessful military and strategic leadership philosophies and decisions based on historical and current events.
- Analyze critical issues and trends in national and international security that affect the strategic employment and sustainment of military forces and the relationship between military power and other elements of national power.
- Develop effective research, analysis, methodological, and presentation skills relevant to military studies.
- Synthesize information in a publication-quality paper that presents new knowledge or a new approach to a topic pertinent to the field of military studies.

Degree at a Glance

Students who select the Concentration in Modern Armed Conflict will have 0 elective hours due to the concentration requiring 18 semester hours, instead of 15 semester hours.

SSGS500	Research Design and Methods	3
MILS521	Strategy, Tactics, & the Operational Art	3
MILS560	Joint Warfare Theory and Practice	3
Total Semester Hours		**15**

Students must choose a concentration for this degree program and may select from a Concentration in Irregular Warfare, Concentration in Joint Warfare, Concentration in Modern Armed Conflict, or Concentration in Strategic Leadership.

Concentration in Irregular Warfare (15 semester hours)

This concentration provides students with an opportunity to research, study, and write in the field of Irregular Warfare (IW). The program experience includes a detailed analysis of historical, current, and future IW theories and concepts. Students will expand critical thinking and their knowledge of IW methods through an examination of materials on intelligence, international relations, terrorism, criminal activities, cyber warfare, propaganda, and the various levels of armed conflict to include conventional, asymmetric, and irregular warfare. The study of insurgent activities and the implementation of these methods provide an understanding of the nature and motivation of movements which challenge legitimate governance through forms of modem or hybrid warfare.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Diagram the changing nature of Irregular Warfare (IW) in terms of current theory, planning, and implementation.
- Synthesize elements of Irregular Warfare (IW) in historical and contemporary campaigns.
- Analyze emerging theories of Irregular Warfare (IW), through an understanding of varied methods of implementation.
- Evaluate Irregular Warfare (IW) concepts within the geo-political and operating environments.

Concentration Requirements (15 semester hours)

MILS680	Special Topic: Military Studies [2]	
Total Semester Hours		**15**

Concentration in Joint Warfare (15 semester hours)

This concentration studies modern joint warfare operations, leadership, and management. Students will learn of the theory, practice, planning, implementation, command and control, and overarching military philosophy that pervades today's joint military environment. Going beyond the specific joint military community, students will also study coalition warfare and future war. The application of air, land, and sea power in joint operations can be analyzed as well as seen through past joint operations. Most popular among students from all military services and inter-governmental agencies, this major is open to any interested military or civilian student who seeks to know more of military philosophy, strategy, tactics, history, and contemporary issues.

Objectives

Focuses on modern joint warfare operations, leadership, and management, including the theory, practice, planning, implementation, command and control, and overarching military philosophy of today's joint military environment. Topics include coalition warfare; future military conflict; the application of air, land, and sea power in joint operations; and various case studies in joint warfare from World War II to the present.

Concentration Requirements (15 semester hours)

MILS561	Joint Warfare Planning and Implementation	3
MILS562	Joint Warfare Command and Control	3
MILS563	Case Studies in Joint Warfare	3
MILS620	Studies in Future War	3
Select 1 course from the following:		3
MILS510	Strategic Military Leadership	
MILS534	Air and Space Power Theory: Strategy and Tactics	
MILS570	Seminar in Asymmetrical Warfare	
MILS572	Special Operations Forces Application	
MILS583	Insurgency and Revolution	
MILS635	Air Power in Joint Warfare	
MILS655	Naval Power in Joint Warfare	
MILS671	The Non-State Soldier	
MILS680	Special Topic: Military Studies [2]	
MILS690	Independent Study: Military Studies [2]	
Total Semester Hours		**15**

Concentration in Modern Armed Conflict (18 semester hours)

This concentration provides students with advanced-level insight into the dynamics of modern armed conflict, with emphasis on the national and global security challenges of the 21st century. Students will study, research, and analyze issues of conflict, defense, and security through an interdisciplinary military studies approach that integrates perspectives from national security, intelligence, and defense studies. Using social science methodologies, the curriculum promotes a holistic understanding of modern warfare, security threats, and contemporary military issues.

Coursework draws from a wide range of SSGS programs, allowing students to tailor their studies to individual interests while gaining breadth across strategic studies, intelligence, terrorism, asymmetric warfare, cybersecurity, and future war. Designed to strengthen analytical and leadership skills, this concentration prepares graduates for professional roles in the military, government agencies, or organizations focused on defense and security, as well as for careers in research and analysis in the broader field of military studies.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Investigate modern armed conflict through an interdisciplinary military studies approach to gain a holistic understanding of relevant theories, concepts, and issues within contemporary contexts.
- Analyze and form critical perspectives on major classic and contemporary theories, strategies, doctrines, events, people, threats, and organizations that shape modern armed conflict and contemporary national security.
- Evaluate emerging challenges in areas such as strategic studies, terrorism, asymmetric warfare, cyber threats, intelligence, and future war, and apply this knowledge to defense and security contexts.
- Synthesize insights from multiple areas of study to strengthen analytical and leadership skills for careers in government, the military, or related national security organizations.

Concentration Requirements (18 semester hours)

MILS570	Seminar in Asymmetrical Warfare	3
MILS583	Insurgency and Revolution	3
MILS620	Studies in Future War	3
MILS671	The Non-State Soldier	3
Select 2 courses from the following:		6

Concentration in Strategic Leadership (15 semester hours)

This concentration is for students who seek an understanding of the principles, theory, and practices of strategy and leadership from historical and contemporary perspectives. This program provides students with the opportunity to focus on strategic leadership lessons learned under military, civil-military, and government settings and conditions. With critical analytical thinking skills, students can apply the classic strategies, tactics, and teachings of the great military philosophers and leaders to key national strategic issues and international concerns that are relevant in modern times.

Objectives

Traces the principles, theory, and practices of strategy and leadership from historical and contemporary perspectives with a focus on strategic leadership lessons learned under military, civil-military, and government settings and conditions. Also teaches critical analytical thinking skills needed to apply classic strategies, tactics, and teachings of great military philosophers and leaders to key national strategic issues and international concerns.

Master of Arts in National Security Studies

Program Description

The Master of Arts in National Security Studies provides executive-level education in national and international security policy with concentrations in homeland security, intelligence analysis, cyber security, terrorism studies, and regional security studies. This online master's program provides practical knowledge often needed in the defense industry, military, U.S. and foreign governments, and the private sector.

The program includes a solid foundation in agency operations and theory, and studies the complex problems found in today's uncertain security environment. You will be taught by experienced faculty who remain active in the national security arena, helping to ensure relevancy in this continuously expanding field.

Graduates of the program can be found across the national and international security community as civilian and military leaders, policymakers, action-officers, analysts, instructors, and consultants. This program also provides a strong academic stepping stone for our doctoral programs in global security and strategic intelligence.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Appraise classic and contemporary theories, strategies, doctrines, and procedures related to the causes, conduct, and termination of armed conflict and the maintenance of peace.
- Assess and predict traditional and non-traditional threats to national and international security.
- Compare the structures, functions, capabilities, and activities of national and international security community members.
- Conduct advanced research and compose professional and academic analyses on issues critical to national and international security.

NSEC612	National Security and Diplomacy	
NSEC614	Political Psychology of Terror Groups	
SSGS595	Internship Program	
Total Semester Hours		**12**

Concentration in Cyber (12 semester hours)

Analyzes the cyber discipline from a multidisciplinary perspective. Topics include: current cyber policy and strategy for non-practitioners in a national security framework; laws related to intellectual property, civil litigation, criminal prosecutions, and cybersecurity; and the privacy, ethical, economic, and societal issues that face today’s information-entrenched society.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the cyber discipline from a multidisciplinary perspective.

Concentration Requirements (12 semester hours)

ISSC630	Advanced Cybercrime Analysis	3
ISSC631	Cyber Ethics: Privacy and Intellectual Property	3
LSTD517	Law, Ethics and Cybersecurity	3
NSEC506	Cyber Policy and Practice in National Security	3
Total Semester Hours		**12**

Concentration in Homeland Security (12 semester hours)

Explores contemporary threats to the U.S. and the organizations, capabilities, and activities of America's homeland defense community. Covers the efforts to prevent, prepare, and respond to the use of weapons of mass destruction, the role of risk management in the prevention of loss, and the development of drug cartels and their organization, production, and distribution networks.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Appraise the contemporary threats to the United States; and the organizations, capabilities, and activities of the national defense community.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
CMRJ526	Drug Cartels and the Narcotics Threat	
HLSS502	Homeland Security and Defense	
HLSS505	Security Risk Management	
HLSS522	Weapons of Mass Destruction and the New Terrorism	
HLSS523	Domestic Terrorism and Extremist Groups	
INTL613	Intelligence and Homeland Security	
Total Semester Hours		**12**

Concentration in Regional Security Studies (12 semester hours)

Examines the forces reshaping world politics and analyzes the institutions that are fostering new forms of global governance. Topics include the role of diplomacy in national security policy development and implementation, and the strategic, operational, and tactical elements required for conducting peace operations.

Concentration Requirements (12 semester hours)

NSEC608	Regional Security Cooperation	3
Select 3 courses from the following:		9
HIST573	History of the Middle East	
HIST670	History and Culture of Latin America	

IRLS613	International Negotiation	
IRLS615	Peacekeeping: Structure and Process	
IRLS631	Government and Security in Korea	
IRLS655	Latin American Security Issues	
IRLS660	Seminar in Middle East Politics and Security	
IRLS662	Middle Eastern Culture	
MILH669	Arab-Israeli Conflict: Contemporary Politics & Diplomacy	
NSEC612	National Security and Diplomacy	
Total Semester Hours		**12**

Concentration in Security and Intelligence Analysis (12 semester hours)

Covers advanced security and intelligence analysis methods used to convey issues critical to national and international security. Examines the forces reshaping world politics, analyzes the institutions that are fostering new forms of global governance, and discusses the current structure, function, capabilities, and contributions of individual U.S. national intelligence community members.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply advanced security and intelligence analysis methods in composing professional and academic analyses on issues critical to national and international security.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
INTL501	Strategic Intelligence	
INTL507	Intelligence Operations	
INTL508	Intelligence Analysis	
INTL509	Intelligence Collection	
IRLS600	Strategic Geography and Geopolitics	
NSEC608	Regional Security Cooperation	
Total Semester Hours		**12**

Concentration in Terrorism Studies (12 semester hours)

Evaluates the causes of and threats from domestic and international terrorism, as well as the organizations, capabilities, and activities of the international security community in the global war on terrorism. Also analyzes U.S. and international policies for combating terrorism, terrorist tactics worldwide, and the scope of terrorism.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Appraise the causes of and threats from domestic and international terrorism and the organizations, capabilities, and activities of the international security community in the Global War on Terrorism.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12

HLSS522	Weapons of Mass Destruction and the New Terrorism	
HLSS523	Domestic Terrorism and Extremist Groups

Total Semester Hours	**3**

1. Required as the first course in this program.
2. Taken once all other requirements have been met. The Capstone Seminar will satisfy 3 semester hours of an elective requirement.

Master of Arts in Political Science

Program Description

The Master of Arts in Political Science delves into popular topics including American government theory and process, comparative politics, contemporary political institutions, defense and security, domestic and foreign policy, legislative behavior, and political philosophy. In this era of polarization in government, there is a great demand for people who possess knowledge of how government works, as well as the research, writing, and analytical skills needed to evaluate domestic policies at all levels of government. Knowledge gained in this online program provides an advanced foundation for those interested in fields such as government, military, the gaining and holding of elected positions, nonprofit administration, or other professions including academia or law where strong interpersonal and communication skills are required.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Analyze the fundamental theories and philosophies of government, governance, economy, and civil society and apply them to contemporary political systems.
- Evaluate the political elements of representative democracy and compare and contrast those elements with other political systems.
- Assemble and evaluate the appropriate information and data used in the social, economic, foreign affairs, and security policy-making realm.
- Assess the actors and processes involved in policymaking and evaluate policy implementation outcomes in various sectors to include the social, economic, foreign policy, and security policy domains.

Core Requirements (18 semester hours)

POLS510	The U.S. Presidency, Congress, & Bureaucracy [1]	3
POLS501	Political Philosophy	3
IRLS502	International Political Systems	3
PADM530	Public Policy	3
POLS512	Diversity in American Politics	3
SSGS500	Research Design and Methods	3
Total Semester Hours		**18**

Students must choose a concentration for this degree program and may select from a Concentration in American Politics and Government, Concentration in Comparative Government and Development, Concentration in International Relations, or Concentration in Public Policy.

Concentration in American Politics and Government (12 semester hours)

Provides insight into the democratic process of government in the U.S. Topics include all three branches of government, as well as freedoms protected by the Constitution, the role of women in changing public policy, and the division of power between federal and state governments.

Objectives

Upon successful completion of this concentration the student will be able to:

- Interpret the philosophical theories of constitutional democracy and federalist principles that form the basis of the U.S. political structure.
- Analyze the three institutions of government that create and implement federal policy.
- Assess why the American system of local, state, and federal government and their intergovernmental relations is an invitation to struggle.
- Evaluate the evolution of interest groups in the United States and their various roles assumed in both historical and modern democratic processes.
- Analyze the perspectives of political parties and their impact on federal, state, and local government.
- Judge the emerging impact of gender, race, language, ethnic traditions, sexual orientation, and moral principles on federal, state, and local government.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
MATH530	Applied Statistics	
POLS511	Political Parties and Interest Group Behavior	
POLS620	Legislatures and Legislative Behavior	
POLS630	The Presidency: Institution and Performance	
POLS640	Judicial Politics, Process, and Policy Making	
POLS650	Federalism: The American Governance Process	
Total Semester Hours		**12**

Concentration in Comparative Government and Development (12 semester hours)

Uses the comparative method of analysis to study democracies, monarchies, dictatorships, and authoritarian forms of government. Topics include Al Qaeda, the relationship between military and government affairs, mediation between opposing factions, and economics, including the readings of Karl Marx.

Objectives

Upon successful completion of this concentration the student will be able to:

- Evaluate the "national interest" and how it is formulated through a comparative studies approach.
- Assess the role of culture, politics, economics, the defense establishment, and domestic constraints in decision making and policy making in various political regimes.
- Analyze the impact of foreign policy on domestic decisions as well as domestic considerations on foreign policy.
- Critically assess the unique principles, structure, and organization of the major international organizations.
- Evaluate the role of international organizations in addressing issues of economic development, free and unrestricted trade, capital investment, conflict resolution, threats to international order, terrorism, and war crimes.
- Assess the economic and political processes in international development; diagnose social issues in international development; appraise the need for sustainable international development.
- Examine the prospects of governance by international organizations.
- Evaluate the multidimensional effects of globalization.
- Assess alternatives to current policies in the post-Cold War era and examine their impact on the United States, its allies, regional powers, and the international system.

Concentration Requirements (12 semester hours)

IRLS501	Comparative Political Systems	3
Select 3 courses from the following:		9
HUMN561	Society, Class and Wealth	
IRLS603	Politics and War	
IRLS613	International Negotiation	
MATH530	Applied Statistics	
NSEC608	Regional Security Cooperation	
SCMT529	International Terrorism	
Total Semester Hours		**12**

Concentration in International Relations (12 semester hours)

Discusses various international issues through coverage of international organizations like the Red Cross and the United Nations, as well as the governments of Latin America, Korea, and the Middle East and the use of modern statistical methods and models to solve problems.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Construct a theory about the distinct nature of conflict in the post-Cold War era.
- Assess the norms and purposes of international structures and regimes.
- Critique the political, economic, military, and cultural differences between the Northeast Asian, Latin American, and Middle Eastern regions.
- Analyze global military developments since the mid-twentieth century.

Concentration Requirements (12 semester hours)

MATH530	Applied Statistics	
Total Semester Hours		**12**

Concentration in Public Policy (12 semester hours)

Discusses a variety of security, economic, foreign, and domestic policy issues at the national, state, and local levels. Topics include budgeting and expenditures, data analysis through statistics, management of large bureaucracies, and the Department of Homeland Security.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Assess the prioritization of American domestic, economic, and foreign policy issues.
- Evaluate the policy-making environment and the role of economic, political, cultural, and organizational factors that affect decision making in the United States.
- Analyze the role of the Executive Branch, Congress, the Department of Defense, appropriate Cabinet Departments and the separated armed services in the formulation of security and domestic policy.

Master of Arts in Psychology

Program Description

The Master of Arts in Psychology blends scientific theory and principles with academic research, scholarly and technical writing, and applied skills. This online degree program emphasizes the factors related to human behavior, including lifespan development, social and cultural competency, personality, human relations, and organizational functioning with concentrations available in general psychology, developmental/personality psychology, industrial/organizational psychology, military and trauma psychology, and child life. Through the online classroom, you will interact with peers and instructors who share your passion for the field of psychology. This MA in Psychology has professional application for business, nonprofit, law enforcement, healthcare, research, and child and family services. The degree may also be preparation for further graduate study.

This program does not provide licensure to engage in clinical practice, preparation for licensure, or professional certification.

This program has specific admission requirements.

Spanish language learners may complete the Psychology program through select courses in the General Concentration.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Demonstrate a broad knowledge of psychology's core domains, an understanding of psychology as a science, and advanced knowledge in an area of concentration.
- Evaluate research questions and methodology to solve contemporary problems, based on a critical review of psychological and other scientific literature.
- Develop defensible ethical decisions and behaviors based on the Ethical Principles of the American Psychological Association.
- Deliver ideas in a clear and professional manner appropriate to an audience and consistent with style expectations of the American Psychological Association.
- Accurately identify gaps in own knowledge and abilities, and then accept and use constructive feedback to improve academic performance.
- Evaluate own cultural competency and how biases and assumptions can influence human interactions.

Programmatic Admission Requirements

For this program, the following is required, proof of which must be provided prior to course registration:

- An undergraduate degree in psychology or a completed bachelor's degree in another discipline with credit in the following foundational courses:
  1. **Introduction to psychology or general psychology**: a course designed to introduce students to the broad discipline and study of psychology, its key historical and contemporary events, publications, practices, and perspectives.
  2. **Research methods**: a course in which students learn how to develop sound laboratory and field behavioral science research protocols.
  3. **Statistical methods**: a course that focuses how to statistically analyze and interpret laboratory and field behavioral science research results. Note: One course that focuses on both statistical and research methods may be used to fulfill both of the above course requirements.
  4. For those wishing to pursue the Child Life concentration, an additional prerequisite of a Child Development course covering any age range from birth to 18 (but not all ages) is required.
- A signed Statement of Understanding (SOU) acknowledging that this program does not lead to certification or licensure.

Preadmission courses completed at the undergraduate level must be grade C or better; B or better at the graduate level.

Please visit our APU graduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-382-1783 or info@apus.edu.

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Cyberpsychology, Concentration in Developmental/Personality Psychology, Concentration in Industrial/Organizational Psychology, Concentration in Military and Trauma Psychology, or Concentration in Child Life.

General Concentration (12 semester hours)

The General Concentration allows students to select from a variety of course offerings in various specialties in the field. Coursework provides students with a broad understanding of theory, principles, research, and ideas across multiple psychological domains.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Demonstrate a broad knowledge of psychology's core domains, an understanding of psychology as a science, and advanced knowledge in an area of concentration.
- Evaluate research questions and methodology to solve contemporary problems, based on a critical review of psychological and other scientific literature.
- Develop defensible ethical decisions and behaviors based on the Ethical Principles of the American Psychological Association.
- Deliver ideas in a clear and professional manner appropriate to an audience and consistent with style expectations of the American Psychological Association.

Concentration in Cyberpsychology (12 semester hours)

Cyberpsychology is an emerging subfield within psychology that examines the relationship and implications of artificial intelligence and other technology on human interaction and behavior. This graduate concentration provides students from any disciplinary background with an understanding of the interface between technology and human behavior as viewed through the lenses of marketing, cyberintelligence, psychology, ethics, and the law.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Describe the role and importance of cyberpsychology to human interaction and behavior
- Compare and contrast different modalities of cybercrime
- Apply general principles of law and ethics to online/digital behavior
- Demonstrate the use of psychological tools in informational/deceptive practice

Concentration Requirements (12 semester hours)

PSYC506	Cyberpsychology: Where Psychology and Technology Meet	3
PSYC507	Social Science Perspectives on Cyberdeviance	3
LSTD517	Law, Ethics and Cybersecurity	3
INTL653	Deception, Propaganda and Disinformation	3
Total Semester Hours		**12**

Concentration in Developmental/Personality Psychology (12 semester hours)

The concentration in Development/Personality Psychology provides students with in-depth study of theory and research associated with normal and abnormal human development and personality. The topics associated with lifespan development, psychopathology, substance abuse and counseling are addressed.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Compare and contrast major theories of personality and developmental psychology.
- Analyze the impact of development and personality on interpersonal relationships.
- Describe normal and abnormal development and personality, including diagnoses and treatments of the major forms of psychopathology.

Concentration Requirements (12 semester hours)

PSYC520	Personality and Counseling Theories	3
PSYC620	Substance Abuse and Addiction	3
PSYC526	Psychopathology	3
PSYC509	Child Development	3
Total Semester Hours		**12**

Concentration in Industrial/Organizational Psychology (12 semester hours)

The concentration in Industrial/Organizational Psychology explores psychological topics related to organizational and workplace settings including, among others: motivation, organizational culture, leadership, and workplace assessment.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply psychological theory and research to various scenarios in workplace settings.
- Evaluate organizational culture and structure in the context of understanding and responding to organizational and individual employee needs.
- Effectively apply leadership principles to personal and professional settings.

Concentration Requirements (12 semester hours)

PSYC512	Introduction to Industrial/Organizational Psychology	3
PSYC640	Advanced Topics in Industrial/Organizational Psychology	3
PSYC521	Organizational Behavior	3
PSYC522	Leadership and Change	3
Total Semester Hours		**12**

Concentration in Military and Trauma Psychology (12 semester hours)

The concentration in Military and Trauma Psychology prepares students to have a strong understanding of psychology topics uniquely associated with military and trauma settings. Students will focus on learning about disaster management, leadership, deployment, and emergency intervention.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Recognize and define the unique psychological constructs associated with the military experience.
- Apply psychological theory and research to effective leadership in military positions.
- Analyze best practices in response to military related challenges such as PTSD, impact of deployment on families, or disaster management.

Concentration Requirements (12 semester hours)

PSYC630	Crisis and Emergency Intervention	3
PSYC513	Deployment Psychology	3
PSYC514	Disaster Psychology	3
PSYC522	Leadership and Change	3

Total Semester Hours	**12**

Concentration in Child Life (15 semester hours)

The Child Life Concentration allows students to focus on rigorous study of Child Life theory, practice and application. Coursework will promote development of skills needed to work with children and families during times of acute or chronic illness or trauma while preparing students to complete the academic requirements for the Certified Child Life Specialist credential. There are additional requirements regarding clinical hours that the University does not provide and students must secure their own placement. Additional information on those clinical requirements can be found at www.childlife.org

Note: Completion of this program does not award any professional certifications.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explore advanced child life theory and practice.
- Discuss the issues faced by children and their families during times of acute or chronic illness or trauma to include physical, developmental as well as psychological impact.
- Gain professional-level academic training in the field of Child Life.
- Apply evidence-based, developmentally appropriate practices to support children and their families during times of acute or chronic illness.

Concentration Requirements (15 semester hours)

HDFS501	Advanced Child Life Theory and Practice	3
HDFS502	Therapeutic Play	3
HDFS503	Death, Dying and Grief - A Child's Perspective	3
HDFS540	Family Systems	3
PSYC509	Child Development	3
Total Semester Hours		**15**

Final Program Requirement (3-6 Semester Hours)

Students in a General Concentration, Concentration in Cyberpsychology, Concentration in Developmental/Personality Psychology, Concentration in Industrial/Organizational Psychology, or Concentration in Military and Trauma Psychology must take PSYC697 and PSYC698. Students in the Concentration in Child Life must take PSYC699.

PSYC697	Thesis Preparation [2]	3
PSYC698	Master's Thesis in Psychology [3]	3
PSYC699	Integrative Capstone Project in Psychology [4]	3
Total Semester Hours		**3-6**

1. Required as the first course in this program.
2. Student must have completed at least 85% of their program. PSYC697 is the last course to be completed before PSYC698.
3. PSYC698 is the last course for students in the General Concentration, Concentration in Cyberpsychology, Concentration in Developmental/Personality Psychology, Concentration in Industrial/Organizational Psychology, and Concentration in Military and Trauma Psychology.
4. Only for students in the Concentration in Child Life.

Master of Arts in Reverse Logistics Management

Program Description

Our Master of Arts in Reverse Logistics Management provides advanced level knowledge to a new generation of professionals in reverse logistics management, retail management, and engineering management in complex military or civilian business environments. In today's competitive business climate, organizations are always under pressure to improve the visibility of product and cargo flows through an ever-widening and complex supply chain. This online master's program provides you with a continuation of your study of reverse logistics in domestic and international transportation and logistics scenarios.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Analyze and present the best practices of a reverse logistics operation.
- Classify and explain the differences between forward and reverse logistics.
- Compare and contrast different historical case studies of when a reverse logistics operation was a success and when it was a failure.
- Explain the military and commercial industry history of reverse logistics compared to its current uses.
- Conduct an informal survey of military or manufacturing or retail decision makers and explain how to appraise qualitative as well as quantitative data and reports in the use of reverse logistics processes.
- Differentiate the financial impact of reverse logistics from financial components within a business environment.
- Examine and compare how a real-world application of reverse logistics is improving logistics visibility in a military, manufacturing and retail environment.
- Design and write an implementation plan to use reverse technology processes and technology within a manufacturing, retail or military organization.

Master of Arts in Security Management

Program Description

The Master of Arts in Security Management provides advanced-level knowledge of asset protection, loss prevention management, security program evaluation, international security, and security management ethics and administration. This online master's degree offers you the opportunity to examine and analyze the principles, theories, and application of security management. Because security threats come from multiple online and offline sources, industries need help to develop security plans and protect data and other valuable organizational assets. This online master's program helps advance your knowledge in security management in multiple fields such as federal or local government, military service, law enforcement, and private security.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Recognize and critically analyze the various forms of liability associated with the security management industry.
- Provide cost-effective measures for architectural security design for facilities, airport security, and critical infrastructures.
- Integrate and adapt security concepts and services from traditional approaches to address vulnerabilities to new technologies.
- Evaluate the technologies of security systems, information security, and asset protection methodologies, and construct a reasonable view through critical thinking, to draw logical conclusions towards objective perspectives.

- Assess the security function as it pertains to complex specializations in safety, safeguarding sensitive assets, and conducting vulnerability assessments.
- Compare and contrast historical, economic, and social perspectives of security measures and associate them to contemporary needs of protection and loss prevention.
- Apply the principles of scientific management to security management as a unique discipline.
- Apply the concepts of professional and ethical behavior to security programs and organizations.

Master of Arts in Sociology

Program Description

Sociology is a discipline that focuses on human behavior and interaction. Studying the role of the individual as an inherently social being, sociological training helps prepare students to develop a reflective understanding of human nature. Examining the nature of the public sphere, addressing the breadth of humanity, and using an identity framework are sociological themes emerging at the core of current social movements. Program courses will examine inequality, globalization, social change, and the intersection of people and societies with institutions. Strong foundation in these concepts and theories will help prepare students to examine real world issues critically in individual, social, and organizational contexts. Development of these knowledge and skills areas supports our mission of preparing students for a global society.

This program has specific admission requirements.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Apply core sociological paradigms, theories, and concepts to social issues.
- Employ an advanced knowledge of social science research methods and statistical analysis to examine data in social scientific contexts and interdisciplinary career fields.
- Describe career opportunities, professional responsibilities, and challenges experienced by sociologists.
- Demonstrate proficiency in scholarly writing.
- Demonstrate mastery of theory and concepts in a specialized field of sociology (e.g., medical sociology, sociology of education, or social psychology).

Programmatic Admission Requirements

The following is required for admission into this program. All documentation must be provided prior to course registration:

- Applicants who do not have a bachelor's degree in sociology must have completed one statistics course (taken within ten years or less)

Please visit our APU graduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-382-1783 or info@apus.edu.

Master of Arts in Supply Chain Management

Program Description

The Master of Arts in Supply Chain Management program focuses on the major areas of the industry, including purchasing, transportation, logistics, distribution, warehousing, reverse logistics, and acquisitions management from a global perspective. This degree will help students investigate, understand, analyze, critique, and solve the complex challenges of moving goods in, through, and around an interconnected global supply chain network. The curriculum for this master’s program focuses on the elements of supply chain information; logistics network design, process/product flows, and process improvements for supply chain efficiencies as they apply to the

global supply chain. This versatile degree helps to prepare students for job opportunities in many industries. Businesses, regardless of size, rely on the supply chain to get products to their customers.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Spanish language learners may complete the Supply Chain Management program through select courses.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Investigate the effects of globalization on product/service acquisition and delivery as well as the overall supply chain network.
- Evaluate the implications of supply chain management on organizational effectiveness.
- Assess the supply chain performance of a familiar global supply chain.
- Devise a plan for the alignment supply chain goals with the organizational strategic plan.
- Recommend appropriate supply chain analytics for various scenarios.

Master of Arts in Transportation and Logistics Management

Program Description

The Master of Arts in Transportation and Logistics Management focuses on the principles, policies, trends, and current issues within air, maritime, or ground transportation. Transportation and logistics management is at the core of global supply chain management, encompassing the manufacturing, distribution, retailing, recreation, and national security industries. This versatile master's degree can help you obtain new skills relevant to industries such as the military, government, and large corporations whose success depends on the global fulfillment of customers' requirements.

This program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBPS® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Spanish language learners may complete the Transportation and Logistics Management program through select courses in the General Concentration.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Apply economic principles to evaluate the performance of a transportation system.
- Analyze the history, pattern, and impact of laws and regulation on the various modes of transportation in the United States.
- Evaluate the importance of transportation at the organizational and national levels.
- Examine global transportation issues including systems, documentation, providers, and challenges in international transportation.
- Contrast and compare buyer/seller relationships, third-party relationships, negotiations, bidding, contracts, and the challenges of relationship management in transportation.

Concentration in Reverse Logistics Management (15 semester hours)

This concentration is designed to educate professionals in advanced subjects in reverse logistics as a key component in logistics management. Students will analyze how reverse logistics is being used in their military or civilian logistics organization. It will provide students with advanced knowledge of current applications of reverse logistics use and opportunities to study practical applications in domestic and international transportation and logistics scenarios. In today's competitive global transportation and logistics business climate, organizations are under pressure to adapt to new procedural and technological trends to improve the visibility of product and cargo flows through an ever-widening and complex supply chain. Within the next three to five years, one will see an increase in reverse logistics as a separate organizational component reporting directly to the CEO or CFO.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze and present the best practices of a reverse logistics operation.
- Classify and explain the differences between forward and reverse logistics.
- Compare and contrast different historical case studies of when a reverse logistics operation was a success and when it was a failure.
- Explain the military and commercial industry history of reverse logistics compared to its current uses.
- Conduct an informal survey of military or manufacturing or retail decision makers, and explain how to appraise qualitative as well as quantitative data and reports in the use of reverse logistics processes.
- Differentiate the financial impact of reverse logistics from financial components within a business environment.
- Examine and compare how a real-world application of reverse logistics is improving logistics visibility in a military, manufacturing and retail environment.
- Design and write an implementation plan to use reverse technology processes and technology within a manufacturing, retail or military organization.

Master of Business Administration

Program Description

Our Master of Business Administration (MBA) offers graduate-level theory and research opportunities along with advanced business knowledge and know-how as a foundation for the corporate executive or entrepreneur. This affordable and comprehensive MBA dovetails with several university specialties so you can concentrate in areas of professional or personal interest including entrepreneurship, global business management, information technology management, accounting, finance, nonprofit management, and homeland security.

This MBA program has been designed in consultation with industry business leaders and is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®).

ACBPS® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Spanish language learners may complete the MBA through select courses in the General Concentration.

Statement of Mission - Dr. Wallace E. Boston School of Business

The mission of the Dr. Wallace E. Boston School of Business is to prepare students to be principled leaders in the global business community through a flexible learning environment that leverages technology and best practices focused on the practical application of knowledge.

Priorities

- Curriculum: Provide a well-rounded curriculum that blends practical, real-world application and theoretical aspects of business and economics in a global context.
- Teaching: Foster understanding through strategic goals, quality instruction and continuous evaluation by faculty who are real-world practitioners and scholars.
- Student Interaction: Encourage students to reach their highest potential through collaborative relationships that motivate and sustain growth individually and organizationally.
- Learning Outcomes: Build competencies in effective communication, critical thinking, quantitative experience, knowledge-based decision making, and ethical behavior.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Conduct advanced business analysis by incorporating the use of various data tools in the discovery of possible solutions for implementation.
- Compare and contrast various organizational managerial approaches to analyze their effect on the individual, group, and organization.
- Analyze the legal, regulatory, and compliance issues affecting managers in today's market place and emphasize the importance of continuing education for managers for future legal changes.
- Evaluate and analyze advanced analysis methods and techniques to determine their interdisciplinary applicability to meet current and business needs and evaluate the need for changes in policies and procedures.
- Distinguish and implement analytical financial tools to conduct business analysis and to communicate possible solutions and implementation plans for business decisions.

- Focus on business strategies and approaches used by organizations in their mission to sustain and obtain various marketing segments to increase their growth potential and integrate business functions into a coherent business strategy.
- Compare and contrast market-driven strategies used by organizations to effectively plan for current and future needs of customers.

Concentration in Accounting (9 semester hours)

Offers insight into public, corporate, governmental, and nonprofit accounting, as well as accounting principles used in non-accounting fields and personal life. Addresses concepts, standards, and regulations in preparing, auditing, and analyzing financial statements, budgets, and financial plans. Additional topics include fraud detection, check tampering, and the Internal Revenue Service tax code.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply accounting knowledge into any branch of the accounting profession including public, corporate, governmental, and not-for-profit accounting.
- Identify accounting concepts, standards, and regulations in preparing, auditing, and analyzing financial statements.
- Analyze financial planning, budgeting, and interpretation of financial results.
- Apply accounting principles for non-accounting fields and personal life.

Concentration in Artificial Intelligence in Business (9 semester hours)

The Master of Business Administration with a concentration in Artificial Intelligence (AI) will enhance your understanding of how businesses operate, plan, and manage critical decisions using artificial intelligence (AI). The concentration is a nontechnical focus, designed for business professionals to gain knowledge in AI applications for business operations and strategies for decision making in a swiftly changing domestic and global business environment. The AI concentration aims to provide a comprehensive, holistic understanding of how AI technologies can be strategically integrated into various functions of business management. *No prior coding or technological experience is needed.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply a cross-functional approach to integration of AI applications in business.
- Implement best practices for integrating AI responsive to legal requirements and ethical practice, operational workflows, R&D innovation, and analytics-driven decision-making.
- Identify key decision points and strategies for high level decision makers tasked with implementing workplace change in a rapidly changing technological business environment.

Concentration Requirements (9 semester hours)

BUSN633	Artificial Intelligence: Law, Ethics, and Risk Strategy	3
BUSN634	Artificial Intelligence: Business Strategies for High Level Decision Makers	3
BUSN656	Artificial Intelligence and Crisis Management	3
Total Semester Hours		**9**

Concentration in Business Project Management (9 semester hours)

The Master of Business Administration with a concentration in Business Project Management enhances your understanding of how businesses evolve, adapt, and maintain an enterprise through project management. Through this concentration, you will be introduced to the theories, concepts, and practices that align with project management. You will develop a skill set to track and monitor projects.

Companies depend on project management to stay competitive in developing new offerings, determining the technology needed within the enterprise, updating processes and procedures, and implementing projects for customers.

The concentration is designed for business professionals and military personnel looking to gain knowledge in project management within the business environment.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Evaluate how to properly monitor a project.
- Articulate why a project needs to align with the organization's strategic plan.
- Analyze the project costs and actuals.
- Create a risk management plan.
- Build a project schedule that integrates the various parts of the project to define the critical path.
- Integrate the various parts of the project to determine the health of the project through cost/schedule metrics.
- Articulate the ethical and legal aspects of project management.
- Analyze the various business tools used to define quality control and quality assurance.

Concentration Requirements (9 semester hours)

BUSN665	Advanced Business Project Risk and Quality Management	
BUSN666	Advanced Business Project Integration, Resource, and Stakeholder Management	
BUSN667	Advanced Business Project Cost Controls	
Total Semester Hours		**9**

Concentration in Cybersecurity (9 semester hours)

As defined by industry standards, cybersecurity is the "function of protecting the integrity of data, networks, and programs from unauthorized access, damage, and theft" and as such opens up a field of study that involves course work in areas such as data management, network management, disaster recovery, intrusion protection, computer crime, and many others. Strengthening IT infrastructures and early detection and prevention of attacks is of utmost importance. Recent efforts at cybersecurity legislation have not been as efficacious as needed to fulfill the market growth in this area, leaving a shortage of qualified candidates. Students will learn the business aspects of cybersecurity as cybercrime, cyber terrorism, cyber espionage and cyber-attacks of mammoth levels have led Cybersecurity to become a national priority.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Develop strategies and plans for security architecture consisting of tools, techniques, and technologies to detect and prevent network penetration, and to design effective cybersecurity countermeasures.

- Analyze network designs, topologies, architectures, protocols, communications, administration, operations, and resource management for wired, wireless, and satellite networks that affect the security of the telecommunications within a business environment.
- Compare and contrast various Business Continuity & Disaster Recovery Planning models.
- Assess vulnerabilities in telephony, short messaging service (SMS), cellular data networks, and in Voice over IP (VoIP).
- Assess the application of data mining and artificial intelligence techniques in intrusion detection and prevention.

Concentration Requirements (9 semester hours)

ISSC680	Information Security Management	3
ISSC641	Telecommunications and Network Security	3
Select 1 course from the following:		3
ISSC642	Intrusion Detection and Incident Handling	
SCMT537	Computer Crime	
Total Semester Hours		**9**

Concentration in DoD Project Management (9 semester hours)

The Master of Business Administration with a concentration in DoD Program Management enhances your understanding of the strategic process of the DoD acquisition cycles and the responsibilities of the program manager throughout that process. Through this concentration, you will be introduced to the theories, concepts, and practices to establish a federal government program. You will learn how DoD programs differ from civilian programs and projects.

The concentration is designed for federal employees and military personnel looking to enhance their knowledge of the acquisition cycle and program management within the military and federal government.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the fundamentals of defense systems acquisition management.
- Evaluate the diverse, interrelated and changing nature in the different disciplines of defense systems acquisition management.
- Analyze the regulations and governing structures of defense systems acquisition management.
- Define the role of projects and project management.
- Create a project charter, a scope statement, a Work Breakdown Structure (WBS) and Responsibility Assignment Matrix (RAM).
- Explain key elements of a communication plan to keep stakeholders abreast of progress, problems, and controls.
- Describe the steps required to plan a project.
- Explain the key features of an Executive Program Manager’s role in today’s workforce.
- Demonstrate the necessary knowledge, skills and abilities to be a successful executive in today’s government contracting and acquisition organizations.
- Create an Executive level action plan for practical and measurable government contracting and acquisition policy and procedures changes.
- Create explain the role and pitfalls of ethics in executive decision making.

Concentration Requirements (9 semester hours)

DEFM540	Program and Acquisition Management	3
DEFM550	Program Manager's Skills	3
DEFM551	Executive Program Manager's Decision Making Skills	3
Total Semester Hours		**9**

Concentration in Event Planning and Management (9 semester hours)

Provides a foundation for developing skills and knowledge related to a variety of topics related to meeting and event planning and management. Courses focus on event coordination, risk management, leadership, budgeting, financial management, and legal issues related to meeting and event planning and management.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Structure an event plan that identifies goals and objectives as well as potential challenges and security risks.
- Develop a budget for an event to maximize return on investment (ROI)
- Apply best practices of successful companies to an event plan.
- Identify potential risks for an event and develop a mitigation plan.

Concentration Requirements (9 semester hours)

Select 3 courses from the following:		9
HOSP610	Event Coordination and Management	
HOSP620	Financial Planning and Management for Events	
HOSP630	Event Risk Management and Safety	
HOSP640	Leadership in Meeting and Event Planning	
SPMT612	Sports Event Management	
Total Semester Hours		**9**

Concentration in Finance (9 semester hours)

The Finance concentration covers a variety of financial subjects relevant to business management, commercial and investment banking, and government finance. Course topics in this concentration include security markets, commercial bank management, investment valuations, portfolio management, capital budgets, and the finance theory and analytical tools used to resolve financial problems and make effective judgments.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply skills and expertise in various financial areas, such as risk management, portfolio construction, financial statement analysis, new venture financing, and global finance.
- Demonstrate a deep understanding of international finance, global currencies, market data, cross-border transactions, and investment opportunities.
- Evaluate financial data and present information in an effective manner for organizational financial decision-making.

Concentration Requirements (9 semester hours)

FINC615	Investment Management	3
FINC620	International Finance	3
FINC625	Entrepreneurship Finance	3
Total Semester Hours		**9**

Concentration in Global Business Management in a Digital World (9 semester hours)

In the Global Business Management in a Digital World Concentration students examine the current and evolving practices, perspectives, and processes engaged in the global digital environment from both a macro- and micro-level. Subject matter focus includes economic, legal, ethical, technological, and operational perspectives of decision making in an ever-changing global marketplace.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explore the intricacies of digital transformation on a global scale, including use of digital technologies, their impact on various industries, and the challenges and opportunities they present for businesses operating in different parts of the world.
- Analyze the strategies employed by multinational corporations and global startups to navigate the complexities of the digital landscape, considering factors such as market entry strategies, finance, digital marketing approaches, and supply chain optimization in a global context.
- Examine the ethical implications, legal frameworks, and challenges of transactions and management of cultural diversity in the international business environment, including digital business practices relating to intellectual property rights, artificial intelligence, cybersecurity, personnel management, corporate social responsibility, and sustainability in an increasingly digitally connected world.
- Explore best practices for operational management in global digital environments, including supply chain management, logistics optimization, and cross-cultural collaboration, to enhance efficiency and competitiveness in the global marketplace.
- Apply theories of international finance to construct strategies for mitigating financial risk and maximizing return for businesses operating in different parts of the world.

Concentration Requirements (9 semester hours)

BUSN619	Global Business Perspectives in a Digital World	3
BUSN632	International Business Law, Ethics, & Cultural Intelligence for Business Leaders	3
BUSN636	International Finance and Emerging Global Markets	3
Total Semester Hours		**9**

Concentration in Global Supply Chain Management (9 semester hours)

The concentration in Global Supply Chain Management equips students with an overview of the strategic knowledge and practical skills necessary for the dynamic supply chain industry. Through a curriculum blending theory with real-world applications, students delve into the intricacies of managing risk, logistics, operations, and distribution channels to optimize organizational efficiency and enhance competitive advantage.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Demonstrate an overall knowledge of different supply chain management areas, including capacity planning, demand management, order management, warehouse management, and transportation.
- Identify global supply chain management best practices.
- Explain how to improve the operational efficiencies of a supply chain.
- Classify supply chain solutions using problem-solving risk management analysis.

Concentration Requirements (9 semester hours)

SCMG503	Sustainable Supply Chain Strategy	3
SCMG604	Managerial Supply Chain Risk Management	3
SCMG609	Supply Chain Analytics	3

Total Semester Hours	**9**

Concentration in Government Contracting and Acquisition (9 semester hours)

Addresses the necessary knowledge, skills, and abilities needed to be successful in today's contract management industry, including government contracting within federal agencies or military and civilian defense establishments. Topics include FAR requirements, unallowable costs, new acquisition regulations, contract reforms, project management, and risk management.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explain the elements of cost in overhead.
- Explain the FAR requirements.
- Explain the general treatment of unallowable costs.
- Analyze the fundamentals of defense systems acquisition management.
- Identify the provision of the New Acquisition Regulations.
- Debate whether contract reforms have increase competition.
- Interpret the nature of and justification for the professional military ethic.
- Investigate the basic ethical problems that defense contract managers must solve.
- Demonstrate the necessary knowledge, skills and abilities to be a successful executive in today's government contracting and acquisition organizations.
- Create an Executive level action plans for practical and measurable government contracting and acquisition policy and procedures changes.
- Demonstrate how executive decision making is conducted for complex major military equipment developments.
- Define the role of projects and project management.
- Assess major schedule, cost, and performance risk elements for managing risks.
- Create a project charter, a scope statement, a Work Breakdown Structure (WBS), and Responsibility Assignment Matrix (RAM).

Concentration Requirements (9 semester hours)

DEFM531	Advanced Business Solutions for Mission Support	3
DEFM550	Program Manager's Skills	3
DEFM551	Executive Program Manager's Decision Making Skills	3
Total Semester Hours		**9**

Concentration in Healthcare Administration (9 semester hours)

Discusses strategies for creating efficient and effective organized delivery systems, key metrics to monitor operations, and proper techniques for gathering and analyzing health care performance measurement data. Takes an in-depth look at the financial side of healthcare, including budgets, costs, prices, and profit margins.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Assess strategies for creating efficient and effective organized delivery systems.
- Create budgets for the purpose of planning.
- Compute costs, prices, and profit margins.
- Use proper techniques for gathering and analyzing healthcare performance measurement data.
- Analyze key metrics to monitor operations.

Concentration Requirements (9 semester hours)

HCAD650	The Business of Healthcare	3
HCAD651	Healthcare Finance	3
HCAD652	Operational Quality in Healthcare	3
Total Semester Hours		**9**

Concentration in Human Resource Management in a Global World (9 semester hours)

The Human Resource Management in a Global World concentration compares various managerial approaches to employment law, discussing rewards systems, measurement of employee performance, and other compensation packages. Courses in this concentration will probes policies and procedures involving legislative, regulatory, and organizational issues affecting human resource management in a global workforce. Other course topics include workplace safety and the recruitment, development, and training of human capital.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Evaluate various laws, rules, regulations, and policies affecting human capital in today's global workforce.
- Recommend strategic initiatives involving the human resources department that align with the strategic direction of the organization.
- Differentiate individual and group behavior in organizations to increase awareness of the problems and opportunities in managing human resources.

Concentration Requirements (9 semester hours)

HRMT602	Employment Law and Labor Relations	3
HRMT603	Human Resource Policy	3
HRMT605	Strategic Human Resource Management Practices	3
Total Semester Hours		**9**

Concentration in Information Technology Management (9 semester hours)

Delves into successful project management for information technology (IT) projects, including evaluation of various system development life cycle (SDLC) models (waterfall, spiral, incremental release, and prototyping) and application of corresponding methods to identify critical checkpoints and reviews. Examines technologies, policies, and practices to ensure security in information systems.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Evaluate various System Development Life Cycle (SDLC) models.
- Examine strategies to apply technology to enhance productivity in organizations.
- Assess and mitigate risk in Information Technology initiatives.
- Appraise technologies, policies, and practices to assure security in information systems.

Concentration Requirements (9 semester hours)

ITMG624	Information Technology Project Management	3
Select 2 courses from the following:		6
HRMT605	Strategic Human Resource Management Practices	
ISSC621	Computer Forensics	
ISSC640	Computer Networks and Data Systems	

ISSC641	Telecommunications and Network Security	
ISSC642	Intrusion Detection and Incident Handling	
ISSC660	Information Assurance	
ISSC680	Information Security Management	
Total Semester Hours		**9**

Concentration in Marketing (9 semester hours)

Analyzes supply chain management, global and electronic marketing strategies, and ecommerce business opportunities. Probes the development of business, product, and pricing strategies, as well as the creation, execution, and management of business plans for successful entry into business areas. Critical evaluations of websites, web tools, promotions, advertising, selling, and communications are also explored.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze e-commerce business opportunities and formulate business strategies.
- Analyze global and electronic marketing strategies.
- Develop product and pricing strategies.
- Analyze supply chain management.
- Develop business plans for successful entry to business areas.
- Formulate, execute, and manage global business plans.

Concentration Requirements (9 semester hours)

BUSN624	Principles of E Commerce	3
MKTG601	Strategic Internet Marketing	3
MKTG602	Global Marketing Strategy	3
Total Semester Hours		**9**

Concentration in Operational Crisis Management (9 semester hours)

The Master of Business Administration degree in Crisis Management (MCM) enhances understanding of how a disaster could impact an organization’s reputation, value, and sustainability, with a focus on its employees, customers, stakeholders, suppliers, and the general public. Business sustainability and competitiveness depend on the stability of resources and the continuity of operations. A clear competitive advantage includes the availability of a business continuity strategy.

The degree is designed for business professionals and military personnel. Through the online Master of Business Administration in Crisis Management, the student will be introduced to the theories, concepts, and practices that align crisis management programs in a comprehensive business plan. Students will develop a skill set for translating problems and crises into solutions for implementation as they learn how to lead organizations through oftentimes complex transformations. Completion of this degree will build management skills at various levels of corporate, government, military, and nonprofit sectors.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Gain valuable insight on how businesses/organizations can be better prepared to face crises and challenges.
- Evaluate the stages of a crisis management plan and the effectiveness of sustainable initiatives.
- Articulate why any management plan needs to align with the organization’s strategic plan.

- Determine if an organization has the necessary technology and processes in place to ensure the continuity of the business in case of a crisis or disaster.
- Research policies and initiatives and develop performance goals that are strategic and ambitious.
- Build an awareness of AI and sustainability programs already in place within the company.
- Learn how public relations and media sources play a critical role in the crisis response formulation.
- Explore ethical and legal issues included in an organization’s crisis management plan.
- Conduct a post-crisis review when the crisis is no longer the focal point but still requires attention.
- Create an e-portfolio that is representative of the skills learned or enroll in comprehensive exam, to be chosen at the student’s discretion.

Concentration Requirements (9 semester hours)

Select 3 courses from the following:		9
BUSN627	Legal, Policy, and Ethical Issues of Crisis Situations	
BUSN654	Business Continuity	
BUSN655	Sustainability and Crisis Management	
BUSN656	Artificial Intelligence and Crisis Management	
BUSN657	Crisis Management for the Business Leader	
EDMG530	Economics of Disaster	
EDMG560	Crisis Action Planning	
EDMG612	Risk Communications	
MGMT604	Organizational Crisis Management	
Total Semester Hours		**9**

Concentration in Operational Technology Management (9 semester hours)

Technology can provide a clear competitive edge when leaders understand how to leverage it in order to drive decisions. The Operational Technology Management concentration of the Master of Business Administration program enhances the student’s understanding of technology’s impact on a leader’s decision-making and the company’s sustainability. The concentration also advances the student’s knowledge in determining when to use technology. The student will be exposed to how technology can enhance profitability and return on investment.

The concentration is designed for business professionals and military personnel. Through the online Master of Business Administration in Operational Technology Management, the student will be introduced to the theories, concepts, and practices that align with the operational technology concentration. Students will be exposed to the skill set for translating complex problems into answers through technology, as they learn how to lead organizations. Completion of this concentration will build management skills at various levels of corporate, government, military, and nonprofit sectors.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Gain valuable insight on how businesses/organizations can make better decisions with technology.
- Evaluate the various types of technology that can help with decision-making.
- Articulate how artificial intelligence assists with data-mining.
- Determine if an organization has the necessary technology and processes in place to further the decision-making process.
- Evaluate effective business presence on the web.
- Conduct a technology review of your organization.

Concentration Requirements (9 semester hours)

BUSN656	Artificial Intelligence and Crisis Management	3
BUSN669	Business Intelligence Analysis	3
ISSC680	Information Security Management	3
Total Semester Hours		**9**

Concentration in Sports Management (9 semester hours)

Illustrates managerial leadership theories and practical concepts utilized by sports industry professionals in leadership positions. Critiques sport marketing strategies and finance theory and concepts relevant to the sports, fitness, health, and wellness operations. Looks at promotions, public relations, and communications involved in the sports industry.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Illustrate managerial leadership theories and practical concepts utilized by sports industry professionals in leadership positions.
- Critique sport marketing strategies, economic decision making, and finance theory and concepts relevant to the sport industry.
- Analyze ethical and legal practices in today’s global sports industry.

Concentration Requirements (9 semester hours)

SPMT502	The Sports Industry	3
SPMT609	Sports Marketing, Promotion, and Public Relations	3
Select 1 course from the following:		3
SPMT608	Sports Law	
SPMT610	Sports Finance	
SPMT613	Sports Entrepreneurship

Final Program Requirement (3 semester hours)

BUSN696	Capstone: E-Portfolio [1]	3
Total Semester Hours		**3**

1. Taken once all other requirements have been met.

Master of Education: Educational Leadership

Program Description

The Master of Education in Educational Leadership program is designed for current educators who wish to specialize in K-12 administrator and supervisory functions in public and/or private educational school settings. Each educational leadership concentration provides a different focus and offers practical applications, as well as the knowledge, skills, and dispositions needed to be successful as an educational leader.

This online master's degree is meant for practicing teachers seeking administrator roles which do not require state certification.

Completion of the program does not lead to state certification or licensure.

This program has specific admission requirements.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Manage a school setting with awareness of historical, social, political, legal, and economic influences on education, show effective leadership, and also recognize the importance of community and collaboration.
- Assimilate effective interpersonal communication skills to work well with school personnel, pupils, and parents and to acknowledge and appreciate diversity in its many forms to assess and instruct without influence of bias.
- Support educational technology as an effective means to promote student learning as well as a medium to improve communication among colleagues, staff, parents, students, and the larger community.
- Develop school policy, implement strategic plans and new programs, exhibit problem-solving skills, analyze and respond to emerging issues and trends in education, and put into practice the accepted norms and principles of educational research.
- Manage daily school operations including record keeping, finances, and reports, and show effective leadership in the areas of supervision, evaluation, professional development, legal issues, and school reform that results in student success through fair and ethical means.
- Recommend performance-based assessments, and implement assessment, instruction, evaluation, and intervention plans as appropriate for diverse learner needs.

If required, students in this program must be physically located in proximity to a school district where the right to conduct on-site observations and an internship is approved.

Background check requirements, including fees, for the selected school placement(s) are the student's responsibility.

Programmatic Admission Requirements

The following documentation is required for admission into any of the Educational Leadership program concentrations, and must be provided prior to course registration:

- Signed statement of understanding (SOU)
- Documentation of 1 year K-12 teaching experience or 1 year K-12 managerial experience in an instructional setting

Important notes:

- This program is not designed to lead to certification or licensure. In order to make an informed decision about your education, prior to applying here we strongly encourage you to explore any state-specific or other requirements applicable to you, including with respect to certification, licensure, and certificate enhancements.
- You are required to take EDUC519 as the first course in this degree program, but other courses may be taken in conjunction with EDUC519.
- You must be physically located in proximity to a school district where the right to conduct on-site observations is approved.
- Background check requirements and fees for on-site observations might be required and are your responsibility.

Please visit our APU graduate admission page for more information on institutional admission requirements.

Total Semester Hours		**18**

Students must choose a concentration for this degree program and may select from a Concentration in K-12 Athletic Administration, Concentration in K-12 Professional Administration, or Concentration in K-12 Virtual School Administration.

Concentration in K-12 Athletic Administration (18 semester hours)

Teaches an array of leadership skills necessary for managing an athletic department in nontraditional K-12 learning organizations such as charter and private schools. Topics include: budgeting and financial management; legal issues, risk, and liability management; conflict resolution; managing facilities; and strategies for coaching and mentoring teachers.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Help to prepare candidates for leadership and managerial positions in athletic administration at the interscholastic level.
- Develop leadership skills to meet today's secondary dual role of managing an athletic department and performing everyday supervision and leadership duties as a school administrator.
- Develop specific leadership skills relative to athletic budgeting and financial management, handling legal issues relative to managing an athletic department, conflict resolution, and managing facilities.

Concentration Requirements (18 semester hours)

SPMT603	High School Athletic Administration	3
SPMT650	Legal Issues in High School Athletic Administration	3
SPMT610	Sports Finance	3
SPMT620	Leadership and Management in Sport	3
EDUC523	Supervision of Instruction	3
EDUC695	Capstone Seminar K-12 Learning Organization	3
Total Semester Hours		**18**

Concentration in K-12 Professional Administration (18 semester hours)

Explores the unique structures of nontraditional K-12 learning organizations, including charter schools and private schools. Topics include: effective teaching strategies during the observation/walkthrough process; methods of collecting and analyzing assessment data; effective fundraising programs; and the importance of quality financial reporting and controls to protect and sustain nonprofit organizations.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply programmatic objectives to non-traditional school environments.
- Synthesize key similarities and differences between traditional and non-traditional school environments.

Concentration Requirements (18 semester hours)

NFPM642	Financial Management in Nonprofit	3
NFPM643	Nonprofit Fundraising Planning and Implementation	3
EDUC504	Curriculum, Instruction, and Assessment	3
EDUC523	Supervision of Instruction	3
EDUC651	Technology Leadership in Education	3
EDUC695	Capstone Seminar K-12 Learning Organization	3
Total Semester Hours		**18**

Concentration in K-12 Virtual School Administration (18 semester hours)

Looks at online learning in nontraditional K-12 learning organizations. Topics include: different types of software/genres and their effect on raising student achievement; intellectual property and copyright infringement issues; philanthropy and effective fundraising programs; and the differences between the learning needs and abilities of adult learners and K-12 learners.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply programmatic objectives to non-traditional school environments, including consideration for instructional design and technological access.
- Synthesize key similarities and differences between traditional and non-traditional school environments, including an appropriate expression of governance, online learning culture, socialization, staffing, and professional development.
- Synthesize andragogy and pedagogy appropriate for the virtual environment.

Concentration Requirements (18 semester hours)

NFPM642	Financial Management in Nonprofit	3
NFPM643	Nonprofit Fundraising Planning and Implementation	3
EDUC621	Online Learning for the Adult and the K-16 Learner	3
EDUC622	Ethics and Legal Issues in Online Learning	3
EDUC623	Online Learning and Student Achievement	3
EDUC695	Capstone Seminar K-12 Learning Organization	3
Total Semester Hours		**18**

1. Required as the first course in the program but may be taken concurrently with another course.

Master of Education: Higher Education Administration

Program Description

The M.Ed. in Higher Education Administration program comprises 36 semester hours of study combining a 24 semester hour foundational set of courses plus various 12 semester hour concentrations. The program foundational courses feature a broad base of exposure to key elements integrating historical, social, ethical, financial, legal, political, cultural, and student affairs aspects of higher education administration and management. The three specialized concentration options are Online Administration, Leadership and Supervision, and Professional Coaching. The program focuses on current and prospective educators and administrators whose desire is to gain knowledge and skills which are often required in fields such as academic administration, college/university leadership, community college administration/leadership, program and curriculum development and evaluation, institutional research and advancement, online education, educational technology, financial supervision, and enrollment management.

Completion of this program does not lead to state certification or licensure.

This program has specific admission requirements.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Integrate higher educational history, philosophy, values, governance, economics, and policies into the professional practice of administration of higher education
- Create an effective learning environment that results in student success
- Implement appropriate leadership/management theories and concepts for the purpose of institutional advancement, stakeholder support, financial resource growth, community collaboration, and staff/faculty development
- Evaluate the use of educational technology to promote student learning and extend communication among stakeholders
- Develop institutional policies that align with ethical and legal standards in response to current societal and cultural realities
- Assess performance-based data regarding organizational effectiveness and student success, and implement appropriate intervention plans that effectively address learner needs
- Assess faculty performance and institutional alignment to fulfill the overall mission and vision of the institution

Programmatic Admission Requirements

The following documentation is required for admission into M.Ed. in Higher Education Administration program, and must be provided prior to course registration:

- Signed statement of understanding (SOU)

Please visit our APU graduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-382-1783 or info@apus.edu.

2. Taken once all other requirements have been met.

Master of Education: Online Teaching

Program Description

The Master of Education in Online Teaching program is designed for those who teach, facilitate, or lead in K-12 virtual/online or hybrid schools or institutions and who already hold K-12 teacher licensure(s). This program does not lead to licensure.

This program has specific admissions requirements.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Analyze digital learning strategies that impact student learning.
- Analyze ways to participate as members of professional learning communities.
- Apply research to address digital learning problems in practice.
- Apply approaches to interact effectively with program mentors, academic specialists, colleagues, parents, and community stakeholders in digital learning contexts.
- Evaluate subjects they teach and how to teach those subjects to digital learners.
- Evaluate digital assessments.
- Create digital learning environments for online, face-to-face, and/or hybrid contexts.

Programmatic Admission Requirements

The following documentation is required for admission into the M.Ed. in Online Teaching program, and must be provided prior to course registration:

- Signed statement of understanding (SOU)

Important notes:

- This program is not designed to lead to certification or licensure. In order to make an informed decision about your education, prior to applying here we strongly encourage you to explore any state-specific or other requirements applicable to you, including with respect to certification, licensure, and certificate enhancements.
- You are required to take EDUC621 as the first course in this degree program, but other courses may be taken in conjunction with EDUC621.

Please visit our APU graduate admission page for more information on institutional admission requirements.

Master of Education: Student Affairs in Higher Education

Program Description

The M.Ed. in Student Affairs in Higher Education program will help to prepare students for professional responsibilities in academic advising, campus leadership, student services, student life, career services, financial management, and other leadership roles within

higher education institutions. This program uniquely combines educational leadership courses and student affairs courses to develop skills that are often needed in student affairs professionals who make a positive impact in higher education. Coursework focuses on leadership development; administrative functions; applying theory to practice; social and cultural competency; organizational theory; assessment; and current principles, approaches, and practices in student affairs. Distance education practicum experiences will provide real-world experience at the culmination of the program.

In addition to integrated coursework, students select an area of concentration from one of the following options: campus leadership, academic advising, and career coaching and services. Student learning outcomes and curriculum are aligned to American College Personnel Association (ACPA®), National Association of Student Personnel Administrators (NASPA®), and Council for the Advancement of Standards in Higher Education (CAS) professional competency standards, depending on the concentration selected.

ACPA® is a registered trademark of the American College Personnel Association.

NASPA® is a registered trademark of the National Association of Student Personnel Administrators.

This program has specific admission requirements.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Explain the history, values, and philosophy of student affairs as it connects to current professional practice.
- Apply student development theories relevant to student learning.
- Develop knowledge, skills, and dispositions relating to policy development, law, compliance, and governance structures in higher education.
- Demonstrate effective interpersonal skills and evidence-based strategies when advising students and groups in higher education settings.
- Demonstrate leadership skills through envisioning, planning, and affecting change in higher education settings.
- Develop awareness and skills related to student success, which effect systemic change in higher education settings.
- Use organizational, management, and leadership theories and skills relevant in higher education settings.
- Demonstrate how to analyze current research, design research studies, use statistical methods, and interpret results accurately.
- Analyze data to inform programs and services in higher education settings.
- Use digital tools, resources, and technologies to advance student learning, development, and performance as a student affairs professional.
- Use ethical standards and commitment to personal wellness and growth to develop and maintain integrity in personal and professional life.

Programmatic Admission Requirements

The following documentation is required for admission into M.Ed. in Student Affairs in Higher Education program, and must be provided prior to course registration:

- Signed statement of understanding (SOU)

Please visit our APU graduate admission page for more information on institutional admission requirements.

Students must choose a concentration for this degree program and may select from a Concentration in Academic Advising, Concentration in Campus Leadership, or Concentration in Career Coaching and Services.

Concentration in Academic Advising (12 semester hours)

Focuses on NACADA®'s core competencies and values associated with academic advising in higher education settings. Conceptual, informational, and relationship components of advising are covered and applied to real-world scenarios. Topics include history of advising, relationship building, decision-making, goal setting, examining outcomes, advising approaches, and student learning and assessment.

NACADA® is a registered trademark of NACADA: The Global Community for Academic Advising, Inc.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Develop a personal philosophy of academic advising in alignment with the core values, ethical standards, and core competencies of the profession.
- Apply academic advising theories and evidence-based strategies through experiential activities and Practicum experiences.

Concentration Requirements (12 semester hours)

SAHE520	Introduction to Academic Advising	3
SAHE533	Academic Advising Theory and Practice	3
SAHE502	Student Learning and Assessment	3
EDUC645	Career Counseling and Development	3
Total Semester Hours		**12**

Concentration in Campus Leadership (12 semester hours)

Focuses on theories, models, and effective practices often needed to serve in leadership roles within higher education settings and influence transformational change. Studies include effective administration, management, leadership, and supervision of higher education departments. Coursework topics include organizational leadership, transformational leadership and change, financial management, strategic planning, and evaluation of programs and data-driven decision-making.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Demonstrate effective leadership skills in managing and supervising student affairs departments.
- Apply leadership models and theories in experiential activities and Practicum experiences.

Concentration Requirements (12 semester hours)

EDUC604	Leadership in Higher Education	3
SAHE508	Organizations, Culture, and Change	3
EDUC516	Financial Management in Higher Education	3
SAHE506	Strategic Planning and Program Evaluation	3
Total Semester Hours		**12**

Concentration in Career Coaching and Services (12 semester hours)

Focuses on the knowledge needed to help provide effective career coaching and services to students transitioning from educational settings into the world of work. Foundational coaching skills, theories of career development, and use of assessments associated with career coaching are covered.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply theory and evidence-based strategies in career coaching/services through experiential activities and Practicum experiences.
- Apply coaching approaches to assist in career development and exploration in higher education.

Concentration Requirements (12 semester hours)

EDUC536	Foundations of Coaching	3
EDUC633	Emotional Intelligence and Coaching Assessments	3
EDUC645	Career Counseling and Development	3
EDUC635	Coaching Groups and Teams	3
Total Semester Hours		**12**

Final Program Requirement (3 semester hours)

Select 1 course from the following:		3
SAHE695	Capstone Seminar for Student Affairs in Higher Education [2]	
SAHE698	Practicum [2]

1. Required as the first course in the program.

2. Taken once all other requirements have been met.

Master of Public Administration

Program Description

The Master of Public Administration (MPA) offers you the knowledge often required to handle the difficult administrative environment that is government service today. This online master's program is ideal if you're currently in public management or public service or looking to transition from a different discipline. Your classmates will bring their own wealth of knowledge from many fields, and through the use of case studies, facilitated discussion, and other exercises, we build on this shared experience.

This online MPA program promotes the core values of service, ethics, knowledge, competence, and diversity. Working across silos, networking among and between agencies and stakeholders, and strategically addressing the issues at hand is a fundamental theme of this online degree program. The culminating goal is to teach you how to competently tackle hard questions, creatively solve them, and communicate your solutions through diverse public, private, and nonprofit organizations.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Assess the leading approaches to managing public organizations.
- Evaluate the moral, legal, and ethical aspects of decision-making in the public sector.
- Evaluate the government budgeting process and funding of government programs and organizations.
- Appraise the role of government organizations in public policy development and implementation.
- Develop solutions to a public issue that take into account multiple stakeholders and decision-makers.
- Implement the core concept of public service by providing evidence of service to the public or nonprofit sector.
- Critique a difficult political situation and offer creative and innovative solutions that take into account multiple stakeholders and decision-makers.
- Assess the part human differences, or lack thereof, plays in public administration.

Students must choose a concentration for this degree program and may select from a Concentration in Coaching and Conflict Resolution, Concentration in Criminal Justice, Concentration in Disaster Management, Concentration in Environmental Policy, Concentration in Health Policy, Concentration in Human Resources, Concentration in National Security, Concentration in Organizational Management, Concentration in Public Policy, or Concentration in Security Management.

Concentration in Coaching and Conflict Resolution (9 semester hours)

Introduces the concepts and methods of coaching and conflict resolution necessary to successfully manage a diverse, global workforce. Topics include conflict analysis, negotiation (individual, across sectors and internationally) and mediation along with skills, methods and strategies required to be an effective coach. This concentration requires a high degree of interaction and role play.

Concentration Requirements (9 semester hours)

Select 3 courses from the following:		9
EDUC536	Foundations of Coaching	
EDUC633	Emotional Intelligence and Coaching Assessments	
EDUC635	Coaching Groups and Teams	
IRLS613	International Negotiation	
IRLS611	Conflict Analysis and Resolution: Theory and Practice	
Total Semester Hours		**9**

Concentration in Criminal Justice (9 semester hours)

This criminal justice concentration introduces the foundations of criminal justice, the criminal justice system, and criminology, providing insight into national and local law enforcement issues. Topics include ethical and professional behavior, criminal law, criminal procedure, and applied theories. These courses support students developing knowledge and skills in courts, corrections, and police administration.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Distinguish between the major systems of Criminal Justice and how the functions of police, prosecution, courts, and corrections interface.
- Analyze theories and philosophies of criminal behavior as they influence modern developments in punishment, sentencing, and corrections.
- Apply the concepts of professional and ethical behavior within the criminal justice system.

Concentration Requirements (9 semester hours)

CMRJ500	Criminal Justice Ethics	3
CMRJ501	Criminology	3
CMRJ512	Police Administration	3
Total Semester Hours		**9**

Concentration in Disaster Management (9 semester hours)

Introduces the concepts of emergency management. Topics covered include the history of the field, hazard analysis, mitigation, planning, communication, and terrorism. Looks at the interaction, coordination, and facilitation between federal, state, and local agencies during preparation, response, and recovery operations. An historical viewpoint of emergency response organizational development is also covered.

Concentration Requirements (9 semester hours)

Select 3 courses from the following:		9
EDMG502	Emergency and Disaster Theory	
EDMG503	Emergency and Disaster Planning and Management	
EDMG509	Interagency Disaster Management	
EDMG530	Economics of Disaster	
Total Semester Hours		**9**

Concentration in Environmental Policy (9 semester hours)

Evaluates the major legal, regulatory, and policy framework that encompasses environmental programs and projects in the U.S. and with international political, commercial, and non-governmental institutions. Examines global environmental change, potential impacts on environmental policy and society, and the public and private economic costs and effects of environmental programs.

Concentration Requirements (9 semester hours)

Select 3 courses from the following:		9
EVSP501	Environmental Management	
EVSP502	Environmental Economics	
EVSP503	Environmental Policy, Regulation, and Law	
EVSP628	Global Environmental Change	
Total Semester Hours		**9**

Concentration in Health Policy (9 semester hours)

Introduces the role of public health systems in America, including federal, state, and local public health agencies, as well as current political, environmental, epidemiologic, legal, and ethical issues impacting the public health field. Covers the skills often required to be an effective health care administrator.

Concentration Requirements (9 semester hours)

PBHE501	Public Health in America	3
PBHE502	Health Policy	3
PBHE601	Health Care Administration	3
Total Semester Hours		**9**

Concentration in Human Resources (9 semester hours)

Offers an advanced study of human resource management with particular emphasis on the strategic planning process. Explores current practices in the workplace, including policy development with an emphasis on the interdependence of human resource and organizational operating functions. Additional topics include employment law, discrimination in the workplace, and practices used by companies to leverage their human capital.

Concentration Requirements (9 semester hours)

Select 3 courses from the following:		9
HRMT600	Human Resource Management	
HRMT602	Employment Law and Labor Relations	
HRMT603	Human Resource Policy	
HRMT605	Strategic Human Resource Management Practices	
Total Semester Hours		**9**

Concentration in National Security (9 semester hours)

Assesses the major concepts of strategic thinking that underpin the national security decision-making process in the U.S, including current challenges to national security interests, especially terrorism and weapons of mass destruction. Also examines contemporary globalization, its links to emergent threats, and potential U.S. responses, as well as the implications of rising worldwide economic interdependence upon national security policy.

Concentration Requirements (9 semester hours)

Select 3 courses from the following:		9
NSEC501	Institutions of National Security	
NSEC503	U.S. National Security	
NSEC610	National Security and Globalization	
NSEC612	National Security and Diplomacy	
NSEC613	Current and Emerging Threats to U.S. National Security	
Total Semester Hours		**9**

Concentration in Organizational Management (9 semester hours)

Focuses on the concepts and methods of managing an organization, including techniques for structuring and resolving managerial problems in public and private organizations. Topics include human behavior principles in individual, group/team, and organizational settings; interpersonal relations, motivation, and decision-making in organizations; and the variables involved in crisis planning, communication, and management.

Concentration Requirements (9 semester hours)

Select 3 courses from the following:		9
MGMT600	Organizational Management	
MGMT601	Organizational Behavior	
MGMT603	Organizational Development	
MGMT604	Organizational Crisis Management	
Total Semester Hours		**9**

Concentration in Public Policy (9 semester hours)

This concentration is designed to provide you with a comprehensive overview of essential leadership skills required for sound research and data analysis, judgment, communication, action, and creative and critical thinking. This concentration helps prepare you to solve real-world problems at local, state, and national levels. Knowledge gained can be useful for those interested in senior-level management positions in government agencies, corporations, research institutes, advocacy or non-profit organizations, and other associations where the ability to analyze and evaluate information is a required skill.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Evaluate the multi-disciplinary nature of the major theories underlying the discipline of public policy.
- Extrapolate the processes by which public policies are designed, implemented, and evaluated.
- Evaluate the effectiveness of existing (or the impact of proposed) public policies.
- Demonstrate appropriate analytical skills to analyze contemporary policy issues.
- Design public policies to solve strategic or social problems.
- Deconstruct contemporary policy case studies using an ethical framework.
- Communicate policy recommendations to diverse audiences.

Concentration Requirements (9 semester hours)

Select 3 courses from the following:		9
MAPP501	Foundations of Governance and Policy	
POLS640	Judicial Politics, Process, and Policy Making	
MAPP503	Digital Government	
MAPP504	Economics and Public Policy	
PADM611	Law and Public Policy	
Total Semester Hours		**9**

Concentration in Security Management (9 semester hours)

Probes contemporary issues in security management, such as background checks, budgeting, security liability, human resources issues, and equal opportunity rights. Topics include: the 9/11 Commission Report on terrorist attacks upon the U.S.; relevant security programs in

the public and private sectors; and the tools necessary to effectively plan for, implement, monitor, and administer a security organization.

Concentration Requirements (9 semester hours)

Select 3 courses from the following:		9
SCMT507	Assets Protection & Loss Prevention Management	
SCMT508	Evaluation of Security Programs	
SCMT509	Contemporary Issues in Security Management	
SCMT553	Security Program Administration	
Total Semester Hours		**9**

Final Program Requirement (3 semester hours)

Select 1 course from the following:		3
PADM697	Creative Project Capstone in Public Administration [2]	
Total Semester Hours		**3**

1. Required as the first course in this program.
2. Taken once all other requirements have been met.

Master of Public Health

Program Description

The online Master of Public Health (MPH) degree is designed to help prepare professionals to resolve complex health issues and enhance the wellbeing of communities in the U.S. and around the world. Through excellence in teaching, research, and service, this respected online program seeks to educate and develop capable leaders in the public health workforce by closely aligning with academic community partners and by empowering students to address relevant public health problems today. This interdisciplinary degree challenges you to proactively seek implementable solutions and to develop preventative measures by understanding the scientific, psychological, and sociological competencies that significantly impact public health policy and practices today.

Our Master's in Public Health is accredited by The Council on Education for Public Health (CEPH®) through December 31, 2029. View our accreditation page for more details. A copy of the self-study and the final report from CEPH can be requested by emailing accreditation@apus.edu.

The Council on Education for Public Health is an independent agency established to accredit schools of public health, and public health programs outside schools of public health.

The Typhon student practicum tracking software is implemented in to the Public Health program for the PBHE697 course. Typhon allows faculty the ability to keep track of documents, practicum hours, and communication. It also allows the preceptor to view and approve hours as submitted. Typhon offers the ability to develop the students' professional portfolio and access the system for 5 years. This course requires an additional cost for the use of Typhon student practicum tracking software, to be purchased by the student prior to the start of the practicum.

CEPH® is a registered trademark of the Council on Education for Public Health.

Statement of Mission: The mission of the Master of Public Health (MPH) program is to prepare and educate students to promote health and well-being as public health practitioners through excellence in teaching, research, and service in preparation for leadership opportunities in a diverse and global society through a student-focused learning environment.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

APU Master of Public Health Program (MPH) requires students to master a set of competencies before graduation. Students will master CEPH's 22 foundational competencies categorized into 8 domains. This is a standard set of competencies required for all public health students receiving an MPH degree at accredited institutions. In addition, students will master six (6) specific program competencies (Program Learning Outcome) that are unique to the APU-MPH program.

22 CEPH Foundational Competencies

Evidence-based approaches to public health

1. Apply epidemiological methods to the breadth of settings and situations in public health practice
2. Select quantitative and qualitative data collection methods appropriate for a given public health context
3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate
4. Interpret results of data analysis for public health research, policy or practice

Public health and health care systems

1. Compare the organization, structure and function of health care, public health and regulatory systems across national and international settings
2. Discuss the means by which structural bias, social inequities and racism undermine health and create challenges to achieving health equity at organizational, community and societal levels

Planning and management to promote health

1. Assess population needs, assets and capacities that affect communities' health
2. Apply awareness of cultural values and practices to the design or implementation of public health policies or programs
3. Design a population-based policy, program, project or intervention
4. Explain basic principles and tools of budget and resource management
5. Select methods to evaluate public health programs

Policy in public health

1. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence
2. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes
3. Advocate for political, social or economic policies and programs that will improve health in diverse populations
4. Evaluate policies for their impact on public health and health equity

Leadership

1. Apply principles of leadership, governance and management, which include creating a vision, empowering others, fostering collaboration and guiding decision making
2. Apply negotiation and mediation skills to address organizational or community challenges

Communication

1. Select communication strategies for different audiences and sectors
2. Communicate audience-appropriate public health content, both in writing and through oral presentation
3. Describe the importance of cultural competence in communicating public health content

Interprofessional practice

1. Perform effectively on interprofessional teams

Systems thinking

1. Apply systems thinking tools to a public health issue

APU-MPH specific program competencies (Program Learning Outcome):

1. Evaluate screening methods of epidemiology using statistical analysis and the impact of disease occurrence, both past and present, on population health
2. Evaluate the effects of environmental factors on the health of populations and discuss appropriate policies to prevent and manage environmental hazards
3. Apply emergency preparedness and disaster health management to public health and healthcare settings
4. Analyze the role of regulatory policy on the healthcare delivery system and management of population health.
5. Develop programs and/or interventions that effectively address the social determinants of health and health disparities.

Programmatic Admission Requirements

The following documentation is required for admission into this program, and must be provided prior to course registration:

- Statement of Interest

Please visit our APU graduate admission page for more information on institutional admission requirements.

Master of Public Policy

Program Description

The Master of Public Policy (MPP) provides a comprehensive overview of essential skills required for sound research and data analysis, communication, action, and creative and critical thinking in the area of public policy. The online curriculum is designed to introduce a broad understanding and application of policy that allows a chosen concentration in a focused area such as Cyber, Space, National Security, Environmental, Public Law or Health. Knowledge gained can be useful preparation for those interested in senior-level management positions in government agencies, corporations, research institutes, advocacy or non-profit organizations, and other associations. Understanding policy at the local, state, and national levels allows better advising and management of risk in these organizations.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Evaluate the multi-disciplinary nature of the major theories underlying the discipline of public policy.
- Extrapolate the processes by which public policies are designed, implemented, and evaluated.
- Evaluate the effectiveness of existing (or the impact of proposed) public policies.
- Demonstrate appropriate analytical skills to analyze contemporary policy issues.
- Demonstrate appropriate analytical skills to contemporary policy issues.
- Design public policies to solve strategic or social problems.
- Deconstruct contemporary policy case studies using an ethical framework.
- Communicate policy recommendations to diverse audiences.

Students must choose a concentration for this degree program and may select from a Concentration in Cybersecurity Policy, Concentration in Environmental Policy, Concentration in Health Policy, Concentration in National Security Policy, Concentration in Public Policy and the Law, or Concentration in Space Policy.

Concentration in Cybersecurity Policy (12 semester hours)

Cybersecurity touches almost every aspect of public policy. This concentration focuses on the issues, policies, practices, and perspectives of various sectors, critical infrastructures, agencies, and disciplines, such as national security, intelligence, criminal justice, and emergency management. Cyber threats can have an adverse effect on public confidence, stock markets, economic sectors, and other critical infrastructures. The need for trained experts in this field who can prevent, detect, and eliminate such threats is critical to our national security.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze the national cyber threat landscape and cybersecurity challenges from both external entities and domestic sources.
- Examine the legal, social, regulatory, ethical, and technical issues related to securing information systems and national critical infrastructures.
- Compare and contrast the interdisciplinary policies, practices, perspectives and products required to address the cyber threats to our information systems and critical infrastructures..

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
NSEC506	Cyber Policy and Practice in National Security	
EDMG600	Emergency Management Perspectives on Cybersecurity	
INTL647	Cyber Intelligence	
LSTD517	Law, Ethics and Cybersecurity	
ISSC631	Cyber Ethics: Privacy and Intellectual Property	
Total Semester Hours		**12**

Concentration in Environmental Policy (12 semester hours)

Environmental Policy represents one of the major policy realms that cross discipline, geography, and history. Students will study the interplay between economic and political factors and their impact on the environment, as well as review existing paradigms for environmental planning, analysis, and management. This concentration may also prepare students for study at the doctorate level in related fields.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Distinguish the key variables and theoretical frameworks for incorporating economic interests into environmental policy.
- Analyze the similarities and differences of specific environmental policies from culturally and geographically diverse areas of the world.
- Analyze the economics of a specific environmental policy.
- Critique current policies and evaluate validity of environmental policy as it relates to economic issues and drivers.
- Analyze an environmental policy's economic impact both spatially and temporally.
- Examine the major legal, regulatory, and policy framework that encompasses environmental programs and projects in the United States.
- Analyze interconnections among environmental policy, laws, and regulations, and between them and environmental management and other disciplines in management, government, science, and engineering.
- Assess the U.S. role and level of involvement in international environmental policy.

Concentration Requirements (12 semester hours)

EVSP502	Environmental Economics	3
EVSP503	Environmental Policy, Regulation, and Law	3
EVSP509	The National Environmental Policy Act	3
EVSP605	Energy Policy and Sustainability	3
Total Semester Hours		**12**

Concentration in Health Policy (12 semester hours)

Health Policy is a growing field, especially now, and our nation looks to policy experts to understand, translate, and explain massive healthcare legislation. Masters of Public Policy students who choose a concentration in Health Policy will gain the knowledge often needed to inform, direct, analyze, and report on public health issues and policy responses. Graduates will learn to craft policies, but also help the nation understand and adapt to them.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Examine how social, behavioral, environmental, and biological factors contribute to specific individual and community health outcomes.
- Analyze the critical factors that will influence health and health care in the first decade of the 21st century.
- Compare and contrast the theories regarding health care systems.
- Evaluate health care policies and their influence on the development, operation, design and effectiveness of health care delivery systems.
- Assess the efficacy of public health programs and initiatives such as Medicare, Medicaid and State Children's Health Insurance Program (S-CHIP).
- Deconstruct the relationship between public health and policy responses.
- Appraise the public health issues associated with various disasters.
- Examine health care issues that confront emergency management decision makers.

- Analyze past and future approaches to disaster health management programs.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
HIMA620	Corporate Compliance in the Healthcare Industry	
NURS502	Population-Based Healthcare	
NURS505	Healthcare Systems and Health Policy	
PBHE501	Public Health in America	
PBHE502	Health Policy	
PBHE532	Ethical Issues in Public Health	
PBHE606	Disaster Health Management	
Total Semester Hours		**12**

Concentration in National Security Policy (12 semester hours)

Public Policy students who choose to focus on National Security Policy will be positioned to advise officials on issues of strategic importance. Combine this degree concentration with your work experience and training to further your knowledge and skills often required in the growing public and private sector industry of policy analysis and strategic planning. This is a concentration of interest to civilian and military students who seek to gain advanced understanding in national security policy, security policy analysis, and related fields.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Deconstruct individual actors' roles and contributions to national security policy.
- Differentiate among conflicting and competing interests and their impact on national security policy development.
- Examine the foundations of U.S. National Security Policy
- Analyze U.S. national security policies from the end of WWII to the end of the Cold War.
- Assess the effectiveness of U.S. National Security strategies available to the United States.
- Analyze the historical practice of diplomacy by states.
- Assess the use of diplomacy by states to implement their national security strategies.

Concentration Requirements (12 semester hours)

NSEC501	Institutions of National Security	3
NSEC503	U.S. National Security	3
NSEC610	National Security and Globalization	3
NSEC612	National Security and Diplomacy	3
Total Semester Hours		**12**

Concentration in Public Policy and the Law (12 semester hours)

Students of public policy must understand how an idea becomes a law, but MPP students who choose a concentration in Policy and the Law will become experts in the judicial process and the enforcement and execution of our laws. This concentration explores ethics, contractual obligations, procedural due process, and new developments in security and the law.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Interpret complex contract language.
- Examine specific cases of contract law and extrapolate the laws and precedents established.
- Extrapolate the development of Constitutional Law in the areas of judicial, legislative, and executive powers.
- Analyze the separation of powers, federalism, national and state regulation of commerce, and property rights.
- Interpret the role of the judiciary by examining landmark constitutional decisions.
- Examine the Bill of Rights and the U.S. Constitution.
- Evaluate policies related to cybersecurity.
- Explore laws related to cybersecurity issues, including litigation, intellectual property and privacy.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
NFPM640	Nonprofit Law, Governance, and Ethics	
HRMT602	Employment Law and Labor Relations	
LSTD510	Constitutional Law	
LSTD517	Law, Ethics and Cybersecurity	
POLS640	Judicial Politics, Process, and Policy Making	
Total Semester Hours		**12**

Concentration in Space Policy (12 semester hours)

This concentration will give the administrator the background to be able to understand the ramifications of policy and law on the future of the space industry, both in the US and globally. The implications of policy for both the public and private sector will be explored.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Examine the political and commercial significance of major national and international space missions, projects, and operations.
- Evaluate organizations that are critical to the success of the technological advance of space infrastructure in the United States.
- Assess the status of space cooperation and diplomacy between various space faring nations.
- Synthesize space laws and how the governing institutions affect applications such as remote sensing, communications, navigation, launch services, satellite exports, and arms control.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
SPST621	Current and Emerging Space Powers	
SPST622	Space Policy	
SPST623	National Space Organization	
SPST628	Space Operations Structure and Design	
SPST640	Space Cooperation and Diplomacy	
SPST671	Space Law	
Total Semester Hours		**12**

Final Program Requirement (3 semester hours)

MAPP697	Public Policy Project Capstone [2]	3

Total Semester Hours	**3**

Elective Requirements (3 semester hours)

Select any graduate courses not already taken to fulfill the requirements listed above.	3
Total Semester Hours	**3**

1. Required as the first course in this program.
2. Taken once all other requirements have been met.

Master of Science in Accounting

Program Description

The Master of Science in Accounting helps to provide you with the theoretical knowledge, practical skills, and research competencies required to address complex accounting issues found in private corporations, governmental entities, public accounting, and not-for-profit organizations. This program extends the knowledge gained in an undergraduate accounting program to enhance your skills in written communication, research, and complex problem solving.

This program has been designed in consultation with industry business leaders, is accredited by the Accreditation Council for Business Schools and Programs (ACBSP®), and has earned additional ACBSP Specialized Accounting Accreditation

This program is not designed to prepare graduates for any state-issued professional license or certification and therefore has not been approved by any state professional licensing agency.

This program has specific admission requirements.

ACBSP® is a registered trademark of the Accreditation Council for Business Schools and Programs.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Research and appraise historic, current, and developing authoritative standards in accounting and apply them appropriately to complex financial transactions.
- Utilize Generally Accepted Accounting Principles (GAAP) and International Financial Reporting Standards (IFRS®) to produce and interpret financial statements for various types of organizations.
- Demonstrate knowledge of the ethical framework for accountants adopted by professional accounting organizations, such as the American Institute of Certified Public Accountants (AICPA®) and the Institute of Management Accountants (IMA®).
- Analyze, evaluate, and organize financial data to facilitate managerial decision making.
- Conduct an in-depth analysis of an organization's financial information and provide a written assessment of the results.

IFRS® is a registered trademark of the International Reporting Standards Foundation.

AIPCA® is a registered trademark of the American Institute of Certified Public Accountants.

IMA® is a registered trademark of the Institute of Management Accountants.

Programmatic Admission Requirements

You will need to provide an official transcript of your completed bachelor's or master's degree showing proof of completion of this required coursework:

- Auditing: 3 credit hours
- Cost Accounting or Managerial Accounting: 3 credit hours
- Individual Federal Taxation: 3 credit hours
- Intermediate Accounting: 6 credit hours

Pre-admission courses must be grade C or better at the undergraduate level; B or better at the graduate level.

You will be required to submit a signed statement of understanding (SOU) to enroll in this program.

Please visit our APU graduate admission page for more information on institutional admission requirements.

Concentration in CPA (9 semester hours)

This concentration is designed for students who have a solid understanding of accounting concepts. Mastery of accounting disciplines such as auditing, financial reporting, cost/management accounting, regulation, and taxation is expected from prospective students. This concentration could serve as a review of concepts that may be necessary for the CPA exam.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply appropriate Generally Accepted Accounting Principles (GAAP) to various scenarios regarding auditing, business environment and concepts, financial reporting, regulation, and taxation.
- Solve problems relating to auditing, business environment and concepts, financial reporting, regulation, and taxation.
- Demonstrate written communications skills in preparing solutions addressing complex accounting problems and situations.
- Illustrate critical thinking and problem-solving skills in formulating solutions to cases.

Concentration Requirements (9 semester hours)

Master of Science in Applied Business Analytics

Program Description

The Master of Science in Applied Business Analytics can help you master the high demand business intelligence skills necessary to stand out as a problem solver, decision maker, strategic thinker, and communicator in any industry. Using problem-solving exercises, you will learn to use data mining techniques and apply business and big data analytics to help you meet your organization's business objectives. You'll develop and apply critical thinking skills and create better management analytics tools to use in business process and decision-making.

Spanish language learners may complete the Applied Business Analytics program through select courses.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Construct both simple regression and multiple linear regression analytical models.
- Use text mining and data mining techniques in the processes of model building for data analysis.
- Define and quantify business problems for the purposes of analytical investigation and decision-making.
- Analyze the interpretation of results from statistical analysis.
- Communicate statistical results and reports for the purpose of decision-making.

Master of Science in Cybersecurity Studies

Program Description

This Master of Science in Cybersecurity Studies takes a broad, multi-disciplinary approach to preventing and responding to large-scale cyber threats and cyber attacks. The first half of this program provides you with a foundation in network security, information assurance, cybercrime, and digital forensics. The second half of this program focuses on the issues, policies, practices, and perspectives of various sectors, critical infrastructures, agencies, and disciplines, such as national security, intelligence, criminal justice, and emergency management. Cyber threats can have an adverse effect on public confidence, stock markets, economic sectors, and other critical infrastructures.

This program has specific admission requirements.

Spanish language learners may complete the Cybersecurity Studies program through select courses.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Analyze the national cyber threat landscape and cybersecurity challenges from both external entities and domestic sources.

- Examine the legal, social, regulatory, ethical, and technical issues related to securing information systems and national critical infrastructures.
- Compare and contrast the interdisciplinary policies, practices, perspectives and products required to address the cyber threats to our information systems and critical infrastructures.
- Appraise the methodologies for performing vulnerability assessment, risk mitigation, auditing, and certification of information systems and critical infrastructures.
- Categorize the cybersecurity related roles, responsibilities, and policies for managers of critical infrastructures, national security, corporate security, criminal justice, and intelligence/counter intelligence.

Programmatic Admission Requirements

All master's degree and graduate certificate programs require a bachelor’s degree (or higher) from an institution whose accreditation is recognized by the Council for Higher Education Accreditation (CHEA).

In order to be considered for the M.S. in Cybersecurity program, students should meet one of three admission requirement options.

Option A

The student must have earned at least one of the following:

- An undergraduate IT degree or a degree in a closely related field
- One of the University’s IT-related certificates
- An IT-related minor or concentration during an undergraduate program
- 9 credits in cybersecurity, information technology, or other closely related courses

Option B

The student must have acquired at least one of these IT or cybersecurity certifications:

- CompTIA Security
- CompTIA Network+®
- CompTIA A+®
- CompTIA Project+®
- CompTIA CySA+®
- CISSP®
- SSCP®
- CEH (Certified Ethical Hacker)®
- Cisco CCNA® Security

A student can also have earned a valid and current Project Management Professional (PMP) certification from the Project Management Institute.

Option C

The student must have acquired demonstrable knowledge acquired from another source, such as:

- A combination of closely related field and relevant work experience in the industry of at least two years
- A completion of closely related education or certification (not listed in option A or B) coupled with relevant work experience

Important Notes

- If the IT-specific requirements are not noted in the official bachelor's or master's transcript, you must provide official copies of your undergraduate transcripts that show the appropriate coursework.
- The verification of the two years of work experience needs to be sent to the university via a formal resume or CV.

- Preadmission courses must have been completed within the last 5 years and at the undergraduate level must be graded C or better; B or better at the graduate level.

CEH® and Certified Ethical Hacker® are registered trademarks of EC-Council.

CompTIA Security+®, CompTIA Network+®, CompTIA A+®, CompTIA Project+®, and CompTIA CySA+® are all registered trademarks of the Computer Technology Industry Association, Inc.

CISSP® and SSCP® are registered trademarks of International Information Systems Security Certification Consortium, Inc.

CCNA® is a registered trademark of Cisco Technology, Inc.

Please visit our APU graduate admission page for more information on institutional admission requirements.

Master of Science in Environmental Policy and Management

Program Description

The Master of Science in Environmental Policy and Management provides academic coursework focused on one of the world's most significant issues: the environment. In this online master's program, you will explore the use of environmental management tools and strategies to resolve complex environmental problems and controversies, while studying environmental economics and resource availability. You will learn about competing ethical arguments that drive environmental law, regulation, policy and management decisions. Both qualitative and quantitative means of analysis of environmental data are addressed.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Research environmental management strategies that incorporate ecological, economic, and social considerations.
- Analyze the ecological, economic, and social barriers to the implementation of sustainable environmental practices and programs.
- Assess the direct and indirect costs of environmental regulation, problems, and corrective actions.
- Examine environmental strategies and policies across spatial scales.
- Evaluate the consequences of ecological destruction on public health, productivity, and social and economic welfare.

Total Semester Hours		**18**

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Environmental Planning, Concentration in Environmental Sustainability, or Concentration in Fish and Wildlife Management.

General Concentration (12 semester hours)

This general concentration allows you to select from all concentration courses offered within this program, enabling you to create your own focused area of study.

Objectives

This general concentration allows you to select from all concentration courses offered within this program, enabling you to create your own focused area of study.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
EVSP506	Restoration Ecology	
EVSP507	Conservation Biology	
EVSP509	The National Environmental Policy Act	
EVSP558	Watershed Management	
EVSP605	Energy Policy and Sustainability	
Total Semester Hours		**12**

Concentration in Environmental Planning (12 semester hours)

Teaches how to design, implement, and evaluate sustainable developments, landscapes, and environments. Covers interactions between humans and their environment and government policies. Legislation, socio-political influences, and the analysis of development plans for adherence to professional standards and principles are covered.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Detail the elements necessary to design, implement, and evaluate sustainable developments, landscapes, and environments.
- Analyze the complex and dynamic interactions between humans and their environment.
- Explain the role of government policy at municipal, regional, national, and global levels to achieve sustainable development.
- Apply theoretical concepts to practical applications in order to design and implement sustainable environmental planning.
- Apply principles of environmental policymaking and environmental legislation, as well as socio-political influences to the field of environmental planning.
- Critically analyze complex, and often competing development plans for adherence to professional environmental planning and sustainability principles.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
EDMG515	Hazard Mitigation and Resilient Communities	
EVSP509	The National Environmental Policy Act	
EVSP558	Watershed Management	
EVSP561	Elements of Sustainable Design	
EVSP627	Landscape Ecology and Planning	
Total Semester Hours		**12**

Concentration in Environmental Sustainability (12 semester hours)

Looks at the complex and dynamic interactions between humans and their environment. Examines the role of government policies and the barriers preventing full sustainability implementation. Topics covered include how sustainability solves complex environmental problems and meets critical resource needs from a local to global scale.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Detail the principles of sustainability and the roles of multiple disciplines in their effective implementation.
- Analyze the complex and dynamic interactions between humans and their environment.
- Assess the role of government policy at municipal, regional, national, and global levels in achieving sustainable development.
- Analyze the political, regulatory, and economic barriers that prevent full implementation of sustainable products, goods and services.
- Apply the principles of sustainability to complex environmental problems.
- Analyze the role of sustainability in meeting critical resource needs, such as renewable energy and water quality and quantity, on the local, regional, national, and global scale.

Concentration Requirements (12 semester hours)

EVSP509	The National Environmental Policy Act	3
EVSP561	Elements of Sustainable Design	3
EVSP605	Energy Policy and Sustainability	3
EVSP627	Landscape Ecology and Planning	3

Concentration in Fish and Wildlife Management (12 semester hours)

Examines fundamental concepts and principles of fish and wildlife management, and why human activity has an effect on populations. Teaches how legal regulations, policies, and politics influence management. The role of collaboration and partnerships in meeting critical resource needs on a national and global scale is also covered.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Describe the fundamental concepts and principles of the management of fish and wildlife resources.
- Assess the impact of human activities on the survival and management of fish and wildlife populations.
- Analyze the regulations, policies, and politics that influence the management of fish and wildlife in the U.S.
- Analyze the complex and dynamic interactions between fish and wildlife resources and their environment.

- Assess the political, regulatory, and economic barriers that prevent the preservation and restoration of species and populations.
- Analyze the role of collaboration and partnerships in meeting critical fish and wildlife resource needs, such as species restoration, threatened and endangered species management, and landscape level conservation, both on the national and global scale.

Master of Science in Health Information Management

Program Description

The Master of Science in Health Information Management (HIM) is designed to provide practicing healthcare professionals with the requisite knowledge and skills to enhance their careers. With a focus on healthcare data analytics and informatics, this online master's degree utilizes a multi-disciplinary approach to its curriculum emphasizing health data management, clinical and administrative decision-making, strategic planning, and outcomes management. In addition, you will continue to build upon your leadership, critical thinking, written and verbal communication, and problem solving skills. The program is designed to help prepare you to manage health information systems and people, as well as employ appropriate change management strategies within an organization.

Note: Some courses in the program require you to install software for virtual online lab accessibility.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Interpret governmental regulations for managing patient data, quality data reporting, and ethical use of protected health information.
- Assess appropriate change management strategies for organizational leadership in health information technology systems.
- Interpret clinical terminologies, standards, and classification systems for data management, reimbursement methodologies, and compliance strategies.
- Examine data to assess performance, reporting, and evidence-based protocols.
- Assess multifunctional information system processes to improve quality of care.
- Evaluate information technologies solutions to manage resources across multi-functional stakeholders.
- Generate strategies for health information technologies to support integrated clinical and administrative decision-making, strategic planning, and outcomes management.
- Evaluate effective communication strategies to collaborate with multidisciplinary teams and facilities.

Master of Science in Healthcare Administration

Program Description

The Master of Science (MS) in Healthcare Administration degree is designed to advance the knowledge of professionals interested in leadership and management positions in hospitals, healthcare systems, medical practices, and other healthcare businesses. This program of study provides students with knowledge, skills, and attitudes in the three competency domains of leadership and management, business acumen, and healthcare organizations and systems.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Evaluate ethical and effective leadership and management skills relevant to successful health administration practice.
- Advocate for the importance of policies, issues, and trends that shape healthcare and healthcare delivery in the United States.
- Apply the concepts of business to the health care environment.
- Support the importance of professional and social responsibility in health administration practice.
- Demonstrate communication and relationship management skills required for successful practice at the mid management level and beyond.

Programmatic Admission Requirements

The following is required for admission into this program. All documentation must be provided prior to course registration:

- Acceptance: Graduated with a Bachelor's degree with a cumulative GPA of 2.75 or better on a 4.0 scale or a conferred Master's Degree in another discipline.

Please visit our APU graduate admission page for more information on institutional admission requirements

Master of Science in Information Technology

Program Description

The Master of Science in Information Technology focuses on the development and implementation of information systems and includes topics such as database systems, IS architectures, IT project management, security, and computer forensics. In this graduate program, students will study the theory, principles, best practices, tools, and technologies associated with the IT marketplace. Students will also be taught the analytic, problem-solving, and research skills required to solve real-world business problems.

This program has specific admission requirements.

Spanish language learners may complete the Information Technology program through select courses in the Concentration in Information Assurance and Security.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Apply key management theory, principles, best practices, tools, and technologies associated with information systems.
- Analyze selected research methods and tools.
- Utilize graduate level critical thinking, reasoning, and writing to defend the logic and the conclusions in scholarly research.
- Plan the processes, phases, domains, and measures for effectively managing complex information technology projects.
- Design a normalized and optimized enterprise database system.
- Produce a plan that addresses the principles and challenges in incorporating emerging network architectures, technologies, and protocols into information technology systems.
- Develop legal, social, ethical, and technical solutions for securing information systems.
- Assess the vulnerabilities of information systems with respect to security and the methodologies to mitigate this risk.

- Perform in-depth research and critical analysis on thesis subject or creative project.

Programmatic Admission Requirements

For this program, you must provide an official transcript of your previously completed bachelor's or master's degree and have ONE of the following:

- Associate, bachelor's, master's degree, or an undergraduate certificate in information technology or a related field (ex: computer science, information systems, database development, etc.)
- 1 year of work experience in the specific sub-field for this degree
- Completion of 6 credits in IT-related courses
- Completion of an IT-related minor or concentration during your undergraduate program
- Certifications in at least one of the below:
  1. CompTIA Security+® (2010 to present recommended)
  2. CompTIA Network+® (2010 to present recommended)
  3. CompTIA A+® (2010 to present recommended)
  4. CompTIA Project+® (2010 to present recommended)
  5. CISSP® certification (valid up until the expiration date)
  6. SSCP®
  7. EC-Council Ethical Hacking
  8. Cisco CCNA® Security
  9. A valid and current Project Management Professional certification from the Project Management Institute
  10. Any other computer/information technology related certification after further verification from an Admissions Representative

CompTIA Security+®, CompTIA Network+®, CompTIA A+®, and CompTIA Project+® are all registered trademarks of the Computer Technology Industry Association, Inc.

CISSP® and SSCP® are registered trademarks of International Information Systems Security Certification Consortium, Inc

CCNA® is a registered trademark of Cisco Technology, Inc.

Notes:

- If the IT-specific requirements are not noted in the official bachelor's or master's transcript, you must provide official copies of your undergraduate transcripts that show the appropriate coursework.
- The verification of the 1 year work experience needs to be sent to the university via formal resume/CV. Resume and letter of recommendation on professional letterhead are required for verification.
- Preadmission courses must have been completed within the last 7 years and at the undergraduate level must be graded C or better; B or better at the graduate level.

Please visit our APU graduate admission page for more information on institutional admission requirements.

Degree Program Requirements

Core Requirements (18 semester hours)

INFO531	Management Information Systems [1]	3
ITCC500	Research Methods in Information Systems and Technology	3
INFO620	Enterprise Database Systems	3
ISSC640	Computer Networks and Data Systems	3
ISSC680	Information Security Management	3
ITMG624	Information Technology Project Management	3
Total Semester Hours		**18**

Students must choose a concentration for this degree program and may select from a Concentration in Digital Forensics, Concentration in Information Assurance and Security, or Concentration in IT Project Management.

Concentration in Digital Forensics (15 semester hours)

The societal impact of cybercrime has become commonplace; it is broadcast on the evening news and is a favorite playing field for television shows and moviemakers. Technology is a boon to society, but, in malicious hands, it becomes a valuable instrument in a dark and sinister underworld; and, unfortunately, cyber legislation and forensics have been lagging way behind when it comes to cybercrime. The process of forensics investigation can destroy the very evidence it is seeking to assimilate. The window of opportunity for collecting evidence can be a few seconds or minutes depending on the sophistication of the perpetrator. This concentration pertains to the study of various forensics models to identify, preserve, collect, examine, analyze, prepare, and present evidence for prosecuting cybercrime.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Evaluate data security, integrity, exposure from multifunctional devices, tracking techniques, and forensics models for analysis and examine the inherent challenges in the processes for seizing electronic evidence.
- Evaluate the principles, practices, and inherent challenges of the e-discovery process and assess the tools, techniques, and procedures to legally seize and forensically evaluate digital crime scenes.
- Analyze concealment and cloaking techniques and technologies such as cryptography, steganography, and data hiding and investigate corresponding legislation and mitigation techniques.
- Assess and mitigate potential exposures and the risks of the chain of custody and examine the methodologies to mitigate the potentially narrow window of opportunity for collecting digital evidence.
- Investigate models to examine the financial and societal impact of technology-related crime.
- Appraise the legal and regulatory compliance requirements in investigating and prosecuting technology-related crimes.

Concentration Requirements (15 semester hours)

ISSC621	Computer Forensics	3
ISSC630	Advanced Cybercrime Analysis	3
ISSC631	Cyber Ethics: Privacy and Intellectual Property	3
ISSC650	Advanced Digital Forensics	3

ISSC651	Advanced eDiscovery	3
Total Semester Hours		**15**

Concentration in Information Assurance and Security (15 semester hours)

The primary challenge for ecommerce is assuring the security and integrity of information systems. We are bombarded daily by news of viruses, worms, malware, breaches, infiltrations, denial-of-service attacks, and the like. The ability of an organization to secure and assure its information technology assets is essential to conducting global commerce and to establishing a robust economy; this is a particular challenge given the rapidly changing face and assets of the virtual intruder. The ability to compromise an organization's information assets is a direct threat to their competitive advantage; and the ability to protect the information assets of an organization is essential to maintaining clientele, trust, revenue streams, credibility, and the survival of the organization. This concentration focuses on securing the information technology assets of an organization. Areas include network security, telecommunications security, computer forensics, legal and ethical issues, cybercrime, computer forensics, information assurance, security risk mitigation, information systems audit and certification, intrusion detection, and incident handling.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Profile the emerging security threats and trends, and analyze the information systems vulnerabilities that they exploit.
- Assess the methods and techniques for recognizing and profiling attack patterns.
- Categorize and analyze the different types of cryptography, encryption keys, malicious software, and types of attacks.
- Analyze the methodologies for investigating computer-related crime and for incident handling.
- Appraise the legal and regulatory compliance requirements related to Information Assurance and Information Systems.
- Security and assess the social, ethical, economic, and technical impact of information systems security.
- Analyze the challenges encountered in establishing information systems security, information assurance, and business continuity.
- Examine the models and methodologies for performing security vulnerability assessment and risk mitigation; also analyze the principles and practices for appraising and certifying systems security.

Concentration Requirements (15 semester hours)

ISSC636	Cybersecurity Principles	3
ISSC642	Intrusion Detection and Incident Handling	3
ISSC660	Information Assurance	3
ISSC661	Information Assurance: Assessment and Evaluation	3
ISSC662	Information Assurance: Capability Maturity and Appraisals	3
Total Semester Hours		**15**

Concentration in IT Project Management (15 semester hours)

The world of Information Technology is replete with projects that were abandoned because of runaway scope and cost. On the other hand, the trend in the world economy is shrinking budgets and shorter deadline, all this while projects are getting more complex. This concentration focuses on meeting industry needs for IT Managers that can manage cost, time, scope, quality, risk, and people to ensure that projects come in on time and under budget. It also addresses strategic planning and business systems analysis.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Appraise the principles and practices for organizing, allocating, and managing project resources.
- Analyze the project management framework, including the stakeholders, domains, phases, processes, integration, and lifecycle.
- Examine the potential complexities and pitfalls in initiating and closing projects; and assess methods to mitigate this risk.

- Appraise the unique challenges in managing the scope, time, and cost of Information Technology projects.
- Examine various project cost models; also analyze the principles of earned value management (EVM).
- Assess the principles, strategies, challenges, and measures for managing quality and risk on IT projects.
- Analyze the phases, procedures, deliverables, and best practices for business systems analysis.

Concentration Requirements (15 semester hours)

ITMG625	IT Project Management: Integration, Scope and Time	3
ITMG630	Project Management for e-Business	3
ITMG636	IT Project Management: Developing Project Schedule	3
ITMG637	IT Project Management: The Integrated Project Plan	3
ITMG638	IT Project Management: Execution, Monitoring and Control	3
Total Semester Hours		**15**

Final Program Requirement (3 semester hours)

Select 1 course from the following:		3
ITCC697	Creative Project Capstone [2]	
ITCC698	Information Technology Capstone [2]	
Total Semester Hours		**3**

1. Required as the first course in this program.
2. Taken once all other requirements have been met.

Master of Science in Nursing

Program Description

The mission of the American Public University System's Nursing Program is to "provide quality, affordable, and accessible higher education for professional registered nurses to foster lifelong learning through a spirit of inquiry in order to prepare students for service and leadership roles in a diverse and global society."

The Master of Science in Nursing program helps to prepare you to be an effective leader in the nursing profession and to be an agent of change in the delivery of health care. The transformational changes occurring in healthcare today make advanced nursing practice essential to the provision of safe, patient-centered care. As a nurse educator or nurse leader, you can help lead the change to move nursing into the future.

The master's degree program in nursing at APUS is accredited by the Commission on Collegiate Nursing Education.

Note: This program is currently not open for admission to residents of Washington.

This program has specific admission requirements.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Apply the principles of ethical decision making to the practice of the master's prepared nurse.

- Demonstrate leadership skills to support safe nursing practices and continually improve patient-centered care.
- Advocate for healthcare policies that improve healthcare outcomes across the lifespan.
- Translate theoretical knowledge, research and evidence-based practice to influence the delivery of high-quality, safe care to various populations in a variety of settings.
- Apply data management principles in the delivery of cost-effective care to improve health outcomes.
- Analyze how healthcare policy and health care economics affect change within the healthcare system.
- Demonstrate effective inter-professional communication and collaboration to support safe and efficient coordination of care.
- Reflect on personal commitment to lifelong learning to gain the competencies needed to lead the provision of care in a complex and changing healthcare environment.

Programmatic Admission Requirements

This program is currently not open for admission to residents of Washington.

For this program, the following documentation is required and must be provided prior to course registration:

- Official transcripts showing a conferred Bachelor of Science in Nursing degree from a program accredited by: Commission on Collegiate Nursing Education (CCNE), Accreditation Commission for Education in Nursing (ACEN®), Commission for Nursing Education Accreditation (CNEA®), or Canadian Association of Schools of Nursing (CASN).
- Current and active unencumbered registered nurse (RN) in a state or province where practicums will be conducted
- Minimum cumulative Grade Point Average (GPA) 3.0 on a 4.0 scale for the baccalaureate nursing degree
- Successful completion of an undergraduate level statistics course with a “C” or higher
- Current resume/CV
- Signed statement of understanding (SOU)
- 500-600 word statement of purpose and goals for graduate education*

*Writing style should be scholarly and coherent with no grammatical errors. Provide in 500-600 words a description of relevant work experience, and clearly articulated reasons for applying to the master’s program. Long-term goals or professional career aspirations should be included.

Note: You must complete this program within 5 years of starting your first nursing (NURS) course.

ACEN® is a registered trademark of the Accreditation Commission for Education in Nursing, Inc.

CNEA® is a registered trademark of the National League for Nursing.

Please visit our APU graduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program’s admission requirements, please contact the Admissions Team at 877-382-1783 or info@apus.edu.

Degree at a Glance

Core Requirements	15
Select one of the following concentrations:	17-18
Community and Public Health Nursing	
Nurse Educator Track	
Nurse Leader Track	
Final Program Requirement	3-4
Total Semester Hours	**36**

Degree Program Requirements

Core Requirements (15 semester hours)

NURS502	Population-Based Healthcare	3
NURS500	Research and Evidence-Based Practice	3
NURS504	Informatics and Technology	3
NURS505	Healthcare Systems and Health Policy	3
NURS507	Leadership for the Master's Prepared Nurse	3
Total Semester Hours		**15**

Students must choose a concentration for this degree program and may select from a Concentration in Community and Public Health Nursing, Concentration in Nurse Educator Track, or Concentration in Nurse Leader Track.

Concentration in Community and Public Health Nursing (17 semester hours)

The community/public health nursing concentration prepares nurses to serve, protect, and promote the health of communities locally and globally through the application of three core functions of public health: assessment, policy development, and assurance. Students are taught to serve as change agents practicing with a justice approach that is collaborative, promotes health and equity, and engages community gatekeepers and stakeholders. Graduates are equipped to analyze determinants of health using epidemiological data and other evidence. They are also prepared to apply social and behavioral science theories, models, and principles to develop or improve programs to address public health issues and to promote public health policies, programs, and resources that improve health outcomes.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze social determinants of health that affect the health of a community.
- Evaluate prevention strategies of communities to identify opportunities for improvement in health and disease prevention of vulnerable populations.
- Enhance the health of a vulnerable population through interprofessional coordination, planning, development, implementation, and evaluation of a public health nursing intervention for a selected community.

Concentration Requirements (17 semester hours)

PBHE520	Biostatistics with Lab	4
PBHE527	Social and Behavioral Aspects of Health	3
PBHE550	Research Methods in Public Health	3
PBHE607	Epidemiology	3
NURS654	Program Development and Evaluation in Community and Public Health Nursing	4
Total Semester Hours		**17**

Concentration in Nurse Educator Track (18 semester hours)

Looks at curriculum, instruction, and assessment in nursing education with a focus on teaching and evaluations for nurse educators.

Objectives

Upon completion of this concentration, you will be able to:

- Apply programmatic objectives to the nurse educator role in clinical or academic settings.

- Create educational and curricular materials for a variety of audiences.
- Evaluate effectiveness of teaching strategies and modalities.

Concentration Requirements (18 semester hours)

NURS601	Advanced Health Assessment	3
NURS604	Advanced Pathophysiology and Pharmacology	3
NURS606	Nursing Curriculum Development, Assessment and Evaluation	3
NURS610	Learner-Centered Teaching Methodologies	3
NURS620	Educational Assessment and Evaluation for Nurse Educators	3
NURS695	Practicum in Nursing Education	3
Total Semester Hours		**18**

Concentration in Nurse Leader Track (18 semester hours)

Offers a focus in leadership, human resource management, and operational quality. Healthcare business and finance are also covered.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply programmatic objectives to the role of the nurse leader.
- Advocate for business practices that promote healthcare quality and patient safety
- Synthesize knowledge of key business and human resources practices to lead healthcare teams.

Concentration Requirements (18 semester hours)

HCAD650	The Business of Healthcare	3
HCAD651	Healthcare Finance	3
HCAD652	Operational Quality in Healthcare	3
HCAD605	Human Resource Management in Healthcare	3
HCAD520	Legal and Ethical Aspects of Healthcare Administration	3
NURS696	Practicum in Nursing Leadership	3
Total Semester Hours		**18**

Final Program Requirement (3-4 Semester Hours)

NURS694	Community and Public Health Nursing Practicum with Capstone Project [1]	4
NURS699	Evidence-Based Practice Capstone Project [2]	3
Total Semester Hours		**3-4**

1. Taken once all other degree requirements have been met. Students who select a Concentration in Community and Public Health Nursing must take this course.
2. Taken once all other degree requirements have been met. Students who select a Concentration in Nurse Educator Track or Concentration in Nurse Leader Track must take this course.

Master of Science in Space Studies

Program Description

The Master of Science in Space Studies is an interdisciplinary degree with concentrations in aerospace science, astronomy, or space policy. The curriculum for this online space studies program – originally designed by former NASA astronaut Dr. James Reilly, veteran of three shuttle missions and five spacewalks – offers in-depth research projects and prepares you to meet the challenges associated with humankind's exploration and usage of space.

Knowledge obtained from this program is useful preparation for a student to develop new skills often required for an aerospace operations engineer/technician, observatory telescope operator, planetarium astronomer, space industry administrator, space journalist, or military space systems specialist.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Develop an appreciation of the foundations and importance of space studies in the role of human space exploration/understanding of the cosmos.
- Analyze quantitative and qualitative research and statistical data related to the support of aerospace science, astronomy, or space policy concepts.
- Assess the history, chronology, and concepts for placing manned and unmanned vehicles in space.
- Evaluate the importance of remote sensing satellites used to observe our Earth and other celestial bodies in the Solar System.
- Synthesize the psychological and physiological elements necessary to support human life in the space environment, including spacesuit design/development.

Degree at a Glance

Core Requirements	15
Select one of the following concentrations:	18
Aerospace Science	
Astronomy	
Earth and Planetary Sciences	
Space Policy	
Final Program Requirement	3
Total Semester Hours	**36**

Degree Program Requirements

Core Requirements (15 semester hours)

SPST501	Introduction to Space Studies [1]	3
SPST500	Research Methods in Space Studies	3
Select 3 courses from the following:		9
SPST503	Chronology of Space	
SPST504	Remote Sensing Satellites	
SPST619	The Psychology and Physiology of Space	
STEM693	Independent Study for Masters Students	

Total Semester Hours	**15**

Students must choose a concentration for this degree program and may select from a Concentration in Aerospace Science, Concentration in Astronomy, Concentration in Earth and Planetary Sciences, or Concentration in Space Policy.

Concentration in Aerospace Science (18 semester hours)

Provides an in-depth study in the discipline, with emphasis in both aircraft and spacecraft design/operations. Students take courses with comprehensive overviews of such topics as aircraft propulsion, aerodynamics and, aircraft design in addition to learning about orbital mechanics, rocket propulsion, and spacecraft design.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Categorize the laws of orbital mechanics -- calculate and illustrate the effects that gravity has on two-body mechanics including spacecraft maneuvers such as transfer orbits and rendezvous.
- Apply scientific principles and calculate problems related to aircraft propulsion systems.
- Examine liquid and solid rocket propulsion fundamentals including propellants, combustion principles, components, and general turbo-pump, and motor design.
- Assess the development, technology, and importance of satellite communications in our modern technological society.
- Synthesize the fundamentals of aerodynamics and aircraft/spacecraft design, building upon past and current technology to shape innovations for the future.

Concentration Requirements (18 semester hours)

SPST502	Introduction to Orbital Mechanics	3
SPST611	Aircraft Propulsion Systems	3
SPST612	Rocket Propulsion	3
SPST613	Satellite Communications	3
SPST615	Aerodynamics	3
SPST616	Aircraft Design	3
Total Semester Hours		**18**

Concentration in Astronomy (18 semester hours)

A diverse range of courses provide an inclusive synopsis of astronomy – from the Solar System to stars and galaxies. You will learn about astronomical instrumentation, with the opportunity to access the university's observatory and the PlaneWave CDK24 robotic telescope.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Demonstrate an in-depth understanding of Solar System -- including planets, comets, asteroids, and meteorites.
- Analyze the celestial objects found beyond our Solar System: stars, exoplanets, galaxies, and possible extraterrestrial life.
- Evaluate the geology of the Moon and Mars as related to their significance for near future human exploration of the Solar System.
- Critique the various configurations of telescopes and their use in the exploration of all types of electromagnetic radiation – from radio waves to gamma rays.
- Synthesize the history of astronomy, from ancient Greece to our modern cosmological model of the universe.

Concentration Requirements (18 semester hours)

SPST630	Planetary and Solar System Studies	3
SPST631	Astrophysical Studies	3
SPST633	Astronomical Instrumentation	3
SPST635	History of Astronomy	3
SPST652	Geology of the Moon and Mars	3
SPST653	Small Bodies of the Solar System	3
Total Semester Hours		**18**

Concentration in Earth and Planetary Sciences (18 semester hours)

The Earth and Planetary Sciences concentration is designed to provide students with an in-depth overview of our Solar System. Topics covered include planetary geology, with special emphasis on geology of the Moon and Mars. Small Solar System objects such as natural satellites, planetary rings, comets, and asteroids are also considered. Students study the origin of atmospheres on the Earth, Venus, Mars, and Saturn's moon Titan. Planetary mapping techniques and GIS fundamentals are considered in this concentration as well.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Use the scientific method and scientific tools to solve programs related to the Earth and planets.
- Identify the process and features associated with the Earth and planetary interiors, landscapes, oceans, and atmospheres.
- Demonstrate a comprehensive understanding of the interrelated physical, chemical, and geological processes operating on the Earth and other planets.
- Present earth and planetary science information clearly, in multiple formats (written, oral, graphically).
- Analyze the origin, composition, and nature of planetary atmospheres.
- Explain how terrestrial moons and planets are mapped utilizing state-of-the-art GIS techniques.
- Demonstrate good scientific ethics.

Concentration Requirements (18 semester hours)

SPST650	Fundamentals of Earth and Planetary Sciences	3
SPST651	Planetary Geology	3
SPST652	Geology of the Moon and Mars	3
SPST653	Small Bodies of the Solar System	3
SPST654	Planetary Mapping	3
SPST655	Planetary Atmospheres	3
Total Semester Hours		**18**

Concentration in Space Policy (18 semester hours)

The program helps to cultivate leaders in the space industry, not only in NASA, but in the commercial realm of space operations. This concentration is ideal if you already have an administrative or business background. Coursework includes space diplomacy and law, space operations and organizations, as well as the historical, political, economic, legal, commercial, scientific, and technical challenges comprising this complex and rapidly changing discipline.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Examine the political and commercial significance of major national and international space missions, projects, and operations.
- Evaluate organizations that are critical to the success of the technological advance of space infrastructure in the United States.
- Assess the status of space cooperation and diplomacy between various space faring nations.
- Synthesize space laws and how the governing institutions affect applications such as remote sensing, communications, navigation, launch services, satellite exports, and arms control.

Concentration Requirements (18 semester hours)

SPST621	Current and Emerging Space Powers	3
SPST622	Space Policy	3
SPST623	National Space Organization	3
SPST628	Space Operations Structure and Design	3
SPST640	Space Cooperation and Diplomacy	3
SPST671	Space Law	3
Total Semester Hours		**18**

Final Program Requirement (3 semester hours)

Select 1 course from the following:		3
SPST695	Space Studies Capstone Portfolio [2]	
SPST699	Space Studies Capstone [2]	
Total Semester Hours		**3**

1. Required as the first course in this program.
2. Taken once all other requirements have been met.

Master of Science in Sports and Health Sciences

Program Description

The Master of Science in Sports and Health Sciences studies the physical, physiological, psychological, and functional adaptations of humans. This online master's degree helps to develop your critical thinking skills and provides the scientific principles you'll need to help varied populations optimize sports performance and reach athletic, fitness, and general health goals. Physical fitness and health and wellness employers seek experienced professionals with extensive knowledge of nutrition, fitness training, and changes in fitness technology to help individuals improve functionality and quality of life.

Spanish language learners may complete the Sports and Health Sciences program through select courses in the General Concentration.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Apply qualitative and quantitative research practices to relevant issues and problems in sports and health sciences through the development and assessment of research proposals and concluding with the analysis and communication of data.
- Dissect the relationships between psychological behaviors such as personality, motivation, stress, and aggression on sport performance.
- Examine physical activities and lifestyle behaviors designed to promote positive health and quality of life.
- Analyze sport movements and design movement-oriented exercise prescriptions.
- Illustrate the potential for enhancement of muscle strength, muscular endurance, power, flexibility, and motor performance during anaerobic training.
- Assemble protein, carbohydrate, and fat recommendations for athletes, and discern between dietary recommendations for disease prevention and recommendations for performance.
- Evaluate best practices to measure selected parameters related to athletic performance, and explain how to administer field tests appropriately.

Degree at a Glance

Core Requirements	21
Select one of the following concentrations:	12
General Concentration	
Exercise and Chronic Disease	
Exercise Science and Human Performance	
Health and Wellness Management	
Final Program Requirement	3
Total Semester Hours	**36**

Degree Program Requirements

Core Requirements (21 semester hours)

SPHS501	Advanced Exercise and Sport Physiology [1]	3
SPHS505	Sport Psychology	3
SPHS511	Critical Thinking in the Sports and Health Industries	3
SPHS500	Statistics for Sports and Health Sciences	3
SPHS502	Motor Learning	3
SPHS503	Nutrition for Sports Performance	3
SPHS504	Advanced Methods of Strength and Conditioning	3
Total Semester Hours		**21**

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Exercise and Chronic Disease, Concentration in Exercise Science and Human Performance, or Concentration in Health and Wellness Management.

General Concentration (12 semester hours)

This general concentration allows you to select from all the concentration courses offered within this program, enabling you to create your own focused area of study.

Objectives

This general concentration allows you to select from all the concentration courses offered within this program, enabling you to create your own focused area of study.

Concentration Requirements (12 semester hours)

Select 4 courses from the following:		12
SPHS506	Essentials of Human Performance and Exercise Science	
SPHS507	Advanced Biomechanics	
SPHS508	Current Topics in Exercise Science and Human Performance	
SPHS509	Optimal Sports Performance	
SPHS510	Ethical and Leadership Principles of Health and Wellness Management	
SPHS520	Current Topics in Health and Wellness Management	
SPHS530	Program Design for Health and Wellness Management	
SPHS540	Health and Wellness Coaching and Behavior Change	
Total Semester Hours		**12**

Concentration in Exercise and Chronic Disease (12 semester hours)

With growing evidence that exercise and activity can help alleviate the burden of chronic disease, it is important for Health and Fitness Professionals to understand the positive effects of exercise on chronic diseases. This concentration will prepare the learner to design and implement fitness programs for individuals and groups who suffer from one or more chronic diseases. Students will learn the role of fitness professionals in the healthcare continuum, be able to recognize the signs and symptoms of common chronic diseases, and design and implement fitness programs for individuals who suffer from common chronic diseases.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze effects of exercise and activity on health and chronic diseases
- Evaluate the roles and limitations of fitness professionals in the healthcare continuum
- Create safe and effective fitness programs for those suffering the effects of chronic diseases using industry best practices
- Utilize critical thinking skills to synthesize relevant knowledge to implement fitness programs for individuals who suffer from common chronic diseases

Concentration Requirements (12 semester hours)

SPHS506	Essentials of Human Performance and Exercise Science	3
SPHS507	Advanced Biomechanics	3
SPHS525	Exercise for Chronic Disease: Musculoskeletal Concerns	3
SPHS535	Exercise for Chronic Disease: Physiological Concerns	3
Total Semester Hours		**12**

Concentration in Exercise Science and Human Performance (12 semester hours)

The Exercise Science and Human Performance concentration is a scientific study of the concepts and applications designed to appraise and enhance athletic performance for researchers and practitioners. Students will develop skills to effectively assess and evaluate exercise and human performance through test administration and program design. Course content focuses on factors influencing health

and performance; including adaptations to exercise, biomechanics, nutrition, testing and evaluation, exercise techniques, exercise prescription, and psychological aspects of performance.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Design an individualized exercise prescription using results from fitness and exercise testing and evaluation.
- Analyze the functional anatomy of the lower and upper extremities during exercise and human performance.
- Synthesize sports nutrition and supplementation findings into recommendations for professional practice.
- Assess concepts associated with functional movements as they pertain to integrated training.
- Generate mental training strategies to improve an athlete's performance.

Concentration Requirements (12 semester hours)

SPHS506	Essentials of Human Performance and Exercise Science	3
SPHS507	Advanced Biomechanics	3
SPHS508	Current Topics in Exercise Science and Human Performance	3
SPHS509	Optimal Sports Performance	3
Total Semester Hours		**12**

Concentration in Health and Wellness Management (12 semester hours)

The Health and Wellness Management concentration helps give students the knowledge to design and implement wellness programs. Students will develop skills to effectively design and manage health and wellness programs for individual clients and corporate settings. Course content focuses on topics crucial to effective fitness leadership and quality management in health and wellness occupations.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Implement programs for exercise, nutrition, and lifestyle change in designing health and wellness programs for clients in private, community, and corporate settings.
- Construct an ethical and leadership philosophy for managing a corporate wellness facility and program.
- Evaluate the role of healthier fitness, nutrition, and lifestyle habits have on disease prevention, general health, and overall well-being.
- Hypothesize solutions to current challenges facing the fitness, wellness, and healthcare industries.

Concentration Requirements (12 semester hours)

SPHS510	Ethical and Leadership Principles of Health and Wellness Management	3
SPHS520	Current Topics in Health and Wellness Management	3
SPHS530	Program Design for Health and Wellness Management	3
SPHS540	Health and Wellness Coaching and Behavior Change	3
Total Semester Hours		**12**

Final Program Requirement (3 semester hours)

SPHS697	Sports and Health Sciences Capstone [2]	3
Total Semester Hours		**3**

1. Required as the first course in this program.

2. Taken once all other requirements have been met.

Master of Science in Sports Management

Program Description

The Master of Science in Sports Management provides students with an improved understanding of sports administration, coaching theory and strategy, and business skills such as marketing, promotion, public relations, and finance. In the sports and fitness fields, students with advanced business skills and sports-related knowledge are needed to help advance the success of athletic programs and individuals. This program has achieved specialized accreditation through the Commission on Sport Management Accreditation (COSMA).

Spanish language learners may complete the Sports Management program through select courses in the Concentration in Sports Business Leadership.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Apply management theory to contemporary sports industry practices.
- Analyze the impact of legal and ethical issues in the sporting enterprise.
- Evaluate qualitative and quantitative data to assess financial challenges/opportunities in the sport industry.
- Develop marketing strategies to enhance the viability of sports-related enterprises.
- Examine structural barriers in the sport industry.

Degree Program Requirements

Core Requirements (18 semester hours)

SPMT502	The Sports Industry [1]	3
SPMT601	History, Culture, and Social Contexts of Sport	3
SPMT608	Sports Law	3
SPMT609	Sports Marketing, Promotion, and Public Relations	3
SPMT610	Sports Finance	3
SPMT612	Sports Event Management	3
Total Semester Hours		**18**

Students must choose a concentration for this degree program and may select from a Concentration in Coaching Theory and Strategy, Concentration in Interscholastic Athletic Administration, or Concentration in Sports Business Leadership.

Concentration in Coaching Theory and Strategy (9 semester hours)

Explores the strengths, weaknesses, and multiple roles of a successful coach in contemporary sports, including an analysis of the leadership style. Focuses on the contrasting responsibilities of a coach and assistant coaches and the levels of coaching relevant to these roles, as well as current ethical, management, and controversial issues in the field.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze and discuss the complexities and issues of academic sports administration from a collegiate or interscholastic context.
- Assess the strengths, qualities and weaknesses of a successful coach, including an analysis of the leadership style and multiple roles required of coaches in contemporary sports.
- Select, predict, and evaluate current ethical, management, and controversial issues in coaching today.
- Compare and contrast the roles and responsibilities of a coach and assistant coaches and discuss the levels of coaching relevant to these roles.

Concentration Requirements (9 semester hours)

SPMT605	Coaching Leadership	3
SPMT606	Techniques in Coaching Strategy	3
SPMT614	Coaching Theory, Methods, and Issues	3
Total Semester Hours		**9**

Concentration in Interscholastic Athletic Administration (9 semester hours)

Analyzes the complexities of sports administration from an interscholastic context. Evaluates the role of stakeholders in the sports industry, such as associations, the community, and administration, as well as various administration styles and a comprehensive sports event management plan that includes promotions, leadership, human resources, and financial aspects.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze and discuss the complexities and issues of academic sports administration from an interscholastic context.
- Assess and develop your leadership and management styles as a sports administrator.
- Assess and discuss the role of stakeholders in the sports industry including associations, the community, and discuss all related regulations and guidelines.
- Develop, design, and assess a comprehensive sports event management plan to include functional plans, training plans, legal, financial, accounting, public relationships, human resources, promotions and leadership.

Concentration Requirements (9 semester hours)

SPMT620	Leadership and Management in Sport	3
SPMT603	High School Athletic Administration	3
SPMT650	Legal Issues in High School Athletic Administration	3
Total Semester Hours		**9**

Concentration in Sports Business Leadership (9 semester hours)

Examines the rapidly-growing and global sports business industry with an emphasis on leadership. Designed to develop the skills and effectiveness of future leaders interested in managing individuals, teams, and sport organizations. This specialization in sports business

leadership studies critical topics within the industry including courses specifically focused on sports leadership, entrepreneurship, and sales and promotions Designed for those interested in professional, interscholastic or recreational leadership positions.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify leadership styles and strengths and take steps to improve personal leadership capacity.
- Implement practices necessary to build highly effective teams.
- Apply theory to real-world problems.
- Develop the capacity to understand and analyze sport organization realities from multiple perspectives.
- Examine the leadership, management, scheduling, and financial issues associated with running a successful athletics program.
- Develop the ability to be creative and entrepreneurial in thinking and application.

Concentration Requirements (9 semester hours)

SPMT613	Sports Entrepreneurship	3
SPMT620	Leadership and Management in Sport	3
SPMT630	Sales and Promotions in Sport	3
Total Semester Hours		**9**

Final Program Requirement (3 semester hours)

Select 1 course from the following:		3
SPMT697	Sports Management Capstone [2]	
SPMT699	Sports Management Practicum and Integration Project [2]	
Total Semester Hours		**3**

1. Required as the first course in this program.
2. Taken once all other requirements have been met.

RN to MSN

Program Description

The mission of the American Public University System's Nursing Program is to "provide quality, affordable, and accessible higher education for professional registered nurses to foster lifelong learning through a spirit of inquiry in order to prepare students for service and leadership roles in a diverse and global society."

The online RN to MSN degree provides Associate and diploma degree prepared Registered Nurses an accelerated pathway to obtaining a Master of Science in Nursing degree while also obtaining a Bachelor of Science degree in nursing. The RN to MSN degree is designed to facilitate the immediate and lifelong professional and personal development needs of Registered Nurses in the three areas of Practitioner, Scientist and Leader. Graduates of the RN to MSN program will be prepared to be agents of change in today's rapidly transforming healthcare industry.

Note: This program is currently not open for admission to residents of New York and Washington.

At this time, this program is not eligible for military tuition assistance; please speak with your Admissions Coach on other financial solutions.

This program has specific admission requirements.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Improve performance in the professional nursing role by developing leadership, management, sound clinical judgment, and communication skills to promote the health of individuals, families, and communities.
- Utilize evidence-based clinical practice guidelines and leadership principles to promote a culture of safety and achieve outcomes that are grounded in institutional values and professional ethics.
- Apply informatics and healthcare technologies to access critical information, to collaborate with other professionals, and to facilitate optimal patient-centered care.
- Apply scientific principles and the nursing process to evaluate responses to therapies and changes in patient health status.
- Integrate knowledge of human and organizational behavior to lead teams and to promote cultures of safety.
- Analyze the impact of financial, regulatory, and political decisions on local, national and global health outcomes.
- Synthesize knowledge of ethical, socioeconomic, and cultural factors to decrease health disparities, to advocate for vulnerable populations and to provide culturally relevant healthcare to individuals, groups and communities.
- Employ a spirit of inquiry to embrace the value of lifelong learning and to participate in professional activities that promote and shape the future of nursing.
- Apply the principles of ethical decision making to the practice of the master's prepared nurse.
- Demonstrate leadership skills to support safe nursing practices to continually improve patient-centered care.
- Advocate for healthcare policies that improve healthcare outcomes across the lifespan.
- Apply data management principles in the delivery of cost-effective care to improve health outcomes.
- Analyze how healthcare policy and health care economics affect change within the healthcare system.

Programmatic Admission Requirements

This program is currently not open for admission to residents of the District of Columbia and Washington.

To apply to this program, you must hold the following:

- Associate degree or diploma from an accredited or board approved institution in nursing.
- Current, active, unencumbered U.S. registered nursing (RN) license in a state where practicums will be conducted.
- Minimum GPA of 3.0
- Signed statement of understanding
- Current resume/CV
- 500-600 word statement of purpose and goals for graduate education*

*Writing style should be scholarly and coherent with no grammatical errors. Provide in 500-600 words a description of relevant work experience, clearly articulated reasons for applying to the master's program, and long-term goals or professional career aspirations.

Please visit our APU graduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-382-1783 or info@apus.edu.

Major Required (30 semester hours)

NURS502, NURS504, NURS507 may not be taken until all courses, except NURS498, have been completed.

NURS300	Professional Transitions in Nursing	3
NURS310	Assessment, Evaluation and Clinical Decision-Making	3

NURS315	Pathophysiology and Clinical Pharmacology	3
NURS340	Science of Evidence-Based Practice	3
NURS400	Emerging Scholarship and Trends in Healthcare	3
NURS401	Caring for Today's Veterans	3
NURS421	Community Health I	3
NURS502	Population-Based Healthcare	3
NURS504	Informatics and Technology	3
NURS507	Leadership for the Master's Prepared Nurse	3
Total Semester Hours		**30**

Elective Requirements (27 semester hours)

Select any courses that have not been used to fulfill major requirements. Credits applied toward a minor or certificate in an unrelated field may be used to fulfill elective credit for the major.	27
Total Semester Hours	**27**

Final Program Requirement (BSN) (3 semester hours)

Total Degree Requirements for BSN Conferral = 120

NURS498	Senior Seminar in Nursing Studies	3
Total Semester Hours		**3**

Students must choose a concentration for this degree program and may select from a Concentration in Community and Public Health Nursing, Concentration in Nurse Educator Track, or Concentration in Nurse Leader Track.

Concentration in Community and Public Health Nursing (23 semester hours)

The community/public health nursing concentration prepares nurses to serve, protect, and promote the health of communities locally and globally through the application of three core functions of public health: assessment, policy development, and assurance. Students are prepared to serve as change agents practicing with a justice approach that is collaborative, promotes health and equity, and engages community gatekeepers and stakeholders. Graduates are equipped to analyze determinants of health using epidemiological data and other evidence. They are also prepared to apply social and behavioral science theories, models, and principles to develop or improve programs to address public health issues and to promote public health policies, programs, and resources that improve health outcomes.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Analyze social determinants of health that affect the health of a community.
- Evaluate prevention strategies of communities to identify opportunities for improvement in health and disease prevention of vulnerable populations.
- Enhance the health of a vulnerable population through interprofessional coordination, planning, development, implementation, and evaluation of a public health nursing intervention for a selected community

Concentration Requirements (23 semester hours)

NURS500	Research and Evidence-Based Practice	3
NURS505	Healthcare Systems and Health Policy	3
PBHE520	Biostatistics with Lab	4

PBHE527	Social and Behavioral Aspects of Health	3
PBHE550	Research Methods in Public Health	3
PBHE607	Epidemiology	3
NURS654	Program Development and Evaluation in Community and Public Health Nursing	4
Total Semester Hours		**23**

Concentration in Nurse Educator Track (24 semester hours)

Looks at curriculum, instruction, and assessment in nursing education with a focus on teaching and evaluations for nurse educators.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply programmatic objectives to the nurse educator role in clinical or academic settings.
- Create educational and curricular materials for a variety of audiences.
- Evaluate effectiveness of teaching strategies and modalities.

Concentration Requirements (24 semester hours)

NURS500	Research and Evidence-Based Practice	3
NURS505	Healthcare Systems and Health Policy	3
NURS601	Advanced Health Assessment	3
NURS604	Advanced Pathophysiology and Pharmacology	3
NURS606	Nursing Curriculum Development, Assessment and Evaluation	3
NURS610	Learner-Centered Teaching Methodologies	3
NURS620	Educational Assessment and Evaluation for Nurse Educators	3
NURS695	Practicum in Nursing Education	3
Total Semester Hours		**24**

Concentration in Nurse Leader Track (24 semester hours)

Offers a focus in leadership, human resource management, and operational quality. Healthcare business and finance are also covered.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Apply programmatic objectives to the role of the nurse leader.
- Advocate for business practices that promote healthcare quality and patient safety.
- Synthesize knowledge of key business and human resources practices to lead healthcare teams.

Concentration Requirements (24 semester hours)

NURS500	Research and Evidence-Based Practice	3
NURS505	Healthcare Systems and Health Policy	3
HCAD605	Human Resource Management in Healthcare	3
HCAD650	The Business of Healthcare	3
HCAD651	Healthcare Finance	3

HCAD652	Operational Quality in Healthcare	3
HCAD520	Legal and Ethical Aspects of Healthcare Administration	3
NURS696	Practicum in Nursing Leadership	3
Total Semester Hours		**24**

Final Program Requirement (MSN) (3-4 Semester Hours)

Select 1 course from the following:		
NURS694	Community and Public Health Nursing Practicum with Capstone Project [2]	4
NURS699	Evidence-Based Practice Capstone Project [3]	3
Total Semester Hours		**3-4**

1. All literature courses require successful completion of ENGL101-Proficiency in Writing or ENGL110-Making Writing Relevant.
2. Taken once all other degree requirements have been met. Students who select a Concentration in Community and Public Health Nursing must take this course.
3. Taken once all other degree requirements have been met. Students who select a Concentration in Nurse Educator Track or Concentration in Nurse Leader Track must take this course.

Master of Science in Computer Science

Program Description

The Master of Science in Computer Science program is designed to equip students with advanced knowledge and skills to address complex computing challenges. Students synthesize and evaluate difficult problems using computer science theory, interdisciplinary methods, and engineering principles to develop innovative computing solutions.

The program emphasizes software engineering, data science, artificial intelligence, and machine learning—preparing graduates to design and evaluate scalable, secure, and sustainable computer systems. Students gain proficiency in programming languages, algorithms, and data structures, while learning to apply advanced computing principles to real-world applications across industries.

Strong communication and collaboration are central to this computer science program. Students refine their ability to explain technical concepts to diverse audiences, engage in research, and uphold ethical and professional standards in computing practice. Graduates emerge ready to lead projects that leverage technology to create effective, responsible, and high-quality solutions to complex technical and societal problems.

It is recommended that students in this program have strong quantitative and analytical foundations.

Spanish language learners may complete the Computer Science program through select courses.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Lead the design, development, and evaluation of secure, scalable software systems and computing applications.
- Apply advanced computer science principles and engineering methods to analyze and solve complex problems.
- Communicate technical and research findings clearly and effectively.
- Uphold ethical and legal responsibilities in computer science practice with awareness of societal impact.

- Collaborate in diverse teams to deliver innovative, high-quality computing solutions for industry and academia.

CSCI510	Applied Machine Learning and Artificial Intelligence	3
CSCI520	Big Data Analytics & Data Mining	3
Total Semester Hours		**12**

General Concentration (18 semester hours)

This computer science concentration equips graduate students to engineer secure, scalable, and user-focused computing systems across the full stack. Coursework integrates cybersecurity, software engineering, DevSecOps, human-computer interaction, cloud computing, computer architecture, and operating systems. Students gain hands-on experience with network security, data science, and automation techniques to design reliable and defensible systems.

Through applied projects, students learn to implement machine learning for anomaly detection, design cloud-native applications, and optimize performance from hardware through runtime environments. Emphasis is placed on formal methods, measurement-based validation, and alignment with recognized security frameworks.

Graduates will be prepared for careers in secure software engineering, cloud architecture, cybersecurity engineering, UX engineering, and systems development, with the ability to integrate advanced computing concepts into practical, scalable, and human-centered technology solutions.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Design, secure, and optimize cloud-native systems using cybersecurity and network defense strategies.
- Apply DevSecOps and automation principles to enhance reliability and scalability.
- Evaluate usability and human-computer interaction (HCI/UX) through empirical research.
- Integrate machine learning and data-driven approaches for threat-informed decision-making.
- Employ computer architecture and operating systems knowledge to improve system performance and security.

Concentration Requirements (18 semester hours)

Master of Science in Coaching and Athletic Development

Program Description

The Master of Science (MS) in Coaching and Athletic Development program is a combination of the study of sport and exercise science, sports business management, and athletic coaching. This degree program helps provide students with the knowledge to train and develop athletes for sport competition and lifetime sport involvement by applying methods of exercise programming, coaching pedagogy, and financial and business principles to sport. The concepts of developing athletes for optimal performance through sport-specific training techniques and strategies will be explored. Students will acquire the skills often necessary to train athletes in both small and large group settings and implement business principles for owning and managing sport-specific training facilities and businesses.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Analyze sport movements and design movement-oriented exercise prescriptions.
- Illustrate the potential for enhancement of muscle strength, muscular endurance, power, flexibility, and motor performance during anaerobic training.
- Assemble protein, carbohydrate, and fat recommendations for athletes, and discern between dietary recommendations for disease prevention and recommendations for performance.
- Evaluate best practices to measure selected parameters related to athletic performance, and explain how to administer field tests appropriately.
- Apply management theory and managerial leadership concepts to contemporary sports industry practices.
- Integrate economic decision making and advanced finance theory and concepts to sports and sports- related enterprises as it relates to sports in contemporary society.

Master of Science in Finance

Program Description

The Master of Finance program equips students with essential knowledge and skills in finance. The curriculum comprises core courses in corporate finance, financial accounting, investment management, and more, along with managerial economics and financial institutions. As students progress, they can specialize in either Risk Management and Derivatives or Mergers and Acquisitions, each offering a range of targeted courses. This well-rounded program empowers students to excel in various finance-related fields, preparing them for successful careers as financial professionals, analysts, or financial planners.

Course enrollment will be available for the October 2026 session. Spanish language learners may complete the Finance program through select courses when course enrollment opens.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Examine the corporate structure and valuation for strategic planning decisions.
- Distinguish financial theories and methods to analyze data.
- Evaluate capital investments and risk exposure in global markets.
- Interpret ethical practices and regulations in financial decision-making.

The General Concentration will give students a deep understanding of financial systems and practices including capital investments, risk, derivatives, investments, and insurance. Those who select the M.S. general concentration will find themselves prepared for a management role in corporate finance. The MS General concentration will also prepare the student for international finance and working with foreign currencies. It will also cover alternative currencies such as Bitcoin. This concentration will focus on how corporations utilize the financial markets for funding projects, capital improvements, and acquisitions.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Develop a comprehensive understanding of financial systems and practices, including capital investments, foreign and alternative currencies, risk management, derivatives, and insurance, preparing them for management roles in corporate finance.

Doctoral Programs

American Public University (APU) professional practice doctorates are multidisciplinary degrees that address intellectual, cultural, and organizational challenges in the respective profession of study. These programs, which embrace a scholar-practitioner model, are preparing the next generation of global leaders to advance their fields. This transformational approach concurrently integrates and develops knowledge, skills, findings, and insights applied to solve or provide greater understanding of complex problems. Likewise, we

aim to advance theory and practice to enhance the related disciplines, areas of professional practice, and communities wherein our students, faculty, and University serve.

A Professional Practice Doctorate is an applied degree that focuses on the scholar-practitioner model. In this program, you will conduct research related to your professional experience to bridge theory and practice, advance knowledge in the field, and contribute to organizational change. While maintaining the rigor of a doctoral program, the emphasis on application of theory to practice differentiates the applied doctorate from the traditional PhD program.

Program Framework

Students will progress through the coursework with options for three elective courses. In addition to coursework, students will complete virtual residencies, an ePortfolio with oral defense of the portfolio, a dissertation proposal with an oral defense, and a dissertation with oral defense.

Residencies: Doctoral programs contain residencies at crucial program points.

1. The first residency is part of your Doctoral Foundations course, which establishes expectations for the program, develops rapport with fellow students, and introduces students to doctoral faculty.
2. The second residency depends on the specific degree program and may include presentations at professional conferences or international experience.
3. The third residency is an 8-week course that focuses on program requirements, such as the e-portfolio defense, committee formation, the practicum and preparing the dissertation proposal.

Doctor of

- Global Security
- Strategic Intelligence

Doctor of Global Security (D.G.S.)

Program Description

The Doctor of Global Security degree explores the complex global security environment. It focuses on the role actors play in the formulation and implementation of international, bilateral, and state policies and norms, and practices of global scope and concern. The program also addresses the impact of global security issues on domestic security and foreign policy.

The multidisciplinary curriculum integrates research and evidence-based solutions to the complex problems you face in your professional practice and is designed to help prepare you for leadership in the field. Strong emphasis is placed on conducting thorough program and policy evaluations that identify and analyze decisions beyond first-order impacts and on further cultivating your applied research skills at an advanced level.

This doctoral program embraces a scholar-practitioner model of education. Courses are taught by highly credentialed and experienced instructors, many of whom hold key positions in government agencies or public safety organizations.

Degree Program Objectives

- Analyze the academic and professional practice of global security.
- Synthesize the major theories, approaches, and concepts relevant to the global security discipline.
- Analyze complex issues and challenges related to the global security discipline.
- Apply theories, approaches, and concepts to real-world examples related to global security.
- Assess the impact of global security issues on domestic security and foreign policy.
- Analyze the ideas, beliefs, language, culture, psychology, and decision making of actors in the global environment.
- Design research studies using appropriate qualitative and quantitative approaches for the global security discipline.

- Operate according to ethical research and professional behavior guidelines in the global security discipline.

Admission Requirements

Admission to our APU doctoral programs is selective. Students are selected based on evidence of outstanding intellectual ability, strong commitment to applied research and practice in the discipline, and demonstrated ability to successfully complete post-baccalaureate study. Interviews will be held with selected students prior to a final admission decision.

All required admissions documents are due before the review can begin. We recommend you apply at least 3 months in advance of your intended cohort start date.

Required Documentation

Upon completion of the application and payment of the non-refundable $100.00 application fee, you will be assigned a student ID. This will allow you to complete your admissions package, which consists of the following required documentation:

1. **Prior Education**
   Your master's degree in a closely related discipline with a minimum GPA of 3.0 is required. Related disciplines include: International/Global Studies; International Relations and Affairs; Political Science; Criminal Justice; Homeland Security; National Security; Military Studies; Cybersecurity; Resource Management; and Global Business and Management. Other degrees and doctoral experience may be considered. Your official transcript verifying the award of your master's degree must be sent from the issuing institution in sealed envelopes or by official electronic copy (such as National Student Clearinghouse transcript). No faxed or unsealed transcripts will be accepted.
2. **Professional Practice**
   You must have 3-5 years work experience in the global security field or closely related field.
3. **CV or Resume**
   Must include work history, professional accomplishments, service to the profession, and any teaching and research experience.
4. **English Proficiency**
   Applicants from a country whose native language is not English (regardless of current residence) must provide proof of English proficiency.
5. **Three References**
   Choose three references from colleagues or professors with whom you have current or recent (within the past 3-5 years) professional associations, and ask them to complete the doctoral reference form. Your references will assess your professional accomplishments, leadership in the discipline, written and verbal communication skills, service activities, and personal strengths necessary for successful completion of a doctoral program.
6. **Admission Essay**
   In 750-1200 words, explain why you are applying to this doctoral program. Please discuss your rationale for earning a doctorate in this field and include specific examples for how this degree will help you obtain your long-term academic and professional career goals. Provide examples of how current issues in this field inform your decisions, making sure to include current relevant literature and cite using Chicago/Turabian style.
7. **Photo ID**
   Submit a legible color copy of your valid government-issued photo ID. Military students, except Air Force, can submit a government issued JST.

Degree at a Glance

Program Milestones

- **Portfolio Defense:** This requirement is an oral defense of the portfolio to demonstrate mastery of disciplinary knowledge and the program learning outcomes for doctoral coursework.
- **Dissertation Proposal Defense:** This requirement is an oral defense of the dissertation proposal in order to receive dissertation committee approval of the dissertation concept and research plan. The portfolio defense must be successfully completed to defend the dissertation proposal.

- **Dissertation Defense:** This requirement is an oral defense of the complete dissertation at the conclusion of the research and writing process. Students must pass the dissertation defense, make any necessary revisions, and publish the dissertation in ProQuest before the doctoral degree can be conferred.

The program is a total of 58 semester hours, plus continuing registration for the dissertation requirement.

Doctor of Strategic Intelligence (D.S.I.)

Program Description

The Doctor of Strategic Intelligence addresses intellectual, cultural, and organizational challenges in the emerging field of intelligence studies. You'll study the activities and relationships between actors in the global community, along with domestic intelligence topics and issues of strategic concern to the U.S. The curriculum integrates practice, research, and multidisciplinary study (international security, psychology, strategic leadership) to enhance your understanding of the complex problems you face in your professional practice today.

As a student in this doctoral program, you will conduct ethically-sound, original, applied research that extends the body of knowledge in the field, and prepares you for leadership and service in the intelligence community. This program embraces a scholar-practitioner model of education, and courses are taught by highly credentialed and experienced instructors, many of whom hold key positions in government agencies or public safety organizations.

Degree Program Objectives

- Analyze the academic and professional practice of strategic intelligence.
- Synthesize the major theories, approaches, and concepts relevant to strategic intelligence.
- Evaluate complex issues and challenges related to strategic intelligence.
- Design research studies using appropriate qualitative and quantitative approaches for strategic intelligence.
- Assess the impact of strategic intelligence on domestic and global problems.
- Operate according to the ethical and professional behavior guidelines in accordance with university best practices.
- Defend and communicate research relevant to strategic intelligence issues before a body of peers, policymakers, or press, in a professional conference setting.

Admission Requirements

Admission to our APU doctoral programs is selective. Students are selected based on evidence of outstanding intellectual ability, strong commitment to applied research and practice in the discipline, and demonstrated ability to successfully complete post-baccalaureate study. Interviews will be held with selected students prior to a final admission decision.

All required admissions documents are due before the review can begin. We recommend you apply at least 3 months in advance of your intended cohort start date.

Required Documentation

Upon completion of the application and payment of the non-refundable $100.00 application fee, you will be assigned a student ID. This will allow you to complete your admissions package, which consists of the following required documentation:

1. **Prior Education**
   Your master's degree in a closely related discipline with a minimum GPA of 3.0 is required. Related disciplines include: Intelligence Studies; Military Studies; International/Global Studies; Homeland Security; Cybersecurity; National Security; Terrorism Studies; Public Administration/Public Policy. Other degrees and doctoral experience may be considered. Your official transcript verifying the award of your master's degree must be sent from the issuing institution in sealed envelopes or by official electronic copy (such as National Student Clearinghouse transcript). No faxed or unsealed transcripts will be accepted.
2. **Professional Practice**
   You must have 3-5 years work experience in the intelligence field or closely related field.
3. **CV or Resume**
   Must include work history, professional accomplishments, service to the profession, and any teaching and research experience.
4. **English Proficiency**
   Applicants from a country whose native language is not English (regardless of current residence) must provide proof of English proficiency.
5. **Three References**
   Choose three references from colleagues or professors with whom you have current or recent (within the past 3-5 years) professional associations, and ask them to complete the doctoral reference form. Your references will assess your professional accomplishments, leadership in the discipline, written and verbal communication skills, service activities, and personal strengths necessary for successful completion of a doctoral program.
6. **Admission Essay**
   In 750-1200 words, explain why you are applying to this doctoral program. Please discuss your rationale for earning a doctorate in this field and include specific examples for how this degree will help you obtain your long-term academic and professional career goals. Provide examples of how current issues in this field inform your decisions, making sure to include current relevant literature and cite using Chicago/Turabian style.
7. **Photo ID**
   Submit a legible color copy of your valid government-issued photo ID. Military students, except Air Force, can submit a government issued JST.

Degree at a Glance

Program Milestones

- **Portfolio Defense:** This is an oral defense of the portfolio to demonstrate mastery of disciplinary knowledge and the program learning outcomes for doctoral coursework.
- **Dissertation Proposal Defense:** This is an oral defense of the dissertation proposal in order to receive dissertation committee approval of the dissertation concept and research plan. The portfolio defense must be successfully completed to defend the dissertation proposal.
- **Dissertation Defense:** This is an oral defense of the complete dissertation at the conclusion of the research and writing process. Students must pass the dissertation defense, make any necessary revisions, and publish the dissertation in ProQuest before the doctoral degree can be conferred.

The program is a total of 58 semester hours, plus continuing registration for the dissertation requirement.

Core Requirements	30
Professional Practice Requirements	8

Undergraduate Certificates

Certificate programs are available to students who seek a shorter program focused on career development or knowledge of a specific discipline. Students are required to take a minimum of 15 semester hours, although some certificates may require up to 24 semester hours.

Note: Students are not permitted to enroll concurrently in multiple programs. For example, you may not be enrolled in both an undergraduate certificate and a bachelor program at the same time. However, if you previously completed the Undergraduate Certificate in Family Studies you may be able to apply those credits toward a Bachelor of Arts in Human Development and Family Studies.

- Child Life
- Computer Systems and Networks
- Counterintelligence
- Cybercrime Essentials
- Cybersecurity
- Digital Forensics
- E-Commerce
- Emergency Management
- Employee Relations and Engagement
- Enterprise Web Applications
- Explosive Ordnance Disposal
- Family Studies
- Fire Science
- Fish and Wildlife Management
- Forensics
- Government Agency Administration
- Homeland Security
- Human Resource Management
- Infant and Toddler Care
- Information Security Planning
- Information Systems Security Essentials
- Instructional Design and Delivery
- Intelligence Analysis
- Internet Webmaster
- IT Infrastructure Security
- IT Project Management Essentials
- Law Enforcement Leadership
- Microsoft Office Applications
- Paralegal Studies
- Pre-Health

- Public Lands Management
- Real Estate Management
- Restaurant Operations
- Security Management
- Space Studies
- Strategic Leadership
- Terrorism Studies
- Visual Communications

Undergraduate Certificate - Child Life

Program Description

The undergraduate certificate in Child Life is ideal if you already have your bachelor's degree and wish to complete the coursework that can help to support the academic requirements to sit for the Certified Child Life Specialist (CCLS) examination. This 7-course online certificate teaches you a range of therapeutic activities designed to assist children and families facing stressful healthcare or traumatic events requiring coping support (counseling, grief support, advocacy, etc.). Completion of this certificate will help you stand out in the growing and competitive child life field where the CCLS is being increasingly recognized as a necessary component to pediatric care.

Note: Additional coursework may be needed depending on your bachelor's degree to fully meet the academic requirements to sit for the CCLS. In addition, all candidates for the CCLS examination must complete the required fieldwork/internship, which is not offered by the university. Additional information on these requirements can be found at www.childlife.org. You are encouraged to research these additional requirements, as well as begin an eligibility assessment on the Association of Child Life Professionals (ACLP) website, www.childlife.org, to most accurately determine which courses you will need to fulfill the necessary academic requirements.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Provide an overview of the field of child life theory and practice.
- Understand the issues faced by children and their families during times of acute or chronic illness.
- Provide evidence of professional level academic training in the field of child life.

Programmatic Admission Requirements

The following is required for admission into this program. All documentation must be provided prior to course registration:

- Your official bachelor's degree transcript from an institution whose accreditation is recognized by the Council for Higher Education Accreditation (CHEA).
- Signed statement of understanding (SOU)

Please visit our APU undergraduate admission page for more information on institutional admission requirements.

Note: Your bachelor's field of study may impact the need for additional coursework to sit for the CCLS licensing examination. Please see the Child Life Council website for more information.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-503-3441 or info@apus.edu.

Certificate Requirements (21 semester hours)

Undergraduate Certificate - Computer Systems and Networks

Program Description

The undergraduate certificate in Computer Systems and Networks provides the education and skills necessary to configure, install, manage, and administer basic network infrastructures. In this online program, you will learn to build, repair, and troubleshoot networks, PCs, and peripherals that are often required for entry-level positions as a helpdesk support analyst, network administrator, PC specialist, or systems analyst. Some courses in this program aligned with the requirements of CompTIA A+® and CompTIA Network+® certification.

CompTIA A+®/CompTIA Network+® certification is a registered trademark of Computing Technology Industry Association, Inc.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Evaluate CPU architectures.
- Evaluate the organization of the motherboard and the processes for monitoring and managing Windows® client operating systems.
- Appraise memory subsystems and bus architectures in computer systems.
- Analyze the formatting, protocols, and latency of storage subsystems.
- Examine the component architecture of notebook computers.
- Appraise the directory, file, registry, and event management systems, and the methods to mitigate risk by minimizing the exposure of information and by improving access control.
- Investigate the processes for analyzing problems, synthesizing solutions, tracking progress, and managing customer relationships related to computer hardware systems.
- Investigate the process to configure local area networks (LAN) and to optimize the utilization of memory, storage, and CPU resources.
- Assess the methodology to harden and secure operating systems and computer information.
- Analyze the layers of the open systems interconnect (OSI) reference model, wireless and mobile networks, multimedia networking, security in computer networks, and network management.

- Appraise the impact of computer systems and networks on global commerce, and analyze the related societal, legal, and economic issues.

Windows® is a registered trademark of Microsoft Corporation.

Certificate Requirements (18 semester hours)

ISSC221	Intermediate Computer Systems	3
ISSC322	Computer Systems Organization: Advanced	3
ISSC323	Computer Hardware Systems	3
ISSC231	Networking Concepts	3
ISSC343	Wireless Networks	3
ISSC421	Computer and Network Security	3
Total Semester Hours		**18**

Undergraduate Certificate - Counterintelligence

Program Description

The undergraduate certificate in Counterintelligence focuses on the fundamentals of how intelligence agencies in the U.S. use counterintelligence and covert action to protect U.S. national security and global interests from adversaries. You will study how counterintelligence is collected, and how modernization and technology affect the use of counterintelligence. This online certificate is ideal for undergraduate students who want to expand their knowledge of counterintelligence without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Acquire in-depth knowledge of counterintelligence research, analysis, and operations.
- Analyze threats in the counterintelligence arena.
- Examine the role of the counterintelligence professional in both overt and covert operational styles.
- Demonstrate proficiency in the use of selected research methods and tools as they pertain to the counterintelligence environment.
- Assess the different operational styles used throughout both the counterintelligence and intelligence analysis communities.

Certificate Requirements (18 semester hours)

INTL408	Counterintelligence Operations	3
INTL409	Counterintelligence Analysis	3
INTL410	Counterintelligence	3
Select 3 courses from the following:		9
INTL412	Espionage/Counterespionage	
INTL413	Denial and Deception	
INTL422	Open Source Collection	
INTL423	Human Intelligence	
INTL424	Interrogation	

Total Semester Hours	**18**

Undergraduate Certificate - Cybercrime Essentials

Program Description

The undergraduate certificate in Cybercrime Essentials presents digital forensics tools and techniques used to detect, recognize, document, and verify cybercrime, cyber terrorism, cyberwarfare, cyberstalking, and cyberbullying. The rapid change in technology and the exponential growth in cybercrime means more skilled professionals are necessary to combat the effects of computer-related malice. This certificate program is intended for undergraduate students who seek to heighten their knowledge of cybercrime without committing to an academic degree program.

Coursework in this undergraduate certificate program aligns to the general objectives of the International Association of Computer Investigative Specialists (IACIS®) certification and meets the topical requirements for the Department of Defense Directive 8570.1M Information Assurance Management (IAM) Technical I, Technical II, Technical III, Management I, Management II, and Management III categories.

IACIS® is a registered trademark of the International Association of Computer Investigative Specialists, Inc.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Appraise the rudiments of cybercrime and computer forensics, and profile the challenges of securing information on the Internet.
- Assess the process, the techniques, and technologies used by hackers to gain unauthorized access to information systems.
- Examine the processes, best practices, and techniques to manage and prevent cybercrime.
- Inspect the strategies and steps to investigate digital evidence in cybercrime.
- Construct the legal portfolio of digital evidence to support the prosecution of cybercrime.
- Examine the file structures, formats and technical protocols in storage subsystems encountered in gathering digital evidence.
- Develop a plan to analyze the processes and practices to seize and secure digital evidence at a crime scene and to collect evidence in both the private and public sectors.
- Analyze the steps and process used to identify, secure, catalog, and store digital evidence.

Certificate Requirements (18 semester hours)

ISSC351	Computer Forensics	3
ISSC361	Information Assurance	3
ISSC422	Information Security	3
ISSC451	Cybercrime	3
ITMG371	Contemporary Internet Topics	3
ITMG281	Law, Privacy, and Digital Data	3
Total Semester Hours		**18**

Undergraduate Certificate - Cybersecurity

Program Description

The undergraduate certificate in Cybersecurity examines the digital forensics tools, techniques, and methods used by cyber analysts to detect cybercrime, cyber terrorism, cyber war, cyberstalking, and cyberbullying. This online program offers both introductory and advanced forensic science courses, along with an understanding of the social and legal impacts of cyber terrorism and cyber bullying. The curriculum for this program maps to the general objectives of the International Association of Computer Investigative Specialists (IACIS®) certification.

Cybersecurity experts are needed to keep systems and sensitive information secure and out of the hands of cyber criminals in government and the public safety sectors, as well as commercial industries. This certificate program is intended for undergraduate students who seek to heighten their knowledge of cybersecurity without committing to an academic degree program.

IACIS® is a registered trademark of the International Association of Computer Investigative Specialists, Inc.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Demonstrate an understanding of the processes and goals of cyber forensics investigations.
- Assess and select federal and state laws and legal concepts that affect how governments and organizations think about information security.
- Support the importance of search warrants and chain of custody in a forensic investigation.
- Apply the field of cybersecurity and the regulatory standards and compliances.
- Gain the foundational knowledge and technologies needed to detect, investigate, and prevent computer-related crimes.

Certificate Requirements (18 semester hours)

ISSC331	Legal Issues in Information Security	3
ISSC351	Computer Forensics	3
ISSC451	Cybercrime	3
ISSC452	Cybersecurity	3
ISSC457	Digital Forensics: Investigating Network Intrusions and Cybercrime Security	3
ITMG281	Law, Privacy, and Digital Data	3
Total Semester Hours		**18**

Undergraduate Certificate - Digital Forensics

Program Description

The undergraduate certificate in Digital Forensics examines various forensics models to identify, preserve, collect, analyze, prepare, and present evidence for prosecuting cybercrime. The window of opportunity for collecting evidence can be a few seconds or minutes depending on the sophistication of the perpetrator, and this program teaches the precise digital forensic measures needed to respond to security incidents to prevent loss or corruption of sensitive proprietary information. This certificate program is intended for undergraduate students who seek to heighten their knowledge of digital forensics without committing to an academic degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Examine common incident response procedures via basic computer investigation processes and a good computer forensics lab for the development of investigative reports following first responder procedures.
- Investigate forensics of wireless network attacks caused by mobile and wireless peripheral devices, and then evaluate security and access procedures within wireless Internet use of subject search warrants and chain of custody in a forensic investigation.
- Explore Web attacks, router forensics, email tracking techniques, email crime, and network forensics through investigation logs.
- Discuss corporate espionage and prevention techniques and computer-related crimes, such as sexual harassment and child pornography and the law.
- Analyze image files using forensic processes, recovered files on deleted partitions, data acquisition and duplication procedures, and steganography tools to create a forensic investigation case.
- Analyze file systems, hard disks, various types of digital media, tools, and applications that utilize password cracking on various operating systems.

Certificate Requirements (18 semester hours)

ISSC351	Computer Forensics	3
ISSC455	Digital Forensics: Investigation Procedures and Response	3
ISSC456	Digital Forensics: Investigating Wireless Networks and Devices	3
ISSC457	Digital Forensics: Investigating Network Intrusions and Cybercrime Security	3
ISSC458	Digital Forensics: Investigating Data and Image Files	3
ISSC459	Digital Forensics: Hard Disc and Operating Systems	3
Total Semester Hours		**18**

Undergraduate Certificate - E-Commerce

Program Description

The undergraduate certificate in Ecommerce helps you comprehend how businesses and organizations use the Web to buy and sell products and services online. This certificate will broaden your scope of understanding of ecommerce architecture, tools and technologies, as well as analytics, videography, search engine optimization (SEO), and content management systems. Specific jobs in the ecommerce field include online marketing and analytic managers, search engine optimization (SEO) specialists, web developers, content managers, product managers, and more. After completing this certificate, you may consider pursuing your Certified Internet Web (CIW®) Ecommerce Specialist certification.

CIW® is a registered trademark of Certification Partners, LLC.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Explain the evolution of e-commerce architecture.
- Summarize the social and economic influences of e-commerce.
- Assess the use of Web analytics, Web videography, search engine optimization, and Web content management systems to promote e-commerce.
- Compare traditional business models with growing Web technologies, Web analytics, Web videography, search engine optimization, and Web content management systems used for e-commerce.

- Develop management strategies that would incorporate e-commerce and achieve organizational missions.

Certificate Requirements (18 semester hours)

WEBD122	Introduction to Web Analytics	3
WEBD222	Advanced Web Analytics	3
WEBD300	User Interface Design	3
WEBD311	Internet Concepts	3
WEBD321	Web eCommerce Development	3
WEBD323	Search Engine Optimization	3
Total Semester Hours		**18**

Undergraduate Certificate - Emergency Management

Program Description

The undergraduate certificate in Emergency Management is designed to improve your knowledge of disaster planning, risk assessment, emergency operations, crisis communication, public policy, and disaster mitigation and recovery. With continual awareness on the need to assure sustainability in crisis situations, along with regulatory requirements on businesses to develop emergency management programs, there is growing need to prepare professionals in all walks of industry to understand, respond to, and manage crisis. This online certificate is intended for undergraduate students who want to expand their knowledge of emergency management without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Develop a core understanding of emergency management theory and concepts.
- Summarize the four phases of emergency management.
- Recognize the application of planning strategies for each phase of emergency and disaster management.
- Assessing the role of social media in preparedness, response and recovery operations.
- Evaluate hazard identification and risk reduction techniques.
- Analyzing the role of public policy in managing threats to community sustainability.
- Examine the psychological impact of a disaster on rescuers and victims.

Certificate Requirements (18 semester hours)

EDMG101	Introduction to Emergency Management	3
EDMG220	Emergency Planning	3
EDMG230	Emergency and Disaster Incident Command	3
EDMG259	Hazard Mitigation and Preparedness	3
EDMG321	Social Media Application to Emergency and Disaster Management	3
PSYC431	Psychology of Disaster	3
Total Semester Hours		**18**

Undergraduate Certificate - Employee Relations and Engagement

Program Description

The undergraduate certificate in Employee Relations and Engagement focuses on organizational change, conflict resolution, motivation, and leadership. Today's employers require skilled managers with business acumen, interpersonal communication, relationship management and cultural awareness skills. Knowledge gained in this program is useful in professions requiring an understanding of leading and navigating employees to success through the creation of engaged, proactive relationships throughout the organization.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Identify employee relation strategies that prevent inappropriate or unlawful behavior in the workplace.
- Discuss how proactive employee relation strategies correlate to organizational success and increase employee morale.
- Describe how implementing a counseling/coaching/mentoring program encourages healthy relationships among leaders and followers as well as peer-to-peer encounters.
- Explore theories and concepts which explain how to gain acceptance and buy-in for change management initiatives within organizations.
- Construct a customized business unit model utilizing employee relation and engagement strategies to decrease employee turnover and improve employee communication.

Certificate Requirements (15 semester hours)

HRMT411	Dispute Resolution	3
HRMT413	Employment and Labor Relations	3
MGMT311	Organizational Behavior	3
MGMT313	Organizational Change	3
HRMT200	Human Resource Fundamentals	3
Total Semester Hours		**15**

Undergraduate Certificate - Enterprise Web Applications

Program Description

The undergraduate certificate in Enterprise Web Applications focuses on the theories and skills necessary to design, develop, and implement robust enterprise web applications. You will be taught how to apply and use object-oriented programming (OOP), HTML, JavaScript®, and Java J2SE® and Java J2EE® and will examine the process to build and deploy real-world Java applications. One course in this program covers the CIW® JavaScript Specialist curriculum of the CIW JavaScript certification. After completing this certificate, you may consider pursuing your CIW Site Development Associate certification.

Note: While not a prerequisite, it is strongly recommended that you complete our undergraduate certificate in Web Publishing prior to enrolling in this program.

JavaScript® is a registered trademark of Oracle America, Inc.

Java J2SE®/Java J2EE® is a registered trademark of Oracle America, Inc.

CIW® is a registered trademark of Certification Partners, LLC.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Assess the impact of Java 2 Standard Edition (J2SE) and Java 2 Enterprise Edition (J2EE) on IT Management, security, and global economies as it applies to enterprise ecommerce solutions on the Web.
- Examine the principles and concepts of object-oriented programming (OOP) and evaluate the application of these principles in JavaScript and Java.
- Evaluate the power and advantages of XML that have made it the global standard for enterprise data exchange and data dictionary standardization.
- Explore and analyze the hierarchy of the Java Class Library; use the objects and properties to design and develop applications on the Web.
- Appraise the architecture, lifecycle, management issues, and process for developing Java Server Pages (JSP) based, Java Servlets based, and JavaBeans based enterprise Web applications.

Certificate Requirements (18 semester hours)

ENTD150	Beginning Programming	3
ENTD381	Object Oriented Programming With Java®	3
ENTD382	Intermediate Object-Oriented Programming With Java®	3
INFO222	Database Concepts	3
WEBD121	Web Development Fundamentals	3
WEBD241	Web Development Using JavaScript®	3
Total Semester Hours		**18**

Undergraduate Certificate - Explosive Ordnance Disposal

Program Description

The undergraduate certificate in Explosive Ordnance Disposal seeks to increase your knowledge of the science, history, construction, and handling of explosive substances, as well as proper disposal techniques and incident assessments. Law enforcement agencies, the military, and government contractors need skilled, knowledgeable bomb disposal technicians and first responders to assist in protecting public safety.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Recognize the historical basis of the development of the explosive ordnance disposal (EOD) field.
- Identify the differences between military and civilian EOD organizations.
- Select the appropriate use of technology/approach in rendering safe operations.
- Describe the basic electrical and electronic theory/circuitry used in triggering and controlling standard and improvised explosive devices (IEDs).

Certificate Requirements (19 semester hours)

SCIN133	Introduction to Physics with Lab	4
HLSS215	Regulatory Issues in Weapons of Mass Destruction	3

HLSS230	Chemistry of Explosives	3
HLSS231	History of Explosive Ordnance Disposal	3
HLSS232	Electronics, Electricity, and Explosives	3
HLSS233	Explosive Incident Assessment: Methods, Practices, Protocols	3
Total Semester Hours		**19**

Undergraduate Certificate - Family Studies

Program Description

The undergraduate certificate in Family Studies is designed for students wishing to develop or enhance their knowledge and skills related to the provision of educational and support services to families, parents, and children. This 6-course online program examines how the individual's needs and perceptions affect family dynamics, and explores the spectrum from child development to the aging process. A focus on the military family is also provided.

Note: Completion of this certificate does not qualify you to apply for teaching licensure.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Investigate dynamics and cultural influences within the family unit.
- Apply theoretical approaches to child rearing.
- Develop knowledge of practical skills for working with children and parents.
- Explore the aging process and its effects on the family.
- Explore and discuss strategies and practices of healthy and effective marriages and family relations.

Certificate Requirements (18 semester hours)

CHFD340	Family Development	3
Select 5 courses from the following:		15
CHFD225	Introduction to the American Family	
CHFD307	Child and Adolescent Development	
CHFD331	Parenting	
CHFD348	Marriage and the Family	
CHFD360	Family Resource Management	
CHFD445	Family Communications	
CHFD446	Families and Social Action	
DEFM332	Transition and the Military Family	
Total Semester Hours		**18**

Undergraduate Certificate - Fire Science

Program Description

The undergraduate certificate in Fire Science provides a foundation in study of fire science, and introduces the essentials of fire behavior and combustion, fire prevention and protection systems, emergency services, and safety and survival. This online program follows the Fire and Emergency Services Higher Education Model Curriculum (FESHE), as outlined by the U.S. Fire Administration and National Fire Academy. This certificate program is applicable to a variety of fields including firefighting, fire inspection, and arson investigation. This online certificate is intended for undergraduate students who seek to expand their knowledge of fire science without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Explain the chemistry components of combustion and how combustion is managed through science.
- Identify the various fire protection systems currently used in today's building protection system.
- Identify construction methods and types of construction.
- Demonstrate use of risk analysis for a geographical community.
- Define the national fire flow formula for proper building protection and water supply.

Certificate Requirements (18 semester hours)

FSMT102	Fire Behavior and Combustion	3
FSMT188	Fire Prevention	3
FSMT201	Fire Protection Systems	3
FSMT210	Fundamentals of Fire Protection	3
FSMT287	Fire Protection in Building Construction	3
FSMT289	Fire Protection Hydraulics and Water Supply	3
Total Semester Hours		**18**

Undergraduate Certificate - Fish and Wildlife Management

Program Description

The undergraduate certificate in Fish and Wildlife Management examines the policies, regulations, and technical approaches to managing fish and wildlife population control and conservation. You'll be taught to develop strategies to ensure species survival in light of environmental and climatic change, and habitat degradation and fragmentation. Knowledge from this certificate program applies to many fields including state and federal fish and wildlife management agencies, nonprofits, and consulting companies.

Certificate Objectives

Upon completion of this program, the student will be able to:

- Describe the fundamental concepts and principles of the management of fish and wildlife resources.
- Explain the impact of human activities on the survival and management of fish and wildlife populations.
- Identify the federal, state, and local agencies responsible for the management of fish and wildlife resources.
- List the competencies needed to become a professional fish or wildlife manager.

- Compare the effectiveness of fish and wildlife management techniques and methods.
- Explain the regulations, policies, and politics that influence the management of fish and wildlife in the U.S.

Certificate Requirements (18 semester hours)

EVSP330	Fish and Wildlife Policies, Programs, and Issues	3
EVSP341	Introduction to Wildlife Management	3
EVSP411	Environmental Policy, Regulation, and Law	3
Select 3 courses from the following:		9
EVSP331	Public Lands Management	
EVSP342	Population Ecology	
EVSP416	General Ecology	
EVSP421	Water Resources Management	
Total Semester Hours		**18**

Undergraduate Certificate - Forensics

Program Description

The undergraduate certificate in Forensics is designed to improve your knowledge of criminal behavior, analysis, profiling, evidence collection and processing, criminal liability, and criminal law. Skilled professionals are needed to serve as criminal profilers, forensic scientists, and crime scene investigators in government and law enforcement agencies. This online certificate is intended for undergraduate students who want to expand their knowledge of forensics without a commitment to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Determine the usefulness of trace elements for the forensic comparison of various types of physical evidence and relate the advantages of evidence collection from the forensic scientist's point of view.
- Explain how the science and art of profiling crime scenes, and subsequently offenders, from physical and psychological evidence is key to the investigation of crimes for which there is no known perpetrator.
- Analyze contemporary practices associated with investigating the manner and cause of sudden, unexpected, and violent death.
- Assess environmental influences and motivating factors that result in criminal behavior.
- Describe how approaches to profiling can be applied to assist in solving crimes.
- Discuss principles of criminal liability and the acts, mental state, and attendant circumstances that are central ingredients in crimes against society, persons, or property.
- Describe why a basic knowledge of chemistry and human anatomy is critical in the world of forensics.

Certificate Requirements (23 semester hours)

CMRJ306	Criminal Investigation	3
CMRJ329	Criminal Profiling	3
CMRJ335	Crime Analysis	3
CMRJ341	Criminalistics	3
CMRJ402	The Pathology of Death Investigations	3

SCIN131	Introduction to Chemistry with Lab	4
BIOL201	Principles of Anatomy and Physiology with Lab	4
Total Semester Hours		**23**

Undergraduate Certificate - Government Agency Administration

Program Description

Across the U.S., many find themselves running government agencies (police departments, fire departments, public works departments, etc.) without the full complement of knowledge, skills, and abilities (KSAs) required for the new tasks and responsibilities. The undergraduate certificate in Government Agency Administration (GAA) has been designed to meet the needs of these agency heads. The certificate program consists of 18 credit hours in needed content areas identified by subject matter experts (SMEs). Upon successful completion of the GAA certificate, the professional will have gained additional knowledge often required for the duties and responsibilities of government agency administration.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Compare and contrast the types of budgets, including line-item budgeting, performance budgeting, zero-based budgeting and capital budgeting.
- Prepare professional communications and documents for the government/business environment.
- Manage the concepts, skills, theories and techniques involving human resource management.
- Analyze the concepts and approaches that shape organizational strategic decision making by examining internal and external factors and influences.
- Formulate the execution of public policy in America.

Undergraduate Certificate - Homeland Security

Program Description

The undergraduate certificate in Homeland Security provides a broad comprehension of major national security threats including weapons of mass destruction, security vulnerabilities, intelligence, consequence management, and homeland defense. Experienced, skilled professionals are in needed to help organizations handle terrorist incidents and create proactive measures to protect public safety. This certificate is ideal for students currently working in public safety. This online certificate is designed for undergraduate students who want to expand their knowledge of homeland security without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Identify the key challenges for the 21st century facing not only U.S. homeland security strategy, but also those of other major actors that might become peer competitors.
- Discriminate between valuable sources of information and those sources that are questionable.
- Differentiate between homeland security and homeland defense.
- Describe the national intelligence apparatus including FBI, CIA, and NSA.
- Assess proposals for improvement in the state of homeland security.

Certificate Requirements (18 semester hours)

HLSS302	Introduction to Homeland Security and Defense	3
HLSS310	Critical Infrastructure Protection	3
HLSS322	Homeland Security Legal and Ethical Issues	3
Select 3 courses from the following:		9
HLSS154	Mind of a Terrorist	
HLSS212	Chemical, Biological, and Radiological Hazards	
HLSS215	Regulatory Issues in Weapons of Mass Destruction	
HLSS311	Border and Coastal Security	
HLSS312	Port Security	
HLSS320	Intelligence and Homeland Security	
Total Semester Hours		**18**

Undergraduate Certificate - Human Resource Management

Program Description

The undergraduate certificate in Human Resource Management is ideal if you already have an associate or bachelor’s degree and want to take focused courses in employment relations, employee development, and other aspects of the human resources field. Courses for this online program are taught at the 300-400 level and cover concepts such as recruiting, compensation, and labor relations.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Identify various laws, rules, regulations and policies affecting employees in today’s workplace.
- Discuss various compensation packages and incentives used in recruiting employees for various positions in an organization.
- Assess leading trends and issues in the field of Human Resource Management.

Certificate Requirements (18 semester hours)

HRMT407	Human Resource Management	3
HRMT412	Compensation and Benefits	3
HRMT413	Employment and Labor Relations	3
HRMT415	Human Resource Management Information Systems	3
HRMT416	Human Resource Development	3
MGMT310	Principles and Theory of Management	3
Total Semester Hours		**18**

Undergraduate Certificate - Infant and Toddler Care

Program Description

The undergraduate certificate in Infant and Toddler Care covers the planning and implementing of infant and toddler programs in group care settings. You’ll look at topics such as infant and toddler developmental milestones, abnormal development and disease, parenting, and family dynamics. This concentrated, 6-course program is intended for undergraduate students who wish to further their knowledge in infant and toddler care without committing to a degree program.

Note: Completion of this certificate does not qualify you to apply for teaching licensure.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Identify cognitive, physical, social, and emotional changes that occur in early childhood.
- Explore the relationship between a child’s development and interactions with parents, siblings, peers, and teachers.
- Examine the fundamentals of infant and toddler development, including planning and implementation of programs in daycare.
- Develop knowledge of formal and informal methods of gathering data on young children.
- Apply interpersonal, group, and presentational communication skills that are applicable in personal and professional cross-cultural environments.

Certificate Requirements (18 semester hours)

CHFD210	Childhood Educational Development	3
CHFD212	Infant and Toddler Programs	3
CHFD308	Infant-Toddler Development	3
CHFD314	Students with Special Needs	3
COMM240	Intercultural Communication	3
EDUC111	Observation Techniques	3
Total Semester Hours		**18**

Undergraduate Certificate - Information Security Planning

Program Description

The undergraduate certificate in Information Security Planning examines the principles of information systems attack and defense, and applies that knowledge to protect the information assets of an organization. You'll be taught how to design secure networks, develop security policies, use cryptography, and perform business continuity planning.

Courses in this program meet the topical requirements of the DoD Directive 8570.1M Information Assurance Management (IAM) Technical II, Technical III, Management I, Management II, and Management III categories. Additionally, the National Security Agency (NSA) Information Assurance Courseware Evaluation (IACE) has certified some courses for this program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Assess the laws (national and federal), policies (including the Sarbanes-Oxley Act), issues (social, psychological, legal, and management), risks, and controls related to information assurance and network security.
- Appraise the principles and concepts behind computer network defense (CND) methodology, robust codes, cryptography, authentication, authorization, non-repudiation, and commercially available security packages (PKI, PGP, Kerberos, SSL, VPN).
- Examine the processes, roles, and responsibilities of management and security professionals in risk assessment, risk mitigation, security validation, policy enforcement, and personnel indoctrination.
- Assess the key components of the Physical Security Policy, Internet Security Policy, E-Mail Security Policy, Encryption Security Policy, Software Development Security Policy, Authentication Security Policy, Network Security Policy, Acceptable Use Policy, and the policy that addresses viruses, worms, and Trojan horses.
- Assess the engineering discipline, process, techniques, tools, and technologies used by hackers to gain unauthorized access to the systems and appraise counter measures to mitigate this risk.
- Examine the plans, procedures, practices, and tools to ensure business continuity and to recover rapidly after an incident.

Certificate Requirements (18 semester hours)

ISSC361	Information Assurance	3
ISSC262	Red and Blue Team Security	3
ISSC422	Information Security	3
ISSC471	IT Security: Auditing	3
ISSC481	IT Security: Planning and Policy	3
ITMG281	Law, Privacy, and Digital Data	3
Total Semester Hours		**18**

Undergraduate Certificate - Information Systems Security Essentials

Program Description

The undergraduate certificate in Information Systems Security Essentials focuses on protecting information assets by ensuring availability, confidentiality, integrity, authenticity, and non-repudiation of information systems. This program concentrates on five key aspects of information security: hardware, software, networks, people, and policies. Security threats increase in number and severity at a faster rate than qualified security professionals can fill the necessary gap. Knowledgeable security professionals are needed even in a troubled economy, as businesses are forced to prioritize to invest in a secure digital environment.

Courseware in this online program is designed to prepare you for the CompTIA Security+® certification. It meets the topical requirements of the DoD Directive 8570.1M Information Assurance Management (IAM) Technical III, Management II and Management III categories. Additionally, the National Security Agency (NSA) Information Assurance Courseware Evaluation (IACE) has certified some courses for this program.

CompTIA Security+® is a registered trademark of the Computing Technology Industry Association, Inc.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Evaluate information security strategies, architectures, and plans to counteract intruders in an information system.
- Appraise national and federal laws, policies, and guidance related to information assurance; also develop an awareness of the social, psychological, ethical, and legal policies and requirements in the field of information assurance.
- Examine and profile the various types of security attacks and exploits; also appraise various security technologies, such as: packet filtering, Stateful Packet Inspection (SPI), proxy technology, Network Address Translation (NAT), Public Key Infrastructure (PKI) authentication, and encryption.
- Analyze the concept and the functionality of firewalls, routers, Virtual Private Networks (VPN), and Intrusion Detection Systems (IDS).
- Appraise the role of security assessments, penetration testing, and security plans in establishing network security; also evaluate the components of a network security assessment methodology.
- Investigate methods to mitigate risk by minimizing the exposure of information to hackers, and the techniques hackers use to avoid detection and to cover their electronic footprints.
- Develop an assessment methodology that identifies, attacks, and penetrates IP based network systems.
- Define public key cryptography, the purpose of digital certificates, and risk analysis & explain ways to securely manage operations.

Certificate Requirements (18 semester hours)

ISSC361	Information Assurance	3
ISSC262	Red and Blue Team Security	3
ISSC363	IT Security: Risk Management	3
ISSC421	Computer and Network Security	3
ISSC422	Information Security	3
ISSC461	IT Security: Countermeasures	3
Total Semester Hours		**18**

Undergraduate Certificate - Instructional Design and Delivery

Program Description

The undergraduate certificate in Instructional Design and Delivery focuses on how to develop curriculum and assessment for adult learners within online, face-to-face, and hybrid learning environments. In this online program, you will study leading theories and concepts of curriculum design, while learning to organize effective instruction that challenges and involves adult learners in ways that meet their different needs. Courses address topics such as pedagogy versus andragogy; organizing and managing adult learner instruction; creating courses, syllabi, objectives, and engaging activities; basics of curriculum and program evaluation; inclusiveness and accommodations; and assessment.

This concentrated, 6-course program is intended for undergraduate students who wish to further their knowledge in instructional design and teaching adult learners in academic settings and corporate/military training contexts without committing to a degree program.

Note: This program is not designed to prepare educators for work in K-12 public school settings and is not a degree program that would lead to state-level teaching certification.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Demonstrate effective professional and personal communication skills.
- Design curriculum for adult learning contexts.
- Use effective classroom management approaches in adult learning contexts.
- Apply adult learning theory.
- Apply learning and cognition theory in adult learning contexts.
- Design instructional assessments based upon measurement and evaluation theory.

Certificate Requirements (18 semester hours)

COMM285	Interpersonal Communications	3
EDUC320	Classroom Management	3
EDUC340	Adult Learning Theory	3
EDUC401	Curriculum Design	3
EDUC402	Measurement and Evaluation	3
PSYC303	Learning and Cognition	3
Total Semester Hours		**18**

Undergraduate Certificate - Intelligence Analysis

Program Description

The undergraduate certificate in Intelligence Analysis helps you to enhance your critical thinking and analytical skills required for gauging and forecasting potential threats to U.S. national security. You will study the fundamentals of intelligence analysis while looking at the historical evolution of the U.S. national intelligence. Topics in this 6-course certificate program focus on advanced qualitative analytic procedures, basic modeling, and predictive analysis skills. The online certificate is designed for undergraduate students who want to improve their knowledge of intelligence analysis without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Conduct basic research and provide professional analyses on issues critical to intelligence consumers.
- Identify the basic cognitive science principles that underlie human information processing and problem solving such as intelligence analysis.
- Complete intermediate-level analyses in selected areas critical to intelligence consumers.

Certificate Requirements (18 semester hours)

SSGS300	Research Design and Methods	3
INTL401	Critical Analysis	3
INTL402	Intelligence Analysis	3

INTL434	Threat Analysis	3
Select 2 courses from the following:		6
INTL419	Applied Geospatial Intelligence	
INTL431	Criminal Intelligence Analysis	
INTL432	Geographic Information Systems I	
INTL433	Geographic Information Systems II	
INTL446	Intelligence and Narcotics	
INTL454	Forecasting Terrorism	
Total Semester Hours		**18**

Undergraduate Certificate - Internet Webmaster

Program Description

The undergraduate certificate in Internet Webmaster aligns with the Certified Internet Webmaster (CIW®) Associate Design Specialist, CIW Web Design Specialist, and CIW Professional certifications, and brings you the essential skills required for website design and development. This online program focuses on the technical side of web design and looks at protocols, browsers, search engines, web services, and internet security. You'll also learn HTML5, cascading style sheets (CSS), graphics, tables, templates, frames, forms, snippets, and how to use Adobe Dreamweaver® and Adobe Flash®. Experience with scripting languages such as JavaScript® is strongly recommended prior to enrolling in this program.

CIW® is a registered trademark of Certification Partners, LLC.

Adobe Dreamweaver® is a registered trademark of Adobe.

Adobe Flash® is a registered trademark of Adobe.

JavaScript® is a registered trademark of Oracle America, Inc.

Certificate Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Analyze the architecture, directory structures, document flow, and protocols of the World Wide Web.
- Compare and contrast the functions of network protocols; describe network transmission media and types and identify network architecture and topologies; and describe the Internet architecture model and Internet protocols.
- Assess the principles for designing web pages, including the content, typography, colors, images, and page layout; also examine the use of style sheets to enhance reusability and to design consistent interfaces.
- Investigate the principles and concepts of effective design for organizing information, for performing site design, and for determining the navigation structure.
- Examine the features, functions, and settings of email and FTP; also evaluate the risks with using FTP.
- Differentiate between web search engines, web directories, and web metasearch engines; also predict the future of web search tools.
- Appraise Cascading Style Sheets (CSS) and apply this knowledge to develop web page and website templates.
- Develop X/HTML code to create web pages with images and image maps.

Certificate Requirements (18 semester hours)

ISSC231	Networking Concepts	3
WEBD121	Web Development Fundamentals	3
WEBD122	Introduction to Web Analytics	3
WEBD221	Intermediate Web Development	3
WEBD222	Advanced Web Analytics	3
WEBD311	Internet Concepts	3
Total Semester Hours		**18**

Undergraduate Certificate - IT Infrastructure Security

Program Description

The undergraduate certificate in IT Infrastructure Security covers the design of secure networks, and teaches how to develop risk mitigation plans and perform intrusion detection in IT network environments. This online program seeks to enhance your ability to assess, mitigate, and manage security risks in IT infrastructure.

The U.S. National Security Agency (NSA) and the Committee on National Security Systems (CNSS®) recognize this program as meeting the CNSS National Training Standards 4011 and 4013E, which are required for network security professionals who assist federal agencies in protecting the nation's vital information resources. Courseware in this online program meets the topical requirements of the DoD Directive 8570.1M Information Assurance Management (IAM) Technical I category.

CNSS® is a registered trademark of the National Security Agency.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Appraise the impact of operating system and network security on information technology management and global ecommerce.
- Establish the need for a reference model and examine the open systems interconnection (OSI) and the transmission control protocol/internet packet (TCP/IP) reference models.
- Discuss the technical risks, performance factors, and security issues related to operating system and network security in ecommerce, information technology management, and global ecommerce.
- Examine the principles that enable viruses, worms, and Trojan horses to propagate and proliferate throughout the system.
- Differentiate between active and passive intrusion detection, and examine the scope and procedures for implementing border and firewall security.
- Appraise the process for assessing network and application security and analyze the corresponding risk mitigation strategies and techniques.
- Assess the configuration, functionality, and risks of filtering and evaluate security systems such as firewalls, border routers, switches, and intrusion detection systems.

Certificate Requirements (18 semester hours)

ISSC231	Networking Concepts	3
ISSC242	Hardening Operating Systems	3
ISSC262	Red and Blue Team Security	3
ISSC363	IT Security: Risk Management	3

ISSC421	Computer and Network Security	3
ISSC461	IT Security: Countermeasures	3
Total Semester Hours		**18**

Undergraduate Certificate - IT Project Management Essentials

Program Description

The undergraduate certificate in IT Project Management Essentials teaches management and organizational skills required to oversee complex enterprise-level projects. You will explore strategic planning and business systems analysis. You'll also learn the fundamental processes for integrating teams and harnessing resources, identifying scope and adapting to change, managing budgets and expectations, and guiding projects to completion with qualitative results. This online certificate is intended for undergraduate students who want to expand their knowledge of IT project management essentials without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Appraise the principles and practices for organizing, allocating, and managing project resources.
- Analyze the project management framework, including the stakeholders, domains, phases, processes, integration, and lifecycle.
- Examine the potential complexities and pitfalls in initiating and closing projects; and assess methods to mitigate this risk.
- Appraise the unique challenges in managing the scope, time, and cost of information technology projects.
- Assess the principles, strategies, challenges, and measures for managing quality and risk on IT projects.
- Analyze the phases, procedures, deliverables, and best practices for business systems analysis.

Certificate Requirements (18 semester hours)

INFO331	Management Information Systems	3
ITMG121	Fundamentals of IT Project Management	3
ITMG223	IT Project Management Using Microsoft Project®	3
ITMG371	Contemporary Internet Topics	3
ITMG281	Law, Privacy, and Digital Data	3
ITMG421	Virtual Management	3
Total Semester Hours		**18**

Undergraduate Certificate - Law Enforcement Leadership

Program Description

The undergraduate certificate in Law Enforcement Leadership is designed to enhance leadership and management skills of chiefs of police and other current key state law enforcement command personnel by providing professionally relevant education at the undergraduate level. It offers you an improved understanding of organizational behavior, motivation, change, budget development, labor relations, human resources, and strategic planning.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Examine management techniques, principles, and philosophies which are part of organization change and transformation.
- Develop a self-assessment of one's own leadership and motivation skills, knowledge, and attitudes.
- Integrate the principles used in formulating and executing a strategic plan.
- Evaluate the historical and current state of employment relations theory.
- Analyze the four phases of the budget cycle.
- Critique the concepts, skills, theories, and techniques involving human resource management and HR practices in the workplace.

Certificate Requirements (18 semester hours)

MGMT312	Leadership & Motivation	3
MGMT313	Organizational Change	3
Select 2 courses from the following:		6
FINC300	Foundations of Financial Management	
HRMT407	Human Resource Management	
HRMT413	Employment and Labor Relations	
MGMT414	Strategic Planning	
Select 2 courses from the following:		6
CMRJ308	Ethics in Criminal Justice	
CMRJ320	Law Enforcement Intelligence Applications	
CMRJ329	Criminal Profiling	
CMRJ335	Crime Analysis

Undergraduate Certificate - Microsoft Office Applications

Program Description

The undergraduate certificate in Microsoft Office® Applications is designed to increase your knowledge of the concepts and technology trends essential to office productivity applications. You will study the principles, practices, features, and functions of word processing, spreadsheet, presentation, and communications applications in the Microsoft Office suite, as well as Internet concepts and emerging Web 2.0 technologies.

Because the Microsoft Office suite is commonly used in a variety of work environments and professions, the knowledge acquired through this program is applicable to a variety of career options in business, education, technology, medicine, science, and education. After completing this certificate, you may consider pursuing your certification as a Microsoft Office Specialist (MOS) in the following areas: Microsoft Office Word® 2013, Microsoft Office Excel® 2013, Microsoft Office PowerPoint® 2013, and Microsoft Office Outlook® 2013.

Microsoft Office® is a registered trademark of Microsoft Corporation.

Microsoft Office Word® is a registered trademark of Microsoft Corporation.

Microsoft Office Excel® is a registered trademark of Microsoft Corporation.

Microsoft Office PowerPoint® is a registered trademark of Microsoft Corporation.

Microsoft Office Outlook® is a registered trademark of Microsoft Corporation.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Communicate the impact of the Microsoft Application Suite on IT Management as it applies to office productivity, collaboration, and security.
- Demonstrate use of productivity software such as Microsoft Word to create lists, themes, mail merges, watermarks, templates, graphics, navigation tools, tables, charts, citations and bibliographies.
- Demonstrate use of productivity software such as Microsoft Excel to create and format spreadsheets, manipulate data, and use formulas, charts, conditional logic, graphics, and security features.
- Demonstrate use of productivity software such as Microsoft PowerPoint to set up presentations, transitions, animations, and timing.
- Demonstrate use of Microsoft Access Relational Database Management System (RDBMS) to design and develop a database application that includes user interfaces, form design, data analysis, and data presentation.
- Assess the functionalities of other Microsoft productivity software.

Certificate Requirements (18 semester hours)

ITCC111	Basic Productivity Applications	3
ITCC112	Advanced Productivity Applications	3
ITCC113	Office Presentation Applications	3
ITMG223	IT Project Management Using Microsoft Project®	3
ITCC200	Application Software Integration	3
INFO221	Relational Database Concepts	3
Total Semester Hours		**18**

Undergraduate Certificate - Paralegal Studies

Program Description

The undergraduate certificate in Paralegal Studies focuses on legal terminology, research, writing, legal theory, and legal concepts. Employers such as law firms, businesses with legal departments, government agencies, and nonprofits require skilled employees with legal expertise, critical thinking skills, and analytical skills. Knowledge gained in this program can be useful in professions requiring an understanding of law and the court system. This online certificate is intended for undergraduate students who want to expand their paralegal skills without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Apply legal research methods and techniques that are used in the practice of law.
- Develop skills in legal reasoning, identifying, and effectively using legal resources and writing legal documents.
- Evaluate the importance of secondary sources in legal research.
- Describe the primary rules and sources and roles of each in legal research.
- Distinguish how advice, persuasion, and advocacy enter into legal research.
- Demonstrate knowledge of the nature and function of the law and the application of critical thinking and analytical skills.
- Comprehend and describe what a paralegal is and how one fits into the legal system.

Certificate Requirements (24 semester hours)

LSTD100	Introduction to Law for Paralegals	3
LSTD201	Litigation	3
LSTD202	Real Estate Law	3
LSTD203	Criminal Law and Procedure for the Paralegal	3
LSTD205	Legal Research and Writing	3
LSTD207	Civil Practice and Procedure	3
LSTD210	Legal Ethics	3
LSTD300	Administrative Law and Policy	3
Total Semester Hours		**24**

Undergraduate Certificate - Pre-Health

Program Description

The Pre-Health Certificate provides a foundation for students who are interested in the healthcare field. General Education courses in the humanities, sciences, and mathematics provide a strong foundation for further studies in allied healthcare fields. The curriculum is composed of classroom and laboratory experiences that serve as admission and prerequisite requirements in most nursing and other healthcare-related degree programs.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Form strong academic habits and skills required to enter healthcare related academic programs.
- Establish a strong foundation in the arts and sciences.
- Prepare for advanced study in nursing and other related healthcare fields.

Undergraduate Certificate - Public Lands Management

Program Description

The undergraduate certificate in Public Lands Management explores the origins of national parks, forests, and refuges, and studies the tools and techniques used by land managers to provide ecosystem services to the public. These tools help you to develop an understanding of regulatory and policy issues, the use of remote sensing and geographic information systems technology, and the application of land preservation and protection strategies. You will examine fundamental land use controls such as zoning, land use policy, and contemporary management techniques. Knowledge gained in this certificate is helpful in the forestry, land conservation, and land management fields. This online certificate is intended for undergraduate students who want to expand their knowledge of public lands management without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- List the federal, state, and local agencies that manage public lands in the U.S.
- Explain the regulatory, policy, and political influences on public lands management.
- Develop management strategies for the management of public lands that balance competing needs and uses.
- Describe the techniques and strategies used to manage fish and wildlife resources on public lands.
- Evaluate land use, development, and management plans within and adjacent to public lands.
- Assess the current status of public lands and its contribution to the social and environmental sustainability of the U.S.

Certificate Requirements (18 semester hours)

EVSP321	Land Use and Planning	3
EVSP322	Remote Sensing and Geographic Information Systems	3
EVSP330	Fish and Wildlife Policies, Programs, and Issues	3
EVSP331	Public Lands Management	3
EVSP411	Environmental Policy, Regulation, and Law	3
EVSP421	Water Resources Management	3
Total Semester Hours		**18**

Undergraduate Certificate - Real Estate Management

Program Description

The undergraduate certificate in Real Estate Management is a concentrated program offering broad-based knowledge of core areas within the real estate field. This online certificate provides a good foundation in real estate topics including real estate law, property management, deeds and leases, insurance, marketing, and negotiation for both aspiring and current real estate professionals. This online certificate is intended for undergraduate students who want to expand their knowledge of real estate management without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Develop a foundational knowledge of management, development, and financing of real estate.
- Discuss the foundations of real property value and review the elements of the appraisal process – from the value definition to reconciliation and conclusion.

Certificate Requirements (18 semester hours)

BUSN120	Real Estate Principles	3
BUSN121	Real Estate Practice	3
BUSN220	Real Estate Finance	3
BUSN221	Real Estate Appraisal	3
BUSN222	Real Estate Property Management	3
LSTD202	Real Estate Law	3
Total Semester Hours		**18**

Undergraduate Certificate - Restaurant Operations

Program Description

The undergraduate certificate in Restaurant Operations is a concentrated program that explores the essentials of front-office and behind-the-scenes operations related to food service management. In this online program, you will examine current managerial techniques and tools to effectively operate a wide variety of restaurants. Topics covered help to provide practical skills often required of a food service manager, or restaurant owner or employee. This certificate would also be a good addition to a business or management degree.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Apply proper food safety and sanitation procedures to meet industry standards and governmental regulations.
- Demonstrate application of theory and concepts as they relate to the various responsibilities of a foodservice manager.
- Practice current managerial techniques and trends to support the goals of a restaurant.
- Interpret financial data as it relates to an operation’s goals.

Certificate Requirements (18 semester hours)

HOSP100	Introduction to Hospitality Management [1]	3
Select 5 courses from the following:		15
HOSP101	Foodservice Sanitation	
HOSP200	Food and Beverage Management	
HOSP202	Quantity Food Preparation	
HOSP203	Hotel and Restaurant Purchasing	
HOSP204	Introduction to Hotel and Restaurant Law	
HOSP207	Principles of Cost Control in Foodservice Operations	

HOSP400	Quality Service Management	
Total Semester Hours		**18**

1. Required as the first course in this program.

Undergraduate Certificate - Security Management

Program Description

The undergraduate certificate in Security Management focuses on the principles and theories associated with various types of security, from physical security to security administration that focuses on the protection of assets. Many organizations need experienced security managers, security guards, and security officers to protect businesses' assets and to proactively prevent internal or external attacks. Field work in the areas of executive protection and recovery, trade secret protection, background investigations, surveillance, IT security, and cybersecurity are but a few choices available in the security management field. This online certificate is intended for undergraduate students who want to expand their knowledge of security management without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Demonstrate knowledge of the basic terms in security management and its theories.
- Assess management theories and apply concepts of planning, resources, and authority to security organizations.
- Identify and discuss the major aspects of physical security, associated threats, and application of countermeasures.
- Explain the basic procedures and rules of personnel security and the specialized terms associated with information security.
- Draw conclusions about the role a security leadership has in establishing the foundation of private security programs.
- Establish how security managers test and align functional performance or their security organization incorporating legal issues and ensuring ethical approaches.
- Evaluate and use a methodology of quality assurance, including the merits of a performance-based standards approach towards total asset protection.
- Draw conclusions about a value-added contribution in the world of tangible and intangible assets.
- Detect how corporate security managers can effectively communicate strategic security issues and actions to other business departments and managers.

Certificate Requirements (18 semester hours)

SCMT370	Principles and Theory of Security Issues	3
SCMT371	Legal and Ethical Issues in Security Management	3
SCMT373	Evaluation of Security Programs	3

Undergraduate Certificate - Space Studies

Program Description

The undergraduate certificate in Space Studies looks at spaceflight history, space policy, and planetary exploration. This online certificate also surveys the government and industry participants from the space race starting in the ‘60s through today. The curriculum for this online certificate was originally designed by former NASA astronaut and Dean of Science and Technology Dr. James Reilly, veteran of three shuttle missions and five spacewalks. You will have the opportunity to learn from leading practitioners working in national and private space, aerospace, and related organizations. This certificate is intended for undergraduate students who want to expand their knowledge of space studies without committing to one of our space studies degree programs.

Certificate Objectives

Upon completion of this program, the student will be able to:

- Describe the principles of manned and unmanned flight, both within and outside of Earth’s atmosphere.
- Categorize the history of space exploration, from early rocketry efforts to the International Space Station and beyond.
- Analyze space policies including the cooperation/diplomacy between various space faring nations.
- Diagram the history of planetary and space exploration, with emphasis on the role of unmanned and manned spacecraft.

Certificate Requirements (18 semester hours)

MATH111	College Trigonometry	3
SPST200	Introduction to Space Studies	3
SPST201	Introduction to Space Flight	3
SPST203	History of Space Flight	3
SPST307	Space Policy	3
SPST435	Planetary and Space Exploration	3
Total Semester Hours		**18**

Undergraduate Certificate - Strategic Leadership

Program Description

The undergraduate certificate in Strategic Leadership is a concentrated program designed to help you develop the skills needed for effective leadership and workforce management. Topics include leadership, motivation, performance management, information systems, organizational change, and staffing. This online program is suited to undergraduate business or management students who want to improve their leadership abilities for use in different organizations.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Construct a strategic plan of staffing requirements for a new initiative that an organization has undertaken.
- Prepare a performance management appraisal for a direct report.
- Produce an icebreaker that can be introduced at a departmental meeting in an effort to promote unity among the team and establish a healthy culture in the work environment.

Certificate Requirements (18 semester hours)

HRMT407	Human Resource Management	3
HRMT415	Human Resource Management Information Systems	3
HRMT419	Recruitment and Staffing	3
MGMT312	Leadership & Motivation	3
MGMT313	Organizational Change	3
MGMT410	Strategic Management	3
Total Semester Hours		**18**

Undergraduate Certificate - Terrorism Studies

Program Description

The online undergraduate certificate in Terrorism Studies provides an overview of various terrorist groups, their histories, and their objectives. This 6-course certificate of study teaches how to define the causes and effects of terrorism and how to interpret religious and political motivations that spark violent attacks. In addition, you'll learn analytical methods, predictive tools, and effective procedures on how best to deter or protect against potential threats. Terrorist incidents occur through various online and offline channels, making protecting people and organizational assets a top priority for many organizations. In order to mitigate terror escalations and prepare for emerging dangers, many professionals in the intelligence and public safety communities are expanding their knowledge and skills through education. This online certificate is designed to support these educational goals.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Investigate the causes and support mechanisms of international and domestic terrorism.
- Examine the history of terrorism and its fundamental variations: domestic; trans-national; state-conducted; state-aided, and independent.
- Employ indication and warning and predictive intelligence methods to forecast pending terrorist attacks.
- Examine effective methods of counterterrorism and responses to reduce the effects locally, nationally, and globally.
- Explore the ideological forces behind terrorism and provide an overview of terrorist groups and their intimidation and fear tactics.

Certificate Requirements (18 semester hours)

Select 6 courses from the following:		18
HLSS154	Mind of a Terrorist	
HLSS212	Chemical, Biological, and Radiological Hazards	
INTL440	Cyber Warfare	
INTL450	Terrorism and Counterterrorism	
INTL451	Terrorism and U.S. National Security	
INTL453	Illicit Finance	
INTL454	Forecasting Terrorism	
Total Semester Hours		**18**

Undergraduate Certificate - Visual Communications

Program Description

The undergraduate certificate in Visual Communications introduces you to the basic fundamentals of graphic design, animation, image manipulation, image enhancement, and image storage. You'll learn how to design, develop, and deploy moving text and graphics to create dynamic and interactive digital experiences. This online program also provides an introduction to website design and development to help you obtain a well-rounded set of visual design skills. This certificate program is intended for undergraduate students who seek to heighten their knowledge of visual communication without committing to an academic degree program.

This hands-on program covers the Site Development Associate curriculum and the Web Design curriculum of the CIW Web Foundations Associate certification. After completing this certificate, you may consider pursuing your CIW Web Design Specialist® certification.

CIW Web Design Specialist® is a registered trademark of Certification Partners, LLC.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Discuss the purpose and usage of smart objects, layers and vectors in editing, also differentiate between a raster image and a vector image; also detail the layer concepts of hiding, linking, and setting layer styles.
- Detail the capabilities of Adobe Photoshop® as a tool for editing and restoring digital images; also describe the process for enhancing digital images by manipulating sharpness, color, contrast, hue, brightness, and resolution.
- Appraise the principles and concepts of effective design for organizing information, for performing site design, and for determining the navigation structure.
- Assess the principles for designing web pages, including the content, typography, colors, images, and page layout; also examine the use of style sheets to enhance reusability and to design consistent interfaces.
- Compare and contrast the various image file formats on the Web, including GIF, JPG, PNG, and SVG.
- Assess the utility of Adobe Flash® technology in streaming animations in website design; also assess the use of tweens, anchors, guides, and onion skins to develop Web animations.

Adobe Photoshop® is a registered trademark of Adobe.

Adobe Flash® is a registered trademark of Adobe.

Certificate Requirements (18 semester hours)

DSIN141	Image Enhancement using Adobe Photoshop®	3
DSIN241	Illustration & Design Using Adobe Illustrator®	3
DSIN143	Design Using Adobe InDesign®	3
WEBD121	Web Development Fundamentals	3
WEBD221	Intermediate Web Development	3
WEBD300	User Interface Design	3
Total Semester Hours		**18**

Graduate Certificates

Certificate programs are available to students who seek a shorter program focused on career development or knowledge of a specific discipline. Students are required to take a minimum of 12 semester hours, although some certificates may require up to 18 semester

hours.

Note: Students are not permitted to enroll concurrently in multiple programs. For example, you may not be enrolled in both a graduate certificate and a master's program at the same time. However, if you previously completed the Graduate Certificate in IT Project Management you may be able to apply those credits toward a Master of Science in Information Technology.

- Accounting
- American History
- American Revolution
- Ancient and Classical History
- Athletic Administration
- Business Essentials for the Security Executive
- Civil War Studies
- Counterintelligence
- Cybercrime
- Digital Forensics
- Emergency and Disaster Management
- Emergency Management Executive Leadership
- Environmental Hazard Mitigation and Restoration
- Environmental Planning and Design
- Environmental Sustainability
- European History
- Executive Coaching
- Executive Law Enforcement Leadership
- Fish and Wildlife Management
- Homeland Security
- Human Capital Leadership
- Information Assurance
- Information Systems Security
- Intelligence Analysis
- Intelligence Studies
- IT Project Management
- K-12 Online Learning
- K-12 Reading and Differentiated Instruction
- K-12 Virtual School Administration
- Leadership and Logistics
- Life Coaching
- Logistics Management
- National Security Studies
- Neuroleadership
- Nonprofit Management
- Nursing Education
- Nursing Leadership
- Organizational Crisis Management
- Organizational Management
- Professional Science Management
- Security Management
- Space Studies
- Sports Management
- Strategic Leadership
- Terrorism Studies
- World War II Studies

Graduate Certificate - Accounting

Program Description

The graduate certificate in Accounting is designed to provide professional development opportunities for mid-career accounting professionals in industry, consulting, and government. This online graduate program is designed to enhance your existing accounting knowledge through better understanding of advanced accounting topics.

This program is not designed to prepare graduates for any state-issued professional license or certification and therefore has not been approved by any state professional licensing agency.

This program has specific admission requirements.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Demonstrate the ability to apply and synthesize the functional areas of accounting to make sound business decisions.
- Access, utilize, and evaluate accounting information in business decision-making.
- Apply accounting methodology, analytical, and critical thinking skills to evaluate information, solve problems and make sound decisions.
- Develop effective communication skills in various multimedia forms.
- Demonstrate knowledge and application of prescribed accounting ethics codes and behaviors.

Programmatic Admission Requirements

You will need to provide an official transcript of your completed bachelor's or master's degree showing proof of completion of this required coursework:

- Auditing: 3 credit hours
- Cost Accounting or Managerial Accounting: 3 credit hours
- Individual Federal Taxation: 3 credit hours
- Intermediate Accounting: 6 credit hours

Pre-admission courses must be grade C or better at the undergraduate level; B or better at the graduate level.

You will be required to submit a signed statement of understanding (SOU) to enroll in this program.

Please visit our APU graduate admission page for more information on institutional admission requirements.

Graduate Certificate - American History

Program Description

The graduate certificate in American history emphasizes the origins, content, and judicial interpretations of the U.S. Constitution as well as the history of our popular culture from the Revolutionary War to the modern era. The curriculum goes beyond just facts and dates by investigating the cultural norms, socioeconomics, religious paradigms, and the foreign and domestic political upheaval that incited the American Revolution. For history buffs or professional historians and educators, this 6-course certificate offers you the opportunity to earn academic credit while studying American history entirely online.

Many university faculty members teaching these courses are published historians or military leaders who bring unique perspectives and relevant research into the classroom. You'll also connect and interact online with other students who share your enthusiasm for history.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Compare and contrast historical context of 18th century British and colonial American political and constitutional philosophies, social norms and societal structure, economics, religious concepts, and foreign and diplomatic policy.
- Discern and assess the political, economic, cultural, and social aspects of the Civil War, including the causes and the conflict's aftermath.
- Explain changes in American society such as industrialization, immigration, and urbanization; isolationism and collective security; World War I; changing values; stock market crash; the Great Depression, and the cultural, social, political, military, and economic growth to the present.
- Critique the history of expressive and material culture; historical contexts of various artistic movements; cultural imperialism; cultural appropriation, creativity, and identity; and expressions of social difference and deviance in the United States.
- Discern the origins, content, and judicial interpretations of the U.S. Constitution and the Supreme Court's evolving decisions on issues as States' rights, civil rights, the Commerce Clause, Due Process in criminal and other proceedings, and protected freedoms.

Certificate Requirements (18 semester hours)

HIST520	Graduate Seminar in U.S. History	3
HIST553	History of Colonial America	3
HIST551	The American Revolution in Context	3
HIST657	Antebellum America: Prelude to the Civil War	3
HIST552	The Civil War: Seminal Event in American History	3
HIST555	The United States in the 20th Century	3

Total Semester Hours	**18**

Graduate Certificate - American Revolution

Program Description

The graduate certificate in the American Revolution weighs the political, economic, and military factors that brought the British Empire to conflict against its former colony. From the British Stamp Act, to the Boston Tea Party, to American outcries against taxation without representation, this online program provides a deep understanding of the Revolutionary War and its enduring impact upon U.S. society and history.

Many university faculty members teaching our courses are published historians or military leaders who bring unique perspectives and relevant research into the classroom. You'll also connect and interact online with other students in your courses who share your enthusiasm for history.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Dissect and critique the American Revolution from its antecedents to its legacy to include events leading to the revolt, Declaration of Independence, strategy and tactics, campaigns, and the aftermath of war on the new nation.
- Analyze the American Revolution in reference to the operational contributions of American and British military leadership using selected land battles as examples of the strategies and tactics involved.
- Evaluate an early and pivotal campaign in the American Revolution by critiquing the strategy, tactics, and results of campaign on the subsequent course of the Revolution and post-war Anglo-American relations.
- Explain the perspective of the American Revolution from the British viewpoint in relation to colonial policies, diplomacy, military leadership, and other influences in Great Britain during and after the war.
- Assess and critique the conclusive military strategy of the American Revolution and why the strategy was distinctive from other military theatres of operation.

Certificate Requirements (18 semester hours)

HIST551	The American Revolution in Context	3
MILH510	Studies in U.S Military History	3
MILH531	Strategy, Tactics & Leadership of the American Revolution	3
MILH532	British Perspective of the American Revolution	3
MILH536	The American Revolution	3
MILH637	The Seven Years War	3
Total Semester Hours		**18**

Graduate Certificate - Ancient and Classical History

Program Description

The graduate certificate in Ancient and Classical History is designed for students interested in ancient and classical Greece and Roman history from their beginnings to the Age of Constantine. This online program emphasizes the medieval world in light of the changing social, political, and religious environments that led to the Renaissance. The growth of humanism, art, sculpture, architecture, market economies,

city-states and monarchies of the Holy Roman Empire, and religious upheavals of Protestantism, Anabaptists, and Catholic Reformation are examined.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Explain and critique Ancient Greece's political, economic, social, and intellectual movements.
- Explain and critique Roman history from its beginnings until the Age of Constantine, including the political and social developments in the Republic and the early empire.
- Examine and appraise great Byzantium leaders, the spread of Christianity throughout the Roman Empire, the recapture of Constantinople from the crusaders, and the impact of Byzantium culture on Western intellect.
- Explain and assess European social, political, economic, and religious institutions and cultural and intellectual phenomena in the light of the changing historical environment from the end of the Ancient World to the Renaissance.
- Explain and assess the medieval church and rise of the Renaissance papacy; growth of humanism, including painters, architects, and sculptors; city-states and monarchies of the Holy Roman Empire; religious upheavals of Protestantism; Anabaptists; and the Catholic Reformation.

Certificate Requirements (18 semester hours)

HIST510	Graduate Seminar in World History	3
HIST531	The Greek Civilization	3
HIST532	The Roman Republic and Empire	3
HIST533	Late Antiquity and Byzantium	3
HIST534	Medieval Europe	3
HIST535	Renaissance and Reformation	3
Total Semester Hours		**18**

Graduate Certificate - Athletic Administration

Program Description

The graduate certificate in Athletic Administration provides you with the fundamental skills often required in fields managing sports programs and facilities. The physical fitness and sports industries require knowledgeable, experienced leaders who are up to date with emerging health and fitness developments and capable of securing financial support for programs and facilities.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Compare and contrast various approaches to the administration of sports programs in a variety of sports settings.
- Recognize the various roles and functions of internal and external stakeholders in the administration and management of sports programs.

Certificate Requirements (18 semester hours)

SPMT608	Sports Law	3
SPMT603	High School Athletic Administration	3
SPMT612	Sports Event Management	3

SPMT613	Sports Entrepreneurship	3
SPMT620	Leadership and Management in Sport	3
SPMT630	Sales and Promotions in Sport	3

Graduate Certificate - Business Essentials for the Security Executive

Program Description

The graduate certificate in Business Essentials for the Security Executive is a concentrated program that bridges an education and skills gap for security officers who are required to manage personnel, budgets, and operations, but who may lack a business background. This certificate helps provide the skills often required in management and leadership professional responsibilities within public safety organizations including police, fire, and emergency management, as well as within security divisions for corporations, government contractors, or federal agencies. This online certificate is useful for graduate students in the security fields who want to expand their business management skills without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Synthesize information from multiple disciplines in order to solve business problems.
- Evaluate various economic indicators and how they depict the state of the economy.
- Justify the use of financial accounting information in making informed and ethical business decisions.
- Identify the types of data and appropriate methods that are specific to managerial decision making.
- Examine differences between leaders/managers and analyze perspectives that shape roles and align norms to maintain a healthy organization.
- Analyze the responsibilities of leaders through lenses of ethical and moral decision making, use of authority, power, and individual leadership style.
- Analyze the role of cross-cultural management.

Certificate Requirements (18 semester hours)

SCMT511	Chief Security Officer Fundamentals [1]	3
BUSN625	Applied Decision Making	3
ECON600	Managerial Economics	3
MGMT605	Leadership	3
MGMT610	Cross-Cultural Management	3
MGMT615	Strategic Planning	3
Total Semester Hours		**18**

1. Required as the first course in this program.

Graduate Certificate - Civil War Studies

Program Description

The graduate certificate in Civil War Studies is designed for students interested in the antebellum period, the Civil War years and Reconstruction era, and the social, cultural, economic, and political developments in the North and South. You will explore the operational command structure and campaign planning in relation to the evolution of tactical command and control at the various levels of the war. Special emphasis in this online program is placed on the analysis and synthesis of historical interpretations as presented in the writings of prominent and influential historians.

Many university faculty members teaching our courses are published historians or military leaders who bring unique perspectives and relevant research into the classroom. You'll also connect and interact online with other students who share your enthusiasm for history.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Place events of the antebellum period, the Civil War, and Reconstruction into the broader scope of American history by assessing the similarities and differences in social, cultural, economic, and political developments in the north and south.
- Discern and assess the political, economic, cultural, social, and military aspects of the Civil War to specifically include their impact on causative factors, conduct of the war, and post-war aftermath.
- Examine the operational contributions of Union and Confederate military leaders by critiquing selected land battles of the war as examples of the strategies and tactics involved.
- Compare and contrast the national, theater, and operational command structures of the Union and Confederacy in relation to leadership styles of key military leaders on both sides and the evolution of command and control during the war.
- Identify, assess, and explain the diverse historical assessments and interpretations of the Antebellum, Civil War, and Reconstruction eras as presented in the writings of prominent and influential historians.

Certificate Requirements (18 semester hours)

Graduate Certificate - CounterIntelligence

Program Description

The graduate certificate in Counterintelligence is designed to increase your fundamental understanding of counterintelligence activity and the ongoing national security challenges faced by the U.S. and its allies. You'll study the current methods and future trends of counterintelligence as integrated into the intelligence process. The U.S. military, government, and law enforcement agencies, as well as international business organizations, all require skilled professionals trained in national security threats and counterintelligence activities to help achieve security objectives. This online graduate certificate is intended for graduate students who want to expand their knowledge of counterintelligence without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Acquire in-depth knowledge of general counterintelligence work.
- Assess U.S. counterintelligence successes in the form of debated case studies.
- Analyze threats in the counterintelligence environment.
- Demonstrate proficiency in the use of selected research methods and tools.

Certificate Requirements (18 semester hours)

SSGS500	Research Design and Methods [1]	3
INTL508	Intelligence Analysis	3
INTL610	Counterintelligence	3
INTL653	Deception, Propaganda and Disinformation	3

INTL604	Interagency Operations	
INTL607	Open Source Intelligence (OSINT)	
INTL621	Signals Intelligence (SIGINT)	
INTL623	Human Intelligence (HUMINT)	
INTL637	Intelligence Profiling	
INTL647	Cyber Intelligence	
Total Semester Hours		**18**

1. Required as the first course in this program.

Graduate Certificate - Cybercrime

Program Description

The graduate certificate in Cybercrime examines the selection and use of digital forensics tools, techniques, and methods used to detect and verify cyber terrorism, cyber warfare, cyberstalking, and cyberbullying. The global reach of the Internet, the low cost of online activity, and the relative anonymity of users has contributed to a steady increase in cybercrime. Talented and trained professionals are needed to combat the effects of this rise in computer-related malice. This certificate program is intended for graduate students who seek to heighten their knowledge of cybercrime without committing to an academic degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Analyze the domains of knowledge, strategies, countermeasures, and challenges in the areas of cyber terrorism, cyber war, cyber stalking, and cyber bullying.
- Examine the phases, processes, and challenges of cybercrime investigations.
- Appraise the technical, legal, economic, and societal issues related to cybercrime.
- Evaluate the principles, practices, tools, techniques, and procedures to process cybercrime scenes.

- Appraise the legal and regulatory compliance requirements in investigating and prosecuting cybercrime.

Programmatic Admission Requirements

For this program, you must provide an official transcript of your previously completed bachelor's or master's degree and have ONE of the following:

- Associate or bachelor's degree in information technology or a related field (ex: computer science, information systems, database development, etc.)
- 2 years of work experience in the specific sub-field for this degree
- Completion of one of our undergraduate IT certificates
- Completion of 6 credits in IT-related courses
- Completion of an IT-related minor or concentration during your undergraduate program
- Certifications in at least one of the below, should be active and earned since 2010:

1. CompTIA Security+®
2. CompTIA Network+®
3. CompTIA A+®
4. CompTIA Project+®
5. CISSP® certification
6. SSCP®
7. EC-Council Ethical Hacking
8. Cisco CCNA® Security
9. Project Management Professional certification from the Project Management Institute

CompTIA Security+®, CompTIA Network+®, CompTIA A+®, and CompTIA Project+® are all registered trademarks of the Computer Technology Industry Association, Inc.

CISSP® and SSCP® are registered trademarks of International Information Systems Security Certification Consortium, Inc.

CCNA® is a registered trademark of Cisco Technology, Inc.

Notes:

- If the IT-specific requirements are not noted in the official bachelor's or master's transcript, you must provide official copies of your undergraduate transcripts that show the appropriate coursework.
- The verification of the 2 years' work experience needs to be sent to the university via formal resume/CV.
- Preadmission courses must have been completed within the last 5 years and at the undergraduate level must be graded C or better; B or better at the graduate level.

Please visit our APU graduate admission page for more information on institutional admission requirements.

Graduate Certificate - Digital Forensics

Program Description

The graduate certificate in Digital Forensics teaches you the innovative tools and leading industry methods for collecting and scientifically analyzing digital devices and data associated with cybercrime. You'll examine the requirements for supporting legal proceedings in criminal and civil forensics, rules for presenting evidence, and how to maintain a chain of custody for evidence integrity. The process of forensics investigation can destroy the very evidence it is seeking to assimilate. The window of opportunity for collecting evidence can be a few seconds or minutes depending on the sophistication of the perpetrator. This online certificate is intended for graduate students who want to expand their knowledge of digital forensics without committing to a degree program.

This program has specific admission requirements.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Evaluate data security, integrity, and exposure from multifunctional devices.
- Analyze various digital forensics models and examine the inherent challenges in the processes for seizing electronic evidence.
- Analyze concealment and cloaking techniques and technologies such as cryptography, steganography, and data hiding and investigate corresponding legislation and mitigation techniques.
- Assess and mitigate potential exposures and the risks of the chain of custody and examine the methodologies to mitigate the potentially narrow window of opportunity for collecting digital evidence.
- Investigate models to examine the financial and societal impact of technology related crime.
- Appraise the principles, practices, and inherent challenges of the e-discovery process and assess the tools, techniques, and procedures to legally seize and forensically evaluate digital crime scenes.

Programmatic Admission Requirements

For this program, you must provide an official transcript of your previously completed bachelor's or master's degree and have ONE of the following:

- Associate or bachelor's degree in information technology or a related field (ex: computer science, information systems, database development, etc.)
- 2 years of work experience in the specific sub-field for this degree
- Completion of one of our undergraduate IT certificates
- Completion of 6 credits in IT-related courses
- Completion of an IT-related minor or concentration during your undergraduate program
- Certifications in at least one of the below, should be active and earned since 2010:

1. CompTIA Security+®
2. CompTIA Network+®
3. CompTIA A+®
4. CompTIA Project+®
5. CISSP® certification
6. SSCP®

7. EC-Council Ethical Hacking
8. Cisco CCNA® Security
9. Project Management Professional certification from the Project Management Institute

Graduate Certificate - Emergency and Disaster Management

Program Description

The graduate certificate in Emergency and Disaster Management introduces you to the concepts of emergency management, including hazard analysis, mitigation, planning, communication, response, and recovery. It provides a theoretical foundation and understanding of what constitutes disaster, and offers you a glimpse into real-world emergency operations centers. You'll also uncover how various emergency support functions (fire, law enforcement, public works, healthcare providers, etc.) work together in an integrated emergency management system.

This program is taught by highly credentialed and experienced instructors, many who are board-certified emergency managers (CEM) or who hold key positions in government agencies or national safety and security organizations.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Assess the impact of federal Homeland Security legislation and regulation, and the placement of FEMA within the Department of Homeland Security, on FEMA's ability to perform in its traditional emergency and disaster role.
- Develop budgetary guidance for emergency management functions.
- Assess the threats to the community that derive from actual and potential "mass casualty--high impact" incidents and judge the effectiveness of the National Incident Management System (NIMS) upon the results of such incidents.

Certificate Requirements (18 semester hours)

Select 6 courses from the following:		18
EDMG501	Emergency Management and Public Law	
EDMG502	Emergency and Disaster Theory	
EDMG503	Emergency and Disaster Planning and Management	
EDMG509	Interagency Disaster Management

EDMG611	Case Analysis: Crisis and Disaster	
PBHE540	Emergency Management Health and Medical Issues	
PBHE606	Disaster Health Management	
Total Semester Hours		**18**

Graduate Certificate - Emergency Management Executive Leadership

Program Description

The graduate certificate in Emergency Management Executive Leadership provides you with the core knowledge often required as an executive or leader in an emergency management program in corporations, organizations or communities. It is designed to improve your knowledge of crisis management, local to national agency coordination, risk assessment, crisis planning, disaster response, and disaster recovery. With continual awareness on the need to assure sustainability in crisis situations, along with increasing regulatory requirements on businesses to develop emergency management programs, there is growing need to prepare professionals in all walks of industry to effectively lead and manage crisis and disaster response programs. This online certificate is intended for graduate students who want to expand their knowledge of emergency management leadership without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Understand the role of law in planning for disaster operations.
- Evaluate public law, regulation, and associated policy that are relevant to emergency planning, response and recovery operations.
- Discuss and interpret the interaction, coordination, and facilitation between federal, state, and local agencies during preparation, response, and recovery operations.
- Discuss the history of emergency response organizational to include the impact of the National Response Framework (NRF) and the National Incident Management System (NIMS) on emergency operations.
- Evaluate the potential for public-private partnerships in disaster response.
- Apply hazard identification and risk reduction techniques to identify threats to community/corporate resilience.

- Analyze and conduct research on the direct and indirect economic losses in public and private sectors that are associated with a disaster.
- Understand the theoretical and practical public management concepts.
- Apply public management theories to public management to emergency program management.

Certificate Requirements (18 semester hours)

EDMG501	Emergency Management and Public Law	3
EDMG503	Emergency and Disaster Planning and Management	3
EDMG509	Interagency Disaster Management	3
EDMG515	Hazard Mitigation and Resilient Communities	3
EDMG530	Economics of Disaster	3
PADM610	Public Management	3
Total Semester Hours		**18**

Graduate Certificate - Environmental Hazard Mitigation and Restoration

Program Description

The graduate certificate in Environmental Hazard Mitigation and Restoration is a unique blend of the disciplines of emergency and disaster management and environmental science and restoration. This online program introduces you to response and recovery functions, and restoration of damaged lands or habitat. You'll also learn principles of ecological restoration in the post-disaster environment, and how to assess and navigate the complex relationships between societies and their use of natural resources.

This online certificate is intended for graduate students who want to expand their knowledge of environmental hazard mitigation and restoration without committing to a degree program.

Certificate Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Define the principles of ecological restoration and hazard mitigation.
- Analyze the complex and dynamic interactions between humans and their environment.
- Explain the role of government policy at municipal, regional, national, and global levels to achieve sustainable natural disaster response and environmental mitigation.
- Apply theoretical concepts of emergency and disaster management planning to complex environmental problems and issues.
- Apply principles of ecological restoration in the post-disaster environment.
- Critically analyze complex and often competing social, environmental, and economic interests in developing hazard mitigation and restoration plans.

Certificate Requirements (18 semester hours)

EDMG502	Emergency and Disaster Theory	3
EDMG515	Hazard Mitigation and Resilient Communities	3
EVSP506	Restoration Ecology	3
EDMG503	Emergency and Disaster Planning and Management	3

EVSP594	Environmental Toxicology	3
EVSP628	Global Environmental Change	3
Total Semester Hours		**18**

Graduate Certificate - Environmental Planning and Design

Program Description

The graduate certificate in Environmental Planning and Design prepares you to develop strategies for implementing sustainable design practices at the landscape scale. You'll be taught how to use planning tools, including the use of Geographic Information Systems (GIS), environmental impact analyses, and the principles of sustainable design. You will also learn the elements that are necessary to design, evaluate, and implement actionable strategies that adhere to professional environmental planning and sustainability principles.

This online certificate is intended for graduate students who want to expand their knowledge of environmental planning and design without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Detail the elements necessary to design, implement, and evaluate sustainable developments, landscapes, and environments.
- Analyze the complex and dynamic interactions between humans and their environment.
- Explain the role of government policy at municipal, regional, national, and global levels to achieve sustainable development.
- Apply theoretical concepts to practical applications in order to design and implement sustainable environmental planning.
- Apply principles of environmental policymaking and environmental legislation, as well as socio-political influences to the field of environmental planning.
- Critically analyze complex, and often competing development plans for adherence to professional environmental planning and sustainability principles.

Certificate Requirements (18 semester hours)

EDMG515	Hazard Mitigation and Resilient Communities	3
EVSP501	Environmental Management	3
EVSP503	Environmental Policy, Regulation, and Law	3
EVSP558	Watershed Management	3
EVSP561	Elements of Sustainable Design	3
EVSP627	Landscape Ecology and Planning	3
Total Semester Hours		**18**

Graduate Certificate - Environmental Sustainability

Program Description

The graduate certificate in Environmental Sustainability focuses on the integration of several distinct topic areas, including sustainability, policy (energy and environmental), economics, and global resource allocation. You will explore the impact of policy and formulate public- and private-sector strategies for the implementation of sustainable practices and design, as well as energy resources on the national and global scale.

This online certificate is intended for graduate students who want to expand their knowledge of environmental sustainability without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Detail the principles of sustainability and the roles of multiple disciplines in their effective implementation.
- Analyze the complex and dynamic interactions between humans and their environment.
- Assess the role of government policy at municipal, regional, national, and global levels in achieving sustainable development.
- Analyze the political, regulatory, and economic barriers that prevent full implementation of sustainable products, goods and services.
- Apply the principles of sustainability to complex environmental problems.
- Analyze the role of sustainability in meeting critical resource needs, such as renewable energy and water quality and quantity, on the local, regional, national, and global scale.

Certificate Requirements (18 semester hours)

EVSP502	Environmental Economics	3
EVSP503	Environmental Policy, Regulation, and Law	3
EVSP561	Elements of Sustainable Design	3
EVSP605	Energy Policy and Sustainability	3
EVSP508	Environmental Ethics	3
EVSP628	Global Environmental Change	3
Total Semester Hours		**18**

Graduate Certificate - European History

Program Description

The graduate certificate in European History explores the rich antiquities of the medieval church, the rise of the Papacy, and the Renaissance. This online program also surveys the growth of humanism, prominent city-states, the monarchies of the Holy Roman Empire, religious wars, and the Catholic Reformation. By examining the early European history, you will discover how these fascinating events shaped the economies, industries, and cultures of the modern world. Special emphasis is placed on the economies, industries, societies, and culture of the U.S., Great Britain, Japan, and Germany during World War II.

Many university faculty members teaching our courses are published historians or military leaders who bring unique perspectives and relevant research into the classroom. You'll also connect and interact online with other students who share your enthusiasm for history.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Explain and assess the medieval church and rise of the Renaissance papacy; growth of humanism, city-states and monarchies of the Holy Roman Empire; religious upheavals; and the Catholic Reformation.
- Distinguish the major social, political and cultural changes of the Enlightenment in Europe from the death of Louis XIV to the fall of Napoleon.
- Discern the origins of World War I in Europe and assess the combatants, strategy and tactics, technological innovation; war in France; war at sea; the peace settlement; and the occupation.

- Compare and contrast the economies, industry, society and culture of the United States, Great Britain, Japan, and Germany during World War II.
- Assess modern European history since the Congress of Vienna to include social, economic, cultural and political experiences common to Europe; developments sharply differentiated from those in most other parts of the world.

Certificate Requirements (18 semester hours)

HIST510	Graduate Seminar in World History	3
HIST536	History of the Enlightenment	3
HIST543	18th and 19th Century Europe	3
HIST558	The Great War	3
HIST560	World War II in Context	3
HIST570	Modern European History	3
Total Semester Hours		**18**

Graduate Certificate - Executive Coaching

Program Description

This Executive Coaching Certificate is an interdisciplinary coaching program that focuses on developing effective coaching skills, building rapport, facilitating organizational change, using assessments, developing cultural awareness, applying coaching models and strategies, exploring emotional intelligence, and creating a plan to turn a graduate's coaching idea into a business. Knowledge gained in this coaching certificate is valuable for business leaders, managers, and professionals across various disciplines, equipping them with the executive coaching skills and leadership tools needed to collaborate effectively with clients, teams, and organizations.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Distinguish between coaching, counseling, mentoring, and supervising.
- Explain the characteristics that encourage an effective coaching experience.
- Demonstrate fundamental active listening and coaching skills.
- Evaluate various models to determine most appropriate for specific coaching situations.
- Evaluate assessments to determine applicability and effectiveness in various coaching situations.
- Use assessments to promote an effective coaching experience.
- Compare and contrast strategies and techniques associated with coaching individuals versus coaching in teams and groups.
- Generate strategies for coaching teams and groups within an organizational structure.
- Apply ethical guidelines and professional standards associated with individual, team, and group coaching.
- Develop business leadership skills required to be an effective coach.

Certificate Requirements (18 semester hours)

EDUC536	Foundations of Coaching [1]	3
EDUC633	Emotional Intelligence and Coaching Assessments	3
EDUC635	Coaching Groups and Teams	3
EDUC645	Career Counseling and Development	3
Select 2 courses from the following:		6

ENTR500	Ideation	
ENTR630	Entrepreneurial Marketing	
MGMT605	Leadership	
Total Semester Hours		**18**

1. Required as the first course in this program.

Graduate Certificate - Executive Law Enforcement Leadership

Program Description

The graduate certificate in Executive Law Enforcement Leadership is designed to help prepare chiefs of police and other key state law enforcement command personnel for their leadership roles. This online program offers you an improved knowledge of police administration, grant writing, organizational management and development, leadership, and planning. This program is also a useful introduction to a graduate degree in criminal justice, management, or other similar areas of interest. This online certificate is intended for graduate students who want to expand their knowledge of executive law enforcement leadership without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Compare and contrast techniques for structuring and resolving managerial problems in public and private organizations.
- Evaluates interpersonal relations, motivation, decision making, and group behavior in organizations.
- Deconstruct the role and function of leadership in terms of how it impacts individuals, organizations, and society.
- Synthesis state-of-the-art practices and theories, strategies and techniques relative to the strategic management and planning process.
- Examines administrative issues inherent in both large and small police organizations, including administration, organization, leadership, the role of the manager, and citizen oversight.
- Demonstrates the skills necessary to be able to develop a grant proposal.

Certificate Requirements (18 semester hours)

MGMT600	Organizational Management	3
MGMT603	Organizational Development	3
MGMT605	Leadership	3
MGMT615	Strategic Planning	3
Select 2 courses from the following:		6
CMRJ500	Criminal Justice Ethics	
CMRJ512	Police Administration	
CMRJ527	Crime and Mental Disorders	
CMRJ601	Cases in Executive Decision Making	
Total Semester Hours		**18**

Graduate Certificate - Fish and Wildlife Management

Program Description

The graduate certificate in Fish and Wildlife Management focuses on ecological functions, habitat restoration, and the survivability and management of fish and wildlife populations. You will study environmental policies, regulations, and laws, while looking at real-world examples of various management approaches for restoring or improving populations of rare, threatened, or endangered species. This online graduate program emphasizes the importance of establishing science-based policy to direct and inform management decision making. Skills obtained through this certificate are often required in fields such as local and national park management, fish hatcheries, wetlands, or conservation agencies. This online certificate is intended for graduate students who want to expand their knowledge of fish and wildlife management without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Describe the fundamental concepts and principles of the management of fish and wildlife resources.
- Assess the impact of human activities on the survival and management of fish and wildlife populations.
- Analyze the regulations, policies, and politics that influence the management of fish and wildlife in the U.S.
- Analyze the complex and dynamic interactions between fish and wildlife resources and their environment.
- Assess the political, regulatory, and economic barriers that prevent the preservation and restoration of species and populations.
- Analyze the role of collaboration and partnerships in meeting critical fish and wildlife resource needs, such as species restoration, threatened and endangered species management, and landscape level conservation, both on the national and global scale.

Certificate Requirements (18 semester hours)

EVSP501	Environmental Management	3
EVSP502	Environmental Economics	3
EVSP504	Fisheries Management	3
EVSP505	Wildlife Management	3
EVSP506	Restoration Ecology	3
EVSP507	Conservation Biology	3
Total Semester Hours		**18**

Graduate Certificate - Homeland Security

Program Description

The graduate certificate in Homeland Security provides you with a broad understanding of national security and defense, policies, planning, and programs, as well as the ability to expertly evaluate and improve current defense tactics. The curriculum is designed to improve your understanding of national security threats, weapons of mass destruction, terrorism, intelligence, consequence management, and interagency government-related issues. This online certificate is intended for graduate students who want to expand their knowledge of homeland security without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to::

- Predict the need to conduct and/or contract for research related to high probability chemical, biological, radiological, nuclear, or energetic (CBRNE) events and their consequences in any community of interest.
- Design and modify plans and programs at federal, state, and/or local levels to reflect the evolving strategic policy issues associated with a statutory and presidential direction for homeland security.
- Evaluate the strengths and weaknesses of public, private and military efforts to reduce, patterned and non-patterned "warfare" by overt and covert means of both nation states and transnational terrorist groups.

Certificate Requirements (18 semester hours)

HLSS500	Research Methods in Homeland Security	3
HLSS502	Homeland Security and Defense	3
HLSS522	Weapons of Mass Destruction and the New Terrorism	3
HLSS523	Domestic Terrorism and Extremist Groups	3
INTL613	Intelligence and Homeland Security	3
LSTD516	Homeland Security and the Law	3
Total Semester Hours		**18**

Graduate Certificate - Human Capital Leadership

Program Description

The graduate certificate in Human Capital Leadership examines the processes, strategies, and practices used by companies and managers to effectively and efficiently leverage their human capital. This online certificate teaches you to evaluate critical information in order to make complex decisions and to implement new initiatives in a changing work environment. This online certificate is intended for graduate students who wish to further their knowledge in human capital leadership without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Evaluate human resource policies and practices that impact the hiring, development and retention of human capital within an organization.
- Create a shared vision and departmental objectives to empower direct reports and encourage collaboration among units to support the mission of the organization.
- Design a case study that addresses how an organization should respond to a crisis.
- Summarize the role of a leader in ensuring that direct reports have the opportunity to work in an ethical, safe and transparent environment.

Certificate Requirements (18 semester hours)

MGMT600	Organizational Management	3
MGMT601	Organizational Behavior	3
MGMT604	Organizational Crisis Management	3
MGMT605	Leadership	3
MGMT617	Leading Teams	3
MGMT618	Ethics in Leadership	3
Total Semester Hours		**18**

Graduate Certificate - Information Assurance

Program Description

The graduate certificate in Information Assurance teaches the theory and technical skills needed to detect threats and to secure vital, sensitive information assets across enterprise networks for organizations and government agencies. Achieving credentials in the information assurance (IA) field helps prove your knowledge of: network security solutions; continuous monitoring, activity analysis, threat detection, warnings, and attacks; cryptography; security awareness training and support; and infrastructure security engineering. This certificate program is intended for graduate students who seek to heighten their knowledge of information assurance without committing to an academic degree program.

This program has specific admission requirements.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Analyze the components of an information assurance and certification plan.
- Assess security governance objectives and risk management objectives.
- Examine the phases, processes, standards, the levels, and the process areas of the INFOSEC Assessment Capability Maturity Model (IA-CMM).
- Appraise and conduct a complete threat, vulnerability, impact, and risk assessment; and synthesize risk mitigation strategies based on the analysis of this data.
- Evaluate the processes and deliverables of the INFOSEC assessment methodology (IAM).
- Design relevant information security management metrics by analyzing incident management and response data.

Programmatic Admission Requirements

For this program, you must provide an official transcript of your previously completed bachelor's or master's degree and have ONE of the following:

- Associate or bachelor's degree in information technology or a related field (ex: computer science, information systems, database development, etc.)
- 2 years of work experience in the specific sub-field for this degree
- Completion of one of our undergraduate IT certificates
- Completion of 6 credits in IT-related courses
- Completion of an IT-related minor or concentration during your undergraduate program
- Certifications in at least one of the below, should be active and earned since 2010:

1. CompTIA Security+®
2. CompTIA Network+®
3. CompTIA A+®
4. CompTIA Project+®
5. CISSP® certification
6. SSCP®
7. EC-Council Ethical Hacking
8. Cisco CCNA® Security
9. Project Management Professional certification from the Project Management Institute

CompTIA Security+®, CompTIA Network+®, CompTIA A+®, and CompTIA Project+® are all registered trademarks of the Computer Technology Industry Association, Inc.

CISSP® and SSCP® are registered trademarks of International Information Systems Security Certification Consortium, Inc.

CCNA® is a registered trademark of Cisco Technology, Inc.

Notes:

- If the IT-specific requirements are not noted in the official bachelor's or master's transcript, you must provide official copies of your undergraduate transcripts that show the appropriate coursework.
- The verification of the 2 years' work experience needs to be sent to the university via formal resume/CV.
- Preadmission courses must have been completed within the last 7 years and at the undergraduate level must be graded C or better; B or better at the graduate level.

Please visit our APU graduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-221-5446 or info@apus.edu.

Certificate Requirements (18 semester hours)

ISSC640	Computer Networks and Data Systems	3
ISSC641	Telecommunications and Network Security	3
ISSC660	Information Assurance	3
ISSC661	Information Assurance: Assessment and Evaluation	3
ISSC662	Information Assurance: Capability Maturity and Appraisals	3

Total Semester Hours		**18**

Graduate Certificate - Information Systems Security

Program Description

The graduate certificate in Information Systems Security teaches secure network design, development of security policies and programs, cryptography, business continuity planning, and other skills necessary to protect organizational systems from growing sophisticated attacks. This certificate program is intended for graduate students who seek to heighten their knowledge of information assurance without committing to an academic degree program.

Courseware in this online program aligns with knowledge needed for the Certified Information Systems Security Professional (CISSP®) certification, the gold standard certification for international information security.

CISSP® is a registered trademark of International Information Systems Security Certification Consortium, Inc.

This program has specific admission requirements.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Compare and contrast the differences between the various network topologies (both physical and logical) and appraise the various types of security architecture and design models.

- Examine the seven-layer OSI networking model and its relation to common protocol stacks, and inspect the components of a packet (header, body, CRC, etc.).
- Examine the principles of network security and assess cellular architecture.
- Evaluate the process for securing current and next generation telecommunications networks.
- Examine the principles of intrusion detection and intrusion prevention.
- Differentiate between the different types of cryptographic algorithms.

Programmatic Admission Requirements

For this program, you must provide an official transcript of your previously completed bachelor's or master's degree and have ONE of the following:

- Associate or bachelor's degree in information technology or a related field (ex: computer science, information systems, database development, etc.)
- 2 years of work experience in the specific sub-field for this degree
- Completion of one of our undergraduate IT certificates
- Completion of 6 credits in IT-related courses
- Completion of an IT-related minor or concentration during your undergraduate program
- Certifications in at least one of the below, should be active and earned since 2010:

1. CompTIA Security+®
2. CompTIA Network+®
3. CompTIA A+®
4. CompTIA Project+®
5. CISSP® certification
6. SSCP®
7. EC-Council Ethical Hacking
8. Cisco CCNA® Security
9. Project Management Professional certification from the Project Management Institute

Notes:

- If the IT-specific requirements are not noted in the official bachelor's or master's transcript, you must provide official copies of your undergraduate transcripts that show the appropriate coursework.
- The verification of the 2 years' work experience needs to be sent to the university via formal resume/CV.
- Preadmission courses must have been completed within the last 7 years and at the undergraduate level must be graded C or better; B or better at the graduate level.

Please visit our APU graduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-381-8535 or info@apus.edu.

Certificate Requirements (18 semester hours)

ISSC621	Computer Forensics	3
ISSC640	Computer Networks and Data Systems	3
ISSC641	Telecommunications and Network Security	3
ISSC642	Intrusion Detection and Incident Handling	3
ISSC660	Information Assurance	3
ISSC680	Information Security Management	3
Total Semester Hours		**18**

Graduate Certificate - Intelligence Analysis

Program Description

The graduate certificate in Intelligence Analysis provides you with a fundamental understanding of the issues, problems, and threats faced by the intelligence community. This online graduate program helps you develop a comprehensive knowledge of how intelligence agencies in the U.S. assess and counter international threats in order to guard U.S. global interests and protect U.S. national security from adversaries. This online certificate is intended for graduate students who want to expand their knowledge of intelligence analysis without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Analyze the foundation and application of psychological concepts to the study of intelligence analyses.
- Apply critical thinking skills to the analyses of case studies on intelligence issues.
- Produce advanced analyses in areas important to intelligence consumers.
- Demonstrate proficiency in the use of selected research methods and tools.

Certificate Requirements (18 semester hours)

SSGS500	Research Design and Methods [1]	3
INTL508	Intelligence Analysis	3
INTL616	Ethical Challenges in the Intelligence Community	3
Select 3 courses from the following:		9
INTL627	Advanced Geospatial Intelligence	
INTL631	Criminal Intelligence Analysis	
INTL635	Indications and Warnings	
INTL637	Intelligence Profiling	
INTL653	Deception, Propaganda and Disinformation	
Total Semester Hours		**18**

1. Required as the first course in this program.

Graduate Certificate - Intelligence Studies

Program Description

The graduate certificate in Intelligence Studies provides you with an improved understanding of intelligence development, collection, analysis, structure, and functions, as well as security threats, countermeasures, and counterintelligence. This certificate program is useful in fields where a thorough knowledge of the intelligence and counterintelligence discipline is required. This online certificate is designed for graduate students who wish to add to their knowledge of intelligence without committing to a degree program.

Certificate Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Assess the evolution, structures, functions, capabilities, and activities of the national intelligence community.
- Evaluate the fundamental capabilities and limitations of intelligence collection.
- Analyze the foundation and application of psychological concepts to the study of intelligence analyses.
- Demonstrate proficiency in the use of selected research methods and tools.

Certificate Requirements (18 semester hours)

SSGS500	Research Design and Methods [1]	3
INTL501	Strategic Intelligence	3
INTL508	Intelligence Analysis	3
INTL509	Intelligence Collection	3
INTL616	Ethical Challenges in the Intelligence Community	3
Select 1 course from the following:		3
INTL507	Intelligence Operations	
INTL607	Open Source Intelligence (OSINT)	
INTL610	Counterintelligence	
INTL627	Advanced Geospatial Intelligence	
INTL637	Intelligence Profiling	
INTL646	Transnational Crime and Narcotics	
INTL647	Cyber Intelligence	
Total Semester Hours		**18**

1. Required as the first course in this program.

Graduate Certificate - IT Project Management

Program Description

The graduate certificate in IT Project Management examines how to manage IT projects in regard to cost, time, scope, quality, risk and people, so that projects come in on time and under budget. You will be taught methods for handling the simultaneous challenges of

complex real-world IT projects, shrinking budgets, and shorter deadlines while learning strategic planning and business systems analysis. This online graduate certificate is intended for graduate students who seek to heighten their knowledge of information technology project management without committing to a degree program.

This program has specific admission requirements.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Analyze the project management framework, including the stakeholders, domains, phases, processes, integration, and lifecycle.
- Examine the potential complexities and pitfalls in initiating and closing projects and assess methods to mitigate this risk.
- Appraise the unique challenges in managing the scope, time, and cost of information technology projects.
- Appraise the principles, practices, and models for organizing, allocating, and managing project resources.
- Examine the models, methods, principles, practices, and challenges pertaining to project cost management and analyze the principles of earned value management (EVM).
- Apply the qualitative and quantitative approaches of risk analysis to risk assessment and management.
- Examine the various tools, techniques, principles, and practices of quality control and quality assurance (QA/QC) programs.
- Examine the phases, methodologies, and processes in the ebusiness project lifecycle.

Programmatic Admission Requirements

For this program, you must provide an official transcript of your previously completed bachelor's or master's degree and have ONE of the following:

- Associate or bachelor's degree in information technology or a related field (ex: computer science, information systems, database development, etc.)
- 2 years of work experience in the specific sub-field for this degree
- Completion of one of our undergraduate IT certificates
- Completion of 6 credits in IT-related courses
- Completion of an IT-related minor or concentration during your undergraduate program
- Certifications in at least one of the below, should be active and earned since 2010:

1. CompTIA Security+®
2. CompTIA Network+®
3. CompTIA A+®
4. CompTIA Project+®
5. CISSP® certification
6. SSCP®
7. EC-Council Ethical Hacking
8. Cisco CCNA® Security
9. Project Management Professional certification from the Project Management Institute

CompTIA Security+®, CompTIA Network+®, CompTIA A+®, and CompTIA Project+® are all registered trademarks of the Computer Technology Industry Association, Inc.

Graduate Certificate - K-12 Online Learning

Program Description

The graduate certificate in K-12 Online Learning helps to provide a foundation for developing the skills often necessary for teaching in online, face-to-face, and hybrid instructional settings. This concentrated, 6-course graduate program is ideal if you currently have a master's degree and seek additional coursework required to succeed as an online educator. If you do not have a master's in education, you might want to consider our M.Ed. in Teaching degree, K-12 Online Learning concentration.

This graduate certificate program does not lead to state certification or licensure, nor can it be used to maintain state licensure or certification.

This program has specific admission requirements.

Degree Program Objectives

Upon successful completion of this certificate, the student will be able to:

- Analyze effective teaching and assessment approaches in online learning contexts.
- Evaluate ethical and legal issues related to online learning.
- Apply technology tools to facilitate effective online learning.
- Create instructional activities that meet the diverse needs of online learners.

Programmatic Admission Requirements

This graduate certificate program does not lead to state certification or licensure, nor can it be used to maintain state licensure or certification. We strongly encourage you to explore your state-specific requirements prior to applying here in order to make an informed

decision. In addition, you may email our coordinator of certification and licensure at certification@apus.edu.

The following documentation is required for admission into this program, and must be provided prior to course registration:

- Signed statement of understanding (SOU)

Important notes:

- You are required to take EDUC621 as the first course in this degree program, but other courses may be taken in conjunction with EDUC621.

Please visit our APU graduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-205-7340 or info@apus.edu.

Certificate Requirements (18 semester hours)

EDUC621	Online Learning for the Adult and the K-16 Learner [1]	3
EDUC622	Ethics and Legal Issues in Online Learning	3
EDUC623	Online Learning and Student Achievement	3
EDUC624	Assessment of Online Learning	3
EDUC639	Online Teaching Technology Integration	3
Select 1 course from the following:		3
EDUC625	Instructional Design in Online Learning	
EDUC629	Personalized and Individualized Online Learning	
Total Semester Hours		**18**

1. Required as the first course in this program.

Graduate Certificate - K-12 Reading and Differentiated Instruction

Program Description

The graduate certificate in K-12 Reading and Differentiated Instruction allows practicing teachers to advance their knowledge in reading/literacy instruction, differentiation, and personalized learning. This concentrated, 6-course graduate program is ideal if you currently have a master's degree and seek additional coursework to help you better meet the varied individual and collective needs of different learners. If you do not have a Master's in Education, you might want to consider our M.Ed. in Teaching degree, Elementary Reading concentration.

This graduate certificate program does not lead to state certification or licensure, nor can it be used to maintain state licensure or certification.

This program has specific admission requirements.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Evaluate diagnostic approaches for K-12 struggling readers across curricular areas.
- Analyze reading, differentiated, and personalized instructional strategies that positively impact student learning.
- Design instructional activities and assessments that meet the different needs of K-12 learners.

Programmatic Admission Requirements

This graduate certificate program does not lead to state certification or licensure, nor can it be used to maintain state licensure or certification. We strongly encourage you to explore your state-specific requirements prior to applying here in order to make an informed decision.

The following documentation is required for admission into this program, and must be provided prior to course registration:

- Signed statement of understanding (SOU)

Important notes:

- This program is not designed to lead to certification or licensure. We strongly encourage you to explore your state-specific requirements prior to applying here in order to make an informed decision.
- You are required to take EDUC590 as the first course in this degree program, but other courses may be taken in conjunction with EDUC590.

Please visit our APU graduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-205-7340 or info@apus.edu.

Certificate Requirements (18 semester hours)

Graduate Certificate - K-12 Virtual School Administration

Program Description

The K-12 Virtual School Administration graduate certificate looks at online learning in non-traditional learning environments. In this graduate program, you will discover the financial, educational, and legal aspects of administering programs that teach K-12 learners in a virtual setting. This concentrated, 6-course online program is ideal if you currently have a master's degree and seek additional coursework required to succeed as virtual school administrator. If you do not have a master's in education, you might want to consider our M.Ed. in Educational Leadership degree, K-12 virtual school concentration.

This graduate certificate program does not lead to state certification or licensure, nor can it be used to maintain state licensure or certification.

This program has specific admission requirements.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Prepare candidates for leadership and managerial positions in virtual school administration at the K-12 level.
- Develop leadership skills often required in today's secondary dual role of managing departments and performing everyday supervision and leadership duties as a school administrator.
- Develop specific leadership skills relative to budgeting and financial management, handling legal issues relative to managing an athletic department, conflict resolution, and managing facilities.

Programmatic Admission Requirements

This graduate certificate program does not lead to state certification or licensure, nor can it be used to maintain state licensure or certification. We strongly encourage you to explore your state-specific requirements prior to applying here in order to make an informed decision. In addition, you may email our coordinator of certification and licensure at certification@apus.edu.

The following documentation is required for admission and must be provided prior to course registration:

- Signed statement of understanding (SOU)
- Documentation of 1 year K-12 teaching experience or 1 year K-12 managerial experience in an instructional setting

Please visit our APU graduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-205-7340 or info@apus.edu.

Graduate Certificate - Leadership and Logistics

Program Description

The graduate certificate in Leadership and Logistics is a concentrated program designed to provide students with a solid foundation with regard to leaders, the leadership process, and motivation as they explore the basic principles of business logistics. Knowledge gained from this graduate program could be adapted in many fields such as military service, nonprofits, or corporations. This online certificate in is intended for graduate students who wish to further their knowledge of leadership and logistics without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Define and compare the different concepts relating to supply chain management, logistics, and transportation and its usage in industry today.
- Conduct analysis of the different leadership styles in business today, with a focus on the logistics business in the public and private sector.
- Compare and contrast different leadership traits and strategies at all levels of a logistics and supply chain organization in the public and private sector.
- Demonstrate how to determine the necessary assessment techniques to quantify successful supply chain management.
- Analyze and explain different methods for establishing and reaching personal and professional goals.
- Define and demonstrate how to resolve management controversies, problems, and conflicts.
- Analyze different modes and models of management interactions and impacts as compared to public and private logistics organizations.
- Define and discuss the various facets and concepts in business logistics today.
- Evaluate possible solutions to issues from various business logistics problems, situations, and controversies.
- Demonstrate knowledge of how to evaluate the economic and international situations will influence management's assessment of logistics.
- Define how to leverage Internet and ebusiness capabilities for conducting logistics business in today's global marketplace.

Certificate Requirements (18 semester hours)

MGMT600	Organizational Management	3
MGMT605	Leadership	3
MGMT615	Strategic Planning	3
TLMT600	National Transportation Management	3
TLMT603	Strategic Intermodal Transportation	3
TLMT611	Global Logistics Management	3
Total Semester Hours		**18**

Graduate Certificate - Life Coaching

Program Description

Knowledge gained in this program is beneficial for individuals with a degree in psychology, counseling, social work, or other professions who want to gain additional skills often required in a life coaching role. This life coach certificate curriculum focuses on developing effective coaching relationships and using coaching models and strategies appropriate for individual clients and groups. Students also learn to cultivate their personal coaching presence and self-awareness while developing cultural understanding and exploring emotional intelligence. Coursework emphasizes a solution-focused approach, ethical considerations, using and interpreting assessments, and partnering with clients to achieve their personal and professional potential.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Distinguish between coaching, counseling, mentoring, and supervising.
- Explain the characteristics that encourage an effective coaching experience.

- Demonstrate fundamental active listening and coaching skills.
- Evaluate various models to determine most appropriate for specific coaching situations.
- Evaluate assessments to determine applicability and effectiveness in various coaching situations.
- Use assessments to promote an effective coaching experience.
- Compare strategies and techniques associated with coaching individuals versus coaching in teams and groups.
- Generate strategies for coaching teams and groups within an organizational structure.
- Apply ethical guidelines and professional standards associated with individual, team, and group coaching.

Certificate Requirements (15 semester hours)

EDUC536	Foundations of Coaching [1]	3
EDUC633	Emotional Intelligence and Coaching Assessments	3
EDUC635	Coaching Groups and Teams	3
EDUC645	Career Counseling and Development	3
Select 1 course from the following:		3
EDUC501	Human Growth and Development	
ENTR630	Entrepreneurial Marketing [2]	
Total Semester Hours		**15**

1. Required as the first course in this program.
2. Students with a Master's degree in Counseling; Doctoral degree in social and behavioral sciences; or individuals with NCC, LPC, LMHC, or LPCC credentials must take this course.

Graduate Certificate - Logistics Management

Program Description

The graduate certificate in Logistics Management is a concentrated program designed to provide the knowledge and skills often necessary for individuals within any organization in the dynamic field of logistics and supply chain management. This online certificate is intended for graduate students who wish to further their knowledge of logistics management without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Evaluate the importance of the maritime industry to the global economy.
- Evaluate the role of the maritime industry as part of our national defense.
- Measure the ways in which logistics processes contribute to meeting the financial goals of businesses.
- Evaluate customer service requirements and their relationships to the goal of driving logistics.
- Assess the role of logistics in optimizing supply chain management.

Certificate Requirements (18 semester hours)

TLMT501	Transportation Policy and Planning	3
TLMT600	National Transportation Management	3

TLMT601	Transportation Economics	3
TLMT603	Strategic Intermodal Transportation	3
TLMT607	Port and Terminal Operations	3
TLMT611	Global Logistics Management	3
Total Semester Hours		**18**

Graduate Certificate - National Security Studies

Program Description

The graduate certificate in National Security Studies looks at national and international security policies, security and intelligence analysis, globalization's impact on national security, and national security institutions. Graduates of the certificate can be found across the national and international security community as civilian and military policymakers, action-officers, analysts, instructors, and consultants. This online certificate is intended for graduate students who want to expand their knowledge of national security without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Appraise classic and contemporary theories, strategies, doctrines, and procedures related to the causes, conduct, and termination of armed conflict and the maintenance of peace.
- Compare the structures, functions, capabilities, and activities of national and international security community members.
- Assess and predict traditional and non-traditional threats to national and international security.

Certificate Requirements (18 semester hours)

NSEC501	Institutions of National Security	3
NSEC503	U.S. National Security	3
NSEC504	International Security	3
NSEC610	National Security and Globalization	3
Select 2 courses from the following:		6
HLSS502	Homeland Security and Defense	
INTL604	Interagency Operations	
INTL652	Terrorism: Assessing the Past to Forecast the Future	
MILS560	Joint Warfare Theory and Practice	
MILS561	Joint Warfare Planning and Implementation	
NSEC506	Cyber Policy and Practice in National Security	
NSEC611	Covert Action and National Security	
NSEC612	National Security and Diplomacy

Graduate Certificate - Neuroleadership

Program Description

The graduate certificate in Neuroleadership introduces you to innovative solutions for improving employee performance, managing a variety of people, and facilitating better learning through coaching. Organizations rely heavily on the behavioral sciences to provide creative workplace solutions. This cutting-edge neuroleadership program evaluates and examines the recent rise in brain-based (neuroscientific) solutions to workplace issues and provides a foundation in organizational leadership skills.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Compare and contrast behavior versus cognitive solutions to issues occurring in the workplace.
- Summarize how neuroscience can mold a person’s leadership style and effectiveness.
- Evaluate the rise of neuroleadership in the human resource and organizational development disciplines.
- Analyze how neuroscience can change the way we work.
- Create a customized model for a brain-friendly workplace.

Certificate Requirements (15 semester hours)

Graduate Certificate - Nonprofit Management

Program Description

The graduate certificate in Nonprofit Management is a concentrated program offering a foundation in leadership, finance, governmental relations, communications, marketing, and the critical role of fundraising in nonprofit organizations. This online program helps to provide knowledge and skills often required to manage a nonprofit organization in today’s economic and regulatory environment, in either the private or public sector. This online certificate is intended for graduate students who want to expand their knowledge of nonprofit management without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Inspect the legal, moral, and ethical responsibilities of executive and governance positions within nonprofit corporations.
- Explain the implications of tax-exempt status and its relationship to public service obligations under the law.
- Analyze the financing of nonprofit enterprises and the variety of funding streams available to nonprofit corporations.
- Create a fundraising plan for a charitable nonprofit to augment other funding.
- Evaluate the structure of the nonprofit enterprise to maximize the work of the organization through paid and volunteer staff and board members.

- Design policies for the governance and operation of nonprofit corporations.

Certificate Requirements (18 semester hours)

NFPM640	Nonprofit Law, Governance, and Ethics	3
NFPM641	The Nonprofit Organization and Executive Leadership	3
NFPM642	Financial Management in Nonprofit	3
NFPM643	Nonprofit Fundraising Planning and Implementation	3
PADM620	Local Political Administration	3
Select 1 course from the following:		3
MKTG601	Strategic Internet Marketing	
MKTG602	Global Marketing Strategy

Graduate Certificate - Nursing Education

Program Description

The graduate certificate in Nursing Education is designed to help prepare master's-level nurses to be effective educators in the nursing profession. It also helps to provide them skills to be an agent of change in the delivery of healthcare, offering a focus in curriculum design, assessment, and teaching and learning practices. The coursework in this certificate program provides the academic preparation required for the Certified Nurse Educator professional certification available from the National League for Nursing.

Note: This program is currently not open for admission to residents of Washington.

This program has specific admission requirements.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Apply programmatic objectives to the nurse educator role in clinical or academic settings.
- Create effective educational and curricular materials for a variety of audiences.
- Evaluate effectiveness of teaching strategies and modalities.

Programmatic Admission Requirements

This program is currently not open for admission to residents of Washington.

For this program, the following documentation is required and must be provided prior to course registration:

- Official transcripts showing a conferred Master of Science in Nursing degree from an accredited program or a BSN degree in nursing and master's degree in a closely related field.
- Current and active unencumbered registered nurse (RN) license in state where practicums will be conducted.
- Minimum cumulative GPA of 3.0 for the Master of Science degree.
- Current resume/CV.
- Signed statement of understanding (SOU).

Please visit our APU graduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-498-7976 or info@apus.edu.

Graduate Certificate - Nursing Leadership

Program Description

The graduate certificate in Nursing Leadership is designed to support master's-prepared nurses in being effective leaders in the nursing profession. It also helps to prepare these nurses to be an agent of change in the delivery of healthcare, offering a focus in leadership, human resource management, and operational quality. The transformational changes occurring in healthcare today make advanced degree nursing practice essential to the provision of safe, patient-centered care.

Note: This program is currently not open for admission to residents of Washington.

This program has specific admission requirements.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Apply ethical principles to advanced professional nursing practice.
- Demonstrate leadership skills supportive of safe nursing practice and patient-centered care.
- Advocate for healthcare policies that improve healthcare outcomes across the lifespan.
- Apply theoretical knowledge and evidence-based practice to influence the delivery of cost-effective care to improve health outcomes.
- Advocate for business practices that promote healthcare quality and patient safety.
- Synthesize knowledge of key business and human resources practices to effectively lead healthcare teams.

Programmatic Admission Requirements

This program is currently not open for admission to residents of Washington.

For this program, the following documentation is required and must be provided prior to course registration:

- Official transcripts showing a conferred Master of Science in Nursing degree from an accredited program or a BSN degree in nursing and master's degree in a closely related field.
- Current and active unencumbered registered nurse (RN) license in state where practicums will be conducted.
- Minimum cumulative GPA of 3.0 for the Master of Science degree.
- Current resume/CV.

- Signed statement of understanding (SOU).

Please visit our APU graduate admission page for more information on institutional admission requirements.

Graduate Certificate - Security Management

Program Description

The graduate certificate in Security Management focuses on the principles and theories associated with various types of security, from industrial espionage, to cybercrime, to contemporary issues in security asset protection. In this online program, you'll also study strategic decision-making and the evaluation of security programs. Field work in the areas of executive protection and recovery, trade secret protection, background investigations, surveillance, IT security, and cybersecurity are but a few areas in the security management field. This online certificate is intended for graduate students who want to expand their knowledge of security management without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Ascertain and evaluate the aspects of vulnerabilities, threats, and countermeasures, as they pertain to assets protection.
- Analyze the security concepts in various programs, including personnel security, information security, and physical security.
- Assess the methodologies of resource allocation as it pertains to applying appropriate security through the use of protective services.
- Conduct risk assessment analysis of computer facilities, including identifying types of threats and probabilities of occurrences.
- Describe and apply various security management plans and principles appropriate to crisis situations and distinguish the management approaches to threats.
- Distinguish between industrial and economic espionage that present threats to either business or government organizations.

Certificate Requirements (18 semester hours)

Graduate Certificate - Space Studies

Program Description

The graduate certificate in Space Studies explores critical space topics, including orbital mechanics, past and current space exploration endeavors, remote sensing, and the role of space in support of modern warfare. This certificate also teaches advanced laws of planetary motion and gravitation, and how to evaluate the political and commercial significance of national, international, and commercial space missions and joint operations. The curriculum for this online program was originally designed by former NASA astronaut and Dean of Science and Technology Dr. James Reilly, veteran of three shuttle missions and five spacewalks. You will have the opportunity to learn from industry leaders in space and aerospace in this 6-course space studies program.

Note: Completion of college algebra is highly recommended for coursework in this program.

Certificate Objectives

Upon completion of this certificate, the student will be able to:

- Assess the laws of planetary motion and gravitation illustrating the effects that gravity has on two-body mechanics and analyze spacecraft maneuvers including transfer orbits and rendezvous.
- Distinguish organizations that are critical to the success of the technological advance of space infrastructure in the United States.
- Evaluate the political and commercial significance of major national and international space missions, projects, and operations.

Certificate Requirements (18 semester hours)

SPST500	Research Methods in Space Studies	3
SPST501	Introduction to Space Studies	3
SPST502	Introduction to Orbital Mechanics	3
SPST504	Remote Sensing Satellites	3
SPST621	Current and Emerging Space Powers	3
SPST623	National Space Organization	3
Total Semester Hours		**18**

Graduate Certificate - Sports Management

Program Description

The graduate certificate in Sports Management further develops your sports-related business knowledge and skills, including marketing, administration, legal issues, and the structure and functions of sports and fitness organizations. Settings for this industry include sports marketing agencies, intercollegiate athletics, professional sport franchises, recreational services, and health and fitness facilities. Courses in the certificate program allow you to study the nature and scope of the sports industry, unique aspects of sports management, and preparation for managing sport in the 21st century. This online certificate in sports management is designed for students who want to gain additional knowledge and skills without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Recognize the impact of laws, rules, and regulations on the sports industry.
- Distinguish and interpret how the sports industry is influenced by economic and financial pressures.
- Compare and contrast how marketing professionals use the media to capture the attention of the public in terms of increasing the visibility of sports in today’s marketplace.

Certificate Requirements (18 semester hours)

Graduate Certificate - Strategic Leadership

Program Description

The graduate certificate in Strategic Leadership looks at international contexts that shape the behavior of states and non-state actors, as well as the formulation of strategic developments and geopolitical concerns influencing military planning and execution. In this online program, you will explore the defense policies of nations dealing with Europe and Asia after the fall of the Soviet state. In addition, strategic leadership is examined in light of technological changes in the information age. This online certificate is intended for graduate students who want to expand their knowledge of strategic leadership without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Discern and assess the domestic and international contexts that shape the behavior of state and non-state actors, and affect the formulation of national security policies.
- Explain the history of strategic developments and geopolitical concerns that are influencing military planning and execution from the mid-20th century through the modern era.
- Compare and contrast the defense policies of nations in Europe and Asia that have had to deal with enormous changes following the East Bloc's collapse.
- Compose an analysis of the characteristics of leadership common to great military leaders and appraise the decision-making skills that are inbred and/or learned by the great leaders.
- Assess the conventional and unconventional joint warfare of the future in light of technological change and the information age, non-state military threats, rogue regimes, and clashes of culture between regions.

Certificate Requirements (18 semester hours)

IRLS600	Strategic Geography and Geopolitics	3
MILS510	Strategic Military Leadership	3
MILS512	Great Military Leaders	3
MILS514	The Making of Strategy	3
MILS620	Studies in Future War	3
NSEC610	National Security and Globalization	3
Total Semester Hours		**18**

Graduate Certificate - Terrorism Studies

Program Description

The graduate certificate in Terrorism Studies offers you a fundamental understanding of extremist groups, terrorism tactics, weapons of mass destruction, counterterrorism, and the effects of terrorism upon political and military leadership after 9/11. Terrorist incidents occur through various online and offline channels, making protecting people and organizational assets a top priority for many organizations. In order to mitigate terror escalations and prepare for emerging dangers, many professionals in the intelligence and public safety communities are expanding their knowledge and skills through education. This online certificate is designed to support these educational goals. This online certificate is intended for graduate students who want to expand their knowledge of terrorism without committing to a degree program.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Assess the terrorist threat to U.S. national security.
- Analyze the likelihood of future terrorist attacks.
- Assess the role of the U.S. intelligence community in addressing the terrorist threat.
- Demonstrate proficiency in the use of selected research methods and tools.

Certificate Requirements (18 semester hours)

Graduate Certificate - World War II Studies

Program Description

The graduate certificate in World War II Studies is designed for students interested in the strategy, tactics, leaders, and lessons learned from the blitzkrieg into France, the Balkans, and the Soviet Union; the campaigns in North Africa and Italy; and the fighting in the Pacific. This online program emphasis the politics, political leadership, and diplomacy that enabled the rise of the Axis and Allied powers before, during, and after World War II. Historians with specialized knowledge can be found as curators, guides, or consultants in tourism, museums, or other historical settings.

Many university faculty members teaching our history courses are published historians or military leaders who bring unique perspectives and relevant research into the classroom. You'll also connect and interact online with other students who share your enthusiasm for history.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Discern and critique the strategies, tactics, leaders and lessons learned during the fighting in the China-Burma-India Theater, New Guinea, the Solomon Islands, the Aleutians, and in the Philippines.
- Explain and assess the strategy, tactics and leadership from the blitzkriegs into France, the Balkans, and the Soviet Union to the campaigns in North Africa and Italy.
- Explain and assess the Allied victory in Europe to include the generalship and decisions concerning the amphibious invasions, airdrops, and the crossing of the Rhine.
- Distinguish the politics, political leadership, and diplomacy in Germany, Japan, and Italy that enabled the rise of the respective countries' Axis leadership that ruled during World War II.

- Distinguish the political leadership that defined the Allied powers of the United States, Great Britain, and Russia before, during, and after World War II.

Certificate Requirements (18 semester hours)

HIST560	World War II in Context	3
MILH510	Studies in U.S Military History	3
MILH551	World War II in Europe	3
MILH552	World War II in the Pacific	3
MILH555	World War II: Politics, Political Leadership and Diplomacy	3
MILH654	World War II and the Eastern Front	3
Total Semester Hours		**18**

Graduate Certificate - Organizational Crisis Management

Program Description

This graduate certificate covers crisis management concepts and activities from the organizational leader's perspective. Courses cover organizational change, risk management, organizational processes related to crisis management, and leadership roles in crisis management.

Certificate Objectives

Upon successful completion of this certificate, the student will be able to:

- Establish protocols for crisis management communication as it relates to the organization.
- Recommend organizational crisis planning strategies.
- Evaluate processes for continuity planning.
- Explain the impact on the organization of poor crisis planning.
- Describe the role of leadership in organizational crisis management.
- Identify strategies for leading change in organizations.

Certificate Requirements (12 semester hours)

MGMT604	Organizational Crisis Management	3
MGMT621	Leadership in a Time of Crisis	3
MGMT622	Risk Management for Leaders	3
MGMT623	Concepts and Processes of Organizational Crisis Management	3

Undergraduate NanoCerts®

Undergraduate NanoCerts® are focused programs which provide skills necessary for career or professional development and result in a marketable microcredential. Academic credits earned while obtaining an undergraduate NanoCert may be applied to a certificate, associate or bachelor's degree.* NanoCerts present you an opportunity to upskill while gaining nine academic credits toward your future pursuits.

Note: Students may not use military tuition assistance or federal student aid to pay for NanoCert courses. However, private financing, veterans' benefits, or employer tuition assistance may be used.

*Students are not permitted to enroll concurrently in multiple programs. For example, you may not be enrolled in both a NanoCert and a Bachelor's degree at the same time. However, if you previously completed the NanoCert in Cybersecurity/Cybercrime you may be able to apply those credits toward a Bachelor's in Cybersecurity.

- Counterintelligence
- Criminal Intelligence
- Cyber Intelligence
- Cybersecurity/Cybercrime
- Geospatial Intelligence
- Intelligence Analysis
- Introduction to IT Project Management
- Introduction to Mobile Computing
- Mobile Security
- Open-Source Intelligence (OSINT)
- School and Campus Security Fundamentals
- Terrorism
- U.S. Government Security Fundamentals

Undergraduate NanoCert® in Counterintelligence

Program Description

The undergraduate NanoCert in Counterintelligence is a three-course program involving the study of counterintelligence operations and counterintelligence analysis.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Compare and contrast applicable U.S. laws, directives, instructions, authorities and regulations that pertain to counterintelligence operations.
- Conduct a basic elicitation and prepare a foreign travel counterintelligence threat briefing and a post-travel debrief plan.
- Describe the role of counterintelligence analysis in the tactical military environment.
- Assess a current and specific foreign intelligence service threat and apply counterintelligence indicator analysis methods.
- Summarize the development of the National Counterintelligence Strategy of the United States.
- Illustrate the role of counterintelligence support to the United States Intelligence Community.

NanoCert Requirements (9 semester hours)

INTL408	Counterintelligence Operations	3
INTL409	Counterintelligence Analysis	3
INTL410	Counterintelligence	3
Total Semester Hours		**9**

Undergraduate NanoCert® in Criminal Intelligence

Program Description

The undergraduate NanoCert in Criminal Intelligence is a three-course program involving the study of criminal intelligence analysis, crime analysis, and law enforcement intelligence applications. It is designed for students who wish to advance their knowledge of criminal intelligence without committing to a full degree or certificate program.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Understand critical issues in the era of homeland security.
- Understand the criminal intelligence environment.
- Explain the commonly employed analytical techniques used by analysts in the investigation process.
- Explain the role of crime analysis in intelligence-led policing.
- List and identify types of materials that qualify as Open Source Intelligence such as social media, and discuss and identify constitutional or other concerns to law enforcement when using open source information.
- Define intelligence analysis uses against enterprise crime and terrorism and discuss and identify security, OPSEC, COMSEC, and counterintelligence issues in law enforcement.

NanoCert Requirements (9 semester hours)

INTL431	Criminal Intelligence Analysis	3
CMRJ335	Crime Analysis	3
CMRJ320	Law Enforcement Intelligence Applications	3
Total Semester Hours		**9**

Undergraduate NanoCert® in Cyber Intelligence

Program Description

The undergraduate NanoCert in Cyber Intelligence is a three-course program involving the study of signals intelligence and security, cyber warfare, and cybersecurity. It is designed for students who wish to advance their knowledge of cyber intelligence without committing to a full degree or certificate program.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Explain the role of communications security.
- Examine the role of SIGINT against current and future threats.
- Analyze cyberspace and cyber warfare and examine defensive strategies for securing networks.
- Evaluate cyber war capabilities of selected nations.
- Identify network and security concepts as they relate to cyber-security and categorize hacker techniques and motivations.
- Analyze defense and analysis techniques, malicious code, and iDefense.
- Discuss data security, digital forensics, and enterprise continuity as it relates to cyber-security.

NanoCert Requirements (9 semester hours)

INTL200	Introduction to Intelligence Studies	3
ISSC221	Intermediate Computer Systems	3
ISSC266	Cryptography Concepts	3
Total Semester Hours		**9**

Undergraduate NanoCert® in Cybersecurity/Cybercrime

Program Description

The undergraduate NanoCert in Cybersecurity/Cybercrime is a three-course program involving the study of computer forensics as well as digital forensics to investigate network intrusions and cybercrime.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Apply basic computer and digital forensic investigation techniques.
- Explain cybercrime and computer forensics.
- Extrapolate the process to prepare cybercrime investigation.

NanoCert Requirements (9 semester hours)

ISSC221	Intermediate Computer Systems	3
ISSC231	Networking Concepts	3
ISSC262	Red and Blue Team Security	3
Total Semester Hours		**9**

Undergraduate NanoCert® in Geospatial Intelligence

Program Description

The undergraduate NanoCert in Geospatial Intelligence is a three-course program involving the study of geospatial information systems, applied geospatial intelligence, and geographic information systems.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Define Geographic Information Systems (GIS) and identify GIS data portals on the internet.
- Describe spatial data and compare the different types of modeling in GIS and when they are appropriate for use in analysis.
- Evaluate how the application of geospatial products can improve future military, intelligence, homeland defense, and law enforcement operations.
- Apply geospatial intelligence analyses to regional or international challenges associated with homeland defense, weather disasters, law enforcement, or sources of conflict.
- Demonstrate the skills to lay out, save, and export geospatial maps using the Toolwire virtual lab using the Esri Geographic Information Systems (ArcMap) software Version 10.1.

- Implement basic ArcGIS® functions relating to databases, layers, labels, and features.

ArcGIS® is a registered trademark of the Environmental Systems Research Institute, Inc.

NanoCert Requirements (9 semester hours)

GEOG200	Fundamentals of Geographic Information Systems I	3
INTL419	Applied Geospatial Intelligence	3
INTL432	Geographic Information Systems I	3
Total Semester Hours		**9**

Undergraduate NanoCert® in Intelligence Analysis

Program Description

The undergraduate NanoCert in Intelligence Analysis is a three-course program involving the study of how critical thinking relates to intelligence analysis, structural analysis, and threat analysis. It is designed for students who wish to advance their knowledge of intelligence analysis.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Distinguish the different techniques analysts can employ in order to interpret significant events from multiple perspectives.
- Analyze the causes and impact of an analytical failure.
- Apply academic and intelligence research processes.
- Evaluate the analyst/policymaker relationship with a focus on the U.S. National Intelligence Estimates.
- Describe the difference between traditional and nontraditional threats to states.
- Analyze a nontraditional threat and ways to counter that threat.

NanoCert Requirements (9 semester hours)

INTL401	Critical Analysis	3
INTL402	Intelligence Analysis	3
INTL434	Threat Analysis	3
Total Semester Hours		**9**

Undergraduate NanoCert® in Introduction to IT Project Management

Program Description

The Introduction to IT Project Management is an undergraduate NanoCert® consisting of three courses that align with the existing Bachelor of Science in Information Technology. The program will introduce you to basic program management skills; provide you introductory understanding of program management strategies and tools; and explore concepts, principles, theories, guidelines, and techniques associated with applying project management to the contracting profession or non-contracting acquisition process.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Identify the need for project management
- Explain the use of project management tools in an organization
- Apply project management in the contracting profession or non-contracting acquisition process

NanoCert Requirements (9 semester hours)

ITMG121	Fundamentals of IT Project Management	3
ITMG223	IT Project Management Using Microsoft Project®	3
DEFM200	Fundamentals of Contracting and Acquisition	3
Total Semester Hours		**9**

Undergraduate NanoCert® in Introduction to Mobile Computing

Program Description

Introduction to Mobile Computing consists of three courses that align with the existing Bachelor of Science in Information Technology degree. The program will introduce the student to basic programming skills; provide introductory understanding of mobile application design and development; and explore concepts, principles, theories, guidelines, and techniques associated with applying mobile computing to ever-changing technologies.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Apply programming skills
- Explain mobile application design and development and their significance
- Identify guidelines and techniques associated mobile application design, development, and deployment

NanoCert Requirements (9 semester hours)

ENTD150	Beginning Programming	3
ENTD220	Introduction to Python®	3
ENTD213	Introduction to Mobile Application Design and Development	3
Total Semester Hours		**9**

Undergraduate NanoCert® in Mobile Security

Program Description

The undergraduate NanoCert® in Mobile Security is a three-course program that aligns with the existing Bachelor of Science in Cybersecurity degree. The program will provide the student with basic knowledge of virtualization and security in a cloud environment.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Describe the key principles of cloud computing along with the security and privacy involved with this emerging technology.
- Use the necessary tools to analyze an organization’s assets.
- Determine if the cloud security and privacy implications are justifiable.
- Conduct a proper audit to allow for organizational operational integrity and the protection of data in the cloud environment.

NanoCert Requirements (9 semester hours)

ISSC412	Mobile Application Security	3
ISSC415	Mobile Device Security	3
ISSC421	Computer and Network Security	3
Total Semester Hours		**9**

Undergraduate NanoCert® in Open-Source Intelligence (OSINT)

Program Description

The undergraduate NanoCert in Open-Source Intelligence is a three-course program involving the study of intelligence analysis, denial and deception, and open source collaboration.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Apply academic and intelligence research processes.
- Examine content analysis, comparative analysis procedures and rational choice theory.
- Comprehend basic theories that explain how and why denial and deception can be used to shape perception.
- Describe the principles that determine the success of denial and deception efforts.
- Diagnose the importance of applying objective, impartial and consistent approaches and methodologies to the handling of OSINT theory and practice.
- Compare and contrast multiple facets of different search engines while formulating tailored semantic search terms and Boolean logic.
- Construct OSINT intelligence products with an awareness of potential ambiguities perceived by policymakers.

NanoCert Requirements (9 semester hours)

INTL402	Intelligence Analysis	3
INTL413	Denial and Deception	3
INTL422	Open Source Collection	3
Total Semester Hours		**9**

Undergraduate NanoCert® in School and Campus Security Fundamentals

Program Description

The University’s Security Fundamentals NanoCert® programs provide a broad understanding of major security threats affecting government, public, and private organizations and entities.

This undergraduate NanoCert may be of interest to those who wish to pursue a future undergraduate degree. This online program’s coursework explores:

- School and campus security
- Security administration
- Security vulnerabilities
- Physical security

This NanoCert also examines planning and decision-making, budgeting and scheduling, and Crime Prevention Through Environmental Design (CPTED).

The University's security management NanoCerts provide government and security professionals and those in the military with an opportunity to advance their knowledge of measures to protect public and private safety.

NOTE: Completion of this program does not award any professional certifications but can be applied toward undergraduate coursework ultimately leading to a bachelor's degree.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Identify requirements of administering an effective security organization.
- Recognize specific traits, warning signs, responses, and dangers of specific strains of campus violence.
- Demonstrate knowledge of the influence of physical design, risk assessment and management, designing security with architects, and security analysis.

NanoCert Requirements (9 semester hours)

SCMT379	School and Campus Security	3
SCMT390	Security Administration	3
SCMT397	Physical Security	3
Total Semester Hours		**9**

Undergraduate NanoCert® in Terrorism

Program Description

The undergraduate NanoCert in Terrorism is a three-course program involving the study of terrorism and counterterrorism, terrorism and U.S. national security, and the forecasting of terrorism.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Interpret a broad history of terrorism and counterterrorism practices.
- Analyze the current issues affecting U.S. counterterrorism and the different approaches to counter terrorism from diplomatic, intelligence, military, law enforcement, economic/financial, and informational standpoints.
- Compare objectives, patterns, and actors of terrorism before and after 2001.
- Evaluate the character and influence of terrorist groups, their goals, structure, logistics, and operations.
- Describe trends in the use of weapons of mass destruction by terrorists.
- Apply a terrorist forecasting methodology to a hypothetical attack scenario.

NanoCert Requirements (9 semester hours)

INTL450	Terrorism and Counterterrorism	3
INTL451	Terrorism and U.S. National Security	3
INTL454	Forecasting Terrorism	3
Total Semester Hours		**9**

Undergraduate NanoCert® in U.S. Government Security Fundamentals

Program Description

The University's Security Management NanoCert® programs provide a broad understanding of major security threats affecting government, public, and private organizations and entities.

This NanoCert may be of interest to those who wish to pursue a future undergraduate degree.

The University's Security Management NanoCerts provide government and security professionals and those in the military with an opportunity to advance their knowledge of measures to protect public and private safety.

NOTE: Completion of this program does not award any professional certifications but can be applied toward undergraduate coursework ultimately leading to a bachelor's degree.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Identify requirements for managing security in a wide range of U.S. government-sponsored facilities.
- Interpret the importance of Critical Infrastructure Protection to the national security of the United States.
- Examine the personnel security clearance process as it relates to access to classified information.

NanoCert Requirements (9 semester hours)

SCMT301	Foundations of U.S. Government Security	3
SCMT302	Protecting U.S. Government Facilities	3
SCMT303	U. S. Government Personnel Security	3
Total Semester Hours		**9**

Graduate NanoCerts®

Graduate NanoCerts are short programs focused on upskilling for professional development goals microcredential. Academic credits earned while obtaining a graduate NanoCert may be applied to a Master's degree.* NanoCerts result in a marketable microcredential, allowing you to level-up or shift your professional focus quickly.

Note: Students may not use military tuition assistance or federal student aid to pay for NanoCert courses. However, private financing, veterans' benefits, or employer tuition assistance may be used.

*Students are not permitted to enroll concurrently in multiple programs. For example, you may not be enrolled in both a NanoCert and a Master's degree at the same time. However if you previously completed the NanoCert in Entrepreneurship you may be able to apply those credits toward a Master of Arts in Entrepreneurship.

- Advanced Cybersecurity/Cybercrime
- Counterintelligence
- Criminal Intelligence
- Cyber Intelligence
- Geospatial Intelligence
- Intelligence Analysis
- Open-Source Intelligence (OSINT)
- Public Administration and Contemporary Security Management
- Security Organizational Leadership
- Teaching Adult Learners Online
- Terrorism

Graduate NanoCert® in Advanced Cybersecurity/Cybercrime

Program Description

The graduate NanoCert in Advanced Cybersecurity/Cybercrime is a three-course program including the study of advanced cybercrime analysis, intrusion detection and incident handling, and advanced digital forensics.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Recognize the dimensions of criminal activity in the world of cyber security.
- Apply current laws and legal actions to analysis of criminal activity.
- Differentiate the rules of evidence such as chain of custody, preservation of evidence, and procedural requirements.
- Evaluate common methods of detection & prevention.
- Analyze the legal issues, ethical challenges, and societal impacts of digital forensic.

Programmatic Admission Requirements

For this program, you must provide an official transcript of your previously completed bachelor's or master's degree and have ONE of the following:

- Associate or bachelor's degree in information technology or a related field (ex: computer science, information systems, database development, etc.)
- 2 years of work experience in the specific sub-field for this degree
- Completion of one of our undergraduate IT certificates
- Completion of 6 credits in IT-related courses
- Completion of an IT-related minor or concentration during your undergraduate program
- Certifications in at least one of the below, should be active and earned since 2010:
  1. CompTIA Security+®
  2. CompTIA Network+®
  3. CompTIA A+®
  4. CompTIA Project+®
  5. CISSP® certification
  6. SSCP®
  7. EC-Council Ethical Hacking
  8. Cisco CCNA® Security

9. Project Management Professional certification from the Project Management Institute

CompTIA Security+®, CompTIA Network+®, CompTIA A+®, and CompTIA Project+® are all registered trademarks of the Computer Technology Industry Association, Inc.

CISSP® and SSCP® are registered trademarks of International Information Systems Security Certification Consortium, Inc.

CCNA® is a registered trademark of Cisco Technology, Inc.

Notes:

- If the IT-specific requirements are not noted in the official bachelor's or master's transcript, you must provide official copies of your undergraduate transcripts that show the appropriate coursework.
- The verification of the 2 years' work experience needs to be sent to the university via formal resume/CV.
- Preadmission courses must have been completed within the last 5 years and at the undergraduate level must be graded C or better; B or better at the graduate level.

Please visit our APU graduate admission page for more information on institutional admission requirements.

Need help?

If you have questions regarding a program's admission requirements, please contact the Admissions Team at 877-379-9213 or info@apus.edu.

NanoCert Requirements (9 semester hours)

ISSC630	Advanced Cybercrime Analysis	3
ISSC642	Intrusion Detection and Incident Handling	3
ISSC650	Advanced Digital Forensics	3
Total Semester Hours		**9**

Graduate NanoCert® in Counterintelligence

Program Description

The graduate NanoCert in Counterintelligence is a three-course program including the study of counterintelligence; deception, propaganda, and disinformation; and human intelligence. It is designed for students who wish to heighten their knowledge of counterintelligence.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Assess the role of counterintelligence within U.S. national security strategy.
- Produce an advanced assessment of the structure, functions, and operations in U.S. counterintelligence.
- Construct mission target analysis procedures using proper operational approach techniques, development, and recruitment activities at the individual and operational level.
- Evaluate the use of influence/deception techniques in historical cases.
- Understand and recognize psychological theories underpinning informational/deceptive practices.

NanoCert Requirements (9 semester hours)

INTL610	Counterintelligence	3
INTL623	Human Intelligence (HUMINT)	3
INTL653	Deception, Propaganda and Disinformation	3
Total Semester Hours		**9**

Graduate NanoCert® in Criminal Intelligence

Program Description

The graduate NanoCert in Criminal Intelligence is a three-course program designed for learners focused on criminal intelligence analysis, transnational crime and narcotics, and organized crime. It is designed for students who wish to enhance their criminal intelligence knowledge.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Analyze the varieties and characteristics of transnational organized crime.
- Evaluate the major organized crime statutes, such as the Harrison Act and the Racketeer Influenced and Corrupt Organizations Act (RICO), and their role in fighting organized crime.
- Analyze the criminal intelligence environment.
- Assess how information is transformed into useable intelligence.
- Examine the connection between transnational crime, narcotics, corruption, and terrorism as a national security policy concern.

NanoCert Requirements (9 semester hours)

INTL631	Criminal Intelligence Analysis	3
INTL646	Transnational Crime and Narcotics	3
CMRJ524	Organized Crime	3
Total Semester Hours		**9**

Graduate NanoCert® in Cyber Intelligence

Program Description

The graduate NanoCert in Cyber Intelligence is a three-course program including the study of cyber intelligence, case studies in foreign cyber threats, and cyber and the intelligence cycle. It is designed for students who wish to heighten their knowledge of cyber intelligence.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Analyze the challenges that rapidly advancing technologies and actors create within the cyber domain.
- Assess the legal and policy challenges in the conduct of cyber intelligence operations.
- Examine the history of cyber intelligence operations and assess the attributes of computer network exploitation, defense, and attack.
- Evaluate the intelligence challenge of attribution in cyber-attacks.

- Evaluate high profile cybersecurity case studies.
- Examine current cyberspace policy issues and challenges.

NanoCert Requirements (9 semester hours)

INTL644	Cyber and the Intelligence Cycle	3
INTL647	Cyber Intelligence	3
INTL649	Case Studies in Foreign Cyber Threats	3
Total Semester Hours		**9**

Graduate NanoCert® in Geospatial Intelligence

Program Description

The graduate NanoCert in Geospatial Intelligence is a three-course program involving the study of advanced geospatial intelligence, intelligence analysis, and indications and warnings. It is designed for those wishing to gain targeted knowledge in geospatial intelligence.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Evaluate the analytic tools, concerns, critical thinking, and problems involved when performing intelligence analysis at the national and international level both in and outside the United States.
- Analyze complex intelligence problems, apply analytic tools, and suggest possible problems and solutions.
- Assess the means by which multiple collection platforms and “big data” are leveraged to produce finished geospatial intelligence.
- Integrate new geospatial technologies from a wide variety of open source applications.
- Evaluate the strategic warning environment and the role of U.S. intelligence.
- Analyze surprise, warning, and intelligence reactions.

NanoCert Requirements (9 semester hours)

INTL508	Intelligence Analysis	3
INTL627	Advanced Geospatial Intelligence	3
INTL635	Indications and Warnings	3
Total Semester Hours		**9**

Graduate NanoCert® in Intelligence Analysis

Program Description

The graduate NanoCert in Intelligence Analysis is a three-course program involving the study of the tradecraft, techniques, and challenges of intelligence analysis. The program is designed for those interested in advancing their knowledge of the discipline.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Evaluate the analytic tools, concerns, critical thinking and problems involved when performing intelligence analysis at the national and international level both in and outside the United States.

- Analyze complex intelligence problems, apply analytic tools, and suggest possible solutions.
- Examine the role of U.S. intelligence in indications and warnings.
- Analyze surprise, warning, and intelligence reactions.
- Apply political psychological concepts and methodologies to study political leaders.
- Differentiate the various types of personality-based measures used to study political leaders.

NanoCert Requirements (9 semester hours)

INTL508	Intelligence Analysis	3
INTL635	Indications and Warnings	3
INTL637	Intelligence Profiling	3
Total Semester Hours		**9**

Graduate NanoCert® in Open-Source Intelligence (OSINT)

Program Description

The graduate NanoCert in Open-Source Intelligence is a three-course program involving the study of collection; open-source intelligence; and deception, propaganda, and disinformation. It is designed for students who wish to advance their knowledge of open-source intelligence without committing to a degree or certificate program.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Assess the implications of advances and modes in intelligence collection technology for the 21st century.
- Understand how intelligence collection priorities are established.
- Analyze the nature and functions of OSINT, its strengths and weaknesses, and the growing role it plays in the intelligence process.
- Demonstrate the use of psychological tools in informational/deceptive practices.
- Deconstruct the concept of deception and its applications in different contexts.
- Evaluate the use of influence/deception techniques in historical cases.

NanoCert Requirements (9 semester hours)

INTL509	Intelligence Collection	3
INTL607	Open Source Intelligence (OSINT)	3
INTL653	Deception, Propaganda and Disinformation	3
Total Semester Hours		**9**

Graduate NanoCert® in Public Administration and Contemporary Security Management

Program Description

The University’s Security Management NanoCert® programs provide a broad understanding of major security threats affecting government, public, and private organizations and entities.

This graduate NanoCert may be of interest to those who wish to pursue a future graduate degree.

The University's Security Management NanoCerts provide government and security professionals and those in the military with an opportunity to advance their knowledge of measures to protect public and private safety.

NOTE: Completion of this program does not award any professional certifications but can be applied toward graduate coursework ultimately leading to a master's degree.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Evaluate the role of the bureaucracy in implementing, interpreting, establishing, evaluating, and enforcing public policy at the various levels of state and local government.
- Appraise the current trends in government ethics and ethical codes/regulations to include distribution methods and enforcement.
- Evaluate the professional standards and ethical issues involved in public governance.
- Analyze current strategic planning in security management.
- Generate strategies for ensuring compliance with security regulatory requirements.

NanoCert Requirements (9 semester hours)

PADM520	Public Administration in Society	3
PADM505	Ethics in Government	3
SCMT509	Contemporary Issues in Security Management	3
Total Semester Hours		**9**

Graduate NanoCert® in Security Organizational Leadership

Program Description

The University's Security Management NanoCert® programs provide a broad understanding of major security threats affecting government, public, and private organizations and entities.

This graduate NanoCert may be of interest to those who wish to pursue a future graduate degree.

The University's Security Management NanoCerts provide government and security professionals and those in the military with an opportunity to advance their knowledge of measures to protect public and private safety.

NOTE: Completion of this program does not award any professional certifications but can be applied toward graduate coursework ultimately leading to a master's degree.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Compare and contrast the functions of a manager and a leader.
- Evaluate a solution that requires use of cross-functional collaboration or crisis leadership.
- Synthesize an ability to use proven methods, concepts, and theories to develop unique solutions to problems associated with rapidly changing social, economic, and technological situations.
- Examine new paradigms of the art of management and the security director/Chief Security Officer (CSO).

NanoCert Requirements (9 semester hours)

SCMT511	Chief Security Officer Fundamentals	3
SCMT510	Security Management Ethics	3
SCMT553	Security Program Administration	3
Total Semester Hours		**9**

Graduate NanoCert® in Teaching Adult Learners Online

Program Description

This stackable NanoCert is intended for professionals who want to teach postsecondary and other adult learners in a variety of settings such as corporations, government organizations, healthcare agencies, community colleges, and other education contexts. Courses prepare trainers and educators to integrate digital tools/technology in their teaching. Topics include pedagogy, andragogy, characteristics of adult learners, integrating technology into instruction, fair use, copyright, legal and ethical issues associated with online learning, designing instructional activities, and more.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Apply various tools to facilitate effective online/hybrid learning
- Evaluate ethical and legal issues related to online learning
- Create instructional activities that support the different needs of online and other types of learners

NanoCert Requirements (9 semester hours)

EDUC621	Online Learning for the Adult and the K-16 Learner	3
EDUC622	Ethics and Legal Issues in Online Learning	3
EDUC625	Instructional Design in Online Learning	3
Total Semester Hours		**9**

Graduate NanoCert® in Terrorism

Program Description

The graduate NanoCert in Terrorism is a three-course program involving the study of counterterrorism, assessing the past to forecast the future of terrorism, and domestic terrorism and extremist groups. It is designed for students who wish to advance their knowledge without committing to a degree or certificate program.

NanoCert Objectives

After successfully completing this NanoCert, the student will be able to:

- Evaluate the variables and strategies of terrorism.
- Assess the methodology of combatting terrorism against international and U.S. policy objectives.
- Examine the evolution and impacts of terrorism over the past two centuries. Analyze the likelihood of future terrorist attacks.

- Analyze domestic terrorism and extremism in the United States. Differentiate domestic terrorists/extremists, domestic terrorist and extremist organizations, and domestic terrorist and extremist events since the end of World War II.
- Evaluate past and present attempts to counter domestic terrorism and extremism in the United States.

NanoCert Requirements (9 semester hours)

INTL650	Counterterrorism	3
INTL652	Terrorism: Assessing the Past to Forecast the Future	3
HLSS523	Domestic Terrorism and Extremist Groups	3
Total Semester Hours		**9**

Undergraduate Course Descriptions

Accounting (ACCT)

ACCT100 Accounting I (3 semester hours)

Introduction to the purposes of financial accounting statements and the recognition, measurement, and disclosure concepts and methods underlying financial statements. The course focus is on using and interpreting financial statements and on understanding the impact of transactions on assets, liabilities, revenues, and expenses.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT101 Accounting II (3 semester hours)

A continuation of Accounting I, this course includes study of managerial concepts, analysis of financial statements, internal controls, and contemporary accounting standards, practices, and issues. Students must have access to Microsoft Word and Microsoft Excel software. (Prerequisite: **ACCT100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT105 Accounting for Non Accounting Majors (3 semester hours)

This course is an overview of accounting concepts used by managers in a business environment intended for non-accounting majors with no accounting background. Topics include accounting concepts, users of accounting information, elements and purpose of financial statements, accrual accounting, internal control and basic financial analysis. Students must have access to Microsoft Word® and Microsoft Excel® software.

Microsoft Word® Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT202 Introduction to Payroll (3 semester hours)

This course provides a foundation in payroll accounting, administration, and management. Learn to complete payroll calculations for earnings, taxes, and withholdings; maintain personnel records; and analyze payroll transactions. This course is intended for accounting students and professionals with a need to understand payroll basics. (Prerequisite: **ACCT100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT300 Financial Accounting (3 semester hours)

As study of financial accounting to expose the student to a wide range of accounting topics. Topics include generally accepted accounting principles, assets and liabilities, debits and credits, accrual and cash based accounting, merchandising and inventory, the accounting cycle, internal controls, capital stock, income reporting, liabilities, cash flow, budgeting, planning and control. Students must have access to Microsoft Word® and Microsoft Excel® software. (Prerequisite: **ACCT100**)

Microsoft Word® Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT301 Intermediate Accounting I (3 semester hours)

This course examines the accounting process including the adoption of the International Accounting standards (IAS) and reporting of financial reporting (e.g., balance sheet, income statement, and statement of cash flows). Students must have access to Microsoft Word® and Microsoft Excel® software. (Prerequisite: **ACCT101**)

Microsoft Word® Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT302 Intermediate Accounting II (3 semester hours)

Students will study accounting theory and practices associated with corporate accounting issues of pensions, leases, bonds, and investments and earnings per share. Students will also study the effects of time value of money and how it applies to business decisions. An in-depth analysis of liabilities, stockholder's equity, and accounting changes and errors analysis are also reviewed in this course. Students must have access to Microsoft Word® and Microsoft Excel® software. (Prerequisite: **ACCT301**)

Microsoft Word® Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT303 Intermediate Accounting III (3 semester hours)

A survey of the financial reporting process, a detailed study of financial statements, and an analysis of generally accepted accounting principles. Students must have access to Microsoft Word® and Microsoft Excel® software. (Prerequisite: **ACCT302**)

Microsoft Word® Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT305 Accounting Information Systems (3 semester hours)

This course provides students with an in-depth understanding of accounting information systems (AIS) and their role in modern business operations. Topics include internal control, business information systems, data management, and the integration of technology into the accounting cycle. Students develop specialized knowledge in designing, implementing, and auditing accounting systems, with emphasis on applying these skills in professional practice. (Prerequisite: **ACCT101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT400 Auditing (3 semester hours)

This course examines the role of the auditor in a global business environment. The course covers the scope of auditing, the rules governing the professional ethics of the Certified Public Accountant, the auditing process, and the legal liabilities and responsibilities of an auditor. Students must have access to Microsoft Word® and Microsoft Excel® software. (Prerequisite: **ACCT101**)

Microsoft Word® Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT401 Cost Accounting (3 semester hours)

Cost accounting identifies the essential data to managers regarding planning and controlling, costing products and services, and customers. The student studies the basic concepts, analyses, uses, and procedures related to types of costs and costing systems. This course will concentrate on examination of the concepts, theories, principles, and practices of cost accounting. Students will develop quantitative and qualitative methods for analyzing raw data that support the business decision-making process and inventory costing. (Prerequisites: **ACCT101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT406 Managerial/Cost Accounting (3 semester hours)

Students will analyze how internal accounting information can be used to support management in planning and controlling business activities.

Topics covered range from (analysis of) financial statement analysis, job order cost systems, cost-volume-profit analysis, budgeting, performance evaluation using standard costs, differential analysis, and product pricing. Students must have access to Microsoft Word® and Microsoft Excel® software. (Prerequisite: **ACCT101**)

Microsoft Word® Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT410 Governmental and Not-for-Profit Accounting (3 semester hours)

This course emphasizes the accounting principles and reporting requirements for government units and not-for-profit entities. Topics include the accounting cycle, budgeting and fund accounting, and accounting for state and local governments, colleges and universities, and for not-for-profit organizations. Students must have access to Microsoft Word® and Microsoft Excel® software. (Prerequisite: **ACCT302**)
Microsoft Word® and Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT415 Law for Accountants (3 semester hours)

To develop a sound understanding of the nature of law and an appreciation of the role of law within which an Accountant operates. A study of an area of law of particular importance to business, including contracts, sales, negotiable instruments, secured transactions, agency, partnerships, and corporations.Students must have access to Microsoft Word® and Microsoft Excel® software. (Prerequisite: **ACCT101**)

Microsoft Word® Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT420 Individual Federal Taxes (3 semester hours)

Students will be introduced to procedures for analyzing tax information on an individual federal tax basis. The following material will be covered in this course: analysis of gross income, income exclusions, adjusted gross income, deductions, exemptions, and credits. Students must have access to Microsoft Word® and Microsoft Excel® software. (Prerequisite: **ACCT101**)

Microsoft Word® Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT460 Auditing & Assurance Services (3 semester hours)

This course examines the role of the auditor in a global business environment. The course covers the scope of auditing, the rules governing the professional ethics of the Certified Public Accountant, the auditing process, and the legal liabilities and responsibilities of an auditor. (Prerequisite: **ACCT303**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT499 Senior Seminar in Accounting (3 semester hours)

The Capstone course is a senior level course designed to allow the student to review, analyze, and integrate the work the student has completed toward a degree in Accounting. The students will examine a number of real-world cases that relate to auditing and accounting issues, and students will prepare an approved academic project or paper that demonstrates mastery of their program of study in a meaningful culmination of their learning and to assess their level of mastery of the stated outcomes of their degree requirements. Students must complete ALL Core and Major courses prior to this course. Students must have access to Microsoft Word® and Microsoft Excel® software. (Prerequisite: Completion of a minimum of 105 hours towards your program)

Microsoft Word® Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Artificial Intelligence (ARIN)

ARIN100 Fundamentals of Artificial Intelligence (3 semester hours)

This introductory course is designed for first-year undergraduates with no prerequisites. Students will explore the fundamentals of artificial intelligence through its core concepts and applications of AI, with emphasis on quantitative reasoning and logical analysis. Interactive lectures, hands-on assignments, and collaborative discussions provide learners with both knowledge and practical skills. Key AI concepts include machine learning, neural networks, deep learning, and natural language processing, along with the role of AI in business, important ethical considerations, and its broader impact on society. Students gain applied experience using industry-standard tools and models and build a strong understanding of how AI systems work while preparing them for future study in this dynamic field.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARIN102 Prompt Engineering (3 semester hours)

This course introduces students to prompt engineering, the art of designing and refining effective inputs for generative AI and large language models. Students explore prompt engineering techniques such as zero shot prompting, few shot prompting, chain of thought prompting, and tree of thought prompting to support complex tasks and improve desired output quality.

The course also examines how user prompts, precise instructions, and additional context influence AI model behavior and model's responses across different prompt engineering use cases. Students work with AI tools and generative AI models to practice optimizing prompts that produce accurate responses, relevant output, and clearly defined desired outcomes.

Hands-on exercises and projects provide practical experience in crafting effective prompts, applying prompt engineering best practices, and analyzing intermediate steps in complex reasoning. By course end, students develop core prompt engineering skills and critical thinking abilities needed to use artificial intelligence systems responsibly and effectively across diverse applications. (Prerequisite: **ARIN100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARIN202 AI Software Foundations (3 semester hours)

This software principles course introduces core concepts of software development, focusing on computer programs, software systems, and the relationship between application software, system software, and the operating system within a computer system. Students learn how programming languages, source code, machine code, and algorithms are used to create a software program that performs specific tasks on modern computer hardware.

The course covers essential topics such as data structures, software design, and software quality, while emphasizing how developers write, test, and implement code to meet user requirements. Students also examine software licenses, intellectual property rights, and common software development practices used across different types of software, including cloud-based software systems and platform-level services.

By building a strong foundation in computer science principles, students develop the understanding needed to design efficient programs and support reliable software functionality, preparing programmers and future developers for advanced applications in AI and modern technology environments.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARIN210 Machine Learning in Business (3 semester hours)

This course provides an introduction to machine learning concepts and techniques with a focus on their application in business environments. Students will learn how to apply machine learning algorithms to real-world business problems, analyze data effectively, and interpret model outcomes to support strategic decision-making.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARIN211 User Experience Design (3 semester hours)

This course explores the principles and practices of UX design within the context of artificial intelligence (AI) applications. Students will learn how to design intuitive, accessible, and ethical AI-powered products that enhance user interaction with intelligent systems. The course emphasizes user-centered UX design process methodologies tailored to AI systems, including chatbots, recommendation systems, and autonomous interfaces. Topics include user research, usability and user testing, ethical considerations, and strategies for integrating AI tools into the design workflow while maintaining human oversight. By combining UX research and design principles with practical applications of relevant AI tools, students will develop the ability to balance human creativity with technology to build trust, ensure inclusivity, and design AI for UX responsibly.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARIN220 Artificial Intelligence and Software Development (3 semester hours)

This AI coding course explores how artificial intelligence and generative AI tools can be used to enhance coding and software development productivity. Students learn to leverage AI tools, including large language models, to support computer programming tasks such as generate code, debugging, and testing, strengthening core coding skills and applied problem solving skills.

The course covers AI concepts and practical AI solutions such as AI-powered code assistants, automated bug detection to fix bugs and code errors, and conversational AI workflows. Emphasis is placed on hands on projects and hands on experience that demonstrate real world applications of AI and machine learning in modern development environments.

Through applied exercises and hands on practice, students gain a foundational understanding of how machine learning, natural language processing, and responsible artificial intelligence technology can be integrated into development workflows. The course prepares aspiring AI engineer and software development professionals to leverage AI effectively while considering ethical considerations and responsible AI use in practical AI applications.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARIN305 Artificial Intelligence Models & Data Resources (3 semester hours)

This AI evals course covers the role of data in refining and evaluating AI systems, emphasizing AI evals, evaluation metrics, and evaluation techniques used to assess generative AI and modern AI applications. Students explore how evaluation criteria, objective criteria, and clear metrics are used to measure AI outputs and model performance, particularly in complex AI systems that differ from traditional software testing.

The course examines evaluating AI systems through a systematic approach, including llm evaluation, evaluating AI agents, and the use of representative data and ground truth. Topics include error analysis, identifying failure modes, handling edge cases, and understanding how evaluation supports continuous improvement and user trust.

Through hands-on activities and real world examples, students develop practical skills to implement effective AI evals and support continuous evaluation of evolving AI products. The course prepares data scientists and technical practitioners to apply AI evaluation methods aligned with business requirements and reliable system performance. (Prerequisites: **ARIN102** and **CSCI360**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARIN350 Artificial Intelligence Applications (3 semester hours)

This AI app development course covers the architecture and development of AI applications. Students explore components such as the underlying large language models, the AI model, orchestration layers, vector databases, and the user interface layer that together form an AI system. Hands-on activities include implementing orchestration frameworks, using prompt templates, and applying prompt engineering techniques to support effective AI integration.

By synthesizing prior knowledge with practical techniques, students gain the skills to developing AI applications and build a functional app for real world scenarios. The course prepares AI developers and software developers to build AI powered applications using modern AI tools, software development practices, and artificial intelligence capabilities. (Prerequisite: **ARIN305**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARIN360 Collaborative Tools (3 semester hours)

This course provides students with practical skills to streamline teamwork in AI development through a beginner friendly introduction to version control, version control systems, and git version control. Students learn git and github as essential tools for managing a repository, creating branches, tracking changes, and collaborating effectively on a shared repo in a central place. Through hands-on examples and guided projects, learners practice making commits, reviewing work, and learning how to resolve conflicts that arise during collaborating on coding tasks. The course also introduces best practices for managing files, addressing bugs, and contributing to open-source communities. By the end of the course, students understand core basics of collaborative development and build the ability to enhance productivity and teamwork in professional AI and software development environments. (Prerequisite: **ARIN305**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARIN410 Artificial Intelligence Impacts, Risks & Ethics (3 semester hours)

This AI ethics course examines the societal and economic impacts of artificial intelligence, focusing on the ethical challenges, ethical implications, and ethical issues associated with modern AI systems and artificial intelligence technologies. Students explore AI risks such as data privacy, security risks, AI biases, and unfair outcomes, alongside workforce disruption and social implications. The course introduces key ethical frameworks, ethical considerations, and ethical practices used to support responsible AI, trustworthy AI, and effective AI governance across the AI lifecycle. Topics include machine learning, generative AI, training data, data governance, AI regulation, and the role of government regulation and the private sector in managing AI development. Through applied discussions and case studies, students learn to address issues, evaluate potential risks, and promote AI ethics that respect human rights while supporting innovation and sound decision making. (Prerequisite: **ARIN100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARIN450 Artificial Intelligence Advance Topics (3 semester hours)

This course explores advanced topics in artificial intelligence, focusing on advanced topics shaping the future of AI systems and artificial intelligence systems. Students examine scaling laws, computational power, and the role of inference-time compute in large language models, deep learning, and neural networks. Additional topics in artificial intelligence include reinforcement learning, edge computing, large datasets, expanding context windows, and emerging natural language processing capabilities. Through theoretical analysis and applied exploration, students gain knowledge of state of the art AI techniques, machine learning algorithms, and advanced applications across various industries and business applications. This advanced topics in artificial course equips learners with the tools, techniques, and insight needed to stay ahead of rapidly evolving emerging technologies in artificial intelligence. (Prerequisite: **ARIN350**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARIN499 Artificial Intelligence Capstone (3 semester hours)

This artificial intelligence capstone course provides a culminating capstone experience in which students apply foundational concepts, practical skills, and technical expertise developed throughout the program. In this capstone project, learners develop, create, and evaluate a comprehensive AI solution addressing real world challenges and real world applications. Projects may incorporate machine learning, deep learning, natural language processing, computer vision, and modern ai tools, with emphasis on hands on experience, deployment considerations, and professional communication. Students work as a team to manage a complete project lifecycle, demonstrating ability, analysis, and evaluation skills. The course concludes with a formal presentation and assessment, allowing learners to showcase a professional portfolio that supports career readiness and reflects applied artificial intelligence knowledge.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Business (ANLY)

ANLY460 Applied Analytics I (3 semester hours)

This course is designed to provide an understanding of the basics of applied analytics based on principals starting from descriptive statistics, probability, distributions, and hypothesis testing; where sums, counts, frequencies, measures, and probabilities of collected data and occurrences, past or current, are used effectively to support reactive or corrective decisions either on real time or for the future. This course covers using Microsoft Excel® add- in for data analysis as a tool to create, manipulate, and report descriptive analytics outcomes for decision-making.

Microsoft Excel® is a registered trademark of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY461 Applied Analytics II (3 semester hours)

This course further integrates applied business analytics. It continues the examination of the role of statistics and analytics techniques in the interpretation and findings of nonparametric test of hypothesis, analysis of variance ANOVA, correlation, and regression analysis. After completing this course, students are expected to understand diagnosing factors affecting a problem, variables involved, relationships among business variables, and how to generate a prediction model. (Prerequisite: **ANLY460**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY462 Applied Analytics III (3 semester hours)

This course covers deeper elements of applied analytics techniques used to identify sources of variation causing business problems, how to design experiments to explore interactions, as well as techniques used to model relationship of business variables as well as quality control. It additionally includes applied tools to predict the future using time series analysis and seasonal forecasting. It integrates statistical analysis and visualization with applied problems. PREREQUISITE: **ANLY461**

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY499 Analytics Senior Seminar (6 semester hours)

This seminar is a senior level course designed to allow the student to review, analyze, and integrate the work the student has completed toward a degree in analytics. The student will complete an approved academic project or paper that demonstrates mastery of their program of study in a meaningful culmination of their learning, as well as assess their level of mastery of the stated outcomes of their degree requirements. PREREQUISITE: Students may only take this course after the completion of all CORE courses.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Business (BUSN)

BUSN100 Basics of Business (3 semester hours)

This course is designed to acquaint the student with the terminology, organization, and function of the American business system. The course will give the student a broad background about the contemporary American and global business environments as well as considering different business organizations, management principles and strategies. Topics covered include marketing, finance, personnel, customer relations, production and operations, e-business, world trade ventures, internal information systems and decision-making processes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN120 Real Estate Principles (3 semester hours)

This course provides an introduction to real estate as a business and profession. Students will have the opportunity to discuss and review terminology, concepts and best practices for the real estate industry. Topics will include the real estate market, property rights, deeds and leases, contracts, the closing process, urban economics, brokerage, appraisal, land uses, and insurance.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN121 Real Estate Practice (3 semester hours)

This course provides an introduction to real estate from an operations viewpoint. Students will have the opportunity to discuss and review terminology, concepts and best practices on how to manage the basic functions within the real estate industry. Topics will include structure of leases, real estate development, negotiations, marketing, and other issues associated with the real estate practice.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN201 Introduction to Construction Management (3 semester hours)

This course serves as an introduction to construction management. Students will have the opportunity to discuss and review terminology, concepts, and best practices in residential real estate construction management and development. Topics will include the construction industry, communication, forecasting and planning, leadership, managing people in construction, production and site management, time management, cost management, and quality.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN202 Leading in the Technology Age (3 semester hours)

Students learn about the fundamentals of various technical applications in the workplace. The course introduces students to hardware, software, cloud computing, collaboration tools, cybersecurity, and other technical matters they will encounter in a business environment. The student will learn how to apply the tools typically used to accomplish routine business tasks and share information.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN220 Real Estate Finance (3 semester hours)

This course is an investigation of institutions, instruments, and structures by which investment in real estate is financed. It reviews capital markets, the sources and use of real estate funds, and the role of government in real estate finance. The course also covers technical skills involved in real estate finance, to include risk analysis, portfolio theory and management, REITs, and capital market trends.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN221 Real Estate Appraisal (3 semester hours)

This course examines property rights and their valuations. Students will have the opportunity to discuss and review terminology, concepts, and best practices on the factors affecting the value of property rights as they relate to general economic theory and the real estate process. Topics will include real estate appraisal methods, valuation of residential and income-producing property, influences on market value, and trends in the appraisal industry.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN222 Real Estate Property Management (3 semester hours)

This course explores the role and major functions of the property manager. Students will have the opportunity to discuss and review terminology, concepts, and best practices for landlord policies, operational guidelines, leases and lease negotiations, tenant relations, habitability laws and the Fair Housing Act. Topics will include the impact of electronic technology on the industry and fair housing regulations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN235 Personal Finance (3 semester hours)

This course addresses the fundamentals of personal finance. Students will develop an understanding of the financial world and how it directly affects their life on a day-to-day basis as well as planning for their long term fiscal security. Topics include money management, consumer credit, home financing, insurance, and investing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN250 Analytics I (3 semester hours)

This course is designed to provide a foundational knowledge in analytics, and how it is used in business to strengthen the decision-making process. As technology has changed the landscape of business processes, it has also created a necessity for decision-makers to have the ability to use various tools to create, manipulate, and report data. Students will learn operational statistical theories, software options to work with data, and begin to integrate concepts into objective decision-making.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN299 Applied Business Solutions (3 semester hours)

This course is an integrated-based approach to task-based, business problem solving using various technology solutions such as productivity software products, the Internet, and free applications. Students will be challenged to use appropriate technology skill sets, while also learning additional skills working on real world business projects. Students will complete the course with an e-portfolio of their work, which can in turn be used in the job search process.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN301 Residential Real Estate Portfolio Development (3 semester hours)

This course serves as an introduction to developing a residential real estate portfolio. Students will have the opportunity to discuss and review terminology, concepts, and best practices in residential real estate portfolio development. Topics will include the components and players involved in a residential real estate transaction, the differences between residential and commercial real estate transactions, the various categories of residential real estate, standard residential contracts, residential market analysis and marketing plans, buying and selling, flipping homes, single-family rental properties, and ethics in the residential real estate industry.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN302 Commercial Real Estate Portfolio Development (3 semester hours)

This course serves as an introduction to developing a commercial real estate portfolio. Students will have the opportunity to discuss and review terminology, concepts, and best practices in commercial real estate development. Topics will include the components and players involved in a commercial real estate transaction, the differences between residential and commercial real estate transactions, the various categories of commercial real estate, standard commercial contracts, basic commercial market analysis and marketing plans, and ethics in the commercial real estate industry.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN306 Real Estate Communication and Negotiation (3 semester hours)

This course focuses on real estate communication and negotiation. Students will have the opportunity to discuss and review terminology, concepts, and best practices in residential real estate communication and negotiation. Topics will include persuasion principles and approaches, real estate negotiation situations, the various modes for communicating and negotiating, e-mailing, texting, and other effective written negotiations, generational factors, and ethics in real estate communication and negotiation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN307 The Legal Environment of Business (3 semester hours)

This course introduces legal and ethical principles relating to business practice in the United States. Students examine the basis and influence of law on business formation, enterprise management, and business decisions. Some of the topics explored are the constitutional basis for U.S. legal system, government regulation, contracts, torts, employment issues, and corporate social responsibility.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN308 Real Estate Marketing (3 semester hours)

This course serves as an introduction to real estate marketing. Students will have the opportunity to discuss and review terminology, concepts, and best practices in residential real estate marketing. Topics will include branding, relationship marketing, communication, electronic tools such as social media and blogs, marketing to potential buyers and for the seller, and ethics in real estate marketing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN310 Business Theory (3 semester hours)

In this course, students will learn about the intricate realms that shape business decisions across domestic, global, technological, political, legal, sociocultural, and economic environments. Students will investigate the factors influencing long-term decisions, corporate culture's sway, and the nexus between social responsibility and corporate performance. In addition, students will also have the opportunity to apply theoretical frameworks to craft strategic recommendations in real-world contexts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN311 Law and Ethics in the Business Environment (3 semester hours)

This course develops skills for inquiry into the business environment from a legal and ethical perspective. Students explore the relationships between modern business and the environment, in addition to the ethical issues that arise when diverse interests intersect. Relevant topics will include contracts, commercial law (sales, secured transactions and creditors remedies), forms of business entities (including limited liability companies and corporations), agency, employer-employee relationships, real property concepts, bankruptcy, and negligence and strict liability concepts. Students will examine corporate governance and business ethics, with emphasis on case studies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN312 Operations Research (3 semester hours)

This course introduces Operations Research and includes the application of operations research and management science techniques to management decision problems. Operations research techniques and methods can be applied to problems in virtually all-functional areas of business including accounting, finance, marketing, production and human resources. Examples from each of these areas will be covered during the course. A feature of the course is that Microsoft Excel is used to implement some of the techniques covered. This means that you will become proficient in using Excel; the most widely used electronic spreadsheet in business today. (Prerequisites: **MATH110**, **MATH111**, or **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN320 Principles of E Business (3 semester hours)

This course is a study of the fundamental principles of e-business. Students will learn how to build a successful e-business operation with step-by-step guidance for writing an e-business plan and simplified guidance for the development and management of a start-up customer focused website. Students will select an e-business of their choice and, using worksheets from their textbooks, follow a step-by-step process to develop eight sections of the e-business plan: business description, product and services, marketplace analysis, marketing planning, management and organization, operations, business location and equipment, and financial plans. Students will integrate basic start-up web site design plans and concepts into their e-business plan. The major objective of this course is for every student to apply the principles of e-business, e-marketing and basic website design and develop an e-business plan for immediate application or for future reference.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN330 Fundamentals of Business Analysis I (3 semester hours)

This course explores the use of standard spreadsheets and historical data for developing and organizing data into lists, creating tables and charts from the data, and utilizing basic formulas to understand summaries of the data. Students will develop skills with analyzing business data utilizing Microsoft Excel®, a standard spreadsheet tool, in order to draw conclusions regarding historical data.

Microsoft Excel® is a registered trademark of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN331 Fundamentals of Business Analysis II (3 semester hours)

This course explores the use of Relational Databases to analyze business data, create queries regarding specific areas of interest, and generate reports regarding trends. Students will develop skills utilizing Microsoft Access®, a relational database, to demonstrate proficiency in manipulating database elements of interest to a business.

Microsoft Access® is a registered trademark of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN333 Project Management for Business Analysts (3 semester hours)

This course focuses on project requirements as the basis for managing development life cycles. Students learn to define project cycle time, measure and estimate project efforts, and set priorities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN336 Strategic Policy Decision-Making (3 semester hours)

Strategy uses historical data and past experiences to try to determine future trends. One of the elements of any strategy is flexibility. Global events regularly prove that every business must plan for a future based on historical data and another possibility using a contingency plan. Businesses should understand that change may come. It could be a catastrophic global emergency or a new competitor that comes in and takes market share. The ability to innovate, adapt, and overcome are essential factors to the success of any global or domestic business strategy. Students will be exposed to the theories and practical applications to develop a successful strategic plan for businesses in the digital era that is flexible and takes into account external environmental factors, such as competitors and unanticipated emergencies that may affect the business.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN340 Operational Crisis Management (3 semester hours)

BUSN340 students focus on the fundamental practices related to identifying, preventing, and controlling crisis situations. Students are exposed to the various stages of a crisis and the need to develop a crisis management contingency plan. The students analyze the strategies, resources needed, and the roles and responsibilities of the crisis management team.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN341 Operational Business Continuity (3 semester hours)

BUSN341 students are introduced to the range of areas involved in effective continuity planning. Focus is on recognizing and prioritizing natural and man-made continuity threats. Students identify and analyze resources needed to avoid, mitigate, or recover from a threat.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN342 Operational Sustainability and Crisis Management (3 semester hours)

BUSN342 introduces the fundamental concepts of crisis management and sustainability in a business. A crisis can happen in an organization at anytime, anywhere. Topics include advanced crisis management planning, which is key to sustainability and assures a company has the processes and procedures in place to address almost any issue that may arise; the impact of a crisis on the employees, customers, suppliers, general public; and the sustainability of a company’s value.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN343 Operational Emergency Preparedness (3 semester hours)

BUSN343 students learn about the fundamentals of preparing for various emergency situations in the workplace. The course introduces students to the situations that threaten workers, customers, or the public and can disrupt or shutter operations, resulting in lost revenue and expenses. The student will learn about the tools to create a plan that addresses the potential impact of various emergencies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN350 Analytics II (3 semester hours)

This course is designed to provide a intermediate knowledge in analytics, and how it is used in business to strengthen the decision-making process. Students will focus on managerial level of statistical methods, advanced Excel functionality, and continue to work on applying concept to strengthen the ability to integrate concepts into objective decision-making processes. (Prerequisite: **BUSN250**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN410 Critical Thinking Strategies for Business Decisions (3 semester hours)

This course provides students opportunities for analysis, synthesis, and application of critical thinking applied to decision making at all levels in an organization. This course equips students with critical thinking skills to identify problems utilizing rational decision making. Students learn to solve organizational problems and provide strategic direction based on critical thinking.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN419 International Business Management (3 semester hours)

This course focuses on the organization, management strategies, and essential operations of international business and cross cultural management. It provides a managerial perspective and a framework of analysis for examining the similarities and differences in the philosophy and practices of management around the world. Topics include the methods and importance of effective strategic planning when organizing and administering international marketing, finance, and human resource management areas toward efficient business, government, and global market relationships. By focusing on the analysis of national and organizational cultures and the impact of individual behaviors, the course gives a strong basis for managers to successfully manage in different countries and different populations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN425 Real Estate Management (3 semester hours)

This course provides an overview of the real estate management field. Students will have the opportunity to discuss and review terminology, concepts, and best practices in real estate management. The course explores the various management roles, including Broker strategic planning and financial responsibilities, liability and safety, leadership, operations, legal, and ethical guidelines in real estate management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN450 Advanced Analytics (3 semester hours)

This course is designed to lead students through various projects and business problem scenarios to enable them to apply concepts learned to quantify elements of alternative elimination, assess data pertinent to the overall decision-making process, and to gain and understanding of the different business functions and how data is used differently in each area. This course requires Microsoft Excel® 2010 or higher. (Prerequisite: **BUSN350**)

Microsoft Excel® is a registered trademark of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN451 Introduction to Business Project Management (3 semester hours)

This course provides an overview of the processes involved in business project management. The student will be exposed to the practical aspects of running a project, including planning, scheduling, budgeting, and developing various plans needed during a business project life cycle. Various techniques needed to track and control a project are introduced. Techniques will include critical path, earned value analysis, variance analysis, and trend analysis.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN452 Project Schedule and Scope Management (3 semester hours)

This course delves into the theories, concepts, and practical applications of understanding how the scope of a project is translated into a project schedule and plan. The student will be exposed to developing a Work Breakdown Schedule (WBS) and project plan, which helps the student understand some of the concepts to monitor and control a project. The student will be exposed to creating a project schedule with resources and risks, as well as understanding scope management by creating a WBS and project plan. (Prerequisite: **BUSN451**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN453 Project Integration, Quality, Resource, and Stakeholder Management (3 semester hours)

This course delves into the theories, concepts, and practical applications of integrating all processes within a project, including quality, resources, and stakeholders. The student will be exposed to developing a quality management plan, resource plan, and stakeholder plan and how they all integrate to drive the project results. The student will be exposed to conflict resolution, decision-making, and leadership to bring the project to a conclusion. (Prerequisite: **BUSN451**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN490 Business Administration Independent Study (3 semester hours)

An opportunity for Business Administration students to pursue an independent research project or examine a specific area of Business Administration under the mentorship of a single professor. Course is open to upper division students only. Participation is at the discretion of the faculty member. This course will require students to produce a major research paper of approximately 25-30 pages; there will be no examination. Students will submit a proposal prior to the start of the project, an annotated bibliography, and a final paper at week 8, all of which will count toward the final grade. To be eligible for an independent study, students must be enrolled in a bachelor's degree program, must have completed 24 hours at APUS toward their current degree program, and should have already contacted a professor and gained approval for the independent study topic. Once these conditions are met the student should contact their academic advisor. Once the course is open the student must complete an official online registration for the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN495 School of Business Internship (3 semester hours)

Participating in an internship provides students with valuable educational and professional opportunities designed to make connections between theory and practice. During internships, students explore and gain hands on experience in their field of study, exploring practical applications in a professional work environment. The primary responsibility for finding an internship belongs to the student; however, there are a number of resources in place to help the student in their search and application process.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN499 Senior Seminar in Business Administration (3 semester hours)

This capstone course is a senior-level project that combines key elements of the undergraduate degree learning experience using a team approach that integrates and showcases multiple business disciplines. Students from a variety of degree programs (such as accounting, marketing, business administration, management, logistics, and human resource management) will develop and complete an approved academic business project. This project will demonstrate respective team members' mastery of academic knowledge. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Business (ECON)

ECON101 Microeconomics (3 semester hours)

Microeconomics is an overview course that covers how households (consumers), firms (producers), and governments interact in competitive and other markets to set prices, and determine what and how much is produced. Key concepts introduced include the role of scarcity and choice, incentives and competition, and the law of supply and demand.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ECON102 Macroeconomics (3 semester hours)

Introduction to Macroeconomics is a survey course that builds on the topics covered and skills developed in **ECON101** (Microeconomics) in order to present a complete picture of the economy. Macroeconomics shows how consumers and markets fit into the overall or aggregated economy and provides a framework to assess government policies. Key topics covered will include economic cycles (growth and recession), economic indicators and measures, and interest rates and money supply.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ECON201 Microeconomics for Business (3 semester hours)

Microeconomics for Business is an overview course that covers how microeconomics impacts business operations and the strategic management of the organization. Households (consumers), firms (producers), and governments are examined to assess how they interact in competitive and other markets to set prices, and determine what and how much is produced. Key concepts introduced include the role of scarcity and choice, incentives and competition, and the law of supply and demand.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ECON202 Macroeconomics for Business (3 semester hours)

Macroeconomics for Business is an overview course that covers how macroeconomics impacts business operations and the strategic management of the organization. An introduction to the principles and tools of macroeconomic analysis is provided. Macroeconomics for Business investigates the main topics of the overall economy including Gross Domestic Product, inflation, unemployment, economic growth, recession, monetary policy and fiscal policy. We use these theories and concepts to examine the role of the government in our economy and how government makes choices.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ECON301 Comparative Economics (3 semester hours)

This course analyzes the main economic systems operating today and their effect on international trade policies. Students will compares economic internal growth in centrally planned, mixed, and capitalist economics. Analyzes the performance of various economic systems in today's global economy and discusses important problems and issues of economic transition. Compares the basic theories of economic systems and various models of economic transition

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ECON302 Environmental Economics (3 semester hours)

This course explores environmental economic theory and the relationship between market activity and the environment. The course emphasizes the use of economic analytical tools, such as market models, benefit-cost analysis, and risk analysis to assess environmental problems and to evaluate economic policy solutions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

This course analyzes money and banking, the US and world financial markets, the role of the central bank, and monetary policies. Topics include principles and issues in money and banking, the nature and functions of money, financial institutions and markets, banking structures, and regulations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Business (ENTR)

ENTR150 Idea Generation (3 semester hours)

The act of being an entrepreneur is taking an idea and turning it into reality. There are two types of entrepreneurs - those that have a myriad of ideas and those that can't think of one idea. This course, Idea generation, is dedicated to helping the student identify opportunities for a new business venture by either deciding on one idea they have or helping to create ideas. The course starts with recognizing various ways to come up with a new idea and ends with outlining a plan to take the idea to reality.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR200 Leadership in Small Business Ventures (3 semester hours)

This course outlines appropriate processes to evaluate potential employees. This course was designed and developed to guide students through recruiting, advertisement planning, and hiring the most qualified applicants. Students research comparable pay rates and the cost of compensation for employees, learn of the most effective methods for motivating employees, and learn about employment law.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR210 Entrepreneurs as Leaders (3 semester hours)

Entrepreneurs face unique leadership challenges, especially with a new venture. This course provides the entrepreneur with the necessary tools and frameworks for creating strategy, building companies, and assembling human capital with limited resources. This course also explains the ethical challenges in a start-up venture.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR215 Innovation Design and Prototyping (3 semester hours)

Innovation Design and Prototyping equips students with the essential skills and frameworks to transform innovative ideas into market-ready products. Through an integrated approach, the course covers the entire product development lifecycle, emphasizing design thinking, customer validation, and agile methodologies. Students will explore strategies for protecting intellectual property, expanding product value, and adapting products for global markets. With a focus on real-world applications, learners engage in hands-on assignments that connect product strategy with broader business goals while leveraging emerging technologies like AI to drive innovation. (Prerequisite: **ENTR150**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR216 Service Innovation and Delivery (3 semester hours)

This course focuses on opportunities and problems encountered in the service sector as entrepreneurs seek to accomplish growth in their service businesses. Topics explored include selecting resources to support service businesses, motivating employees in the service sector and developing a control system to offer an efficient and effective service product to your market. Students develop a market analysis of the needs and wants matrix for the service market.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR300 Foundations of Entrepreneurship (3 semester hours)

This course studies the foundations of entrepreneurship through the context of innovation, entrepreneurial processes and concepts, and ethical decision-making. By studying how different decisions result in different outcomes and by understanding the unique strategic requirements of a venture, this course investigates entrepreneurship and the creation of new ventures. Students learn the basic theories used to explain and understand entrepreneurial activity, which prepare them to plan a new business opportunity.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR309 Business Plan for Non-Majors (3 semester hours)

This course focuses on the essential framework and first steps towards pursuing an entrepreneurial opportunity. The course first focuses on a framework for a business plan. The course later covers business plan elements, such as competition, marketing, operations, and other issues essential to the delivery of a business plan.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR310 The Family Owned Business (3 semester hours)

As The Family Owned Business is introduced, students learn what differentiates this type of business and the characteristics that make family owned firms different from other business environments. The entrepreneur who takes over the family business will have innovative ideas to enhance the business. This brings complexity and challenges as an entrepreneur and this course explores some of those while also constructing effective strategies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR311 Business Plan Foundations (3 semester hours)

This course focuses on the essential framework and first steps towards the student's objective of an entrepreneurial opportunity. The first portion of the course focuses on a framework for your business plan. The remainder course topics center on business plan elements, such as competition, marketing, operations, and other issues essential to the delivery of a business plan. In this course, the student begins the process of writing a business plan, which will be used and updated throughout the program. (Prerequisites: **ENTR150**, **ENTR215**, and **ENTR300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR312 Social Entrepreneurship (3 semester hours)

Social entrepreneurship is a growing movement for entrepreneurship. Social entrepreneurship scans society and identifies social problems; the entrepreneur then solves that problem/need by creating a solution that benefits society. Because of this, Social Entrepreneurship has since become the new trend for aspiring entrepreneurs to start their entrepreneurial ventures. According to a survey of 1,000 social entrepreneurs (conducted by Un.Ltd. research team), they impact health and well-being, community cohesion, promote personal development, and create training and skills development. Further, the research indicated 40% of social entrepreneurs held a degree.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR313 Non-Profit Entrepreneurship (3 semester hours)

Non-profit entrepreneurship continues to thrive in the 21st century in most major and minor industries. Topics include trustee's responsibilities, trustee recruitment/termination/development, financing structure, fundraising, financial management, and strategic planning.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR315 Financing a New Venture (3 semester hours)

This course introduces students to the essential principles and tools of small business finance, with a focus on planning, budgeting, forecasting, and funding strategies for new ventures. Students will develop key components of the financial section of a business plan—including start-up cost estimates, cash flow projections and profit and loss statements. Emphasis is placed on understanding the financial decision-making process, building effective financial systems, maintaining compliance, and presenting financial data persuasively to lenders or investors. This course is designed to equip aspiring entrepreneurs with the financial knowledge and confidence to fund, manage, and sustain a small business.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR320 Practical Law for the Entrepreneur (3 semester hours)

This course covers many of the legal aspects of starting a new business venture including business entity selection and formation, employment law, intellectual property, taxation, and business transactions. (Prerequisite: **ENTR311**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR340 Small Business Customer Service (3 semester hours)

New business owners must be able to retain customers and capture new customers. Whether online or in a physical location customer service is critical to the success of any small business. This course provides students the foundation for service innovation, finding opportunities for service innovation, and exploring customer "jobs." In addition, this course focuses on determining what your customer is trying to accomplish, not what you are offering. This is crucial to implement a quality service culture.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR410 Money Management for Entrepreneurs (3 semester hours)

This course provides detailed budgeting and money management tools to start and grow a new venture. Many entrepreneurs have charismatic leadership and vision, but underestimate the importance of the ability to manage the money coming and going out of the organization. Cash deficits can cripple a company, so it is imperative entrepreneurs understand the drivers of good cash flow and strong profitability. This course enables the student entrepreneur to gain practical knowledge with the cash flow statement, forecasting, pro forma statements, profit and profitability, break-even, budgeting, and working capital. NOTE: This course uses spreadsheet software. (Prerequisites: **ACCT105** and **ENTR311**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR415 Marketing the Successful Small Business (3 semester hours)

Marketing the Successful Small Business examines the role of marketing in driving growth and competitiveness in small business environments. The course focuses on how small businesses develop marketing strategies that align with business goals, respond to market conditions, and operate within resource constraints. Students explore customer-focused marketing decision-making, competitive positioning, pricing, branding, distribution, and the strategic use of digital and emerging technologies to support effective marketing outcomes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR416 Innovative Marketing (3 semester hours)

Innovative marketing provides a conceptual and applications-oriented framework for marketing decision-making in an entrepreneurial environment. This course emphasizes satisfying target customers and achieving organizational objectives through skillful blending of strategies of key marketing concepts and principles for entrepreneurs.(Prerequisite: **ENTR311**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR420 Social Media to Grow Small Business (3 semester hours)

This course explores the benefits and challenges of using social media and other online marketing techniques. Part of the focus throughout the course is seeing how different marketing tools and strategies can enhance presence in the market for a small business. Students learn how to leverage social media to enhance branding and marketing strategies and customer relations. It is recommended the student have completed **ENTR415**.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR421 The Value of Networking (3 semester hours)

Networking is a valuable skill for anyone, but it is especially critical for the entrepreneur. The entrepreneur must put themselves "out there" and develop business relationships. There is an art and skill to networking and this course unlocks the psychology of networking. Entrepreneurs in this course also begin structuring and maintaining their network.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR425 Operating a Small Business (3 semester hours)

This is a critical operations course integrating Excel (or equivalent spreadsheet software) to formulate crucial numbers. Students learn about strategy, budgeting, cash conversion, cash considerations, analyze costs, analyze financial and operating ratios, and plan for internal controls. A working knowledge of spreadsheet software is expected. NOTE: This course uses spreadsheet software.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR426 Strategic Growth (3 semester hours)

Managing growth includes leveraging assets at every stage and controlling the risk. This course focuses on areas that are essential to a new venture’s growth, including planning, marketing, risk assessment, and financial performance. Students examine the growth opportunities of a venture and structure an experiential growth plan that will provide the greatest impact for their venture. (Prerequisite: **ENTR311**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR427 Technological Innovation (3 semester hours)

Creating a new venture offers unique challenges. Indeed, innovation and advances in technology are prevalent, and technological innovation leads to competitive advantage. Students are introduced to the challenges of new technology that include: the complexity of intellectual property and sources of funding. This course includes an application of integrating technology into a venture.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR430 Virtual Small Business (3 semester hours)

This course provides an overview of the elements of e-Business/eCommerce such as strategy, technology, relationships, and related issues to create an online business, build brand presence, and other important aspects of having an online business. The student creates a domain name and selects a website template to create a virtual business.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR450 Business Plan Strategy (3 semester hours)

The Business Plan Strategy course offers students the opportunity to apply their entrepreneurial knowledge by developing a comprehensive business plan. Students will analyze and synthesize the essential components of a business plan, evaluating its role in driving entrepreneurial strategy. Throughout the course, students will focus on key areas such as defining the business offering, conducting market analysis, designing a marketing strategy, developing financial projections and establishing an operational structure that supports scalability. The course culminates in a cohesive, strategic business plan designed for future implementation, serving as a roadmap for business growth and attracting potential stakeholders. Must have completed at least 102 hours toward the program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR498 Entrepreneurship Senior Capstone (3 semester hours)

The Entrepreneurship Capstone Project synthesizes the prerequisite core and elective Entrepreneurship Courses allowing the student to implement the planning document that has been created throughout the program for their venture. The course includes presenting a pitch for the student's venture. (Prerequisite: Senior Standing and completion of all core and major courses prior to enrollment)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Child and Family Development (CHFD)

CHFD210 Childhood Educational Development (3 semester hours)

This course examines a variety of developmentally appropriate instructional strategies central to the education of children. Integrating a micro-systemic perspective that takes into account internal and external family dynamics, this course will focus on identifying theoretical and applied solutions to the choice of age-appropriate learning exercises

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD212 Infant and Toddler Programs (3 semester hours)

This course examines the fundamentals of infant and toddler development, including planning and implementing programs in group care. It emphasizes meeting physical, social, emotional, and cognitive needs; scheduling, preparing age-appropriate activities, health and safety policies, record keeping, and reporting to parents.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD215 Introduction to Child Development (3 semester hours)

This course addresses the research and theory of child development from conception through the end of childhood. Topics include the child's emotional, perceptual, and intellectual development, with attention to the social, cultural, and biological context in which children develop. Practical applications of theory and research will be emphasized.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD220 Human Sexuality (3 semester hours)

This course is an overview of the biological, psychological, cultural, and behavioral aspects of human sexuality and family life. The overall theme of the course focuses on attitudes and responsible sexual behavior. Key topics include how culture, society, and history have impacted our understanding of human sexuality.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD225 Introduction to the American Family (3 semester hours)

This course examines the family during modern times. Topics include a wide range of issues, including single mothers, fathers, disparities among families, childcare and child well-being, cohabitation, and how these trends affect American family life.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD230 Child Welfare and Advocacy (3 semester hours)

This introductory course will explore the field of child welfare by providing an overview of the systems that are in place to ensure the needs of high- risk children, youth and families are met. This course will also explore child advocacy with regard to protecting children experiencing different societal issues.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD307 Child and Adolescent Development (3 semester hours)

This course is a study of theories, research and practical interventions concerning the psychological development of the child from conception to puberty. Course content focuses on biological, intellectual, emotional and social development, and the dynamics of family, peer, school and other environmental influences.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD308 Infant-Toddler Development (3 semester hours)

This course is an examination of physical, cognitive, emotional and social development in the first 3 years of life. Course topics include developmental milestones, abnormal development and disease, parenting, family dynamics and appropriate care practices and environments from infancy through 36 months of age.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD311 Guidance in Early Childhood (3 semester hours)

This course stresses the need to respect the unique qualities that individual children and their families bring to the early childhood setting. It presents developmentally appropriate guidance strategies that help young children to become responsible, respectful, and productive members of the community.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD314 Students with Special Needs (3 semester hours)

This course focuses on theory and practical approaches to understanding and providing accommodations for students with special needs. Students will be presented with an overview of the characteristics of the most prevalent types of disabilities, as well as the laws that protect and best educational practices for children with disabilities. Students will examine the methods to teach, as well as the documents that provide the legal basis for meeting the needs for an appropriate education for this population.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD315 Current Trends and Issues in Early Childhood (3 semester hours)

Just as children grow and change rapidly, so do the trends and issues shaping early childhood. This course examines current key issues and emerging trends in early childhood education that affect parents, caregivers, and professionals who interact with young children. Through exploring research and real-world examples, students gain a deeper understanding of how these trends influence child development, including aspects of emotional development, social and emotional development, and overall well-being.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD331 Parenting (3 semester hours)

This course examines factors influencing child rearing practices in families with an emphasis on developing practical skills for working with parents and children. Topics of study include family systems, communication dynamics, blended and culturally different families, conflict management, custody concerns, factors supporting healthy child development and resilience, challenges to positive parenting and models for effectively working with parents and youth.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD340 Family Development (3 semester hours)

This course is a study of the dynamics of family interaction over the life cycle. Course content emphasizes the developmental, social, and cultural influences of the family in relation to a variety of personal and social experiences.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD342 Human Life Span Development (3 semester hours)

This course is a survey of human development across the life span. Course content includes terminology, principles, and theories related to genetic and environmental influences on physical, cognitive, emotional and social development.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD348 Marriage and the Family (3 semester hours)

This course guides students through an examination of the major theories and research findings related to healthy and effective marriages and families. Family dynamics associated with marital breakdowns and an introduction to family therapy are included.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD350 Family Life Education (3 semester hours)

The course offers a philosophical and historical perspective on family life education across the lifespan. Practice in curriculum development including content, objectives, and teaching strategies for different social groups and settings is stressed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD360 Family Resource Management (3 semester hours)

The course covers the management of a variety of resources most often found in family systems. Included is the interaction of families with other societal environmental systems in acquiring and using resources to meet goals and other demands.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD411 Child Psychopathology (3 semester hours)

This course focuses on psychopathology in childhood from biological, cognitive, social and emotional perspectives and the assessment and diagnostic tools and treatment approaches used with major childhood disorders. Environmental factors contributing to the development of child psychopathology, including family dysfunction, interpersonal violence and trauma and assessment of risk for child abuse and neglect, drug use and suicide will be examined. This course replaces **CHFD410**. (Prerequisite: **CHFD307**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD415 Children and Stress (3 semester hours)

This course examines historical and current research related to, and practical applications for managing and reducing, childhood stress within home, school and community environments. The effects of separation, divorce, violence, crises and trauma both within and external to the home, and events impacting local and extended communities will be addressed with a prevention and intervention focus.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD445 Family Communications (3 semester hours)

This course emphasizes the role of communications within the family relationship cycle. It examines how individual needs, perceptions, and self-concepts affect the quality of intra - and inter-familial communication, and integrates both theoretical and applied aspects of family research.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD446 Families and Social Action (3 semester hours)

This course is the study of the multidimensional aspects of family law and policy, including child support enforcement, homosexual marriage, and surrogate parenting. Students will analyze case excerpts from court opinions on family policies and laws that apply at the federal, state, and local level.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHFD498 Senior Seminar in Child and Family Development (3 semester hours)

This course covers major issues within the field of child and family development. Historical underpinnings of theory and practice, factors influencing family function and dysfunction across the lifespan, family education and guidance, law and public policy related to children and families, family resource management, and ethical and professional issues confronting practitioners in field are examined. Extensive research, reading and synthesis of scholarly and professional resources are required. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Child and Family Development (HDFS)

HDFS401 Child Life Theory and Practice (3 semester hours)

This course will support students in the application of knowledge of child development to educate, prepare, and support children and their families through the processes of hospitalization and changes in family dynamics related to illness. Child Life Theory and Practice is taught by a Certified Child Life Specialist and will meet one of the requirements of the Association for Child Life Professionals to become a Certified Child Life Specialist. Enrollment in this course is specifically designed for students pursuing the Child Life Specialist Certification. (Prerequisite: **CHFD307** or any Child Development course)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HDFS402 Benefits of Therapeutic Play (3 semester hours)

This course provides an overview of the principles and benefits of therapeutic play, including its history, theories, techniques, applications and skills. The course focuses on basic therapy skill development within the context of ethical and culturally-sensitive practice.

Attention is also given to understanding the role of therapeutic play in the context of the participant's clinical (medical treatment) and non-clinical system (family, school, and community). Participants learn strategies for engaging children in art, music, and other alternative therapeutic play to educate them on an adult's diagnosis or on their own diagnosis. Students will be introduced to a variety of online resources available for further support. This course is specifically designed for students seeking to meet the ACLP academic requirements for Child Life Specialist certification (Prerequisite: **HDSFS401**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HDFS403 Death, Dying, and Grief (3 semester hours)

This course introduces students to the concepts surrounding the nature of suffering and issues of death, dying, and grief. Students will examine these concepts from a theoretical perspective with attention to ethical and moral issues from a cross-cultural perspective and the impact of death, dying and bereavement on a family and community.

Students will also explore the different stages of grief and apply them to case studies or their own patient experiences. They will also learn about tools for legacy building and memento creation, identify and utilize resources that promote positive coping skills, discover strategies related to providing children bad news or notifying them about death or impending death. This course focuses on death, dying, and grief in pediatric care. It is specifically designed for students seeking to meet the ACLP academic requirements for Child Life Specialist certification. (Prerequisite: **CHFD307** or any Child Development course)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HDFS496 Practicum Experience (3 semester hours)

This course is an elective option for the Child Life Certificate and the BA in Human Development and Family Studies degree/Child Life option.

The course is accepted by the Association of Child Life Professionals (ACLP®) towards the elective requirement for certification eligibility. It is not accepted towards any of the 7 specific courses. It is the student's responsibility to secure their own practicum. APUS is open to establishing affiliation agreements with hospitals for the purpose of supporting a practicum placement. Note: Student will need to meet all of the requirements set forth by the clinical placement which may include a medical physical, immunizations, criminal background check and drug screens prior to being enrolled in the course. (Prerequisite: **HDFS401**)

ACLP® is a registered trademark of the Academy of Consultation-Liaison Psychiatry, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HDFS497 Internship Experience (3 semester hours)

Internship Experience is designed to support students who are completing an internship for Child Life Specialist. This experience will expose students to increasing relevant work practices in their area of study. Students will complete their Internship Experience while participating in online discussions weekly throughout the course. Students will be expected to complete a work journal, keep accurate time records, and evaluate their internship experience. The course will integrate the competencies as outlined by the profession throughout the course and encourage application of skills learned. Note: Students are required to secure their own internship experience. The University does not assist in placement. Student will need to meet all of the requirements set forth by the clinical placement which may include a medical physical, immunizations, criminal background check and drug screens prior to being enrolled in the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Communications (COMM)

COMM101 Introduction to Communication (3 semester hours)

This course is an introduction to communication studies, the broad areas of communication (interpersonal, oral, electronic, mass media, etc.), and artifacts. This course will familiarize students with the scope, basic terminology, and major career fields in Communication areas. Course topics include: communication, interpersonal communication, communication in groups and organizations, mass communication, media, digital communications, advertising, public relations, promotion management, digital communications and media, fund-raising management, writing, and teaching.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM115 Foundations for Lifelong Learning (1 semester hours)

Foundations for Lifelong Learning introduces students to the skills and dispositions needed to be a lifelong learner. Students will explore what it means to be curious by exploring unfamiliar topics in depth, by taking the initiative to expand knowledge, having the independence to explore interests in and outside the classroom, and transfer previous learning and apply it to current knowledge for comprehension and problem solving. Finally, students will reflect on what it means to learn, to change perspectives, explore civility, and create a foundation for lifelong learning.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM120 Information and Digital Literacy (3 semester hours)

Information and Digital Literacy is designed to provide students with sustainable and usable skills essential to success in both academic and professional settings. Students will learn best practices to locate and evaluate sources, and effectively communicate using digital literacy to become proficient 21st century learners.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM150 Emerging Technology for College Success (3 semester hours)

This course introduces students to emerging technologies such as artificial intelligence (AI), machine learning, deep learning, large language models (LLMs), and generative AI. Students learn how these tools can be used responsibly and ethically to enhance academic performance and digital literacy. Coursework covers the basics of AI prompting and prompt engineering, explores strategies for integrating AI into research and writing, and examines the potential benefits and risks of using AI in academic settings. The course also considers how emerging technologies are shaping innovation across education, business, government, and creative fields.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM200 Public Speaking (3 semester hours)

Public Speaking introduces students to the field of public speaking, giving them a foundation in the issues relevant to communicating effectively in today's global, technological, and divergent world. The history and theories of speech, ethics, the audience, developing and delivering a speech, and types of speeches and specialized speech situations will also be covered and practiced. Students enrolling in this course must be able to capture video (required) for their speeches. Video files are created and stored within the classroom for the students' security.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM210 Communication and Gender (3 semester hours)

This course examines the similarities and differences in male and female communication styles and patterns. The content emphasizes implications of gender perceptions, values, stereotyping, language use, nonverbal communication, and power conflict in human relationships.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM211 Social Media and Society (3 semester hours)

This course explores the practical and theoretical social impacts of computer-mediated communication (CMC) systems, including many different types of technologies, such as social networking sites, email, forums, chat, and online games. Students will engage in the analysis of CMC practices, the social processes and structures that emerge when people use these applications, and the problems and barriers that emerge from use.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM220 Small Group Communication (3 semester hours)

This course will examine the theoretical and practical issues that affect communication between members of work teams, discussion groups, and decision-making bodies. Students will work as members of student teams to analyze both the theoretical and practical implications of the issues that surround effective communication and miscommunication is a small group setting.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM240 Intercultural Communication (3 semester hours)

This course develops interpersonal, group, and presentational communication skills that are applicable in personal and professional cross-cultural relationships, and focuses on differences in values, message systems, and communication rules across cultural boundaries and in multicultural settings.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM250 Mass Communication (3 semester hours)

This course is an introduction to major mass communication theories as a context to examine major issues surrounding mass media in American society. Students will trace the history and development of the major media, both nationally and internationally, and examine the connection to, and interdependence of, each medium to other media. Emphasis will be placed on the current status of each medium and its influence on society and vice versa.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM255 Digital Tools and Media in Communication (3 semester hours)

Digital Tools and Media in Communication is a basic course in digital tools and media in communication, which enables our students to situate their communication studies within the modern technical world. The course gives students exposure to modern technology through the communication lens and provides students with opportunities to explore and evaluate digital tools and media for communication purposes. Throughout the course, students will progress in standards published in 2015 by the National Communication Association as those Communication majors should know, understand, and be able to demonstrate as part of the Communication degree program. This course introduces principles of composition and design, presentation, and evaluation across varied modes of communication using modern tools, apps, cloud services, programs, and social media.

Course topics include mass media communication strategies, music tools, podcasts, video conferencing, blogging, mobile messaging, social networking, internet broadcasting, live streaming, and new and emerging technologies, evaluation, and application.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM280 Ethics in Communication (3 semester hours)

This course is a study of the ethical considerations in communication. It will examine the main ethical issues in interpersonal and mediated communication, including such topics as objectivity, freedom of expression, representations of sex, violence and other human behavior, privacy, confidentiality and obligations to the public.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM285 Interpersonal Communications (3 semester hours)

This course is designed to focus on communication within the workplace, personal activities, and family life in order to establish and maintain healthy interpersonal relationships. This course serves as an introduction to major theories and empirical research regarding the role of interpersonal communication as it relates to personal, contextual, and cultural variables in the development of various types of relationships.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM300 Communication Research Skills (3 semester hours)

This course will introduce the research methods of communication processes and issues, which include scientific, interpretive, critical, and rhetorical research methods. During the course, students will evaluate existing communication studies and use both quantitative and qualitative approaches in order to understand research methods in the broad field of communication studies, answer questions, and solve problems.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM304 Communication Theory (3 semester hours)

This course is an exploration of major communication theories and their practical application to social events and issues. This course will provide theoretical background in the field to students using case studies, films, and scenarios and opportunities to analyze and apply theories. Course topics include: seven traditions in the field of communication theory, interpersonal communication theories, interpersonal messages, relationship development, relationship maintenance, influence, group communication, organizational communication, public rhetoric, media and culture, media effects, intercultural communication, gender and communication, and integration. (Prerequisite: **COMM101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM350 Journalism (3 semester hours)

This course will introduce students to core journalism skills and the historical, social and political context of journalistic practice. The course provides instruction in on-line journalism, news writing, story structure, interviewing techniques and a working understanding of the code of ethics and legal issues which impact journalistic practice. (Prerequisites: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM351 Strategic Communication (3 semester hours)

This course is designed to introduce students to the planning, coordination, collaboration, and management needed to create a fully-fledged communication strategy that will deliver a message to achieve the desired effect for any organization or individual. Students will cover many aspects of strategic communication management: planning and analysis, considering audience demographics data analytics, incorporating input from all decision makers, media and platforms to be used, timeline, creating feedback loops, legal and compliance approval, implementation, and assessment of communication effectiveness and future considerations. Practical business skills, marketing, navigating organizational politics, intercultural communication, information flow, and data analytics will also be covered on during this course. (Prerequisite: **COMM300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM356 Digital Communication and Media Design Principles (3 semester hours)

This course is designed to introduce students to digital communication and media design principles and the dynamisms of communication in digital media. Students will cover many aspects of digital communication and media design principles: writing for digital media, visual communication, website, social media, and platform communication capabilities, communicating for organizations and individuals, crafting the narrative in digital media, establishing brand and presence, and flexibility with future technologies. Leadership and decision maker input will be covered in addition to the necessity of analytics and data to guide the scope and breadth of digital communication. (Prerequisite: **COMM300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM361 Global Communication (3 semester hours)

This course is designed to provide students with an understanding of how to effectively communicate across cultures within the United States and Globally from a critical and applicable perspective. This course will cover how communication is influenced by culture and cultural norms and how culture is perceived through communication. Students will self-reflect on their own cultural identity and examine how that influences their perception of communication and how they communicate in their own workplace. By the end of the course, students will create ways to identify and resolve cross-cultural communication conflicts and misunderstandings and incorporate cultural understanding into strategic communication. (Prerequisite: **COMM351**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM365 Communication Analytics (3 semester hours)

The purpose of this course is to provide students with the theory and application of how the use of analytics shapes communication decisions in today's connected and complicated communication environment. This course will cover how data and the associated metrics have become the standard when making business decisions and how a proper communication strategy must coordinate with the use of analytics. Students will learn how to best use analytics to make data driven communication decisions while using standard reporting API to inform decision makers of the best plan for communicating with an audience. In addition, targeting and location will be discussed so communication can be focused on specific segments of an audience for potentially higher communication conversion. Student will examine the numerous analytics solutions that are available while always looking at future trends and technologies. By the end of the course, students will create a digital communication strategy that uses analytics and data to guide the way they communicate with an audience.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM370 Situational Communication (3 semester hours)

This course is designed to prepare students to write dynamic content for any form of media or platform that will achieve the communication goals of the organization or individual. Great effort will go into crafting the content and word choice while being flexible to adjust content to any form or media or platform. Students will address content creation and application for traditional media, new media, be mindful of new technologies, and the need to communicate across multiple medias and platforms. By the end of the course, students will have created a strategic communication plan that can change depending on the situation, platform, or media. (Prerequisite: **COMM351**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM375 Web and Mobile Communication (3 semester hours)

This course is designed to provide students with the theory and application of how to communicate on different web, mobile, and social platforms. The most effective way to communicate will be examined in addition to how consumers consume messages depending on multiple platforms. The immediacy of digital communication will be covered along with the need to respond in a timely manner without a bias toward action. Students will have hands-on experience crafting messages that meet the technological and audience needs of each of the major platforms. By the end of the course students will know how to strategically approach communication across web, mobile, and social platforms while constantly adapting messages depending on the situation. (Prerequisite: **COMM356**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM380 Communication of Listening (3 semester hours)

This course is designed to provide students with techniques and practices that will allow students to gather input, information, and perspectives from decision makers and the targeted audience when planning and implementing a strategic communication strategy. Students will learn why it is critical to understand the targeted audience by listening to their needs, their wants, and how they like to be communicated with. Students will also learn why leadership input is critical when creating a communication plan and the need to create feedback loops. In addition, managerial courage, comfortable around senior leadership, and bias towards action will be addressed because of the political sensitivity of communication strategies and tight deadlines. (Prerequisite: **COMM351**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM385 Visual Communication (3 semester hours)

This course is designed to provide students with the theory and application of how and why visual communication is a critical aspect of digital communication and media design. Students will be introduced to the different ways web, mobile, and social media platforms communicate visually with their audience. The strengths and limitations of visual communication will be taken into consideration when formulating a digital communication and mobile design strategy. Real-world communication miss-steps and blunders will be studied to show how graphic design can confuse and obfuscate communication. Attention will be given to creating an aesthetically appealing experience that communicates an intended message while taking into consideration practical visual and accessibility concerns. By the end of the course, students will have created a visual communication plan that can be included in any digital communication strategy. (Prerequisite: **COMM356**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM400 Persuasive Communication (3 semester hours)

In this course, students will learn about the history and development of persuasion, the relationship of audience differences to the impact of persuasive messages, principles of argumentation and evidence, and applications to real-world situations and messages. Throughout the course, students will make connections with political, mass media, marketing, public relations, organizational, advertising, and internet-based messages by applying theories and concepts of persuasion.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM401 Conflict and Communication (3 semester hours)

This course introduces students to concepts in the study of human conflict. During the course, students will explore communication in conflict or crisis and emergency situations where ethics, risk, and uncertainty may exist, as well as where communication must be effectively managed. Through case studies and applied exercises, students will apply theory to practical situations to evaluate communication efforts and prepare a crisis communication plan, focusing on causes and dynamics of interpersonal conflict and strategies people use to manage conflicts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM402 Media Law (3 semester hours)

This course is designed to provide students with an understanding of media law from a communication perspective. Topic covered will include First Amendment law, prior restraint, copyright, defamation, and other legal aspects communication professional encounter. Students will investigate case studies that delve into the broad depth of media law issues that both help and inhibit communication and journalism.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM410 Leadership Communication (3 semester hours)

This course is designed to introduce students to the theory and practices of leadership communication and provide students with the ability to clearly and persuasively communicate as a people leader with messages that inspire understanding and action. Different communication situations will be examined that includes leadership updates, sharing mission and vision, communicating values and ethics, transformational messages, and difficult leadership communication. Attention will be given to a clear, concise, and informative style that focuses on a positive tone, and support. Each student will learn about their own leadership style and how their individual leadership attributes contributes to a more authentic message that connects with the target audience. By the end of the course, students will have created numerous leadership messages to suit a variety of communication scenarios. (Prerequisite: **COMM351**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM415 Building a Digital Presence (3 semester hours)

This course is designed to provide students with the theory and application of how to build and maintain a digital presence. Students will be introduced to the many facets of creating and maintaining a digital presence while continuously trying to reach and influence the intended audience. Every aspect of digital communication; the written word, visuals, audio, and video will be analyzed to help plan and build a well-rounded and effective presence. Great effort will go into crafting messages, creating visuals, and using audio and video to build a digital presence. By the end of the course, students will have planned and implemented their own personal digital presence on multiple platforms. (Prerequisite: **COMM356**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM450 Strategic Communication Career Management and Ethics (3 semester hours)

This course is designed to provide students with the knowledge and understanding of strategic communication career management to ensure long-term career success. Students will learn the tools and strategies that will allow them to change with their industry, change industries, be flexible, constantly learn, network, and always be advocating for their own success. The importance of career management will be studied to ensure that strategic communication students will have the tools and strategies that will allow them to change with their industry, be flexible, constantly learn, network, and have long-term career success. In addition, advanced topics in ethics will be explored to ensure that all communication efforts are ethical and align to the values of the student and the mission of the organization. By the end of the course, students will be prepared to find employment in any industry by presenting themselves as communication professional. (Prerequisite: **COMM351**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM456 Digital Communication and Media Design Career Management and Future Technologies (3 semester hours)

This course is designed to provide students with the knowledge and understanding of digital communication and media design career management to ensure long-term career success. Students will learn the tools and strategies that will allow them to change with their industry, change industries, be flexible, constantly learn, network, and always be advocating for their own success. The importance of career management will be studied to ensure that digital communication and media design students will have the tools and strategies that will allow them to change with their industry, be flexible, constantly learn, and have long-term career success. In addition, future technologies will be examined and how digital communication and media design will evolve depending on the communication platform. By the end of this course, students will be prepared to find employment in any industry as a digital communication and media design professional. (Prerequisite: **COMM356**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COMM498 Capstone (3 semester hours)

The focus of this course is to review the major concepts, theories, and issues within the field of Communication and the application to current events and future possibilities. In this course, students will also have the opportunity to explore Communication philosophy from a variety of perspectives. As the capstone course in the Communication program, this course will also provide guidance as students develop a professional portfolio that can be used in seeking employment within the Communication field. (Prerequisites: **COMM300** and Senior Standing and completion of all major courses prior to enrollment)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Computer Science (CSCI)

CSCI140 Introduction to Programming (3 semester hours)

This course provides an introduction to programming using the C++ and Python programming languages, with an emphasis on foundational programming skills and effective computer programming practices. Topics include object oriented programming, memory management, and optimization concepts. The course also covers special topics such as arrays, pointers, references, classes, methods, dynamic memory allocation, recursion, linked lists, iterators, and function pointers in C++. Students also explore data structures and algorithms in Python, including lists, dictionaries, sets, and their applications. Students learn to write programs and create readable, well-decomposed code, gaining knowledge of proper variable naming, concise functionality, and method implementations used in modern software development. This course features bi-weekly coding assignments, quizzes, and a final project. (Prerequisite: **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI150 Digital Systems I (3 semester hours)

This course focuses on number systems, binary arithmetic, logic gates, and forming logic circuits. Other core topics include combinational circuits and Boolean algebra. The concept of circuits will be expanded to include logic blocks; multiplexers; and arithmetic blocks such as adder, multiplier, subtractor, and divider with an emphasis on block designs. Additionally, sequential circuit and finite state machine will be discussed in detail. The course concludes with the synthesis of a complete processor. (Prerequisite: **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI200 Introduction to Artificial Life I (3 semester hours)

This course presents artificial life through the lens of simulated and/or synthesized life and life-like processes. It begins by discussing the history of artificial life, or Alife. This course provides students with the opportunity to study the life-like processes that arise from biological and chemical phenomena, mathematical and computational models, and physical models of a variety of statistical and dynamical systems. (Prerequisite: **STEM100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI220 Operating Systems I (3 semester hours)

This course helps students understand the design and implementation of operating systems in the area of purpose. It focuses on description, contrast, and comparison of different structures for operating systems. Students will analyze theory and implementation of processes, resource control, physical and virtual memory, scheduling, I/O, and files. Students need to be familiar with C language before taking this course. The course introduces a high-level structure of the Linux kernel both in concept and source code, while offering a detailed understanding of its aspects. (Prerequisite: **CSCI150** or **CSCI245**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI225 Introduction to Networking I (3 semester hours)

This course introduces students to the structure and components of computer networks, including packet switching, layer architectures, and various applications. Specific topics include Web/HTTP, Voice Over IP, P2P file sharing, socket programming, TCP/IP, reliable transfer, flow control, congestion control, the network layer (names, addresses, and routing), local area networks (LANs), and wireless networks. The course also explores network security, including issues related to security threats and secure communication. Students will gain experience with tools needed to use and write protocols and understand core networking concepts. (Prerequisite: **CSCI220**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI240 Algorithms and Data Structures I (3 semester hours)

This course strengthens and broadens students' awareness of existing trends in the development of object-oriented programming. Students expand their use of a structured design method to provide systematic analysis of performance and systematic proof of correctness. Students gain a deeper understanding of concepts like implementations of abstract data types and present data structures linked to stacks, queues, and hashes. The course will also address advanced concepts related to algorithms that will include divide-and-conquer and dynamic programming. Students will also learn how to analyze different algorithm development as well as various sorting strategies. (Prerequisites: **CSCI140** or **CSCI150**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI245 Machine Architecture and Organization I (3 semester hours)

This course presents concepts related to computer architecture and their impact on program design and development. It introduces students to topics such as instruction set design, memory hierarchies, pipelining, storage systems, and parallel architectures. Specific topics include performance evaluation, computer organization, instruction formats, addressing modes, computer arithmetic, single-cycle and multi-cycle data paths, and processor control. Assembly language programming is used as a means of exploring instruction set architectures and understanding machine architecture. (Prerequisite: **CSCI240**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI311 Network Security Fundamentals (3 semester hours)

This is an advanced course in networking and requires students to have in-depth knowledge of the 7 layers of the ISO/OSI model. The course starts with an overview of IP addressing and subnetting. A significant amount of time will be spent on routing protocols like BGP, OSPF, and EIGRP, and security issues with each of these protocols is discussed. Other topics covered in this class will include, but are not limited to, traffic engineering, multi-path routing, and segmentation. (Prerequisite: **CSCI225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI315 User Interface and Experience Design (3 semester hours)

Learn the fundamentals of human-computer interaction and user experience design by applying design thinking methods and acquiring the skills necessary to create interactive systems for a variety of audiences and purposes. During this course, students will learn about various types of prototyping methods, as well as how cognition and perception play an important role in affecting the experience of interaction design. (Prerequisite: **CSCI345**).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI320 Operating Systems II (3 semester hours)

This operating systems course presents advanced topics in the operating system, building on fundamentals introduced in earlier OS course work. Students learn to analyze how modern operating systems manages system resources across hardware and software, with particular attention to process management, process scheduling, memory management, and file management. The class compares design decisions that affect reliability, scalability, and performance while maintaining a strong focus on data integrity and system robustness. Taking a deep dive into more advanced topics, the course explores file system design, inter-process communication, virtualization, containerization, concurrency, synchronization, threads, processes, and multithreading. Students study how these core functions support efficient execution on the CPU and enable controlled access to software resources and memory. In alignment with program-level outcomes in computer science, students understand and apply system design principles that address architectural weaknesses and promote efficiency in software implementation. The course also emphasizes security, examining how common system vulnerabilities can be identified and mitigated within unix and linux-based operating systems during system design, development, and implementation. (Prerequisite: **CSCI220**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI325 Design for the Web (3 semester hours)

This course introduces students to the software tools used for the design and development of web applications. In addition to applications, students are introduced to web frameworks and how to balance between effective front-end design and back-end processing and implementation. Using these frameworks, the HTML, CSS, and JavaScript® development of client-side web applications, sending and receiving REST requests, designing models, HTML5 and CSS3® are all covered in detail. (Prerequisite: **CSCI315**)

JavaScript® is a registered trademark of Oracle America, Inc. CSS3® and CSS® are registered trademarks of Certified Security.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI335 Web Applications Programming (3 semester hours)

This course introduces students to the client-side and server-side mechanisms for developing dynamic web applications with persistent data storage. Modern scripting languages and the DOM are used for client-side programming. Server-side programming using new web programming languages and frameworks. Considerations for security. This course focuses on broad knowledge of many tools/technologies rather than in-depth knowledge of a single tool/technology. (Prerequisite: **CSCI325**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI336 Topics in Computer Vision (3 semester hours)

The goal of this course is to introduce students to various computer vision techniques, beginning with the fundamentals and progressing to more advanced learning and attention concepts. Image classification and annotation, object recognition and image search, various object detection techniques, motion estimation, object tracking in video, human action recognition, and image stylization, editing, and new image generation are some of the topics that will be covered. Students will learn how to use visual entropy and similar techniques to understand the key differences and overlaps between human-based and computer-based visual systems. (Prerequisite: **CSCI381**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI340 Program Design and Development (3 semester hours)

This course teaches students to design and develop programs. The course assumes that students have previously acquired programming skills in C, C++, and Python®. Students learn advanced programming concepts that will enable them to produce reliable and maintainable code and be able to compare learned concepts to other languages. The course focuses on programming structures, constructs and writing tests as well as understanding inheritance, polymorphism, and interfaces. Moreover, students will master generic programming, appreciate the value of reflection, and write multi- threaded applications. By the end of the course, students will be able to differentiate between good and bad programming practices. (Prerequisite: **CSCI240**)

Python® is a registered trademark of the Python Software Foundation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI345 Algorithms and Data Structures II (3 semester hours)

The course will present advanced concepts related to hashes, trees, graphs, linear programming, and multithreading. Students study techniques for designing algorithms and for analyzing the time and space efficiency of algorithms. The course will introduce students to computational models and computational complexity like NP-Completeness, as well as how to develop key algorithms for advanced types of trees, analyze NP-Completeness, apply advanced concepts related to graphs, analyze topics related to multithreaded algorithms, and compare different algorithm strategies. The algorithm design techniques include divide-and-conquer, greedy algorithms, dynamic programming, randomized algorithms, and parallel algorithms. (Prerequisite: **CSCI240**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI350 Digital Systems II (3 semester hours)

This course advances the student's understanding of PDLs, FPGA design flows, and ability to perform HDL-based design and implementation on FPGAs. Students learn to design, synthesize, simulate, and implement logic on an actual device, as well as understand and work with FPGA architectures, digital arithmetic, pipelining, and parallelism. Students will become knowledgeable to make a substantial modification to a simple microcontroller-based system and identify the cyber concerns associated with it. The course provides hands-on training on the use of a hardware-description language. In addition, students will be able to detect failures in security design principles, and how they can lead to system vulnerabilities that can be exploited as part of an offensive cyber operation. (Prerequisite: **CSCI150**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI351 Quantum Computing Systems (3 semester hours)

This course explains the fundamental principles of quantum computing, including key quantum mechanical concepts like superposition and entanglement. Students will gain foundational knowledge through hands-on activities such as designing quantum circuits and using interactive simulations. This course emphasizes developing technical documentation that aligns with industry best practices, thereby preparing students to communicate their work effectively.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI355 Quantum Algorithm Engineering (3 semester hours)

This course investigates how to develop quantum algorithms. Topics explored include Grover’s and Shor’s Algorithms, collaborative coding, algorithmic optimization, and performance benchmarking. Students will use modern platforms such as Qiskit and Cirq to develop quantum algorithms and investigate performance in simulated and real quantum environments. (Prerequisites: **CSCI240** or Chair Approval)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI360 Introduction to Database Systems (3 semester hours)

This course helps students to understand the basic principles required to construct a functioning database free of data anomalies. A strong mathematical background may be required to manage advanced concepts of multi-valued dependency and representation theory, as well as an ability to conceptualize, design, and implement a database. The course focuses on relational database structures, with emphasis on entity relationship diagrams for data modeling, transaction properties, and functions. Students will study SQL for data description and data manipulation, as well as the use of modern APIs to access the database. (Prerequisite: **CSCI345**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI370 Software Reverse Engineering (3 semester hours)

The discipline of reverse engineering provides the ability to deduce the design of a software component and aid in the analysis of software via decomposition. The course provides a practical foundation for all areas of software security research, including forensics, penetration testing, vulnerability research, exploit development, and malware analysis. Students will be able to use tools to safely perform static and dynamic analysis of software in order to fully understand the software's functionality. Specifically, the course focuses on reverse engineering techniques and software specification recovery, reverse engineering for malware analysis, and communications. The course also provides guidelines for dealing with obfuscated code. (Prerequisites: **CSCI311** and **CSCI320**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI375 Quantum Information Theory and Cybersecurity (3 semester hours)

This course offers a comprehensive analysis of quantum information systems, with a focus on cybersecurity. Students will explore quantum cryptography, including quantum key distribution and how it provides security in applications beyond what classical systems can offer. The course examines the ethical and societal implications of quantum technologies, providing a framework for responsible development and implementation. (Prerequisites: **MATH220** and **MATH302**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI381 Machine Learning (3 semester hours)

This course provides an overview of types of problems that can be used with machine learning, as well as different variations of machine-learned methods such as supervised/unsupervised, batch/online, etc. The course discusses the main challenges of machine learning, notably the issue of data quality, as well as overfitting and underfitting data. (Prerequisite: **DATS211** or **CSCI345**).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI386 Advanced Topics in Machine Learning (3 semester hours)

This course is focused on more advanced topics in machine learning, including clustering, dimensionality reduction, and the emerging applications of machine learning such as recommender systems, search in unstructured data, and time series analysis. (Prerequisite: **CSCI381**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI390 Cellular and Mobile Technologies (3 semester hours)

This course focuses on wireless communications and networks. It covers radio propagation and propagation path-loss models; digital communication and transmission; cellular communication and WWAN architecture; antennas, diversity, and link analysis; SS and CDMA systems; and security in wireless systems. WWANs, GSM, CDMA, WAP, WLAN, WPAN, 3G/4G/5G are important concepts covered in this course. (Prerequisite: **CSCI370**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI415 Information Visualization (3 semester hours)

Data production in research, engineering, business, and ordinary human activity is expanding at an alarming rate, as is the amount and complexity of information produced. The aim of this course is to introduce students to methods and techniques for visual representation that will help better understand complex data. The use of effective visualizations not only provides a visual interpretation of data, but they also aid in the comprehension, communication, and decision-making processes. Students will learn how the human visual system processes and perceives images, good visualization design practices, methods for visualizing data from a variety of fields, and programming interactive web-based visualizations using the D3 programming language. (Prerequisite: **CSCI335**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI425 Information Systems Development (3 semester hours)

This course is an overview of the ways information systems are developed and will include underlying philosophies, paradigms, techniques, and tools. The course covers different software development life cycles (SDLC) methodologies with a special focus on modern methods. It also goes over the different phases of the SDLC and covers the inputs, activities, artifacts, and outputs for each phase. (Prerequisite: **CSCI335**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI431 Embedded Systems (3 semester hours)

This course studies the fundamental concepts in the design and organization of modern computer systems. Topics include computer organization, instruction-set design, processor design, memory system design, timing issues, interrupts, and various performance-enhancing parallel techniques such as prefetching, pipelining, branch prediction, superscalar execution, and massive-parallel processing. The course also studies existing architectures using CISC, RISC, and VLIW designs. (Prerequisite: **CSCI390**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI440 Principles of Programming Languages (3 semester hours)

This course presents multiple programming languages to students and the different solution each offers. Topics include binding, binding times, data types and implementation, operations, data control, storage management, parameter passing, and operating environment. (Prerequisite: **CSCI340**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI445 Formal Languages and Automata Theory (3 semester hours)

This course deals with the mathematical abstraction model of computation and its connection to formal languages. It is designed to introduce students to the theoretical development of computer science and provide conceptual tools used by practitioners in computer engineering. Students will understand how automata are used to describe computing machines and computation. (Prerequisite: **CSCI340**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI452 Cybersecurity/Cyber Defense (3 semester hours)

This course introduces students to the ethical, theoretical, and practical issues surrounding security in computer systems and networks. Some of the topics in this course include identification of the following: reconnaissance operations, anomaly/intrusion detection, command and control operations, data exfiltration activities, and malicious code based on signatures. Students will master network security techniques and components, as well as cryptography and its uses in cybersecurity together with malicious activity detection. Understanding how defense complements offense is essential in a well-rounded cyber operations program. Students develop a sound understanding of the technologies and methods used to defend systems and networks. They will be able to describe, evaluate, and operate a defensive network architecture employing multiple layers of protection using technologies appropriate to meet mission security goals. (Prerequisite: **CSCI311** or **CSCI440**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI455 Quantum Machine Learning and AI Integration (3 semester hours)

This course provides an in-depth evaluation of quantum-enhanced machine learning models and their applications in artificial intelligence. Students will gain practical experience in assessing performance metrics and analyzing ethical considerations surrounding the use of quantum technologies. Case studies from various industries are used to demonstrate the unique advantages and limitations of integrating quantum AI. Through hands-on exercises and critical analysis, students will be prepared to develop and evaluate quantum machine learning solutions integrated with AI. (Prerequisite: **CSCI355**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI465 Advanced Quantum Software Architecture (3 semester hours)

This course focuses on the principles of designing and implementing scalable quantum software systems. Students will explore advanced topics such as quantum middleware, hybrid quantum-classical systems, and techniques for performance tuning on quantum hardware. Students will also apply secure software development frameworks by actively contributing to open-source quantum projects. Through these practical applications, students will learn to build secure, robust and efficient software for the future of quantum computing. (Prerequisite: **CSCI375**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI471 Software Engineering (3 semester hours)

This course presents how to apply a systematic approach to the development of software systems. Topics explored include software development life cycles, requirements elicitation, and architectural design and design decomposition, implementation, and testing. The course reviews the modern techniques available for performing actions in these areas. (Prerequisite: **CSCI360**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI475 Development of Secure Software Systems (3 semester hours)

This course is designed to help prepare students to write robust, secure software that maintains the confidentiality, integrity and availability of the software and data. Specific topics covered in this course include system security architectures and concepts, as well as secure programming principles and practices.

Students will be able to demonstrate that they understand the techniques specifying program behavior, as well as the classes of well-known defects and how they manifest themselves in various computer languages. Also, students will learn to understand how poor coding affects security and how to identify common coding errors. In addition, students will need to demonstrate their ability to author programs that are free from defects and document code with clear, succinct explanations. (Prerequisite: **CSCI452**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI476 Applications of Quantum Algorithms in AI and Cybersecurity (3 semester hours)

This course focuses on the application of widely used quantum algorithms in artificial intelligence and the field of cybersecurity. Students will learn how quantum computing can impact secure communication, encryption, and post-quantum cryptography. Students will apply algorithms such as Grover's, Shor's, and quantum kernel methods using platforms like Qiskit and Cirq. Emphasis is placed on comparing quantum and classical approaches, evaluating performance and security trade-offs, and analyzing the ethical implications of deploying quantum technologies in real-world systems. Through case studies, programming labs, and critical evaluations, students will develop domain-relevant quantum solutions aligned with current industry and research practices. (Prerequisites: **CSCI375** and **CSCI465**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI484 Introduction to Artificial Intelligence (3 semester hours)

This course provides students with in-depth knowledge and skills in computer science, including the history of AI and the processes involved in training machines to learn. It covers various search methods and why they are important to AI as well as specific AI applications Topics covered enable students to continue their study of artificial intelligence. Through readings, assignments, and laboratories in which they learn to conduct analyses to meet specified objectives, students gain hands-on experience. (Prerequisite: **CSCI381**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI486 Deep and Reinforcement Learning (3 semester hours)

The primary focus of this course is on neural networks and deep learning networks such as CNN, RNN, LSTM, and industry-accepted libraries required to train these models, such as TensorFlow and Keras. It also covers different variations of training and transporting these models using attention and transformers. (Prerequisite: **CSCI484**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI498 Senior Project Design (3 semester hours)

This seminar is a senior-level course designed to allow the student to review, analyze, and integrate the work completed toward a degree in computer science. In this course, students design a faculty-approved project that demonstrates mastery of their program of study in a meaningful culmination of their learning. The project should also demonstrate the student's level of mastery of the stated outcomes of degree requirements. Prerequisite: The student must have senior standing (90 semester hours completed) in the Computer Science program and be in good academic standing (2.0 GPA or higher).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CSCI499 Senior Project Implementation (3 semester hours)

After completing the design of their approved project in **CSCI498**, students will implement that design into a working prototype and write a senior thesis. The senior thesis will be completed and an oral defense presented. Selected senior papers will be retained in our library. The student is further encouraged to submit work to peer-reviewed journals, conference proceedings, and/or senior design competitions. (Prerequisite: **CSCI498**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Criminal Justice (CMRJ)

CMRJ100 Introduction to Law Enforcement (3 semester hours)

This course is an introduction to the philosophy, history, and constitutional limitations of law enforcement. The course will focus on the function of law enforcement within society, ethics and professionalism, theories of law enforcement, and the legal aspects that impact law enforcement.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ101 Evidence and Procedures (3 semester hours)

This course will provide an introduction to the collection, preservation, and basic crime scene investigations. Furthermore this course will also focus on the laws and court decisions relating to the admissibility of evidence as well as the appropriate methods of interrogation and its uses in the criminal justice process.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ201 Criminal Justice Administration (3 semester hours)

The course will provide the student with an overview of the American criminal justice system as an interdisciplinary social science involving aspects of criminology, sociology, law, and political science. This course will also examine the complexity of the American Criminal Justice System through its administrative process.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ202 Stress Management in Law Enforcement (3 semester hours)

This course will explore the stresses of law enforcement, specific stress factors in law enforcement (i.e., shift work, hazards and dangers, dealing with death and severe injury, post-shooting trauma, testifying in court, and undercover work). Methods and techniques for reducing stress will be discussed as will applying these techniques in the field.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ203 Patrol Methodologies & Community Policing (3 semester hours)

This course will provide an in-depth overview of the concepts and theories associated with being a patrol officer. The student will become familiar with aspects of community-oriented policing; problem-oriented policing, civil liability, ethics and day-to-day police activities that make patrol work the backbone of law enforcement.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ205 Rape and Sexual Violence (3 semester hours)

This course will explore the sociological and psychological perspectives of sexual crimes as well as examine the legal and forensic aspects of rape. The impact rape has on its victims and society's reactions to sexual violence will be analyzed not only within the United States but around the world. Additionally the class will focus on aspects of causation and rehabilitation of rape crime as well as the proper collection, preservation and analysis of evidence in rape crimes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ206 Juvenile Delinquency (3 semester hours)

This course will introduce students to the principles of juvenile delinquency. It will provide a historical overview of juvenile delinquency in America. The course will examine the psychological, social, and environmental theories of juvenile delinquency while also covering the juvenile court system and treatment options for delinquency.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ295 Criminal Justice Sophomore Seminar (3 semester hours)

This course is the final course needed for the completion of the Associate of Arts in Criminal Justice degree. The course is designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Criminal Justice. The student will complete an approved academic project or paper that demonstrates their grasp of the criminal justice field. This is a culminating course to be taken after all other Associate of Arts in Criminal Justice courses have been satisfactorily completed. Students must have completed at least 49 semester hours in their program.
This course is to be taken as the LAST course in the AA in Criminal Justice program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ302 U.S. Law Enforcement (3 semester hours)

This course is an evaluation of the breadth and complexity of contemporary police administration from a systems perspective, a traditional structural perspective, a human behavioral perspective, and a strategic management perspective. Students will apply terms and ideas in the study of policing; and be able to demonstrate and assess the historical development of law enforcement at local, state and federal levels. Additionally they will be able to critically analyze contemporary problems and trends facing law enforcement agencies including their functions, operations and management styles. Managerial theories and practices in organizations will be examined and assessed as to their application in law enforcement organizations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ303 Criminology (3 semester hours)

This course examines criminal behavior in relationship to various criminological theories and analyses these theories through a historical context. These theories include classical theories and current theories of crime as they relate to criminal involvement. Additionally this course will analyze society's response to criminal behavior through the assessment of legal approaches and the various aspects of the criminal justice system. Additionally types of criminal behavior and the systems reaction to these crimes will be distinguished. Research affecting social policy and public crime concerns are examined including social problems and social responsibility perspectives as well.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ306 Criminal Investigation (3 semester hours)

This course is an analytical examination of crime detection and solution, including such topics as crime scene procedures, physical evidence, interviews, field notes and reporting, follow-up investigation, interrogation, and rules of evidence. Specific detail is given to investigations involving homicide, sex-related offenses, and crimes against children, robbery, larceny, vehicle thefts, computer crime, environmental crime, arson, and drug abuse. There is an in depth analysis of investigation methodologies addressing inductive and deductive reasoning to assess the decision making process to solve crimes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ307 Cold Case Investigation (3 semester hours)

This course provides an analysis of techniques and procedures utilized to solve cold cases that have been designated as unsolved by law enforcement. Topics covered include forensic genealogy, behavioral analysis, crowd-sourcing techniques, victimology, and the use of media platforms to raise awareness and develop new leads. Additionally, the course examines strategies for cold case investigation, including how to prepare and organize an investigation plan. The benefits of collaboration between civilian investigators, detectives, and criminal justice professionals are explored, along with the complexities of working with a victim's family and coordinating among multiple agencies. Pitfalls such as confirmation bias, belief perseverance, and investigator exhaustion are addressed. Specific focus is given to cold case homicides and best practices for utilizing modern investigative resources to pursue justice for unresolved crimes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ308 Ethics in Criminal Justice (3 semester hours)

This course concentrates on the major functions, structures and processes that underline ethical issues within the American Criminal Justice System. This course will explore the structure and nature of the various types of ethical debates within the American judicial system. There will be an assessment of the ethics in criminal justice, as it explores the issues of morality, virtue, honesty, and making ethical decisions in the United States criminal justice system. Assessments of various issues will be examined as they relate to decision making and ethics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ316 Corrections and Incarceration (3 semester hours)

A comprehensive study of the context, practices, and special interests of corrections. Topics include the early history and current trends of correctional thought and practice, jails and other short-term facilities, intermediate sanctions, the prison experience, women in prison, institutional management, educational/treatment programs, prisoners' rights, and race/ethnicity challenges.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ320 Law Enforcement Intelligence Applications (3 semester hours)

The course will prepare students to use intelligence methodologies and templates to assist in case support or investigations, security and counterintelligence, trend development and forecasting, and efficient use of open source information to maximize resources. The course will examine the current use of intelligence in law enforcement (federal, state, and local) and its applications in support of investigations and operational planning. The methods examined in this course will be applicable in the private sector.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ324 The History of Organized Crime (3 semester hours)

This course will provide an examination of the evolution of organized crime in the United States, with a focus on the social and legal factors that contributed to its development and the groups involved. Additionally this class will explore how organized crime is structured and how it can be exposed and controlled. Theoretical explanations of organized crime are also covered.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ329 Criminal Profiling (3 semester hours)

This course explores criminal behavior, its motivation, and the environmental influences and patterns of offending. Other topics examined are the approaches to profiling and how these investigative techniques are applied to helping solve crimes. This course will address aspects of behavior, taking into consideration the definition of criminal profiling as the inference of offender traits from physical and/or behavioral evidence. Evaluations will be made of the history, theories, and investigative techniques regarding profiling crime offenders, using a unique blend of both social science, as well as psychological and legal research. It includes legal case excerpts to demonstrate the role of the profiler (investigator). This provides the student a solid knowledge foundation of the integral relationship between the profiling techniques and theories of criminal behavior and the court system. It is recommended students take either **CMRJ101** or **CMRJ306** prior to enrolling in this course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ335 Crime Analysis (3 semester hours)

This course will examine contemporary practices for analysis and measurement of crime including the use of geographical information systems (GIS) to map various aspects of crime. Modern crime analysis focuses on reducing crime and improving police efficiency by illustrating the impact of crime on the community and community impact on crime through the use of the SARA (scanning, analysis, response, & assessment) problem-solving model. Crime analysis facilitates informed decision making on criminal activity and prevention, thereby being instrumental in helping society learn the linkages between crime and other factors such as poverty or drug abuse. Additionally, there is a review of the crime analysis function within the law enforcement organization and a demonstration of how to develop, implement, and operate a crime analysis unit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ341 Criminalistics (3 semester hours)

The purpose of this course is to educate students regarding the everyday operations of state and federal crime laboratories and the forensic services provided by these organizations. The course is scientifically oriented and will concentrate on the significance of forensic evidence and various testing procedures and instrumentation used to analyze biological, chemical, pattern, and trace items of evidence. Another focus will be the proper recognition, collection and preservation of physical evidence obtained from systematic searches of crime scenes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ401 Human Trafficking (3 semester hours)

This course will provide an in-depth overview of human trafficking. Human trafficking will be explored from domestic and global perspectives. Students will gain a deeper understanding of how human trafficking occurs and how victims are recruited into human trafficking. An in-depth analysis of laws governing human trafficking and the Trafficking Victims Protection Act of 2000 will be explored. Students will explore the Department of State Trafficking in Persons Report and how countries around the world are evaluated in terms of their efforts against human trafficking based on the Trafficking in Persons Report tier system. A comprehensive analysis of the scope of human trafficking in the United States will be provided along with an analysis of indicators of human trafficking. Human trafficking will be explored on a global scale and the impact of the Covid-19 pandemic on human trafficking will be explored. Furthermore, the role of gangs and why they have set their targets on human trafficking will be assessed. Students will gain a deeper understanding of the role of law enforcement and other first responders in mitigating human trafficking.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ402 The Pathology of Death Investigations (3 semester hours)

This course will examine contemporary practices for investigating sudden, unexpected and violent death. Two major topics will be explored: the first focusing on the manner of death (the social circumstances under which the death occurs), the second focusing on the cause of death (the particular material actions which result in death).The following types of deaths will be considered: asphyxial, blunt and sharp force, firearms, natural causes, mass disaster, child abuse, sudden infant death syndrome (SIDS) and suicide. Estimating the postmortem interval and identification of human remains will also be considered. It is recommended that students take **CMRJ306** before enrolling in this course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ497 Criminal Justice Capstone - Digital Forensics (3 semester hours)

This course is designed to be the final class taken in the B.S. in Criminal Justice with a concentration in Digital Forensics program. The class will be an 8-week course during which students will be required to complete work which will demonstrate a mastery of their program. It is designed to be a meaningful culmination of their learning and to assess their level of mastery of the stated outcomes of their degree requirements. Topics covered during the capstone will allow students to review, analyze, and integrate the work the student has completed towards their degree. NOTE: All required, core, and major courses must be completed prior to enrollment in this course. SENIOR standing is required.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ498 Forensic Law Enforcement Capstone (4 semester hours)

This course is designed to be the final class taken in the B.S. in Criminal Justice with a concentration in Forensics program. The class will be a 16 week course during which students will be required to complete work which will demonstrate a mastery of their program. It is designed to be a meaningful culmination of their learning and to assess their level of mastery of the stated outcomes of their degree requirements. Topics covered during this senior seminar will allow students to review, analyze, and integrate the work the student has completed towards their degree. (Prerequisite: Completion of a minimum of 106 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CMRJ499 Senior Seminar in Criminal Justice (3 semester hours)

This seminar is a senior level course designed to allow the student to review, analyze, and integrate the work the student has completed toward a degree in Criminal Justice. The student will complete an approved academic paper that demonstrates mastery of their program of study in a meaningful culmination of their learning, as well as assess their level of mastery of the stated outcomes of their degree requirements. NOTE: ALL required, core, and major courses must be completed prior to enrollment in this course. Student must have SENIOR standing to register. (Note to students: The course materials, assignments, learning outcomes, and expectations in this upper level undergraduate course assume that the student has completed all lower level general education and career planning coursework necessary to develop research, writing, and critical thinking skills. Students who have not fulfilled all general education requirements through courses or awarded transfer credit should strongly consider completing these requirements prior to registering for this course.)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Cybersecurity (ISSC)

ISSC221 Intermediate Computer Systems (3 semester hours)

This course is a study of computer systems, computer organization, computer subsystems, and operating systems. This course examines CPUs, motherboards, basic input/output systems, memory subsystems, bus structures, expansion cards, ports, connectivity, interfaces, data storage subsystems, and multimedia interface devices. This course also evaluates computer monitoring, computer systems management, operating systems, networking, and security. This course covers the CompTIA A+® Certification Essentials curriculum.

CompTIA A+® is a registered trademark of the Computing Technology Industry Association, Inc.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC231 Networking Concepts (3 semester hours)

This course is a study of the evolution, the concepts, and the principles of local, distributed and enterprise networking. This course examines Network design, topologies, architecture, media, interface cards, protocols, problem resolution, communications, administration, operations, and resources. It introduces the student to the concepts of wireless networking, and web-based networks. This course also explores the Open Systems Interconnection (OSI) and the Transmission Control Protocol/ Internet Packet (TCP/IP) reference models. This course also examines internetworking servers, and hardware and operating systems maintenance.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC242 Hardening Operating Systems (3 semester hours)

This course is a study of the principles and concepts of Network Security from various aspects including but not limited to hardware, software, and other critical elements relating to the CIA Triad. There is an emphasis on standard Operating System (OS) functions and discovering vulnerabilities. Upon completion of this course, students will be able to demonstrate an understating of methodologies and measures necessary to take a preventive stance to address security vulnerabilities. Students will examine the principles, practices, and policies related to hardening and securing Operating Systems. This course focuses on vulnerabilities and related countermeasures of various Windows components

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC262 Red and Blue Team Security (3 semester hours)

This course examines the techniques and technologies for penetration of networks, detection of attacks, and prevention of attacks. This course addresses the techniques, the technologies, and the methodologies used by cyber intruders (hackers) to select a target and launch an attack. Students will gain insight into the motives and desired goals of hackers as well as effective tools and techniques used as countermeasures ensuring data assets remain secure. This course focuses on techniques and technologies to detect such attacks even while the attack is in progress; early detection enables the administrator to track the movements of the hacker and to discover the intent and goals of the hacker. This course assesses the various countermeasures to keep the system out of the “sights” of the hacker and to keep the hacker out of the perimeter of the target network. This course also explores the laws and the legal considerations in prosecuting computer crime.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC266 Cryptography Concepts (3 semester hours)

This course will provide an extensive overview of the field of cryptography, which includes but not limited to a historical perspective on early systems, building to the number theoretic foundations of modern day cryptosystems. Upon completion of this course students will have the ability to demonstrate a knowledge of how cryptosystems are designed, and to match cryptosystems to the needs of an application. Students will also study basic cryptanalysis and will be presented with real life breaches of common cryptosystems so that they better understand the dangers within cryptosystem design and in the design of systems that rely on cryptography. Students will also gain an understanding of the various methods of encryption and analyze the strength and weaknesses of various techniques to ensure data assets are protected and secure.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC290 Securing Databases (3 semester hours)

This course is an introductory study of the principles, practices, procedures, and methodologies to ensure security of data at rest within databases. It appraises the convergence between database security and associated threat vectors and attack methods. It examines database types, security architecture, platform fundamentals, user administration, password management, security models, virtual private databases, and auditing models. It reviews database security processes, security configuration techniques, and auditing checklists. Course topics include: Secure Architecture, Privilege Management, and Auditing Processes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC297 Securing Applications (3 semester hours)

This course is an introductory study of the principles, practices, procedures, and methodologies to ensure security of data within web-based applications. It examines secure coding practices and processes, web application security configuration management techniques, and web application security standards. It appraises the convergence between web application security and associated threat vectors/attack methods. It appraises secure development processes, web application secure configuration techniques, and legal issues related to securing vital digital assets. Course topics include: Secure Configuration & Development, Vulnerability & Risk Mitigation, Vulnerability Assessments & QA Testing, and PCI DSS Compliance. Requires CITRIX CLIENT SOFTWARE INSTALLATION FOR ONLINE VIRTUAL LABS accessibility.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC298 Cybersecurity Capstone Portfolio (3 semester hours)

This Capstone course provides a comprehensive overview of major components of Information Systems Security. The course explores various security-related plans and policies that demonstrate mastery of the program of study and results in a meaningful culmination of the student’s learning; these plans and policies will be used to assess one’s level of mastery of the stated outcomes of the degree requirements. This is a capstone course to be taken after all other Information Systems Security courses have been satisfactorily completed. (Prerequisite: Completion of a minimum of 57 hours towards the degree program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC322 Computer Systems Organization: Advanced (3 semester hours)

This course is an advanced study of computer systems with a focus on operating systems, system administration, networking and security. Design, configuration techniques and troubleshooting skills techniques are covered utilizing a variety of hardware scenarios including: processor design, CPU architecture, number systems used in computing, storage subsystems, and memory subsystems, This course also examines the OSI model, networking, security, performance management, and capacity planning. This course covers the CompTIA A+® Certification curriculum. (Prerequisite: **ISSC321**)

CompTIA A+® is a registered trademark of the Computing Technology Industry Association, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC323 Computer Hardware Systems (3 semester hours)

This course is a technical study of the hardware systems and architectures in a computer system; it appraises expansion cards, storage subsystems, IO interface subsystems, operating system, Local Area Networking (LAN), Internet connectivity, and security. This course also examines the processes for analyzing problems and for synthesizing solutions related to computer hardware systems.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC325 Biometrics (3 semester hours)

This course presents an introduction to biometrics, the study of recognizing individuals based on their unique physical or behavioral traits related to computer and information security. Authentication, authorization, identification, and access control through biometric perspective are emphasized. The course orients practical applications of biometrics in the real world, providing a realistic view of the use of biometrics within the emerging threats in information security.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC326 Cloud Computing (3 semester hours)

This course will delve into all aspects of a Cloud Computing implementation, starting from a definition of what it actually means and assessment of whether it is suitable for a given company to the strategy alignment, implementation and operation of a working solution. It will cover Infrastructure-as-a-Service, Platform-as-a-Service, and Software-as-a-Service as the many integration and management components that are necessary to make this work together to fulfill business requirements.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC331 Legal Issues in Information Security (3 semester hours)

This course examines information security issues and the law. The rapid growth of technology has given rise to legal issues surrounding technology. Information security is the practice of protecting information to ensure the goals of confidentiality, integrity and availability are met. Information security makes sure that accurate information is available to authorized individuals when it is needed. When governments, private organizations, and individuals do a poor job of protecting the information entrusted to them, legislatures respond with new laws. The course will examine key conflicts involving technology and the legal system to include: privacy issues, civil, criminal, and administrative law, Children's Online Privacy Protection Act (COPPA), Sarbanes Oxley, and information security governance. This course examines current literature on such topics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC343 Wireless Networks (3 semester hours)

This course offers a framework for learning the latest developments and trends in ad-hoc wireless and mobile communications. The course provides a complete coverage of the wireless ad-hoc networks: principles, protocols and applications. The course will look at the characteristics and operations of contemporary ad-hoc wireless network technologies. Students will study the impact of wireless transmission and user mobility with an emphasis on the design and management of ad-hoc wireless mobile systems. Students must have access to MS Visio software. Course software requirements with the appropriate versions are listed under the course materials site. This course meets the topical requirements of the DoD Directive 8570.1M Information Assurance Management (IAM) Technical I category.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC344 Open Source System Security (3 semester hours)

This course is an introductory study of the principles, practices, procedures, and methodologies to provide security on Linux systems. It assesses the security risks, threats and vulnerabilities related to individual and enterprise Linux environments. Course topics include: user privileges and permissions, file systems volumes and encryption and kernel security risk mitigation. Requires CITRIX CLIENT SOFTWARE INSTALLATION FOR ONLINE VIRTUAL LABS accessibility.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC345 Service Oriented Architecture (3 semester hours)

This course examines the various aspects of a Service-oriented Architecture (SOA). It explores the comprehensive plan to interrelate business with technology. It displays how SOA combines the talents and skills of an entire organization, with its requisite needs and computing know-how. It focuses on the necessary tools—processes, best practices, and standards—for developing a sound SOA, Service-Oriented Modeling: Service Analysis, Design, and Architecture. It also introduces a service-oriented modeling framework that employs an agile and universal business and technology language to facilitate analysis, design, and architecture initiatives.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC351 Computer Forensics (3 semester hours)

The explosion in the use of the Internet and the ensuing growth in cybercrime have given rise to the field of computer forensics (also called digital forensics). Digital forensics is used to assemble digital evidence to prosecute cybercrime, analyze intrusions, mitigate risk, and for data recovery. This course examines the theory, best practices, and methodologies to conduct computer forensics investigations; it includes the ethical issues, data presentation, and chain-of-evidence procedures. It also appraises current tools and technologies to analyze, acquire, and organize digital evidence. This course maps to the general objectives of the International Association of Computer Investigative Specialists (IACIS) certification. Requires CITRIX CLIENT SOFTWARE INSTALLATION FOR ONLINE VIRTUAL LABS accessibility.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC361 Information Assurance (3 semester hours)

This course is a study of the discipline of Information Assurance that focuses on protecting information assets by ensuring availability, confidentiality, integrity, authenticity, and non- repudiation. This course delves into the deliberate engineering, planning and implementation of the five major areas in any enterprise: hardware, software, networks, people, and policies. This course meets the topical requirements of the DoD Directive 8570.1M Information Assurance Management (IAM) Technical III, Management II and Management III categories.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC363 IT Security: Risk Management (3 semester hours)

This course explores Networking Security from the perspective of risk management and confirms that assessment of IP based Network systems is critical to developing strategies to mitigate and manage risks. This course focuses on effective assessment strategies that ultimately help the student to implement effective and proactive risk mitigation measures and risk management practices. It exposes the vulnerabilities of TCP/IP; and appraises risk assessment, risk analysis, risk mitigation, risk management, networking components and Virtual Private Networks (VPN). This course examines the tools and techniques used to attack, test and assure the security of the remote information, maintenance, FTP, database, email, UNIX RPC, and IP VPN services. The student will apply this knowledge to develop an assessment methodology that identifies, attacks, and penetrates IP based network systems.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC364 IT Security: Access Control and Authentication (3 semester hours)

This course examines a broad range of network security issues. It
explores how access controls protect resources against unauthorized viewing, tampering, or destruction and serves as a primary means of ensuring privacy, confidentiality, and prevention of unauthorized access and disclosure. It focuses on access control, such as components, processes, controls, and authentication, as well as security breaches, organizational behavior and social engineering, physical security, remote access control, public key infrastructure and encryption, cryptography, testing, and information assurance. Requires CITRIX CLIENT SOFTWARE INSTALLATION FOR ONLINE VIRTUAL LABS accessibility.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC368 IT Security: Physical and Peripheral Defense (3 semester hours)

The course covers physical security requirements in a network enterprise on varying levels including physical protection against internal and external threats that may impact people, property, and other data and networked assets. Students will learn how to assess and protect these assets via multiple layers of physical security.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC412 Mobile Application Security (3 semester hours)

This course explores security strengths and weaknesses of applications on various mobile operating systems running on PDAs and mobile devices. It identifies, analyzes and explores vulnerabilities, attacks, exploits, and insecurities of mobile applications running on operating systems such as iOS, Android, Windows®, and BlackBerry® OS. What constitutes designing secure code for apps on these operating systems will also be covered.

BlackBerry® is a registered trademark of BlackBerry Limited.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC415 Mobile Device Security (3 semester hours)

This course explores security strengths and weaknesses of devices running various mobile operating systems. It identifies, analyzes and explores vulnerabilities, attacks, exploits, and insecurities of mobile applications running on operating systems such as iOS, Android, Windows, and Blackberry OS. A comparative study of current mobile devices with respect to security and privacy capabilities will be covered.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC421 Computer and Network Security (3 semester hours)

This course allows the student to obtain the knowledge required to analyze and mitigate threats in the organizational network environment. Upon completion of this course, students will be able to demonstrate a knowledge of both computer and network security, from the wetware (human), software, and hardware perspectives. The "wetware" component will deal with identification of potential risk situations, establishing policies for avoidance, recovery, and prosecution, and proactive measures to reduce causal factors for security breaches in an organization. The "software" perspective will examine types of inappropriate software activity, as well as asset protection issues (recognizing software assets). This component will also address software tools available to assist in reducing administrative costs due to both malicious and accidental loss. The "hardware" component will address hardware approaches to protecting assets, as well as hardware techniques used to compromise assets. Specific technologies discussed include firewalls, symmetric key encryption, public key encryption, digital certificates, and cryptographic systems (SSL/TLS, VPNs, and Kerberos).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC422 Information Security (3 semester hours)

This course allows students to examine a broad range of computer security issues and provides the student with technical knowledge not normally addressed in traditional training. It explores the protection of proprietary information and security planning with an emphasis on networked computer vulnerabilities. It also focuses on detection (e.g. viruses, hackers, types of computer crime, computer forensic examination, etc.), as well as disaster recovery and technology law. A primary focus is put on security of systems and computer crime prevention. Also addressed is the maturing criminal population with increased computer literacy, whose tendency is to move from violent actions to more profitable computer crime. Finally, issues of privacy and freedom of information are examined. This course meets the topical requirements of the DoD Directive 8570.1M Information Assurance Management (IAM) Technical II and Management I categories. Requires CITRIX CLIENT SOFTWARE INSTALLATION FOR ONLINE VIRTUAL LABS accessibility.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC426 Cloud Security and Privacy (3 semester hours)

This course will provide necessary guidance to build a proper audit to ensure that operational integrity and customer data protection, among other aspects, are addressed for cloud based resources. This course will serve as a cloud computing reference for auditors and IT Security Professionals. It will also provide information to assist in preparing for an audit addressing cloud computing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC442 Wireless and Mobile Network Security (3 semester hours)

The mobile communication market has grown so rapidly keeping up security in wireless networks has become a challenge. Maintaining secure connectivity on mobile devices as well as retaining flexibility, mobility, and resilience are critical to keeping files, data, and information secure and private. This course explores security issues surrounding mobile cellular communication technologies. Hands-on labs are also included as practical examples of wireless network security.
(Prerequisite: **ISSC343**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC451 Cybercrime (3 semester hours)

The rapid change in technology and the exponential growth in the use of the Internet have resulted in an increase in the number of computer and technology related crimes. This course is designed to provide students with the foundational knowledge and technologies needed to detect, investigate, and prevent computer related crimes. Topics to be covered include: cybercrime classification (hacking, denial of service attacks, cyberstalking, cyberbullying, virus dissemination, identity theft, electronic funds transfers, phishing, spoofing, Internet fraud, access device fraud and salami attacks), vulnerability of computer systems and computer applications, computer intrusions and attacks, the impact of cybercrime (social, economic, and legal), investigation of digital evidence, computer forensics, and the prevention of cybercrime.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC452 Cybersecurity (3 semester hours)

This course examines the practices for assuring information security. The various roles and functions within the Cybersecurity practice will be combined and leveraged to produce a secure organization. Case studies will be used to examine theories and practices drawn from real world situations. The numerous pitfalls of Cybersecurity will be presented with everyday practices of securing companies resources from attack. This course will examine the frameworks, roles, and competencies involved with information security. The fundamentals of Cybersecurity will be examined to include: network and security concepts, attacker techniques, data security, system and applications security and incident response techniques. Current literature will be examined on such topics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC455 Digital Forensics: Investigation Procedures and Response (3 semester hours)

This course is an introduction to Computer Forensics Investigation Procedures and Response. It provides a basic understanding of the importance of computer forensics, how to set up a secure lab, the process for forensic investigation including first responder responsibilities, how to handle various incidents and information on the various reports used by computer forensic investigators.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC456 Digital Forensics: Investigating Wireless Networks and Devices (3 semester hours)

The growth of wireless networking technologies has given rise to many security issues. Wireless technology has become popular because of its convenience and low cost. This course pertains to the study of Computer Forensics Students will be introduced to advanced techniques in computer investigation and analysis with interest in generating potential legal evidence. An overview of cybercrime and security will be addressed by explaining the basic security procedures and will include discussions of the various security threats that today's users face. This course will prepare students to gather all necessary information and evidence to support prosecution in a court of law. This course will examine wireless networks and devices and will discuss how to investigate wireless attacks, as well as PDA, iPod®, iPhone®, iPad®, and BlackBerry® forensics. Current literature will be examined on such topics.

iPod®, iPhone® and iPad® are registered trademarks of Apple, Inc.
BlackBerry® is a registered trademark of BlackBerry Limited.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC457 Digital Forensics: Investigating Network Intrusions and Cybercrime Security (3 semester hours)

The increase in the use of the Internet and ensuing growth in cybercrime have given rise to the field of digital forensics. Students will be introduced to advanced techniques in computer investigation and analysis with interest in generating potential legal evidence. This course examines computer related crime and abuse cases in order to gather all necessary information and evidence to support prosecution in a court of law. Collection of evidence, investigating information hiding, and intrusion response techniques will be explored. This course will examine network intrusions, network traffic, web attacks, DoS attacks and corporate espionage. Current literature will be examined on such topics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC458 Digital Forensics: Investigating Data and Image Files (3 semester hours)

This course is designed to expose the student to the process of detecting attacks and collecting evidence in a forensically sound manner with the intent to report crime and prevent future attacks. Learners are introduced to advanced techniques in computer investigation and analysis with interest in generating potential legal evidence. The course provides a basic understanding of steganography, data acquisition and duplication. It examines how to recover deleted files and partitions and image file forensics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC459 Digital Forensics: Hard Disc and Operating Systems (3 semester hours)

This course is designed to expose the student to the process of detecting attacks and collecting evidence in a forensically sound manner with the intent to report crime and prevent future attacks. Learners are introduced to advanced techniques in computer investigation and analysis with interest in generating potential legal evidence. The course provides a basic understanding of file systems, hard disks and digital media devices. Boot processes, Windows and Linux Forensics and application of password crackers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC461 IT Security: Countermeasures (3 semester hours)

This course is a study of Network Security attacks and countermeasures. This course examines various security technologies, such as: intrusion detection, authentication, session hijacking, sniffing, spoofing, denial of service, buffer overflow attack, port scanning, encryption, IPSec, DES encryption, triple DES encryption, message digest 5 algorithm, point-to-point tunneling protocol (PPTP), layer 2 tunneling protocol (L2TP), Kerberos, RSA Pretty Good Privacy(PGP), Secure Shell (SSH), Secure Sockets Layer (SSL), Stateful Packet Inspection (SPI), Network Address Translation (NAT), proxies, content filters, public/private keys, Public Key Infrastructure (PKI), Virtual Private Networks (VPN), security policies, security tokens, digital certificates, viruses, worms, Trojan horses, virus scanners, virus protection, vulnerability assessment, and vulnerability scanners.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC471 IT Security: Auditing (3 semester hours)

Security is one of the most important concerns in the world of Information Technology. This course examines the technical issues and the administrative practices to implement and manage security; in particular, this course focuses on the principles of security auditing. This course explores the various technologies and tools to assist with discovery and auditing in the world of security management. This course also assesses the audit practices, audit processes, audit plans, discovery process, discovery software, penetration strategies, identification of potential attacks, log analysis, user baseline analysis, activity analysis, risk assessment, roles and responsibilities, and the roles and responsibilities of security auditing professionals.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC473 IoT Surveillance (3 semester hours)

As technology continues to integrate in diverse areas of our daily environment the possibility of being monitored via an Internet of Things (IoT) device drastically increases. This course will look at how technologies including medical devices, vehicles, wearable tech, and smart homes can be used as a surveillance tools.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC474 Networking Surveillance (3 semester hours)

The course focuses on the tools and methods that are used to remotely monitor and analyze network traffic. Students will exposed to various surveillance techniques including cellular, video, and cloud. The ability to use social media as a means to monitor individuals remotely will be addressed. Network Intrusion and Detection Systems as a mitigation method will be reviewed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC475 Bias in Surveillance (3 semester hours)

Digital Surveillance in conjunction with Artificial Intelligence creates innovative opportunities to increase the effectiveness of remote monitoring however there are concerns that widespread surveillance can have unforeseen consequences. This course will address potential biases of electronic monitoring including the color of surveillance phenomenon, governmental authority, and religious concerns.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC476 Surveillance Legislation and Policy (3 semester hours)

This course examines legislative and policy areas related to surveillance and privacy. The ability for organizations and governments to remotely monitor and track individuals has given rise to legal and ethical concerns which are addressed. This course will examine how laws have had to change to account for the new possibilities of privacy violations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC477 ICS and SCADA Security Architecture (3 semester hours)

This course provides an overview of the architecture of Industrial Control Systems (ICS) and Supervisory Control and Data Acquisition (SCADA) systems and how these system can be secured. Students will explore issues such as planning and developing an ICS/SCADA network, learn about PLC devices and their role in these systems, diagraming and ensuring secure communications and operations, and implementing security standards.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC478 SCADA Risk Management (3 semester hours)

This course provides an overview into risk management techniques used in securing Industrial Control Systems (ICS) and Supervisory Control and Data Acquisition (SCADA) systems. Students will explore how the unique equipment in these systems affect an otherwise standard risk assessment and risk management strategy for the average enterprise network. Students will also learn the different mitigation techniques that can be implemented to mitigate the identified risks. (Prerequisite: **ISSC477**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC479 SCADA Security Standards (3 semester hours)

This course provides an overview into the security standards and policies involved in Industrial Control Systems (ICS) and Supervisory Control and Data Acquisition (SCADA) systems. Students will explore the standards laid out in federal, state, and local laws, as well as those developed by the Federal Government via the National Institute of Standards and Technology (NIST) and the Department of Homeland Security (DHS). Students will also explore other potential external authorities that may play a role in certain critical infrastructure sectors as well as various industry groups focusing on information sharing. (Prerequisite: **ISSC478**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC480 Threats to SCADA Networks (3 semester hours)

This course provides a peek into the latest threats to Industrial Control Systems (ICS) and Supervisory Control and Data Acquisition (SCADA) systems. Students will explore historical attacks against critical infrastructures across the world to develop an understanding of the challenges faced in securing these systems. Key topics such as malware threats, insider attacks, denial of service, hacker attacks, and terrorism will be reviewed. (Prerequisite: **ISSC479**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC481 IT Security: Planning and Policy (3 semester hours)

This course examines the principles of security planning and policy; it offers a holistic approach to cybersecurity for an organization. It focuses on a variety of security guidelines, policies and plans (security requirements, internal users, external users, operational costs, geography, capacity plan, growth plan, business organization, business scenarios, business factors, business processes, business functions, business products, product life cycle, technical factors, roles and responsibilities, and organizational authority). This course addresses physical security, authentication, network security, encryption, software development, email, Internet, acceptable use, acceptable speech, and viruses/worms. It also covers the need for actionable and maintainable policies and the need for periodic audits of policies and configurations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC483 Privacy and Cyberethics in Mobile and Wireless Networks (3 semester hours)

The Internet's explosive growth and the availability of a myriad of devices that connect each of us with one another using a various mobile network technologies empowering us to great capabilities, has given rise to questioning if any limitations do exist. The manners by which we use our devices for the purposes we desire to accomplish, may also disarm us with what is still unknown to us. Concerning ethical issues, cyber governance, and cyber and privacy policies are eminent to keeping order for a chaotic realm of cyber communications. In this course you will explore some of these policies, the ethical approach and our moral duties in cyber obligations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC498 IT Security: Implementation Plan: Capstone (3 semester hours)

This Capstone course is a senior level course designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Information Systems Security. Students will complete various security related plans and policies that demonstrate mastery of their program of study and results in a meaningful culmination of their learning; these plans and policies will be used to assess their level of mastery of the stated outcomes of their degree requirements. This is a capstone course to be taken after all other Information Systems Security courses have been satisfactorily completed. (Prerequisite: Completion of a minimum of 106 hours towards your program including **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ISSC499 Senior Seminar in Cybersecurity (3 semester hours)

This Capstone course is a senior level course designed to allow the student to review, analyze, and integrate the work the student has completed toward the Bachelors of Science in Cybersecurity degree. Students will examine a number of real-world scenario cases related to various aspects of Cybersecurity to complete various cybersecurity related plans and policies that demonstrate mastery of their program of study in a meaningful culmination of their learning and to assess their level of mastery of the stated outcomes of their degree requirements. (Prerequisite: Completion of a minimum of 105 hours towards your program including **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Data Science (DATS)

DATS200 Functional Methods and Coding (3 semester hours)

This course provides students with the basic knowledge and skills to handle and analyze data using a variety of methods, as well as different programming languages and tools. Students are introduced to current industry standard data analysis packages and tools – such as those in R/RStudio, Python, and Structured Query Language (SQL) – to prepare them for higher-level courses that rely heavily on the use of these analytic tools. (Prerequisites: **MATH302** and **MATH220**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS201 Analytical Methods I (3 semester hours)

This course provides students with the basic toolkit of statistical methods and models that practitioners use for regression, analysis of variance, and linear models. This toolkit could be based on Python® or on R. Topics include descriptive statistics/data summaries, inference in simple and multiple linear regression, residual analysis, estimation and testing of hypothesis, transformations, polynomial regression, model building with real data, nonlinear regression and linear models. The course is not mathematically advanced but covers a large volume of material. (Prerequisites: **DATS200**, **MATH302** and **MATH220**)

Python® is a registered trademark of the Python Software Foundation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS211 Introduction to Data Science (3 semester hours)

This course provides an overview of data science including a foundation in research methodology. Data science is a data-driven process that provides descriptive, predictive, and prescriptive insight. Whether reporting on historical information or making predictions about future events, the goal of data science is to add value through analysis that informs. To meet this goal this course introduces a range of tools and methods including supervised and unsupervised techniques. These include techniques such as classification, rule-based association techniques, support vector machines, K-nearest neighbor, regression, and clustering techniques such as K-Means. (Prerequisite: **DATS201**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS221 Exploratory Data Analysis (3 semester hours)

Exploratory data analysis (EDA) plays a crucial role in the first stages of analysis. That is, the data determine what the appropriate analysis technique is rather than an analysis technique being applied to the data. During this course students develop skills in all aspects of exploratory data analysis including a wide variety of tools and techniques for pre-processing and cleaning data, including big data. This course also introduces students to evaluating and plotting/graphing data to evaluate the content and integrity of a data set. (Prerequisite: **DATS200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS225 Data Visualization (3 semester hours)

One of the most important functions in data science is the communication of the meaning in data. Data visualization is a core competency that enables that communication. This course introduces students to best practices in the visual and graphical representation of data and meaning. Design principles are emphasized as skills in visual communication develop. The specific tools and methods used in this course will vary depending on current industry standards and preferences. (Prerequisite: **DATS200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS281 Introduction to Python I (3 semester hours)

This course introduces Python to students with very little programming experience. It covers the basics of programming, including core elements of programs, data types, and functions. Topics also include Python syntax, working with variables, and creating simple Python code. Additional areas of focus include debugging, runtime, and an overview of computational complexity. (Prerequisite: **DATS200** or chair override)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS298 Associate Seminar (3 semester hours)

This course is intended to be the last course taken prior to completing the Associate of Science in Data Science program of study. Students will work as a team to acquire and analyze data to address a specified challenge or problem. This course stresses critical thinking in analyzing data with a focus on implementation of potential solutions within a given context. Challenges or problems assigned in this course involve real-world, complex situations such as large natural disasters, broad financial incidents or pandemics, planning for policy discussions at the state, regional or national level, etc. (Intended to be the last course in the program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS301 Analytical Methods II (3 semester hours)

Whereas Analytical Methods I primarily deals with continuous data, this course deals with methods and tools used to analyze categorical (discrete) data. For example, researchers analyze categorical data, e.g. using logistic regression, to determine the results of tests such as learning if a patient's tumor cancerous or not, or whether a consumer will purchase a particular product or not. Specific attention will be paid to surveys and survey data. In addition, this course introduces generalized linear modeling. (Prerequisite: **DATS211**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS311 Intermediate Data Science (3 semester hours)

This course continues to expand the knowledge, skills and abilities of students by two paths; first through the design of experiments required to acquire specified data, and second using carefully designed experiments to establish causal effects. Students will take a deep dive into the differences between correlation and causality. They will learn the critical thinking skills required to assert the reliability of data acquired. (Prerequisite: **DATS301**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS344 Probabilistic Graphical Models (3 semester hours)

This course focuses on the use of probabilistic graphical models to represent complex domains using probability distributions. Using probabilistic graphical models to model large collections of random variables with complex interactions. Students will learn the key formalisms and main techniques in building probabilistic graphical models. And, how to use them to make predictions and support decision-making under uncertainty. Bayesian networks, directed and undirected graphical models, as well as their temporal extensions will be covered. Students will be introduced to causation and how it can be modeled. (Prerequisites: **MATH302**, **MATH328**, **DATS301**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS371 Fundamentals of Simulation (3 semester hours)

This course provides students with an introduction to modeling and simulation at the undergraduate or at the graduate level. It includes an introduction to discrete event simulation (DES) as well as simulation methodology, input data modeling, output data analysis, and a broad overview of DES tools. It also includes an introduction to continuous simulation (CS) as well as simulation methodology, differential equation models, numerical solution techniques, and a broad overview of CS tools. (Prerequisites: **MATH240**, **MATH302**, **MATH328**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS381 Behind the Data, Our values and beliefs (3 semester hours)

This course discusses the legal, policy and ethical implications of data including privacy, surveillance, security, classification, discrimination, decisional-autonomy, and duties to warn or act. Examines these issues over the full data-science life cycle; data collection, storage, processing, analysis, and use. Includes current topics such as: legal and policy constraints; data collection methods and institutions; as well as technical, legal, and market approaches to mitigating and managing concerns.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS382 Python and Data Science I (3 semester hours)

This course explores how Python, one of the most popular programming languages today, is applied in data analysis, image processing, machine learning, and parallelism. As a lab-based course, it emphasizes significant time spent programming. Topics include handling data structures such as Python lists, NumPy arrays, and Pandas DataFrames. The course also focuses on functions, flow control, and building on data visualization concepts introduced in **DATS225** – Data Visualization. (Prerequisite: **DATS281**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS401 Analytical Methods III (3 semester hours)

This course covers topics in advanced topics and methods such as unstructured data/information and big data. The theoretical background required for the integration of data mining and text analytics or text mining are explored. Students are exposed to additional topics such as the implementation and use of data lakes and ontology evaluation. (Prerequisites: **DATS200**, **DATS201**, **DATS301**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS411 Advanced Data Science (3 semester hours)

This course completes the three-course sequence in Data Science. This advanced course takes students through the application of more advanced methods in regression and time series models. It includes discussions about causal inference, and a wide-range of time series models. This course emphasizes tools and methods used to capture key patterns and generate insight from data. (Prerequisite: **DATS311**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS433 Artificial Neural Networks using TensorFlow (3 semester hours)

The Google Brain Team originally developed TensorFlow as a proprietary code. Today, TensorFlow is open source and freely available. This course teaches students how to use TensorFlow to build and run artificial neural networks. Convolutional and recurrent networks will be included as well regression. (Prerequisite: **DATS431**. **DATS432** strongly recommended)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS435 Optimization and Machine Learning (3 semester hours)

This course provides an introduction to optimization and machine learning, i.e. how machines learn. It takes an in-depth look at objective, or loss, functions and how they are used to reduce error through feedback. It also takes a look at how that feedback enables machines to learn. Students gain an appreciation of the similarities in optimization and machine learning, as well as the differences. It also takes a look at all the challenges in training machine models including the local minima or maxima that affect machine learning. In addition, it discusses different methods that are applied to optimization and machine learning, e.g. gradient methods. (Prerequisites: **MATH240**, **MATH328**, **DATS301**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS442 Bayesian Methods (Bayesian Inference, Naïve Bays) (3 semester hours)

This course focuses on the Bayesian approach to probability and statistics and applies it to tools and methods used in data science. This course starts with a brief review of the tenets of probability that form the foundation for Bayes Theorem. Next, it discusses Bayes Theorem in-depth. Then, it considers the Bayesian approach to inference, examines the Naïve Bayes model, and develops Bayesian regression. (Prerequisite: **MATH328**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS443 Generalized Linear Equations Using R (3 semester hours)

This course introduces students to generalized linear models that extend the linear modeling framework to allow response variables that are not normally distributed. Estimation and inference are included. Continuous data is considered. However, the primary focus is on binary or count data. Poisson and quasi-Poisson models are discussed. (Prerequisites: **MATH227**, **MATH328**, **DATS301**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS451 Sentiment Analysis I (3 semester hours)

Sentiment analysis is a specialized form of natural language processing intended to determine opinions expressed in written text. This lab-based course is designed to implement topics covered in labs. The topics covered include the concepts and theories behind sentiment analysis and opinion mining. The course will also discuss the research approaches taken in sentiment analysis, knowledge-based techniques, statistical methods, and hybrid approaches. Tasks in sentiment analysis will be discussed and implemented through labs, such as determining an emotional scale and generating a sentiment score. Students will analyze positive and negative words and evaluate customer sentiment through text analysis and emotion recognition techniques. (Prerequisites: **MATH302** and **DATS411**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS465 Risk Modeling and Assessment (3 semester hours)

This course provides students with knowledge about the complete risk assessment process. It begins with in-depth discussions about the mathematical and computational models supporting risk assessment. Then, covers a variety of situations where risk can have a great impact, e.g. extreme events. Hierarchical holographic modeling and related models are used to analyze subsystem risks and how those risks compound to affect an entire system. (Prerequisites: **MATH328**, **DATS301**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS473 Simulation Techniques I (3 semester hours)

This course provides the theoretical foundations, tools, and methods used to implement solutions through discrete event simulation, agent-based simulation, and other simulation techniques. It emphasizes the use of simulation models to explore different scenarios and develop effective processes for complex systems. The course incorporates analytical methods and demonstrates how different types of simulation models can be used to simulate operations and evaluate outcomes. Learners will engage with examples of real-world simulations to understand how to design, implement, and optimize simulation programs. (Prerequisite: **DATS371**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DATS499 Senior Capstone Project (3 semester hours)

This Capstone course is intended to be the last course taken by seniors prior to completing their bachelor’s degree. It is intended to give seniors the opportunity to demonstrate the knowledge and skills they have gained throughout their program of study. At the start of this course, students will be presented with a complex, real-world problem. As they consider this problem, they will restate it in a format consistent with conducting a data analysis. They will acquire the data needed and pre-process that data as required. They will determine the best method of analysis depending on the problem and the data. They will conduct the analysis obtaining preliminary results, and evaluate the analysis and the results to determine if any adjustments to parameters or hyperparameters need to be made. They will obtain the final results, i.e. the solution to the problem. Last, they will generate a written report and an oral presentation that discusses the problem, the data, the analysis including any parameters or hyperparameters used, the results, and their evaluation of the analysis and results. It is intended that the report and presentation be of sufficiently high quality to serve as part of the student’s portfolio for job interviews or applications to graduate school. (Intended to be the last course in the program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Education (EDUC)

EDUC111 Observation Techniques (3 semester hours)

This course examines formal and informal methods of gathering and analyzing data on children. The emphasis is on understanding developmental patterns and implications for diagnostic assessment and intervention.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC200 Humane Education: A Global Interdisciplinary Perspective (3 semester hours)

This course is based upon the Institute for Humane Education's (IHE) definition of humane education, which is "a lens, body of knowledge, and set of tools and strategies for teaching about human rights, animal protection, environmental stewardship, and cultural issues as interconnected and integral dimensions of a just, healthy society" (Institute for Humane Education, n.d.). The course explores issues, resources, rationales, and approaches to humane education related to various considerations and disciplines, including: economics, politics, science, technology, education, the arts, philosophy, religion, and geography.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC320 Classroom Management (3 semester hours)

This course provides course participants with the knowledge and skills necessary to establish a classroom learning community in which they can organize and conduct effective instruction that challenges and involves adult learners. Course content will focus on effectively planning instruction or training for adults; considering the unique needs of adult learners; building a sense of community among learners; assessing learning; attending to different needs; and instructing in online, face-to-face, and hybrid learning contexts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC340 Adult Learning Theory (3 semester hours)

This course provides students with a foundation in theoretical and practical aspects of adult learning. The course begins with comparing and contrasting adult learning (andragogy) to learning among children and adolescents (pedagogy). Examination of various theorists, theories, and practitioners; technology integration rationales; and application of theories to practice in online, face-to-face, and hybrid environments prepares students to plan, teach, and evaluate adult learning.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC401 Curriculum Design (3 semester hours)

This course focuses on the knowledge and skills necessary for the effective development of curriculum materials and organization and implementation of those materials as a learning program with a focus on adult learners. Activities include studying and applying seminal and current theories, creating engaging experiences, attending to different learner needs, and understanding key aspects of program evaluation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDUC402 Measurement and Evaluation (3 semester hours)

This course requires students to study theory, concepts, and practices of measurement and evaluation in instructional settings with a focus on adult learning contexts. Course topics include reliability, test and evaluation development, validation, accommodations for adult learners with disabilities, ethical evaluation and measurement practices, and assessment (e.g. rubric creation).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Emergency Management (EDMG)

EDMG101 Introduction to Emergency Management (3 semester hours)

This is designed to introduce students to the concepts of emergency management. Students will gain a general understanding of the threats faced by communities. Students will explore the role of emergency management as well as the activities taken during the various phases of emergency management: mitigation, preparedness, response, and recovery. Topics covered in this class include the history and development of emergency management, hazard identification and risk analysis, mitigation, communications, international disaster management, and the future of emergency management. Through a simulation exercise, the students use publicly available tools to take on the role of an emergency manager. They will be tasked with doing a comprehensive risk assessment of a fictional town and apply the results to a Hazard Vulnerability Assessment (HVA) using different man-made, technological, and natural hazards that culminates in a peer-review assessment.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG220 Emergency Planning (3 semester hours)

Effective emergency planning is the key to surviving natural and man-made disasters. Risk analysis and the formulation of a comprehensive plan, followed by a vigorous and continuing testing program, are essential elements to surviving an emergency. Topics covered include threat assessment, risk analysis, the formulation of a plan, emergency operations center (EOC) staffing, coordination with supporting agencies, the importance of liaison continuity, actual incident management, and effective follow-up analysis. Various actual case studies are discussed. Students build upon their knowledge and use the Hazard Vulnerability Assessment (HVA) developed in **EDMG101**. If they have not taken the course, a generic completed HVA will be provided to develop a section of an Emergency Operation Plan. Students will also have the ability to work through a self-paced optional “refresher” module on the creation of the HVA.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG230 Emergency and Disaster Incident Command (3 semester hours)

This course is a study of the theory and practice of incident command, the various methods of incident command, and specific focus on the Incident Command System (ICS) used in crises, disasters, and emergency management response systems. The roles and responsibilities of the ICS system are identified. The different agencies and incidents in which the ICS system is used are discussed. Cases are studied in order to assist students in understanding the management and leadership complexity associated with modern emergencies and disasters. The student will participate in a 2D/3D simulation and take on a new role within an incident command scenario shifting from being an information producer, to an information consumer, and decision-maker. The scenario will feature a terrorist event at a university graduation where students will be required to activate their incident command system, working the scenario to its conclusion using decision-making points throughout.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG240 Chemistry of Hazardous Materials (3 semester hours)

This course gives the student an in-depth study of the chemistry of hazardous materials as emergency management personnel must deal with these types of materials. The course covers a great amount of material on the chemistry and physical properties of common materials that an emergency responder will commonly find in the course of responding to emergencies. It is important for emergency responders to have this knowledge for the safety of them and others. This course presents the chemical basis for classification of, and emergency response to incidents involving, hazardous materials. It is designed for the non-chemist emergency responder, transporters and others who need to understand the implications of single product and multiple product spills, releases and incidents.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG259 Hazard Mitigation and Preparedness (3 semester hours)

This course will provide the student with an overview of society's need for planning for hazardous situations. Every community faces the potential of hazards, both natural and manmade. Only when people are injured and property is damaged by a hazard does a disaster occur. Due to patterns of population growth and development in the United States, disasters now occur more frequently than ever before. Mitigation and preparedness strategies are critical ways of making a community more resilient against the impacts of hazards.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG320 Natural Disaster Management (3 semester hours)

This course covers the basic principles of natural disaster management in the United States. This course highlights several hazard types as topical investigations, as well as the processes and considerations of management options for preparedness, response, recovery, and mitigation. This will include, but not be limited to, understanding basic natural hazard mechanisms, the range of physical and human impacts, linkages to demographic and environmental transitions, and both structural and non-structural mitigation techniques. All management techniques are framed within existing U.S. federal guidelines, however management techniques covered in this course may be applied widely. The course covers organization, operations, training, and other issues associated with the management of natural disasters. The student will participate in a simulation taking on a decision-making role and must react to information about a specific natural disaster that develops over a series of weeks. The students will be presented with a series of weather-related information and will be assigned a specific role. They must make leadership decisions on how they will utilize their resources responding regularly to the incident commander (course professor) explaining what actions need to be carried out along with their rationale for their actions. Wrapping up the scenario, a Hot Wash is conducted with three UP (good) things and three DOWN (need improvement) things and provided to the incident commander so that the student will be able to better handle the next disaster as a lessons-learned phase.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG321 Social Media Application to Emergency and Disaster Management (3 semester hours)

This course explores social media and other forms of communication; their value and limitations in today’s environment; and cross-functional employment in support of emergency management, homeland security, and public health emergency operations. In addition, this course evaluates the contributions of the internet and social media within a larger media/public relations context, as a stand-alone mass notification/information-sharing platform, and as part of a communications strategy for disaster response. Through a simulation, the student experiences a vital role within emergency and disaster management, that of a public affairs officer. Within the course, the student explores the utility and challenges of using social media as an emergency management communication tool to support homeland security and public health emergency operations. Using private locked-down Facebook and Twitter groups, students develop social media posts specific to their assigned roles and what they need to convey to the town as the public affairs officers during a severe storm scenario and a terrorist attack threat scenario. In addition to these roles, one student is assigned the role of the antagonist, and another is assigned the disruptor role with the goal of spreading rumors, myths, and misinformation. The purpose is to emulate some of the key challenges that emergency management public affairs officers encounter on a regular basis. The intent is for all students to learn the use of social media and the Center for Disease Control (CDC) Social Media Toolkit as a way to improve their communications during an emergency.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG330 Managerial Issues in Hazardous Materials (3 semester hours)

This course covers managerial issues in hazardous materials. The impact hazardous materials have on humans, wildlife, and the environment will be covered. The major laws that are applicable to hazardous materials at the Federal, State, and local levels will be discussed. The student will learn about writing an effective contingency plan and the importance of coordination and collaboration across multiple agencies when dealing with a hazardous material response. This course examines all facets of hazardous materials including regulatory issues, hazard analysis, multi-agency contingency planning, response personnel, multi-agency response resources, agency policies, procedures and implementation, public education and emergency information systems, health and safety, command post dynamics, strategic and tactical considerations, recovery and termination procedures, and program evaluation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG340 Consequence Management (3 semester hours)

This course addresses the potential results from nuclear, biological, and chemical incidents or uses. Topics include public health consequences of such incidents, emergency planning and response measures in place among U.S. agencies, and emerging detection and management technologies. Existing vulnerabilities to these types of incidents and attacks will also be discussed. Objectives of the course include identification of the historical development and use of chemical and biological weapons; definition of the types of chemical and biological weapons and their impacts; analysis of case studies related to the development and use of chemical and biological weapons, and research on chemical and biological warfare.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG420 Risk Communications (3 semester hours)

This course examines media management during local/national disasters and/or events. It will also address the media and all levels of governmental response. The focus will be on actual operations and on-site issues. This course provides the student an arsenal of useable tools and techniques that are universally prescriptive and can be implemented in nearly every risk-associated situation, from public health to accidents to terrorist attacks and even to challenges to corporate reputation management. Students who complete this course will be prepared to make the best possible decisions during a crisis emergency about the affected population’s wellbeing, and communicate those decisions, within nearly impossible time constraints, and ultimately, to accept the imperfect nature of choices as the situation evolves.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG498 Senior Seminar in Emergency & Disaster Mgmt. (3 semester hours)

This senior capstone course allows students majoring in emergency and disaster management to participate in a simulated disaster scenario that develops and spans the entire course using the knowledge and understanding gained through the required courses and a significant number of the major courses in the program. (Prerequisite: Completion of a minimum of 106 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EDMG499 Independent Study in Emergency and Disaster Mgmt (3 semester hours)

This course gives students an opportunity to pursue an independent research project or examine a specific area of study under the mentorship of a single professor. The course is open to upper division students only. Participation is at the discretion of the faculty member and must be approved by the Program Director or Dean. The course will typically involve a major research paper (20-30 pages). Students will submit a proposal prior to the start of the course. To be eligible for an independent study, students must be enrolled in a bachelors degree program, must have completed 24 hours at APUS toward their current degree program, and should have already contacted a professor and gained approval for the independent study topic. Once these conditions are met the student should contact their academic advisor. Once the course is open the student must complete an official online registration for the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Emergency Management (EXOD)

EXOD299 Sophomore Seminar in Explosive Ordnance Disposal (3 semester hours)

This course is a culminating course for the Associate of Science in Explosive Ordnance Disposal degree. It is designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Explosive Ordnance Disposal. The student will complete an approved academic project or paper that demonstrates the student's grasp of the explosive ordnance disposal field. This is a culminating course to be taken after all other Associate of Science in Explosive Ordnance Disposal courses have been satisfactorily completed. Student must have SOPHOMORE standing to register. Prerequisite: This course is to be taken as the LAST course in the AS in the Explosive Ordnance Disposal Program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Emergency Management (HLSS)

HLSS211 Emergency Response to Terrorism (3 semester hours)

This course is designed to provide students with an understanding of terrorism in the world today. The course examines the history of international and domestic terrorist groups, both state and non-state actors. The course covers the legal aspects of terrorism and Weapons of Mass Destruction (WMD), the composition of WMD that threatens the world including chemical weapons, industrial chemical materials, biological agents, radiological and nuclear materials as well as explosives and explosive devices. The course also addresses the impact of the complexities of terrorism and Chemical Biologic Radiological and Nuclear (CBRN) Weapons on the emergency response community. The course will look at the pre-planning, mitigation, response, and recovery stages. The class will examine the actions necessary to bring the event to termination including: protecting the population and emergency responder, the roles of federal regulations to secure that protection; how the event is treated as a crime and the actions necessary to secure evidence and protect the environment.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Engineering (ELEN)

ELEN100 Introduction to Electrical Engineering (3 semester hours)

This is an introductory course that incorporates labs and project based learning. The course uses the IEEE® Code of Ethics to apply ethics to engineering scenarios, as well as research the Electrical Engineering field and apply engineering design principles that will be used in Electrical Engineering courses. Students will examine and explore various electrical engineering concepts and components and use them to build working projects that sense temperature, read switches, write data to displays, drive LEDs, and generate audio signals. Students will use graphical system software to verify project performance. NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details.

IEEE® is a registered trademark of the Institute of Electrical and Electronics Engineers, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN201 Circuits I (3 semester hours)

This course presents concepts associated with DC circuit analysis and synthesis including: resistance, capacitance, inductance, Ohm's Law, Kirchhoff's Laws, node voltage analysis, mesh current analysis, superposition, Thevenin-Norton equivalents, and operational amplifiers. (Prerequisites: **MATH240** and **SCIN234**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN202 Circuits II (3 semester hours)

This course presents concepts associated with AC circuit analysis and synthesis including sinusoidal steady-state analysis, electric power, 3-phase power, magnetically coupled coils, frequency selective circuits, Laplace domain representations of circuits, and Fourier series representations of periodic waveforms. (Prerequisite: **ELEN201**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN210 Engineering Instrumentation and Measurements (3 semester hours)

This course will present important measurement techniques and instruments used in electrical engineering. An overview of the modern International System of Units (SI), including important units outside the SI standard will be discussed. Measurement errors, measurement uncertainty, and instrumentation limits on errors will be introduced as well as measurement elements such as resistors, capacitors, inductors, laboratory voltage sources, and analog measuring instruments. The course will also cover compensation measurement methods and introduce AC and DC calibration techniques. Additionally, the uses and testing methods of instrument transformers, operational amplifiers (opamps), and oscilloscopes will be presented. A description of the construction of the digital voltmeter and an overview of analog to digital converters will be provided. Finally, the course describes various measurement systems that students will use throughout the curriculum including the most popular sensors, signal conditioning, computer algorithms, and data acquisition hardware. (Prerequisites: **MATH240** and **SCIN234**)

NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN306 Analog Circuit Theory (4 semester hours)

This course presents basic elements in analog circuit design. Initially operational amplifiers will be discussed, including design and implementation of practical amplifier and feedback circuits. Other analog elements such as diodes and transistors will be introduced combined with previously discussed passive components to design DC power supplies, audio amplifiers, active filters and oscillators along with other applications. Students will gain a fundamental understanding of the key analog circuit components and the basic skills to create and implement practical designs.
NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details. (Prerequisite: **ELEN202**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN307 Digital Circuit Theory (4 semester hours)

This course presents digital and logic circuit analysis and design. The course covers six main parts: Boolean algebra and Boolean function simplification; basic logic gates, combinational functional blocks, and combinational circuit design using gates and functional blocks; digital circuit description by VHDL language; basic flip-flops, sequential circuit analysis and design; registers, static and dynamic memories, ROM and RAM, programmable logic devices, and field programmable gate arrays (FPGA's); and register transfer language, basic computer structure, operation and design. Students will be introduced to the concepts of digital circuit theory and design, will practice with circuit analysis software, will gain solid skills to analyze and design digital circuits for various applications, and will get familiar with the structure and operation of a digital processor.
NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details. (Prerequisite: **ELEN202**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN310 Continuous and Discrete Signals and Systems (4 semester hours)

This course is presents signal and system description and characterization in the time and frequency domains for linear time-invariant (LTIV) systems. Time domain topics include differential and difference equations; convolution; and Fourier Series. Frequency domain material will incorporate Fourier transforms; Laplace transforms; z-transforms; and system description via transfer functions. The sampling theorem will be addressed. State-space representation of LTIV systems in either the time or frequency domains will be introduced. The course will show students how to characterize and analyze systems in either time or frequency and transform between domains. Students will be shown how to determine and apply a correct technique to either analyze an existing system or design a system to meet specifications.
NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details. (Prerequisites: **ELEN202** and **MATH210**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN315 Energy Conversion Processes and Power Systems (3 semester hours)

This course presents concepts related to energy conversion and transport and provides the foundation for understanding power generation and distribution. Energy conversion in electrical, electromagnetic, electromechanical and electrochemical systems will be discussed. Different forms of power generation, both AC and DC, will be covered along with single-phase and three-phase power, transmission lines, and transformers. The course will also cover AC and DC motors, motor control, power measurement, switches and rectifiers. An introduction to power electronics will be also be presented, demonstrating the circuits used to interface both traditional and emerging alternative energy sources to the existing distribution system and homes. The course will center on a practical understanding of individual components and applying this knowledge to discussions of large and small scale energy systems, Students will gain the fundamental skill set to understand our electrical grid and power generation. (Prerequisites: **ELEN202** and **ELEN350**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN350 Electromagnetic Field Theory (3 semester hours)

This course teaches the physics and applications of electromagnetic field theory as encapsulated in the vector form of Maxwell's equations. The class will show how these laws govern the design and bound the performance of electronic devices, circuits, and systems. This course covers the following topics from field theory to include magnetic materials and forces, inductance, Coulomb‘s law, Gauss’s Law, energy, divergence, electrical potential, conductors, dielectrics materials, capacitance, Ampere’s Law, boundary value problems, Biot-Savart Law, Ampere‘s law, Lorentz force equation, magnetic materials, magnetic circuits, inductance, time varying fields and Maxwell‘s equations. As part of the course, students will develop Maxwell’s Equations from electric and magnetic field experimental laws. This course will also cover wave propagation in free space and in transmission lines and characteristics of radiating structures such as antennas. (Prerequisites: **MATH227** and **MATH240**)

NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN416 Control Systems Theory and Design (3 semester hours)

This course covers the basic principles of frequency- and time-domain design techniques. Classical methods covered include Laplace transforms and transfer functions; root locus design; Routh-Hurwitz stability analysis; frequency response methods including Bode, Nyquist, and Nichols; steady state error for standard test signals; second order system approximations; and phase and gain margin and bandwidth. In addition, the state variable method is investigated including full state feedback design, and limitations of state variable feedback. The student will learn to use computers in the analysis and design of control systems. NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details. (Prerequisite: **ELEN310**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN420 Communication Systems (3 semester hours)

The course covers statistical communication theory including amplitude, frequency, and pulse code modulation; description of random process by auto-correlation and power spectral density functions, sources and properties of electrical noise and its effect on communication systems, the effects of modulation, detection and filtering on signal information content, and bandwidth and signal-to-noise ratio. Topics include: a review of signals and systems, power spectral density, amplitude modulation, angle modulation, pulse modulation, a review of probability and random variables, and an introduction to digital transmission systems. NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details. (Prerequisites: **ELEN310**, **ELEN325** or **ELEN350**, and **MATH303** or **MATH328**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN421 RF/Microwave Engineering I (3 semester hours)

This course covers the fundamental concepts of passive microwave circuit analysis and design. Topics include electromagnetic theory, propagation of electromagnetic waves in various transmission media, microwave network analysis, the Smith Chart, impedance matching & tuning, resonators, power dividers, directional couplers, and microwave filters. At the end of this course, you will have an understanding of the key concepts and components associated with passive microwave circuits. (Prerequisites: **ELEN350**)
NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN424 Robotics (3 semester hours)

This robotics course introduces the modeling, analysis, and control of robotic systems, with emphasis on robot kinematics, robot dynamics, motion planning, and state estimation. Drawing on linear algebra and multivariable calculus, students gain both theoretical knowledge and hands-on experience through assignments, projects, and simulations. The course also covers manipulator design and an introduction to robotic perception and planning, providing the fundamentals needed to apply robotics concepts in practical applications. (Prerequisites: **MATH240** and **ELEN416**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN425 AI-Driven Robotics Development (3 semester hours)

This AI-driven robotics course introduces students to artificial intelligence (AI) techniques that enable robots to perform complex tasks, including machine learning, computer vision, reinforcement learning, sensor fusion, and intelligent control. Students develop software for autonomous navigation and mobile robots, applying AI technologies such as object detection, mapping, and simultaneous localization. Using simulations, students gain practical experience in designing and validating intelligent robotic systems through simulation environments, preparing them to apply cutting-edge AI robotics methods across various industries. (Prerequisites: **MATH240** and **ELEN416**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN427 Radar Systems Theory (4 semester hours)

This course is an in-depth coverage of the theory of radar and RF signal propagation, transmission, and reception. Topics covered include the radar range equation; antenna patterns; target cross section; system losses; calculation of signal-to-interference ratios; detection probability; target scintillation; main lobe and side lobe clutter; and moving target indicator (MTI) and pulse Doppler processing. Radar system hardware including transmitters, receivers, and antennas will be introduced and system block diagrams created. Classification of radar types into search, track, or mapping systems will be discussed. NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details. (Prerequisite: **ELEN420**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN430 Embedded Systems Design (3 semester hours)

The fundamentals of embedded system hardware and firmware design will be covered in this course. The main topics to be discussed are: embedded processor selection, hardware/firmware partitioning, glue logic, circuit design, circuit layout, circuit debugging, development tools, firmware architecture, firmware design, and firmware debugging. The Atmel AVR series microcontroller will be studied. The architecture and instruction set of the microcontroller will be discussed. A microcontroller development board will be utilized as a development and debugging platform. The course will culminate in a significant final project and will include interfacing real world peripherals to the microcontroller to perform some specific task. Depending on the interests of the students and professor, other relevant topics may be covered. NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details. (Prerequisites: **ELEN307** and **ENGR200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN432 Microcontroller Based Systems (3 semester hours)

This course is an introduction to microcontroller-based systems. Topics in the class include microprocessor/microcontroller organization, instruction sets, assembly language programming, analog and digital interfacing, and design of microcontroller based systems. Emphasis is on design, labs and projects in the course, including written and oral communication for project summaries and results. (Prerequisite: **ELEN307**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN435 Introduction to Power Electronics (4 semester hours)

This course takes a student with a basic understanding of circuit analysis and introduces them to the functionality, topography, and regulation of power electronic devices. Students will become skilled in power computations based on load design, conversion of DC/DC, DC/AC, AC/DC, and AC/AC circuits, rectifiers, voltage controllers, power supplies, inverters, and operations of semiconductor devices, and basic switching circuits. Students will also delve into software tools with embedded power electronic equations to simulate and investigate the behavior of power electronic circuits under various load settings and heat sync scenarios. They will also utilize software to experiment and manipulate power electronic equations and observe voltage and current waveforms. NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details. (Prerequisites: **ELEN306** and **ELEN325** or **ELEN350**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN437 Robotics Design and Experimentation Lab (4 semester hours)

This robotics design course provides hands-on experience in the development of robotic systems, with a focus on design, building, and testing. Students work with sensors, actuators, and embedded controllers to create prototypes that demonstrate autonomous behavior. Key topics include mechanical assembly, modeling, system integration, debugging, and design iteration. Emphasis is placed on applying engineering principles and working with components and materials to gain a practical understanding of robotics in both research and real-world applications. (Prerequisite: **ELEN424** and **ELEN425**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN438 Perception and Planning for Autonomous Systems with Lab (4 semester hours)

This robotics and autonomous systems course introduces students to the principles of sensing, perception, and motion planning in autonomous systems. Students examine how autonomous robots and intelligent systems perceive their environments, apply sensor fusion and computer vision, and use algorithmic methods to plan efficient paths in both static and dynamic physical systems. Emphasis is placed on the integration of control systems, mapping techniques, and decision-making processes that support advanced applications in robotics and artificial intelligence. (Prerequisite: **ELEN437**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN440 Mechatronics (4 semester hours)

This course covers the foundational concepts in mechatronics. It introduces students to the required skills necessary to design a complete mechatronic system. Students will learn about the use and integration of sensors, actuators, microcontrollers, and various types of software required to interact with hardware. Students will gain a system-of-systems approach to designing a complete mechatronics system and how to structure and interface to electromechanical systems. They will also gain practical experience through laboratory exercises in design of graphical user interfaces and real-time operating systems needed to control mechatronic systems. Students will also design feedback control systems with time and task constraints. NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details. (Prerequisites: **ELEN312** or **ELEN315**, and **ELEN416**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN498 Senior Seminar Design (3 semester hours)

This seminar is a senior-level course designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in electrical engineering. The student will design an approved project that demonstrates mastery of their program of study in a meaningful culmination of their learning and to assess their level of mastery of the stated outcomes of their degree requirements. Prerequisite: Completion of a minimum of 110 hours towards your program.
NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ELEN499 Senior Seminar Project (3 semester hours)

After completing the design of their approved project in **ELEN498** - Senior Seminar Design, students will implement that design into a working prototype and write a senior thesis. The senior thesis will be completed and an oral defense presented. Selected senior papers will be retained in our library. The student is further encouraged to submit work to peer reviewed journals, conference proceedings, and/or senior design competitions. NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details. (Prerequisite: **ELEN498**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Engineering (ENGR)

ENGR200 Introduction to Engineering and Computing (3 semester hours)

This course provides an overview of the engineering profession and introduces the student to writing computer programs. The course provides information about different engineering disciplines and gives an overview of electrical engineering. The APUS electrical engineering concentrations are introduced and it describes what career opportunities are available in those concentrations. Additional Engineering subjects are presented including Engineering Ethics and Management. The class presents the principles of structured programming using the C++ language. The course is designed for engineering students without previous programming experience. Topics include: Introductions to computers, C++ programming, classes, objects, strings, control statements, recursion, functions, arrays, vectors, and pointers. Finally, an introductory engineering design problem will be presented which gives the students an opportunity to solve a problem. (Prerequisite: **ELEN100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGR300 Fundamentals of Mechanical Engineering (3 semester hours)

This course presents the fundamental mechanical principles of engineering required for any course of study in the engineering sciences. The student will be introduced to the principles and applications of statics, dynamics, thermodynamics and heat transfer. Students will study the interaction between mechanical and electrical systems and apply analogies between the two. Topics include: Technical problem solving and communication skills; Forces in Structures and Machines; Materials and Stresses; Fluids Engineering; Thermal and Energy Systems; Motion and Power Transmission. Finally, the course will present the essentials of the mechanical engineering profession and where it fits in the world of technology. (Prerequisites: **SCIN234** and **MATH240**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

English (ENGL)

ENGL101 Proficiency in Writing (3 semester hours)

Playing third base doesn't come naturally to most folks; instead, it requires dedication to become good at it. In the same way, learning how to cook or developing a new app takes a lot of time and commitment. As with any new skill, perseverance and consistent daily practice lead to success. And so it is with writing. It's not the mystery most people make it out to be; in fact, when you get right down to it, writing is pretty formulaic. It's a series of skills that, once learned, require a commitment to practicing them. In other words, no one is born a great writer; instead, writers learn their craft through hard work. **ENGL101** identifies the basic building blocks of writing, and as each new skill is learned, it is practiced in a safe and supportive environment. Come take the mystery out of writing in **ENGL101**: Proficiency in Writing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL110 Making Writing Relevant (3 semester hours)

Martin Luther King, Jr, said, "If you can't fly, then run. If you can't run, then walk. If you can't walk, then crawl. But whatever you do, you have to KEEP MOVING." Making Writing Relevant is a composition course that will definitely keep you moving. It is not merely a required course; it is the type of course you will want to take because it moves you onto the path to success. Over eight-weeks, we will help you learn the most important components of a successful writer-communicator. We will teach you how to research properly, knowing you will need this skill in every course you take here at APUS and also in interactions in your professional and personal life. We will teach you the formatting style you will use in your field. We will provide a supportive community to strengthen and encourage you, and by the end of this nearly-all-you-need-to-know-about-writing course, you will be able to fly.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL115 Argumentation and Rhetoric (3 semester hours)

Presidents winning elections, countries declaring war, spouses saving a marriage, students earning scholarships—all of these have something in common: argumentation. Mountains have been moved by masters of this craft. Just think of what such people as Martin Luther King, Jr., Franklin D. Roosevelt, and Abraham Lincoln achieved with the power of their words. There is, as Horace says, harmony in discord. We will explore that harmony and why Fredrick Douglass said there can be no progress without struggle. In this class, we will examine argument strategies and structures, interrogate assumptions, explore moral arguments with complex empirical questions, and analyze a variety of texts—popular culture, websites, advertisements, etc. Be prepared to work with a variety of evidence and opinions, cultures, counterclaims, evidentiary quality, and more, as we study and practice the art of argumentation. (Pre-requisite: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL125 Introduction to Creative Writing (3 semester hours)

Everyone has a story to tell. Our lives are filled with characters, are rich in texture, and have plots and storylines screaming to be told. Within each of us is a writer yearning to share that story. This course is designed to reach into you and pull that writer into the wonderful world of creative writing. You will learn how to build memorable characters, write incisive dialogue, and craft scenery that will make your readers want to buy a ticket to go there. If you have ever dreamt of being published or just want to flex your creative brain cells, this is the course for you. As one writer, Rodney White, so succinctly wrote: It takes nothing to dream and everything not to. Start your writing dreams today. Who knows where they might take you? (Pre-requisite: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL210 Introduction to Literature (3 semester hours)

Do you enjoy horror, romantic, adventure, or science fiction stories? Do you find song lyrics poetic? Have you ever fancied yourself a director, debater, or film critic? Many APUS students have been enthralled with **ENGL210** – a special course that gives students access to many worlds, plots, themes, and voices. You will enter the deep catacombs of Italy, feel the thrill of detective work, relish in the beauty of lyrical poetry, and experience historical events through a first-person perspective. Also, in **ENGL210**, you will feel what it is like to be a critic, director, author, and audience member. Come join an entertaining way to gain insight into the human experience!

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL220 Technical Writing (3 semester hours)

ENGL220 introduces students to several different forms of technical writing while challenging them to engage regularly with the field at a scholarly level. Major concepts include collaboration, audience, document design, persuasion, the use of mobile technologies, and revision. In this course, readings are discovered by students in relevant technical writing journals in the AMU/APUS Trefry Library. As students hone their academic research skills, they are tasked with reporting back to their peers regarding the found articles that are relevant to that week's writing objectives. Weekly class discussions are set up to simulate the technical writing work groups that are routinely found in companies and organizations, and should offer students a place to brainstorm and refine ideas for their larger assignments. Students will compose product proposals, instructions, labels, and a final web-based product manual. These assignments are designed to build on one another and culminate in the final project which can be included in a professional portfolio. (Prerequisites: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL221 Scientific Writing (3 semester hours)

Volcanoes. Biochemistry. Space studies. Whether pursuit of scientific knowledge is for personal interest or career progression, **ENGL221** gives you the knowledge and skills to understand how and why scientific writing is different from other writing styles. As a launch pad to study rocket science or gather data to advocate for environmental protection policies, this course will provide the groundwork for presenting relevant data to all scientific disciplines. We will learn the basics and practice writing various sections of a scientific paper, including the abstract, introduction, materials and methods, results, discussion, conclusion, and references. **ENGL221** will explore the unique structure, style, process, and documentation found in scientific writing. (Prerequisites: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL226 Effective Business Communication (3 semester hours)

In the modern workplace driven by technology, business is about relationships, and the written word connects us. This course teaches us how to build those relationships, efficiently and effectively, through composing common types of business messages. We will focus on writing emails, memos, and letters as well as social media content, presentations, and personal resumes and cover letters. Develop professional communication skills to articulate your ideas and purpose to a variety of different business audiences in clear, concise, correct, coherent, and credible ways. (Pre-requisite: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL235 Take on the World: An Introduction to Linguistics (3 semester hours)

The only constant in a person's life, whether awake or in a dream state, is language; in fact, it is everything, everywhere, all at once. The process of acquiring language begins even before birth, and by mid-childhood, most have developed a first language without having to work at it. It is natural; humans are hard-wired to acquire language. Throughout life, language influences thought, impacts identity development, and affects people's behaviors, and learning a second or later language can fundamentally change those thoughts and behaviors. Linguistics, the scientific study of language, focuses on the rules that explain the discrete sounds of language, the combination of those sounds into words, the arrangement of words into sentences, and the meaning derived from those sentences in use. This introduction to Linguistics course is a fascinating first foray into building an understanding of language.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL280 Exploring Society & Cultures via Science Fiction (3 semester hours)

This course offers students with a unique approach into the societies and cultures that we could progress toward in the future via the review of the science fiction genre. This course will review many aspects of technological questions that society will face in the future. Does the rise of technological advancements in artificial intelligence and robotics eventually bring us to a point where we must decide what is life and the right to self-determination as the Star Trek: TNG series covered in "The Measure of a Man", laying out the rights of Commander Data. This is just one of many aspects of society and culture that will be examined throughout the course as students are made to think critically about what will the future look like.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL300 Research, Analysis, and Writing (3 semester hours)

Writer Zora Neale Hurston describes research as "formalized curiosity. It is poking and prying with a purpose." This course will help students hone their research skills, along with all other aspects of academic writing. Students will receive step-by-step guidance through the process while writing about topics they want to explore.
In this course, students will learn how to compose thoughtful research questions, gather and evaluate supporting facts, and create an organized outline for a research paper. Students will also learn how to properly cite sources, avoid plagiarism, flesh out a research paper's paragraphs with substantive details, and turn in a polished final paper. Students will work within a supportive university community and will receive plentiful, constructive feedback.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL320 Freelance Writing (3 semester hours)

Have you ever wondered where magazines, newspapers, websites, and blogs find the content they deliver? In our current age of information, there is an increasing reliance on freelance writers to take on articles of interest and to fill the gaps in both online and print publications. **ENGL320** will teach you how to successfully pitch an article or idea via an industry-standard query letter, write hooks and ledes that will capture an editor's attention, and execute a variety of non-fiction articles for unique audiences. Additional topics include performing market research to determine the best home for your article, how to handle rejection gracefully, and how to fine-tune and polish your writing for publication. In **ENGL320**, you will learn practical skills that can be immediately applied to help advance your non-fiction writing career, so whether you're ready to find an audience for your work or you just want to see what freelance writing is all about, this is the course for you! (Prerequisites: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL322 The Personal Essay (3 semester hours)

Whether we realize it or not, we encounter unique characters, settings, circumstances, and situations nearly every day in almost every way we interact in the world. These encounters are filled with meaning that can only be unlocked through deep processing of the events and an evaluation of their effects on our lives. In **ENGL322**, we learn how to process our encounters and interactions. In order to become compelling first-person narrators, then, we will study what forms a personal essay can take. We will read a wide variety of essays that will act as models of good writing and choose from among them those that resonate with us. Then, we will write our own personal accounts, using the components of voice, setting, structure, theme, and style. In this way, we will develop a richer understanding of the world in which we interact. (Pre-requisite: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL402 WordPlay: A Biography of the English Language (3 semester hours)

Mysterious ancient runes carved into a sword hilt, fierce Germanic kingdoms, and Viking marauders—the history of our language is rooted in artifacts of breathtaking power and the spirit of warriors who came to the British Isles. Civilized by the French courts, seeking adventure along the Silk Road, and embracing democracy in the Americas, English would eventually reign in the world's corridors of power. Now, a sophisticated tool in the hands of wordcrafters, English is a language of strength, beauty, and caprice. Continue the adventure with us in **ENGL402** WordPlay: A Biography of the English Language where we will explore English from its oral roots right up to its modern-day artistry. (Pre-requisite: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL420 Advanced Creative Writing (3 semester hours)

Writing is an expression of self. It is the process of putting yourself, your thoughts, your ideas, your deepest fantasies, and your greatest fears on paper. Nobody writes the way you do! And nobody can write what you choose to write in the same exact way! **ENGL420** will focus on maximizing self-expression in writing; in other words, together, we will discover the voice inside longing to be heard, longing to sing out. We will hone your writing ability using tried and true techniques so that you can tell your stories in a way that is accessible to others. In **ENGL420**, we will explore fiction, creative nonfiction, poetry, songwriting and screenwriting, and develop the tools and the methods necessary to know the differences among them. Bring your creative spirit, your imagination, and your willingness to risk to write the story of your life. (Pre-requisite: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENGL498 Senior Seminar in English (3 semester hours)

So the end is in sight … now it's time to show us what you can do. In this course we will work through the process of creating a formal thesis in the form of a literary analysis essay that demonstrates the critical skills you have developed in your years as an English major. You will pick one literary work and dive deeply into it to engage the critical conversation surrounding it. The 10-15 page essay you produce will not only demonstrate your skills, but also serve as a formal writing sample for those of you intending to pursue graduate education. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Environmental Science (EVSP)

EVSP180 Introduction to Environmental Science (3 semester hours)

This course will give students the opportunity to learn and connect with the central issues in environmental science, from ecological to social to economic considerations. The basic concepts of ecology, geography, chemistry, economics, ethics, policy, and many other disciplines will be used to examine the overarching role that humans play in our planetary environmental problems, successes, and solutions. Assignments will allow students to collect and evaluate qualitative and quantitative data regarding the human-environment relationship. Lifestyle examination, ethical considerations, and critical analysis of individual contributions to local and global impacts in regards to environmental sustainability will be emphasized. This is a course primarily for a non-scientist.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP201 Environmental Economics (3 semester hours)

This course provides an introduction to the economics of natural resource management and environmental policy. Topics include benefit-cost analysis, valuation, market failure, pollution control, sustainable development, market-based environmental policy, and the economics of renewable and non-renewable resource management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP204 Hunting & Wildlife Conservation (3 semester hours)

This course gives students the opportunity to learn and connect issues in wildlife conservation as they pertain to hunting. Basic concepts of ecology, ethics, human health, policy, economics, history, culture, and other disciplines will be used to examine the role hunting plays in wildlife and conservation management. Assignments allow students to study issues and topics surrounding hunting in the U.S. and around the world. These include the following topics: endangered species and associated policies worldwide, the hunter's role in wildlife conservation, infectious diseases of game animals transmittable to humans, government's role in hunting regulations, major hunting and anti-hunting organizations, conservation management funding, invasive species, cultural differences within and outside the U.S., economic impact of hunting, and perceptions and myths of hunting.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP309 Atmospheric Science (3 semester hours)

Atmospheric science is an applied discipline that focuses on the structure and circulation of the atmosphere, global climate change and dynamics, air quality, and other processes that impact humans and the environment. Topics discussed in the course include meteorology, atmospheric physics, atmospheric chemistry, and climate dynamics. Students will also have opportunities to observe and discuss both past, current, and near real-time weather and air quality conditions to better understand the atmosphere's complexity.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP310 Water Science (3 semester hours)

An overview course on water sources, uses, management and conservation; biological, economic, and health issues. The course will use chemical and engineering approaches to water and wastewater treatment. It includes studies for assessing chemicals in water and wastewater. Students will cover the application of standardized analytical methods for evaluating water quality.
(Prerequisites: **BIOL133** or **SCIN130** and **MATH302**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP311 Soil Science (3 semester hours)

A fundamental study of soil properties and reactions critical to the evaluation of how contaminants, as well as essential nutrients, behave in the soil environment. Interactions of potential pollutants with soils and the aquatic and atmospheric environments are emphasized. Methods of soil management or remediation to minimize pollution are presented.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP312 Introduction to Sustainability (3 semester hours)

This course will introduce students to the principles of environmental sustainability. Students will explore various aspects of sustainability, including energy use, industrial processes, waste generation and disposal, and the built environment. As part of the focus on solutions, the course will introduce students to tools society can use to attain and implement sustainable practices, such as policy, law, education and communication, marketing, research advocacy, and international agreements and collaboration.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP316 U.S. Federal Environmental Organization (3 semester hours)

This course is a study of the environmental organization at the federal level, to include duties and responsibilities of federal environmentally-focused agencies, non-environmental agencies and organizations that have environmental impact or related responsibilities, and other federal administrative issues focused on environmental bureaucracy, contracting, and/or outsourcing to private organizations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP320 Energy and Resource Sustainability (3 semester hours)

This course will introduce students to current and future trends in energy technology, policy, and sustainability. It will address topics such as resource sustainability, relevant aspects of economics, sociology of innovation diffusion, product design principles, and the environmental impacts of existing and emerging energy technologies. Analysis of the range of current and future energy choices will be stressed, as well as the role of energy in determining local environmental conditions and the global climate.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP321 Land Use and Planning (3 semester hours)

This course will introduce students to the basic methods of land use planning, including: goal development and formalization, planning intelligence and information systems, population forecasting, land use forecasting, land suitability analysis, land use location requirements, land classification planning, natural/sustainable land use design, and the analysis of regional or local land use plans. Through lecture, discussion, case studies, and assignments, the class will examine fundamental land use controls (i.e., General Plans and Zoning), land use policy, and contemporary land use management techniques.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP322 Remote Sensing and Geographic Information Systems (3 semester hours)

This course illustrates the fundamental concepts of GIS and remote sensing technologies in the context of land use planning and management. Topics include the physical basis for remote sensing, remote sensing systems, digital image processing, data structures, database design, and spatial data analysis. The course is not intended to provide students with extensive training in particular image processing or GIS packages; however course exercises and the final project will require GIS data analysis and presentation skills.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP330 Fish and Wildlife Policies, Programs, and Issues (3 semester hours)

This course focuses on national fish and wildlife policy, programs, and contemporary issues. Topics addressed in the course include historical and contemporary fish and wildlife policy; major fish and wildlife federal, state, and local programs; economic incentives and disincentives associated with fish and wildlife; and non-U.S. approaches to fish and wildlife issues.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP331 Public Lands Management (3 semester hours)

This course focuses on the federal, state, and local agencies, policies, strategies, and public law that influences the public lands management of the United States, and, to a lesser extent, other countries. The focus of the course is the historical and contemporary land management approaches used to protect, exploit, manage, and/or use public lands in the United States. Topics include jurisdictional issues over public land, federal agencies involved in land management, state and local issues and land management, and contemporary issues associated with land management in the 21st Century.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP341 Introduction to Wildlife Management (3 semester hours)

The course explores conceptually the ecological knowledge needed for wildlife conservation, including how species behavior and life history evolves and ultimately how that shapes wildlife populations. Traditional wildlife management topics will be included, along with an added emphasis on ethological implications that affect biological variation. In addition, human behavior and its impact on wildlife populations and biological variation will be studied through case studies, scientific literature, and assigned readings.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP342 Population Ecology (3 semester hours)

This course examines the fundamental laws of population ecology, providing an overview of the underpinnings of population theory. Emphasis is placed on these principles as applied to conservation and management of fish and wildlife populations. Topics include assessing extinction risk of rare species, invasion dynamics of exotic species, demographic and environmental stochasticity, metapopulation dynamics, structured populations, species interactions, interspecific interactions, and micro-evolutionary processes. Use of case studies will demonstrate the application of population ecology models and methods to the management of fish and wildlife populations, and provide the opportunity to apply concepts to current problems and challenges in this field. Students will complete quantitative analyses throughout this course, and a familiarity with college algebra or statistics is encouraged.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP350 Introduction to Climate Change and Resilience (3 semester hours)

This course provides a comprehensive overview of climate change science, the impact of climate change, and potential future scenarios. Students will explore the fundamental concepts of climate resilience, vulnerability, and adaptation. Through case studies, students will analyze historical and contemporary examples of climate change impact on various systems, including ecosystems, infrastructure, and human societies. Topics will include rising global temperatures, extreme weather events, and sea level rise. Special attention will be paid to how different systems respond and adapt. **ESVP350** will also introduce strategies related to mitigation and resilience-building, contributing to a broader understanding of how communities can prepare for and respond to climate-related risks. This course is the prerequisite for **EVSP351**, **EVSP440**, and **EVSP441**.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP351 Climate Change Mitigation and Adaptation Strategies (3 semester hours)

This course delves into the strategies and policies aimed at mitigating greenhouse gas emissions and adapting to the impact of climate change. Students will explore a range of climate change mitigation options, such as renewable energy, energy efficiency, and carbon capture and storage. Additionally, **EVSP351** will cover adaptation strategies to address unavoidable climate effects, including infrastructure development, ecosystem-based adaptation, and community-based planning. Topics will also touch on the role of sustainable land management, emerging technologies, and the integration of climate policy and economics in supporting both adaptation and mitigation goals. (Prerequisite: **EVSP350**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP411 Environmental Policy, Regulation, and Law (3 semester hours)

This course is an introduction to environmental policy, regulation, and law in the U.S. Subjects covered will include command and control of regulation, air quality, water quality, control of toxic materials, waste management, energy, and natural resources.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP413 Environmental and Ecosystems Management (3 semester hours)

This course focuses on contemporary theories and practices associated with environmental and ecosystems management. Industrial, economic, commercial, political, developmental, and other issues and concerns that influence environmental and ecosystems management are addressed.
(Prerequisite: **EVSP310**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP416 General Ecology (3 semester hours)

This course provides an intensive treatment of the field of ecology. Ecology is the scientific study of the interactions among organisms and their environment, which explains the distribution and dynamics of organisms, their traits, and the effects that they have on the natural world. Students will learn that ecology is an integrative discipline that draws from various fields of biology (physiology, morphology, behavior, evolution) and natural sciences (e.g., geology and chemistry), as well as other disciplines (e.g., economics and social sciences). The focus of the course will be on identifying and recommending solutions to ecological problems, e.g., habitat destruction and fragmentation, biological variation, global environmental change, desertification, acidification of the oceans, and others.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP417 Conservation Biology (3 semester hours)

This course examines the fundamental biological and ecological principles of conservation biology. Instruction covers measures of biological variation, species concepts, genetics of small population viability analysis, and metapopulation dynamics; habitat fragmentation including edge effects, corridors and patch dynamics; reserve design principles; setting biological variation priorities; and monitoring indices. Changes in land use patterns and the science of Landscape Ecology are also investigated. Current conservation techniques are reviewed through the use of case studies and computer exercises. (Prerequisites: **BIOL133** or **SCIN130**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP418 Green Infrastructure and Renewable Technologies (3 semester hours)

This course will introduce students to the concepts of green infrastructure planning and design and the implementation of renewable technologies. The framework presented for planning and design will focus on increasing the performance of green infrastructure systems. Students will examine case studies and participate in exercises to develop richly layered, interconnected, and sustainable communities that increase human health and ecological resilience.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP421 Water Resources Management (3 semester hours)

This course is designed to review the practical application of watershed planning as a tool to manage land, water, and ecosystem resources. Students will explore the public policies and practices of watershed planning by examining case studies in water supply, water quality, drought, floodplain, and storm water management in the U.S. The watershed management curriculum will utilize a multi-disciplinary approach, involving the fields of geography, environmental science, geology, public policy, urban and regional land planning, geographic information systems (GIS) and engineering.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP440 Ecosystem-Based Adaptation (3 semester hours)

This course focuses on the role of ecosystem services in climate regulation and resilience, and the potential for widespread use of Ecosystem-based Adaptation (EbA)—a specific type of Nature-based Solution (NbS). Students will explore how EbA strategies conserve, restore, and sustainably manage ecosystems to help communities adapt to climate change. Topics include key services—carbon sequestration, water filtration, biodiversity conservation—and how they contribute to reducing vulnerability and building climate resilience.

EVSP440 will emphasize the design and application of climate-resilient ecosystems, examining terrestrial, freshwater aquatic, and marine environments. Students will also be introduced to concepts such as risk reduction, ecosystem-based planning, and the multiple benefits EbA offers from cost-effective climate solutions to enhanced protection from extreme weather events. (Prerequisite: **EVSP350**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP441 Climate Change Engagement (3 semester hours)

This course focuses on the effective communication of climate change, adaptation, and resilience to targeted audiences, including policymakers, the public, and community leaders. Students will learn how to develop clear and compelling messages about climate change impact, incorporating principles such as framing, storytelling, and the use of visual and data-driven communication.

Additionally, **EVSP441** explores strategies for audience engagement and stakeholder involvement in climate action and decision-making. Topics include public participation, community-based planning, and social marketing, as well as techniques for fostering dialogue, addressing climate skepticism, and promoting behavior change toward a more sustainable future. (Prerequisite: **EVSP350**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

EVSP498 Senior Seminar in Environmental Science (3 semester hours)

As a senior seminar, this course will provide a review of core program content and a springboard for more advanced discussion on topics covered throughout the degree program. Students will review and analyze the environmental problem solving process with consideration for the social, environmental, and economic components. This capstone course will provide students with the opportunity to reflect on the course work and demonstrate knowledge of their selected concentration field of study. This is a capstone course to be taken after the environmental science courses have been satisfactorily completed. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Esports (ESPT)

ESPT101 Introduction to Esports (3 semester hours)

This course provides students with an overview of the history of esports, the esports ecosystem, esports athlete culture, and other relevant topics within the industry. Students will be introduced to the interdisciplinary nature of the esports industry and how it affects stakeholders.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ESPT201 Contemporary Issues in Esports (3 semester hours)

This course provides students with an understanding of current events and important ethical issues of the modern esports industry. The course offers an understanding of contemporary issues and allows students to apply their knowledge to the current industry. Students will assess the field of esports from different perspectives, debate contemporary issues, and respectfully engage in discourse regarding controversial topics in esports.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ESPT205 The Business of Esports (3 semester hours)

This course provides a comprehensive examination of the business aspects of the esports industry. Students will examine esports concepts related, but not limited to, marketing, revenue generation, and sponsorship. The students will apply their knowledge learned in class to the current industry in order to develop practical takeaways and deliverables that can be used in professional settings. (Prerequisite: **ESPT101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ESPT210 Esports Event and Facility Management (3 semester hours)

This course will teach students how to plan, organize, and manage esports events and competitions. Concepts related to format, event size, purpose, and funding will be discussed. Students will also learn how to effectively plan and manage an esports facility. (Prerequisite: **ESPT201**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ESPT310 Policy Regulations and the Esports Ecosystem (3 semester hours)

This course provides an in-depth analysis of the governance structures and policies that exist in esports at various levels of competition and in international settings. Students gain an understanding of how esports competitions are structured in order to provide a fair level of play. Ideas related to international levels of competitions and associated regulations will be discussed. (Prerequisite: **ESPT201**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ESPT320 Esports Player Development (3 semester hours)

This course provides students with current knowledge and best practices to aid with effective esports athlete development. Students learn the basics of wellness, physical training, and other relevant aspects that may affect overall player performance. Additionally, students will analyze current coaching methodologies and gain a holistic understanding of the factors that affect esports player development. (Prerequisite: **ESPT201**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ESPT340 Esports Media and Production (3 semester hours)

This course familiarizes students with the tools and platforms used for digital media management and production within esports. Students learn the skills necessary to create and manage content for an esports organization or event. The elements of a high-quality broadcast production will also be covered. (Prerequisite: **ESPT201**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ESPT498 Externship in Esports (6 semester hours)

This course is designed to provide students with an opportunity to gain real-world experience within the esports industry. Students will proactively work with industry professionals, faculty, and the University's Career Services team to research and identify best-fit opportunities in advance of the externship course. (Prerequisites: All ESPT course courses)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ESPT499 Seminar in Esports (3 semester hours)

This senior capstone class is the final course in the degree sequence for students majoring in Esports. Students will review, assess, and then apply many of the concepts they have researched during undergraduate studies through the analysis and application of optimal solutions to the problems presented. Real-life, hands-on tools for career exploration will also be examined through lively discussions, including an investigation of the job market in esports, as well as how to properly network and prepare for a job interview. (Prerequisites: All ESPT course courses)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Finance (FINC)

FINC201 Financial Management Principles (3 semester hours)

Explore the key principles of financial management and their impact on both an organizational and global scale. This course covers essential topics such as financial systems, financial markets, financial statements and analysis, and capital budgeting. Students will engage in financial decision-making processes, focusing on return on investment and the effective allocation of financial resources. Proficiency in Microsoft Word® and Microsoft Excel® is required. (Prerequisites: **ACCT100** or **ACCT105**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FINC300 Foundations of Financial Management (3 semester hours)

This course is an overview study of the concepts and techniques in finance for non-financial managers. The course will cover basic financial tools and principles for both small and large business. Topics include financial and securities markets, financial statements and analysis, capital budgeting, management, and decision-making. Students must have access to Microsoft Word® and Microsoft Excel® software.

Microsoft Word® and Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FINC303 Blockchain Technology for Business (3 semester hours)

This course explores blockchain technology and its applications in the business environment. Topics include cryptocurrency systems such as Bitcoin, blockchain networks, smart contracts, supply chain management, and the development of blockchain solutions for the private sector. Students will gain a solid foundation in the basic concepts of blockchain, evaluate its potential benefits and challenges, and apply their understanding through hands-on projects and case examples across different industries.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FINC405 Budget Development and Execution (3 semester hours)

This course provides an in-depth focus and analysis of the four phases of the budget cycle -- formulation, review, execution and audit. It also explores the purposes of budget, including line-item budgeting, performance budgeting, zero-based budgeting and capital budgeting. Students must have access to Microsoft Word® and Microsoft Excel® software.

Microsoft Word® and Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Fire Science Management (FSMT)

FSMT102 Fire Behavior and Combustion (3 semester hours)

This course explores the theories and fundamentals of how and why fires start, spread, and are controlled. The student can expect to identify physical properties of the three states of matter; categorize the components of fire; recall the physical and chemical properties of fire; describe and apply the process of burning; define and use basic terms and concepts associated with the chemistry and dynamics of fire; discuss the various materials and their relationship to fires as fuel; demonstrate knowledge of the characteristics of water as a fire suppression agent; articulate other suppression agents and strategies; and compare other methods and techniques of fire extinguishments.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT188 Fire Prevention (3 semester hours)

This course examines the history, principles, and evolving landscape of fire prevention. Students will explore the origins of fire prevention practices through the work of the National Fire Protection Association (NFPA) and the cutting-edge 1973 America Burning report on fire prevention. These works will guide students into the world of modern fire prevention initiatives. Through the material presented in this class, participants will gain a deep understanding of fire prevention techniques, regulations, and emerging technologies shaping the field today.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT201 Fire Protection Systems (3 semester hours)

This course provides an in-depth study of fire protection systems and the critical safety measures that support them. Emphasizing the essential role of these systems in modern fire protection and life safety, students will explore the design, installation, and operation of a broad range of fire suppression technologies. Key topics include fire alarm systems, sprinkler systems, standpipe systems, fire pumps, smoke control systems, and special hazards suppression systems. Students will gain practical understanding of inspection, testing, and maintenance procedures as defined by the National Fire Protection Association (NFPA) and industry standards. The course also examines portable fire extinguishers, smoke detectors, and other fire protection equipment, preparing students to evaluate how these systems contribute to reducing risk, preventing property damage, and protecting lives. By the end of the course, students will be equipped to recognize, differentiate, and assess commonly used systems encountered by firefighters and facility managers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT210 Fundamentals of Fire Protection (3 semester hours)

This course is an overview of fire protection and its related fields. It also covers the philosophy and history of fire protection/service, fire loss analysis, organization and function of public and private fire protection services, fire departments as part of local government, laws and regulations affecting the fire service, fire service nomenclature, specific fire protection functions, basic fire chemistry and physics, introduction to fire protection systems, and introduction to fire strategy and tactics. Students can expect to describe and discuss components of the history and philosophy of the modern fire service; analyze the basic components of fire as a chemical reaction, examine the major fire phases, and examine the main factors that influence fire spread and behavior; list and describe major emergency response services and illustrate how they interrelate; synthesize roles of national, state, and local support organizations in fire and emergency services; describe the scope of fire and emergency services organization; describe the common fire facilities, equipment, and apparatus; analyze management concepts for emergency situations; and explain fire prevention including code enforcement, public information, and public and private fire protection systems.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT281 Principles of Fire and Emergency Services Safety and Survival (3 semester hours)

This course introduces the basic principles and history related to the national firefighter life safety initiatives. The course focuses on the need for cultural and behavior change throughout the emergency services.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT284 Emergency Medical Services (3 semester hours)

This Emergency Medical Services (EMS) course explores the role EMS plays in public safety as well as how it is staffed, funded, and delivered. Students will learn about the future of EMS education, the four different levels of EMS certification, and the four EMS domains according to the National EMS Scope of Practice Model.

In addition, students will develop the ability to describe emerging trends in EMS; how those trends align with EMS Agenda 2050; and identify medical, legal, and ethical issues associated with the EMS profession. In addition, students will also learn how to explain the role of an EMS leader in relation to patient care, experience, training, education, and credentialing and to discuss a culture of health and safety in EMS. Other topics included in this class are the role of an EMS director in providing out-of-hospital care in a community and the preparedness of EMS personnel in dealing with mass casualty incidents.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT287 Fire Protection in Building Construction (3 semester hours)

This course provides an in-depth exploration of building construction and its critical connection to fire protection and life safety, with a strong emphasis on firefighter safety. Students will study the elements of structural design and building materials—particularly fire-resistant and combustible materials—and examine how these factors influence fire prevention, building inspections, fire department pre-planning, and emergency response strategies. Topics include the classification of major types of building construction, an analysis of potential fire hazards, and tactical considerations involving flammable materials, fire suppression systems, and property damage risk. Students will assess various loads and stresses that impact structural integrity and evaluate fire protection systems such as fire alarm systems, sprinkler systems, smoke detectors, and fire doors. The course also addresses fire safety measures, flame spread versus fire resistance, and occupancy classifications outlined in local fire codes and national standards. Students will learn to recognize indicators of structural failure and apply fire safety protocols, risk assessment methods, and code enforcement strategies to help safeguard occupants, building owners, and fire department personnel during high-risk situations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT288 Community Risk Reduction for the Fire and Emergency Services (3 semester hours)

This course provides a theoretical framework for the understanding of the ethical, sociological, organizational, political, and legal components of community risk reduction, and a methodology for the development of a comprehensive community risk reduction plan.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT289 Fire Protection Hydraulics and Water Supply (3 semester hours)

This course is a theoretical study to understand the principles of the use of water in fire protection and to apply hydraulic principles to analyze and solve water supply problems. The student can expect to apply the application of math and physics to the movement of water in fire suppression activities; comprehend the design principles of fire service pumping apparatus; analyze the community fire flow demand criteria; and demonstrate understanding of hydraulics, water characteristics, fluid pressure, hydrokinetics, Bernoulli’s formula, nozzle reaction, friction loss in water conductors, nozzle pressure equation, water distribution systems, Hazen-Williams equation, fire flow tests, determination of required fire flow, fire service pump design and testing, friction loss calculations, engine and nozzle pressure, Underwriter’s formula, parallel lines, Wyed lines, aerial stream calculations, relay pumping, mobile water supply, fire streams, four hydraulic laws of friction loss, and firefighting foams and foam systems.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT299 Sophomore Seminar in Fire Science (3 semester hours)

This course is a culminating course for the Associate of Science in Fire Science degree. It is designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Fire Science. The student will complete an approved academic project or paper that demonstrates their grasp of the fire science field. This is a culminating course to be taken after all other Associate of Science in Fire Science courses have been satisfactorily completed. Student must have SOPHOMORE standing to register. Prerequisite: This course is to be taken as the LAST course in the AS in the Fire Science Program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT311 Fire Dynamics (3 semester hours)

This course focuses on fire behavior and includes topics such as fire chemistry, science, interaction with the environment, and reaction to chemical and/or natural elements involved in a response. The student will be able to understand the fundamental principles related to structural fire protection, building furnishings, and fire protection systems. physical properties of the three states of matter. The components and dynamics of fire, the process of burning, suppression agents and strategies, and the methods and techniques of fire extinguishment will be covered in the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT320 Fire Protection Structure and System Design (3 semester hours)

This course examines design principles involved in structural fire protection and automatic suppression systems, including fire resistance and endurance, flame spread evaluation, smoke control, alarm systems, sprinkler innovations, evaluation of sprinkler system designs, and specialized suppression systems. Advanced fire suppression systems must be properly designed and the occupants must be properly trained to react in concert with the life safety systems and the fire department. Knowing how the different design systems function and how they protect a space or process aids in the interaction with owners, engineers, architects, and contractors. The importance of a good relationship between the authority having jurisdiction and those charged with the enforcement of the code is considered.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT321 Community Fire Mitigation and Protection (3 semester hours)

This course is a study of the leading theory and practice associated with community fire mitigation, planning, protection, response, and recovery. Topics of the course include fire-community relations, community outreach, volunteerism and fire protection, strategic community planning, inter-organizational responses, and other issues. Concepts in Code enforcement, investigations, and the historical, social, and cultural influences on fire prevention are discussed. The students will look at the economic, and governmental and departmental influences on fire prevention. Fire prevention programs will be evaluated and prepared.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT340 Incendiary Fire Analysis and Investigation (3 semester hours)

This course is designed to meet the levels of mastery established by the National Fire Academy, NFPA 1021 and NFPA 1033. These standards are agreed upon by professionals across the fire service community as the foundational benchmarks that all individuals should know at the completion of this course. This course examines technical, investigative, legal, and managerial approaches to the arson problem, including principles of incendiary fire analysis and detection, environmental and psychological factors of arson, gang-related arson, legal considerations and trial preparations, managing the fire investigation unit, intervention and mitigation strategies, and shaping the future.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT362 Fire Administration and Finance (3 semester hours)

This course examines the relationship of fire administration and the role of executive fire administrators in the administration of complex issues in a dynamic environment. The course covers political, legal, financial, and ethical issues faced by fire administrators within the context of public administration. Topics include examination of the effects, influences, challenges, and opportunities of public and private fire functions and roles.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT405 Fire Safety and Risk Regulation (3 semester hours)

This course establishes the foundation of history, knowledge, and processes to assist the Risk Manager or Fire Department Safety Officer achieve their goal in preventing firefighter injury and death. The Safety Officer is a position mandated in Hazmat and Terrorism/Homeland Defense responses and it is a good idea for all responses to keep the safety of responders in first place as well as the community. The course includes a study of the leading theories and practices associated with risk management and emergency scene safety. This course focuses on citizen and responder fire safety and risk reduction through prevention, response, and recovery phases of fire operations. Topics include risk reduction planning, equipment, communications, and procedure, among others.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT410 Fire Regulation, Policy, and Law (3 semester hours)

This course introduces the student to many areas of fire laws and regulations. The main purpose of this course is to introduce you to the laws and regulations that will impact your work. This course enables the student to acquire a basic knowledge of the law in each of the specified subject areas that directly or indirectly affect fire services by providing a basic knowledge of the methodology through which to locate, read and comprehend the various statutes and regulations surrounding fires. This course focuses on public policy, law, and regulation concerning fire mitigation, response, and recovery. Legal issues and risk are addressed as topics in the course, as are general and specific national, state, and local fire regulations and public law.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT475 Applications of Fire Research (3 semester hours)

This course focuses on the rationale for conducting fire research, various fire protection research activities, and research applications, including fire test standards and codes structural fire safety, automatic detection and suppression, life safety, and fire fighter health and safety. This course examines tools and techniques of rational decision making in fire departments, including databases, statistics, probability, decision analysis, utility modeling, resource allocation, cost-benefit analysis, and linear programming. This course involves selecting a fire-related topic, developing research objectives, a proposal, and a plan using a quantitative or qualitative research design for the completion of a final research paper.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FSMT498 Senior Seminar in Fire Science (3 semester hours)

This senior capstone course allows students majoring in fire science to analyze program-related issues and problems. Students will be required to utilize their fire management, fire research, fire regulations/laws, and other knowledge gained from previous core courses and a significant number of major courses to complete this course. (Prerequisite: All required, core, and major courses must be completed prior to enrollment in this course.)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Foreign Languages (ARAB)

ARAB100 Arabic I (3 semester hours)

This course will introduce the student to the fundamentals of the Arabic language. The student will learn basic vocabulary, verb conjugations, and grammatical usage through online listening, speaking, reading and writing exercises. The student will also learn about the cultures of Arabic speaking nations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARAB101 Arabic II (3 semester hours)

This course is a continuation of **ARAB100**, Arabic I. Students will continue to build vocabulary and be introduced to more advanced grammatical usage. In addition to similar—but more advanced—online listening, speaking, reading and writing exercises, students will also learn to communicate in more abstract patterns of thought as demonstrated through the use of cartoons and humor. (Prerequisite: **ARAB100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARAB200 Arabic III (3 semester hours)

This course introduces the student to the fundamentals of Intermediate Modern Standard Arabic (MSA) language and cultures. This course uses an interdisciplinary approach in an asynchronous online setting. Emphasis is placed on the development of fundamental communication skills of writing, reading, speaking, and listening using authentic language contexts. Besides learning about the language, we will also explore various areas of the world where Arabic is spoken. (Prerequisite: **ARAB101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARAB201 Arabic IV (3 semester hours)

This course is a continuation of **ARAB200** (Arabic III). Students continue to build on the fundamentals of Modern Standard Arabic (MSA) language and culture. They learn how to use conjugated verbs, both past and present tense, to communicate using more complex grammatical structures. The course focuses on beginning and intermediate concepts of vocabulary and grammar principles and uses an interdisciplinary approach. Emphasis is placed on fundamental communication skills in writing, reading, speaking, and listening. Additionally, students will explore various areas of the world where Arabic is spoken. (Prerequisite: **ARAB200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Foreign Languages (FREN)

FREN100 French I (3 semester hours)

This course will introduce the student to the fundamentals of the French language using an online immersion technique developed by Rosetta Stone. The student will learn basic vocabulary, verb conjugations, and grammatical usage through online listening, speaking, reading and writing exercises. The student will also learn about the cultures of French speaking nations. Please note the technical specifications below. These are required to interface with the online version of Rosetta Stone. If you cannot meet these requirements we strongly recommend you do not take this course. Please contact classroomsupport@apus.edu if you are unsure or have any questions.

* The ability to download and install the speech component.
* A working microphone installed on the computer for speech recognition.
* Access to streaming media is also required and should be confirmed before registering for the class.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

FREN101 French II (3 semester hours)

This course is a continuation of **FREN100**, French I. Students will continue to build vocabulary and be introduced to more advanced grammatical usage. In addition to similar—but more advanced—online listening, speaking, reading and writing exercises, students will also learn to communicate in more abstract patterns of thought as demonstrated through the use of cartoons and humor. Please note the technical specifications below. These are required to interface with the online version of Rosetta Stone. If you cannot meet these requirements we strongly recommend you do not take this course. Please contact classroomsupport@apus.edu if you are unsure or have any questions.

* The ability to download and install the speech component.
* A working microphone installed on the computer for speech recognition.
* Access to streaming media is also required and should be confirmed before registering for the class.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Foreign Languages (GERM)

GERM100 German I (3 semester hours)

This course will introduce the student to the fundamentals of the German language using an online immersion technique developed by Rosetta Stone. The student will learn basic vocabulary, verb conjugations, and grammatical usage through online listening, speaking, reading and writing exercises. The student will also learn about the cultures of German speaking nations. Please note the technical specifications below. These are required to interface with the online version of Rosetta Stone. If you cannot meet these requirements we strongly recommend you do not take this course. Please contact classroomsupport@apus.edu if you are unsure or have any questions.

* The ability to download and install the speech component.
* A working microphone installed on the computer for speech recognition.
* Access to streaming media is also required and should be confirmed before registering for the class.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

GERM101 German II (3 semester hours)

This course is a continuation of **GERM100**, German I. Students will continue to build vocabulary and be introduced to more advanced grammatical usage. In addition to similar—but more advanced—online listening, speaking, reading and writing exercises, students will also learn to communicate in more abstract patterns of thought as demonstrated through the use of cartoons and humor. Please note the technical specifications below. These are required to interface with the online version of Rosetta Stone. Undergraduate Course Descriptions

Foreign Languages (JAPN)

JAPN100 Introduction to Japanese (3 semester hours)

This course introduces students to the fundamentals of the Japanese language using an online immersion technique developed by Rosetta Stone. Students will learn basic vocabulary, verb conjugations, and grammatical usage through online listening, speaking, reading and writing exercises. Students will also learn about Japanese culture. Please note the technical specifications below. These are required to interface with the online language content provider. If you cannot meet these requirements we strongly recommend you do not take this course. Please contact classroomsupport@apus.edu if you are unsure or have any questions.

• The ability to download and install the speech component.
• A working microphone installed on the computer for speech recognition.
• Access to streaming media is also required and should be confirmed before registering for the class.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Foreign Languages (PORT)

PORT100 Introduction to Brazilian Portuguese (3 semester hours)

This course will expose the student to the fundamentals of Brazilian Portuguese. The student will learn basic vocabulary, verb conjugations and grammatical usage through workbook and listening exercises. The student will also learn about Brazilian culture through reading and listening exercises. Please note the technical specifications below. These are required to interface with the online version of Rosetta Stone. If you cannot meet these requirements we strongly recommend you do not take this course. Please contact classroomsupport@apus.edu if you are unsure or have any questions.

• The ability to download and install the speech component.
• A working microphone installed on the computer for speech recognition.
• Access to streaming media is also required and should be confirmed before registering for the class.

Undergraduate Course Descriptions

Foreign Languages (RUSS)

RUSS100 Russian I (3 semester hours)

This course will introduce the student to the fundamentals of the Russian language using an online immersion technique developed by Rosetta Stone. The student will learn basic vocabulary, verb conjugations, and grammatical usage through online listening, speaking, reading and writing exercises. The student will also learn about Russian culture. Please note the technical specifications below. These are required to interface with the online version of Rosetta Stone. If you cannot meet these requirements we strongly recommend you do not take this course. Please contact classroomsupport@apus.edu if you are unsure or have any questions.

* The ability to download and install the speech component.
* A working microphone installed on the computer for speech recognition.
* Access to streaming media is also required and should be confirmed before registering for the class.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Foreign Languages (SPAN)

SPAN100 Spanish I (3 semester hours)

Provides an introduction to the language and culture of the Spanish-speaking world. Focus is placed on development of four skills: reading and listening comprehension and writing and speaking proficiency. Much practice is also dedicated to pronunciation, lexicon and syntax through a variety of materials. Students will also learn about the culture and people of Spanish speaking countries and the Hispanic/Latino communities in the United States.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPAN101 Spanish II (3 semester hours)

Is a continuation of **SPAN100**. Students are introduced to more advanced syntax, lexicon and idiomatic expressions. The goal is to enhance the development of four skills: reading and listening comprehension and writing and speaking proficiency. Students will continue to learn more about the people, traditions and cultures of Spanish speaking countries and the Hispanic/Latino communities in the United States.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPAN200 Spanish III (3 semester hours)

SPAN200 is an intermediate course. The main focus is placed on enhancing the development of four skills: reading and listening comprehension and writing and speaking proficiency. Command of Spanish language is promoted through concepts of geography, civilization, culture, arts, and literature. Complex grammatical structures and sophisticated vocabulary including idiomatic expressions and colloquialisms are developed. Students will continue to learn more about the people, traditions and cultures of Spanish speaking countries and the Hispanic/Latino communities in the United States. (Prerequisite: **SPAN101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPAN202 Spanish IV (3 semester hours)

SPAN202 is a continuation of **SPAN200**. In this course, students master reading and listening comprehension, formal and informal writing, and presentational and interpersonal speaking skills. Students also use their critical thinking skills when comparing and contrasting, persuading, analyzing and synthesizing. Command of Spanish language is promoted through concepts of geography, civilization, culture, arts, and literature. Complex grammatical structures and sophisticated vocabulary including idiomatic expressions and colloquialisms are developed. Students will continue to learn more about the people, traditions and cultures of Spanish speaking countries and the Hispanic/Latino communities in the United States. (Prerequisite: **SPAN200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Foundations (COLL)

COLL111 Planning Your Future with Purpose in Humanities & Education (3 semester hours)

This course introduces students to an attitude and approach for college success and relevant connections to their own inner motivations and external career options. Some key elements include values-goal alignment, an orientation to online learning, and strategies for successful adult learning.

Other elements include planning a pathway from academic studies to a career path, career awareness, networking, engaging support resources, and collaborating with colleagues. Through the learning and activities of this course, students will gain the perspective needed for successful time management and prioritization, critical thinking, applied and collaborative learning, and civic/democratic and global learning. Content within the classroom includes learning material that can be easily obtained online. This course fulfills one general education elective.

This course is recommended to be completed first in the student's degree plan when possible.

COLL111, **COLL112**, **COLL113**, **COLL114**, and **COLL115** are considered equivalent courses. Students may only take one of these courses for credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COLL112 Planning Your Future with Purpose in Business (3 semester hours)

This course introduces students to an attitude and approach for college success and relevant connections to their own inner motivations and external career options. Some key elements include values-goal alignment, an orientation to online learning, and strategies for successful adult learning.

Other elements include planning a pathway from academic studies to a career path, career awareness, networking, engaging support resources, and collaborating with colleagues. Through the learning and activities of this course, students will gain the perspective needed for successful time management and prioritization, critical thinking, applied and collaborative learning, and civic/democratic and global learning. Content within the classroom includes open educational resources that can be easily found online. This course fulfills one general education elective.

This course is recommended to be completed first in the student's degree plan when possible.

COLL111, **COLL112**, **COLL113**, **COLL114**, and **COLL115** are considered equivalent courses. Students may only take one of these courses for credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COLL113 Planning Your Future with Purpose in Health Sciences (3 semester hours)

This course introduces students to an attitude and approach for college success and relevant connections to their own inner motivations and external career options. Some key elements include values-goal alignment, an orientation to online learning, and strategies for successful adult learning.

Other elements include planning a pathway from academic studies to a career path, career awareness, networking, engaging support resources, and collaborating with colleagues. Through the learning and activities of this course, students will gain the perspective needed for successful time management and prioritization, critical thinking, applied and collaborative learning, and civic/democratic and global learning. Content within the classroom includes open educational resources that are easily available online. This course fulfills one general education elective.

This course is recommended to be completed first in the student's degree plan when possible.

COLL111, **COLL112**, **COLL113**, **COLL114**, and **COLL115** are considered equivalent courses. Students may only take one of these courses for credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COLL114 Planning Your Future with Purpose in STEM (3 semester hours)

This course introduces students to an attitude and approach for college success and relevant connections to their own inner motivations and external career options. Key elements in this course include values-goal alignment, an orientation to online learning, and strategies for successful adult learning. Other elements include planning a pathway from academic studies to a career path, career awareness, networking, engaging support resources, and collaborating with colleagues.

Through the learning and activities in this course, students will gain the perspective needed for successful time management and prioritization, critical thinking, applied and collaborative learning, and civic/democratic and global learning. Content within the classroom includes open educational resources that are easily available online. This course fulfills one general education elective.

This course is recommended to be completed first in the student's degree plan when possible.

COLL111, **COLL112**, **COLL113**, **COLL114**, and **COLL115** are considered equivalent courses. Students may only take one of these courses for credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COLL115 Planning Your Future with Purpose in Security & Global Studies (3 semester hours)

This course introduces students to an attitude and approach for college success and relevant connections to their own inner motivations and external career options. Key elements in this course include values-goal alignment, an orientation to online learning, and strategies for successful learning. Other elements include planning a pathway from academic studies to a career path, career awareness, networking, engaging support resources, and collaborating with colleagues.

Through the learning and activities in this course, students will gain the perspective needed for successful time management and prioritization, critical thinking, applied and collaborative learning, and civic/democratic and global learning. The content within the classroom includes open educational resources that are easily available online. This course fulfills one general education elective.

This course is recommended to be completed first in the student's degree plan when possible.

COLL111, **COLL112**, **COLL113**, **COLL114**, and **COLL115** are considered equivalent courses. Students may only take one of these courses for credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

COLL300 Research, Analysis, and Writing (3 semester hours)

Does the thought of writing a research paper make your hair stand on end? Are you postponing certain classes because they require research papers? Do you fear plagiarism more than malaria? If you answered yes to any of these questions, **COLL300** is the course for you. **COLL300** will help you gain confidence, so you can tackle even the toughest research assignments. You will be guided, step by step, from the beginning to the finished product as you write about a topic that you really want to explore. You will learn how to exercise your curiosity in writing research questions; how to be a detective in gathering and evaluating evidence; how to plan and organize a sturdy framework; how to conquer fears of citing sources and avoiding plagiarism; how to flesh out paragraphs with substantive details; and how to polish your finished paper. You will do all this in a supportive community with plentiful, constructive feedback. Each week will take you closer to becoming a skilled research writer. (Prerequisites: **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Foundations (INTD)

INTD310 Applied Interdisciplinary Perspectives (3 semester hours)

An interdisciplinary perspective can help form innovative, thoughtful, and creative approaches to solve complex challenges and issues. In this course, students will analyze connections between two or more major discipline areas in order to thoroughly examine a personal or professional experience or challenge.

This course will support students in examining career paths that align with their interdisciplinary coursework as they learn how to present diverse disciplinary knowledge effectively to others and prepare for their senior seminar. Students must have completed 60 credits to enroll in this course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTD498 Senior Seminar in Interdisciplinary Studies (3 semester hours)

In this course, students will develop an independent interdisciplinary project showcasing their acquired knowledge, academic and research skills, writing abilities, and presentation strategies. Approved projects will demonstrate the application of prior coursework, the interdisciplinary nature of the program of study, and substantial research knowledge that demonstrates the ability to synthesize and broadly integrate subject-specific and cross-disciplinary knowledge and to connect theory and application.

This course also addresses capstone work by considering students' overall academic accomplishments in light of specific personal and career goals. **INTD498** is to be taken after all other Interdisciplinary Studies courses have been satisfactorily completed. A student must have SENIOR standing to register for this course. (Prerequisites: **INTD310** and completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Government Contracting and Acquisition (DEFM)

DEFM200 Fundamentals of Contracting and Acquisition (3 semester hours)

This course provides an in-depth examination of federal acquisition practices, policies and procedures, to acquaint managers and non-contracting personnel with the acquisition process and compliance issues. Contracting and acquisition fundamentals reviews contract planning, contract execution, and contract management as part of the acquisition process. They will learn basic mission support planning strategies, how to research the Federal Acquisition Regulation (FAR) and Defense Federal Acquisition Regulation Supplement (DFARS); additionally, students will learn how effective market research and socioeconomic programs support the FAR and DFARS acquisition planning process as well as its implementation. They will examine the process, problems and issues of solicitation and contract award. Instruction will also include: benefits of early industry involvement in shaping requirements; basic procedures for acquisition of commercial and noncommercial requirements; basic competitive acquisitions; awards processing; management of contract award protests; contractor performance metrics; contract changes procedures; disputes; and close out procedures of completed contracts. This course is designed for personnel new to the contracting career field or non-contracting personnel who play a role in the acquisition process.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM305 Acquisition Business Management (3 semester hours)

Deals with common financial issues in acquisition that include cost estimating; earned value analysis; Planning, Programming, Budgeting and Execution (PPBE); congressional enactment; and budget preparation and execution. In this course, the student will prepare, justify, and defend budget exhibits and obligation/expenditure plans; formulate impact/reclama statements and reports; and develop and defend business aspects of the acquisition and PPBE cycle.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM310 Program and Acquisition Management I (3 semester hours)

This course is an introduction to the requirements of successful program management in the DOD. The course will look at the entire systems acquisition cycle from the point of view of government requirements and the efforts of the civilian contractor to bring the system to Full Operational Capacity.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM311 Program and Acquisition Management II (3 semester hours)

This course of instruction addresses the DOD acquisition process once the government has decided that it must seek the enormous resources of the private industry. The scope of this course specifically addresses the formal process by which the DOD requests (or solicits) industry to respond to their needs and requirements. The course also outlines the evaluation process and evaluation criteria used by the government to evaluate and select the winning proposal. The course will review the Federal Acquisition Regulations (FAR) and the Defense Federal Acquisition Supplements (DFARS). Additionally the course will review the current policy in the DOD to outsource to the private sector (non-DOD sources) the tasks and functions previously performed by in-house government workforce. (Prerequisite: **DEFM310**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM312 Defense Budget Development and Execution (3 semester hours)

This course is a study of the process by which the acquisition, personnel, and readiness (operations and maintenance) portions of the annual Defense Budget are integrated and executed. Students will learn of the politics behind the issues and will gain an appreciation for the complexity of the process. Following an in-depth review of the political scope of budgeting, the course will shift into a study of how budgeting actually works at each stage of executive and legislative action. From the preparation of the service and agency budgets, through the presentation of the president's budget, to the actual appropriation and expenditure of funds, the student will apply their knowledge of the politics of the process to appreciate the problems and issues in defense budgeting.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM332 Transition and the Military Family (3 semester hours)

This course is designed to provide students with knowledge of the theoretical and practical aspects of managing transitions, with a focus on those issues incumbent on the military family. Course topics include change and choice, psychology of the self, interpersonal relations, health, dysfunction, grief, and building a life-career. Particular attention is focused on these topics' application to the military family lifestyle, to include deployment separation, reunion, marriage and family, parenting, military casualty, and life-career. The following questions appear as themes throughout the course: what is transition; what transitions do military families experience; what are the affects on the body, mind, spirit, and interpersonal relationships; what is resilience; and how does one create a plan to strengthen resilience?

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM410 Program Appraisal (3 semester hours)

This course is designed to develop the basic skills essential to evaluate public programs. Knowledge of the policy process and of research methods are brought together in the execution of an ethical evaluation of how well the processes, and outcomes of a program meet the needs at which the program is targeted. This course will introduce the basic concepts of planning and carrying out an evaluation, the most commonly used analytical tools, and cost-benefit and cost-effectiveness methods. It will also introduce the basic format of evaluation reports.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM415 Acquisition Test & Evaluation (3 semester hours)

Emphasizes the basic test and evaluation (T&E) principles, policies, organizations, processes, and practices used by DOD. Course topics include the role of T&E in systems acquisition, T&E planning, experimental design, measurement of systems effectiveness and suitability, instrumentation, and data collection and management. Also covered are reliability, maintainability, and availability of systems; analysis and evaluation; software; modeling and simulation; and T&E of alternative acquisitions. Problem-solving situations engage students in the use of T&E concepts, principles, and theories.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM420 Cost Analysis and Negotiation Techniques (3 semester hours)

This course introduces methods and techniques necessary to analyze a contractor's cost proposal and to develop a Government negotiation objective. Students will apply the cost analysis techniques to analyze a contractor's proposal and develop a cost objective. The course also introduces negotiation terminology, styles, and techniques.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM421 Joint Contingency Contracting (3 semester hours)

This course develops skills for contracting support provided to Joint Forces across the full spectrum of military and disaster relief operations. Exercises focus on unique aspects of contingency, critical thinking skills, and the execution of appropriate contractual instruments.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM422 Mission Support Contracting I (3 semester hours)

This course involves a series of case studies where students demonstrate their ability to develop and execute business strategies to meet customer requirements. These cases help develop critical thinking, customer needs analysis, procurement strategy development, and source selection skills necessary for successful contract performance.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM423 Mission Support Contracting II (3 semester hours)

This course involves a research paper in which professionals apply the knowledge and skills to demonstrate their ability to negotiate fair and reasonable prices and to consider the legal implications for various contract situations. The research paper helps develop critical thinking, cost analysis, negotiation, and contract administration skills necessary for successful contract performance.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DEFM424 Overhead Management of Defense Contracts (3 semester hours)

This course provides an understanding of industry overhead costs and the costs' impact on seller pricing/business strategies under various acquisition environments with differing contract types. Attendees will understand the development and application of overhead rates used in contract formation, administration, and closeout. The course-integrating case study provides hands-on application of the overhead-rate process in which attendees determine their own final overhead rates.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Health Information Management (HIMA)

HIMA100 Medical Terminology (3 semester hours)

This course is a basic study of the professional language of medicine. It is designed to include word construction, pronunciation, spelling, definition and use of terms related to all areas of medical science, hospital service and health related professions. The course uses a systems based approach that provides students with the skills and knowledge necessary to derive meaning from common medical terms. Students will deconstruct medical word construction and language, as well as the derivation, roots, prefixes, and suffixes. Various structures and organization of bodily systems will also be examined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA110 Introduction to Health Information Management (3 semester hours)

The purpose of this course is to introduce the students in Health Information Management to the historical development of the health care field with emphasis on the organizational structure of health institutions: federal, state, local agencies and allied health associations. The course also addresses the theoretical and practical applications of health information management, the Health Information Department, its functions, and an overview of the American Health Information Management Association (AHIMA®). The course includes definitions of, standards for, and the development of the health record (both electronic and paper-based) as to content, format, evaluation, completion, legal and regulatory aspects and automation. The course content also consists of numbering systems and methods; the use of accessory equipment and technology; conversion systems; the master patient index; filing systems and control; evaluation methods; electronic health records, and supplies and equipment. Documentation issues, along with indexes, registers, and health data collection are also introduced.

AHIMA® is a registered trademark of the American Health Information Management Association.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA200 Legal Aspects of Health Information Management (3 semester hours)

This course focuses on the legal system and procedures, ethics, control and use of patient-specific health information. Student will analyze the major external forces affecting the HIM professional's ability and responsibility to manage patient-specific health information. In addition it also addresses specialty matters such as healthcare fraud and abuse in health information management (HIM). Students will examine the impact that e-mail, digital imaging, telemedicine, and the Internet are having on health records, and analyze laws, regulations and standards related to patient confidentiality and privacy.(Prerequisite: **HIMA110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA220 Classification Systems I (3 semester hours)

This course will introduce the student to the principles of taxonomy. The course will include purposes of classifying diseases, clinical vocabularies, and terminologies/nomenclatures. The interaction of different Prospective Payment Systems with classification systems will be emphasized. Data quality, the Uniform Hospital Discharge Data Set as well as coding/sequencing guidelines and advanced topics in diagnosis and procedural coding. (Prerequisites: **BIOL201** and **HIMA100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA230 Classification Systems II (3 semester hours)

This course will introduce the student to the principles of taxonomy. The course will include purposes of classifying procedures, clinical vocabularies, and terminologies/nomenclatures. The course will include purposes of coding for professional services, ambulatory services and procedures. The course will properly instruct the student on the proper usage of CPT and HCPCS code books. The interaction of different code systems such as the Prospective Payment Systems (PPS) with classification systems will be emphasized. Data quality, the UACDS as well as coding/sequencing guidelines will be examined. Coding and indexing of procedures using various classification systems and nomenclatures. The interaction of different Prospective Payment Systems with classification systems and data quality will be emphasized. (Prerequisite: **HIMA220**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA240 Healthcare Reimbursement Methodologies (3 semester hours)

This course provides students with a foundation of the basics of health insurance and public funding programs, managed care contracting, and payment for services. The content focuses on health insurance plans, government-sponsored healthcare programs, managed care plans, fee schedules, resource-based relative value system for physician payment and prospective payment for various inpatient settings. Students will examine various reimbursement methodologies, and the interconnection between clinical coding, compliance, and reimbursement. Within this, revenue life cycle management will be studied and its impact on provider financial stability.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA250 Healthcare Delivery Systems and Documentation (3 semester hours)

This course will introduce students to the healthcare delivery systems including organization, accreditation, licensure, and regulatory agencies. Students will examine the historic development, organization and characteristics of the health care delivery systems; current payment and reimbursement systems for each healthcare delivery systems; accrediting agencies applicable to health care; the functions of health care providers; organizational patterns of health care facilities; medical staff organization and bylaws. The work of accrediting, licensing, and certifying agencies, such as that of the Joint Commission, the American Osteopathic Association, Medicare, and Medicaid will be discussed in detail for each health care area.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA310 Electronics Health Records Fundamentals (3 semester hours)

This course examines the emerging technology of Electronic Health Records through conceptual theory of health information systems used in health care delivery systems including terminology and essential concepts of health information systems. An overview of varied automated administrative, clinical and financial systems is given. Additionally, the course covers structure of electronic health records (EHRs). Content includes overview of health care industry’s transitioning to electronic health record systems, components of EHRs, technologies used for input into EHRs, and privacy and security issues affecting access to and use of patient information.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA350 Compliance (3 semester hours)

The purpose of this course is to familiarize students with the concept of Quality and the process of Quality Improvement across the Health Care continuum. This course focuses on the history and evolution of quality, its terms, principles, theories, and practices. The student is introduced to a diverse collection of methods of improving quality, including but not limited to continuous Quality Improvement and Total Quality Management, and to the guidelines for implementing quality management and the continuous quality improvement processes. Students will also be exposed to new cutting edge technologies that impact the quality improvement efforts/interventions in health care delivery that make quality health care more safe, timely, effective, equitable, efficient, and patient-centered.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA360 Health Informatics Project and Enterprise Management (3 semester hours)

This Project Management course examines project management in theory and practice and the roles and responsibilities of the health information project manager. The course offers a practical approach to managing projects, focusing on organizing, planning, and controlling the efforts of the project. Additionally, this course covers project, enterprise, financial and contract managements in a health information environment. Students will examine system selection processes and develop negotiating skills in the selection process. The principles and approaches to the assessment of quality in health care and how this impacts the role of the health information manager will be examined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA410 Informatics and Analytics (3 semester hours)

This course offers an overview of the field of health informatics and analytics by providing students with the fundamental knowledge of the concepts of health informatics applications as they relate to the collection, storage, retrieval, communication and optimal use of health related data and how technology can be used in the delivery of health care. The basic principles of health informatics and analytics that govern communication systems, clinical decisions, information retrieval, telemedicine, bioinformatics and evidence based medicine will be explored.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA460 Healthcare Data Management and Governance (3 semester hours)

This course is designed to give the student an insight into the procedures and techniques that can be used to analyze health care data. The course will focus on the "how to" of systems by demonstrating fundamental skills and techniques that can be applied immediately to the management and governance of healthcare data. This course covers fundamentals of health care workflow process analysis and redesign as a necessary component of complete practice automation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA497 Health Information Management Practicum (3 semester hours)

This guided health information management (HIM) practicum provides an overview of health information services with hands-on and reality-based experiences in a health information department, or related site that will reinforce and enhance classroom learning. Students will also acquire technical skills through guided simulated online lab activities designed to simulate the activities that would be completed in an HIM department setting. Students will evaluate and utilize relevant HIM computer and software applications. This course is intended to give the student practical experience in HIM, and during the course students will employ practical application of previously studied theory, principles, and knowledge in data retention, retrieval, storage assembly, deficiency analysis, physician communication, and release of information. Prerequisite: Students may take the practicum after all other Major Required courses are completed. This course requires an additional cost for the use of Typhon student practicum tracking software, to be purchased by the student prior to the start of the practicum.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIMA499 Senior Seminar in Health Information Management (3 semester hours)

This seminar is a senior level course designed to allow the student to review, analyze, and integrate the work the student has completed toward a degree in health information management. The student will complete an approved academic project or paper that demonstrates mastery of their program of study in a meaningful culmination of their learning, as well as assess their level of mastery of the stated outcomes of their degree requirements. (Prerequisite: Students may only take this course after the completion of all CORE courses)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Healthcare Administration (HCAD)

HCAD300 Legal and Ethical Principles in Healthcare (3 semester hours)

Legal and Ethical Principles in Healthcare introduces major concepts and functions of government and law applicable to healthcare throughout our global society. Theoretical health law and governing policies are investigated along with regulations of health quality. Students will analyze ethical dilemmas and utilize an ethical decision-making framework to solve complex legal and ethical problems faced by healthcare practitioners. (Prerequisite: **ENGL110**, **PBHE111** and **PBHE112**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD301 Healthcare Principles and Policies (3 semester hours)

Healthcare administrators comply with health policy on a day-to-day basis and influence the drive for change to improve policies across the healthcare system. Principles for planning, managing, and evaluating healthcare policies and programs are examined. Students will explore modern and historical issues and determine the theoretical basis for the healthcare system to include the epidemiology for major health policy issues. Students will examine alternate opportunities to enhance healthcare systems from the perspective of health providers, community leaders, and community residents.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD302 Healthcare Quality and Safety (3 semester hours)

Regulatory aspects of healthcare, such as licensing, accreditation, credentialing, and governance, impact the quality of healthcare programs. This course will analyze components which contribute to healthcare quality and promote a systems thinking approach to improving healthcare processes. Students will apply process improvement tools to identify healthcare challenges and create solutions to improve quality, safety, and value in healthcare organizations. Patient safety indicators are analyzed to ensure quality healthcare services implementation. (Prerequisite: **ENGL110** and **HCAD301**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD400 Strategic Planning and Marketing in Healthcare (3 semester hours)

Strategic planning theories and methodologies are essential to the quality, safety, and value of healthcare programs and organizations. Students will study strategies to evaluate and shape strengths and weaknesses within a healthcare organization along with implementation and monitoring approaches for strategic planning and implementation. The impact of marketing in the strategic planning and development process will be examined as students design promotional tools to advance and successfully market healthcare programs. (Prerequisite: **HCAD301**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD401 Finance and Budgeting for Healthcare Administrators (3 semester hours)

This course provides an in-depth focus and analysis of the financial and budgeting components of healthcare administration. Students will compare and contrast the various types of budgets that are used within health organizations. Additionally, there is an analysis of various healthcare reimbursement methodologies and the effect that operational quality has on reimbursement. (Prerequisite: **HCAD300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HCAD498 Senior Seminar in Health Sciences (3 semester hours)

The Health Sciences Senior Seminar is a cumulative project consisting of key concepts, theoretical knowledge, critical thinking, practical application, and real-world decision-making relative to the program objectives and courses completed throughout the program. Students will integrate critical analysis with healthcare disciplines and synthesize ethical standards in decision-making to achieve organizational goals. Students will discuss real-world scenarios and applications to the ever-changing healthcare industry and environment. The seminar project enables students to demonstrate skills of leadership, management, and systematic problem solving. (Prerequisite: **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

History (HIST)

HIST101 American History to 1877 (3 semester hours)

This course is a survey of United States history from the earliest European settlements in North America through the end of Reconstruction and emphasizes our nation's political, economic, and social development, the evolution of its institutions, and the causes and consequences of its principal wars.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST102 American History since 1877 (3 semester hours)

This course is a survey of history of the United States from the end of Reconstruction to modern times. Emphasis will be placed on internal expansion, inherent isolationism, America’s road to becoming a world power, and the development of the concept of America as the "policeman" of the world.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST111 World Civilization before 1650 (3 semester hours)

This course is a survey of the history of the human community from the dawn of civilization to 1650. Emphasis is placed on the origins and achievements of the core civilizations of Asia, Europe, Africa and the Western Hemisphere. It stresses the interrelations of societies and cultures of the past, comparing and contrasting the experiences of peoples and civilizations with one another.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST112 World Civilization since 1650 (3 semester hours)

This course is a survey course in the history of the human community from 1650 to the present. It covers the origins, development and achievements of the major civilizations and stresses the interrelations of societies and cultures of the past, comparing the experience of peoples and civilizations with one another.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST121 Western Civilization before The Thirty Years War (3 semester hours)

This course is a survey of the history and culture of the Western Civilization from the ancient civilizations of the Near East, through the rise of the classical civilizations of Greece and Rome, to the beginnings of Europe's Early Modern period. Emphasis is placed on the examination of the major political, social, economic and religious developments of European history.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST122 Western Civilization since The Thirty Years War (3 semester hours)

This course is a study of the history and culture of the Western world, from the beginnings of Europe's Early Modern Period to the present. It covers the major political, social, economic, religious and cultural developments, since the thirty years war.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST213 History of Women in the United States (3 semester hours)

This course has been designed as an introduction to the history of women in the United States from the colonial period to the present. It will be surveying the field of American women's history in order to understand how specific political, social and economic transformations in the nation's past have affected the female half of the population. Throughout, it will remain attuned to ethnic, racial, and regional differences and class distinctions in the lives of U.S. women. It will look at women's culture, as distinct from the dominant male culture, and analyze women's writings, art, life cycles and sexuality. It will work to understand the collective lives of women as workers, family members, reformers, and political activists as well as the individual experiences of women in the U.S. from the colonial era into the 21st Century.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST221 African-American History before 1877 (3 semester hours)

This course examines the complex and varied experiences of African Americans from slavery to 1877. Topics include West African roots, the middle passage, American slavery and resistance, the development of racism, the Civil War, and Reconstruction. The course will examine internal and external factors that shaped the black historical experience economically, culturally, and politically. While the class is designed to proceed chronologically, important themes such as the development of racism, abolitionist thought, the slave community, and the impact of free blacks will be emphasized.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST222 African-American History since 1877 (3 semester hours)

This course surveys the economic, cultural, and political facets of the African American experience from 1877 to the present. Topics of African American history will be examined, such as Jim Crow laws, the Harlem Renaissance, the Civil Rights Movement, and Black Power. While the class is designed to proceed chronologically, themes such as military and diplomatic policies, migration and urbanization, black political thought, and popular culture will be emphasized.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST223 History of the American Indian (3 semester hours)

This course surveys American Indian history from before Columbus to the present. It emphasizes the American Indians' political, economic, and social development, the emergence of the principles that guided them into the 21st century, the evolution of its institutions, and the causes and consequences of its principal wars.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST225 West Virginia Studies (3 semester hours)

In this course, students will review the geographical, cultural, economic, and political aspects of the state with an emphasis on the events leading up to statehood and beyond. Local traditions and state sectional patterns are stressed and examined in the context of assimilation into the national body politic.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST230 History of East Asia (3 semester hours)

This survey course traces China's social, political, and cultural developments from the dynastic period to the present. Through this process, this course will examine the Chinese dynastic system, the rise of Confucianism, the adoption of Buddhism, technological developments, and explores the great range and impressive continuities of traditional Asian civilization. Additionally, students will explore the historical transformations that have led to the development of modern Asia as well as how China has historically impacted all of Asia.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST270 History of Science (3 semester hours)

Science is unquestionably central in shaping our modern world. Though often directed by the "big science" efforts of universities, global corporations, and nations, it is the individual scientist that populates these scientific communities. It is at this individual level, both professionally and personally, that science touches us most directly. Students earn advanced degrees in a wide range of specialties like physics, biology, and chemistry. Science is also a central component in related fields of medicine, geology, genetics, ecology, cosmology, and technology. On the personal level we encounter science everyday when we eat genetically enhanced food, take complicated medicines to combat illness, debate the origins of life, strive to understand new information about ourselves in the universe, use advanced technologies, and in many more ways.

These scientific developments do not emerge instantaneously from a vacuum. To fully understand science, one must have an appreciation of its history and how it has developed over time. The latest scientific advance is merely a snapshot of the present, and only looking at this image obscures our appreciation of the dynamic interaction between science and culture, and the ways that national, institutional, and individual goals have determined its trajectory. This broader perspective, gained only by the study of the history of science, serves as our central mission in this class. **STEM185** and **HIST270** are considered equivalent courses. Beginning January 2023, students may only take one of these courses for credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST290 History of the Holocaust (3 semester hours)

This course is an overview of the major historical, political, cultural, religious, and military issues associated with the Holocaust. It will examine how the anti-Semitic propaganda of the early Nazi Party manifested itself into a legitimate political platform, evolving into state sponsored legal legislation, and culminating into an industrialized killing industry. Students will be introduced to the principle historical figures, events and time lines regarding the birth of the Nazi Party, their taking control of the German nation, and finally their political and military actions against those deemed 'subhuman'. In addition, students will also become well-versed in The Hague and Geneva Conventions regarding the roles of the military and the protective status and qualifications of noncombatants.
(Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST300 Research Methods in History (3 semester hours)

The purpose of this course is to prepare the student for upper-division course work, research, and writing based on historical methodologies such as quantification or paleography. It is designed to familiarize the student with what historians do and how they do it, and affords the student the opportunity to develop their own skills as a historian by interpreting and evaluating primary and secondary source material and presenting their findings in a written, properly referenced format.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST301 Ancient Greece (3 semester hours)

This course covers the history of the Greek speaking peoples from the origins of Greek civilization during the Bronze Age to the dispersion of Greek culture during the Hellenistic era through the conquests of Alexander the Great. The topics emphasize the political, social, cultural, and economic institutions and values that Hellas created to revolutionize Ancient Mediterranean history. Students gain an introduction to the history of Greek civilization and a deeper understanding of the nature of democracy, and the relationships among politics, art, literature, and the ideals of civic virtue. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST302 Ancient Rome (3 semester hours)

This course will study the history of Ancient Roman civilization from the founding of the Republic in 735 BC to the fall of the western empire in 476 AD. Roman political, military and cultural events and personalities will be the focus of this course. Interaction and conflict with neighboring Mediterranean, western tribal, sophisticated eastern, and later barbarian cultures will serve as the thematic core. The course will also examine the lasting impression and influence of Ancient Roman civilization on European and Western culture.
(Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST303 The Middle Ages (3 semester hours)

This course will cover the history of Europe from the 4th/5th century when the Roman Empire was ending to the middle of the 14th century when the new nations were fully defined. Starting with the fall of the Romans and the effect of that fall on Europe, the course will cover the arrival of the “barbarian” invaders, the reign of Charlemagne, the rise of separate, new European states such as France, England and Germany as well as the Church, the relations between these states and with the Byzantine Empire, the period of the Crusades, and the development of different government systems in the various European nations.
(Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST304 The Renaissance (3 semester hours)

This course is a survey of Western Europe from 1350 to 1600. It examines the political, military and social events surrounding the re-birth of classical knowledge and artistic expression in Italy known as the Renaissance. The course also traces the movement of the Renaissance northward, focusing on the coming Reformation era. The last part of the course studies the Protestant and Catholic Reformations to include how the Reformations effected the growth of the modern nation-state. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST305 France in the Age of Enlightenment (3 semester hours)

This course examines the "Age of the Enlightenment" in France with the reigns of King Louis XV and Louis XVI. Through readings of the functioning of the monarchy, on the world of everyday peoples in Paris and the countryside, and the intellectual climate of the era, students will be able to reconstruct the time known as "the ancient regime." The class will also analyze readings by authors such as Diderot, Voltaire, DuChâtelet, and Rousseau to gain a sense of the intellectual excitement of the "Enlightenment." (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST306 The British Empire (3 semester hours)

This course examines the British Empire from the late 18th century to the 1960s. It includes the settler colonies, the colonies inhabited almost exclusively by non-European peoples, and the "informal empire" of trade and investment as well as the impact of the Empire upon the British Isles. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST307 The Age of Dictators: Europe 1914-1945 (3 semester hours)

This course focuses on the great crises of 20th century European civilization, from the outbreak of war in August 1914 to the defeat of Hitler Germany in May 1945. Through novels and historical monographs, it explores the effects of total war and mass mobilization on the industrially advanced state systems of the period, as well as the social emancipation, economic disintegration, and cultural innovation brought on by the great wars of the period. Particular attention is paid to the experience of the "great powers" (Germany, the Soviet Union, Britain and France), which is supplemented by student research on the smaller countries of Europe. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST308 History of European Colonialism (3 semester hours)

This course explores European colonial history from the fifteenth century to the present. It takes into account the exploration, colonization, and decolonization of the Americas, Africa, Asia, India and the Middle East by three major European powers: Britain, France, and Spain. The actions of these countries, among others in Europe, affected the areas they colonized and the indigenous populations for generations to come. This course will focus on the expansion of European empires, the consolidation, management, and disintegration of the empires. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST310 History of Modern Europe (3 semester hours)

The course evaluates European politics from the French Revolution to the industrialization process and effects in the late 18th and 19th centuries. Students assess the impact of military modernization and analyze the commercialization of the culture. An overview of politics and wars in the 20th century and their relationship to the fall and rise of the economy will be presented as well as the concept of European security. The forces of modernization, causes of war, and power of unification will be evaluated, with an emphasis on effects and divisions of the Cold War and democratization wave of the 1990's. It will examine the evolution of trade unions to a regional union with its effects on politics, economics and security, including case studies of regional terrorism. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST320 History of Russia (3 semester hours)

The course covers the history of Russia and its people from the medieval period up to the present. While student projects can be on any aspect of Russian history from any period, the emphasis in the classroom will be on political and social history from the period of reforms in the mid 19th century up to the fall of the Soviet Union. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST340 History of Africa (3 semester hours)

This course examines the history of Africa from the first periods in recorded history, through the colonial period and 20th Century. The focus is upon the major European powers that influenced the continent and the internal social, religious, political and economic dynamics specific to each region. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST350 History of the Middle East (3 semester hours)

This course examines Middle Eastern history from the era of Suleyman the Magnificent, the 16th-century Ottoman sultan, to the late 20th century. It traces the roots of current Middle Eastern politics to social changes-- as the region lost its pivotal role in the world economy in the 19th century but gained oil wealth-- and to the political aftershocks of colonial occupation a century ago. Themes include the emergence off dictatorship and violence in politics during the 20th century, and especially the conflicts centered on the emergence of Israel; the rise of new political ideologies, nationalism, liberalism, and Islamism; the rise of women's rights movements, and the reasons that political conflict has come to center on women's status; and the polarization of rich and poor classes that continues to destabilize domestic politics. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST360 History of Latin America (3 semester hours)

This course is a survey course of Latin American History. The subject is approached from two very different perspectives. The primary method is a comprehensive overview of Latin American history and theories important to the study of Latin America and the second provides the student with an overview of the history of individual Latin American countries. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST402 Colonial America (3 semester hours)

This course explores North American history from the dawn of the British colonization of North America to the end of the French and Indian War in 1763, which sparked subsequent British Colonial Policy and thus set into motion the events leading to American Revolution in 1775. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST403 The Early Republic, 1783-1815 (3 semester hours)

The Early Republic, 1783-1815 examines the development of American political, social, and cultural institutions during the formative years of the new Republic. Through a study of the primary and secondary literature of American history this course surveys the individuals and groups who influenced the American experience, as well as the cultural, political, and socio-economic movements that shaped the nation. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST404 Jacksonian America, 1815-1846 (3 semester hours)

Jacksonian America, 1815-1846 examines the nature of Jacksonian democracy and its treatment in American historiography. Through a study of the primary and secondary literature of American history this course surveys the individuals and groups who influenced the American experience, as well as the cultural, political, and socio-economic movements that shaped the nation.
(Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST405 Antebellum America, 1846-1861 (3 semester hours)

Antebellum America, 1846-1861 examines the divisive political, social, and economic forces which intensified in the 1840s and culminated in the Civil War. Through a study of the primary and secondary literature of American history this course surveys the individuals and groups who influenced the American experience, as well as the cultural, political, and socio-economic movements that shaped the nation. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST406 Civil War And Reconstruction, 1861-1877 (3 semester hours)

Civil War and Reconstruction, 1861-1877 examines the wartime problems of the Union and Confederacy, as well as the consequences of the war and the postwar efforts to create a new Union. Through a study of the primary and secondary literature of American history this course surveys the individuals and groups who influenced the American experience, as well as the cultural, military, political, and socio-economic movements that shaped the nation. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST407 The Gilded Age, 1877-1900 (3 semester hours)

The Gilded Age, 1877-1900 examines the rise of the United States as an industrial and world power with particular stress on the changing patterns within American society. Through a study of the primary and secondary literature of American history this course surveys the individuals and groups who influenced the American experience, as well as the cultural, political, and socio-economic movements that shaped the nation. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST408 The United States: 1900 to Second World War (3 semester hours)

This course examines the changes in American society at the end of the 19th century as it confronted the issues of industrialization, immigration, and urbanization. It explores the open conflict between the advocates of isolationism and collective security and examines the impact of World War I. It also examines the changing values of the 1920's, the stock market crash of 1929, the Great Depression that followed, and the prelude to the second world war.
(Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST409 The United States: WW II to the Present (3 semester hours)

The United States: WW II to the Present is a study of the political, economic, social, and cultural development of the United States from World War II to the Present. Topics include social and cultural changes in the 50s, 60s, 70s, 80s, 90s, and the first decade of the 21st Century; the United States foreign policy from the post-WWII "Cold War," to Korea, Vietnam, and other global confrontations between the United States and the communist world from Somalia, Grenada, and the First Gulf War to the most recent "War on Terrorism"; and the technological changes and their impact on the social and economical development of the United States. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST415 The Cold War (3 semester hours)

The Cold War developed between capitalist and communist nations—primarily between the United States and Russia—shortly after World War II and lasted until the early 1990s. Although the conflict is technically considered over, its impact is still felt in society, politics and economics even today. The Cold War often threatened to transform into a hot war, and actually did so periodically, such as in the Korean and Vietnam Wars. This course focuses on the development of the ideological conflict and its effects on politics, economics, technology, society and culture in both the East and the West. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST480 Special Topic: History (3 semester hours)

This is a special topics course that is designed to afford students the opportunity to examine topics not covered by the existing curriculum. Students are permitted to substitute up to two special topics classes for other courses required in their concentration. Special topic courses are offered quarterly, and the topics for these will vary.

July 2026: The History of AI
As artificial intelligence becomes increasingly embedded in daily life, understanding its long and complex history is essential for interpreting the present—and anticipating a potential "posthuman" future. This course traces AI from early dreams of artificial minds in classical antiquity to the latest advances in generative AI. Students examine foundational figures and early post-WWII pioneers (Turing, Newell, Simon, Minsky, Shannon, McCarthy, and others), as well as the skepticism and backlash of subsequent "AI winters." The course explores the significance of gaming as both a laboratory and a public proving ground for AI (from chess to today's AI-driven worlds, where agents learn, adapt, and generate dialogue and quests in real time). Students examine how popular culture (from Frankenstein and Metropolis to 2001: A Space Odyssey, Star Trek, The Matrix, Her, and Black Mirror) has shaped public expectations and, at times, influenced technological agendas. Finally, students assess why historical perspective is indispensable for contemporary debates over AI creativity, labor, bias, surveillance, regulation and companionship. The course concludes by confronting emerging "posthuman" questions about what AI is becoming, what society should demand of it, and how it may reshape human life and work.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST481 Special Topic: History Fall (3 semester hours)

This is a special topics course that is designed to afford students the opportunity to examine topics not covered by the existing curriculum. Students are permitted to substitute up to two special topics classes for other courses required in their concentration. Special topic courses are offered quarterly, and the topics for these will vary.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST482 Special Topic: History Winter (3 semester hours)

This is a special topics course that is designed to afford students the opportunity to examine topics not covered by the existing curriculum. Students are permitted to substitute up to two special topics classes for other courses required in their concentration. Special topic courses are offered quarterly, and the topics for these will vary.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST483 Special Topic: History Spring (3 semester hours)

This is a special topics course that is designed to afford students the opportunity to examine topics not covered by the existing curriculum. Students are permitted to substitute up to two special topics classes for other courses required in their concentration. Special topic courses are offered quarterly, and the topics for these will vary.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST484 Special Topic: History Summer (3 semester hours)

This is a special topics course that is designed to afford students the opportunity to examine topics not covered by the existing curriculum. Students are permitted to substitute up to two special topics classes for other courses required in their concentration. Special topic courses are offered quarterly, and the topics for these will vary.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST490 Independent Study: History (3 semester hours)

An opportunity for History students to pursue an independent research project or examine a specific area of history under the mentorship of a single professor. Course is open to History majors only. The course will typically involve a major research paper; there will be no examination. Students will submit a proposal prior to the start of the project, and a rough draft of the paper, both of which will count toward the final grade. To be eligible for an independent study, students must be enrolled in a bachelors degree program, must have completed 24 hours at APUS toward their current degree program, and should have already contacted a professor and gained approval for the independent study topic. Once these conditions are met the student should contact their academic advisor. Once the course is open the student must complete an official online registration for the course. (Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST491 Writing a Research Proposal (3 semester hours)

Preparation for the BA in History and Military History Capstone seminar begins on day one of a student's program of study. The theories, research methods and analytical skills, and substantive knowledge obtained through their BA curriculum provide the basis for the Senior Seminar. Students are required to develop primary and secondary source materials on their research topic and address the writing requirements as described in the syllabus and classroom assignments. The research proposal must provide a clear description of a question or problem and a proposed method of answering the question or solving the problem. This course should be the LAST course in your program prior to **HIST498**/**MILH498** and should not be taken earlier in your program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HIST498 Senior Seminar in History (3 semester hours)

The Senior Seminar in History is designed to integrate the student's past work in their major field of study and to review as well as strengthen their understanding of their focus area in history. After a review of the student's academic experience, the student and professor will design a course of study to round out the student's preparation for research and writing a major paper in their field of interest. (Prerequisite: **HIST491** and completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Homeland Security (HLSS)

HLSS154 Mind of a Terrorist (3 semester hours)

This course explores psychological and behavioral perspectives of terrorism. Specifically, the course examines the circumstances underlying why people radicalize and join terrorist groups, engage in terrorist activities, assume various terrorist roles, and, in some instances, de-radicalize and disengage from terrorist activities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS212 Chemical, Biological, and Radiological Hazards (3 semester hours)

This course provides an in-depth study of the nature and tactical use of chemical, biological, radiological, and nuclear (CBRN) agents/weapons by nation-states, state-sponsored organizations, and terrorists. The course will also discuss agricultural attacks and various approaches to deter the use of CBRN agents, materials, and weapons.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS215 Regulatory Issues in Weapons of Mass Destruction (3 semester hours)

This course focuses on the strategic and regulatory issues associated with weapons of mass destruction (WMD) response. Course topics include WMD-relevant public law, definitions, reporting authorities, and jurisdictional and functional issues that govern organizations, technical companies, medical providers, and the scientific world. Other topics include the moral/ethical issues of using WMD, various aspects of WMD response, global CBRN threats, and CBRN arms limitations, treaties, organizations, regimes, and agreements.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS230 Chemistry of Explosives (3 semester hours)

This course offers explosive handlers, bomb disposal technicians and responders an introduction to the chemical make-up and associated hazards of explosive substances. The combination of challenging reference sources and instructional interchange immerses the student in the world of explosive compounds including the research and development behind many explosive compounds widely used throughout the world today. This combination of reference materials, website research and group-related projects, allows the new explosive handler to learn the scientific basis for the long lists of safety precautions involved when handling explosives. Topics include, but are not limited to, history of explosives; basic chemical composition of explosives; and, safety precautions and guidelines when approaching or handling explosives. It will also cover researching information sites and references for material ranging from basic safety precautions of explosives to the resources available for emergency handlers and responders. The course helps students understand the hazards associated with common explosive materials.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS231 History of Explosive Ordnance Disposal (3 semester hours)

This course is a dynamic and information packed introduction to the history of incendiaries and explosives. Included is a short study of the origins of modern-day Bomb Disposal and Explosive Ordnance Disposal (EOD) Teams and their evolving techniques. The course examines areas and ideas from the ancient mystique of “Greek Fire” and the inventions of gunpowder and high explosives, up to modern-day nuclear reactions and weapons of mass destruction. The course provides an in-depth understanding and appreciation of the history and background of the science and mechanics applied to explosive technologies, and provides for a better understanding of those who work to render safe unexploded hazards.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS232 Electronics, Electricity, and Explosives (3 semester hours)

This course is designed for Explosive handling technicians, police or military, or others who respond to incidents involving hazardous devices containing electrical and/or electronic components. Concepts covered include the important differences between electricity and electronics (E&E) from the scientific and technical perspective and the practical situational aspects of threats posed to any handler of suspicious E&E devices. Specific areas are covered in a logical and easy to digest manner and include the fundamental principles of Alternating Current (AC) and Direct Current (DC) including series, parallel, and series parallel circuits; hazardous device circuit component operations and capabilities; and, safety precautions and guidelines when dealing with circuits contained in hazardous devices. The course focuses on how to conduct research on information sites and references for basic circuitry and helps students recognize the technical aspects of circuit theory, components and capabilities required to effectively perform diagnostic procedures.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS233 Explosive Incident Assessment: Methods, Practices, Protocols (3 semester hours)

This course is an overview of Explosive Ordnance Disposal (EOD). It provides a framework in which to evaluate Standard Operating Procedures (SOPs) utilized by military and civilian Explosive Ordnance Disposal teams and Hazardous Devices teams in the field. The extremely hazardous nature of these operations lends itself to a detailed evaluation of the methods; practices and protocols used during live ordnance and emergency response calls. Formal EOD guidance contained in military instructions and regulations, and Federal Codes of Regulation (CFRs) are examined as references and for operational compliance. They are evaluated for efficacy in meeting the often conflicting and demanding needs of EOD operators. Procedures covered include the full spectrum of military EOD Required Operational Capabilities. Included are high-risk evolutions such as diving and demolition operations, parachuting and rappelling operations, and, response to weapons of mass destruction, and small arms employment under hostile and time constrained conditions. The vulnerability and risk of specific EOD procedures to terrorists’ actions is defined, and proposed countermeasures are weighted for effectiveness. The application of industry “Best Practice” risk management processes is examined for application to the Explosive Ordnance Disposal field.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS300 Research Methods in Homeland Security Studies (3 semester hours)

This class is highly recommended as the first course that upper-level homeland security students should take. It will prepare students to employ basic research methods and use their writing skills to produce sound research papers and analyses. Students taking this course will gain the knowledge of how to develop a research strategy, critically read and evaluate data, and communicate their findings in coherent, well-organized written work.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS302 Introduction to Homeland Security and Defense (3 semester hours)

This course offers a broad overview of key operational and policy areas the United States government employs to best ensure U.S. domestic security. Students will explore and discover central themes that create the framework of the homeland security enterprise that emerged after the 9/11 terrorist attacks and continues to evolve.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS303 Homeland Security Risk, Threats and Consequences (3 semester hours)

This course examines the homeland security threat landscape by examining risks, threats, and consequences as they apply to local communities, states, and the nation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS305 Private Sector Homeland Security (3 semester hours)

The private sector is responsible for much of what has become known as the “homeland security enterprise.” This course will address this expanding role and address the responsibility of private sector entities in securing the homeland.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS310 Critical Infrastructure Protection (3 semester hours)

This course provides an overview of critical infrastructures and their relationships to one another. Critical infrastructure sectors will be analyzed to determine prioritization, potential areas of vulnerability to threats, and potential counter-measures that can be utilized. Students will explore issues pertaining to planning, securing, and responding to these infrastructures under serious threat to ensure continuity of operations. Factors that should be considered in the response to minimize disruption and improve first responder safety will also be discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS311 Border and Coastal Security (3 semester hours)

This course is a study of the federal, state and local organizations involved in border and coastal security, associated homeland security issues, the various policy and operational strategies used for border and coastal access and security, and contemporary border and coastal security concerns. Topics also include immigration and non-U.S. approaches to border and coastal security.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS312 Port Security (3 semester hours)

This course is designed to provide students with a broad knowledge of port security issues. It examines the critical importance of ports to trade and the U.S. economy, as well as ports' vulnerability to disruption and attack. Legislation, port facility management and operations, access controls, and future maritime threats will also be discussed in this course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS320 Intelligence and Homeland Security (3 semester hours)

This course focuses on the development and evolution of U.S. intelligence support to the homeland security enterprise. Students will examine the roles and responsibilities of U.S. Intelligence Community members and the support they provide to the federal, state, and local levels as well as the intelligence collection programs for supporting homeland security. Also addressed in this course is the analysis of a terrorist group that threatens the homeland and how intelligence support could be used to counter the threat.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS322 Homeland Security Legal and Ethical Issues (3 semester hours)

This course provides an overview of legal and ethical issues in homeland security. Homeland security legislation and executive orders will be discussed, as will international law, conventions, and declarations. The central focus of the course is the balance of goals, strategies, and objectives for effective homeland security while preserving civil liberties. Issues surrounding intelligence and the use of surveillance, rights of U.S. citizens and foreign nationals, immigration, transportation security, and cyber security will all be examined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS323 Homegrown Violent Extremism (3 semester hours)

This course explores homegrown and domestic violent extremism in Western society, which has significantly increased due to the inspiration of domestic causes, foreign causes, and terrorist groups. This course examines the ideology of homegrown and domestic extremists and the different models of why and how people become radicalized and take violent action against their fellow citizens. Also addressed in this course is the increasing use of social media to recruit and radicalize individuals, initiatives to counter homegrown and domestic violent extremism, and efforts to de-radicalize individuals.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HLSS498 Senior Seminar in Homeland Security (3 semester hours)

This senior capstone course allows students majoring in homeland security to analyze specific program related issues and problems using the knowledge and understanding gained by completing the required courses in the program and a significant number of the major courses.
Prerequisite: Completion of a minimum of 106 hours towards your program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Hospitality Management (HOSP)

HOSP100 Introduction to Hospitality Management (3 semester hours)

Hospitality Management is the largest service industry in the world. This course is an overview of the basis dimensions of professionalism, customer service, and sustainability to the major areas of hospitality management, and segments of travel and tourism. The background and historical development of the hospitality industry and its component areas are presented; employment opportunities and trends in each area are discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP101 Foodservice Sanitation (3 semester hours)

An examination of topics related to food borne diseases and how to control them, importance of employee personal hygiene and habits, and appropriate procedures for handling utensils and equipment. Key terms and real-world food safety case studies are reviewed. (Prerequisite: **HOSP100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP110 Practical Food Safety and Awareness (3 semester hours)

In a developed country, one can often take for granted the safety of the food supply. 1 in 6 Americans get sick from foodborne illness annually, with an estimated 128,000 requiring hospitalization and resulting in approximately 3,000 deaths annually. Practical knowledge in safe food sourcing, storage, preparation and serving is addressed along with providing tips for practical awareness of techniques for staying safe. In a global society, food safety is not just a local issue, and everyone should have a working knowledge of food safety and what to look for to remain free of foodborne illness. In this course, students will learn general techniques for preparing and consuming food that is free from harmful pathogens, incorporating the flow of food from purchasing through storage and preparation to serving. Students will explore contemporary and cross cultural issues surrounding food safety in a global society. Practical knowledge about preparing safe food and red flags to watch for when dining out will be explored. Students will learn where to find information on health inspection reports, foodborne illness outbreaks and recall alerts, and will know where to report any suspected foodborne illness or suspicious activity related to the food and water supply.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP200 Food and Beverage Management (3 semester hours)

Introduction to the principles of the food and beverage management; attention is focused on major industry segments, business practices and trends. Subsequently, detailed consideration is given to the components of the foodservice system: marketing, menu planning, logistical support, production, service, controls, and quality assurance. Product and systems differentiation in various industry segments are emphasized throughout.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP202 Quantity Food Preparation (3 semester hours)

A study of established standards, techniques, and practices in large quantity food production, to include sales, production, and service of meals in varied environments - fine dining, casual table service, and catering, among others. (Prerequisite: **HOSP100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP203 Hotel and Restaurant Purchasing (3 semester hours)

A study of the principles and techniques of purchasing both food and non-food supplies applicable to the food industry. Purchasing ethics are discussed in additions to specifications for all items.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP204 Introduction to Hotel and Restaurant Law (3 semester hours)

A study of the legal rights and liabilities of travel and tourism personnel, hotel and restaurant operators, including innkeeper and guest, landlord and tenant, liquor, sanitation, labor and other laws applicable to hotel and restaurant operations; insurance coverage for the protection of the hotel and restaurant operators from the various liabilities inherent to these types of operations; safety measures necessary to protect guests and employees from legal harm.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP207 Principles of Cost Control in Foodservice Operations (3 semester hours)

This course covers the necessary principles to keep food, beverage and labor costs under control, helping to contribute to the success of the operation. Students will apply the terminology and calculations involved in cost control systems and analysis. The course will examine cost control techniques for food, beverage and labor. Menu engineering and analysis will be introduced along with development of cost reduction methods through management policy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP212 Fundamentals of Tourism Management (3 semester hours)

A comprehensive look at the output, employment, exports, investments and taxation emanating from the immediate providers of travel and tourism products and services

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP221 Hospitality Marketing (3 semester hours)

An introduction to the marketing of hotels, restaurants and clubs. Information on market segmentation, marketing research, public relations, promotions, packaging, pricing strategies and the future of hospitality marketing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP295 Restaurant Operations Seminar (3 semester hours)

This course is a culminating course for the Associate of Arts in Hospitality Management, Restaurant Operations concentration and the AAS in Culinary and Foodservice Management. It is designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Hospitality Management. The student will participate in simulated exercises that provide practical exercise enabling the student to demonstrate a grasp of hospitality management study. This is a culminating course to be taken after all other Associate of Arts in Hospitality Management and Associate of Applied Science in Culinary and Foodservice Management courses have been satisfactorily completed. Student must have SOPHOMORE standing to register. This course is to be taken as the LAST course in the A.A. in Hospitality Management and AAS in Culinary and Foodservice Management programs.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP300 Managerial Accounting for the Hospitality Industry (3 semester hours)

Key accounting concepts and the selective application of their most effective strategies and tactics are mission critical factors for most hospitality operations. Students complete financial statements and analysis using sound accounting principles, preparing them for real-world, hands-on managerial accounting in a hospitality setting. Revenue management and dynamic pricing, accounting for hospitality operations, and profitability indexes are introduced.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP302 Hospitality Law (3 semester hours)

Focus is on fundamental laws, rules, and regulations applicable to the hospitality industry regarding rights and liabilities of innkeepers and restaurant operators. Case studies will be used to provide additional learning opportunities specific to hospitality.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP304 Nutrition in the Food Service Industry (3 semester hours)

An introduction to basic nutrition concepts and concerns in relation to food preparation and service in the hospitality industry. Students are introduced to nutrition and dietary guidelines and the connection to healthy life styles and prevention of health issues.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP308 Meeting and Convention Planning (3 semester hours)

A thorough explanation of the lucrative meeting and convention industry and its function in the travel and tourism sector. An overview of the meeting, exposition, and convention businesses, that covers the history of these businesses and the economic value they represent to a destination. Course will include a broad brush of the organizations that support this segment, such as convention bureaus, destination management companies and meeting planners.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP309 Convention Sales and Services (3 semester hours)

A practical insight into servicing different kinds of meetings and conventions, the types of organizations that stage such events, and the people who hold the key to site selection, and implementation is the focus. Convention management is presented in a way that prepares the student for real-world experiences in planning, selling and servicing meetings and conventions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP310 Management of Lodging Operations (3 semester hours)

Focuses on the understanding of how hotels are managed from the rooms' perspective. Managerial aspects of the front of the house departments/divisions and the back of the house departments/divisions are to ensure efficient lodging operations; topics include the overview of the lodging industry, housekeeping, front office, PBX, reservations, revenue management, forecasting, budgeting, inventory management, service, ethics, and technology.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP316 History and Culture of Wine (3 semester hours)

Study of wine manufacturing, quality criteria, and sensory standards for both U.S. and international wines; topics include history of wine in society, selection of wine for specific meals, and wine variations. Opportunities for students to purchase different types of wine and participate in evaluative tasting techniques are presented; however, alternatives are available for students that choose not to, or may not legally, consume alcoholic beverages.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP320 Business and Conference Hospitality Mgmt (3 semester hours)

A study of business travel and conference management in the multi-billion dollar industry is covered from the international down to the local level. Discussions focus on best practices, strategies, and customer perspectives that differ for business vs. leisure travel, leading organizations in the business and conference hospitality industry, issues of liability and insurance, and other factors implicit in effectively managing and providing services to be competitive in this industry.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP321 Marketing and the Hospitality Industry (3 semester hours)

A comprehensive review of marketing in the hospitality industry; restaurants, hotels, planned play, theme parks and convention centers, based upon customer satisfaction and the customer’s perspective. Students will identify best practices in marketing, analyze the market, and assess consumer behavior, offerings, price, and promotion strategies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP325 Revenue Management for the Hospitality Industry (3 semester hours)

This course examines principles and tactics in revenue management for the hospitality industry. It is designed to equip students with the knowledge and skills to optimize pricing strategies and enhance perceived value in the hospitality sector. Through a combination of theoretical principles, relevant calculations, and data analysis, students will learn to assess market trends, develop dynamic pricing models, and implement effective revenue strategies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP335 Leadership and Management in Hospitality (3 semester hours)

Focus is on the leadership role, people management, interpersonal skills and attention to quality in hospitality organizations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP350 Managing Technology in the Hospitality Industry (3 semester hours)

Focuses on identifying and evaluating technology by type and utility to assess how technology influences the guest experience and operations management. Interconnected components of a system, data gathering and analysis, utility, and ease of use are examined though class reading, group discussion, and assessments.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP400 Quality Service Management (3 semester hours)

The focus is on service delivery and methods for implementation and improvements within the service delivery process. Special emphasis will be placed on management and supervision techniques in service quality along with steps in critical evaluating and implementing a quality service plan within hospitality based organizations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP410 Advanced Tourism and Hospitality Management (3 semester hours)

Focus is on advanced techniques and skills for Hospitality Management Professionals to ensure effective and efficient management within the Tourism and Hospitality Management industries. Standards and expectations for restaurant owners, hotel and tourism managers and meeting and event planners are addressed. Price points, product development, tips and marketing techniques that restaurants, hotels, tourism organizations and event planners employ to enhance the customers' experience are addressed.(Prerequisite: **HOSP100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP413 Meeting and Event Risk Management (3 semester hours)

This course introduces procedures to manage facilities and risks specific to the events industry. Current knowledge in risk management is needed to protect guests from safety hazards and firms from loss of profits specific to this unique sector of hospitality. Topics covered include: health and safety, loss prevention and security, emergency preparedness and safeguards, program design and site management. (Prerequisite: HOSP 100)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP415 Destinations and Cultures (3 semester hours)

Introduces tourism development as a process with its own organizational structures and its own responses to the economic cycle of supply and demand. Cultural environments and their influence are discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HOSP495 Senior Seminar in Hospitality Management (3 semester hours)

The 16-week Senior Seminar is the final course for the BA in Hospitality Management. Students fulfill the requirements by obtaining an internship in their selected concentration. Students obtain an internship that consists of 80 hours of work over the 16 weeks in a self-selected and instructor approved hospitality environment (hotel, restaurant, convention center, etc.). Students will apply insights and learning from the classes and obtain real-time work experience. Students are required to keep a journal or log during the internship capturing questions, insights, and learning from the experience. Upon completion of the practicum students will write a final 10 page integrative paper drawing upon literature and insights to support and enhance their practicum experience. For those students who do not obtain an internship, they can fulfill the requirements by writing a 30-page, instructor-approved, research paper that is connected to a real organizational issue. See syllabus for further information. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Humanities (ARTH)

ARTH200 Art Appreciation (3 semester hours)

This course provides a survey of the visual arts, which is directed at understanding how to read the global visual world. Building from basic terminology and fundamental analysis, to more complex concepts of understanding art, the course provides tools for examining, analyzing, interpreting, and writing about works of art. Topics will include the political, religious, socio-cultural, and aesthetic functions of painting, sculpture, architecture, camera arts, and new media. No prior art classes or experiences are required.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARTH240 Survey of Photography (3 semester hours)

This course is designed to acquaint the student with the history of photography from its beginnings through contemporary times, including its terminology and analytical skills applied to the art and practical applications of photography. The course will give the student a broad background of major photographic works and photographers from various eras in both Western and non-western arts; photographic production, tools, and techniques; ways to interpret art and apply photographic terminology; describing, comparing, contrasting, and analyzing photography within technological, social, political and historical contexts; and applying digital information literacy to the research and writing process about photography.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ARTH241 Film and Literature (3 semester hours)

This course is designed to enhance students' appreciation for the history and traditions of American film. Students will investigate traditional as well as non-traditional film images, themes, techniques, and styles.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Humanities (MUSI)

MUSI200 Music Appreciation (3 semester hours)

Spanning the Middle Ages through the twenty-first century, this course offers a thorough introduction to the elements of music, a broad overview of the history of musical styles, including cultural contexts and perspectives.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MUSI212 Jazz and Rock (3 semester hours)

This course is designed to provide students with an introduction to popular American music in the 19th, 20th, and 21st centuries and the cultural contributions of African Americans, Indigenous peoples, Hispanics, and European descendants. Students will learn about ragtime, jazz, how jazz became an art, blues, rhythm and blues, rock and roll, and popular music. Important artists will be discussed, important songs will be reviewed, and the intersection of cultures will be analyzed throughout the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MUSI250 World Music and Cultures (3 semester hours)

World Music and Cultures explores traditional and popular from major regions of the world, and how music relates to its culture. Students develop knowledge of representative styles and regional characteristics in world music, including cultural context and perspectives.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Information Technology (DSIN)

DSIN141 Image Enhancement using Adobe Photoshop® (3 semester hours)

This course introduces students to the principles and practices of image manipulation, image enhancement, and image storage. In this class, students will explore graphical file formats, color and perception, color balance, histograms, web-friendly colors, the impact of image size and resolution on screen size and resolution, brightness, contrast, image noise, noise reduction, and digital signal processing (blurring, de-blurring, Gaussian filters, sharpening, softening, spot healing, dodging, and burning). The course will also teach students about transparency, opacity, hue, saturation, image layering, color blending (multiplying and dodging), image transformation (rotation, resizing, and shearing), selections (pixel and vector), alpha channels, and image modes (grayscale, RGB, CMYK, HSB, and indexed color).

NOTE: For this course, students must have access to Adobe Photoshop. This software is not provided by the course material grant and must be purchased/provided by students.

Adobe Photoshop® is a registered trademark of Adobe, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DSIN143 Design Using Adobe InDesign® (3 semester hours)

This course studies the principles, practices, processes, and disciplines related to using Adobe InDesign to create print media for effective communication. In this course, students will learn how to evaluate the design process and acquire the knowledge for planning, preliminary negotiations, pre-visual research and analysis, visual conceptualization, points of view, attitude, document design, document production, and post-production. This class also examines the principles of typographic design, word design, page organization, page layout, the integration of words and images, character styles, paragraph styles, layout design, tiling, scaling, textures, and illustrations. In addition, this course investigates color theory, additive and subtractive color models, complementary colors, patterns, and rhythms. Students will apply their knowledge to design flyers, brochures, CD/DVD covers, and product packaging.

NOTE: For this course, students must have access to Adobe InDesign. This software is not provided by the course material grant and must be purchased/provided by students.

Adobe InDesign® is a registered trademark of Adobe, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

DSIN241 Illustration & Design Using Adobe Illustrator® (3 semester hours)

This course examines the process of designing, developing, and deploying text and graphics using an industry standard vector graphics program, Adobe Illustrator. Students will create graphics that take advantage of the broad set of tools, effects, and attributes available in Illustrator.

Also, students will learn to edit existing vector graphics files and structure and manage vector graphics files for maximum efficiency and effectiveness. In addition, the course will cover how to format files for use in other applications and for output to a variety of imaging devices.

NOTE: For this course, students must have access to Adobe Illustrator. This software is not provided by the course material grant and must be purchased or provided by students.

Adobe Illustrator® is a registered trademark of Adobe, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Information Technology (ENTD)

ENTD120 User Experience I (3 semester hours)

This is an introductory course on user experience (UX). It explores fundamentals concepts, principles, theories, laws, and techniques of UX. It examines how UX affects the success or failure of a business or an organization. The course also addresses psychology, ethical implications of UX and user design principles. This course will serve as the foundation for other related UX courses.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD150 Beginning Programming (3 semester hours)

This course introduces beginners to computer programming through Python®, one of today's most popular programming languages. Students learn essential programming concepts, including variables, data types, functions, control structures, loops, and data structures. With an emphasis on basic programming concepts and programming fundamentals, the class teaches how to write code, solve problems with logic, and design step-by-step algorithms. No prior experience is required—this learning experience is ideal for students exploring computer science or preparing to study different programming languages such as C or Java. By focusing on structured problem-solving and clear instructions, the course equips future programmers with the skills to begin their programming journey and build lasting knowledge in programming.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD213 Introduction to Mobile Application Design and Development (3 semester hours)

This course is an introductory study of mobile application design and development and how enhanced mobile devices are changing the face of technology. The course begins with some introductory concepts to lay the foundation for more advanced topics, such as regarding development platforms, cross-platform development, mobile operating systems, the mobile web, The Internet of Things, and artificial intelligence in mobile apps.

Also, the course will cover a theoretical overview of mobile application, design and development issues, and practical application concerns. Conceptual and scenario-based exercises will be used to reinforce student learning in the course. To do well in this course, students will need introductory-level programming experience and/or knowledge; no specific programming language is required.

Note: **ENTD213** duplicates **ENTD313**, students may only earn credits for one course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD220 Introduction to Python® (3 semester hours)

The course presents the principles of object-oriented programming using the Python® language, one of the most increasingly preferred languages for programming today. Python is a high-level general-purpose programming language that is portable and used on different systems to include UNIX and Mac—it is platform independent. Python has been touted as one of the most powerful and easy to learn programming languages. The course addresses syntax, types, variables, strings, branching, loops, tuples, lists, dictionaries, functions, files, exceptions and other related concepts and terms in an effort to establish a solid foundation for more advanced programming using structured language. The course will also provide both conceptual and scenario based exercises, thus enabling students to experience the maximum amount of comprehension and retention of material covered. The Python interpreter is available online for free. This software is not provided by the course material grant and must be purchased/ provided by the student. (Prerequisites: **ENTD150** or **ENGR200**)

Python® is a registered trademark of the Python Software Foundation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD225 Introduction to Blockchain and Cryptocurrency (3 semester hours)

This course offers a high-level technical introduction to blockchain and cryptocurrency, providing students with a foundational understanding of how blockchain technology works. Topics include blockchain networks, consensus mechanisms, distributed ledger architecture, cryptography, digital signatures, smart contracts, and decentralized record systems. Students will examine how blockchain stores information securely across nodes in a peer-to-peer network, enabling tamper-resistant transactions without third-party verification. Emphasis is placed on blockchain implementation and data structures, including public and private blockchains, and the role of blockchain in business operations and identity management. Through practical exercises, students gain exposure to blockchain frameworks like the Ethereum blockchain, while exploring potential applications in digital assets, voting systems, property records, and other industries. The course focuses on the computer science and engineering aspects of blockchain, rather than finance or cryptocurrency investment. Students will leave with a deeper understanding of blockchain's decentralized nature, security principles, and future impact across many industries.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD226 Applications of Blockchain (3 semester hours)

This course explores the technical implementation and applications of blockchain technology across a range of industries. Students will examine blockchain architecture, including the layers of the blockchain technology stack and how these affect system governance, consensus algorithms, data privacy, and access control. Emphasis is placed on blockchain's decentralized nature, secure data storage, and data transparency, with examples from healthcare (e.g., patient data and medical records), finance (e.g., secure transactions, payment processing, bitcoin transactions), logistics, and real estate. Students will analyze how blockchain protocols support data integrity, prevent data tampering, and validate transactions across a distributed ledger network. The course also investigates blockchain-based solutions such as smart contracts, private and public blockchain networks, and blockchain records, highlighting both opportunities and vulnerabilities. Additional topics include cryptographic hash functions, document timestamps, digital assets, and blockchain's role in data security, digital currencies, and mobile device integration. (Prerequisite: **ENTD225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD261 Scripting Languages for the Administrator (3 semester hours)

This course introduces the scripting languages necessary in custom programming for server administration and security purposes. Introductory level programming will be covered using scripting languages such as JavaScript®, VBScript®, Windows Shell Script, Python® and SQL. Previous programming experience is recommended. You must have access to a Windows®-based system to successfully complete the assignments in the course.

JavaScript® is a registered trademark of Oracle America, Inc.

VBScript® is a registered trademark of Microsoft Corporation.

Python® is a registered trademark of the Python Software Foundation.

Windows® is registered trademark of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD268 Information System Design (3 semester hours)

This course is an overview of the system development life cycle. Emphasis on current system documentation through the use of both classical and structured tools/techniques for describing process flows, data flows, data structures, file designs, input and output designs and program specifications. Discussion of the information gathering and reporting activities and of the transition from analysis to design.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD278 Object Oriented Design (3 semester hours)

This course is a study of the principles, practices, and technical architecture and development characteristics of Object Oriented Programming and an examination of the differences between object oriented programming and traditional programming. It examines objects, instances, classes, inheritance, polymorphism, encapsulation, abstraction, methods, attributes, tight-encapsulation, interfaces, type casting, type conversions, and object libraries. This course differentiates between single-inheritance model and multiple inheritance models. This course also explores the foundations of the Unified Modeling Language (UML), class models, state models, and interaction models.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD300 User-Centered Experience Behavioral Design (3 semester hours)

This course provides a study of behavioral user experience (UX) techniques, strategies, tools, and tactics. This course will be taught utilizing a mixture of analytical and practical methods.

The course examines UX principles and human behavior patterns, as well as how they are used to improve the UX design of products, services, and processes. Course topics include common types of behavioral UX Issues, user personas, behavioral UX data analysis, and user behavior and psychology. Other topics covered in the course include behavioral design, human computers and cognition, and usability analysis.

The course begins with introductory UX concepts and lays the foundation for more advanced topics. The course covers both conceptual and scenario-based exercises, which will enable students to more easily comprehend and retain the course material. (Prerequisite: **ENTD120** and **WEBD122**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD301 User Experience Strategy (3 semester hours)

This UX strategy course introduces concepts and strategies for creating a successful user experience strategy. It examines UX design principles and their connection to business strategy and business goals. Students will apply user research and analysis to address user needs and explore how a UX strategist can align solutions with business stakeholders and UX team members. Through team-based projects, students will learn how to define a UX vision, build a UX roadmap, and incorporate user feedback and user testing into the design process. Topics include the historical development of UX strategy, tenets of defining UX strategy, value propositions and value innovation, target users, and business model prototypes. By completing this course, students will strengthen UX management skills that prepare them to contribute to UX initiatives and collaborate with UX professionals. (Prerequisites: **ENTD120** and **WEBD122**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD302 User-Centered Experience and Interactive Design (3 semester hours)

This user experience design course is the study of UX design and the role of UX designers. It examines how businesses and organizations use user experience methods to conduct user research, analyze, plan, and implement techniques that enhance a user's experience. The course builds on concepts from prior UX research and design courses and emphasizes scenario-based exercises that apply design principles in practice. Students will use design tools to build prototypes and user interfaces, supporting retention and hands-on learning. The course blends analytical and practical approaches to user centered design. Topics include the design process, UI design, user interface design, UI UX design, interaction, wireframes, animations, usability testing, user personas, and the psychology of experience design. Students will also practice problem solving and apply design thinking to create meaningful, real world projects. (Prerequisites: **ENTD120** and **ENTD301**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD320 Intermediate Python® Programming (3 semester hours)

This course presents the principles of object-oriented programming using the Python® language, one of today's preferred languages for programming. Python is a high-level general-purpose programming language that is portable and used on different systems, including UNIX and Mac, and it is platform independent. Python has been touted as one of the most powerful and easy-to-learn programming languages. The course addresses data structures and algorithms; efficient and scalable Python programming; RESTful application programming, interface services, microservices, and multiprocessing using the Python programming language; and other related concepts and terms in an effort to establish a solid foundation for more advanced programming using structured language. The course will also provide an intermediate level of both conceptual and scenario-based exercises, thus enabling students to maximize their comprehension and retention of material covered. The Python interpreter is available online for free. This software is not provided via the course material and must be obtained by the student. (Prerequisite: **ENTD220**)

Python® is a registered trademark of the Python Software Foundation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD323 App Development (3 semester hours)

This course studies application development for various mobile devices and covers how to enhance the use of mobile devices with uniquely designed application software. The course expands on concepts introduced in other mobile application design and development courses and allows students to design and develop a prototype app. In addition, this course covers scenario-based exercises and requires students to use assigned tools to write, test, and deploy mobile software applications associated with applicable operating systems.

Before the class begins, students must install the latest Xcode®, available from the App Store. Students must have access to an Apple computer with Xcode installed to successfully complete this course. Students will also need intermediate-level programming experience and/or knowledge, including previous programming experience using an object-oriented C-based language such as C#, Java®, Python®, or C++. (Prerequisite: **ENTD213**)

Xcode® is a registered trademark of Apple, Inc. JavaScript® is a registered trademark of Oracle America, Inc. Python® is a registered trademark of the Python Software Foundation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD326 Blockchain and Crypto Programming (3 semester hours)

This course introduces students to blockchain programming through hands-on experience with the data structures, coding techniques, and consensus algorithms used in blockchain development. Students will explore the foundations of blockchain technology and gain practical skills in blockchain coding languages such as Python and JavaScript, with attention to object-oriented programming (OOP) principles and their application in blockchain systems. Key topics include designing and developing smart contracts, programming decentralized applications (dApps), and implementing blockchain-based solutions across various platforms such as the Bitcoin and Ethereum blockchains. The course also covers functional blockchain architectures, blockchain security, and the role of programming languages in supporting scalable and secure blockchain ecosystems. Emphasis is placed on coding for real-world blockchain projects, the growing demand for blockchain developers across different industries, and the career paths available in blockchain software development. Students will also assess how blockchain works, including its data structures, peer-to-peer transactions, and portable code requirements. (Prerequisites: **ENTD225**, **ENTD226**, and **ENTD381**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD381 Object Oriented Programming With Java® (3 semester hours)

This course is a study and application of the principles and concepts of Object-Oriented Programming (OOP) as it is implemented in the world of Java®; including inheritance, encapsulation, and polymorphism. It appraises the processes and practices used to develop IT solutions that are reusable, modular, and small; all of which are popular objectives in the world of IT management. This course explores the inheritance (is a), containment (has a), and collaboration (use a) relationships; and examines the major packages in the Java Class Library, strings, arrays, classes; instantiation, properties, methods, constructor methods, method overloading, method overriding, inheritance modifiers, access modifiers, interfaces, and packages. This course also assesses exception handling with the use of “try,” “catch,” and “finally.” Students must have access to the latest edition of the Java Development Kit. This software is not provided by the course material grant and must be purchased/provided by the student. (Prerequisites: **ENGR200** or **ENTD150**)

Java® is a registered trademark of Oracle America, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD382 Intermediate Object-Oriented Programming With Java® (3 semester hours)

This course is designed to build upon the foundational concepts of Java® programming. This course delves deeper into object-oriented principles, the Graphical Users Interface (GUI), and advanced Java features. Students will gain hands-on experience in developing robust and maintainable Java applications. This software is not provided by the course material grant and must be purchased/provided by the student. (Prerequisite: **ENTD381**)
Java® is a registered trademark of Oracle America, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTD411 Application Development (3 semester hours)

This course covers issues of software project development from the perspective of a manager and of an application developer: from conception, to prototyping, to interfacing with analysts, supervisors/team leaders and management, through to product testing, release, and maintenance. Also covered are issues related to revision control, coding under stress, and strategies for dealing with budget and schedule overruns. Particular attention is given to strategies for maintaining code quality, programmer productivity, and coding and design standards under budget, staffing, and time constraints. Lateral versatility of the developer within project roles across a project's life span (such as often occurs in small software companies) is emphasized.(Prerequisite: **ENTD150**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Information Technology (INFO)

INFO221 Relational Database Concepts (3 semester hours)

This course introduces students to the concepts, management issues, and advantages of relational database management systems. Topics covered in the class will include data definition, data manipulation, relational algebra, Structured Query Language (SQL), and Online Transaction Processing (OLTP) systems. Also, this class examines database design, normalization for OLTP systems, Codd’s rules for OLTP systems, data integrity, database system functions (journaling, forward recovery, and backward recovery), database security (authentication and authorization), and database administration. Other topics that students will explore in this course include distributed databases, Online Analytic Processing (OLAP) systems, data warehouses, and object-oriented databases.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INFO222 Database Concepts (3 semester hours)

This course studies the major advancements in database technology that have taken place in recent years. The class will introduce students without a prior background in Microsoft Access® to basic concepts and will cover advanced topics as well. The course offers both conceptual and hands-on material in database management, enabling students to have improved comprehension and retention of course material.

Note: Software for this course is not provided by the course material grant and must be purchased/provided by students.

Note for Mac users: Access 2019 and older do not work on the Mac OS. The University recommends using Windows OS, even on Mac. If a Mac OS must be used, it is recommended that students install Windows on Parallels (purchased separately) and install Access 2019 on the Windows OS via Parallels. Microsoft Access is a registered trademark of Microsoft Corporation.

Microsoft Access® is a registered trademark of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INFO331 Management Information Systems (3 semester hours)

This course provides a technical and organizational foundation for understanding the use and importance of information systems and information technology in today's management environment. This course covers the hardware, software, and infrastructure that support management information systems. Information and decision support systems, knowledge management and specialized information systems, database management systems, telecommunications, the Internet, Intranets, Extranets, and wireless networks will be examined. This course also covers systems development, e-commerce, and the ethical and societal impact of management information systems.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INFO401 Data Exploration and Visualization (3 semester hours)

In this project-based Python data science course, students will explore the Python language and its use in data analysis. Students will gain hands-on experience applying statistical methods through exploratory data analysis, data wrangling, and data visualization with libraries such as pandas and the NumPy library. The course covers preparing datasets, handling missing values, and using NumPy arrays to support effective analysis. Students will also examine machine learning models such as regression models and practice model evaluation on real datasets. In addition, students will work with relational databases using SQL and explore NoSQL systems to compare different approaches to managing data. Through interactive exercises and Python projects in environments like Jupyter Notebook, students will write Python code, create visualizations, and develop essential data analytics skills for solving real world problems in data science. (Prerequisites: **ENTD150**, **ENTD220**, and **INFO222**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INFO498 Information Technology: Capstone (3 semester hours)

This capstone course is a senior level course designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Information Technology. The student will complete an approved academic project and paper that demonstrates mastery of their program of study in a meaningful culmination of their learning, and assesses their level of mastery of the stated outcomes of their degree requirements. This is a capstone course to be taken after all other Information Technology courses have been satisfactorily completed. Students must have senior standing in the program and must demonstrate that they have taken all other IT courses in their degree plan prior to registering for this course. (Prerequisite: Completion of a minimum of 105 hours towards your program including **ENGL101** or **ENGL110**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Information Technology (ITCC)

ITCC111 Basic Productivity Applications (3 semester hours)

This course is a study of the concepts and technology trends essential to office productivity applications. Students will explore the principles, practices, features, and functions of the word processing application in the Microsoft Office® Suite. The course will be taught with a mixture of analytical methods and practical exercises. Students will use Microsoft Word® to create and format documents; and use lists, themes, mail merge, watermarks, templates, graphics, navigation tools, tables, charts, citations and bibliographies. Students may access MS Office 365® Suite via their MyCampus account for FREE in the classroom. Microsoft Office 365 is free to students and faculty.

Microsoft Office®, Microsoft Word® and Microsoft Office 365® is a registered trademark of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITCC112 Advanced Productivity Applications (3 semester hours)

This course is a study of the concepts and technology trends essential to office productivity applications. Students will explore the principles, practices, features, and functions of the electronic spreadsheet application in the Microsoft Office® Suite. The course will be taught with a mixture of analytical methods and practical exercises. Students will use Microsoft Excel® to create and format spreadsheets; they will also manipulate data and use formulas, charts, workbooks, styles, hyperlinks, themes, functions, conditional logic, graphics, comments, and security features. Students will participate in an engaging learning experience that aligns with Microsoft's Exam. The course content maps to the Microsoft Office Specialist (MOS): to Microsoft Office Excel Certification. Students may access MS Office 365® Suite via their MyCampus account for FREE in the classroom. Microsoft Office 365 is free to students and faculty.

Microsoft Office®, Microsoft Excel® and Microsoft Office 365® is a registered trademark of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITCC113 Office Presentation Applications (3 semester hours)

This course is a study of the concepts and technology trends essential to office presentation, communication and productivity applications. Students will explore the principles, practices, features, and functions of Microsoft PowerPoint®, the presentation application in the Microsoft Office® Suite. The course will be taught with a mixture of analytical methods and practical exercises. Students will use Microsoft PowerPoint to build and format presentations; and to use styles, templates, lists, tables, charts, hyperlinks, transitions, animations, graphics, multimedia, and digital signatures. They will also rehearse the timing of the presentation and prepare presentations for the Web. Students will participate in an engaging learning experience that aligns with Microsoft's Exam. Students may access MS Office 365® Suite via their MyCampus account for FREE in the classroom. Microsoft Office 365 is free to students and faculty.

Microsoft PowerPoint®, Microsoft Office® and Microsoft Office 365® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITCC121 Introduction to Computer Science (3 semester hours)

This course is an overview of computer information systems in which hardware, software, procedures, systems, and databases are explored in relation to their integration and application in business and other segments of society. Telecommunications and network concepts are introduced as a basis for understanding of the Internet and e-commerce capabilities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITCC200 Application Software Integration (3 semester hours)

In this course, students will explore the principles, practices, features, and functions of software in the Microsoft Office® suite. The course will be taught through a mixture of analytical methods and practical exercises. Students will use Microsoft Word®, Excel®, Outlook®, and PowerPoint® to format and design documents, spreadsheets, and other related projects. Students will also design and publish advertising and marketing documents according to hypothetical and real-world scenarios.

Through this course, students may acquire a more comprehensive understanding of commonly used applications and how they can be integrated with one another. Students may access the free Microsoft Office 365® suite via their MyCampus account. This software suite is available to students using both Apple® and Microsoft Windows® computers.

Microsoft Word®, Microsoft Excel®, Microsoft Outlook®, Microsoft Access®, Microsoft PowerPoint®, Microsoft Office 365®, and Microsoft Windows® are registered trademarks of Microsoft Corporation. Apple® is a registered trademark of Apple, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITCC231 Introduction to Information Technology Writing (3 semester hours)

This course provides a writing foundation necessary for an IT professional to identify and respond to communication needs within the IT environment, so that the professional can produce clear, concise, and appropriate IT documentation for peers and supervisors, with the ultimate goal of increasing organizational standardization and efficiency.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITCC298 Computer Technology Intermediate Capstone (3 semester hours)

This course provides a comprehensive overview of major components of computer technology. The course explores concepts, principles, and practices associated with computer hardware and software, web development, productivity applications, and programming fundamentals. This course provides an opportunity to integrate academic rigor with real-world experience; apply theory to solve real-world problems, make the learning experiential, facilitate project-based learning, and integrate knowledge and skills with practice. (Prerequisite: Completion of all other General Education Major and Elective Requirements in the Associate of Science in Computer Technology program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITCC498 Computer Technology Advanced Capstone (3 semester hours)

This capstone course is a senior level course designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Computer Technology. The student will complete an approved academic project that demonstrates mastery of program of study in a meaningful culmination of learning and assesses the student's level of mastery of the stated outcomes of the degree requirements. This course is to be taken after all other Computer Technology courses have been satisfactorily completed. Students must have senior standing in the program and must demonstrate that they have taken all other IT courses in their degree plan prior to registering for this course. (Prerequisite: Completion of a minimum of 111 hours towards degree program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Information Technology (ITMG)

ITMG121 Fundamentals of IT Project Management (3 semester hours)

This IT project management course introduces the planning and processes involved in managing an information system project. Students learn essential project management skills by examining planning, scheduling, and controlling aspects throughout the project lifecycle. The course explores widely used project management techniques such as the Project Evaluation and Review Technique (PERT), Gantt charts, and other tools for developing and maintaining a project plan. Emphasis is placed on methodologies that help manage projects effectively, guide project teams, and support positive outcomes. This course also aligns with the knowledge required to pursue the CompTIA Project+® certification, helping students strengthen their technical foundation and prepare for future career opportunities in technology management and leadership.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITMG223 IT Project Management Using Microsoft Project® (3 semester hours)

This applied project management course introduces students to core project management principles and technology trends while providing hands-on experience with Microsoft Project®. Through a blend of analysis and practical assignments, students gain essential project management skills by creating comprehensive project plans, organizing project tasks such as estimating, budgeting, and scheduling, and managing resource allocation. Additional topics include identifying constraints, determining critical paths, building Gantt charts, and establishing baselines to monitor project performance. Because this is an applied project management program, students will learn to apply industry-recognized techniques for managing projects of varying complexity. The course also aligns with the topical knowledge required for the CompTIA Project+® certification, supporting both academic success and preparation for future career opportunities in technology management and leadership.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITMG281 Law, Privacy, and Digital Data (3 semester hours)

This course examines how laws have changed to account for the expanded realm of crimes in the digital age. Students will learn about topics such as online identity theft, sexual harassment, intellectual property rights violations, and plagiarism. In addition, students will learn how stalkers can access the digital data of victims, gain access to highly confidential medical and financial information, and sabotage their victims' reputations. This course examines current literature on topics such as the Health Insurance Portability and Accountability Act (HIPAA), the Family Educational Rights and Privacy Act (FERPA), the Children’s Online Privacy Protection Act (COPPA), the Sarbanes-Oxley Act, and other legislation impacting legal disputes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITMG371 Contemporary Internet Topics (3 semester hours)

This course explores the Internet's impact on business and personal dynamics, from a managerial perspective. A review of current literature will examine such issues as: changes in workplace productivity, legal issues arising from company Internet use policies, staff morale in the face of nearly ubiquitous Internet access, institutional liability for employee conduct while on the Internet, telecommuting, and the impact of conducting personal business during work time. Non-workplace issues such as the impact of the Internet on family life, politics and the economy will also be explored.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITMG421 Virtual Management (3 semester hours)

This course is designed to provide an overview of key individual, group, and organizational issues involved in virtual management (technology-assisted employee management). Topics covered in this class include gauging employer and employee readiness for technology-enabled communication and telecommuting; identifying appropriate job types and flexibility options; applying effective communication strategies and methods when utilizing computer video, telecommunication technologies; and implementing and evaluating management procedures and policies in flexible organizations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITMG481 Ethics in Information Technology (3 semester hours)

This course introduces students to issues and controversies that comprise the new field of Cyberethics. The course examines a wide range of ethical issues of moral responsibility towards social and ethical concerns which affect us in our daily lives. Other topics include machine ethics, conceptions of autonomy and trust, responsible innovation, ethical controversies related to ethical computing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITMG498 IT Management: Senior Seminar (3 semester hours)

This Capstone course is a senior level course designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Information Technology Management. The student will complete an approved academic project or paper that demonstrates mastery of their program of study in a meaningful culmination of their learning and to assess their level of mastery of the stated outcomes of their degree requirements. This is a capstone course to be taken after all other IT Management courses have been satisfactorily completed. (Prerequisites: **ENGL101** or **ENGL110** and completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Information Technology (ITNW)

ITNW200 Cisco I (3 semester hours)

Cisco I is the first of two courses that follow the Cisco Networking Academy curriculum, providing a strong foundation in networking fundamentals. This computer networking course introduces students to essential concepts such as network terminology, protocols, and the basics of Ethernet LANs, Virtual LANs (VLANs), and wide-area networks (WANs). Students will explore the OSI model, structured cabling, and the role of key network devices such as routers and switches. Additional topics include Internet Protocol (IP) addressing, configuring basic network management features on switches, and understanding common network standards. By completing this course, students build the core networking basics needed to continue into more advanced Cisco training.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITNW201 Cisco II (3 semester hours)

Cisco II is the second of two courses in the Cisco Networking Academy, expanding students' knowledge, skills, and training in the networking field. Topics include Spanning Tree Protocol, Subnetting IPv4, Classful Networks, Subnet Masks, static and dynamic routing, Cisco routers, and IP Routing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITNW210 Cloud Foundations (3 semester hours)

Cloud Foundations is intended for students who seek an overall understanding of cloud computing concepts, independent of specific technical roles. It provides a detailed overview of cloud concepts, AWS core services, security, architecture, pricing, and support.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ITNW211 Cloud Architecting (3 semester hours)

Cloud Architecting covers the fundamentals of building IT infrastructure on Amazon Web Services, or AWS. The course is designed to teach solutions architects how to optimize the use of the AWS Cloud by understanding AWS services and how these services fit into cloud-based solutions. Because architectural solutions can differ depending on industry, type of applications, and size of business, this course emphasizes best practices for the AWS Cloud, and it recommends various design patterns to help you think through the process of architecting optimal IT solutions on AWS. It also presents case studies throughout the course, which showcase how some AWS customers have designed their infrastructures, and the strategies and services that they implemented. Finally, this course also provides opportunities to build a variety of infrastructures via a guided, hands-on approach.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Information Technology (WEBD)

WEBD121 Web Development Fundamentals (3 semester hours)

This course introduces students to website development through a combination of readings and hands-on development exercises. This course covers coding with Hypertext Markup Language 5 (HTML5), website development essentials, Cascading Style Sheets (CSS), graphical elements, hyperlinks, HTML table creation, web forms, video, audio and image techniques, website development for business, and website publishing and maintenance. Fundamentals of JavaScript® programming are also introduced in this course.

Students will need access to a web browser such as Microsoft Edge Firefox, or Google Chrome.

Microsoft Edge, Firefox, or Google Chrome are not provided by the course material grant and must be purchased/provided by students. To succeed in this course, students will also need basic computer knowledge such as creating files and folders, downloading and uploading files, creating zipped files, and working with a text editor such as Notepad++.

JavaScript® is a registered trademark of Oracle America, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD122 Introduction to Web Analytics (3 semester hours)

This introductory web analytics course is designed for beginners who want to develop foundational skills in web analytics and data analysis using Microsoft Excel®. Students will learn how to transform raw data into actionable insights by learning how to collect data, interpret website traffic, and understand how businesses use analytics to report on website visitors. They will learn key terms and web analytics concepts, gaining reinforcement through hands-on exercises and examples that reflect the broader web analytics process taught in the course. No prior experience with data analysis or web analytics is required. This course also showcases Microsoft Excel® as a powerful and versatile tool for modern analytics tools and introductory measurement of key performance indicators (KPIs).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD221 Intermediate Web Development (3 semester hours)

This course teaches advanced website development concepts and skills through a combination of readings and hands-on development exercises. It builds upon students' fundamental coding skills by emphasizing HTML5 structure elements, embedded video and audio elements, HTML5 APIs, cross-browser user-input forms, the use of JavaScript® to add interactive capabilities to webpages, and the use of Cascading Style Sheets (CSS3) to enhance reusability and design consistent user interfaces.

The class will also introduce advanced CSS3 techniques, including 2D and 3D transformations, transitions, animations, and user interface (UI) properties. Techniques for developing webpages, optimized for mobile devices, including Responsive Web Design (RWD), are emphasized. This course covers the Advanced HTML5 and CSS3 Specialist curriculum needed to pursue the CIW Web and Mobile Design Professional certificate.

Students will need access to a web browser such as Microsoft Edge or Firefox. This software is not provided by the course material grant and must be purchased/provided by students. To succeed in this course, students will also need basic computer knowledge such as creating files and folders, downloading and uploading files, creating zipped files, and working with a text editor such as Notepad++. (Prerequisite: **WEBD121**)

JavaScript® is a registered trademark of Oracle America, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD222 Advanced Web Analytics (3 semester hours)

This course is an advanced study of Web analytics technology and how businesses and organizations may use the technology to measure website traffic, enhance business presence, and conduct market research. The course expands on concepts introduced from the Introduction to Web analytics course and expands into more advanced topics regarding the subject. The course will cover scenario-based exercises and requires students to use free Web analytic tools to experience the maximum amount of application and retention of material covered in the course. (Prerequisite: **WEBD122**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD241 Web Development Using JavaScript® (3 semester hours)

This course expands on the topics introduced in Web Development Fundamentals (**WEBD121**). This course introduces students to fundamental JavaScript® programming concepts, such as variables and data, functions, program flow control (branching and iterating), the JavaScript object model (window, document, image, history, location, and navigator objects), and JavaScript language objects (String, Array, Date, and Math objects). This course also addresses the development of interactive forms with JavaScript, cookies and JavaScript security, frame control with JavaScript, and custom JavaScript object creation. This course partially covers the CIW JavaScript Specialist curriculum needed to pursue the CIW JavaScript Specialist certification. (Prerequisite: **WEBD121**)

Students must have access to a web browser such as Microsoft Edge or Firefox. This software is not provided by the course material grant and must be purchased/provided by the student.

JavaScript® is a registered trademark of Oracle America, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD300 User Interface Design (3 semester hours)

This course presents the principles and skills for how to design effective user interfaces for websites, with an emphasis on designing for mobile technologies. This course covers the content for the Certified Internet Web (CIW®) User Interface Designer certification in the Web and Mobile Design Series. Emphasis is on how to apply key usability concepts and user analysis techniques; how to design for multiple platforms using suitable color schemes, formatting and topography; and how to collect information from customers, users, and market analysis to better address ease-of-use and to enhance website experiences for mobile users. (Prerequisite: **WEBD121**)

CIW® is a registered trademark of Certification Partners, LLC.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD311 Internet Concepts (3 semester hours)

This course concentrates on the technical side of the Internet, examining Internet communication and technology, Web browsing, multimedia on the Web, databases and Web search engines, business e-mail and personal information management, Internet services and tools [newsgroups, telnet, File Transfer Protocol (FTP), and instant messaging], Internet security (encryption, authentication, firewalls, malware, virus detection and prevention, spyware, updates and patches), and IT project and project management. Students will need access to a browser. This software is not provided by the course material grant and must be purchased/provided by the student. This course covers the Internet Business Foundations curriculum of the CIW® Foundations certification.

CIW® is a registered trademark of Certification Partners, LLC.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD321 Web eCommerce Development (3 semester hours)

This course is a study of Web e-commerce development and how businesses and organizations may to use the Web to the buy and sell products and services online. The course begins with some basic introductory concepts and progresses into more advanced topics regarding the subject. The course will cover both conceptual and scenario based exercises, thus enabling students to experience the maximum amount of comprehension and retention of material covered in the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD323 Search Engine Optimization (3 semester hours)

This course introduces concepts and strategies for successful search engine optimization (SEO). It examines different kinds of searches including image searches, local searches, and industry-specific vertical search engines. Additional topics such as link building, site structure improvements, conversation tracking, research and development keyword strategic development, and understanding barriers of search engine optimization are addressed for the purpose of increasing a website's relevance and to determine how people search for products and services.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD341 Enterprise Data Exchange Using XML (3 semester hours)

This course is a study of the concepts and applications of the Extensible Markup Language (XML), a general-purpose markup language that can be used to formally specify special-purpose markup languages. This course will be taught from a mixture of analytical and practical methods. Topics include: the history of XML, the XML language, Data Type Definition (DTD), XML Schema, eXtensible Style Sheet Language (XSL), and eXtensible Style Sheet Language Transformations (XSLT). The student will bind values to elements to render them distinct and different from its other instances of that attribute and explore the power of XML as a tool for Enterprise Exchange in both the J2EE and .NET Software Development Frameworks. Knowledge of XML will enable the student to standardize and reuse reference text, paragraphs, and chapters.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

WEBD343 jQuery (3 semester hours)

This course studies the concepts and applications of jQuery using multi-browser JavaScript® language. This course will be taught from a mixture of analytical and practical methods. Topics include JavaScript, React.JS, Model View Controller architectural pattern, Angular.JS, the Document Object Model (DOM), Asynchronous JavaScript and XML (Ajax), JavaScript Object Notation (JSON), events, animations, and plugins. The student will use jQuery to conduct and apply jQuery's traversal methods, DOM manipulation, perform AJAX calls, apply popular events, write plugins, animate elements, build their own jQuery slider, and explore jQuery API documentation. (Prerequisite: **WEBD221** and **WEBD241**)

JavaScript® is a registered trademark of Oracle America, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Intelligence Studies (INTL)

INTL200 Introduction to Intelligence Studies (3 semester hours)

This course provides an introduction to intelligence studies and focuses on the five principle categories in the study of strategic intelligence. In this course students will focus on the role, purpose, and history of strategic intelligence analysis. They will gain a better understanding for the use of intelligence to carry-out foreign policy objectives. Students will be engaged on topics looking at the nature and evolution of congressional oversight. In addition to this, we will look at the role of strategic intelligence collection when it comes to supporting strategic decision making, as well as the role that counterintelligence plays at the highest levels of government.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL301 U.S. Intelligence Community (3 semester hours)

RECOMMENDED AS SECOND PROGRAM COURSE. This course surveys the U.S. Intelligence Community, with an emphasis on its current structure. Students review the members of the community and distinguish their key roles and missions. Students also assess the impact of the post-9/11 restructuring of the intelligence community.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL304 Intelligence Collection (3 semester hours)

A multidisciplinary survey of Imagery Intelligence (IMINT), Signals Intelligence (SIGINT), Human Intelligence (HUMINT), and Measurement and Signature Intelligence (MASINT) is conducted. The background, capabilities, and limitations of each intelligence collection method are covered. The course focuses on planning activities which provide an integrated approach to intelligence collection.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL305 Law and Ethics in Intelligence (3 semester hours)

This course examines the legal foundations and oversight mechanisms for the US intelligence community. It also explores the major ethical problems confronting the intelligence profession. Students will investigate the difficult legal and ethical issues in the intelligence community.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL401 Critical Analysis (3 semester hours)

This course provides an introduction to critical thinking, intelligence analysis, and the use of structured methodologies. Functions associated with the processing of information to include perception, memory, and the evaluation of information are examined. Conscious and unconscious cognitive biases along with strategies to mitigate their impact are also assessed.
(Prerequisite: **SSGS300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL402 Intelligence Analysis (3 semester hours)

This course builds upon the foundations of critical analysis taught in INTL 401, expanding the student's repertoire of analytical techniques. Students explore creative analysis techniques, including hypothesis generation, red-teaming, and adversarial collaboration. Students focus on intelligence as a service to decision makers, including principles of customer-focused writing and techniques for analytic problems designed to provide tactical, operational, or strategic support. (Prerequisite: **SSGS300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL408 Counterintelligence Operations (3 semester hours)

Students in this course study and analyze counterintelligence operations focusing on activities that comprise counterintelligence functional activities, including the detection of espionage and elicitation; counterintelligence interviews/debriefings; and the collection of counterintelligence information. The student will be required to study a range of books and articles on this topic and will develop a comprehensive knowledge of counterintelligence activities and operations in order to protect U.S. national security and global interests and from adversaries.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL409 Counterintelligence Analysis (3 semester hours)

This course provides students with an introduction to foreign counterintelligence analysis. Students will learn and apply aspects of counterintelligence basic principles, concepts, missions, and functions. Students will be instructed in the analytical process, denial and deception identification, analytical techniques, threat profiling procedures, and analytical tools and databases.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL410 Counterintelligence (3 semester hours)

During this course, students will develop a comprehensive knowledge of counterintelligence, and how intelligence agencies, organizations, and military units in the U.S. use both offensive and defensive counterintelligence to guard and protect U.S. national security interests from foreign intelligence entities. Students will study and analyze counterintelligence, learn and discuss multi-discipline counterintelligence support to intelligence operations, counterintelligence collection process, and analyze how cultural, social, and technological changes affect counterintelligence.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL411 International Criminal Organizations (3 semester hours)

This course differentiates historical and contemporary patterns, modus operandi, capabilities, and vulnerabilities of organized crime organizations. Course content includes a review of the contemporary literature of South American, Mexican, Asian, European, and African criminal enterprises, traditional organized crime, Outlaw motorcycle gangs and transnational criminal enterprises.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL412 Espionage/Counterespionage (3 semester hours)

This course studies the history of intelligence and espionage and reviews ancient espionage techniques, profiles famous agents throughout history, and focuses on such intelligence issues as SIGINT and HUMINT. The bulk of the course concentrates on 20th century intelligence, assessing changes in intelligence collection and priorities and analyzing how technological changes have affected intelligence collection.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL413 Denial and Deception (3 semester hours)

This course will be an overview of denial and deception possibilities. It will review the history, concepts, and implications of denial and deception on national security decision making. It will also discuss foreign and domestic case studies, tradecraft, and the different methodologies associated with this topic area.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL419 Applied Geospatial Intelligence (3 semester hours)

This course is an exploration of the historical development, capabilities, and application of Geospatial Intelligence to inform decision makers in policy making, national defense, and law enforcement. The focus will be on understanding the underpinnings of this exciting and relatively new intelligence discipline. We will explore what GEOINT is, and how is it used.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL421 Signals Intelligence and Security (3 semester hours)

This course examines the history of signals intelligence, also known by the acronym SIGINT. It covers the various methods and modes of intelligence collection by electronic means for the use of strategic and operational level communications (COMINT), and electronics (ELINT) intelligence. The course also discusses encryption and protection of electronic capabilities and countermeasures (EECM).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL422 Open Source Collection (3 semester hours)

This course provides an examination of how various unclassified materials, such as news services, databases, government documents, newspapers, journals, magazines, yearbooks, surveys, radio, TV, Internet, indexes, materials from various organizations, interviews, and country studies can be utilized as intelligence.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL423 Human Intelligence (3 semester hours)

This course is an introduction to Human Intelligence (HUMINT). The course will define and examine HUMINT in context with the other intelligence collection disciplines. Students will understand the dynamics and functions of human source intelligence as a discipline through the use of focused discussion supported by directed readings and by applying critical thought to an incremental research project that requires a HUMINT solution.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL424 Interrogation (3 semester hours)

This course examines intelligence interrogation from a conceptual perspective that provides students with the tools to develop an overall understanding of interrogation and practical interrogation concepts as they can be applied to intelligence interrogation. This course addresses legal issues, verbal and non-verbal behavior, interrogator and subjects, environmental and cultural issues, coercive practices, as well as current events as they apply to the concepts of intelligence interrogation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL431 Criminal Intelligence Analysis (3 semester hours)

The rapid increase in multinational analysis and transnational organized crime, corporate drug trafficking organizations, and the impact of crime on national and international policy has created a critical need for law enforcement intelligence experts in the relatively new field of criminal intelligence. The course provides the student with an introduction to the methods and techniques of criminal intelligence analysis and strategic organized crime. It will demonstrate how to predict trends, weaknesses, capabilities, intentions, changes, and warnings needed to dismantle criminal organizations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL432 Geographic Information Systems I (3 semester hours)

Geographic Information Systems (GIS) contain a powerful set of tools for data acquisition, management, query and display. This course will provide students with a substantial foundation of skills to merge both theoretical and applied information with hands-on practical training utilizing the basic tools provided with the ArcGIS Online software. Students will become familiar with GIS and with GIS software as they create ArcGIS Map projects addressing security and intelligence issues.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL433 Geographic Information Systems II (3 semester hours)

Geographic Information Systems (GIS) contain a powerful set of tools for data acquisition, management, query and display. This course will provide students first with a substantial foundation in theory and practical use of GIS. The weekly labs provide practical training utilizing the basic tools provided with the Esri ArcMap software as applied to a national security issues. (Prerequisite: **INTL432**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL434 Threat Analysis (3 semester hours)

This course examines nation-states and the theories, characteristics, and impacts of threats to decision-making. Various historical and modern threats will be discussed throughout the course. An understanding of threats to the state and its vulnerabilities is developed through a discussion of the types of nation-states and non-state actors as well as terrorist, economic, military and emerging threats among others. This course will focus on these specific threats as well as the conditions that create them. This course provides the opportunity to examine these specific threats through analysis and research. This course is a prerequisite to any of the Intelligence Studies country analysis courses.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL440 Cyber Warfare (3 semester hours)

This course provides an overview of cyber warfare and the potential impact of its use by military, terrorist, and criminal organizations. By studying the operation of computer networks, the student will gain an appreciation of how they have both benefited society and made portions of its infrastructure more vulnerable. An overview of cyber weaponry will be presented, and various offensive and defensive strategies will be examined via case studies

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL442 Tactical Intelligence (3 semester hours)

This course examines the impact of terrain and weather on tactics, employment of multi-discipline intelligence collections, and principles of tactical intelligence analysis form the core of the course. Students develop an appreciation for the limits of process in applying the art of intelligence to deal with tactical problems and how tactical intelligence theory and practice are utilized in support of ground operations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL443 Foreign Intelligence Organizations (3 semester hours)

This course introduces students to several foreign intelligence organizations that continue to play a significant role in U.S. strategic intelligence, foreign policy, and national security strategy planning. Each country's organizational structure, their collection methods, operational strengths and weaknesses will be assessed with the objective of evaluating their overall relative effectiveness.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL446 Intelligence and Narcotics (3 semester hours)

This course surveys the role of narcotics and the illicit drug trade as risks to national security, international development, and progress. The purpose is to assess both domestic and foreign intelligence gathering and analysis, with an emphasis on counter-narcotics policies and strategies. Students will be able to critically analyze, strategically assess effective intelligence collection, and evaluate the impact of current drug interdiction efforts by federal domestic and international agencies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL450 Terrorism and Counterterrorism (3 semester hours)

This course examines terrorism as a social and political instrument from past to present. Topics include comparing insurgencies and terrorism, the paths to radicalization, the roots of extreme Islam, U.S. domestic terrorism issues, counter terrorism, national & domestic intelligence resources employed against terrorism, and a review of U.S. National Security Policy regarding terrorism.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL451 Terrorism and U.S. National Security (3 semester hours)

This course assesses the impact of terrorism on U.S. national security. With a focus on essential elements related to terrorism as well as on U.S. anti-terrorism and counter-terrorism policies and their challenges, the student will develop a comprehensive understanding of how the United States views terrorism and how its lasting threat affects national security.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL453 Illicit Finance (3 semester hours)

Modern criminal business, to include drug trafficking, trafficking in people or weapons, gold and precious gem smuggling, and even terrorism are reliant on how such activities are funded. Without some form of funding, illicit actors and illicit behaviors would have difficulty existing. This course will explore the shadowy world of illicit finance, from money laundering to Hawalas, to fraud, trade, and corruption used to fund illicit actions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL454 Forecasting Terrorism (3 semester hours)

This course examines the theoretical underpinnings of the phenomenon of terrorism, actual and planned cases of chemical and biological weapons use, and the modern threat of improvised weapons of mass destruction. The course surveys traditional and newer methods of forecasting terrorism: intuition-based, profiling, conflict vulnerability analysis, and prognosis (early warning), etc. The course concludes by looking at the significant post-9/11 efforts at hardening facilities, increasing security, and monitoring terrorist-WMD activity. However, the threat is still substantial as religious-based extremists are still wholly intent on acquiring WMDs.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

INTL498 Senior Seminar in Intelligence Studies (3 semester hours)

The Senior Seminar in Intelligence Studies is required for all majors. This capstone experience for Intelligence Studies majors will review and integrate their academic coursework, strengthen their understanding of intelligence research methodologies, and relate their academic preparation to their post-graduation goals. Students will conduct original research and present their findings to the class in written and e-portfolio formats.

Prerequisite: Completion of a minimum of 106 hours towards your program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Intelligence Studies (SSGS)

SSGS300 Research Design and Methods (3 semester hours)

This course provides basic research methods skills for addressing problems and issues specific to the programs within the School of Security and Global Studies. The course covers four basic approaches to social research including experimentation, survey research, field research, and the use of available data. Students will gain foundational knowledge in research planning, design, methodology, data collection, and analysis. This course prepares students to carry out research at the undergraduate level.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

International Relations (IRLS)

IRLS200 Information Literacy and Global Citizenship (3 semester hours)

Information Literacy and Global Citizenship builds students' information literacy skills in the international relations/global studies context. Students analyze scholarly sources in the discipline, identifying the types of issues and questions scholars pursue, the discursive conventions they employ, and their methods of engaging in dialogue with and citing sources. After identifying their own discipline specific research question, students select and use appropriate research tools, developing complex search strategies that help them to find relevant scholarly information on their topics. They evaluate sources and information to determine their authority, reliability, timeliness as well as the quality and underlying assumptions of the arguments presented. They synthesize the information they've found with their own ideas, effectively integrating source material into their papers and citing that material appropriately. Finally, the course asks students to reflect upon the ways in which the information literacy skills they've acquired provide a foundation for both global citizenship and lifelong learning.
NOTE: Students may not earn credit for both **IRLS200** and previous course **IRLS303**.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS210 International Relations I (3 semester hours)

An overview of the field of international and global politics. The nation state, factors of power, collective security, international trade, regional and international organization, sources of conflict and convergence are addressed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS211 International Relations II (3 semester hours)

This course analyzes international relations from 1945 to the present. Students will become thoroughly familiar with events and major interpretive issues. Topics include the Cold War, decolonization, the role of the United Nations and other non-governmental organizations, the development of international terrorism, the Arab-Israeli and Persian Gulf conflicts, and the Korean and Vietnam Wars. (Prerequisite: **IRLS210**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS213 Political Geography (3 semester hours)

September 11 and its aftermath, the ongoing conflicts in the Middle East and South Asia and debate over the nature and effects of globalization all highlight the importance of political geography as a means of understanding the world around us. This course examines the relationship between earth and state. World political phenomena are studied from a geographic perspective, including international boundaries, territorial seas, and landlocked states. This course emphasizes the practical application of geography to political events.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS214 American Foreign Policy (3 semester hours)

This class examines the elements and practice of American Foreign Policy. It reviews the history of American Foreign Policy and ideology, and then examines the actors, tools and processes of US foreign policy. This class emphasizes current foreign policy issues, including policy geared toward national security.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS260 Middle Eastern Culture (3 semester hours)

This course covers geography, culture, society, economy, and religions of the major ethnic and linguistic groups in the Middle East. The course will introduce students to important events and developments, such as the changing concepts of politics in Islam; the evolving sociological bases of states and societies in the Middle East; and the early impact of Europe on the Middle East, first through trade and then through colonialism.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS300 Comparative Political Systems (3 semester hours)

Introduces major theoretical approaches to the comparative study of politics. The student applies these approaches to government institutions, the policy-making process, political participation, economic structures and social change for both state and non-state actors.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS301 International Organizations (3 semester hours)

Examines the role of and interrelationship of international organizations, nation-states, and non-state actors in the global system. North-South and East-West relations are discussed in terms of specific global issues: crisis management, conflict resolution, human rights, refugee problems, international finance, developmental assistance, world trade, and globalization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS302 International Development (3 semester hours)

In this course, students will study the history, theories, and practices of international development. This class will guide students in understanding the complex geographic, political, economic, social, and environmental factors that contribute to international development and the interplay of those factors. Students will also analyze the role of non-governmental organizations in international development and apply their knowledge to current issues in global development.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS310 Introduction to Human Security (3 semester hours)

This course introduces students to the international relations subfield of human security. A broad overview of the security issues affecting humans, their communities, and as a result global stability are the focus of this course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS322 African Politics (3 semester hours)

This class provides an introduction to contemporary African politics. Specifically the course examines the historical, cultural, economic, social and geographic traits that distinguish this region and shape its domestic political processes and interstate relations. This includes a survey of contemporary multilateral issues important to the region with emphasis on regional security concerns.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS331 Asian Politics (3 semester hours)

This course examines historical, cultural, economic, social and geographic traits that distinguish this region and shape its domestic political processes and interstate relations. This course surveys the governments of selected countries to include China, Japan and Korea. Topics will emphasize the interaction between economic development and political changes, as well as the conflict between traditional norms and modern institutions. This course includes a survey of contemporary multilateral issues important to the region with emphasis on regional security concerns.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS343 Government and Security of Russia (3 semester hours)

Explores historic, cultural, economic, and geographic traits that characterize the Russian state and shape the domestic political processes and interstate relations. Critically compares the politics, governments and orientations of post-Soviet states and other regional powers. Surveys contemporary regional issues such as ethnic conflict, nationalism and political-economic reforms, with a particular emphasis on security concerns.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS344 European Politics (3 semester hours)

This course focuses on comparative evaluation of Europe paying particular attention to challenges facing the continent such as migration, ethno-nationalism, and terrorism. It will also focus on opportunities for European countries to work together, including NATO, OSCE, and the EU.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS355 Latin American Politics (3 semester hours)

This course is designed to familiarize students with the politics of contemporary Latin America. The course will cover such topics as the various types of political systems found in Latin America, the political economy of development, and the issue of regime transition.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS360 Global Politics of Islam (3 semester hours)

The purpose of this course is to provide a comprehensive survey of the politics of Islam in the global context (both within and across states). While a portion of the class will be dedicated to the Middle East, we will also focus on parts of the globe where Muslims form a significant minority, e.g., the U.S., Western Europe, Russia, and China. This is an interdisciplinary class, meaning that we will discuss religion, history, culture, and identity in addition to politics. We will explore the implications of past and present U.S. foreign policy in the Muslim world and historical and current relations between Islam and the “West.” Additionally, we will address conflicts within Islam, transnational Islamist movements such as Hizb-ut Tahrir and Al Qaeda, and the role of pan-Arab media such as Al Jazeera. This is a reading-intensive course. Students will be expected to think critically, interpret texts, and formulate their own ideas in verbal and written form.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS392 Globalization and the Market Economy (3 semester hours)

Based on a theoretical analysis, a detailed study is undertaken of the globalization of the market system and its impact on population growth, urbanization, political governance, and traditional values in various nation-states and regions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS400 Human Rights (3 semester hours)

This course provides an overview of human rights, their history, codification, and the various debates that surround human rights discourse. Additionally various human rights topics are analyzed. The course provides students with a thorough understanding of how human rights and human security are intertwined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS402 International Law and Regimes (3 semester hours)

This course focuses on the role that international law and international regimes play in global governance. Students will examine the international legal framework that governs state relations, including international organizations and norms, ordering principles, treaties and international regimes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS405 National and Transnational Justice (3 semester hours)

This course provides an overview of many transitional and transnational justice approaches. Beginning with Nuremberg through to the International Criminal Courts, students will gain a thorough understanding of the global justice endeavors and their connection to human security.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS409 Environmental Security (3 semester hours)

This course provides an overview of environmental security by examining environmental threats such as climate change, water scarcity, consumption patterns, urbanization, resource extraction and usage, food security, and globalization. The course provides students with a thorough understanding of how environmental security and human security are intertwined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS412 Comparative Foreign Policy (3 semester hours)

An analysis of the foreign policy and policy-making process in various regions of the world. Specific case studies allow the student to assess national priorities and ideological commitments in the post-Cold War era.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS413 International Conflict Resolution (3 semester hours)

This course examines the application of conflict resolution theories to interstate crises and civil wars by international organizations like the UN and NATO, states and ad hoc coalitions of states and non-government entities. The focus will be on the post-cold war conflicts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS414 Principles of Peacekeeping (3 semester hours)

This course is an examination of the fundamental principles behind peacekeeping, including the political, managerial, military, and humanitarian aspects of the peacekeeping process.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS415 Peacekeeping Logistics (3 semester hours)

This course explores logistics in peacekeeping operations. Students will gain an understanding of the concepts, principles, and strategies that govern logistical support for UN and regional peace operations. Emphasis is placed on building an understanding of the role, responsibilities, and limitations facing those who manage logistics for peace operations. This includes challenges surrounding funding and rapid deployment, as well as the advantages and challenges associated with public/private partnerships and a multi-dimensional approach to peacekeeping logistics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS417 International Civil Order (3 semester hours)

This course explores the unique role of international civilian police in peacekeeping operations. Students will gain an understanding of the principles, strategies, operational and tactical considerations that shape the way that international civilian police establish a rule of law that is effective enough to support emerging democratic societies and build sustainable peace. Emphasis is placed on the roles, responsibilities, challenges, and risks facing international civilian police, as well as their relationships with other international actors.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS460 Government & Security in the Middle East (3 semester hours)

Examines historic, cultural, economic, social, religious, and geographic traits that distinguish this region and shape its domestic political processes and interstate relations. Surveys the governments of selected countries, considering factors such as legitimacy and political development. Includes a survey of contemporary issues salient in the region, including the Arab-Israeli dispute, with particular focus on regional security concerns.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS463 Arab-Israeli Conflict: Contemp. Politics & Dipl. (3 semester hours)

This course will trace the origins, evolution and development of the Arab-Israeli conflict from the early 20th century to the present. The course follows a thematic and chronological schema, drawing on a variety of sources. Considerable focus and attention will be given to the current and ongoing conflict between Israelis and Palestinians.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS468 Politics and Security in the Persian Gulf (3 semester hours)

Politics and Security in the Persian Gulf course explores political, social, economic, and cultural issues that are relevant to the contemporary Gulf politics and security. In this context, this course also examines the impact of external powers within the region; and thus, the correlation of this impact with the rise of vulnerabilities and implications both at the regional and global levels.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS490 Independent Study: International Relations (3 semester hours)

Individual study or research of a selected topic conducted on a tutorial basis. To be eligible for an independent study, students must be enrolled in a bachelors degree program, must have completed 24 hours at APUS toward their current degree program, and should have already contacted a professor and gained approval for the independent study topic. Once these conditions are met the student should contact their academic advisor. Once the course is open the student must complete an official online registration for the course. (Prerequisite: **IRLS210**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS491 Special Topics in International Relations (3 semester hours)

This course allows the students to examine an emergent issue or event in this field of study. The course will be taught in a structured seminar format. Students are required to complete a research project.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS492 Senior Seminar in International Relations (3 semester hours)

This senior capstone course allows students majoring in International Relations to analyze specific issues at the global level that would include: armaments, disarmament and proliferation; nationalism and world order; terrorism; peacekeeping; drug wars; political development and revolutionary change in less developed countries; and the organized use of force. This course will provide students with the opportunity to complete an approved academic research exercise that demonstrates knowledge of a selected field of study. This is a capstone course to be taken after all other International Relations courses have been satisfactorily completed. (Prerequisite: Completion of a minimum of 106 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

IRLS493 Capstone Middle Eastern Studies (3 semester hours)

This senior capstone course allows students majoring in Middle Eastern Studies to analyze specific issues at the regional level including the role of religion, culture, politics, security, economic issues. This course will provide students with the opportunity to complete an approved academic research exercise that demonstrates knowledge of a selected field of study. This is a capstone course to be taken after all other Middle Eastern Studies courses have been satisfactorily completed. (Prerequisite: Completion of a minimum of 106 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Legal Studies (LSTD)

LSTD100 Introduction to Law for Paralegals (3 semester hours)

This is the foundation course for the program. This course requires no previous legal background and introduces the student to the paralegal profession, the legal system, legal research, writing, and analysis, and other aspects of the law and the law office. This course will provide practical problem exercises of the type faced in an office environment; help the student develop the requisite paralegal skills; and presents a variety of the ethical issues and perspectives that paralegals face today. The overall theme is to address a broad range of paralegal topics in a contemporary law office environment.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD201 Litigation (3 semester hours)

This course gives the students a broad overview of the litigation process and the specific role of the paralegal. This course is an introduction to and the exploration of the process related to civil litigation and the procedures normally the responsibility of the paralegal in preparing materials for trial. Coverage will include information gathering, interviewing, organizing, and preparation of materials for trial. It includes general information on the litigation process and practical exercises to help the student learn to implement the role of the paralegal, such as how to conduct an initial fact finding interview. The course will give an overview of the structure of the court system.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD202 Real Estate Law (3 semester hours)

This course is a study of real estate law, with emphasis on those portions of real estate law that are essential to the processes and functions of the real estate purchase, administration, financing, land use regulation, financial instruments, leases, and property rights. The law of real estate has traditionally consisted of laborious manual searches to ensure good title. The internet provides real estate attorneys and legal assistants with new tools and procedures for conducting real estate transactions. This course will prepare the student for these concepts and will introduce the student to the new world of the Internet as related to real estate law.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD203 Criminal Law and Procedure for the Paralegal (3 semester hours)

This course will examine the practical aspects of criminal law and procedure as they pertain to the work of the paralegal. The course covers the nature of criminal liability, the elements of various crimes, and defenses to criminal accusations. The course will also cover criminal procedure, from search and seizure through trial and appeal. Constitutional issues relating to search and seizure, self-incrimination and other matters are explored in depth. Students learn how to prepare relevant legal documents.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD204 Introduction to the Courts (3 semester hours)

This course is an introduction to the structure of the American court system. Topics include prosecution, right to counsel, pretrial release, grand jury process, and sentencing concepts. The course will assess the U.S Courts System and how it relates to the criminal justice system in America. Students will become familiar with the chronological events from the arrest process to sentencing and appeals. Students will be able to explain concepts of stop and frisk arrest, searches under warrant, and presentation of the case to the magistrate. Assessments of the criminal trial process and phases of pretrial and trial proceedings will be examined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD205 Legal Research and Writing (3 semester hours)

This course will assess the methods used to locate necessary legal materials and be able to evaluate the appropriate citations of those materials. The paralegal aspects are reviewed and distinguished from other judicial case briefings. The course will introduce legal analysis methods and the preparation of appropriate techniques for researching legal issues and cases. Critical definitions of legal terminology are analyzed and used in preparation of legal materials such as memoranda, client letters, and other relevant documents. The course presents the student with techniques for effective writing in the legal environment.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD207 Civil Practice and Procedure (3 semester hours)

This course is an overview of civil practice and procedure and will examine the process that courts must follow when hearing cases of a civil nature. During the course of study, students will learn how a lawsuit is commenced, what kind of service of process is required, the types of pleadings, motions, and orders allowed in civil cases, the timing and manner of depositions and discovery, the conduct of trials, the process for judgment, various available remedies, and how the courts and clerks must function. The course focuses on the legal skills involving interviewing and counseling for civil cases, the drafting of legal documents for civil cases, and legal ethics focused specifically on civil cases. Course topics include civil trial practices of pleadings, motions, discovery, pre-trial conferences, jury selection, trial protocols, and appellate strategies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD209 Sports Law, Risk, and Regulation (3 semester hours)

This course is a broad study and analysis of sports law and regulation. This course is rooted in the conviction that sports law is an intricate blend of contracts, regulatory schemes (including antitrust law, risk and liability concerns), and torts. Additionally, bargaining issues including unions, contract negotiation, and collective bargaining will be covered. This course will also examine risk assumption and liability as they relate to sports law. This class will also discuss relevant sports organizations (NCAA, NFL, etc.); Title X; drug testing of athletes; the role of sports agents; intellectual property issues; broadcasting law; and rules of athlete eligibility and participation. This course exposes the student to legal cases from the individual perspective of the player, coach, fan, owner, agent, and medical staff, in addition to leagues and administrative bodies, dealing with captivating subjects as varied as drug testing, gender discrimination, player violence and criminal conduct, breach of contract, player eligibility, product liability, endorsement contracts, and television broadcasting.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD210 Legal Ethics (3 semester hours)

This undergraduate course introduces students to the ethics and professional responsibilities of the legal profession. Emphasis is given to the strict regulation of the practice of law and accompanying reasons, as well as the standard of care expected by those who work in the field. Important ethical issues, such as marketing, client relationships, fees, and communications are explored. Students will analyze the model rules and their practical applications.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD211 Introduction to Legal Technology (3 semester hours)

Technology has changed the legal field and how professionals operate within it. Law offices need to be innovative and efficient in addressing client needs. The American legal justice system requires new technical skills and expertise from those who work within it to better serve the public's need for legal and equitable justice. This course will provide students with introductory legal technology competence about how it can be used in the court system, law offices, and throughout the duration of a legal case.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD212 Basic Contracts Law (3 semester hours)

This course was designed for students new to contract law with no prior knowledge of contracts or how the law applies to them. This course will give students a broad overview of the elemental framework of contracts law, including an introduction to and exploration of contract formation as well as contract enforcement. Students will also gain early hands-on experience in contract drafting, and negotiating amendments and remedies. The key concepts of the course are tied together through the use of a long-running factual scenario.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD298 Sophomore Seminar in Legal Studies (3 semester hours)

This course is a culminating course for the Associate of Science in Legal Studies degree to be taken after all other courses in the program have been satisfactorily completed. It is designed to allow the student to review, analyze, and integrate the work completed toward the degree. The student will complete an approved academic project or paper that demonstrates their grasp of the legal studies field. (Prerequisite: Sophomore standing and completion of at least 85% of other courses required in the AS in Legal Studies program.)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD300 Administrative Law and Policy (3 semester hours)

This undergraduate course is the study of the work of administrative agencies in the executive branch of the United States government with some additional material on administrative agencies in state and local governments. Administrative law and policy touches virtually every person in the United States virtually every day of the year. It is the administrative agencies that fill in the "details" of government policy. Indeed, administrative agencies are so important and so powerful that they are frequently referred to as the "fourth branch of government. "This course will examine the position that agencies occupy in our constitutional system of government by carefully detailing the respective roles of the legislative, executive and judicial branches of government. The course will be mainly concerned with administrative procedure (i.e., agency rulemaking and adjudication, agency investigations, agency sanctions) but because it is almost impossible to distinguish between substance and procedure, the procedural elements of administrative law will be illustrated and discussed in the context of a specific agency action--e.g., the Environmental Protection Agency's actions on carbon emissions and global warming. The course will analyze the work of the "independent regulatory commissions" as well as those agencies that are completely under the control of the President of the United States. Both the legislative and judicial branches of our government have a large impact on administrative law, so the actions of Congress in creating and watching over the agencies and the actions of the courts in adhering to the rule of law for agency action ("judicial review of agency action") will be vital components of the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD301 Constitutional Law (3 semester hours)

This course is an introduction to Constitutional Law, the Supreme Court, and other aspects of the legal system using the case analysis approach. Its concentration is on the study and analysis of United States Constitution. It emphasizes an in-depth study of the Bill of Rights, specifically those rights pertaining to Civil Liberties. Topics include: the historical events that led to the development of the Constitution; principles governing the operation of the Constitution and the role of the U.S. Supreme Court and the Judiciary; characteristics and powers of the three branches of government; development of due process and individual protections to include right to speech, freedom of religion, right to bear arms, right to vote, and right to counsel.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD302 Criminal Law (3 semester hours)

This course familiarizes the student with the basic law, procedures and rules that govern the criminal justice system in America. It is designed to produce students who can understand, appreciate and discuss the benefits and problems with the criminal justice system in America today. The students will become conversant with the Bill of Rights, basic criminal law terminology and procedures. The course emphasizes the principles of criminal liability and the acts, mental state, and attendant circumstances that are necessary ingredients in crimes against persons or property or in offenses involving theft, fraud, drugs, morality and decency, public peace, or public justice.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD303 Family Law (3 semester hours)

This upper level undergraduate course introduces students to the legal and procedural requirements of family law. Students will explore various legal procedures and extrajudicial methods. Topics such as marital agreements, separation, divorce, alimony, custody, adoptions, domestic violence, cohabitation, and same-sex marriages will be covered. Emphasis is placed on linking theory to practice.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD304 Military Law (3 semester hours)

This course is designed to provide students with a solid knowledge of US Military Law through the study of the evolutionary process, politics, and motivation that has led to the current status of US Military Law. Topics include the history of military law, US Military Law, statutory basis, legal system, and basic application. It will also include an analysis of current events as related through the press, where military law is involved.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD306 International Law (3 semester hours)

This course introduces students to the nature, development, principles, and processes of the law that applies among nations. Students will evaluate the various implications of state sovereignty as viewed through the prism of public international law. Specific topics include the sources of international law such as custom and treaty, the role of international organizations such as the United Nations, the bases of international jurisdiction, and international norms governing recognition, nationality, the global environment, protection of human rights, and the use of force. This course introduces the student to the basic principles and practices of international law and legal regimes and examines traditional and emerging topics in the field: human rights, the Law of the Sea, the Law of Armed Conflict, War Crime Tribunals, and the International Criminal Court.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD350 Victim Advocacy (3 semester hours)

This course prepares students to provide assistance to crime victims. What a victim advocate is and their rights and responsibilities will be discussed. Students will learn how to navigate through the Criminal Justice System to include both the civil and criminal litigation process, as well as understanding the steps to help victims towards a successful recovery. The course prepares the student to work in victim advocacy arenas such as crisis hotlines, domestic violence shelters, etc. Course topics include legal terminology, legal process, legislation regarding victims-rights, effects of victimization, victim advocate skills, and crisis intervention.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD400 Criminal Legal Process (3 semester hours)

This is a procedural law course which includes an overview of the law of arrests, search, and seizure, the making of bail, adjudication, pre- and post-trial activities and the nature of plea bargaining. Substantial emphasis is given the constitutional protections afforded through the Bill of Rights. This course examines procedures used by American police, prosecutors, and courts to bring criminal cases to trial and explores some of the defendant's rights at trial and on appeal. The course will consider the Common Law, constitutional, and statutory bases of procedural practices in American criminal law. The student will be exposed to a comprehensive overview of the processes involved in the use of criminal evidence including rules of evidence; arrests, searches, and seizures; interrogations, confessions, and non-testimonial evidence, impeachment and cross-examination of witnesses; opinion evidence; hearsay evidence; and articles and exhibits of evidence.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD401 Maritime Law (3 semester hours)

This course is a study of the primary international and domestic laws governing navigation, naval operations, and maritime law enforcement. Students will study various aspects of the international law of the sea, maritime jurisdiction, and other laws and treaties dealing with such topics as maritime safety and security, drug trafficking, fisheries management, marine environmental protection, and piracy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD402 Immigration Law and Policy (3 semester hours)

This course is an introduction to immigration law and policy. Its concentration is on the study and analysis of governing immigration laws and the application of those laws to immigration practice. Current immigration policies and procedures will also be analyzed and discussed. Topics covered include: historical developments and sources of immigration law, federal agencies governing immigration law and practice, admission procedures to the U.S. to include immigrant and non-immigrant visas and citizenship, removal (commonly referred to as “deportation”) laws and procedures, and relief from removal to include asylum, cancellation of removal, and other forms of relief.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD453 Evidence (3 semester hours)

This undergraduate course will focus on the basic legal rules governing kinds of information which can be developed and received at trial, and how evidence may be considered by the trier of fact. Students will study how policies favoring probative evidence must be weighed against policies protecting against hearsay, opinion, prejudice, time consumption, and other harmful matters. Proper examination and impeachment of witnesses will also be explored.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD454 Legal Technology: eDiscovery (3 semester hours)

Electronic discovery (eDiscovery) is critical to the development of a case. Exactly how that electronic information is managed before and during litigation is essential. In this course, students will learn about the key ethical and legal concepts of eDiscovery, its project management, and the requirements necessary to identify, collect, preserve, manage, review, and produce electronically stored information (ESI) in the discovery process. Researching developing issues and trends in court rules and case law as well as applying that knowledge to scenarios will prepare students for real-world situations. Analysis will include spotting critical e-discovery issues and how to best resolve them. Technology Assisted Review (TAR), Electronic Discovery Reference Model (EDRM), and predictive coding will be examined. To better navigate the wealth of legal technology related issues and concepts, students will analyze federal and state case law, court rules, eDiscovery terminology, and ethical rules. Critical issues, such as the use of mobile devices, social media, metadata, computer forensics, and cloud computing in the context of discovery, trial practice, security and confidentiality, will also be examined. Special emphasis will also highlight eDiscovery-related ethical, privacy and IT security concerns. (Prerequisite: **LSTD453**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD497 Senior Seminar in Legal Studies (3 semester hours)

The Capstone course is a senior level course designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Legal Studies. The student will complete an approved academic project or paper that demonstrates mastery of their program of study in a meaningful culmination of their learning and to assess their level of mastery of the stated outcomes of their degree requirements. Prerequisite: Senior Standing and completion of all major courses prior to enrollment. To be taken as the last course prior to graduation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LSTD498 Practical Legal Studies Applications (3 semester hours)

This course is a pinnacle of the Legal Studies bachelor degree program. As such, it is designed to allow students to demonstrate their ability to review, analyze and integrate their work commensurate with their status as seniors who are ready to graduate. Students will both submit a series of high quality academic research-based essays and make an audio-visual presentation to demonstrate their mastery of this program of study.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Literature (LITR)

LITR215 Literature of American Encounters, Revolution, and Rebellion (3 semester hours)

How does a young country develop a literature of its own? From explorers to frontiersmen, follow the search for freedom and new lands through early American literature, guided by the adventuresome spirit reflected in works from the Colonies to the advent of the Civil War. How do we rationalize reports from explorers and early settlers on indigenous populations? What impact did religion have on early colonial writing and why did the focus shift to reason? How did American writing reflect and shape thought about rebellion and war? How did American women carve out space for themselves as writers of merit? This course explores these questions and more through the writing of American history and the American character, deepening our understanding of a literature that came to be defined by courage, passion, idealism, and—yes—even objection and protest. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR218 From Abolition to #MeToo: Literature of the American Civil Rights Movement (3 semester hours)

True to its revolutionary roots, America is not just the birthplace of democracy but it is also home to the major civil rights movements of the modern era. This course is a survey of American literature related to the major civil rights movements of the last 150 years, including Abolition (Pre-1865), the Suffragettes (1860-1920), Civil Rights (1920-Present), Women's Rights (1920-present), and GLBT Liberation/ACT UP (1960-Present). **LITR218** will take students on a journey through the social, political, and cultural changes that shape modern America and ask students to contemplate the connections between literature, politics, social change, and the American identity. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR222 Pivotal Figures in Early British Literature (3 semester hours)

Join us on a journey through a thousand years of British history, beginning in an Anglo-Saxon mead hall with a couple of characters named Beowulf and Grendel and even a dragon. From there we'll go on a pilgrimage to Canterbury with the Good Wife of Bath, ride alongside Arthur's knights, sit at Queen Elizabeth's feet, get up close and personal with Satan, ride a slave-ship to the new world, debate the state of Ireland, and hear some words of wisdom from Samuel Johnson. It will be quite a ride, so hang on tight. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR225 British Literature from Wordsworth through the Wasteland (3 semester hours)

Ready to explore the darkest places of the heart, the mind, the soul? Are you longing to "fade far away, dissolve, and quite forget" the modern world for a little while? Then, join us as we grapple with the tumultuous relationship between Catherine and Heathcliff in Wuthering Heights and consider Josef Conrad's harsh criticism of imperialism in Heart of Darkness. **LITR225** delves deep into the literary periods of the Romantics, Victorians, Imperialists and Modernists. Learn how society and historical events shaped our authors, and in turn, how our authors impacted society. Come prepared to debate, analyze and share your personal insights in forum conversations and written assignments. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR231 Leadership in World Literature: Antiquity to the Early Modern Period (3 semester hours)

Humans have theorized about great philosophical questions since the dawn of time. While the values and beliefs that guided the views of ancient cultures have undoubtedly changed, it is also clear that those views continue to influence modern lives.
From the ancient world through the European Renaissance, **LITR231** focuses on these monumental philosophical questions using great works of art, including the major genres of epic poetry, drama, lyric verse, religious texts, and prose fiction, drawn from Classical Greece, Asia, the Middle East, Western Europe, and the Americas. Students will travel through the musings of ancient authors from foreign lands to gain an understanding of cultural practices and values and investigate any connections between the modern-day world and those who lived and wrote before the modern era.
Students will explore their ideas regarding leadership, conflict, heroism, friendship, love, politics, and religion to understand how they continue to impact humanity. They will consider what "world" literature means and why the struggles, concerns, and lives of those long dead are still important today.
(Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR233 Literature of the Newly Globalized World: The Individual's Struggle to Adapt (3 semester hours)

How would you like to travel through time, witnessing historical global events, a variety of different cultures, and exciting scenery? In **LITR233**, Literature of the Newly Globalized World: The Individual's Struggle to Adapt, you won't simply read a textbook. You will travel to different continents and time periods, observing life during significant moments in modern history. Through historic fictional works, you will become part of the action, experiencing war, changing belief systems, and cultures. Not only will you understand what life was like for those in power, you will also see the world from the lens of those who have been oppressed. Come join our journey through history! (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR311 Monsters, Heroes, Romance, and the Human Condition Through the Centuries (3 semester hours)

We hit the ground running with the bloodthirsty monster, Grendel, who roams the Danish countryside and cheer on the noble Beowulf who jumps in to save the day. Next, we move on to one of Chaucer's bawdy tales and read about the pitiful competition between two lovesick knights. In Shakespeare's "As you like it," we witness an Elizabethan Rom-Com of tortured lovers who roll their eyes and sigh deeply. After aggressive cannibals face off against Defoe's Robinson Crusoe, we take on Mary Shelley's greatest creation: Frankenstein. And still there's more! Jane Austen and George Eliot pull back the curtain on the petty machinations, weaknesses, and hypocrisy of the upper class in 19th century England while Yeats, Woolf, and Orwell ask probing questions about society, morality, and our fellow creatures. Join us in **ENGL311** for a rollicking fun adventure! (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR315 British Poetry from Blake to the Beatles (3 semester hours)

Don't miss **LITR315**! We play the classics from Shakespeare to Sting and everything in between. In an eight-week exploration of British verse, we'll ask the important questions: Was Chaucer a feminist? Was Satan the hero in Milton's work? Were the otherworldly visions of Blake for real? We'll also take a look at the conspiracy theories that rocked the poetry world. Where did the conspiracy theory of Paul McCartney's death come from? And who was the actual recipient of Shakespeare's sonnets? These are just some of the showstoppers we discuss in British Poetry from Blake to the Beatles. With three projects and no quizzes, don't let this one get away! (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR319 Society, Identity and Politics: Contemporary Topics in Critical Theory (3 semester hours)

This course is a survey of contemporary critical theory from the late 20th century to the present. Theories include Contemporary Feminist Theory, Queer Theory, Postcolonial Theory, Critical Race Theory and Transgender Theory. The course combines philosophy, cultural critique, and politics to examine how different theoretical approaches can create dramatically different interpretations and analyses of a text. Theoretical premises and techniques are applied to selected works so as to understand more fully those techniques and to analyze specific texts in particular. Readings are from Judith Butler, Judith Halberstam, Michel Foucault, Riki Wilchins, Alan Freeman and others critical to the development of contemporary critical theory. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR331 Gothic Literature - Nightmare Creators from Lord Byron to Anne Rice (3 semester hours)

In Nightmare Creators from Lord Byron to Anne Rice, we will explore and assess a range of Gothic literary texts, covering numerous time periods, styles, and authors. The course begins by looking at the major influences of the Gothic tradition and then explores the major Gothic texts beginning in Victorian England and moving into present-day America. The readings will cover a variety of literary genres, including poetry, short stories, and the novel. Most importantly, this course will introduce students to a range of representative texts that reveal the interconnectedness of literature across time and place and show how the Gothic tradition has changed over time. This is a great class for students interested in learning about the origins of modern day horror and thriller stories, films, and TV shows. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR333 Women Writers: Finding a Voice, Sharing a Vision and Establishing Identity (3 semester hours)

Why did Louisa May Alcott feel the need to write her "blood and thunder tales" under a pseudonym? Why, in the nineteenth century, did Nathanael Hawthorne describe women writers as "a damned mob of scribbling women"? And how might we apply feminist theory to better understand the constructs and corresponding roles of gender and how that is reflected in both literature and lived experience? Find out the answers to these questions and more as we explore how women have established their voices and given authenticity to women’s writing and experience throughout the course of literary history. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR335 Exploring Relationships through Folk Narrative (3 semester hours)

Ogres, giants, elves, talking animals, brave heroes, magic, curses, prophecies, ghosts, otherworld adventures, quests, sex, taboo, tricksters, and monsters! What doesn’t folklore contain? Often considered tales suitable for bedtime or teaching lessons to young children, folklore allows us to contemplate the psyche, analyze cultural ideals, and make connections across vast societies. In this course, we’ll discover how folklore offers a safe space in which to examine our own personalities, provides a context through which to view social issues, and continues to inspire modern storytellers. Get ready to talk to animals about love, resist temptations set by lovers, and engage in a quest to better understand the world! (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR336 The Imaginary Real: Magical Realism in Latin American Literature (3 semester hours)

In the world of magical realism, the ordinary becomes extraordinary and the magical becomes commonplace. Featuring literature from Spanish speaking countries of Latin America, this course will introduce students to key writers of the genre. Spanning a century of literary narrative, beginning with the first magic-realist flashes in the 1920s and reaching to its echoes today, the course will emphasize the Latin American Boom with the writers of the 1960s and 70s, whose alchemy crafted and transformed this style into one understood today as distinctly Latin American. As students will learn, Magical Realism is not a style or a genre so much as a way of questioning the nature of reality. As such, it will expose students to equal parts magic and realism in key literary works and challenge them to think critically about prominent themes in order to better understand the evolving character and identity of Latin America.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR339 Flowers Bloom in the Desert: Literature of the Middle East (3 semester hours)

Without realizing it, you have been exposed to Middle Eastern Literature for most of your life. One of the first important texts in history, The Epic of Gilgamesh, so influenced the ancient world that parts of it are found in the Bible and other major works from before the time of Christ. The Middle East is known as the “cradle of civilization,” and true to its history, the region today continues to capture the attention of the world. Stories adapted from thousand+ year old texts, like Aladdin, for example, have earned billions of dollars at the box office and introduced wider audiences to the stories of the Middle East. The literature that comes from the region, both then and now, is filled with passion and power and is a testament to the region’s relevance throughout history. Our course will begin with essential texts and continue through newer works that show the cultural challenges to be found in today’s complex environment. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR350 America’s Genre: The Art and Genius of the Short Story (3 semester hours)

American writers are credited with the creation of the short story and have defined the genre for the world. From Nathaniel Hawthorne's first published collection in 1837, America's short stories have explored topics such as witches and demon worship, mysterious murders and insanity, tall tales from the Wild West, love and loss, and the ethics that reflect the cultural identity of Americans. Through a variety of short stories, students will examine the components that embody this original and compressed art form and uncover the ingenuity behind this precise and difficult genre of fiction. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR354 American Poetry from Bradstreet to Bukowski (3 semester hours)

To the rich oral tradition of Native Americans, new European arrivals added their own lyrics and sense of morality in a Neoclassic style. Not long after, the Romantics rejected this rational view of the world and instead explored emotions: love, obsession, fear, patriotism, and more. Later, in a country torn apart by fighting, Realists voiced their despair in poetry as the nation attempted to recover from the Civil War, and not long after that, the Modernists struggled with finding an identity in a new world shaped by World War I, economic depression, and modernization. Finally, Postmodernists and contemporary poets rejected everything and nothing; to them, anything was possible, and an explosion of new voices, experiences, and ideas emerged. Explore all these American movements—and more—in American Poetry! (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR357 The Past is Always Tense: Contemporary African-American Literature (3 semester hours)

This course explores the emergence of a distinctly Black modernist and post-modernist literary discourse in fiction, poetry, drama, and criticism published from the middle of the twentieth century to the present, often in response to and in conversation with contemporaneous Anglo-American literary movements and trends. We will investigate African American writers' engagement with the "Wright School of Social Protest"; the evolution of the Black Arts/Black Aesthetic Movements of the 1960s and 1970s; the emergence of Black feminist literature, criticism, and theory in the 1970s and 1980s; and the so-called "third renaissance" of the 1990s and 2000s. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR403 The Work and Life of Ernest Hemingway (3 semester hours)

"Writing is something that you can never do as well as it can be done," said Ernest Hemingway, and he did it better than most. Through his adventurous life and authentic work, he became a larger-than-life cultural icon of his time and one of the most influential writers of the 20th century. Through his work, this course examines the genesis and influences that made Hemingway the writer we know, the writer that was selected for the sort of quality and precision that defined his writing and earned the respect and recognition of the Nobel Committee for his "powerful, style-making mastery of the art of modern narration." (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR408 Mark Twain: The Voice of American Literature (3 semester hours)

Mark Twain's works are filled with danger and adventure, rollicking humor, biting satire, and memorable characters that wrestle with universal and timeless issues. In his writing, he asks us to consider what it means to be human, and in Mark Twain's characters, we often see and hear parts of ourselves which helps us hone in on our own humanity. Through social satire and a wicked irreverent sense of humor, his works became timeless; while he lived, he was known as "the funniest man on earth." But Mark Twain also used his distinct voice to expose the problems and issues that faced society often by highlighting the quirks of its members. **LITR408** examines Twain's literary genius and the man behind the genius who unflinchingly proclaimed, "I am not an American. I am the American." (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

LITR410 All of the World's a Stage: Differences in the Dramatic World of Shakespeare (3 semester hours)

In All the World's a Stage: Defining Differences in the Dramatic World of Shakespeare, we'll discuss life. Specifically, we'll look at life and love, politics and ambition, evil and violence, wit and laughter, racial divisions, battles between the sexes, and misery and happiness as it unfolds in the plays and poetry of the Bard. (Pre-requisite: **ENGL210** for English majors, or **ENGL101** or **ENGL110** for non-English majors)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Management (HRMT)

HRMT101 Human Relations Communication (3 semester hours)

This course provides students with communication strategies from the behavioral sciences designed to establish positive relationships with individuals and groups in the modern workplace. Through readings, critical thinking exercises, problem-solving scenarios, written assignments, and case studies, students develop the human relations skills required to interact effectively with people at work. Communication skills and practices pertinent to ethical relationships with members of line management, co-workers, direct reports, customers, and the public are examined. Also, interpersonal and organizational applications associated with group/team functions, multicultural and multigenerational relationships, leadership, mentoring, and customer satisfaction are presented to assist students with the timely identification and resolution of communication issues and challenges.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT200 Human Resource Fundamentals (3 semester hours)

This introductory course focuses on the concepts and methods of managing human capital in an organization. Students will have the opportunity to explore human resource fundamentals by discussing practices in the selection, training, job analysis, evaluation, wage setting, incentive principles, merit rating, job efficiency, and labor/employee relations of human resources as applied to various types of organizations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT201 Employee Training and Development (3 semester hours)

In the emerging global economy, only those organizations dedicated to continuous learning are expected to grow and thrive. This course is an examination of individual and organizational strategies designed to stimulate creative approaches to learning in organizations. Students will have the opportunity to outline individual development plans from an organizational and personal perspective. Theoretical foundations and practical issues involved in employee training and development in business organizations are explored.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT202 Interviewing Fundamentals (3 semester hours)

In today's workforce, being qualified is not enough. Most applicants are qualified, but they may not be the right fit for the culture. Interviewing has become a crucial process in organizations, and the outcome can determine the next path for many people. Therefore, it is important to spend time preparing for the actual interview meeting. This course will provide a comprehensive study on skill sets that interviewees should display to be the chosen candidate. Topics include communication and interpersonal skills, critical thinking and problem-solving skills, time and project management techniques, and managing change with a positive attitude and self-confidence. Emphasis will be placed on clear concise written and spoken communication regarding business correspondence and oral presentations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT300 Negotiation I (3 semester hours)

This course provides a comprehensive overview of negotiation and distributive bargaining. It expands on the strategies of negotiation such as value claiming, value creation, mutual adjustments, ethics, and conflict management. Students will develop knowledge and skills and apply the characteristics of negotiation and distributive bargaining techniques to build relationships, establish agreements, and solve problems in real-world scenarios.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT301 Negotiation II (3 semester hours)

This course provides a specialized focus on negotiation. It expands on the techniques of perception, cognition, emotion, communication, power, relationships, teams, and cross-cultural concepts, principles, and theories in negotiation. Students will develop knowledge and skills and apply best practices in negotiation to build relationships, establish agreements, and solve problems in real-world scenarios. (Prerequisite; **HRMT300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT320 Employment Law (3 semester hours)

This course on employment law offers a comprehensive overview of legal frameworks relevant to human resources management. Students will explore key legislation, regulatory requirements, and case law affecting the employer-employee relationship. Topics include the Fair Labor Standards Act, the Civil Rights Act, anti-discrimination laws, wage and hour regulations, collective bargaining, employee rights, workplace safety, and labor relations. Through case studies and practical exercises, students will develop skills to navigate legal issues and ensure compliance in the workplace, preparing for roles as HR professionals and legal compliance specialists.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT407 Human Resource Management (3 semester hours)

This course provides an overview of concepts, skills, theories and techniques involving human resource management(i.e. recruitment and selection, training and development, performance appraisals, reward systems, and benefit programs). Students will have the opportunity to review scenarios involving innovative HR practices in the workplace.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT411 Dispute Resolution (3 semester hours)

This course focuses on the principles, practices, and processes of dispute and conflict resolution. The course draws on interdisciplinary materials from social science, decision theory, management/labor relations, law, and others. Course curriculum incorporates a review of non-binding dispute resolution strategies such as negotiation and mediation, binding strategies including arbitration, and psychological challenges to overcoming conflict such as cognitive perception biases.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT412 Compensation and Benefits (3 semester hours)

This course establishes a foundation for the art of compensation and benefit practices. Students will examine the context of compensation and benefit practices, the criteria used to compensate employees, compensation system design issues, employee benefits, and contemporary challenges that compensation and benefits professionals will face given the current economic times.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT413 Employment and Labor Relations (3 semester hours)

This labor relations course examines the historical evolution and current state of employment and labor law, as well as theories of employment relations. Students will explore the role of unions in America, collective bargaining, contract negotiations, arbitration, and dispute resolution processes. Additional topics include conflict management, leadership strategies, and the impact of laws such as the National Labor Relations Act on the employee/employer dynamic. Designed for HR professionals, this course provides practical knowledge of labor and employment relations, preparing students for roles in human resources management and labor relations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT415 Human Resource Management Information Systems (3 semester hours)

This course provides a basic overview of various automated information systems that are available to support today's human resource departments. Students will have the opportunity to explore online, offline, and hybrid HR software applications as well as other automated processes. Additional topics include HR analytics, systems security, individual privacy, legal implications and streamlined interview process.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT416 Human Resource Development (3 semester hours)

Training and development is no longer an option for organizations – continuous learning has become an essential requirement for those companies that wish to sustain market share and compete successfully in the marketplace. This course provides a comprehensive overview of the training and development function and is applicable to all organizations and jobs. Training methods, theories, research findings, and issues regarding training, employee development, and the career management function in organizations will be explored.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT419 Recruitment and Staffing (3 semester hours)

Hiring a new employee can be costly, and the cost becomes greater with the selection of an individual who is not a good fit. Therefore, the talent management and development functions spend quality time developing strategic plans to address the organization's recruitment, selection, and retention initiatives. This course examines external and internal staffing processes and practices needed for a successful search. Students will explore the various techniques/methods for determining whether individuals possess the knowledge, skills and abilities required by the organization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT427 International Human Resource Management (3 semester hours)

This course explores the importance of human resource management in the context of the global marketplace, including topics on culture, compensation and benefits, managing expatriates, global labor markets, managing diverse teams, and the legal and regulatory considerations that global organizations face. This course will help you identify differences in operating domestically versus globally, and adapt human resource practices successfully in foreign markets.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT430 Performance Management (3 semester hours)

This course examines how to measure and develop individual and group performance. Students will have the opportunity to design performance management systems in an effort to align employee performance with an organization's strategic objectives. There will be an exploration of methods, theories and issues regarding workforce expectations and performance.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HRMT490 Senior Seminar in Human Resource Management (3 semester hours)

This course integrates Human Resource Management principles from previous coursework culminating in comprehensive projects and case studies. Students will focus on foundational Human Resources Management functions including understanding controlling employment laws, the use of HR technology and data analytics, designing fair compensation programs, and implementing diversity and inclusion initiatives to foster an equitable and ethical workplace. Prerequisite: Senior Standing and completion of all major courses prior to enrollment.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Management (MGMT)

MGMT100 Human Relations (3 semester hours)

This course is designed to provide the student with a basic foundation of positive communication strategies among individuals in today's business settings. Students will accomplish a variety of assignments that promote critical thinking and problem solving, and will develop basic human relations skills essential to function effectively in a modern business environment. Students will be presented with communication concepts associated with interpersonal relationships, including individual differences, group/team activities, cultural relations, leadership, mentoring, customer satisfaction and ethics. Communication concepts from assigned reading will be stressed, and this knowledge will then be applied in the analysis of case studies, scenarios, and problem-solving exercises to develop interpersonal skills that can be used in actual work situations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT101 Principles of Supervision (3 semester hours)

Supervisors are the first line of leadership. This course provides an overview of supervision in the workplace. Students will explore concepts and skills on how supervisors can improve their skill set for their scope of responsibilities (i.e. goal setting, problem-solving, staffing, conflict management and development of employees).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT200 Ethics Fundamentals (3 semester hours)

How can we help employees do the right thing? Ethical behavior in organizations is a topic that warrants exploration. The purpose of this course is to investigate some of the ethical issues facing the modern workplace. Topics include acceptable risk, intellectual property, workers' rights, whistle-blowing, moral leadership, outsourcing, and ethical issues in marketing. Students will be asked to reflect and examine how one comes to terms with being a good citizen and preventing unethical business practices.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT201 Organizational Fundamentals (3 semester hours)

Students taking this course should not take **RTMG150**. This course is designed to provide students with an overview of the challenges that arise for managers in organizational settings and to provide an introduction to the concepts and theories that can be useful in facilitating organizational effectiveness. Students will have the opportunity to review and critique the latest research on obstacles facing the modern workplace, motivation of employees, organizational justice, and implementing the best systems, processes and procedures for efficient workflow.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT296 Capstone: Portfolio (3 semester hours)

This **MGMT296**, A.A. in Management Capstone: Portfolio, course is the final course in the Associates Program. This course will prepare students to reflect on their academic experience by compiling and revising artifacts from previous courses in the program into an organized e-portfolio. The e-portfolio will reflect the student's educational growth from entry in the associates program. In addition, the student will develop the skills necessary to successfully transition to and navigate post-graduate life as well as understand the civic and social responsibilities of being educated citizens. Finally students will be given the resources to connect with APU/AMU in an ongoing relationship.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT310 Principles and Theory of Management (3 semester hours)

This course introduces the concepts, theories, and principles of management. Students will have the opportunity to explore the aspects (i.e. planning, organizing, staffing, directing, and controlling) of the management process. Classical and contemporary management theories that operate in today's business will be discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT311 Organizational Behavior (3 semester hours)

Successful organizations strive to hire the best talent and seek innovative strategies on how to retain them. Leaders attempt to create an environment that is appealing by soliciting feedback on what motivates them to stay. This course examines the field of organizational behavior and the various research strategies in areas such as personality, motivation, values, stress, leadership skills, power bases, and communication. It is designed to explore the attitudes and behavior of leaders and employees. The course examines decision-making and risk management techniques incorporating accounting and financial concepts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT312 Leadership & Motivation (3 semester hours)

This course is designed to provide students with a solid foundation about leaders, the leadership process, and motivation. Topics include the theories of leadership and motivation, leadership power, leader behavior, leadership characteristics, the role of gender, substitutes for leadership, and dysfunctional leadership. **MGMT312** serves as a self-assessment of the student's leadership and motivation skills, knowledge, and attitudes and addresses the questions: Who am I as a leader? What are my most distinguishing leadership traits? What leadership style am I most comfortable being around? How do I influence others, and how do I motivate others?

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT313 Organizational Change (3 semester hours)

The realities of organizational change affect every individual, every business, and every government. Change and transformation are constants in today's global and technical environment. This course explores theories and concepts which explain how to gain acceptance and buy-in for change management initiatives within organizations. If management and employees accept these changes, the impact will be beneficial and less disruptive to daily operations. Whether the change is as small as the implementation of a new financial system or as big as a plant move across the country, the implementation process necessitates planning and communication to ensure success.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT314 Management Ethics (3 semester hours)

With all of the cases regarding corruption, scandals and unethical behavior in businesses, how does one do the right thing? This course explores the moral and ethical responsibilities of managers and their direct reports. Topics of discussion include organizational justice, human resource practices (i.e. employee selection, salary administration, employee relations), and corporate/social responsibility.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT315 Management Communications (3 semester hours)

Effective communication is necessary at all levels of an organization, and executives are concerned that employees lack this skill set. The focus of this course is the exploration of theories and techniques utilized in achieving efficient external and internal communication processes and practices within and among businesses. These processes and practices include communication around operations, legal, marketing, budgets, costs, and earnings. Students will be encouraged to apply their analytical, creative, and critical thinking skills in developing and presenting potential solutions to managerial problems.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT316 Paving Your Career Path (3 semester hours)

This course provides students with information and knowledge for career decision-making. Students will explore the job search process, and develop professional skills to stand out during the recruitment stages or to advance in a career. Students will learn the various forms of resumes as well as how to construct an effective resume for their field. Students will also learn how to leverage networking and gain insight to finding job leads.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT331 Leading Yourself Foundations (3 semester hours)

This course provides the critical elements of analytical and intellectual examination and reflection of certain core issues in the practice of leadership. The purpose of the course is to gain a better understanding of leadership from multiple angles and perspectives. Students will explore the different ways leadership has been defined and studied; similarities and contradictions among current leadership theories and the way leadership has been exercised in business, military, and political contexts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT410 Strategic Management (3 semester hours)

In today's business environment, executives have challenging and costly corporate decisions to make regarding globalization and organizational expansion. This course focuses on concepts and approaches that shape organizational strategic decision making by examining internal and external factors and influences. Students will have the opportunity to analyze case studies and participate in discussions on how best to select competitive strategies and analyze competitive advantages. Students discover the importance of strategic marketing and leveraging internet, marketing, and e-business capabilities toward a competitive advantage.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT414 Strategic Planning (3 semester hours)

This course focuses on the principles utilized in the formulation and execution of an organization's strategic plan as it relates to maintaining a competitive advantage. The integration of an organization's mission, stakeholder objectives, vision, and core values is emphasized.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT495 Senior Seminar in Management (3 semester hours)

This end-of-program course is designed to allow students to create a final project or paper by integrating the knowledge obtained throughout their program of study. (Prerequisite: Completion of a minimum of 105 hours towards the program).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MGMT496 Capstone: Portfolio (3 semester hours)

This capstone course is the final class in the management and human resource management programs for the B.A. in management. This course prepares students to reflect on their academic experience by compiling and revising work from previous courses into an organized e-portfolio. The e-portfolio will reflect the student’s educational growth from the initial entry to the final stage of the bachelor’s program.

In addition, students will develop the skills necessary to successfully transition to and navigate post-graduate life, and they will understand the civic and social responsibilities of being educated citizens. Finally, students will be given the resources to connect with APUS in an ongoing relationship.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Marketing (MKTG)

MKTG201 Fundamentals of Marketing (3 semester hours)

This course provides a comprehensive overview of marketing activities and functions, introducing students to the scope, terminology, and procedures of marketing. Key topics include the analysis of markets, competition, and consumer behavior, along with the assessment of product, price, distribution, and promotion strategies.

Students will explore consumer motivation and the processes behind the diffusion and adoption of new goods and services. Additionally, students will engage with a practical component, reviewing the key elements of a marketing plan, including market segmentation, branding, and integrated marketing communications, to understand how these factors work together in marketing strategy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG205 Fundamental of Sales (3 semester hours)

Fundamentals of Sales provides a comprehensive introduction to the role of sales within the broader marketing mix. Students will explore the sales process from prospecting to closing, with an emphasis on effective lead management and relationship-building techniques. The course covers a variety of methods for presenting products and services, as well as strategies for overcoming customer objections and successfully closing sales. Students will also examine long-term relationship-building strategies, focusing on customer retention and post-sale engagement. By the end of the course, students will be able to apply key concepts and techniques to drive sales performance and foster lasting customer relationships in a competitive marketplace.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG301 Principles of Sales (3 semester hours)

This course explores the principles of selling in various situations encountered in interpersonal interactions. Effective and ineffective sales methods for both person-to-person and group selling are studied in order to increase the understanding of the sales process.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG304 Public Relations (3 semester hours)

This course is an introduction to public relations, covering strategies and tactics used by public relations professionals. The course emphasizes theory and skills needed to perform in the professional arena, including an introduction to research-based public relations campaigns. A major focus of the course for the student is a “walk through” of a public relations campaign that uses a checklist approach.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG305 Advertising (3 semester hours)

This course is a study and analysis of advertising's role in marketing operations. Course topics will include such areas as the integration of advertising into sales promotion, event marketing, direct response, and other varied support strategies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG307 Consumer Behavior (3 semester hours)

This course explores consumer behavior from determining consumer needs and wants, the process by which they are satisfied, and the environment in which the behavior occurs. The objectives of the course are to introduce the student to concepts developed in psychology, economics, and sociology and their relationship to consumer behavior, to involve the student directly in the study and analysis of consumer behavior, and to develop in students the ability to translate what can be learned into marketing action implications.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG308 Social Media Marketing (3 semester hours)

This course presents the use of online social networking as a marketing strategy designed to increase customer loyalty and lead conversion. Through the study of social media sites, students evaluate contemporary and emerging tools in the digital marketplace.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG310 Digital Marketing (3 semester hours)

This course is a study of marketing activities in the digital age. The course will familiarize the student with digital marketing approaches using the internet and other forms of new media. Course topics include online advertising, social media, online listening and monitoring, and search engine optimization. The student will learn how digital marketing strategies fit into the overall marketing plan and how to measure the effectiveness of these efforts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG400 Marketing Research (3 semester hours)

This course is a study of the conduct of marketing research to provide information to be used in the decision making process. Course topics include problem definition and solution in a marketing context, data collection methods, sampling, research design, statistical techniques in the analysis of market research information, and survey planning.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG401 Marketing Strategy (3 semester hours)

This course presents the analytical and decision-making processes involved in formulating, implementing, and controlling a strategic marketing program for a given product-market entry. It includes discussions of customer, competitor, and environmental analysis; market segmentation and targeting; competitive positioning; implementation; and control. Because the course assumes that the student is already familiar with many of the concepts and analytical tools relevant to these topics, it goes beyond a simple review of definitions and procedures to examine strategic implications. The course also explores how marketing interacts with other levels of strategy and with other functional departments within an organization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG403 Marketing Management (3 semester hours)

This course provides a comprehensive overview of how marketing managers transform strategic plans into coordinated, high-impact marketing execution. Students will explore the operational responsibilities of marketing leadership, including campaign planning, resource allocation, cross-functional collaboration, and team management. Emphasis is placed on aligning execution with business goals, measuring performance, and adapting strategies using customer insights, analytics, and technology. Through practical applications, students learn to lead marketing efforts that drive results, foster customer loyalty, and respond to dynamic market conditions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG407 International Marketing (3 semester hours)

This course is designed to develop marketing decision skills in the global context. The course focuses on international marketing theory and practice from the point of view of the marketing manager and the requirements of a business in the international marketplace. The emphasis is on the application of tools and methods of international marketing practices. This course builds on skills developed in previous course work and assignments by integrating these with the issues and concepts of international marketing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG420 Branding (3 semester hours)

This course introduces students to understanding the need to differentiate products and services. The course explores how branding can have an impact on purchasing decisions. Students learn branding methods to transcend industries and techniques to use branding as an asset.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG425 Integrated Marketing Communications (3 semester hours)

This course provides a sound understanding of an integrated approach toward the marketing communications mix. The course assesses the impact of globalization of markets on marketing communications and provides an understanding of the cultural, legal, and lifestyle of various cultures. This is an advanced writing course providing practice in producing marketing content for print, broadcast, online, and public relations media. Commonalities and differences among writing formats, mechanics, and approaches of each medium are addressed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MKTG495 Senior Seminar in Marketing (3 semester hours)

This course is a capstone course designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Marketing. The student will complete an approved academic project or paper that demonstrates mastery of marketing principles, concepts, and study. This is a capstone course to be taken after all other Marketing courses have been satisfactorily completed. (Prerequisite: Completion of a minimum of 105 hours towards your program).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Mathematics (MATH)

MATH101 Introduction to College Algebra (3 semester hours)

This course is an introduction to college algebra and is organized into six distinct parts, beginning with a review of basic mathematics skills. It then addresses the language of algebra, the definition, uses, and methods of solving equations and inequalities, exponents and polynomials, factoring, and rational expressions. Practical applications are emphasized throughout the course. This course does not fulfill the mathematics General Education Requirements, but it can be used as elective credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH110 College Algebra (3 semester hours)

This course will encompass the basic concepts involved in graphing points and linear equations and the solution and graphing of inequalities and systems of linear equations. The course will also concentrate on the manipulation and use of exponential expressions and radicals and the solution of quadratic equations and their applications.
Practical applications will be provided throughout the course. There is careful attention to the presentation of concepts that will become important in the study of analytic geometry, trigonometry, and calculus.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH111 College Trigonometry (3 semester hours)

This course in college trigonometry synthesizes topics from college algebra courses and is designed to extend students' knowledge of trigonometry. It covers a variety of mathematical concepts and techniques that are important to students planning to continue into more advanced math and math-related classes.

The course concentrates on various trigonometric functions, identities, and equations as well as the practical application of trigonometry to real-life situations. The final part of the course includes polar coordinates and vectors. While there are no prerequisites for **MATH111**, it is very highly recommended that students complete **MATH110** College Algebra or an equivalent college-level course prior to taking this course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH112 Pre-Calculus (3 semester hours)

This is a course to prepare students for Calculus. It synthesizes topics from college algebra and trigonometry (courses such as **MATH110** College Algebra and **MATH111** Trigonometry). It also goes into greater depth with concepts that will be crucial when taking Calculus. These mathematical concepts and techniques are important to those continuing into more advanced math and math-related classes. Practical applications are provided throughout the course.

The course assumes the student is completely comfortable with the language of algebra, equations and inequalities, polynomials, factoring, and rational expressions. If a lower-level math course has not been completed recently, we recommend that students take **MATH100** Pre-Algebra or **MATH101** Introduction to College Algebra.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH120 Introduction to Statistics (3 semester hours)

This is an introductory statistics course designed to help students achieve a basic understanding of the statistical methods available to analyze and solve the wide variety of problems encountered in the workplace. This course is designed for students who seek an understanding of descriptive and inferential statistical methods. The emphasis of the course will be on the proper use and interpretation of statistical techniques. **MATH120** is the recommended mathematics general education course for students who will be required to take additional statistics courses such as **MATH302** Statistics as part of their program of study.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH125 Math for Liberal Arts Majors (3 semester hours)

THIS COURSE DOES NOT FULFILL MATH PREREQUISITE REQUIREMENTS IN SCIENCE PROGRAMS. STUDENTS IN AS OR BS PROGRAMS OR IN PROGRAMS THAT REQUIRE **MATH302** SHOULD TAKE **MATH110** OR HIGHER AS THEIR MATH GEN ED UNLESS CLEARED WITH ACADEMIC ADVISOR FIRST.

This course examines various mathematical concepts and problem solving techniques and provides mathematical functional literacy for those majoring in non-technical subject areas such as intelligence, military history, economics, and management. Students will learn how to solve a wide variety of problems from such areas as: mathematical thinking; logic; number theory and real numbers; introduction to algebraic equations, inequalities, and problem solving; functions and graphs; geometry; mathematical systems and matrices; sophisticated counting techniques; consumer math; and an introduction to probability and statistics. This course is principally a problem-solving course where students learn how to solve a wide variety of mathematical problems, rather than a conceptual course where problem solving is not emphasized.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH200 Analytic Geometry (3 semester hours)

This course introduces students to the concepts of analytic geometry. Some of the most important applications in physical sciences will be presented; however, emphasis is on the fundamentals of analytic geometry as a foundation for the study of calculus. Students may use this course for higher level prerequisite mathematics requirements. Topics include: plane analytic geometry; vectors in the plane; equations of lines, circles, and conic sections; transformation of coordinates; curve sketching of polynomial and rational functions; polar coordinates; parametric equations; and three dimensional vectors. (Prerequisite: **MATH111** or equivalent)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH210 Discrete Mathematics (3 semester hours)

This course introduces students to the fundamental concepts of discrete mathematics. The course provides a foundation for the development of many computer related concepts and more advanced mathematical concepts found in electrical engineering or computer science courses. Important applications in the computer science and engineering disciplines will be presented. Topics include: fundamentals (basic tools for discrete math); logic; methods of proof; graphs and sets; functions; relations and equivalences; recursive relations; polynomial sequences; induction; combinatorics; counting; and probability. (Prerequisites: **MATH110**, **MATH111**, or **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH220 Linear Algebra (3 semester hours)

This course presents vectors, matrices, determinants, eigenvalues, and eigenvectors; and how these concepts may be used and applied. The emphasis of the course will be on understanding the concepts and methods of linear algebra, as well as solving problems and understanding how linear algebra is used in real world applications. (Prerequisite: **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH225 Calculus (3 semester hours)

This course begins with a study of limits and continuity, which leads into the study of derivatives. Students will be taught to find the derivative of many functions using a variety of methods, including power rule, product rule, and chain rule.
Students will then learn how to tackle several different applications of derivatives, including optimization, curve sketching, approximations, and related rates. Finally, students will be introduced to integration and how it can be used to determine areas. (Prerequisite: **MATH111**, **MATH112**, or an equivalent course)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH226 Calculus II (3 semester hours)

This course builds on the concepts introduced in Calculus I and will expand students' ability to integrate more functions using a variety of techniques, including substitution, integration by parts, and trigonometric substitutions. These skills are then used to find the area between curves, the volume of shapes created by rotating area, arc length, and surface area. The course also introduces sequences and series and includes several methods for determining when the series and sequences converge. (Prerequisite: **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH227 Calculus III (3 semester hours)

This course is designed to extend calculus concepts to functions with more than two variables. Students will perform vector calculations encompassing operations such as the dot product and cross product. They will also use these skills in several applications, including arc length and motion.
Students will then apply their calculus skills to multivariable equations to find the partial derivatives and double and triple integrals. Finally, they will apply their vector skills to vector calculus and work with vector fields, line integrals, and surface integrals. (Prerequisite: **MATH226**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH239 Data Analysis and Presentation (3 semester hours)

This applied course introduces students to a variety of techniques for organizing, analyzing and presenting large data sets. Topics to be covered include descriptive statistics with graphics and sample estimation. Emphasis is placed on real-world applications such as those found in the social and physical sciences. Students will become familiar with statistical software packages. (Prerequisite: **MATH220**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH240 Differential Equations (3 semester hours)

MATH240 is introduction to differential equations. It is designed to introduce students to the basic concepts and techniques of differential equations. The course covers the standard materials addressed in the first semester of college differential equations to include: first and second order differential equations, Laplace transforms and differential equations with variable coefficients. Problems have been selected to illustrate the applications of these techniques across a wide range of areas of science, technology, and economics. It is essential for engineering, science, and economics. Increasingly, applications in business management and related fields also employ the calculus. (Prerequisite: **MATH227** or equivalent)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH302 Statistics (3 semester hours)

This is an interactive course designed to help students achieve a greater understanding of the statistical methods and models available to analyze and solve the wide variety of problems encountered in business, science, medicine, education, the social sciences, and other disciplines. Successful completion of this course will provide students with a working knowledge of the principles of both descriptive and inferential statistics, probability, averages and variations, normal probability distributions, sampling distributions, confidence intervals, statistical hypothesis tests, and correlation and regression analyses. The emphasis of the course will be on the proper use of statistical techniques and their application in real life -- not on mathematical proofs. This course will use Microsoft Excel for some of the work. Students should have a basic familiarity with Excel and have access to this software application. **MATH120** is the recommended mathematics general education course for students who will be required to take additional statistics courses such as **MATH302** Statistics as part of their program of study. (Prerequisites: **MATH110**, **MATH111**, **MATH120**, or **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH303 Probability and Statistics for Engineers and Scientists (3 semester hours)

This course in statistics is designed to provide students with a more in-depth understanding of statistics than **MATH302**. Topics covered include: the principles and applications of descriptive and inferential statistics, probability, common distributions and hypothesis testing. Regression and correlation will also be considered. (Prerequisite: **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH305 Real Analysis (3 semester hours)

This course provides a theoretical foundation for single-variable calculus concepts and introduces higher level abstraction of these concepts. Topics include the structure of the real numbers, sequences, continuity, and metric spaces. This course will be run as a seminar that emphasizes mathematical constructs of real analysis and proof writing. (Prerequisites: **MATH227**, **MATH240**, and **MATH320**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH320 Mathematical Modeling (3 semester hours)

This course introduces students to the fundamental concepts of math modeling. It integrates the student's previous experiences with mathematical concepts to provide a variety of practical methods to solve problems. The course covers mathematical concepts such as graphs, inequalities, slopes, linear regression, matrices, operations and applications of matrices, linear programming, sets,Venn diagrams, permutations, combinations, binomial theorem, and an introduction to logic.
(Prerequisite: **MATH220**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH325 Linear Regression I (3 semester hours)

Linear regression models are widely used in business administration, economics, engineering, and the social, health, and biological sciences. Successful applications of these models require a sound understanding of both the underlying theory and the practical problems that are encountered in using the models in real-life situations. In this first course in linear regression students will be exposed to some of the fundamental tools of linear regression. The emphasis will be on using and interpreting linear models. In addition to analyzing given linear models, students will analyze data and create linear regression models as a means to assess and evaluate the extent to which individual or sets of predictor variables influence a particular response. Furthermore, students will use models to forecast outcomes associated with various response variables. Applications from a number of different areas will be examined. (Prerequisites: **MATH220** and **MATH302**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH328 Probability Theory with Applications (3 semester hours)

This course introduces students to the basic concepts and applications of probability theory. An understanding of probability theory is essential to statistics, which is the fundamental basis of how all research is done, from science to medicine to business, marketing, and governmental politics. Probability theory is also essential to such disciplines as mathematics, finance, artificial intelligence, and even legalized gambling (such as state lotteries). Examples of applications problems from these areas are included in the course, with a focus on understanding the concepts and methods of probability theory, as well as solving problems taken from real world applications.
(Prerequisite: **MATH226**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH330 Linear Optimization (3 semester hours)

This course examines various linear optimization concepts and problem solving techniques commonly found in manufacturing, transportation, and military operations. The goal of optimization is to find the best possible solution to a problem given a number of constraints. The emphasis of this course is problem solving. This course includes the construction and analysis of real world problems and the application of various linear optimization techniques to find an optimal solution. An optimization software package will also be presented and used to solve problems. This course covers a wide range of linear optimization techniques. Topics include linear programming; the simplex algorithm and goal programming; sensitivity analysis and duality; problems in transportation and transshipment; network models; and integer programming.
(Prerequisite: **MATH220**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH340 Multivariate Statistics (3 semester hours)

This course will introduce to students analysis of categorical data, log linear models for two- and higher-dimensional contingency tables, and logistic regression models. Also, students will analyze aspects of multivariate analysis to include random vectors, random sampling, multivariate normal distribution, inferences about the mean vector and MANOVA. (Prerequisites: **MATH328** and **MATH302**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH360 Mathematics History and Development (3 semester hours)

This course will introduce students to the historical development of the disciplines of mathematics. Within the discipline of mathematics, we will examine the development of numbers and number systems, geometry and measurement, algebra, probability and statistics, calculus, and discrete mathematics. Throughout this course, students will study the history of mathematics and mathematics education through readings, case studies, and problem sets. (Prerequisite: **MATH320**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH375 Inventory Models and Systems (3 semester hours)

This course introduces students to the basic concepts and application of inventory management, its theory and practice. An understanding of the inventory management theory is essential to operations management, production planning and scheduling, and global supply and demand chain management. Inventory management is the heart of operations management in any industry. On upstream, it will dictate policies and procedures for procurement and material management. Its impact on downstream, especially in meeting the required service level, is a determinant factor in high service level which greatly impacts marketing and financial departments. In this course, we introduce quantitative methods of optimal inventory management in the context of operations management, forecasting, BOM, MPS, and ERP.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH410 Design of Experiments (3 semester hours)

This course is delivered online and is organized into distinct parts. This course will begin with Design of Experiments (DOE) methodology and statistical inference. The design of single factor, factorial, nested and nested factorial experiments will be taught. Quantitative and qualitative factors will be introduced to simulate real situations that are encountered in operations being explored. Students will learn how to set up and solve fixed, random, and mixed models with two or more factors. Practical applications are provided throughout the course. (Prerequisite: **MATH340**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH412 Graph Theory (3 semester hours)

This course studies set theory, counting techniques such as permutations, combinations, generating functions, partitions and recurrence relations, Polya's theorem, Hamiltonian and Euclidian properties of graphs, matchings, trees, coloring problems and planarity. (Prerequisite: **MATH305**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH415 Operational Simulation (3 semester hours)

This course examines various mathematical concepts and problem solving techniques and introduces discrete system simulation, Monte Carlo methods, discrete event modeling techniques, programming considerations, statistical definitions and concepts, random number generation, and output analysis. This will be a problem-solving course which will emphasize tools that can be used during the analysis phase of real world problems. (Prerequisites: **MATH330** and **MATH375**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH418 Topology (3 semester hours)

Topics include definition of a topology, closed sets, relativizations, base and sub-bases of a topology, compact topological spaces, separation axioms, normal spaces, regular spaces, metric spaces, continuous mappings, product spaces, and function spaces. (Prerequisite: **MATH305**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH420 Game Theory and Decision Models (3 semester hours)

"A Beautiful Mind" is a movie that helped popularize game theory. It is a biographical film about the life of John Nash who is known for his work in game theory. "Game theory is the study of mathematical models of conflict and cooperation between intelligent and rational decision makers." This course examines game theories and their applications commonly found in economics, business, political science, and law and how to model games to make informed decisions. Topics include dominance solutions, Nash equilibrium, backward induction, subgame perfect equilibrium, repeated games, dynamic games, Bayes-Nash equilibrium, mechanism design, auction theory, and signaling. (Prerequisites: **MATH410** and **MATH415**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH460 Principles of Applied Mathematics (3 semester hours)

The process of expressing scientific principles, experiments, and conjectures in mathematical terms. Topics include: gathering reliable data, exposing underlying assumptions, variables, relationships, levels, refining of models, and stochastic models. Deterministic versus stochastic models. (Prerequisite: **MATH305**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH470 Measurement Theory (3 semester hours)

This course covers the study of basic topics in analysis with emphasis on methods and measurement. Sequences, series, functions, uniform convergence, continuity, partial differentiation, extreme value problems with constraints, Riemann integrals, line integrals, improper integrals, integrals with parameters, transformations.
(Prerequisite: **MATH305**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MATH499 Senior Seminar in Mathematics (3 semester hours)

The Capstone course is a senior level course designed to allow the student to review, analyze, and integrate the work the student has completed toward a degree in Mathematics. Students will examine a number of real-world case studies; prepare an approved academic project or paper; and demonstrate mastery of their program of study in a meaningful culmination of their learning. Students must demonstrate that they have taken all other math courses in their degree plan prior to registering for this course. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Military History (MILH)

MILH201 Introduction to Military History (3 semester hours)

This course is a survey of the changing patterns of warfare within Western civilization, to include analyses of principal military thinkers and the evolving relationship among Western societies, warfare, and their military institutions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH202 Survey of American Military History (3 semester hours)

This course is a study of the American military institution from the colonial period to the current environment in the 21st century. Students will examine military traditions and employment of forces during war and peace as well as the relationships between the military and society. Recommended prerequisites are two lower level survey courses in U.S. or World History.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH221 War From Antiquity to 1700 (3 semester hours)

This course is a survey and discussion of warfighting during ancient times through to the beginning of the 17th century with emphasis on technological advances in the military arts and sciences and their short-term and long-term effects on strategy and tactics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH222 War from 1700 to the Present (3 semester hours)

This course is a survey and discussion of warfighting from end of the 17th century until now, to include military arts and science as well as combined arms employment. Emphasizes the innovations and changes in strategy, tactics, organization and technology engendered by the decisions of the great captains of each age.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH303 Readings in Military Leadership (3 semester hours)

This course is a study of military leadership of ancient to present day commanders through selected readings. Emphasis will be on the burden of command and the various solutions that military leaders employed in the prosecution of war. Ancient and modern leadership will be examined, but the primary focus will be on the modern era.
(Prerequisites: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH304 Readings in Military Philosophy (3 semester hours)

This course is a study of basic concepts in military strategy and tactics viewed through the prism of the selected readings from well-known military philosophers. Both ancient and modern philosophers will be studied.
(Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH320 The American Revolution (3 semester hours)

This course examines the American Revolution from its antecedents to its legacy. The events leading to the revolt and the Declaration of Independence; the strategy and tactics of the war emphasizing the land campaigns; and the aftermath of war on the new Nation.
(Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH355 World War I (3 semester hours)

This course analyzes World War I, from the political unrest in Europe in 1914 and the outbreak of war to the Armistice in November 1918 to the treaty of Versailles in 1919 and the official end of the war. Global in scope, the themes highlight the origins of the conflict, Entente and Central Powers strategies, plus the major military campaigns, power diplomacy, life on the home front and America's entry and effect to the Entente (Allied) war effort her entry had on the outcome of the conflict. (Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH360 World War II (3 semester hours)

This course is a global examination of the Second World War with an emphasis on the origins of the conflict, Axis and Allied strategies, major military campaigns, great power diplomacy, life on the home front, and the Holocaust. The experience of combat, social and political changes that resulted from the conflict and the scientific consequences of the war will be continual themes addressed by the course material.
(Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH362 Ancient Military History (3 semester hours)

This course is a comprehensive survey of ancient and classical warfare (prehistory to c. AD 500) in Western Civilization from the origins of warfare in the Paleolithic period to the decline and fall of the Western Roman Empire in the fifth century. The millennia under study in this course were a dynamic period in warfare, full of important discoveries and innovations in martial technologies, strategy, organization and combined-arms tactics, fortification, siege craft, and naval warfare. Students will read and analyze a wide variety of sources on ancient and classical warfare in Mesopotamia and the Near East (Sumerian, Akkadian, Babylonian, Hittite, Assyrian and Persian), Egypt (Old, Middle and New Kingdom), Greece (Mycenaean, Archaic, Hellenic and Hellenistic) and Rome (Republican and Imperial) in order to develop an appreciation of the important contributions of these civilizations to the continuity of warfighting in the Western world.
(Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH363 17th and 18th Century Military History (3 semester hours)

This course covers the history of warfare from the Spanish Armada in 1588 to the dawn of the French Revolutionary wars in the 1790s. The 17th and 18th centuries were an era in world history abound in continuous warfare. The militaries of Europe in particular were still primarily composed of mercenaries, politically and often militarily unreliable. Warfare in this era was not confined to the plains of Europe; the world's oceans also played host to their own form of combat. The 17th and 18th centuries at sea began with Great Britain on the verge of invasion from the Spanish Armada to Great Britain becoming the unquestioned master of the ocean. Thus, the 17th and 18th centuries began in an aura of indecisiveness and closed awash in the destruction of "world" war. The evolution of warfare from the inconclusive to the decisive battle is explored in depth. (Prerequisite: **HIST300/HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH364 Medieval Military History (3 semester hours)

This course is a comprehensive study of European post-classical warfare from the decline and fall of the Western Roman Empire in the fifth century to the integration of reliable gunpowder technologies at the beginning of the sixteenth century (c. 450 to c.1500 AD). Students will read and analyze a wide variety of sources on medieval warfare in order to develop an appreciation of the important contributions of the European Middle Ages to the continuity of warfighting in Western civilization. Contrary to popular belief, the millennium under study in this course was a dynamic period in warfare, full of important rediscoveries and innovations in fortification, siegecraft and combined-arms technology, organization and tactics, all of which allowed Europe to become the preeminent military power in the period after 1500 AD. (Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH365 The Napoleonic Wars and the Long Peace (3 semester hours)

This course examines the theory and practice of warfare in Europe from 1785 to 1870. It will emphasize the rise of Napoleon as a military leader, as a practitioner of the operational art, but will also examine his political, economic and legal impact on Europe as a whole. This course will focus on the wars of the French Revolution, Napoleon's northern Italian campaigns, his expedition to Egypt, his battles while leading the Grand Army at Austerlitz and Jena, and his march to Moscow where he led the largest army in European history to date. It will also cover the 1813 and 1814 campaigns, the reactions of Napoleon's enemies to his innovations in warfare, and his final defeat at Waterloo. The course then looks at the status of Europe in 1815 and the conditions which set the terms for the "Long Peace". The course ends prior to the start of the wars of 1870 and the lessons learned. (Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH370 The Korean War (3 semester hours)

This course provides a history of the Korean War from pre-hostilities to post-ceasefire. The course mainly concentrates on the U.S. and South Korean conflict against North Korean and Chinese forces, but other UN participants are covered throughout the course. All three levels of conflict, from tactical to strategic are discussed. The increase in technology, the usage of modern weapons, POWs, and the continued presence of U.S. forces in the Republic of South Korea are also covered. (Prerequisite: **HIST300/HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH371 The Vietnam War (3 semester hours)

This course examines the origins of the conflict in Indochina, American intervention and commitment, the ground wars, Vietnamization, trouble at home, the US withdrawal, and the war's effect on American society. (Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH422 History of Peacekeeping: 1988-Present (3 semester hours)

This course examines the strategy, operations, evolution, and functions of United Nations and regional peacekeeping operations (PKO) from the end of the Cold War to the present. Emphasis is on the significance of individual peacekeeping missions, including their background, functioning, military operations, and end result. While the United Nations peacekeeping operations are studied in detail, other forms of peacekeeping are presented as well.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH480 Special Topic: Military History (3 semester hours)

This course is a one-time offering on an area of special interest and may be applied to fulfill major course requirements or electives. A student may appeal to take this course twice, if the subject matter is different enough to merit separate credit. WINTER 2016 SPECIAL TOPIC - MEDAL OF HONOR: Students will learn about the story behind the Medal of Honor and the significance of the design of the Medal. Students will also learn how Confederates were honored with a Roll of Honor. They will learn that the Medal of Honor Legion was founded in 1890 to protect the Medal from abuse. They will learn that 911 Medals of Honor were revoked in 1917 after all the Medals to date were reviewed, including those of the only woman and the 27th Maine, and will learn if any of these Medals were restored later. They will also learn about modern Medal of Honor recipients.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH490 Independent Study: History (3 semester hours)

An opportunity for Military History students to pursue an independent research project or examine a specific area of history under the mentorship of a single professor. Course is open to Military History majors only. The course will typically involve a major research paper; there will be no examination. Students will submit a proposal prior to the start of the project, and a rough draft of the paper, both of which will count toward the final grade. To be eligible for an independent study, students must be enrolled in a bachelors degree program, must have completed 24 hours at APUS toward their current degree program, and should have already contacted a professor and gained approval for the independent study topic. Once these conditions are met the student should contact their academic advisor. Once the course is open the student must complete an official online registration for the course. (Prerequisite: **HIST300**/**HS334** for History and Military History majors only)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

MILH498 Senior Seminar in Military History (3 semester hours)

The Senior Seminar in Military History is designed to integrate the student's past work in their major field of study and to review as well as strengthen their understanding of their focus area in military history. After a review of the student’s academic experience, the student and professor will design a course of study to complete the student’s preparation for research and writing a major paper in their field of interest. This is a capstone course to be taken after all other Military History courses have been satisfactorily completed. (Prerequisite: **HIST491** and completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Nursing (NURS)

NURS159 Fundamentals, Adult, and Childbearing Family Nursing Transition Course (6 semester hours)

This course prepares the Licensed Practical Nurse, Paramedic, Army Medic, Air Force Technician, and Navy Corpsman to enter a community college associate degree nursing program with advanced standing. The role of the nurse in the delivery of safe and effective care to individuals across the life span is addressed with an emphasis on adults and childbearing families. The nursing process and critical thinking guide the provision of patient-centered care. Advocacy through effective verbal and written communication with patients, families, and other members of the healthcare team facilitates the achievement of desired patient outcomes. Emphasis is placed on the role of evidence-based practice in the delivery of optimal health care. THIS IS A RESTRICTED COURSE THAT REQUIRES APPROVAL FROM OUR NURSING PROGRAM.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS161 Fundamentals and Adult Nursing Transition Course (6 semester hours)

This course prepares the Licensed Practical Nurse, Paramedic, Army Medic, Air Force Medical Technician, and Navy Corpsman to enter a community college associate degree nursing program with advanced standing. The role of the nurse in the delivery of safe and effective care to individuals across the life span is addressed with an emphasis on adults. The nursing process and critical thinking guide the provision of patient-centered care. Advocacy through effective verbal and written communication with patients, families, and other members of the healthcare team facilitates the achievement of desired patient outcomes. Emphasis is placed on the role of evidence-based practice in the delivery of optimal health care. THIS IS A RESTRICTED COURSE THAT REQUIRES APPROVAL FROM OUR NURSING PROGRAM.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS300 Professional Transitions in Nursing (3 semester hours)

This course is only open to students admitted and enrolled in the RN to Bachelor of Science Nursing Program. In this course, students examine the role of the baccalaureate-prepared Registered Nurse as a leader and change agent in various practice settings. Students determine the impact and effectiveness of informatics, cultures of safety, levels of professionalism and ethics in their healthcare settings. Students will conduct a self-assessment of professionalism, identify areas for growth and write a Professional Development Plan. Principles of critical thinking and scholarly writing are applied throughout the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS310 Assessment, Evaluation and Clinical Decision-Making (3 semester hours)

This course explores assessment of the individual and families across the lifespan. The concepts of genetics and health maintenance/health promotion will guide the student to develop plans of care focused on clinical prevention. Students will cultivate professional assessment skills by completing a health interview, a health risk assessment and a discharge teaching plan. All evidence-based plans of care reflect an understanding of the relationship between assessed risk factors and genetic predisposition toward illness with the goal of achieving quality patient outcomes. (Prerequisite: **NURS300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS315 Pathophysiology and Clinical Pharmacology (3 semester hours)

This course is only open to students who are enrolled in the RN to Bachelor of Science in Nursing (RN to BSN) program. This course explores the connections between pharmacological interventions and pathophysiology across the life span. The study of genetics/genomics, culture, and integrative health provides a theoretical context for the delivery of patient-centered care. An understanding of the dynamic relationship between comorbidities and medication interactions facilitates the development of an individual plan of care. An analysis of human responses to pharmacological interventions will be explored through case studies, evidence-based research, and group projects. (Prerequisite: **NURS300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS340 Science of Evidence-Based Practice (3 semester hours)

This course is only open to students who are enrolled in the RN to Bachelor of Science in Nursing (RN to BSN) program. This course reviews evidence-based practice, the history of this movement, and the challenges to implementation in the practice setting. Students will further develop their skills with efficiently finding, reading, and comprehending published research and determine applicability to clinical practice. Students continue to explore means to assess, monitor, and develop cultures of safety in their own organizations and will become familiar with several national safety initiatives. (Prerequisites: **NURS300** and **MATH120**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS350 Transformational Leadership and Cultures of Safety (3 semester hours)

This course is only open to students who are enrolled in the RN to Bachelor of Science in Nursing (RN to BSN) program. It includes a 20 hour practice experience in leadership with a nurse leader in a care setting. This course builds on assessments related to professionalism, culture of safety, nursing ethics and effective use of healthcare technology completed in previous courses with an emphasis on leading change in complex organizational healthcare systems. Students integrate and apply this knowledge to improve quality and build cultures of safety in their workplaces. It is recommended that students select a nurse leader for this assignment prior to the course start. (Prerequisite: **NURS300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS400 Emerging Scholarship and Trends in Healthcare (3 semester hours)

This course is only open to students who are enrolled in the RN to Bachelor of Science in Nursing (RN to BSN) program. Students explore the rapid evolution of current nursing practice and examine historical and contemporary issues germane to their practice. Students examine changes in technology and its impact on access, cost, quality, and knowledge development. Global health and nursing workforce issues are evaluated and discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS401 Caring for Today's Veterans (3 semester hours)

This course addresses the unique healthcare issues facing today's veterans. Emphasis is on physical and psychosocial needs of veterans and the delivery of patient/family centered care. Post-traumatic stress disorder, traumatic brain injury, and other health issues of veterans will be explored through evidence-based literature and research. Students will examine the veteran culture, identify health risks, analyze health issues and trends in healthcare systems, and explore best practices.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS421 Community Health I (3 semester hours)

This course is only open to students who are enrolled in the RN to Bachelor of Science in Nursing (RN to BSN) program. In this course, the student will focus on the community as client with an emphasis on specific vulnerable populations and related topics, such as substance abuse, mental illness, domestic violence, women's and men's issues, and environmental health. The student will gain knowledge of underserved populations as well as how communities are affected by cultural diversity and natural and man-made disasters. Clinical experiences will allow for the implementation of a teaching project for a designated vulnerable population. (Prerequisite: **NURS300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS425 Informatics and Technology in Healthcare (3 semester hours)

This course is only open to students who are enrolled in the RN to Bachelor of Science in Nursing (RN to BSN). This course explores the role of healthcare technologies in the provision of safe and high quality, patient-centered nursing care. The use of informatics to improve the health of individuals and the delivery of healthcare services will also be examined with an emphasis on patient privacy and confidentiality in the digital age. (Prerequisite: **NURS300**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

NURS498 Senior Seminar in Nursing Studies (3 semester hours)

This course is only open to students who are enrolled in the RN to Bachelor of Science in Nursing (RN to BSN) program. This course is organized around individual student research papers and project development and serves as a capstone and culminating experience where students integrate knowledge and apply professional skills to improve the quality of health in the workplace. Students prepare formal written and poster presentations of the project. A final evaluation of progress toward meeting goals is completed. (Prerequisite: **NURS300**, **NURS310**, **NURS315**, **NURS340**, and **NURS350**.) NOTE: Students must earn a grade of B or higher to pass this course

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Philosophy and Religion (PHRL)

PHRL498 Religion and Philosophy Capstone (3 semester hours)

This capstone course is an intensive study of major figure(s) and or movement(s) in philosophic thought, and/or contemporary issues and beliefs in religion and events of particular historical importance to the discipline. Students will integrate knowledge acquired in previous courses into critical analyses of movements, theories and principles that have influenced historical and contemporary thought in philosophy, and the integration of a critical analysis of selected sacred scriptures, collection and review of religious adherents' expressions and experiences, and a synthesis of all research into a final written project. This is a capstone course to be taken after all other Philosophy and Religion courses have been satisfactorily completed. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Philosophy (PHIL)

PHIL101 Introduction to Philosophy (3 semester hours)

This course is intended to equip the student with a baseline understanding of issues and concepts that compose the Western philosophic enterprise, and to serve as a point of departure for their further studies in Philosophy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL110 Critical Thinking (3 semester hours)

Critical Thinking introduces skills, concepts, models, and techniques for reading, writing, and thinking critically. Critical thinking is a necessary process for identifying and solving problems in academia and the workplace, as well as interpreting information in the media. Through the use of critical and logical thought processes, students will develop practical, analytical skills that prepare them for the investigative nature of being life-long learners.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL200 Introduction to Ethics (3 semester hours)

This course will examine the field of ethics and provide the tools for ethical decision-making. Students will analyze texts for meaning, apply theories learned to various areas of moral concern, such as war, euthanasia, divorce, and poverty. The course will also provide an overview of how philosophers have thought about moral problems and some of the solutions they have proposed. Students will develop the ability to think about moral problems in a clear and logically consistent manner.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL202 Philosophy of Science (3 semester hours)

Philosophy of Science will introduce students to the origins and development of modern science and how that is distinguished from pseudo-science; the importance of deduction and induction and their separate methodologies; the process of the scientific method; scientific change and scientific revolutions, particularly that of Thomas Kuhn; and selected philosophical problems in the basic sciences, such as absolute space, biological classification, the modular mind, and recent discoveries of neuroscience.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL270 Thinking & Acting Ethically (3 semester hours)

This course offers students a chance to delve into ethics from many approaches. Every day, an individual’s ethics may be challenged, and this course will do its best to provide a foundation on which students can develop a personal set of ethics. The course covers various ethical frameworks, reviews the ethical challenges individuals are likely to encounter in their daily or professional lives, and explores solutions based on ethical principles.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL300 Logic (3 semester hours)

This course is an examination of the historical and contemporary concepts and techniques used in logic, emphasizing classical and modern treatments of topics such as rules of inference. The course will cover the principles of deduction, induction, informal fallacies, and uses of logic in everyday life. (Prerequisite: **PHIL101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL302 Ancient Western Philosophy (3 semester hours)

This course examines themes in the thought of Plato, Aristotle, and the Stoic, Epicurean, and neo-Platonist philosophers of the ancient world. It enables the student to enter the “great conversation” of western civilization as well as debate the fundamental questions that surround science, religion, self-awareness, ethics, and politics. (Prerequisite: **PHIL101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL303 Medieval Philosophy (3 semester hours)

This course considers the synthesis of Christianity with classical pagan philosophy achieved by St. Augustine and St. Thomas Aquinas. What became of the ancients’ ideal of human knowledge in an age when philosophy became the “handmaid of theology"? What were the underpinnings of the “natural law” conception of moral and political philosophy? How did this medieval synthesis break down, on the scientific side with Galileo’s challenge to Aristotelian physics and astronomy, and on the moral and political side with Machiavelli’s portrayal of a Renaissance prince? (Note to Students: The course materials, assignments, learning outcomes, and expectations in this upper level undergraduate course assume that the student has completed all lower level general education and career planning coursework necessary to develop research, writing, and critical thinking skills. Students who have not fulfilled all general education requirements through courses or awarded transfer credit should strongly consider completing these requirements prior to registering for this course. (Prerequisite: **PHIL101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL320 Environmental Ethics (3 semester hours)

This course is a study of environmental issues from a moral and philosophical approach. Issues raised in the course include the moral obligation, or lack thereof, to preserve and protect the environment, the ethical presumptions that underlie environmental policy, the traditional theories of moral philosophy applicable to contemporary environmental problems, and the potential for a new conception of the relationship between humanity and nature.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL330 Philosophy of Law (3 semester hours)

This course surveys the main issues in the philosophy of law. We will study seminal work on questions like “what is the law?”, “what is the relationship between the law and morality?”, “what does it mean for someone to be responsible for a crime?,” and “what makes a punishment reasonable?”

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL340 Bioethics (3 semester hours)

This bioethics course examines some of the primary ethical issues in human health, biomedical research, and healthcare, as well as the ethical challenges they present. These philosophical problems are approached scientifically, argued rationally using ethical theory, and critically examined for practical application. Students will explore case studies and hypothetical situations that require judgment and decision-making, connecting philosophical principles to real-world dilemmas in medicine, law, science, and society. Although students are encouraged to think for themselves, they are required to demonstrate a clear understanding of different positions on any given issue, providing a strong foundation in biomedical ethics and the medical humanities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL400 Contemporary Issues in Philosophy (3 semester hours)

This course examines specific topics in philosophy, such as ethics, neuroscience, social philosophy, and political philosophy, that are of central interest and interdisciplinary in nature. In this course, students will develop a deeper knowledge of notions of the self, love, the morality of charity, and philosophies that address war and terrorism. Students will also develop a better understanding of how neuroscience, biology, and experimental philosophy influence our understanding of human morality. (Prerequisite: **PHIL101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL401 Modern Philosophy from Descartes to Kant (3 semester hours)

This course focuses on the work of European philosophers from roughly 1600 to 1800. Students will study the philosophy of René Descartes and traces the development of philosophical rationalism and empiricism in thinkers such as John Locke, David Hume, and Baruch Spinoza. In addition, the class will cover the transcendental idealism of Immanuel Kant. (Prerequisite: **PHIL101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL403 Continental and Post-Modern Philosophy (3 semester hours)

This course is a contemporary discussion of philosophic thought. It addresses leading thinkers and theories of the past two centuries and includes Hegel, Marx, Nietzsche, Sartre, Arendt, and other philosophers. (Prerequisite: **PHIL101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL405 Metaphysics and Epistemology (3 semester hours)

This course will cover basic themes in the topics of metaphysics and epistemology. It will investigate the basic question of "being," or what reality is most fundamentally, as well as the fundamental question of knowledge, or what distinguishes real knowledge from mere belief or opinion. Students will be asked to investigate questions regarding the existence or non-existence of God, and to critically examine leading metaphysical options such as theism, atheism, materialism, and idealism. They will also be considering questions regarding the acquisition and justification of various epistemic claims. Particular topics will include free will, determinism, skepticism, and truth.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL410 God and World (3 semester hours)

What is it that we name, what is it that we mean, when we say God? Although we may speak of God as if we are naming some entity or being whose identity we hold in common understanding, as we will see, God is a name used to express a range of concepts and experiences that have varying and often conflicting features. In this class we will examine some of these concepts and descriptions of experiences of the divine. Ultimately, however, this is not a study of God but of man and his attempt to understand his relation within and between God and the world.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL417 Analytical Philosophy (3 semester hours)

This course is designed to introduce students to the foundations and building blocks of philosophy in the analytical tradition. Focusing on a combination of topical and chronological, students will learn about the development of a school of thinking occurring in primarily anglophone countries, as opposed to primarily non-anglophone, Continental Philosophy. Specifically, starting with individuals such as Carnap, Russell and Wittgenstein, the course covers the development of analytical philosophies of language, metaphysics, epistemology, mind, ethics, and personal identity. The class culminates by examining a few recent developments including experimental philosophy and neuroexistentialism.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL420 Contemporary Philosophy (3 semester hours)

This contemporary philosophy course explores major figures, debates, and developments in Analytic, Continental, and Postmodern philosophy from the 19th century to the present. Students examine thinkers such as Hegel, Marx, Nietzsche, Wittgenstein, Sartre, Arendt, and Putnam. Emphasis is placed on philosophical arguments about individual liberty, moral and political philosophy, consciousness, and the nature of truth and existence. Through critical reading, writing, and discussion, students gain a deeper understanding of how contemporary philosophers continue to influence thought across society, science, government, and daily life. (Prerequisite: **PHIL101**).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHIL498 Senior Seminar in Philosophy (3 semester hours)

This capstone course offers an intensive review of major figures and movements in the history of philosophical thought. Students will apply knowledge gained from previous courses to critically analyze influential movements, theories, and principles in both historical and contemporary philosophy. Students will also synthesize all research into a final project. This course is intended to be taken after successfully completing all other Philosophy courses. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Political Science (POLS)

POLS101 Introduction to Political Science (3 semester hours)

Introduction to Political Science explains foundational principles of the field. Students will learn the purpose of political science, common terms and concepts, and subfields. Among these are introductions to political philosophies and ideologies, comparative systems of government, and international relations. The course also examines the professional and academic fields to which a political science degree is relevant.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS210 American Government I (3 semester hours)

This is the first course in a two-course sequence in American Government. The course is designed to convey basic facts about the structure and functioning of the American political system. The philosophical foundation of the U.S. Constitution is explored and the federalist construct is examined. The functions of the three separate branches of government and their roles in policy making are a major focus.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS211 American Government II (3 semester hours)

This is the second course in a two-course sequence in American Government. The course is designed to provide research tools and writing skills that will build on the academic knowledge acquired in **POLS210**. The student will investigate issues in American government in greater detail through use of Internet-based research, seminar discussions, and point papers. (Prerequisite: **POLS210**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS213 Political Theory (3 semester hours)

This course offers an overview of Western political thought from the Ancient Greeks to contemporary political theorists. It follows the rise of secularism and modernity through an Enlightenment tradition of social contract theory, shaping debates on human nature, equality, liberty, rights, and justice as the basis for civil society and democratic governance. This course is an essential foundation for the political science major.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS301 Ethics in Politics (3 semester hours)

This course focuses on providing students a study of ethics as it relates to government. Students will be presented with readings, case studies, and insightful information that will provide them the opportunity to analyze topics that will enable student discussions pertaining to ethical dilemmas in politics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS311 Political Parties and Interest Groups (3 semester hours)

This course is a study of the various roles of political parties and interest groups in the American democratic process. Issues covered include the ideological differences among parties, the role of third party candidates, mobilization of voting blocks, the formation and types of interest groups, and political agenda development.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS312 State, Local, and Community Politics (3 semester hours)

Comparative analysis of state and local political systems in the United States. Emphasis is placed on the contemporary role of states and localities in the development and implementation of public policies. Additionally, there is an examination of the role of grass roots social movements in shaping local politics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS401 The Psychology of American Politics (3 semester hours)

This course is an overview of the psychological study of American politics. Various topics and issues are covered throughout the course to include the personality, leadership style and decision making of presidents, voter choices and preferences, the influence of the media and political attitudes of different groups.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS410 Public Policy (3 semester hours)

Analyzes the formulation and execution of public policy in America. Includes study of decision-making theory, bureaucratic politics and other models that seek to explain how policy is made. Issues explored include social, environmental, economic, homeland security, defense, and foreign policy. Additional issue areas may be covered depending on contemporary significance.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

POLS497 Senior Seminar in Political Science (3 semester hours)

Analyses of specific issues addressed at the national level that would include a review of American political institutions and decision-making; policymaking in the economic, social, and security arenas; instruments of foreign and defense policy; federalism and democratic political theories; and the electoral process. This capstone course will provide students with the opportunity to complete an approved academic research exercise that demonstrates their knowledge of their selected field of study. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Psychology (PSYC)

PSYC101 Introduction to Psychology (3 semester hours)

The course introduces students to the art and science of Psychology. Course emphasis is on applying the "science of human behavior" to a variety of settings: vocational, personal, academic, and clinical. Course content introduces the history of psychology, major theories of personality and learning, current research and developmental issues. The course has a holistic approach and integrates the biological basis of behavior, social factors, learning and the unique coping styles of the individual to understand human behavior.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC102 Professional Careers and Education in Psychology (3 semester hours)

This course provides an overview of psychology as a profession and academic discipline. It focuses on the broad discipline of psychology and its subspecialty areas within the discipline, career opportunities available in the field and educational requirements for field entry, effective job and graduate program preparation strategies, and practical issues confronting psychologists and professionals in related occupations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC201 Introduction to Social Psychology (3 semester hours)

This course introduces students to historical and contemporary theories of social psychology, key theorists' contributions to the field of and practical applications of theoretical concepts in the real world of the individual functioning in group settings. The focus of study includes social judgments and decisions, attitudes and perception, social influence, attraction, aggression, altruism and group pressure and their influences on human behavior, cognition and emotion, along with exposure to the methods of social scientists who study group influence on human behavior in the field. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC221 Personality Theories (3 semester hours)

This course provides a broad overview of theories of personality. Course content includes psychodynamic, behavioral, cognitive, and humanistic perspectives, and examines contributions of major theorists from each school, key theoretical points from each perspective, critiques of the value (and the limitations) of each theory.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC300 Research Methods in Psychology (3 semester hours)

This course focuses on laboratory and field research methods applied in the study of human behavior. Course content emphasizes the development of sound methods of hypothesis testing, data interpretation and formal research report writing, the review of empirical, peer-reviewed literature, the critique and interpretation of applied research and the ethical responsibilities and codes of conduct related to psychological research

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC303 Learning and Cognition (3 semester hours)

This course examines basic learning processes within the context of classical, instrumental, and operant learning situations. Course content focuses on classical conditioning, instrumental learning, principles of reinforcement, punishment and avoidance conditioning, stimulus generalization and discrimination, retention and forgetting, nature and functioning of memory, and learning and performance of motor skills. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC304 Perception (3 semester hours)

This course provides an introduction to the study of how humans organize and interpret stimulation arising from their environments. Course content includes a review of theory, methodology, and research findings. Illustrative case studies will be explored, particularly with regard to disorders of perception. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC305 History and Systems of Psychology (3 semester hours)

This course examines the major antecedents of modern psychological theories and methodology. Course content focuses on the history of psychology as a field of scientific inquiry, including an overview of development of schools of thought, prominent figures, and key theories. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC324 Psychology of Addiction & Substance Abuse (3 semester hours)

This course focuses on the role of drugs in society, licit and illicit substances, the use and abuse of medical drugs, and the state of the field in terms of prevention and treatment for substance abuse and dependence. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC325 Biopsychology (3 semester hours)

This course surveys anatomical structures and functioning as the biological bases for human functioning and psychological states. Topics investigated include sensory processing, movement, emotional expression, sleep, learning, memory, language, reproduction and psychopathology. (Prerequisite: **CHFD342** and **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC343 Adult Development (3 semester hours)

This course is an in-depth study of the developmental processes from the transition to adulthood through old age. Course content examines the ways adults construct meaning, including intellectual, moral, and personality development. Gender and culture are highlighted, and particular emphasis is placed on understanding the influence of context on adult development. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC360 Psychology of Terrorism (3 semester hours)

This course is an introduction to historic and contemporary terrorist groups and their motives and strategies. The psychological and social impact on individuals, communities and global societies of the achievement of terrorist goals as well as recruitment methods, the influence terrorist groups exert on their members and factors influencing the establishment and dissolution of terrorist groups will be examined.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC406 Psychopathology (3 semester hours)

This course surveys syndromes of psychopathology, by reviewing etiology, symptomatology, and treatment. Psychological, neurobiological, and genetic approaches to understanding mental disorders are considered. Topics also include depression, anxiety, schizophrenia, personality disorders, memory disorders, and childhood disorders. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC431 Psychology of Disaster (3 semester hours)

This course focuses on the psychological and physiological human response to natural and man-made disasters. Using clinical research and case histories, students will examine normal and abnormal psychological reactions, the recovery process and principles of mental health care for victims of mass disasters. Differences between natural and man-made disasters are examined and factors that mitigate post-traumatic effects are reviewed. Psychological aspects of Weapons of Mass Destruction (WMD) disasters are also considered.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC432 Psychology of Combat (3 semester hours)

This course is a study of acute and chronic behavioral response to battle. Students will review, analyze, and evaluate the range of psychological responses to combat, from "normal" reactions to variations of "Combat Stress Reaction." Case studies from combat action will provide material for application and synthesis of the concepts presented in the course. Topics include the U.S. military approach to psychiatric management of combat, POW experiences, mental adaptation for future warfare, and stress associated with other forms of conflict, such as peacekeeping. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC490 Independent Study: Psychology (3 semester hours)

This Independent Study course provides an opportunity for undergraduate Psychology students to examine in depth, and with individualized guidance from a professor, a specific area within the discipline of psychology. The course is open to upper division Psychology majors only. Independent Study course sections are 8-weeks long and run during the University's regular monthly course offering cycles. Completing of this course off cycle or for less than 3 credits is not permitted. No exams are included in the course. Course completion will involve weekly in-classroom engagement with the Independent Study professor, to be accomplished via asynchronous discussion board engagements, assignment grading feedback and email, and the multi-phased completion of an in-depth peer-reviewed literature review paper with a required minimum length of 20 main body pages and formatted per the editorial requirements of the American Psychological Association (APA), along with the completion of any other supporting assignments to be determined by the professor. Independent Study involves advanced-level student work held to rigorous standards and it should not be attempted merely as a means of earning 3 credits needed to finish up a degree. To be eligible to register for the course, a student must be actively enrolled in the undergraduate Psychology degree program and must have completed 24 hours at APUS toward the degree. Prior to attempting **PSYC490** registration, the student must first have identified an Independent Study topic focus of interest, and must have discussed the proposed topic with and obtained a memo of commitment from a professor agreeing to teach the course. The student also must have subsequently obtained approval from the Psychology Program Director prior to any registration attempt. Ample time for meeting these responsibilities must be allowed and attempts to do so should not be made during the final week before the registration period for the target course session closes, as each required step in the process necessitates consultation and review turnaround time. A month of lead time is strongly recommended. Following completion of these responsibilities, the student will be notified that a section of **PSYC490** Independent Study has been opened for individual registration. The student must then complete official online registration for the course prior to the ending of the regular course registration period (late registration for this course is not permitted), enter the classroom during Week 1 to connect with their professor, review the course syllabus and all other classroom materials, and subsequently complete each week of the course as required by the professor. Pre-requisite: **PSYC101** Introduction to Psychology. Available to upper division APUS Psychology majors only. Must have completed 24 hours at APUS toward current degree program. (Prerequisite: **PSYC101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PSYC498 Senior Seminar in Psychology (3 semester hours)

The Senior Seminar in Psychology is the capstone course for the bachelor of arts in psychology degree. Students will examine what they have learned during their program and how these concepts and skills apply to a specific occupational path in the psychology profession. Students will also examine the requirements to seek careers in psychology as well as the options for graduate study. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Public Health (PBHE)

PBHE111 Introduction to Health Care Administration (3 semester hours)

This course presents information and insight that identifies the challenging and overarching issues surrounding Heath Care Administration. It carefully examines the broad functions, operations and tools of the field and emphasizes the need for excellence in the management of health services. This course will assist students as they prepare for health services management careers and provides an ongoing program of professional development for those already employed in health professions. The course is divided into three parts: Managing in Health Services Environments, Managerial Tools and Techniques, and Managing Relationships.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE112 Health Services Organization (3 semester hours)

This course examines Health Service Administration, primarily The Structuring Policies of Federal, State, and Local Organizations. **PBHE112** reveals the framework of the United States Healthcare System; the organization and administration of health services; the roles of international, federal, state, and local health organizations; and the barriers to health services delivery.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE209 Wellness: Health Promotion and Disease Prevention (3 semester hours)

This course introduces students to the wellness concept, which builds the foundation for health literacy and an appreciation for life-long health and physical fitness. The components of wellness will be studied in this class, including physical, intellectual, emotional, social, spiritual, environmental, and occupational, with the goal of promoting and advocating for self-responsibility, health literacy, and a life-long commitment to wellness.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE211 Public Health in America (3 semester hours)

This course discusses the important role that public health plays in the United States. Students will examine how behavioral, epidemiological, environmental and social factors influence the public's health, and how public health professionals develop appropriate intervention strategies to improve the nation's health. Students will also explore future challenges facing public health professionals in the 21st century.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE215 Healthcare: Moral Issues (3 semester hours)

This course is an examination of moral issues and dilemmas within the health care profession based on associated ethical theories and principles. The course puts special emphasis on patient's rights, social justice of health care, and evolving health care technologies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE315 Health Economics and Finance (3 semester hours)

This course is designed to provide the student with tools used to express the financial and economic components of the health care industry. The student will develop a vocabulary in addition to gaining knowledge in the use of graphs, charts, tables and reports. The student will utilize these tools to assess past and present analysis as well as projecting future developments.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE413 Special Operations in Emergency Medical Services (3 semester hours)

This course deals with the specialized issues associated with emergency medical services—those issues that are not commonplace or part of everyday procedure. Topics include emergency medical services in mass casualty, biological, chemical and radiological incidents. The course also covers unique topics in emergency medical services, to include the employment of services in complex contingencies, such as those faced when fire, police, terrorist, and other emergencies co-exist with the need to provide medical services on-scene and post-disaster.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE426 Quarantine (3 semester hours)

This course is a study of the theoretical, historical, and contemporary issues associated with quarantine as a public health and safety measure. Students will learn quarantine strategy, implementation, effectiveness, and debate. The course topics will include the consideration of quarantine as a health and safety measure in modern homeland security strategy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE427 Epidemiology (3 semester hours)

This course provides an introduction to epidemiologic concepts and approaches to population problems in public health. It covers a wide spectrum of topics, to include outbreak investigation, test properties, and study design. The course will provide understanding of disease and disease transmission, rates and proportions associated with different forms of outbreak, and epidemiological risk management methods and measures.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PBHE498 Senior Seminar in Public Health (3 semester hours)

This senior capstone course allows students majoring in public health to analyze specific program related issues and problems using the knowledge and understanding gained by completing the required courses in the program and a significant number of the major courses. This is a capstone course to be taken after all other Public Health courses have been satisfactorily completed. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Religion (RELS)

RELS101 Introduction to the Study of Religion (3 semester hours)

This introductory course explores the basic nature of religion, both historical and contemporary, and familiarizes the student with a multidisciplinary approach to religious study. Students examine the importance of religious thought and expression, from the viewpoints of both a participant and a critic.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS201 Introduction to World Religions (3 semester hours)

This course introduces the major religions of the world with attention to origin, history, beliefs and practices. The course provides a balanced consideration of both Eastern and Western religions. No force has influenced human life and civilization more than religion; no understanding of human affairs, on an individual scale or a global one, can succeed without comprehending it.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS202 Religion in America (3 semester hours)

This course examines the variety of ways in which religion is found in contemporary American experience. Course content focuses on the changes within traditional historical religions as well as new religious groups which have evolved within American society.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS205 Christianity (3 semester hours)

An introduction to Christianity as a world religion — with origins, history, beliefs, literature, ritual, and practical ethics as points of departure — this course places emphasis on understanding the multiple and complex global interpretations of Christianity as expressed by the great church traditions (including Roman Catholic, Eastern Orthodox, Protestant denominations, and traditional churches of the Middle East and Africa) and in regional variations worldwide.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS206 Contemporary Christianity (3 semester hours)

Over the past 2,000 years, the influence of Christianity has grown to impact almost every corner of the world as the largest religion in our time. This course will provide an academic survey of the modern issues that are currently impacting contemporary Christianity through the study of selected themes, movements, religious contexts, theologies, philosophies, and beliefs with attention to its continuing religious and cultural impact. It delves into the study of contemporary Christian issues, including the nature of the Bible, science and evolution, gender and sexuality, world Christianity, persecution, the decline of Christianity in America, church and state, racism, freedom, art and technology, ecology, sports, and institutions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS211 Introduction to the Old Testament (3 semester hours)

This course acquaints students with the content and major themes of the Old Testament and familiarizes them with important contemporary scholarship which helps to illuminate the biblical documents. Course content explores the socio-political and religious forces that shape the thirty-nine books of the Old Testament and examines the enduring significance of their messages.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS212 Introduction to the New Testament (3 semester hours)

This course provides a detailed exploration of the historical and religious context, literary styles and theological themes of each of the twenty-seven books of the New Testament, and offers an overview of current New Testament studies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS250 Death and Dying (3 semester hours)

This course provides perspectives on death and dying. Students examine how death is beneficial and necessary for evolution. Participants explore the media's impact on mortality. Participants analyze how to communicate death to the living. Students assess the bereavement and burial process. Topics include: communicating death, the feeling of emptiness, the forgetfulness of life, living in the face of death, organ donation, burial, and the other side after death.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS260 Race & Religion (3 semester hours)

American society is a cauldron of various racial, political, ethnic, and religious formations. Amongst these, religious and racial formations provide strong modes of social organization. Both religion and race are also a major stimulus of cultural practices and belief systems. These two modes influence the ideals of democracy, equality, freedom, and even political identifications. The current agitations about Black Lives Matter are drawing attention to the racial divisions that are splitting the American society. At the same time, these movements are receiving the support of people from different religions. The Islam phobia and growth of right-wing militias are also similarly pitting Americans against one another based upon their religious beliefs. American writers, artists, activists, and even poets have drawn attention to these linkages and the pernicious impact it is having upon our society. Their contributions provide an alternate understanding of the strengths and limitations of American democracy. In this course, we will examine a variety of sources to understand how religion and race are shaping American democracy and society.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS270 Hope and Resilience (3 semester hours)

This is a survey course that will investigate different religions and the techniques they offer to maintain physical and mental well-being. In this process, students will review various religious teachings, the Sufi Dervish tradition, and the Christian teaching of gratitude, Yoga, and Meditation from different religious traditions. We will go over contemporary applications of the religions with particular attention to the cultural, social, and political structuring of their practices.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS305 Theology of Social Responsibility (3 semester hours)

This course provides an exploration of belief and practices related to agitation, direct action for social change, and responsible action in the religious setting. This course dives into how identity, power, and suffering shape historical judgments about the intersection of religion and ethics. Close readings of primary sources drawn from autobiographies, letters, sermons, poems, and treatises. Figures may include John Wesley, Sojourner Truth, Frederick Douglass, Eberhard Arnold, Martin Luther King Jr., Pauli Murray, Dorothy Day, Thomas Merton, Jean Vanier, Daniel Berrigan, Joan Chittister, Jonathan Wilson-Hartgrove, and The Sister Fund.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS311 Introduction to the Bible (3 semester hours)

This course explores the languages, canonization, organization and translation of the Bible. The genres of narrative, poetry, wisdom, law, prophecy, gospels, parables, letters, and apocalypse are analyzed in order to thoughtfully read the Bible without the aid of other reference works. This course is foundational to further Biblical study.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS330 Religions of the Middle East (3 semester hours)

This course is a study of the three primary religions whose origins were in and which are still practiced in the Middle East: Judaism, Christianity, and Islam. For each religion, topics include history, culture, beliefs, scriptures and practices. Variations within the religions will be studied in context of their expression in the Middle East. In addition, the relationship of the three in the present day context will be studied, as well the influence of the religions on political and social situations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS353 Islam (3 semester hours)

This course is an introduction to Islam - and its associated civilization - through readings, case studies, projects, and interaction within the classroom. Course content will examine the people and nations that practice this fascinating religion.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS360 East Asian Religions (3 semester hours)

This course deals with theoretical and practical concerns regarding East Asian Religious Studies. From a comparative viewpoint, the indigenous religions of the geographical regions will be studied along with the historical development and modern form of these religious beliefs and practices and how they interact on the world stage.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS370 South Asian Religions (3 semester hours)

This is a survey course for students to understand South Asian religions. The course will use primary and secondary texts, videos, and first-person accounts for instruction to generate class discussions. Hinduism, Buddhism, Jainism, and Sikhism are major religions practiced in South Asia and by their diaspora in the west. This course will invite students to think deeply about different perspectives and how various religions have emerged or accepted teachings from each other to evolve as independent religions. The course covers contemporary applications of the religions with particular attention to the cultural, social, and political structuring of their practices.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS405 Myth and Ritual (3 semester hours)

This course is a study of the role of myth and ritual in historical terms as well as modern myth and ritual developments. Students explore the influence of pervasive myths and rituals in society as they are infused throughout people and religious thought. Students will examine the continued influences of classical, religious and new myths in American popular culture and society today.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS411 Religious Existentialism (3 semester hours)

This course is a study of the set of philosophical ideals that emphasizes the existence of the human being, the lack of meaning and purpose in life, and the solitude of human existence. The course will cover the existentialist philosophy and its leading historical proponents.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS422 The Teachings of Jesus (3 semester hours)

Jesus Christ has impacted the world unlike any other person in history. Profound and multifaceted, Jesus' life and teachings are explored through the careful study of the history, culture, miracles and teachings presented in the four ancient Gospel accounts of Matthew, Mark, Luke and John.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RELS462 New Religious Movements and Cults (3 semester hours)

This course examines new religious movements and religious cults that span specific times and faith-based perspectives. Its focus is on the development of new religious movements and their growth, as well as the causes of cult formulation, cult leadership, cult purpose, and cult interactions with the outside world. Course content also explores what is meant by the terms "new religious movement," "cult," and "alternative religion," using historical and contemporary examples to illustrate these ideas. (Prerequisite: **RELS101**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Retail Management (RTMG)

RTMG150 Retail Organization Fundamentals (3 semester hours)

In this course, students will learn the basics of retail management functions, principles and techniques found in today's marketplace. Students will also explore the ideal characteristics and responsibilities of an effective department or store manager, ranging from legal and safety scenarios to understanding the role and importance of logistics in various retail establishments. In this class, students will focus on the individual as a contributor, their roles and responsibilities in retail management and operations, and its varied sizes and types.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG200 Customer Relations (3 semester hours)

This course introduces students to the basics of customer relations functions and describes the ideal characteristics of good customer relations in both small and large retail organizations. This class will also discuss effective customer relations strategies, effective listening, oral and written communication, analytical and problem-solving skills, and teamwork based on the organization's commitment to meeting customer needs while making customers feel welcome and valued. Students will also learn the methods and approaches to addressing problems, including the management of conflicts when they occur.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG201 Retail Inventory Management (3 semester hours)

This class in retail inventory management will present the significant factors in managing a business' profits at a steady margin and reducing theft and loss of inventory. Students will learn to distinguish between large and small retail organizations and become familiar with variations in inventory management based upon the nature of the inventory (such as perishable, seasonal, and fashion). The course will also review the skills, tools, and resources required for effective inventory management, as well as the strategies for keeping inventory current and various ways to identify and mitigate inventory management challenges.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG202 Risk Management (3 semester hours)

This course enables students to identify, define, and explain risk situations and to develop management concepts, techniques and processes and understand from a company perspective the impact of safety and compliance policies. To understand risk management students will examine risk management origins and trends from an insurance perspective in retail and develop skills in interpreting the impact that unresolved risk management issues can have on compliance, safety and the bottom line. Risk management is about insurance and developing policies to mitigate risk. This strategic focus and its application are covered in this class.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG204 Finance Fundamentals (3 semester hours)

During this course, students will develop a basic vocabulary and application of finance functions and principles. Students will describe the importance of knowing retail based calculations such as retail pricing, markup, and gross profit. They will relate the concepts of retail math (initial margin, markdown, shrinkage, gross profit dollars and percents) to finance and to the overall business success of the retail enterprise. They will define and apply ending inventory, retail cost, cost compliment, net profit, net sales, controllable expense, and non-controllable expense. Students will examine how retail finance can be applied to products and services in a wide variety of situations and how to review a project and evaluate the financial situation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG300 Retail Strategy (3 semester hours)

This course in retail strategy will teach students to use analytical techniques for diagnosing the competitive position of retail-focused strategy and discover specific retail options to suit particular markets. Students will discover the strategic perspectives of retail management; examine essential concepts in the retail industry; determine how retail businesses increase returns; and learn ways to create economic value for owners and stakeholders. Students will also examine how consumers behave as shoppers and what retailers can do to create and satisfy customer demands.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG301 Retail Innovation (3 semester hours)

This course looks at new or significantly improved service concepts such as new customer interaction channels and approaches, new distribution systems, and innovative technological concepts. Students will examine how retailers must continually review current practices and introduce innovative concepts to remain competitive. The class will also explore how market patterns change and create both opportunities and threats for retailers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG302 Retail Operations (3 semester hours)

In this retail operations class, students will study how to manage the day-to-day functions of retail establishments, such as department stores, grocery stores and specialty shops. Students will also learn how to formulate and analyze of policies and operations that collectively determine how a retail-oriented business positions itself to increase its returns and create economic value for its owners and stakeholders. In addition, students will be introduced to analytical techniques for diagnosing the competitive position of retail-focused strategy and the functions and applications of retail operations theory.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG303 Retail Merchandising Operations (3 semester hours)

For this course, students will examine retail merchandising operations as the principal task of in-store managers and sales personnel. Students will also learn all of the functions related to merchandising and corporate profitability and how to manage and arrange products on display in a store to increase sales within a competitive market. In addition, students will discover how today’s global business organizations utilize techniques and resources to succeed and remain profitable.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG304 Digital Retail Inventory Management (3 semester hours)

In this course, students will review the digital retail inventory management processes and methods used to keep track of stock and inventory. These methods control ordering, shipping, receiving, inventory tracking, retail turnover, and storage. Also, students will analyze the skills, tools, and resources required for effective inventory management, as well as strategies for keeping inventory current. In addition, students will learn different ways to identify and mitigate inventory management challenges and risks to support a retail organization's profitability.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG305 Financial Concepts in Retail Management (3 semester hours)

During this course, students will develop a basic vocabulary and application of finance functions and principles. Students will describe the importance of knowing retail-based calculations such as retail pricing, markup, and gross profit. They will relate the concepts of retail math (initial margin, markdown, shrinkage, gross profit dollars and percentages) to finance and to the overall business success of the retail enterprise. They will define and apply ending inventory, retail cost, cost complement, net profit, net sales, controllable expense, and non-controllable expense. Students will examine how retail finance can be applied to products and services in a wide variety of situations and how to review a project and evaluate the financial situation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG310 Digital Retail (3 semester hours)

This Digital Retail course provides an introduction to digital retail concepts and principles and explores real-world practices for engaging the customer in the shopping experience that empowers both the employee and the consumer. Students will be introduced to the evolution of retail markets from pre-industrial to modern times. Students will investigate the way retailers are using technology in both small and large organizations to create seamless transactions for an e-commerce or mobile platform, along with efficient supply chain and distribution methods. In addition, this course includes a discussion on the inherent risks of digital retail, including data fraud and safety protection.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG311 Digital Retail Technologies (3 semester hours)

This course is designed to provide a foundational knowledge in digital retail technology and how it is used by retailer, both large and small. As technology has changed the landscape of retail processes, it has also created a necessity for decision-makers to have the ability to use various methods to evolve in the global retail market. Students will learn how to use predictive analytics to help organizations problem-solve retail objectives. In addition, students will explore new ventures retailers are taking to overcome challenges in the market place through implementing digital inventory and supply chain management. Students are introduced to the trends and challenges of new technology including augmented reality, enhancing the customer experience, smart enabled equipment, and product customization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG312 Digital Retail Analytics (3 semester hours)

This course focuses on digital retail analytics. Students will have the opportunity to discuss and review terminology, concepts and best practices in digital retail analytics. Topics will include the role digital retail analytics plays in the supply chain, inventory, customer relations, merchandising, and security. Students will examine methods used to best uncover patterns in data. Looking forward, students will develop predictive tools to benefit retailers in future planning and strategy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG313 Digital Retail Strategies (3 semester hours)

This course focuses on digital strategies in retail. Students will have the opportunity to discuss and review terminology, concepts, best practices and strategies in digital retail. Topics will include the creation and implementation of digital strategies and digital market planning used by successful retailers. Students will explore the retailer's role in society, providing insights as to how consumers behave as on-line shoppers, what retailers do to create demand, as well as their role in satisfying customer demands in a digital world. In addition, students will discuss digital retail strategies from the perspective of planning for success as well as identifying challenges and problems that occur when retailers do not react to rapid changes in the digital marketplace.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG314 Digital Merchandising (3 semester hours)

This course is designed to provide the student with an in depth understanding of digital merchandising, fashion, retail, and consumer shopping behavior from a digital perspective. Materials that will be covered include digital, social, and mobile platforms as we explore the future of digital merchandising. Students will discuss the increasing role of e-commerce and how mobile technologies are shaping the consumer shopping experience and how to best utilize these tools to drive business success. Students will explore digital merchandising and how promotions and web layout design can affect consumer purchasing and decision-making processes. Students will also explore how trend forecasting, digital marketing and advertising campaigns affect the sale of products in the digital marketplace.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RTMG315 Retail Cybersecurity (3 semester hours)

This Digital Retail Cybersecurity course provides a broad overview of cybersecurity concepts and principles and explores real-world threats facing today's retailers in a global economy. Students will assess various methods retailers can utilize to avoid security threats on outdated hardware or software. Students will investigate various data breaches throughout the past decade, analyze ransom and malware attacks, and discuss how retailers and consumers are both a part of preventing financial data breaches. In addition, this course includes a discussion on the inherent risks of digital supply chains, third party vendors, and explores the ever-increasing mobile security issues facing retailers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Reverse Logistics Management (RLMT)

RLMT301 Introduction to Reverse Logistics Management (3 semester hours)

This course provides students with a systems-centric view to explore what is seen as today's wide range of practices in reverse logistics applications in manufacturing, retail and in the military. It includes the many definitions related to reverse logistics, the different scope, practices, procedures and processes of reverse logistics as compared to forward logistics. It explores the various dilemmas practitioners face in designing a reverse logistics system. A practitioner approach is used to explore and examine the management functions and the interrelationships among the components of reverse operational logistics are provided. This course is intended for students and professionals working in reverse logistics, retail business management, general management, transportation management, supply chain management, and corporate and military decision makers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT302 Environmental Issues in Reverse Logistics (3 semester hours)

This course provides students with an overview of sustainment of materials recovered from waste management programs. Students will study environmental regulations and their impact on company's plans to dispose of unused or waste materials into landfills or recycling programs. Students will gain a perspective on how reverse logistics can work to improve the environment to help increase the value of the company's products, and increase revenue in the process. The student will evaluate the direct and indirect impact of reverse logistics operations and the impact on the local, regional, and world environment. The "green" movement will be explored as a competitive advantage. The student will study various recycling processes for various products, from automotive to clothing to food and beverages.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT303 Technology in Reverse Logistics (3 semester hours)

This course provides students with a systems-centric view to explore how tracking and tracing technology, such as GPS, bar codes and Radio Frequency Identification (RFID) tags can be used in reverse logistics operations for returns, recalls, recycling and waste management. Case studies of today's best practices in reverse logistics technology used in manufacturing, retail and in the military will be studied and discussed. Packaging technology and the growth of new types of packages to reduce waste will be examined. A comparison will be conducted on how different technology is used in processes of reverse logistics as compared to forward logistics. A practitioner approach is used to explore and examine the management functions and the interrelationships regarding the use of technology to capture data for products flowing in the reverse logistics system. Data synchronization and the issues of interfacing legacy software systems or information technology systems will be explored. This course is intended for students and professionals working in reverse logistics, retail business management, general management, transportation management, supply chain management, and corporate and military decision makers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT304 Reverse Logistics Policies and Procedures (3 semester hours)

This course demonstrates the 21st century importance of strategic reverse logistics planning in contributing to corporate profits, customer service enhancements leading to higher sales and a marketing weapon to gain sustainable competitive advantage. The importance of moving information becomes equal to the movement of goods but is different when working in forward logistics compared to reverse logistics operations. Federal and state regulations regarding waste management and the handling of recycled materials will be examined. Managerial perspectives are offered on aligning corporate planning, technology, financial controls and reverse logistics performance measurement. Students will also gain an overview on the interaction among stakeholders in the public and private sectors in aligning public policy with global uncertainties when implementing reverse logistics operations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT305 Cost and Benefit Analysis of Reverse Logistics (3 semester hours)

This course provides students with a systems-centric view to explore the financial management components needed to develop best practices in reverse logistics applications in manufacturing, retail and in the military. A systems view of total life cycle cost will be calculated and compared to the benefits or value added by incorporating a reverse logistics process to manufacturing and retail operations. Students will analyze a potential reverse logistics case study to determine the short and long term financial implications to the company and to the environment. The student will examine how to define the problem and the core assumptions that define the problem space. This course is intended for students and professionals working in an organization that uses or is considering using reverse logistics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT306 Green Logistics Programs and Issues (3 semester hours)

This course provides students with an understanding of sustainability and environmental issues and programs for today's logistics and supply chain manager. Students will examine recycling activities of several corporations and examine "green" technology initiatives from using energy-efficient lighting to using wind and solar power. Legislation and regulations will be examined and discussed that place boundaries on greenhouse gases in manufacturing and in retail operations. International impacts on U.S. policies and programs, such as Cap-and-Trade will be examined in relationship to similar programs in other countries. The definition and potential impact of global climate change will be discussed. The student will examine how different manufacturing and distribution companies are complying or not with the Carbon Footprint concerns.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT307 Food and Beverage Reverse Logistics (3 semester hours)

This course provides students with a systems-centric view to explore what is seen as today's best practices in reverse logistics applications to the food production and distribution industry as well as the beverage industry. The student will study new container and packaging designs, such as the TEDSBOX, to help eliminate the spoilage factor of food and beverage movement in a reverse logistics operation. The issue of food and beverage is complex with many solutions from retail grocery giants. How to process returned food and beverage items will be explored and options discussed. Field survey of a grocery store or commissary near the student will be encouraged in order to obtain the unique language used in each type of retail store. Recycled food and beverage items will be examined in order to reprocess basic ingredients, such as sugar, to be resold in the marketplace next to virgin sugar. This course is intended for students and professionals working in manufacturing and retail reverse logistic who are concerned with returns and unsalable products.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT309 Reverse Logistics Management and Operations (3 semester hours)

This course provides students with an overview of today's best practices in reverse logistics applications in manufacturing, retail and in the military. It includes the nature, scope, practices, procedures and processes of adding a reverse logistics operations center to a forward logistics supply chain. A practitioner approach is used to explore and examine the management functions and the interrelationships among the components of reverse operational logistics are provided. Case studies of Central Returns Centers are examined and core assumptions derived to help define the steps to follow in setting up a Central Returns Center. This course is intended for students and professionals working in logistics, retail business management, general management, transportation management, supply chain management, and corporate and military decision makers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT400 Recalls Best Practices and Issues (3 semester hours)

This course provides students with a systems-centric view to explore what is seen as today's best practices in product recalls in manufacturing and retail. There appears to be no one standard set of practices or steps to follow for recalls. Each time a recall is voluntary or is issued by a company or the government, different procedures seem to be followed. This course will examine case studies of recalls from the food and beverage industry, consumer electronics, automotive, toys, and home appliances and furniture. The student will examine these cases to discover a set of procedures or steps that are common and those that are unique. This course is intended for students and professionals working in reverse logistics, retail business management, general management, transportation management, supply chain management, and corporate and military decision makers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

RLMT495 Senior Seminar in Reverse Logistics Management (3 semester hours)

This course allows students majoring in Reverse Logistics Management (RLM) to analyze specific issues of defining the various components of reverse logistics operations both domestically and internationally. This course will provide students with the opportunity to complete an approved academic research project that demonstrates knowledge of a selected applications area in reverse logistics management. The project, chosen on a specific topic, will be completed by each student in the course. (Prerequisite: Completion of a minimum of 106 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

School of Health Sciences (PSYC)

PSYC460 Sports Psychology (3 semester hours)

Students will examine human behavior in a sport and exercise setting. They will understand that enhancing individual performance is a primary objective of sport psychology. Students will learn how to create a psychological skills training program, which incorporates theories of anxiety reduction, imagery training, and self-efficacy. Current theoretical perspectives of personality factors in exercise and sport, why people exercise, what motivates an individual, exercise/sport adherence, stress, anxiety, and arousal, and the psychological effects of exercise and sport will be investigated. Students will learn the key features of effective goal setting, and apply this understanding to their own professional development.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

School of Health Sciences (SCIN)

SCIN255 Principles of Pathophysiology and Pharmacology (3 semester hours)

This course introduces students to the fundamental physiological principles of disease and injury and the mechanisms and use of drugs in the care and treatment of humans. It is intended to prepare students for careers in the health sciences and healthcare systems (medical assisting, medical technology, radiologic technology, respiratory therapy, health information management, medical coding, etc.). Initial lessons provide an overview of cellular injury, inflammation, immunity, drug naming, classification, and common mechanisms of drug action. Later lessons examine the common diseases and medications affecting each organ system. (Prerequisite: **HIMA100**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Science and Society (STEM)

STEM100 Introduction to STEM Disciplines (3 semester hours)

This course provides students a chance to explore an array of topics and disciplines across science, technology, engineering and mathematics (STEM) and provides a solid exploration of the STEM industry and career opportunities through undergraduate study. Students will be introduced to major areas of STEM, covering the fundamental concepts of each discipline, and how STEM topics are integrated into non-STEM areas. Additionally, students will be introduced to career avenues, expectations of career readiness, career satisfaction, and professional communication. There is an emphasis on developing an understanding of personal interests, skills, and abilities, with a focus on helping students find their passion through self-reflection and self-assessment. Additionally, this course is designed to foster community among students from a variety of majors.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM185 The History and Context of STEM (3 semester hours)

This course offer students the opportunity to delve into the history and context of the STEM disciplines. The course will review not only the definition of STEM (Science, Technology, Engineering, and Mathematics), but the history of the individual study areas and their progression toward a unified field of study. The course will delve into the similarities that helps to unite these fields as well as the distinct differences that separate them. Students will be exposed to a wide range of topics as the course looks at different key timeframes in STEM, such as 19th century America and Europe as well as today. **STEM185** and **HIST270** are considered equivalent courses. Beginning January 2023, students may only take one of these courses for credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM270 Thinking and Acting Ethically (3 semester hours)

This course offers students a chance to delve into ethics from many approaches. Every day, an individual's ethics may be challenged, and this course will do its best to provide a foundation on which students can develop a personal set of ethics. The course covers various ethical frameworks, reviews the ethical challenges individuals are likely to encounter in their daily or professional lives, and explores solutions based on ethical principles.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM280 Exploring Society and Cultures via Science Fiction (3 semester hours)

This course offers students with a unique approach into the societies and cultures that we could progress toward in the future via the review of the science fiction genre. This course will review many aspects of technological questions that society will face in the future. Does the rise of technological advancements in artificial intelligence and robotics eventually bring us to a point where we must decide what is life and the right to self-determination as the Star Trek: TNG series covered in "The Measure of a Man", laying out the rights of Commander Data. This is just one of many aspects of society and culture that will be examined throughout the course as students are made to think critically about what will the future look like.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM380 Coevolution of Society, Culture, and Technology (3 semester hours)

This course will expose students to how since the earliest days of mankind, technology and technological advances have helped to mold our society and guide our prosperity, but also to the goals of the society in driving the development and progression of technology as well. This course will review the various periods of time, where the world leaped forward in their understanding of the world around them and how they could harvest the world around them to advance their own world. This course will also reveal the potential conflicts of complex relationships between technology and society, looking at such topics as global warming, artificial intelligence, nuclear weapons, and many other potentially dangerous technological advances.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM470 Cybersecurity, Surveillance, Privacy and Ethics (3 semester hours)

This course offers an opportunity for students to look into the surveillance that takes place at all levels in today's world. The course will first review the collection of surveillance technologies such as CCTV, border control, traffic cameras, etc. The course will then continue onward to look into such innocuous and hidden data collection such as website analytics, app data collection, online identity databases, and more. These topics will be viewed not only from the collection standpoint but also from a privacy standpoint and an ethical standpoint. Students will study these data collections and look at the rationales for their collection and be encouraged to justify or refute these collections on an ethical or privacy basis.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM471 Analytics, Algorithms, AI, and Humanity (3 semester hours)

Welcome to STEM 471. In this course, you will explore how artificial intelligence, AI systems, and AI algorithms shape society and influence everyday life. You will examine the societal impacts of AI technology, including ethical, political, psychological, and economic dimensions such as ethical concerns, decision making, and racial and gender biases. Coursework develops critical thinking about the use of AI and its AI capabilities and AI risks. Your work will inform both personal and professional applications, including how AI development and such systems may benefit society. No prior technical background is required.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM493 Independent Study for Bachelors Students (3 semester hours)

Bachelor's students can pursue an independent study course, which the University occasionally offers in response to student interest. Students have the opportunity to study their chosen subjects under a faculty mentor's guidance. These courses are limited in their offerings and scope, and the format will vary based on the student's interest and the topics to be covered in the course. Approval of the Department Chair is needed prior to enrollment.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM494 STEM Special Topics for Bachelors Students (3 semester hours)

Special Topics courses are offered occasionally, in response to student interest, on emerging topics. These courses are limited in their offerings and scope, and the format will vary based on the student interest and the topics to be covered. Enrollment by Program Director approval.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Science (BIOL)

BIOL133 General Biology I with Lab (4 semester hours)

This course provides a foundational basis for the study of basic biology. It is the first in a two-part biology series designed for students who intend to complete a degree that requires a majors-level biology course.

Topics covered in this course include an introduction to the molecular basis of life; the biology of the cell; genetic and molecular biology; evolution; and the variety of life on Earth. This course includes virtual laboratories that complement the topics and concepts covered in the lectures.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL134 General Biology II with Lab (4 semester hours)

This course is the second in a two-part biology series designed for students who intend to complete a degree that requires a majors-level biology course. Topics in this course include the variety of life on Earth; plant form and function; animal form and function; and ecology and behavior.

This course includes virtual laboratories that complement the topics and concepts covered in the lectures. NOTE: This course requires students to purchase additional materials that are not covered by the undergraduate book grant. Please refer to the Course Materials section for additional details. (Prerequisite: **BIOL133**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL180 Introduction to Biology (3 semester hours)

This course introduces students to the biological systems within their associated environments. The course furnishes an understanding of biological principles and the properties of life. Topics covered in this course include the structure and function of plants and animals, cell biology principles, genetics, reproduction, development and growth, the variety of life on Earth, principles of evolution, and interactions among organisms and with their environment. Students will discuss the process of the scientific method and also demonstrate science information literacy skills through source selection and completion of a course project.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL181 Introduction to Human Anatomy and Physiology (3 semester hours)

This online human anatomy and physiology course explores the structure and function of the human body, emphasizing homeostasis, integration, and regulation of physiological processes. Students explore cells, tissue types, and major organ systems, including integumentary, skeletal, muscular, nervous, endocrine, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems, as well as an overview of gestational development and an introduction to patterns of inheritance. Emphasis is placed on anatomical structure, molecular mechanisms, and environmental interactions that influence health and disease. Learners apply scientific concepts and life sciences principles to understand how the body works, developing analytical and research skills essential for success in science and healthcare-related fields.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL201 Principles of Anatomy and Physiology with Lab (4 semester hours)

This course introduces students to the fundamental principles associated with the structure and function of the human body. It is intended to offer knowledge and skills often required in the health sciences and healthcare systems, such as medical assisting, medical technology, radiologic technology, respiratory therapy, health information management, and medical coding.
The lessons and laboratory exercises focus on the organization, microscopic and gross anatomy, and the functions of the integumentary, musculoskeletal, nervous, endocrine, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems of the human body. The course will also introduce the basics of chemistry and cell biology to provide a foundation for discussion of individual organ systems.
This course includes a virtual laboratory component. This is a time- and resource-intensive course. Students intending to pursue a career in the health sciences should verify that this course meets the requirements of their intended program prior to enrollment. NOTE: Students may take either **BIOL201** or **BIOL250**/**BIOL251** for credit, but not both versions of the anatomy and physiology courses.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL202 Principles of Microbiology with Lab (4 semester hours)

This course includes the study of the history of Microbiology, as well as the fundamentals of microbe staining, culture and growth. We will also focus on sterilization, disinfection and antimicrobial therapies that help to keep microbes in check. Finally, the course will focus on microbial infections of the skin, eyes and wounds as well as the urogenital, respiratory, oral gastrointestinal and nervous systems. This course includes a laboratory component that allows the student to explore exercises in the principles and concepts of microbiology. This course is designed for students with interests in basic science, microbiology and the medical professions. NOTE: Students may take either **BIOL202** or **SCIN202** for credit, but not both versions of microbiology. (Prerequisites: **BIOL133** or **SCIN130**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL240 Elements of Biological Chemistry (3 semester hours)

This course introduces students to the fundamental principles associated with the structure and function of the macromolecules that sustain living systems. The course will begin with a general introduction to organic chemistry including the molecules and functional groups that set this category of chemistry apart from the others. Topics will then move on to more specific molecules such as carbohydrates, lipids, proteins and nucleic acids along with the cellular processes involved in building and metabolizing these macromolecules. Additional details regarding biology at the cellular and molecular level will include topics such as nutrition, body fluids, pH and cellular respiration. (Prerequisites: **CHEM134**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL241 Cell Biology (3 semester hours)

This cell biology course will provide a detailed understanding of the fundamental processes of cellular functions. The course will include aspects of prokaryotic and eukaryotic cells as both often share similar mechanisms. In the first half of the course, the focus is on the macro--level with an exploration of basic cell characteristics, cellular membranes, cellular respiration and how cells interact with the environment. In the second half of the course, the focus is on genetics with a look at chromosomes, genes, gene expression, how cell accomplish DNA replication, repair errors that can result in DNA, how cells reproduce, how cells communicate, and finally we will explore the relationship between cancer and the immune system at the cellular level. (Prerequisites: **BIOL134** and **CHEM134**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL250 Human Anatomy and Physiology with Lab I (4 semester hours)

This course is the first of a two-course sequence in human anatomy and physiology. It is an intensive course intended provide knowledge and skills often required in the health sciences, such as sports medicine, physical therapy, EMS, nursing, or physician assistant.
The lessons and laboratory exercises focus on the organization of the human body; homeostasis; basic chemistry; cell biology; genetics and heredity; and the integumentary, musculoskeletal, and nervous systems. It also includes a virtual laboratory component.
This is a time- and resource-intensive course. Students intending to pursue a career in the health sciences should verify that the **BIOL250** and **BIOL251** course sequence meets the requirements of their intended program prior to enrollment.
NOTE: Students may take either **BIOL201** or **BIOL250**/**BIOL251** for credit, but not both versions of anatomy and physiology. (Prerequisites: **CHEM133** or **SCIN131**, and **MATH110**, **MATH111**, or **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL251 Human Anatomy and Physiology with Lab II (4 semester hours)

This is the second of a two-course sequence in human anatomy and physiology. It is an intensive course intended to enhance knowledge often needed in the health sciences, such as sports medicine, physical therapy, EMS, nursing, or as a physician assistant).
The lessons and laboratory exercises focus on homeostasis; metabolism; acid-base balance; human growth and development; and the body's endocrine, cardiovascular, lymphatic, respiratory, urinary, digestive, and reproductive systems. Students are also required to successfully complete a cumulative assessment of anatomy and physiology objectives from both **BIOL250** and **BIOL251**. This course also includes a virtual laboratory component.
NOTE: Students may take either **BIOL201** or **BIOL250**/**BIOL251** for credit, but not both versions of the anatomy and physiology courses. (Prerequisite: **BIOL250**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL301 Molecular Biology (3 semester hours)

This molecular biology course will provide a detailed understanding of the structure, function, and regulation of DNA, RNA and proteins. The first half of the course will focus on the basic biochemical properties of DNA, RNA and proteins to establish and understanding of how these molecules function. The second half of the course will focus on transcription, translation, and regulation of these processes and finally the real-world application of molecular biology. (Prerequisite: **SCIN211**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL302 Viruses (3 semester hours)

This course will introduce students to the concept of viruses as nonliving parasites that prey upon microbes, plants, and animals. Students will explore various aspects of viruses, including molecular composition and structure, host specificity, viral diseases, and viruses as a cause of genomic evolution. The origins and evolution of viruses will be discussed, including how zoonotic viruses such as Zika and COVID-19 gained the new ability to infect humans. (Prerequisite: **BIOL241**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BIOL404 Synthetic Biology (3 semester hours)

This interdisciplinary course explores how scientists are working to engineer living organisms. This work includes experimental manipulation to modify individual genes, add foreign genes from other organisms, and construct living systems from non-living components. In this way, organisms are redesigned for useful purposes by engineering them to have new abilities.
The course will cover the biological background of gene regulation and experimental methods for the construction of gene circuits. It will also explore practical examples of synthetic biology from medicine, manufacturing, and agriculture. In addition, students will address potential ethical issues that might arise with the construction of entities that fall somewhere between living things and machines or between humans and other organisms. (Prerequisite: **BIOL301**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Science (CHEM)

CHEM133 General Chemistry I with Lab (4 semester hours)

This is the first course of a two-course general chemistry sequence that introduces students to the principles, terminology, methodology, and worldview of chemistry. Lecture and lab topics are both descriptive and mathematical and include matter, measurement and problem solving; atomic theory and structure; the periodic table; and nomenclature. Other topics covered in the class are the physical properties of gases, liquids, and solids; molecular bonding and geometry; stoichiometry; thermochemistry; the types of chemical reactions; and solution chemistry.
The virtual laboratory exercises in this course are designed to help students to learn how to make qualitative and quantitative observations about physical and chemical phenomena; to make calculations; and to test their own reasoning. Students will also acquire skills in laboratory techniques to reinforce and build upon the concepts presented in class lectures.
This is a time- and resource-intensive course. Students intending to use this course to satisfy prerequisites for pre-professional programs should verify that the **CHEM133** and **CHEM134** course sequence meets the requirements of their intended program prior to enrollment. To be successful in this course, it is recommended that students complete high school chemistry or a basic college equivalent, and they should also be comfortable with basic algebra, including the manipulation of equations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHEM134 General Chemistry II with Lab (4 semester hours)

This is the second course of a two-course general chemistry sequence that introduces students to the principles, terminology, methodology, and worldview of chemistry. Lecture and lab topics are both descriptive and mathematical and include solution chemistry; chemical kinetics; chemical equilibrium; acids and bases; aqueous ionic equilibrium; free energy; thermodynamics; electrochemistry; radioactivity; and nuclear chemistry.
The virtual laboratory in this course is designed for students to learn how to make qualitative and quantitative observations about physical and chemical phenomena, to make calculations, and to test their own reasoning. Students will also acquire skills in laboratory techniques designed to help reinforce and build upon the concepts presented in the lecture portion of the class.
This is a time- and resource-intensive course. Students intending to use this course to satisfy prerequisites for pre-professional programs should verify that the **CHEM133** and **CHEM134** course sequence meets the requirements of their intended program prior to enrollment. In order to be successful in this course, students must have successfully completed CHEM 133 General Chemistry I with Lab or an equivalent course. (Prerequisite: **CHEM133**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHEM180 Introduction to Chemistry (3 semester hours)

This course introduces students to the principles of basic chemistry; the terminology, methodology, and world view of chemistry; and chemistry's practical application to everyday living. Topics discussed in the course include acids, bases, atomic structure, chemical equations, chemical reactions, and chemical language and nomenclature.

Other topics that will be covered in the course include gases, molecular structure, solution chemistry, chemical mathematics, organic chemistry, and biochemistry. Also, students will discuss the process of the scientific method and be required to demonstrate science information literacy skills through the creation of a narrated presentation.

Topics covered in this course require some comfort with math. This course is time-intensive, so students should ensure they have the time to fully commit to this course if it is used to fulfill the General Education science course requirement.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHEM233 Organic Chemistry I with Lab (4 semester hours)

Fundamentals of bonding, structure, and reactions of organic compounds, including nomenclature, molecular geometry, polarity, conformation, isomerism, functional groups, stereochemistry, reactions and reaction mechanisms, and spectroscopy. Designed primarily for chemical engineering and the biological sciences majors: premedical, predental, life sciences, and pharmacy. (Prerequisite: **CHEM134**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

CHEM234 Organic Chemistry II with Lab (4 semester hours)

Emphasis on organic reactions, reaction mechanisms, synthesis, and spectroscopy building on the foundation of Organic Chemistry I, including functional group reactivity of carbonyl compounds, aromatic compounds, organic acids and bases, polymers, and biomolecules. Designed primarily for chemical engineering and the biological sciences majors: premedical, predental, life sciences, and pharmacy. (Prerequisite: **CHEM233**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Science (ERSC)

ERSC180 Introduction to Meteorology (3 semester hours)

Introduction to Meteorology covers the fundamental principles governing the behavior of our atmosphere and the duties and methods of the professional meteorologist. Students will gain insight into the exciting discipline of meteorology, discussing topics such as cloud formation, movement in the atmosphere, thunderstorms, tornadoes, meteorological satellites, and climate change. Students will discuss the process of the scientific method and also demonstrate science information literacy skills through source selection and creation of a narrated presentation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ERSC181 Introduction to Geology (3 semester hours)

Geology encompasses the study of our planet, and students in this course will explore: how it formed, the nature of its interior, the materials of which it is composed, landforms, earthquakes and volcanoes, geologic resources, and geologic history. Current events that students learn about in the news, ranging from volcanic eruptions, earthquakes, landslides, and more will fit into a larger picture of how Earth works and why such things happen.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ERSC204 Earth System History (3 semester hours)

Earth System History explores the amazing history of our planet. Many astonishing events of the geologic past, and the science behind how they came to be understood are examined. The Earth and its inhabitants have undergone continuous change during the last 4.56 billion years. These changes are investigated using an integrated approach that considers the inter- relationships between the solid Earth, atmosphere, hydrosphere, and biosphere. Thus, students learn how our planet became a place where life began and continued to flourish; how change has dominated Earth history; and how continuing changes to Earth's subsystems may challenge us in the future.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ERSC302 Geomorphology (3 semester hours)

Geomorphology is the study of the physical features of the Earth's crust. The study of geomorphology helps us understand not only about the earth as it is today, but also as it may have been in the past. Climate change and global warming are hot issues in current events these days, but how do scientists determine the climate is actually changing? Through observation of what we see today, and comparison to what we "see" in the past. This allows us to determine if the climate of the earth has always been like it is today or whether it's changed over time. With that knowledge we can predict how the climate might change (or not) in the future. If global warming and cooling has happened before, then it might happen again. One way to determine past climatic conditions is to study the landscape. What types of landforms are associated with different climatic conditions? The Midwest used to be the bottom of a vast shallow sea; the northern part of our continent was sculpted by glaciers that no longer exist. Understanding geomorphology, gives us insight to the landforms we see today that are the result of processes no longer at work on the landscape. (Prerequisite: **SCIN138**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ERSC304 Remote Sensing and GIS for Earth Sciences (3 semester hours)

This class introduces students to the fundamentals of remote sensing, geographic information systems (GIS), and associated geospatial technologies and techniques such as global positioning systems and image interpretation. It will provide an understanding of spatial data and its creation, manipulation, and analysis, through a combination of conceptual learning and hands-on exercises that focus on applications in earth and space studies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ERSC305 Ocean and Atmospheric Dynamics (3 semester hours)

This course will explore the fluid mechanical principles guiding the atmosphere and ocean on a global scale. We will examine the inherit variables in the equations of motion, hydrostatic equations, and balanced flow principles. An examination of the atmospheric general circulation will be discussed including vertical and horizontal structure of temperature, pressure and density as well as a discussion on the dynamics of convection. Ocean dynamics will be discussed including the air- -ocean interaction, thermohaline circulation and ocean heat budget and transport.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ERSC401 Natural Hazards and Society (3 semester hours)

The purpose of this course is to introduce the student to the complex relationships between the natural hazards of earth processes that have direct, and often sudden and violent impacts on human society. The course integrates principles of geology, hydrology, meteorology, climatology, oceanography, soil science, ecology and solar system astronomy. This class describes the earth processes that drive hazardous events in an understandable way, illustrates how these processes interact with our civilization, and describes how we can better adjust to their effects. Examples and case studies are taken from international and U.S. experiences, along with how societies adjust to natural hazards. (Prerequisites: **GEOG103** and **ERSC302**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ERSC402 Earth and Planetary Sustainability (3 semester hours)

This course introduces students to the principles of planetary sustainability. Students explore various aspects of sustainability, including energy use, industrial processes, waste generation and disposal, and the built environment. As part of the focus on solutions, the course introduces students to tools society can use to attain and implement sustainable practices, such as policy, law, education and communication, marketing, research advocacy, and international agreements and collaboration.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Science (GEOG)

GEOG101 Introduction to Geography (3 semester hours)

This course is a basic overview of the geographer's study of the location and distribution of features on the Earth's surface. These features are both natural and man-made, both physically and culturally determined. The relationship of people and place is central to an understanding of human history, contemporary events, and possible global futures. As an introductory course it covers the whole globe and all its greatest geographic features and relationships. This dictates that the approach is broad and not too deep. However, knowledge of the geographer's art will enable students to delve as deeply as their interest and energy will allow, into the dynamic spatial realities that surround them.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

GEOG103 Physical Geography (3 semester hours)

Physical Geography includes the study of processes of the atmosphere, hydrosphere, lithosphere and biosphere. Specific topics include maps and map reading, temperature cycles, storms formation, plate tectonic theory, structures of volcanoes, flooding, coastline formation, glaciations, ice ages, and the distribution of plants and animals on the planet. This course is an excellent choice for anyone with interest in environmental studies, natural hazards and the science behind earth processes.
NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

GEOG200 Fundamentals of Geographic Information Systems I (3 semester hours)

The term “Geographic Information System” refers to the synthesis of information (data), software, and hardware for the express purpose of better understanding the world in which we live. Data are collected and managed within this system, and are ultimately used to question, analyze, and interpret patterns that occur throughout physical space. The interaction between different types of data reveals patterns and relationships that are not otherwise readily detectable. This course will provide students with the theoretical concepts necessary for advancement in the field of GIS, and further enhance their experience in a wide range of multidisciplinary endeavors. Note: This course requires students to install software on a Windows-based computer (Windows 7 or higher) in order to complete assigned course work.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

GEOG201 Fundamentals of Geographic Information Systems II (3 semester hours)

This course builds upon principles covered in Fundamentals of GIS I and will provide students an emphasis of hands-on Geographic Information Systems (GIS) experience while solidifying the foundation of the concepts learned in Fundamentals of GIS I. The objectives of this course are to begin establishing a solid foundation in the operation of GIS systems and to teach organizational skills needed for successful GIS project management. Overall this course prepares the student for learning beginning and intermediate functional applications of GIS as well as spatial data analysis. Note: This course requires students to install software on a Windows-based computer (Windows 7 or higher) in order to complete assigned course work. (Prerequisite: **GEOG200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Science (PHYS)

PHYS133 Elements of Physics I with Lab (4 semester hours)

This fundamental Physics course is the first of two courses that examine basic Physics using algebraic techniques. Topics include Mechanics, Fluids, Oscillations, Waves, Temperature, Heat, and thermodynamics. The course involves study through hands-on laboratory experiments designed to help reinforce and build upon the concepts presented in the lectures. NOTE: In addition to the laboratory equipment provided as part of the course materials, students will need access to the following: paper towels, water, a freezer, a stove top, a pot, a pencil and crushed ice. (Prerequisites: **MATH110**, **MATH111**, or **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHYS134 Elements of Physics II with Lab (4 semester hours)

This fundamental physics course is the second of two courses that examine basic physics using algebraic techniques. The course covers electric forces and fields, electric currents and circuits, magnetic forces and fields, electromagnetic induction, alternating current, electromagnetic waves, reflection and refraction of light, optical instruments, interference and diffraction, and an introduction to quantum and particle physics. NOTE: In addition to the laboratory equipment provided as part of the course materials, students will need access to the following: pencils, a printer, several sheets of paper and water. NOTE: This course requires the student to purchase additional materials that are not covered by the book grant. Please refer to the Course Materials section for additional details. (Prerequisite: **PHYS133**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

PHYS180 Introduction to Physics (3 semester hours)

This course is designed as an introduction to classical physics for non-scientists. Students will learn to apply Newtonian principles to the basic topics of motion, gravitation, momentum, work, energy, heat, wave behavior, sound, light, electricity, and magnetism.

Basic algebra will be used in the course to demonstrate how mathematics can describe and predict the real-world behavior of objects from electrons to planets. Students will also be expected to relate physics principles to their daily lives. Also, students will discuss the process of the scientific method and must demonstrate science information literacy skills through the creation of a narrated presentation.

Topics covered in this course require some comfort with math. This course is time-intensive, so students should ensure they have the time to fully commit to this course if it is used to fulfill the General Education science course requirement.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Science (SCIN)

SCIN120 Foundations of Scientific Inquiry Laboratory (1 semester hours)

This course provides an introductory laboratory experience for students who have previously completed a course in the natural sciences (biology, chemistry, physics, earth science, or astronomy) and require a laboratory experience to meet the general education natural sciences requirement for their degree. Students will discuss and apply the steps of the scientific method to activities and simulations drawn from across the natural sciences. Students will also review and demonstrate science information literacy skills through source selection, critical thinking, and writing. Note: Enrollment in this course is limited to incoming transfer students. Contact the Transfer Credit Department at CreditAward@apus.edu for information and registration instructions. This course may only be taken once for credit.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN130 Introduction to Biology with Lab (4 semester hours)

This course introduces students to biological systems in their natural environments. The course offers an understanding of biological principles and the properties of life.

The topics covered in this course include the structure and function of plants and animals; cell biology principles; genetics; reproduction; development and growth; the variety of life on Earth; the principles of evolution; and interactions among organisms and with their environment. The course will also include online lab work, which is designed to reinforce the concepts in the assigned reading. The lab involves study through interactive simulations, videos, and animations, which will be provided to students throughout the course.

Topics covered in this course require some comfort with math. This course is time-intensive, so students should ensure they have the time to fully commit to this course if it is used to fulfill the General Education science course requirement.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN131 Introduction to Chemistry with Lab (4 semester hours)

This course introduces students to the principles of basic chemistry; the terminology, methodology, and worldview of chemistry; and chemistry's practical application to everyday living. Topics covered in this course include acids, bases, atomic structure, chemical equations, chemical reactions, and chemical language and nomenclature. Students will also learn about gases, molecular structure, solution chemistry, chemical mathematics, organic chemistry, and biochemistry.

This course will also include lab work, designed to help students to learn how to make qualitative and quantitative observations about physical and chemical phenomena, make calculations, and test their own reasoning. Through interactive virtual laboratories, students will acquire skills in laboratory techniques and critical thinking that will build upon the concepts in the class.

Topics covered in this course require some comfort with math. This course is time-intensive, so students should ensure they have the time to fully commit to this course if it is used to fulfill the General Education science course requirement.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN133 Introduction to Physics with Lab (4 semester hours)

This course offers an introduction to classical physics for non-scientists. Students will learn to apply Newtonian principles to the fundamental topics of motion, gravitation, momentum, work, energy, heat, wave behavior, sound, light, electricity, and magnetism. Basic algebra will be used in this course to demonstrate how mathematics can describe and predict the real-world behavior of objects ranging from electrons to planets.

Students will be expected to relate physics principles to their daily lives. Through interactive simulation software, lab exercises will teach students how to take measurements, make observations about physical phenomena, make calculations, and test out their own reasoning.

Topics covered in this course require some comfort with math. This course is time-intensive, so students should ensure they have the time to fully commit to this course if it is used to fulfill the General Education science course requirement.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN134 Introduction to Astronomy with Lab (4 semester hours)

This course will introduce students to the wonders of the universe. Topics covered in this course will involve deciphering the movement of objects in the sky; learning how astronomers decode the light coming to us from distant objects; exploring the Earth and other bodies in our solar system; and investigating the properties and structure of stars, galaxies, and the universe.

Students will be encouraged to develop a conceptual understanding of these topics beyond the mere memorization of facts. With lab work and online tools, students will engage in astronomy inquiries and learn how astronomers work by asking research questions, collecting data, and defending evidence-based conclusions.

This course is conceptual in nature, but students should expect to use some mathematics. Completion of at least college algebra prior to taking this course is highly recommended. This course has a required prerequisite of **MATH111**.

Topics covered in this course require some comfort with math. This course is time-intensive, so students should ensure they have the time to fully commit to this course if it is used to fulfill the General Education science course requirement. (Prerequisite: **MATH111**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN137 Introduction to Meteorology with Lab (4 semester hours)

Introduction to Meteorology covers the fundamental principles governing the behavior of our atmosphere and the duties and methods of the professional meteorologist. Students will gain insight into the exciting discipline of meteorology, discussing topics such as cloud formation, movement in the atmosphere, thunderstorms, tornadoes, meteorological satellites, and climate change. The Meteorology laboratory will take the student deeper into the aspects of our weather through the study and exploration of our atmosphere via online interactive modules prepared by professional meteorologists. Topics to be discussed range from hurricane formation and the impacts of extreme weather to forecasting local weather and toxic pollution. The online laboratory modules increase the student's awareness of our planet through hands-on activities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN138 Introduction to Physical Geology with Lab (4 semester hours)

Geology encompasses the study of our planet, and students in this course will explore: how it formed, the nature of its interior, the materials of which it is composed, landforms, earthquakes and volcanoes, geologic resources, and geologic history. Current events that students learn about in the news, ranging from volcanic eruptions, earthquakes, landslides, and more will fit into a larger picture of how Earth works and why such things happen. The laboratory component of the course provides students with practical activities which reinforces the content of the course in a virtual format. (Prerequisite: **MATH111**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN140 Introduction to Environmental Science with Lab (4 semester hours)

This course will give students the opportunity to learn and connect with the central issues of environmental science. This is a course primarily for the non-scientist. The basic concepts of ecology, geography, chemistry, economics, ethics, policy, and many other disciplines will be used to examine the overarching role that humans play in our planet's environmental problems and successes. The laboratory exercises will allow students to use hands-on, field, and/or Internet resources to collect and evaluate qualitative and quantitative data regarding the human-environment relationship. Lifestyle examination, ethical considerations, and critical analysis of individual contributions to local and global impacts in regards to environmental sustainability will be emphasized in the laboratory portion of this course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN202 Introduction to Microbiology (3 semester hours)

Introduction to Microbiology includes the study of the history of microbiology, as well as the fundamentals of microbe staining, culture, and growth. We will also focus on sterilization, disinfection and antimicrobial therapies that help to keep microbes in check Finally, we will focus on microbial infections of the skin, eyes, and wounds as well as the urogenital, respiratory, oral gastrointestinal and nervous systems. NOTE: Students may take either **BIOL202** or **SCIN202** for credit, but not both versions of microbiology. (Prerequisites: **BIOL133** or **SCIN130**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN211 Principles of Genetics with Lab (4 semester hours)

This course is an introduction to the basic principles of human genetics and heredity. Students will investigate both classical Mendelian genetics and modern molecular genetics. Topics include the transmission of genes from one generation to the next, the molecular structure of genes, the regulation of gene expression, genes and cancer, genetic technology, genetically modified foods, gene therapy and population genetics. The course is designed for all students interested in human genetics, the application of genetic principles and genetic technology. (Prerequisites: **BIOL133** or **SCIN130**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN233 Physics I with Lab (4 semester hours)

This fundamental Physics course is the first of two courses that examine basic Physics using Calculus techniques. Topics include Mechanics, Fluids, Oscillations, Waves, Temperature, Heat, and Thermodynamics. The course involves study through interactive simulation laboratories designed to help reinforce and build upon the concepts presented in the lectures. (Prerequisite: **MATH225**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN234 Physics II with Lab (4 semester hours)

This fundamental physics course is the second of two courses that examine basic physics using Calculus techniques. The course covers Electric Forces and Fields, Electric Currents and Circuits, Magnetic Forces and Fields, Electromagnetic Induction, Alternating Current, Electromagnetic Waves, Reflection and This fundamental physics course is the second of two courses that examine basic physics using Calculus techniques. The course covers Electric Forces and Fields, Electric Currents and Circuits, Magnetic Forces and Fields, Electromagnetic Induction, Alternating Current, Electromagnetic Waves, Reflection and Refraction of Light, Optical Instruments, Interference and Diffraction, and an Introduction to Quantum and Particle Physics. (Prerequisites: **SCIN233** and **MATH226**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN311 Fishery Biology (3 semester hours)

This course will present the principles and methods used in studying the biology of fishes, the ecological requirements of freshwater and anadromous fishes, and the principles and practices in sport fishery management. Students will participate in case studies and critically analyze existing fisheries management plans to ascertain their effectiveness and scientific validity. This course will also emphasize the value of collaboration in effective fisheries management. (Prerequisites: **BIOL134**, **BIOL180**, **SCIN130**, or **SCIN206**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN314 Botany (3 semester hours)

An introduction to the structure, processes, and reproduction of higher plants with an emphasis on flowering plants. This course will use an integrative approach to examine the relationships between structure and function, variation, and evolution. (Prerequisites: **BIOL134**, **BIOL180**, or **SCIN130**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN316 Plant Identification, Taxonomy, and Systematics (3 semester hours)

An introduction to classification and evolution of vascular plants, with emphasis on flowering plants (angiosperms). This course will use structural terminology, characteristics of major plant families, and systematics. Student will use taxonomic keys, floras, and manuals for species identification. (Prerequisites: **SCIN130** or **BIOL134**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN400 Research Methods in Natural Sciences (3 semester hours)

This course focuses on providing students with the essential elements of scientific research and matters associated with the scientific method; experimental and non-experimental research design; and statistical data analyses. Students will become familiar with the current methodologies, tools, and instruments of modern research, such as sampling, test design, data collection reporting, and the scientific writing process.
In addition, each student will develop a proposal to conduct an original research project in the field of natural sciences. This proposal will then be used as the basis for an independent research project in **SCIN499**.
The University recommends that students do not attempt this course until they have completed all required courses for the natural sciences major and all required courses in the biology or earth science concentration. (Biology concentration prerequisites are **BIOL240**, **BIOL241**, **EVSP416**, **SCIN202**, and **SCIN211**. Earth Science concentration prerequisites are **GEOG200**, **SCIN138**, and **SCIN261**.)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN401 Mammalogy (3 semester hours)

The goal of this course is to introduce students to the biology of the class Mammalia. The course will include a survey of the origins, evolution, variation, and adaptations of mammals to diverse environments. Topics include taxonomy, reproduction, sensory perception, herbivory, population cycles and behavior. Students will use case studies to apply the concepts of mammalogy to broader problems of species management, biological variety, and the effects of development and habitat fragmentation on mammals. (Prerequisites: **BIOL134**, **BIOL180**, or **SCIN130**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN402 Ornithology (3 semester hours)

Ornithology is the study of the anatomy, physiology, and behavior of birds. In this course, students will integrate ornithological study with the principles of bird conservation and management. Students will learn to identify birds by sight and call and will learn the names of the major orders and families of birds throughout the world. (Prerequisites: **BIOL134**, **BIOL180**, or **SCIN130**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCIN499 Senior Seminar in Natural Sciences (3 semester hours)

Instruction in analysis and presentation of original scientific research. Each student will carry out an original independent research project which was proposed in **SCIN400**. After data collection, each student will analyze and interpret data collected from the experimental project executed as part of this upper-level course. Each student will prepare a scientific paper and a live webinar presentation of their research. This is considered the capstone course for students completing majors within the natural sciences. (Prerequisites: **SCIN400** and completion of a minimum of 106 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Security Management (SCMT)

SCMT101 Introduction to Security Management (3 semester hours)

This course is an introductory course to the Security Management field and is designed to familiarize students with the profession as well as to provide an overview of security measures used in the industry. Emphasis is placed on distinguishing the terminology used in the security industry. The student will be exposed to such topics as the privatization of public safety, use of technology and physical security, contract and proprietary security, executive protection, special event security, access control, integrated security systems, and the need for assessing vulnerabilities to increase the security posture of an organization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT150 Transportation and Border Security (3 semester hours)

This course is designed to provide the student with an understanding and knowledge of modern transportation and border security challenges as well as techniques to combat those challenges. The course will address changes in infrastructure technology as well as the technology that TSA has to respond to events. We will explore prevention, detection, response, and mitigation. Transportation and border systems of particular interest in this course include, but are not limited to: seaports, ships, airports, aircraft, train stations, trains, railways, highways, bridges, trucks, buses, and pipelines. Students will emerge with a greater understanding of potential threats to our borders and transportation systems, as well as preparation and responses to these threats.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT301 Foundations of U.S. Government Security (3 semester hours)

This course offers the student an overview of many of the primary laws and policies, which drive the U.S. Government's security apparatus. There is a vast array of policy covering security topics, which are promulgated throughout numerous U.S. Government agencies. Topics will include the U.S. Constitution, Executive Orders, Presidential Decision Directives, and the National Industrial Program Security Operating Manual. The student will gain an appreciation for the complexities involved in securing U.S. Government sponsored facilities, personnel and information.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT302 Protecting U.S. Government Facilities (3 semester hours)

This course offers the student an in-depth look into the construction and security management requirements of a wide range of United States Government sponsored facilities (domestic and overseas). This course includes coverage of a wide array of natural and man-made threats that must be considered in facility construction as well as special requirements for constructing facilities designed for the protection of classified information. Additionally, this course will cover facility security management procedures and build upon the student's existing knowledge of basic physical security principles. The student will gain an appreciation for the wide range of facility security applications across the federal government.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT303 U. S. Government Personnel Security (3 semester hours)

Personnel Security (PERSEC) is the fundamental program in government security that provides a process for vetting and maintaining individuals' suitability, reliability, and trustworthiness. This course offers the student an in-depth exploration of the steps to gaining access to United States National Security information, facilities and Information Systems. Basic requirements for access with emphasis on the National Industrial Security Program Manual (NISPOM) PERSEC process, as well as processes utilized by the Intelligence Community for Access to Sensitive Compartmented Information (SCI) and the Special Access Program (SAP) communities will be covered.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT319 Global Terrorism (3 semester hours)

This course examines various elements and aspects of International and Domestic Terrorism. Students explore the cultural and ideological philosophies, as well as the social, economic, political, and religious conditions of select states, groups, and individuals that comprise the phenomena of terrorism. By examining the historical and contemporary aspects of terrorism students develop a working knowledge of the current Global War on Terror and are better prepared to comprehend terrorist motives and ideologies. Topics include: History and Development, Types of Terrorism, Conventional and Unconventional terrorist tactics, the Media's impact on terrorism including the US Counterterrorism Policies. Particular attention is addressed to the Al-Qaeda terrorist network.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT370 Principles and Theory of Security Issues (3 semester hours)

This course is an overview of the principles and issues in business and organizational security management. It reviews the classical management functions including the role of the Chief Security Officer and the principles of organizing the security function. It assesses the traditional management theories and concepts of planning, staffing, span of control as they are applied to the organization. Students examine the challenges embodied in various aspects of physical, personnel, and information security. Principles of loss prevention and the protection of assets are also considered. The history, legal foundations, functions, operations, processes, and tools of security management are explored to ensure the student has a broad understanding of security management and its current role in government and business operations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT371 Legal and Ethical Issues in Security Management (3 semester hours)

This course assesses legal and ethical issues that inevitably affect security managers. It examines dimensions of security management including pertinent points of civil and criminal law, personnel law and obligations, negotiations, contract management, constitutional rights of individuals, legal compliance, liability, ethical standards and dilemmas, and decision-making.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT373 Evaluation of Security Programs (3 semester hours)

This course explores industry standards, practices and methods of determining the adequacy of security management programs. It reviews the interplay of management structures, functions and processes as well as proper procedures for conducting physical security analyses and evaluations. The course examines the principles of operating technology-centered programs for the protection of assets.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT374 Contemporary Issues in Security Management (3 semester hours)

This course focuses on the contemporary issues of security management such as substance abuse, violence, ideologies, adjudication and reconsideration reviews, security countermeasures, case management, use of examinations such as polygraphs, report writing, international commercial sales, and media relations. It also addresses the security manager's role in personnel management, security planning, organizational communication, recruitment, retention, training and development, and management of contracts, as well as examines techniques and tools that help security managers understand bias, educate, and shift attitudes of employees towards more proactive security practices.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT379 School and Campus Security (3 semester hours)

Over the last several years, the perception of safety has been challenged by a series of high profile critical incidents, litigation, legislation and the protection of the 2nd Amendment, right to bear arms. Officials at educational and all types of institutions must be prepared to manage every day security issues while planning for high impact scenarios such as terrorism and active shooter/ mass casualty incidents. Students will explore risk management and emergency management protocols, the threat assessment process, crisis and recovery measures, and become aware of the Department of Homeland Security protocols for active shooters/mass casualty incidents. Students will be required to take the web-based FEMA Active Shooter training and upon successful completion will receive a FEMA certification. This course will benefit students in the educational, criminal justice, security management, emergency management and, homeland security fields of study.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT390 Security Administration (3 semester hours)

This course focuses on principles and practices that security managers can put to immediate use. The bedrock requirements of effective organization, staff selection, and daily operating procedures are emphasized over abstract concepts. Topics include guard operations, plans, policies, and procedures, workplace violence, managing change, bomb threat management, security awareness training, physical security, securing information systems, investigations, and employee screening.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT392 Industrial Espionage (3 semester hours)

Industrial espionage results in millions of dollars in lost revenue each year. This course provides a brief history of espionage and examines the World Wide Web as an enabler of espionage, the role of governments in
industrial espionage, the rise of the competitive intelligence professional, tensions between openness and security, and the Economic Espionage Act of 1996.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT396 Protective Services (3 semester hours)

Executive protection is a growth industry. This course provides a thorough overview of the subject. Topics covered include basic principles, threat assessment, risk analysis, training opportunities, finding employment, organization and management of a protective services detail, working the principal, home and office security, technological considerations, vehicle security, conducting an advance, domestic and international travel, firearms selection and training, and self-defense fundamentals.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT397 Physical Security (3 semester hours)

Effective physical security is based on an accurate threat assessment followed by the implementation of an overlapping system of physical and electronic safeguards designed for the specific needs of the client. Topics covered include threat assessment, the security survey, architectural design for security, physical and electronic security methodologies, security lighting, perimeter protection and the guard force, clear zones, wall materials, signage, and the importance of effective and continuous local, state, and federal governmental liaison.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMT498 Senior Seminar in Security Management (3 semester hours)

The Capstone course is a senior level course designed to allow the student to review, analyze and integrate the work the student has completed toward a degree in Security Management. The student will complete an approved academic project or paper that demonstrates mastery of their program of study in a meaningful culmination of their learning and to assess their level of mastery of the stated outcomes of their degree requirements. NOTE: All required, core, and major courses must be completed prior to enrollment in this course.

Prerequisite: Completion of a minimum of 106 hours towards your program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Social Science (ANTH)

ANTH100 Introduction to Anthropology (3 semester hours)

This course introduces students to human nature and behavior from the broad, holistic perspective of contemporary U.S. American anthropology. The four primary sub-fields of anthropology, biological, cultural, linguistics, and archaeology, will be discussed in order to integrate various aspects of the human condition.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANTH200 World Archaeology (3 semester hours)

This course is a worldwide survey of prehistoric cultural adaptations from the first use of bone and stone tools to the ancient mysterious civilizations of Asia, Africa, the Americas, and Europe including recent archaeological discoveries. Emphasis is on the development of technologies, social groups and the patterns of cultural development. Archeological excavation methods and archeological artifacts are discussed in considerable detail. Archaeological concepts and skills will be explored through simulations as well as virtual field trips and activities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANTH202 Introduction to Cultural Anthropology (3 semester hours)

This course is designed to acquaint the novice anthropology student with anthropology and its various sub-fields, examining cross-cultural, global, comparative, and critical perspectives on human behavior and culture, as well as the breadth of human cultures from hunter-gatherers to industrialized city dwellers. The implications of socio-cultural analysis of economic, social, symbolic, and religious systems are also considered.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANTH203 Introduction to Forensic Anthropology (3 semester hours)

Forensic anthropology is the application of physical anthropology in a medico-legal context; forensic anthropologists use the tools of archaeology and physical anthropology to discover, recover and identify human remains. Students will be exposed to the interdisciplinary, scientific basis of forensic anthropology, along with legal and ethical issues forensic anthropologists face. The course is designed to give students a broad overview of the field by introducing them to the process of human remains identification; the archaeological and laboratory methods incorporated in human remains recovery; and, a review of the work forensic anthropologists work do with law enforcement, forensic pathologists and odontologists in recovering and collecting victims of foul play as well as those of mass fatalities, such as the 9/11 terrorist attack on the World Trade Center.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Social Science (SOCI)

SOCI490 Independent Study: Social Science (3 semester hours)

An opportunity for Social Science students to pursue an independent research project or examine a specific area of Social Science under the mentorship of a single professor. Course is open to upper division students only. Participation is at the discretion of the faculty member. The course will typically involve six or more professor contacts and produce a major research paper (30+ pages); there will be no examination. Students will submit a proposal prior to the start of the project, and a rough draft of the paper at week 10, both of which will count toward the final grade. Participation is at the discretion of the faculty member. To be eligible for an independent study, students must be enrolled in a bachelors degree program, must have completed 24 hours at APUS toward their current degree program, and should have already contacted a professor and gained approval for the independent study topic. Once these conditions are met the student should contact their student advisor. Once the course is open the student must complete an official online registration for the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Sociology (SOCI)

SOCI111 Introduction to Sociology (3 semester hours)

Introduction to Sociology introduces students to the sociological investigation of human interaction and behavior in society. Students will become familiar with the sociological perspective and develop a ‘sociological imagination’ – the ability to see the general in the particular, the new in the familiar, and to observe the impact social forces have on our lives. The course explores environmental, historical, cultural, and organizational influences on our interpersonal relationships and life-patterns within the context of contemporary society. Students will learn how to use sociological concepts, theory and research to think critically about individuals, groups, institutions, and societies in any given situation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI212 Social Problems (3 semester hours)

This course examines a sample of social problems facing the United States today and identifies how these problems affect, and are affected by, our institutions and culture. The sociological perspective and key theories will be used to understand the beginnings of the civil society, how problems develop and are defined, and the role of social change (particularly contemporary technological innovation). Key social problems covered will include social stratification/inequality, crime, drug abuse, prostitution, aging, infectious disease, family violence, health care, racial/ethnic conflict, terrorism, etc. Sociological research on social problems will be explored, and social policies to remedy the negative consequences of these issues on society will be discussed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI213 Society, Interaction, and the Individual (3 semester hours)

This course surveys sociological theories and research on the relationship between the individual and society. It is a sociological approach to social psychology, emphasizing symbolic interactionism and social constructionism. Students will learn how individuals participate in the construction of society through interaction and the impact of cultures and social structure on our everyday lives including individual behavior in group processes. Core topics covered will include the Social Construction of Reality, Ethnography and other key methods in Symbolic Interactionism; the Self in Context; the Sociology of Emotions; Interaction and inequality.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI214 Stratification and Inequality (3 semester hours)

This course will critically examine the causes, processes and patterns of social inequality in society. Social stratification explores inequality through the lens of social class, gender, race-ethnicity, sexuality, age, and wellness. Students will use sociological theory and applied research to explore the various ways hierarchies are produced and maintained among people within the social structures such as the economy, religion, education, and family in the United States. Students will also consider the impact of globalization on the distribution of power and access to resources in the United States.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI215 Social Deviance (3 semester hours)

This course is a critical examination of the relationship between deviance and social control. It will include how and why certain forms of behavior come to be known as deviant, it will analyze the nature of formal and informal responses to deviance, and explain the interaction of different social control institutions. Special attention will be given to an overview of general theories of deviance, and the particular forms it takes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI220 American Popular Culture (3 semester hours)

This course is a contemporary study of popular culture in America – its development and characteristics, its role in shaping our individual lives and key social institutions; and its broad effects on our globalizing world. The course is designed around the interdisciplinary nature of cultural studies, and students will learn how to use key concepts and theories to examine popular culture from a number of different fields including Sociology, Anthropology, Communications, History, Cultural Studies, English, Women's Studies, Ethnic Studies, and American Studies. Students will develop the skills to analyze the reciprocal relationship between culture and key stratification factors such as gender, race, ethnicity, class, age, region and sexuality. The course will cover many facets of popular culture from all forms of media, to sports, fashion, and the influence of technology. Students will learn to situate popular culture within its social, historical, political, and economic contexts and their personal lives.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI303 Classical Sociological Theory (3 semester hours)

This course examines the transition from social philosophy to sociology with special emphasis on the European theorists in the nineteenth and early twentieth centuries.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI305 Contemporary Sociological Theory (3 semester hours)

This course offers a general survey of recent developments in social theory since the 1960's. It covers a variety of theories that have been or are influential in the social sciences. Focus will be directed towards both those social theories that have sought to understand modernity as a social epoch and those that claim we have entered a new postmodern era. Differences between European and American approaches will be considered as the substance of the course is developed.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI306 Race and Ethnicity (3 semester hours)

This course is a critical analysis of the structure of racism, stratification, hate violence, youth violence, poverty and human rights, stereotyping and ethnocentrism in the contemporary United States. Students examine the outstanding problems facing society and strategies for change, including an exploration of the ethics of intervention.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI307 Sociology of Aging (3 semester hours)

In this course the social construction of age and aging in the U.S. will be examined. The sociological perspective will be used to explore social problems associated with aging and the elderly, the influence of various social institutions on older adults, and sociological theories and research associated with aging. The course will also examine the impact of government, healthcare, the media, and various social factors such as race and gender on the experiences of older adults.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI310 Military Sociology (3 semester hours)

This course will examine the military through the lens of sociological theory, specifically focusing on social factors associated with military membership, collective narratives of military members as well as the complex relationships between civilian and military stratification. Comparisons will examine life inside and outside the military including studies of families, veterans, and retirees. Complex social issues and movements key to military history will also be explored including the evolution of combat, human ethics, gender, race, and sexual identity.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI311 Political Sociology (3 semester hours)

Political Sociology examines the broad social bases of politics and identifies how politics and actions by government can influence the fate of nations and their citizens. These influences include, but are not limited to, power and authority, economic policy, equality, forms of political rule, access to the political process, and the roles of political parties.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI312 Organizational Sociology (3 semester hours)

This course examines the nature of formal organizations in society. Organizations are a distinct form of modern society and human interaction. They shape us as individuals, and they affect the structure of society. Students will explore key organizational sociological literature and apply it to practical case studies in areas such as fast food, the military, politics, religion, education, and social movements, their structures and outcomes. Key substantive areas of analysis will include organizational processes, such as power, leadership and change, and organizational environments and inter-organizational relationships.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI315 Food and Culture (3 semester hours)

This course is a theoretical and empirical exploration of human food choices from an ecological, political and sociological perspective. Students will examine food taboos and cravings, with their social, ideological and biological sources. The course is designed to discuss the socio-cultural dimensions of food production, preparation and consumption to include dimensions of individual, family, community and societal structures, as well as ideological, religious and cultural identities embodied in gender, race, ethnicity and socioeconomic status. Choices of pets, insects and people as food choices are considered in their socio-cultural contexts. Social issues include the 21st century locavore and organic movements, community food production, malnutrition and hunger.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI331 Research Methods for Sociology (3 semester hours)

This course introduces students to the purpose and techniques in social research: problem definition, research design, sampling and data collection methods including observation, interviewing, questionnaire construction and the use of documents and other unobtrusive data sources. The basic goal of all social research is to gather evidence in order to answer questions about the nature of relationships between individuals, groups, institutions, and societies. This course is designed to give the student a broad overview of the logic of social research, of the process of research design, and of the major types of data collection techniques and methods of data analysis.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI332 Statistics for Social Science (3 semester hours)

This course is designed to provide a basic survey of the application, empirical use and interpretation of a variety of statistics methods used in the social sciences. A key objective of the course is the instruction in best statistical practice through the use, exploration and analysis of empirical data. Emphasis will be placed on understanding and interpreting the meaning of statistics. The practical aspects of statistics are emphasized and students are instructed in the use of the standard statistical package for the social sciences (SPSS) which is widely used in the social sciences and in the labor force. NOTE: Students must have access to required software: SPSS (Statistics Package for the Social Sciences); see Course Materials for current version requirement. APUS does not supply this software. (Prerequisite: **MATH120**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI340 Digital Society (3 semester hours)

Technological advances have created a dynamic and ever-changing landscape for social experiences in life online. This course will focus on the shift from the industrial age to today's information age dominated by digital technology. Using a social science lens, students will examine the way technology has increasingly shaped individual and social experiences. The course traces the establishment of the early internet to current trends in social media and explores society's responses to changing technology. Students examine the way social movements, political participation, and social support have been shaped by new opportunities for people to connect digitally.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI341 Social Analysis of Digital Communities (3 semester hours)

Social life online is complex, offering opportunity and positive community in some contexts while reinforcing disparities and structural inequalities in other contexts. As consumers of online experiences or participants in generating online content and discussion, everyday people play a significant role in shaping social movements through presence and participation in digital communities. In this project-based course, students will examine a specific social issue by analyzing specific communities (social media groups, influencer blogs, news outlets) to assess the social impact of digital community content on digital audiences.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI403 Social Change (3 semester hours)

Beginning with industrialization, a structural and cultural approach will be used to study processes of human interaction resulting in social change. The concept of what 'change' is and how it happens will be clarified with a focus on the various factors and theories that explain it. Key topics will include industrialization, institutional change, social movements, modernization, world systems, economic development, globalization, and information society.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI404 Gender and Society (3 semester hours)

This course is a critical analysis of the structure of sexism, stratification, poverty and human rights in the contemporary United States. Students examine the outstanding problems facing society and strategies for change, including an exploration of the ethics of intervention. The course is designed to discuss the way culture shapes and defines the positions and roles of both men and women in society. It will cover the historical development of gender roles and stereotypes, how gender roles are socially constructed, and the social conditions which may lead to the broadening or reduction of gender roles and stereotypes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI420 Sociology of Religion (3 semester hours)

This course will guide students through a critical and sociological exploration of religion. It will provide them with an opportunity to think about religious experience and religious organizations as a part of a larger social order. It will introduce basic concepts in the sociology of religion. This process involves analyzing the interrelationship of culture, society, and religion; religion and social stratification; religious, economic, and political institutions; social change and religion. There will be a general emphasis on American society and institutions, with global and historical contexts integrated throughout the course. The course is designed with a focus on reading, discussion, field observation and critical writing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI421 Sociology of the Family (3 semester hours)

This course is a sociological analysis of the modern family and marriage, its structures and functions, variant patterns, and the influence of contemporary society on this institution. Course topics include dating, marital roles, divorce, child raising, and alternative lifestyles.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI422 Sociology of the Law (3 semester hours)

This course is a study of law, law-making, law-enforcement, and legal systems in social life. Course content focuses on the American legal system from a sociological perspective--its origins, development, and current format, and examines the sources of the legal tradition, the function of legislation in society, and current trends in the social construction of norms. The course investigates the human need for social order and conflict resolution, and how that takes shape in the social world.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI423 Sociology of Health and Illness (3 semester hours)

This course examines the social contexts of health, illness and organized medical care. It focuses on the theories, research and debates of medical sociology. Topics covered will include the social, environmental and occupational factors in health and illness; the meaning of health and illness from the patient's perspective; the historical transformation of the health professions and the health work force; the social and cultural factors surrounding the creation and labeling of diseases; disparities in health, access to healthcare, and the quality of healthcare received; organizational and ethical issues in medicine including rising costs and medical technology; and health care reform.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI424 Sociology of Death and Dying (3 semester hours)

This course is an exploration of the social, psychological, cultural, and individual experiences of death, grief, and loss. The study of the structure of the human response to death, dying, and bereavement in a socio-cultural, interpersonal, and personal context will be examined. Topics to be discussed will include development of perceptions of death, bereavement and grief over the life course; functions of the funeral; euthanasia and death-related ethical debates; and, suicide. Current sociological theories and empirical research regarding the study of death and dying will also be introduced and discussed. Attention will be given to appropriate coping strategies for dealing with death and for aiding others in the coping process.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI491 Sociology Independent Study (3 semester hours)

An opportunity for Sociology students to pursue an independent research project or examine a specific area of Sociology under the mentorship of a single professor. Course is open to upper division students only. Participation is at the discretion of the faculty member. To be eligible for an independent study, students must be enrolled in a bachelors degree program, must have completed 24 hours at APUS toward their current degree program, and should have already contacted a professor and gained approval for the independent study topic. Once these conditions are met the student should contact their academic advisor. Once the course is open the student must complete an official online registration for the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SOCI498 Senior Seminar in Sociology (3 semester hours)

The focus of this course is to review the major issues within the field of sociology and their relationship to current events. Theoretical and applied perspectives will be discussed, culminating in the students' completion of a major sociological research paper/project that synthesizes the body of acquired knowledge. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Space Studies (SPST)

SPST180 Introduction to Astronomy (3 semester hours)

This course will introduce students to the wonders of the universe. Topics will include deciphering the motions of objects in the sky, learning how astronomers decode the light coming to us from distant objects, exploring the Earth and other bodies in our solar system, and investigating the properties and structure of stars, galaxies, and the universe itself. Students will be encouraged to develop a conceptual understanding of these topics beyond memorization of facts. While the course is conceptual in nature, students should expect to use some mathematics. Completion of at least college algebra prior to taking this course is highly recommended.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST200 Introduction to Space Studies (3 semester hours)

This course is designed to introduce the student to a variety of subjects, which together comprise the overall field of space studies. This includes the space environment, astrodynamics, launch vehicles, spacecraft, space operations, commerce, space law, policy, telecommunications, space navigations, remote sensing, space resources, astronomy, and space life sciences. All of these topics will be addressed with a very broad brush, as the student will study them more in-depth during later courses in the aerospace studies degree program. Instruction is primarily through readings (both textbook and online), along with weekly classroom discussions.

As the first space studies course in the AS and BS degree in Space Studies program, this course also focuses on research and writing methods appropriate to space studies. The web readings listed under "Web Resources" will discuss critical elements of research, writing, style and formatting. The Turabian style (also known as the Chicago style) is required for all courses in this program. The course will introduce the student to a variety of research sources that will be useful in future space studies courses. (Prerequisite: **MATH111**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST201 Introduction to Space Flight (3 semester hours)

Students in this course assess the major aspects of space flight. The course covers space flight from early rocketry through the development of satellite navigation, meteorology, and telecommunications, up to human space flight. Course topics also include: rocket propulsion, basic orbital mechanics, the space environment, living and working in space, and an overview of non-U.S. space programs. Instruction is primarily through readings, along with weekly forums. There will be weekly quizzes, and a paper. (Prerequisite: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST203 History of Space Flight (3 semester hours)

This course is a history of human activity in space and includes rocketry, space associations, voluntary organizations, human flight, unmanned flight, satellites, science-fiction, and ballistic missiles. The History of Space is a survey of humanity’s quest to explore outer space, “the final frontier.” This course is a history of human activity concerning, about, and in space and includes early humanity’s fascination with the heavens, the quest for knowledge about what lay beyond the sky, human flight, unmanned flight, the development of rocketry and satellites, the role of early space associations and voluntary organizations, space exploration and ballistic missiles and the increased militarization of space, and science fiction. (Prerequisite: **SPST201**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST304 National Space Organization (3 semester hours)

This course addresses the United States organization for space operations, to include exploration, satellite operations, military purposes, and research and development. Included in the organization will be the linkages between governmental and non-governmental enterprises in or dealing with space. The course will also briefly address comparative organizations for space as witnessed in other industrialized nations. (Prerequisites: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST305 Introduction to Orbital Mechanics (3 semester hours)

Students taking this course compute and calculate satellite orbits, planetary orbits, solar system orbits, and other essential space orbits. Designed for the non-scientist student, this course provides a fundamental understanding of how orbital mechanics works in space. (Prerequisites: **MATH111** and **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST306 Human Space Flight (3 semester hours)

This course evaluates the physical and psychological effects of spaceflight on humans, countermeasures for both short- and long-duration spaceflight, and discussions of human factors in spacecraft engineering. (Prerequisites: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST307 Space Policy (3 semester hours)

This course assesses the various aspects of policy surrounding space activities and investigates how space policy evolves from historical contexts through policy outcomes, including law, commerce, the environment, international cooperation, and national security. (Prerequisites: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST310 Rocket Propulsion (3 semester hours)

This is a survey course of rocket propulsion that covers the history of rockets, the basic science of rocket propulsion including Newton's Third Law, basic fluid mechanics, the ideal rocket equation, nozzle design and impulse, types of rockets including thermodynamic and electrodynamic, and exotic propulsion methods such as solar sails, tethers and the future of antimatter propulsion.
As an introductory survey course, the objectives of this class are geared towards gaining a conceptual understanding of these topics and how rocket propulsion works, rather than memorizing a lot of facts.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST330 Launch and Reentry Systems (3 semester hours)

This is a survey course of launch systems and re-entry principles that reviews the basic principles of rocket propulsion, and covers launch windows, times and locations, launch vehicles and their subsystems, the concept of staging, current launch systems, re-entry design including trade-offs and options, and ICBM re-entry systems.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST340 Tools of the Observatory (3 semester hours)

This course is designed to familiarize students with the tools used by the astronomer in the observatory. Such tools include telescopes and astronomical imaging cameras. Students will have the opportunity to use the APUS remote observatory. The course will also introduce students to career opportunities as night telescope operators at astronomical observatories.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST341 Tools of the Planetarium (3 semester hours)

This course is designed to familiarize students with the equipment and operation of the modern planetarium. Students learn about the use of the planetarium as an effective astronomical educational tool, and explore exciting career opportunities in the planetarium field. Students have the opportunity to utilize planetarium software and visit a local planetarium in their region of the country.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST342 Habitable Worlds (3 semester hours)

This course focuses on the concept of habitability and the search for habitable conditions in our galaxy. Students learn about the requirements for life and the conditions for circumstellar and galactic habitable zones. They will explore the possibility of life both within our solar system and on planets that orbit other stars, known as exoplanets. Students will study the Drake equation and use this important tool to understand the conditions for the development of intelligent life elsewhere in the universe. They will consider the differences between primitive and intelligent life, and current efforts to search for both. Completion of at least college algebra prior to taking this course is highly recommended. (Prerequisite **SCIN134**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST351 Introduction to Unmanned Aircraft Systems (UAS) (3 semester hours)

This course provides a foundational introduction to unmanned aircraft systems (UAS). Students will explore the history, development, and operations of UAS technology with a focus on small, commercial drone systems. Key topics include system components, command and communication structures, fundamentals of flight, FAA regulations, safety protocols, sensors, and human factors. The course also addresses the societal impact of UAS and introduces the potential future use of uncrewed aerial systems in planetary exploration. This course is suitable for students seeking access to the growing field of UAS operations and engineering. (Prerequisite: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST352 Unmanned Aircraft Systems (UAS) Components and Modeling (3 semester hours)

This course provides an in-depth study of unmanned aircraft systems components and modeling, with a focus on multi-rotor drone design and system integration. Students analyze the structure and function of unmanned aircraft vehicles (UAVs), beginning with carbon fiber frames and progressing through key system components including motors, rotors, ESCs (Electronic Speed Controls), flight controllers, FPV (First Person View) equipment, radio transmitters and receivers, propellers, onboard sensors, cameras, smart battery technology, and charging equipment. Emphasis is placed on UAV flight control systems, payload capacity, structural integrity, and system efficiency. Students will investigate component-level functions through drone deconstruction and explore the application of UAS in civil, commercial, and environmental monitoring contexts. The course also examines future developments in uncrewed aircraft, including the use of drones in planetary exploration, and considers regulatory frameworks such as those set by the Federal Aviation Administration (FAA). (Prerequisite: **SPST351**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST353 Unmanned Aircraft Systems (UAS) Applications (3 semester hours)

This course explores a broad range of unmanned aircraft systems (UAS) applications, with a focus on commercial and scientific uses of drones and UAS. Students examine UAS applications across multiple sectors, including precision agriculture, architectural inspection, construction, environmental monitoring, geospatial analysis, energy management, emergency services, public safety, communications, aerial photography, and search and rescue in disaster-stricken or inaccessible areas. The course also explores how unmanned aircraft systems can be used in remote sensing applications, aerial mapping, and scientific research such as planetary topology and terrain mapping, preparing students for roles as remote pilots and data analysts in evolving commercial UAS environments. Emphasis is placed on commercial drones, sensors, high-resolution cameras, autonomous systems, and the associated equipment that support low-cost, high-impact operations. The course concludes by addressing regulatory frameworks from agencies such as the Federal Aviation Administration (FAA) and highlights emerging trends in UAS technology and applications for space exploration. (Prerequisite: **SPST351**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST361 Planetary Science with Lab (4 semester hours)

This course is a tour of the planets and moons of the solar system and an introduction to their internal structures, atmospheres, and surface features. Processes that form planets and act continually to change them, such as earthquakes, volcanoes, giant impacts, are discussed, as are comets, asteroids, rings, and life. Information gained from spacecraft missions is highlighted. In the laboratory component, students will engage in planetary science inquiry using online interactive simulations and data gathered from space missions and ground-based observatories to help reinforce and build upon the concepts presented in the lecture portion of the course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST415 Space Station Systems and Operations (3 semester hours)

This course elaborates on Space Station flight operations, its supporting elements and planned systems. Students will study commercial applications, logistical support, maintenance and servicing design concepts. (Prerequisite: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST425 Satellite and Spacecraft Systems (3 semester hours)

Orbital satellites and spacecraft are discussed according to their application, design and environment. The power system, shielding and communication systems are reviewed along with their missions, space environment and limitations. This course elaborates on Space Station flight operations, its supporting elements and planned systems. Students will study commercial applications, logistical support, maintenance and servicing design concepts. (Prerequisites: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST426 Space Habitats (3 semester hours)

This class introduces students to the fundamentals of space and planetary habitats, not limited to space stations but including lunar, asteroid, and Martian structures. It will provide an understanding of the cost/value of such habitats and how they can be built. (Prerequisite **SPST307**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST427 Space Resources (3 semester hours)

This class introduces students to the fundamentals of space and planetary resources, including lunar and asteroid mining, solar power in space, and Martian resources. It will provide an understanding of the cost/value of such resources and how they can be gathered. (Prerequisite **SPST307**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST435 Planetary and Space Exploration (3 semester hours)

This course is a summary of U.S. and international space programs. The student will assess the Earth and its space environment, to include methods of scientific exploration and spacecraft and payload criteria at the basic physics level. This course elaborates on Space Station flight operations, its supporting elements and planned systems. Students will study commercial applications, logistical support, maintenance and servicing design concepts. (Prerequisites: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST440 Stars and Galaxies (3 semester hours)

This course is designed to familiarize students with celestial objects found beyond the Solar System. Students learn about the origin and evolution of stars and galaxies. Topics covered in the course include main sequence stars, red giants, white dwarfs, neutron stars, and black holes. Galaxy classification is also considered. Students have the opportunity to use the new APUS remote observatory for celestial observations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST441 Cosmology (3 semester hours)

This course covers the origins and evolution of the universe. It begins by describing the scale of the universe, both in size and in distance. It will take an in-depth look at the important eras in the history of the universe from the Big Bang to the expansion and inflationary periods. This course will analyze the possible future of the universe as a function of critical density, dark matter, and dark energy. It will consider observational evidence for these theories and also investigate the Steady State Theory and alternate cosmologies. (Prerequisite **SPST440**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST445 Space Transportation Systems (3 semester hours)

This course evaluates Space Transportation Systems (STS) including manned space flight operations, supporting systems and the Space Shuttle mission, both present and future. Included are manned space flight operations, supporting systems and the Space Shuttle mission, both present and future. A review of Space Shuttle flight profiles, guidance and navigation control, proximity operations and rendezvous and a brief review of hypersonic orbiter aerodynamics are included. Also covered are future STS applications to space station logistical operations, commercial applications and Department of Defense operations. (Prerequisites: **SPST200**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST451 Unmanned Aircraft Systems (UAS) Payload and Sensor Technologies (3 semester hours)

This course explores payload and sensor technologies for unmanned aircraft systems (UAS), with a focus on UAS used in commercial, civil, and space-based applications. Students examine sensor payload integration and data collection techniques for aerial imaging, environmental monitoring, infrastructure inspection, and off-world exploration. Topics include high-resolution imagery, RGB and EO/IR (electro-optical/infrared) cameras, thermal imaging, hyperspectral sensors, short-wave infrared, vegetation indices, and synthetic aperture radar. Emphasis is placed on the role of onboard sensors, ground control stations, global positioning systems (GPS), and inertial measurement units (IMUs) in UAS remote sensing. Students also explore payload capacity, obstacle avoidance, flight controllers, and post-processing methods. The course considers the growing relevance of artificial intelligence, situational awareness, and actionable intelligence in UAS operations. This foundational course prepares students for advanced work with UAS payloads in diverse commercial and civil applications. (Prerequisite: **SPST351**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST452 Remote Pilot Certification Preparation (3 semester hours)

This course prepares students for the FAA Part 107 knowledge test, required to obtain the Remote Pilot Certificate for operation of small, unmanned aircraft systems (UAS) in commercial settings. Students will review FAA regulations, operating requirements, and emergency procedures, with a focus on real-world applications within the National Airspace System. Using FAA study guides, learning statement codes, and sample exam questions, students will complete a structured eight-week schedule designed to build familiarity with the remote pilot certification process. Topics include airspace classification, flight restrictions, maintenance and inspection, weather interpretation, and regulatory compliance. Students will also develop the confidence and foundational knowledge needed to take the “Unmanned Aircraft General – Small (UAG)” knowledge test. While course completion provides preparation, it does not guarantee a passing score on the FAA exam. Students are responsible for scheduling and paying for their certification exam at an FAA-authorized testing center. (Prerequisites: **SPST351**, **SPST352**, **SPST353**, and **SPST451**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST465 Space Weather (3 semester hours)

The relatively new science of space weather has significant influence on both the space program, and our increasingly technology-dependent society. Space weather is largely the result of solar activity, including sunspots, solar wind and solar flares and their interaction with the Earth's magnetic field. This course will discuss this Sun-Earth connection, its implications for both Earth-bound and space activities, and the current state of space weather study and prediction.(Prerequisites: **SPST200** or **SPST435**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST485 Space Wargaming (3 semester hours)

This course promotes the understanding and effective use of space power while providing insight into the shaping and consequences of strategic decisions made in a space wargame. Students explore critical space issues in-depth and investigate the integration activities of multiple agencies associated with space systems and services. The course includes an overview of wargaming, the reasons why we wargame, and the history of wargaming. It then examines the space environment and why we wargame in space, even though there has never been a conflict in that domain. Next is an overview of Thor’s Hammer (the National Reconnaissance Office’s wargame) and the Schriever wargame series, followed by lessons learned from each wargame and how wargames affect military strategy. This course allows students to think critically about the importance of space assets and how best to protect them.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPST499 Senior Seminar in Space Studies (3 semester hours)

Analyses of specific issues will be conducted that will include a review of current and future space exploration goals and discoveries, space policy and law, aerospace engineering, and astronomical studies and discoveries. Students will review and analyze the problem solving process with consideration for the implications of these areas on national and global scales. This capstone course will provide students with the opportunity to complete an approved academic research exercise that demonstrates their knowledge of their selected field of study. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Sports and Health (SPHE)

SPHE250 Sports First Aid and Safety (3 semester hours)

Sports First Aid is the recognition and emergency treatment of sports injuries sustained during participation in a sporting event. Students will learn basic first aid principles in order to provide emergency care to injured athletes. Students will develop a basic knowledge of common sports injuries to be able to administer appropriate sports first aid. This course introduces the role of the coach as well as other medical professionals who provide first aid to athletes. Focus will be placed on techniques and concepts used to treat these sports injuries. Students taking this course will become a competent first aid responder for basic athletic injuries.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE290 Foundations of Sports and Health Sciences (3 semester hours)

This course introduces students to the fundamental concepts of Sports and Health Sciences including basic principles in exercise science, health, wellness, fitness, and coaching studies. The student will focus on clarification of the wellness continuum including physical, emotional, intellectual, spiritual, interpersonal, and environmental wellness while implementing the methods of the health-related components of physical wellness – cardiorespiratory endurance, muscular strength, muscular endurance, flexibility, and body composition to promote lifelong physical fitness, disease prevention, and health and wellness.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE295 Foundations of Nutrition (3 semester hours)

This course introduces students to the scientific principles of nutrition pertinent to the function of nutrients in the body and the physiological processes involved in digestion and absorption. Students will attain knowledge of the nutrients that make up the food we eat; the anatomy and physiology of digestion and absorption; the function of the each macro and micro nutrient within the body; the interplay between foods, food substances and disease processes like heart disease, cancer, and obesity; the role of nutrition throughout the life cycle; and, our global food problems.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE314 Exercise Physiology (3 semester hours)

This course is designed to provide students with the knowledge of the inner workings and physiological changes that occur in the body during exercise, after exercise, and during a training period. Topics include efficiency, needs and limitations of body systems and their interrelationships, genetic differences in exercise, and developing a personalized exercise routine to meet your needs.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE315 Training and Conditioning (3 semester hours)

This course concentrates on the science, planning, management, and analysis of training and conditioning as it relates to the human body. Through a series of assignments and case studies, you will learn the theory of muscle growth and how muscle growth applies to your body. The course will answer many questions including how can you build an impressive, muscular physique using free weights? How, for example, can you customize your workouts according to your body type? And how should diet, including food supplements, factor into your fitness goals?

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE317 Sports Medicine (3 semester hours)

This course in sports medicine explores the causes and prevention of common sports injuries. You will learn the prognosis and treatment of injuries by examining the anatomy of the injured area of the body through diagrams and interactive websites. Each section of the course covers a certain category of injuries; you will learn what sport or particular athlete is more at risk. Each student will be required to submit a course paper on a specific injury that includes case studies from appropriate references. It is recommended that students complete SPHE 421 Kinesiology before enrolling in this course. (Prerequisite: **BIOL251**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE318 Coaching Theory and Methodology (3 semester hours)

Students in this course will review Coaching Theory and Methodology within the coaching profession. They will examine theories specific sports teams, including the development of methodologies and the development of a team, principles for coaches to follow and pass on to teams, and the end of competitive careers in organized sports. Guiding questions include: What sport has done for the player and coach? Why is theory and methodology in sport important? How does leadership and strategy play a role? Students will develop a coaching philosophy that will drive their coaching theories and methods. Students will discover that teaching life lessons through sport is vital to the success of their athletes.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE322 Sports Nutrition (3 semester hours)

What should you eat? When should you eat it? Why? Nutrition plays an integral part of our daily life. A healthy diet can protect us from a number of diseases, including heart disease and cancer. Nutrition also plays an integral part in an athlete's performance, often making a difference between success and failure. Improper use of diet and/or ergogenic aids can result in poor performance. Students in this course will explore basic nutrition concepts, gaining an appreciation of the contribution of macro and micronutrients to a healthy diet and gaining an understanding of the importance of these nutrients as performance enhancers. They will identify a number of strategies for making healthy food selections, for integrating these selections into their lives, and for successfully maintaining a healthy diet. These concepts will be reinforced through the analysis of their own diets and the development of several new diets. The impact of excessive or deficient caloric intake on health and body composition will be determined. Finally, dietary supplements and performance enhancers are used by many people. Improper use of these can be detrimental to one's health as well as adversely impact athletic performance. Strategies for identifying and using good and bad supplements/enhancers will be developed. (Prerequisite: **SPHE295**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE324 Biomechanics (3 semester hours)

Students in this course will use qualitative and quantitative analysis to understand the biomechanics of human movement. This course will focus on biomechanics in sports and how biomechanical evaluation can improve performance and prevent injuries. Through the use of videos and personal observations, students will learn to apply mathematical equations to various sports skills to develop an understanding of how the laws of physics affect performance. Linear and angular kinematics and kinetics will be applied to sport skills. Students will complete a course project which will require the student to observe a sport skill, qualitatively analyze the athlete performing the skill and make recommendations for improvement. It is highly recommended that students complete College Algebra and Physics before taking this course. (Prerequisites: **BIOL250** and **BIOL251**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE340 Nutrition Throughout the Lifecycle (3 semester hours)

This course examines nutrition and dietary needs throughout the lifespan, emphasizing nutrition/dietary factors to improve one's health span. The course will focus on dietary guidelines, special nutritional needs at each life stage, nutritional health concerns at each life stage, and wellness coaching techniques to enact behavior change. (Prerequisite: **SPHE295**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE360 Scientific Principles of Coaching (3 semester hours)

This course provides coaches with the biomechanical tools necessary to help their athletes achieve optimal performance in their sport. Students will explore theories and activities designed to improve movement capabilities, methods to reduce the risk of injuries caused by faulty mechanical principles, and a wide range of practical mechanisms useful to teach correct movement skill acquisition.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE416 Athletic Programs Administration (3 semester hours)

Athletic programs administration focuses on the coach, and their administrative responsibilities of their profession. Coaching goes beyond knowledge of the game, strategies to win or practice design. Coaches and administrators, much like managers in the business world, are decision makers and resource allocators. They make sure player to player and coach relations are operating smoothly. Their duties also include fundraising, facility management, scheduling and maintaining budgets much like any business manager. This course examines the key concepts and skills to becoming an effective sports manager that includes program promotion, leadership, personal organization, public relations and risk management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE417 Leadership Concepts in Coaching (3 semester hours)

This course will introduce Coaching Leadership on a sports level but show how that leadership can relate to personal, business and everyday successes for individuals. Creating success in the sports arena, a leader has to communicate, to bring a set of individuals together to accomplish one common goal. To be a good leader and coach, one must motivate teamwork and reveal the powerful characteristics of success. Leadership can be universal and used in any walk of life. Coaches are faced with many hurdles to overcome on different levels. The best coaches are able to work through these barriers and develop systems that bring teammates together with a common purpose. Course objectives will be reached by means of selected case studies and focused assignments, reinforced by study of proven coaching leaders.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE420 Exercise Programming and Testing (3 semester hours)

This course is designed for the undergraduate degree in Sports and Health Sciences. Students will combine knowledge from prior classes such as Anatomy, Exercise Physiology, Nutrition and Training and Conditioning and will be prepared to implement their knowledge in a professional setting. Application of basic exercise training principles will be expanded as the course progresses, allowing the student to execute a wide range of personal fitness training principles such as fundamentals of human movement science, client/athlete assessment, exercise training concepts, program design, nutrition and supplementation. This course incorporates advanced exercise programming techniques utilizing the Optimum Performance Training Model (OPT Model) and prepares students for the Certified Personal Training examination offered by the National Academy of Sports Medicine (NASM-CPT). Upon successful completion of this course and with a valid CPR certification students are eligible to sit for this examination. (Prerequisite: **BIOL251**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE421 Kinesiology (3 semester hours)

Kinesiology develops a practical understanding of the neuromotor system in relation to anatomical structures responsible for human movement along with their respective functions. Students will learn how to analyze movement and determine specific muscles responsible for a particular movement along with the associated joint action and neural control mechanisms. Students will contrast movements and exercises to determine their appropriateness and fit for specific and common goals in real world settings. Additionally, students will discuss Kinesiology principles and critical concepts as they relate to athletics, rehabilitation, and recreational exercise. The course will also explore how to improve human performance through effective exercise and training program design. Students learn concepts in this course which apply in coaching, athletics, rehabilitation, and fitness settings. (Prerequisite: **BIOL251**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE423 Advanced Strength and Conditioning (3 semester hours)

This course provides the student with the skills necessary to develop an annual training program for athletes of all levels. Emphasis will be placed on the principles of periodization and how to determine the appropriate training program for each sport. The topics of plyometrics, speed, agility, strength, and power will be demonstrated in videos and through other course materials. Students will be required to complete a 52-week training plan for an athlete based on the principles of periodization.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE426 Principles of Corrective Exercise (3 semester hours)

The purpose of this course is to provide an understanding of exercise physiology, biomechanics, and exercise prescription for those in need of remedial exercise programming. This course will examine the theory and practice associated with functional and corrective exercise program design and progression when movement dysfunctions and imbalances are present. In addition, scope of practice, limitations, and coordination of care with health care professionals will be addressed. (Prerequisite **SPHE317**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE435 Advanced Nutrition (3 semester hours)

This course uses recent advances in nutrition science to investigate the role of nutrients in biochemical, physiological, and hormonal processes within the body and nutrient-disease relationships. (Prerequisite: **SPHE295**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE460 Business Aspects of Fitness and Wellness (3 semester hours)

This course provides the student with the tools to pragmatically conduct business within the fitness and wellness industry. The student will develop parameters of management within a business structure including financial, facility, marketing, risk management, leadership, and personnel.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE461 Current Issues and Trends in Fitness and Wellness (3 semester hours)

This course is designed to explore the growing field of Sports and Health Sciences and its cultural impact on the United States and International health and wellness. The student will gain the tools necessary to assess the fitness, sport, and health industry and its relationship to health and wellness management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE470 Psychology of Sport (3 semester hours)

Students will examine human behavior in a sport and exercise setting. They will understand that enhancing individual performance is a primary objective of sport psychology. Students will learn how to create a psychological skills training program, which incorporates theories of anxiety reduction, imagery training, and self-efficacy. Current theoretical perspectives of personality factors in exercise and sport, why people exercise, what motivates an individual, exercise/sport adherence, stress, anxiety, and arousal, and the psychological effects of exercise and sport will be investigated. Students will learn the key features of effective goal setting, and apply this understanding to their own professional development.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPHE490 Senior Seminar in Sports and Health Science (3 semester hours)

This senior capstone class is the final course in the degree sequence for students majoring in Sports and Health Sciences. In this dynamic and interactive course, learners will review, assess and then apply many of the concepts they have researched during undergraduate studies through the creation of a customized graduation portfolio. This portfolio can be used for future career or academic goals and serve as a tangible job aid that houses previously acquired knowledge. Real life, hands on tools for career advancement will be examined and then applied, including the creation of a professional resume. An investigation of the job market in the field of sports and health will also take place through case study analysis and lively, career focused discussions. Alternative career paths for sports and health sciences degree holders will also be explored. (Prerequisite: Completion of a minimum of 105 hours towards your program)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Sports Management (SPMT)

SPMT200 Foundations of Sports Management (3 semester hours)

Sports management is evolving at a rapid pace. This course provides an overview of the sports industry and teaches the basics of sport management to future sport managers. Students will explore the sports industry in different segments that will help guide them to what area of expertise they might choose as a career path. Topics will include ethics, finances, high school and youth sports, marketing and legal issues. This course also examines specific industries involving management such as the fitness industry, facility management, sporting goods, and event management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT213 Principles of Sports Marketing (3 semester hours)

This course focuses on the promotions, public relations, advertising, and other marketing functions involved in the multi-billion-dollar sports industry. The course provides research, case analysis, and other opportunities to learn about the effective principles, theories, practices, and methods involved with all aspects of sports communications.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT230 Integrated Communication in Sports (3 semester hours)

This sports communication course introduces the principles and practices of sports media in today's industry. Topics include models of sport communication, print and electronic media, public relations, media relations, and promotion of sporting events. Students examine how sports organizations communicate through writing, discussion, and applied projects that simulate professional communication tasks. Learners will assess real-world examples of sports media strategies and construct their own messages within various sport contexts. Course activities include reflective reading, analytical discussions, and a final project emphasizing effective communication and ethical practice in the global world of sports.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT279 Social Issues in Sports (3 semester hours)

Students use analytical techniques to examine the scope and effect of sport on society. They will explore sociological concepts regarding how sports and sport participation impact the lives of individuals and groups in a society. Students will explore several significant contemporary issues including drug abuse, Title IX, ethics, gambling, and violence. To further increase their sociological understanding of sport, students will also identify and discuss sociological perspectives about the components of sport and physical activity.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT299 Externship in Sports Management (3 semester hours)

This course is an introduction to on-site sports management. It requires a minimum of 100 hours of on-site game, team, event, or organizational management, and students will assist in planning, organizing, and executing approved sports or entertainment events.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT316 Sports and Recreation Facility Management (3 semester hours)

This course prepares students with an interest in pursuing a career in the fast growing industry of sports facility or event management. During the course, students will acquire professional skills that can be applied in a wide variety of career positions. A range of topics includes facility financing, alcohol management, crowd management, and box office management. Upon completion students will have basic fundamentals to comprehend the field of facility and event management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT326 Ethics in Sports (3 semester hours)

Students will examine morality and ethical issues pertaining to sport. During this course, students will discuss sportsmanship, fan behavior, performance-enhancing drugs, Title IX, deviant behavior in athletics, and issues related to youth sports participation. Students will examine their current rules, morals, and philosophies in both ethical as well situational manners. Students will be immersed in ethical situations through the use of videos and relevant current event articles.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT410 Applied Concepts in Sports Finance (3 semester hours)

Applied Concepts in Sports Finance will provide students with a vast overview of the financial and contemporary economic issues related to sports, athletes and the sport industry. The course will examine the market power in sports, impact of teams and facilities on neighborhood economics, issues relating to a professional sports lockout as well as the relationship among academics, athletics, and the economy. Contemporary topics will include sports franchises, agents, contracts, sports industry financing, and financial and legal issues.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT440 Sports Event Management and Planning (3 semester hours)

Sports Event Management and Planning involves a comprehensive overview of the development and implementation process involved with managing a successful sporting event. The student will examine detailed event criteria including time line, budget analysis, sponsorship, event location, staff and consumer management, as well as the development of television and talent contracts. The course shall provide the knowledge necessary to cultivate, organize, and execute any sporting event from a managerial standpoint.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT450 Sports Governance (3 semester hours)

This course will focus on the policies, structure and politics that shape sport at the regional, national and international levels. With a focus on the Olympic movement, the course will also examine the organization and development of amateur and professional sport, including the need for Paralympic Games, Gay Games and Special Olympics. The student will analyze the different membership guidelines, organizational goals, and administrative roles of the many governing bodies as well as learn about the historical politics and boycotts, the international development of sport and the bidding process for an international event.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT455 Ticket Sales Management (3 semester hours)

This course provides training in all aspects of ticket sales including prospecting and qualifying, creating and presenting sales proposals, overcoming objections, and closing sales. Specific techniques such as networking and role playing will be used to prepare students for careers in sport ticket sales. The material is designed to expose students to the standards, principles and practices that can be applied to the ticketing industry at any level by combining knowledge of ticket sales strategies with management of ticket office operations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT491 Senior Seminar in Sports Management (3 semester hours)

This senior capstone class is the final course in the degree sequence for students majoring in Sports Management. In this dynamic and interactive course, learners will review, assess, and then apply many of the concepts they have researched during undergraduate studies through the analysis and application of optimal solutions to the problems presented. Real-life, hands-on tools for career exploration will also be examined through lively discussions, including an investigation of the job market in sports management, as well as how to properly network and prepare for a job interview. Prerequisite: Completion of a minimum of 106 hours toward your program.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SPMT499 Internship in Sports Management (3 semester hours)

This course is designed as a culminating experience for sports management majors. Students will develop practical and leadership skills in a pre-approved, professional setting, including (but not limited to) interscholastic or intercollegiate recreation or athletic programs, community recreation agencies, sport businesses, sports facilities, amateur athletic organizations, and/or professional sports teams. Students are required to complete a minimum of 150 hours of work, including a comprehensive project.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Supply Chain Management (SCMG)

SCMG201 Principles of Supply Chain Management (3 semester hours)

This course is a study of design, planning, execution, control and monitoring of supply chain activities with the objective of creating net value, building a competitive infrastructure, leveraging worldwide logistics, synchronizing supply with demand and measuring performance globally. As a principles course, it will introduce these components along with their integration into the supply chain. The impact of technology of supply chain management will be examined and its critical role enabling synchronized logistics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMG301 Supply Chain Risk Management (3 semester hours)

This course is a study of the implementation of strategies to manage every day and exceptional risks along the supply chain through continuous risk assessment with the objective of reducing vulnerability and ensuring continuity. Supply Chain Risk Management (SCRM) can be viewed as the intersection of supply chain management and risk management. Topics include: risk concepts, risk management strategies, key components of SCRM including risk resilience, risk appetite, risk response planning, risk compliance and risk governance.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

SCMG305 Global Demand Management (3 semester hours)

This course is a study of the demand for goods and services to support the marketplace, prioritizing demand when supply is lacking. Proper demand management facilitates the planning and use of resources for profitable business results. The demand management process weighs both customer demand and firms output capabilities to seek balance between the two. Topics include: demand planning, demand driven supply networks, demand forecasting, demand segmentation and demand side analysis.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Undergraduate Course Descriptions

Transportation and Logistics (TLMT)

TLMT200 Retail Shipping and Receiving (3 semester hours)

This course introduces the student to retail Supply Chain and Logistics Management with a focus on the shipping and receiving functions to include its nature, scope, and processes. An examination of shipping and receiving functions and the interrelationships among these components of an operational supply chain and related logistics of large retail businesses is provided. Students receive an overview of the role and importance of shipping and receiving within the retail industry with an emphasis on effective management. The contemporary environment of retail shipping and receiving functions are addressed as well as management perspectives, inventory management, and the impacts of technology on providers and users, both domestically and globally. Ultimately, this course is for those seeking retail opportunities in management, supervisory, and/or entry-level positions as well as those transitioning into the retail industry.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT201 Retail Transportation (3 semester hours)

Students in this course are introduced to the area of transportation within the logistics field to include its nature, scope, and processes. An examination of the management functions and the interrelationships among the components of operational logistics is provided. Students receive a familiarization of transportation functions within the retail industry. The various aspects of transportation are addressed within the retail supply chain to include modes of transportation, international logistics, import/export, regulations, customer management (selection and negotiating), warehousing and inventory management, and technology. A practitioner approach is used to explore and examine processes, strategies, best practices, issues and trends in retail transportation. This course is for those seeking retail opportunities in transportation management and supervisory opportunities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT311 Introduction to Transportation Management (3 semester hours)

This course is an overview of the transportation sector, including providers, users and government agencies. It examines contemporary public policy issues, such as deregulation, along with managerial strategies in transportation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT312 Transportation Economics (3 semester hours)

This course focuses on the micro and macro economic issues associated with international, national, and local transport, logistics, and other issues in the transportation industry. Topics include the economic aspects of rail, water, air, ground, and other transport modes; inventory, and supply.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT313 Supply Chain Management (3 semester hours)

This course is a study of supply chain management from the consumer back to raw materials. The entire process is studied from the standpoint of the leading theory and practice of cutting-edge organizations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT318 Hazardous Materials Transportation (3 semester hours)

This course is a study of the packaging, transportation, and delivery of hazardous materials. Course topics include container, vehicular, storage, mode, onload/offload, and other considerations associated with hazardous materials transportation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT331 Fundamentals of Intermodal Transportation (3 semester hours)

This course examines the United States and worldwide commercial freight transportation systems, with an emphasis on international intermodal surface transportation. Modal/intermodal economic and operating characteristics will be surveyed, along with cost, pricing, and regulation of transportation services. In addition, students will be introduced to electronic data interchange (EDI) in commercial transportation and the use of computer software applications in transportation management—all with the goal of providing students with an in-depth understanding of the principles of intermodal transportation systems, a grasp of transportation terminology, and the interrelationship between the Defense Transportation System (DTS) and the global commercial transportation infrastructure.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT341 Logistics Management (3 semester hours)

This course studies the logistics functions of business involved in the movement and storage of supplies, work-in-progress, and finished goods. It examines the trade-offs between cost and service and the purchase and supply of raw materials; the warehousing and control of inventory; industrial packaging; materials handling within warehouses; and the distribution of finished goods to customers required to minimize costs, maximize profits or increase customer service levels.
STUDENTS ARE STRONGLY ADVISED TO COMPLETE **TLMT311** PRIOR TO TAKING THIS COURSE.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT342 International Logistics Management (3 semester hours)

This course addresses the design and operation of international logistics systems. Topics include export-import issues, multi-national sourcing and distribution strategies, channel management, and comparative transportation systems and policies.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT351 Packaging (3 semester hours)

This course examines the role of packaging marking and labeling as part of the physical distribution process. It examines inner, outer, and intermediate packing, packaging media, dunnage, lading and ISO & non-ISO containers. Topics include: packaging as containment; packaging as a physical barrier, packaging as an impediment to in-transit visibility and handling; packaging as a carrier of arachnids, nematodes and plant and animal life; and contaminated packaging incompatibilities.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT352 Distribution Systems (3 semester hours)

This course addresses the principles and practices of transportation and its role in the distribution process. Topics include the physical transportation system of the United States and its performance; carrier responsibilities and services; economic and legal bases of rates, freight classification and tariffs; public policy regarding regulation; and transportation issues and problems.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT353 Logistics Management and Operations (3 semester hours)

An overview of the general area of logistics, its nature, scope, and process. It is a critical examination of logistics management functions and the interrelationships among strategic support and operational logistics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT381 Hazardous Materials Management (3 semester hours)

This course will cover the requirements and regulations associated with packaging, handling, storage, transport, and incident response at the operational level for all forms of Hazardous Material. The emphasis will be on the federal regulations and their often-competing goals and contradictory provisions.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT405 Best Practices in Reverse Logistics (3 semester hours)

This course provides students with a systems-centric view to explore what is seen as today's best practices in reverse logistics applications in manufacturing, retail and in the military. It includes the nature, scope, practices, procedures and processes of reverse logistics as compared to forward logistics. A practitioner approach is used to explore and examine the management functions and the interrelationships among the components of reverse operational logistics are provided. This course is intended for students and professionals working in logistics, retail business management, general management, transportation management, supply chain management, and corporate and military decision makers.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT411 Air Transportation (3 semester hours)

This course covers the history, management and future trends in air transportation. It covers the four principal segments of air transportation: major carriers, regional carriers, all-cargo carriers and general aviation. In each segment, the issues of aircraft design, market share, finance, insurance and operations are discussed. The course analyzes the development and application of national and international regulations that impact air transportation. Topics include: cost structure, air fares, flight crews and safety, environmental impacts of aircraft and airports, operating and service characteristics, technological advances, world competition and intermodal operations.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT415 Airport Operations (3 semester hours)

This course is a study of managerial and leadership issues associated with airport operations, to include human resource, union, commercial, legal, security, air and air support operations, and other issues.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT416 Air Cargo Operations and Security (3 semester hours)

This course provides students with an understanding of air cargo theft and proper control for safety and security of people, the cargo and the environment. This remains the focal point of cargo security management despite the justifiably increased concern for disruptions due to natural catastrophes, accidents and global terrorism. Topics include introduction to cargo security, benchmarking against best practices in the industry and conduct of an effective cargo theft investigation. With what are the learning outcomes? At the completion of this course the student will be able to: Assess transportation as a conveyance and evaluate the impact of transportation disruptions on the supply chain, understanding of the role of airport management operations focused on air cargo movement and control through an airport system.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT441 Advanced Business Logistics (3 semester hours)

Business Logistics is the set of activities involved in the flow of materials and products through an organization and through the supply chain to the market. This course examines and applies management tools and principles to these supply and distribution problems. Emphasis is first placed on developing a broad overview of the logistics field: what are its principle activities, decisions and how these activities produce value by supplying customer service through order fulfillment. Interfunctional coordination is reviewed by examining how logistics is coordinated or integrated with marketing and corporate strategy. Next, a thorough grounding in concepts, alternatives and tools for the primary activities of logistics: inventory, transportation, warehousing and order processing are presented. This provides the basis for examining issues in logistics system design, including stock
location, sourcing, number and location of facilities and flow management. The organizational design of the logistics system across the internal supply chain is examined if time permits.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT442 International Trade and Regulations (3 semester hours)

This course is a study of international trade, to include the theories and practice of international trade and their economic outcomes from both global and local vantages. Topics of the course include free and restrictive trade theories, free trade agreements, general and specialized tariffs, and trade as an arm of foreign and/or domestic policy.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

TLMT498 Senior Seminar in Transportation and Logistics (3 semester hours)

This senior capstone course allows students majoring in transportation and logistics to analyze specific program related issues and problems using the knowledge and understanding gained by completing the required courses in the program and a significant number of the major courses. (Prerequisite: Completion of a minimum of 105 hours towards your program)

Graduate Course Descriptions

Accounting (ACCT)

ACCT603 Advanced Business Concepts (3 semester hours)

This course covers the knowledge and understanding of general business environment and concepts. The topics in this course include knowledge of corporate governance; economic concepts essential to understanding the global business environment and its impact on an entity's business strategy and financial risk management; financial management processes; information systems and communications; strategic planning and operations management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Accounting (ACCT)

ACCT603 Advanced Business Concepts (3 semester hours)

This course covers the knowledge and understanding of general business environment and concepts. The topics in this course include knowledge of corporate governance; economic concepts essential to understanding the global business environment and its impact on an entity's business strategy and financial risk management; financial management processes; information systems and communications; strategic planning and operations management.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT604 Comprehensive Financial Accounting (3 semester hours)

This course covers the knowledge and understanding of the financial reporting framework used by businesses, not-for-profit, and government entities. The financial reporting frameworks covered in this course include those issued by the FASB, the IASB, the SEC, and the GASB.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT606 Advanced Auditing Topics (3 semester hours)

This course covers the knowledge and understanding of the following professional standards: Auditing standards promulgated under U.S. GAAS [related to audits of an issuer (a public company), a non-issuer (an entity that is not a public company), government entities, not-for-profit entities, and employee benefit plans], standards related to attestation and assurance engagements, and standards for performing accounting and review services.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT607 Business Law and Taxation (3 semester hours)

This course the professional ethics issues relating to tax practices and based on the AICPA® Code of Professional Conduct, Treasury Department Circular 230, and rules and regulations for tax return preparers. Business law topics covered include the legal implications of business transactions, auditing, and financial reporting.

AICPA® is a registered trademark of the American Institute of Certified Public Accountants.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT608 Financial Reporting & Analysis (3 semester hours)

A study of the techniques used to interpret and analyze financial statements effectively. Managers, accountants, investors and analysts often perform analytical procedure to learn more about what is being reported by public corporations. The viewpoint is that of the user of financial statements. This course is designed primarily for students who expect to be intensive users of financial statements as part of their professional responsibilities. Students must have access to Microsoft Word and Microsoft Excel software.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT609 Auditing & Assurance I (3 semester hours)

The primary goal of the course is to expand students understanding and application of auditing research, processes, planning, and execution. This course provides an in-depth analysis of a wide range of topics on auditing. Topics include audit reports, responsibilities, objectives, evidence, planning, legal liability, and ethics. (Prerequisite: **ACCT400** or equivalent)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT610 Advanced Accounting (3 semester hours)

An advanced analysis of accounting theory and practice designed to prepare the accounting major for complex problems that arise from partnerships, consolidations and mergers, receiverships, and governmental units. Also a study of the theoretical and practical approach of accounting, budgeting, reporting and auditing for governmental units, colleges and universities, hospitals and other not-for-profit organizations. Students must have access to Microsoft Word® and Microsoft Excel® software. Please refer to the Course Materials section for additional details on materials and pricing or contact booklist@apus.edu. (Prerequisite: **ACCT608**)

Microsoft Word® and Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT612 International Accounting (3 semester hours)

This course examines methods of international accounting concepts, practices, and issues. The course focuses on the accounting issues encountered by multinational companies engaged in international trade and invested in foreign operations. The course analyzes the global financial environment, foreign exchange market, foreign exchange risks, global financing and investment decisions. (Prerequisite: **ACCT610**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT614 Government & Non-Profit Accounting I (3 semester hours)

The primary goal of the course is to expand students understanding and application of government and non-profit accounting research, processes, planning, and execution. This course provides an in--depth analysis of a wide range of government and non-profit accounting topics. Topics include governmental operating statement accounts, budgets, accounting for general assets, accounting for long-term liabilities, etc. (Prerequisite: **ACCT410** or equivalent)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT615 Individual Tax Research and Planning (3 semester hours)

A study of income determination and concepts for individuals with emphasis of the impact of taxation on personal and/or business decisions, advances student knowledge of research techniques, and understanding of the IRS tax code. Students must have access to Microsoft Word® and Microsoft Excel® software.
Microsoft Word® and Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT616 Advanced Federal Taxation (3 semester hours)

This course is a continuation of **ACCT615** Individual Tax Research and Planning for students with an interest in continuing their study of Federal Taxation. The course will consider tax reporting issues for regular C Corporations, S Corporations, and Partnerships. A brief introduction to International Tax transactions and Federal Estate and Gift Taxes is included. Students must have access to Microsoft Word® and Microsoft Excel® software. (Prerequisite: **ACCT615**)

Microsoft Word® and Microsoft Excel® are registered trademarks of Microsoft Corporation.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT617 Advanced Cost Accounting (3 semester hours)

This course covers the analysis of accumulating and reporting costs of operations, budgets, and other tools of management for measuring profitability of a business enterprise. Emphasis is given to the various cost systems like job order, process cost, standard cost, and variable costing. (Prerequisite: **ACCT610**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT618 Managerial Accounting (3 semester hours)

The focus of managerial accounting is to provide key information to internal parties (e.g., managers) to enable them to make better business decisions. This course will provide students key facets of cost analysis and various cost accounting systems. Students will learn how managerial accounting is used to facilitate and guide business decisions. Topics include planning (e.g., budgets), variance analysis, and overall performance measurement, among others.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT620 Forensic Accounting (3 semester hours)

This course is a study of forensic accounting with an emphasis on using accounting techniques in white collar criminal investigations. The course exposes students to criminology topics such as skimming, cash larceny, check tampering, billing schemes, payroll and expense reimbursement irregularities, non-cash misappropriations, corruption, and interviewing witnesses. The course advances student knowledge of auditing, financial statement analysis, and research techniques in the context of fraud. This course requires the student to purchase additional materials. Please refer to the Course Materials section for additional details on materials and pricing or contact booklist@apus.edu. (Prerequisite: **ACCT609**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT695 Accounting Theory and Concepts (3 semester hours)

In this course students evaluate how organizations process and report accounting information in adherence to ethical standards and generally accepted accounting principles. Topics include accounting literature related to the accounting cycle, adjusting and closing entries, ethics, financial reporting & analysis, international accounting, auditing, taxation, and governance. (Prerequisite: **ACCT610**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ACCT699 Financial Accounting Theory Capstone (3 semester hours)

A required capstone course that explores the rationale and structure of accounting theory including the concepts underlying current accounting thought. Students will conduct accounting research and complete a thesis that bears to their intended area of practice and facilitates a broadened perspective by exploring relevant technical constructs in a theoretical context.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Business (ANLY)

ANLY600 Data Mining (3 semester hours)

This course covers data mining using the R programming language. It offers hands on experience approach through a learn-by-doing-it strategy. It further integrates data mining topics with applied business analytics to address real world data mining cases. It continues the examination of the role of “Data Mining in R”, and review statistics techniques in prescriptive analytics, and some predictive analytics. Additionally, some standard techniques and excel functions will be also covered.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY610 Text Mining (3 semester hours)

This course covers the elements of text mining techniques used to complement data mining methods but for unstructured text. The essential transformation techniques where text is prepared and handled to a form in which it can be mined is discussed and explained. Additionally, some standard techniques and excel functions will be also covered. (Prerequisite: **BUSN662**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY620 Predictive Analytics (3 semester hours)

This course equips students with the skills to forecast business outcomes based on historical data and sophisticated modeling techniques. Students will explore a gamut of predictive models from regression analyses to state-of-the-art machine learning algorithms.

Class participants will practice building, validating, and deploying models to address pressing business challenges and to ensure proactive strategic initiatives. Emphasizing both theory and application, this course is essential for students aspiring to learn how to harness the predictive power of data to shape business trajectories. (Prerequisite: **BUSN662**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY630 Optimization and Simulation (3 semester hours)

This course primarily covers handling elements of the influence on a business performance that can be constraints for achieving certain results. The course discusses optimization methodologies to support management choices. Students will learn about applying linear programming principals to harness a precise objective considering a set of business constraints. Students will use spreadsheet software to implement and solve these linear programming problems. (Prerequisite: **BUSN662**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY640 Data Management (3 semester hours)

This course offers a comprehensive overview of the methodologies, tools, and best practices required to store, organize, and maintain high-quality datasets. Students will explore relational databases, data warehousing, and the essentials of data governance and security.

Through hands-on exercises, participants will design and implement database structures, ensuring data integrity and accessibility. This course may be useful for students seeking a mastery of the backend of analytics. (Prerequisite: **BUSN662**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY645 Enterprise Analytics (3 semester hours)

This course centers on leveraging analytics at a grand scale, ensuring students are well-equipped to drive strategic initiatives across large corporations and multifaceted institutions. Students will acquire a knowledge of holistic data strategies, systems integrations, and the nuances of analytics deployment in diverse enterprise environments. Class participants will participate in real-world case studies, simulating the challenges and opportunities of analytics in expansive organizational settings.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY646 Social Media Analytics (3 semester hours)

This course delves deep into advanced analytical techniques tailored for marketing from customer segmentation and lifetime value prediction to sentiment analysis and recommendation systems. Class participants will harness big data to craft personalized marketing campaigns, optimize customer touchpoints, and predict emerging market trends. Engaging with real-world scenarios and utilizing cutting-edge tools, students will gain a mastery over optimizing marketing return on investment (ROI) through precision analytics.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY647 Six Sigma Concepts & Tools (3 semester hours)

In this course, students will journey through the Define, Measure, Analyze, Improve and Control (DMAIC) framework to comprehend the key principles and tools that underpin Six Sigma methodologies for excellence in process management and continuous improvement. From root cause analysis to control charts and process mapping, participants will harness a suite of tools to identify, quantify, and mitigate process variability. Real-world projects will ensure hands-on experience, enabling students to implement Six Sigma strategies for optimal business performance.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ANLY699 Analytics Project (6 semester hours)

Preparation for the Applied Business Analytics Project/Capstone begins on day one of a student's graduate program of study. The theories, research methods, analytical skills, analytical tools, and substantive knowledge obtained through their master's curriculum provide the basis for a major data analysis project. Students will work closely with the assigned faculty member to develop the subject matter of their project. The experiential or practical component of the class aims to apply learning in an aspect of interest related to the degree and concentrations of the student's areas of specialization. It is understood to be a supervised project where data is collected from or about an approved organization. The selection of an organization or site for the project must relate to the content of the student's course work and/or analytics concentration. Goals of the applied project will be submitted by the student using an application for approval to the faculty member and/or Program Director. The organization will serve as an opportunity to experience the practice of business or big data analytics. This option will act as a capstone of the student's program and is to be completed in the student's final semester.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Business (BUSN)

BUSN501 Critical Thinking and Digital Literacy (3 semester hours)

This **BUSN501** Critical Thinking and Digital Literacy course will prepare the transportation and logistics management and reverse logistics management graduate student to address issues associated with critical thinking and digital literacy. Students will be afforded the opportunity to begin to compile artifacts and signature assignments related to their field of study of transportation and logistics management or reverse logistics management. The course is intended to provide a foundation from which the student may use the knowledge and practices gained in this course throughout the rest of their graduate program.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN600 Artificial Intelligence Practices in Business (3 semester hours)

This course introduces the fundamentals of artificial intelligence (AI)'s applications in business for non-technical professionals. Students will gain a basic understanding of AI's development, its use in business operations and decision making, and the ethical and legal implications inherent in its use. In exploring the many facets of real-world AI business applications, learners will analyze the disruptive changes brought by AI innovation and evaluate AI's potential future influence on business and society.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN604 Fundamentals of Business Analysis (3 semester hours)

This course examines issues and functions that business managers face within the context of day-to-day operations and long-term planning for an organization. Topics covered in this course include the tools used in business operations, the global dimensions of business, financial statement analysis, capital budgeting, legal and ethical behavior, and economic analysis for decision makers.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN619 Global Business Perspectives in a Digital World (3 semester hours)

This course examines the issues and problems confronting business leaders and managers in the international business environment. The focus is strategic management in today's fast-changing global digital world, in the context of both long-range planning and day-to-day operations. Topics include the global perspective of managing interests of diverse stakeholders; marketing; sustainability; supply chain issues; economic, accounting, and tax considerations; organizational challenges; sustainability; and communications. Students engage in real life case studies and problem-solving culminating in a summative course project. (Prerequisite: **FINC600**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN620 Strategic Management (3 semester hours)

This Strategic Management course serves as a culmination of prior business studies where students can integrate all core functional areas of designing a unified business strategy for long-term organizational success. Students explore the strategic management process, including strategy formulation, strategy implementation, and strategic planning in complex business environments.

The course examines competitive advantage, strategic decisions, and strategic thinking through real-world case studies from leading organizations and industries. Students apply management frameworks to develop and evaluate effective strategies, enhancing their skills, knowledge, and ability to make informed decisions as managers and future leaders.
By the end of the course, students will be prepared to design and execute innovative strategies that drive organizational growth, adaptability, and sustained performance in today's dynamic marketplace. (Prerequisites: **BUSN600**, **ECON600**, **FINC600**, and **MTKG600**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN623 Legal & Ethical Issues in Management (3 semester hours)

This course examines major legal and ethical issues confronting business operations and management in a changing, fast-paced global environment. It explores the intersection of law and ethics, equipping students with the skills to evaluate and integrate legal risk and ethical practices for effective decision-making. Using a case study approach, major topics include business structure and liability, intellectual property, contracts, torts, ethical theories, Constitutional law, regulatory compliance, corporate social responsibility, and emerging contemporary issues. (Prerequisites: **BUSN600**, **ECON600**, and **FINC600**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN624 Principles of E Commerce (3 semester hours)

This course introduces the student to the concepts and terminology of modern e-commerce approaches. It includes topics on marketing, web technologies, security, legal issues, imaging, search engines. The emphasis will be to develop an understanding of the underlying principles of e-business.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN625 Applied Decision Making (3 semester hours)

This course provides students with a comprehensive understanding of decision-making processes in business contexts and the balance between theoretical foundations and practical applications in decision making. Through theoretical frameworks, case studies, and practical exercises, students will develop skills in identifying, analyzing, and making effective decisions in complex environments.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN627 Legal, Policy, and Ethical Issues of Crisis Situations (3 semester hours)

This course provides a study of legal, policy, and ethical issues and practices that relate to decision-making in crisis situations in the 21st century U.S. and global environment. Using a case study analysis approach, students are provided readings and comparative case studies for recognition of the important legal issues, ethical approaches, and policy implications involved in such crisis arcs as pandemics, social and political unrest, environmental disaster, communications disruptions, and terrorism.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN632 International Business Law, Ethics, & Cultural Intelligence for Business Leaders (3 semester hours)

This course examines contemporary and emerging issues of international business law, ethics, and cultural intelligence for the business leader. Through a case study approach, students delve into legal, ethical, and multi-national topics affecting global business decision making, such as cross-border transactions, international trade law, contracts, antitrust, artificial intelligence, human rights, intellectual property, cybersecurity, human resources, dispute resolution, labor, terrorism, and sustainability. Ethical considerations, such as bribery prevention and corporate responsibility, are integrated with strategies for fostering ethical leadership. Cultural competence is emphasized, with insights into negotiation dynamics and team building across multi-cultural contexts. Through case studies and practical exercises, students gain skills to lead knowledgeably, with integrity, in the global marketplace. (Prerequisite: **BUSN623**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN633 Artificial Intelligence: Law, Ethics, and Risk Strategy (3 semester hours)

Using a practical case study approach, this course explores the evolving law governing artificial intelligence applications in business, ethical issues relating to artificial intelligence, and the associated risks of artificial intelligence in business. Students will apply key legal principles and ethical considerations to business management problems and build a risk strategy tool kit to effectively navigate the fast-changing AI environment. (Prerequisites: **BUSN600** and **BUSN623**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN634 Artificial Intelligence: Business Strategies for High Level Decision Makers (3 semester hours)

This course introduces students to the best business practices for the use of AI technologies and leveraging AI tools for responsible decision making. Students will research and analyze implications of emerging AI developments for competitive business applications. (Prerequisites: **BUSN633** and **BUSN656**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN636 International Finance and Emerging Global Markets (3 semester hours)

Today's digitally linked global world requires skillful navigation of the intricacies of international finance to attain sustainable growth and profitability. This course provides a strategic overview of the theories and frameworks that underpin international finance, with a focus on practical corporate decision-making in a global context. Students will gain insights into fluctuating global markets, exchange rate dynamics, balance of payments analysis, and international investment theories. Students will explore factors propelling emerging global markets, such as demographic shifts, disruptive technological advancements, and geopolitical trends, and determine strategies to mitigate financial risks and maximize returns. (Prerequisites: **BUSN619** and **BUSN632**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN640 Nonprofit Law, Governance, and Ethics (3 semester hours)

A survey of the legal structure that defines and regulates the nonprofit sector and an examination of fundamental governance issues in nonprofit corporations. The focus of the course is on the board of directors (trustees) and the executive director and their fiduciary responsibilities established both by law and by the moral imperatives from actions on behalf of the public interest.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN641 The Nonprofit Organization and Executive Leadership (3 semester hours)

A comparative analysis of the various theories, principles, and styles of leadership and how they apply to the management and governance challenges in nonprofits; complex organizations with a wide range of stakeholders and often fragile and fragmented financing.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN642 Financial Management in Nonprofit Organizations (3 semester hours)

A comprehensive study of the key financial statements to help monitor the organization's financial health. An analysis of fund accounting, the importance of quality financial reporting and financial controls to protect and sustain nonprofit organizations, and the budget as a tool to direct the organization are included in this course.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN654 Business Continuity (3 semester hours)

BUSN654 introduces students to the elements of continuity for an organization. A business continuity plan (BCP) includes procedures for short- and longer-term issues. Students will gain the knowledge to identify essential services and develop a business continuity plan that will outline the methods for protecting the various components of a business, as well as how to proceed when experiencing a crisis.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN655 Sustainability and Crisis Management (3 semester hours)

BUSN655 introduces the fundamental concepts of crisis management and sustainability in a business. A crisis can happen in an organization anytime, anywhere. Topics include advanced crisis management planning, which is key to sustainability and assures a company has the processes and procedures in place to address almost any issue that may arise. The course also covers the impact of a crisis on an organization's employees, customers, suppliers, and general public; and the sustainability of a company's value.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN656 Artificial Intelligence and Crisis Management (3 semester hours)

BUSN656 covers several key concepts. In the course, the student will learn to identify potential internal and external crises and provide insight on how businesses can use AI to prepare to face crises and challenges. Students will develop an understanding of how AI technology improves the efficiency of the management process during a crisis response. Students will learn how the use of robotics, information sharing using ontologies, and providing multi-agent systems for real-time support and simulated environments assist in crisis management planning. They will also learn about the tools needed to conduct ethically sound crisis management practices.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN657 Crisis Management for the Business Leader (3 semester hours)

BUSN657 introduces the role of leaders/managers in crisis management. Topics include the types of crisis, the importance of developing a crisis management plan and implementing a team, and the ways to overcome crisis. The course also covers the impact of a crisis on an organization's employees, customers, suppliers, and general public; and managing stress during a crisis.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN660 Advanced Analytics I (3 semester hours)

This course delves deeper into the sophisticated techniques, algorithms, and tools central to modern analytics. Building upon their foundational knowledge of analytics, students will engage with complex data sets, machine learning methodologies, and advanced predictive modeling. Through real-world case studies and hands-on projects, course participants will learn how to derive actionable insights and address intricate business challenges.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN661 Advanced Analytics II (3 semester hours)

This course equips students with advanced Excel data analysis skills that can be used for problem-solving and decision-making in business. Building upon a foundational knowledge of analytics, students will engage with complex data sets, estimate regression models, and conduct visual analytics. Using case studies and hands-on projects, students will learn how to derive actionable insights and address business challenges. (Prerequisite: **BUSN660**)

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN662 Applied Advanced Analytics (3 semester hours)

This course in applied advanced analytics imparts a deep understanding of the strategies, methodologies, and leadership skills required to drive and manage technological change and innovation in today's evolving business environments. This course combines intricate analytical theories with tangible business scenarios, ensuring students can adeptly transfer classroom knowledge to real-world contexts.

Students will utilize intricate data sets, employ cutting-edge algorithms, and learn to make strategic decisions grounded in advanced analytical findings. Through hands-on projects, students will be taught how to confront and solve genuine business challenges from supply chain optimizations to market forecasting. This course is ideal for those seeking to not only understand but also apply high-level analytics, and it serves as a bridge between theory and impactful business application. (Prerequisite: **BUSN661**)

Spanish language learners may complete this course in Spanish.

BUSN663 Project Management for the Business Professional (3 semester hours)

This course delves into the theories, concepts, and practical application of project management for business professionals and how internal and external environmental factors affect projects that individual students will lead and oversee. Students will analyze project scenarios to determine the best outcomes and what actions to take when the project overruns its budget or schedule. Also, students will examine the future of project management and what technology is available to help the business professional and the project manager.

Spanish language learners may complete this course in Spanish.

BUSN664 Advanced Business Project Schedule and Scope Management (3 semester hours)

This course provides an in-depth analysis of project schedule development and project scope management. Students examine the relationship between schedule and scope across the project life cycle while applying key project management processes. Topics include developing a project scope statement, creating a Work Breakdown Structure (WBS), and building a detailed project schedule. Students learn to identify task dependencies, allocate resources, calculate durations, and apply scheduling techniques such as network diagrams, Gantt charts, and the Critical Path Method (CPM). Tools for monitoring project progress and managing scope changes are explored, including earned value management and change control processes. Emphasis is placed on using project scheduling software, fostering collaboration among project team members, and applying schedule and scope management practices to deliver successful project outcomes. (Prerequisite: **BUSN663**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN665 Advanced Business Project Risk and Quality Management (3 semester hours)

This course provides an in-depth analysis of project risk and quality management. These two aspects of project management are considered difficult to make tangible to the project team. This class will introduce students to the tools and techniques to identify, control, and monitor risks and opportunities and how to plan and promote a project’s quality program. (Prerequisite: **BUSN663**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN666 Advanced Business Project Integration, Resource, and Stakeholder Management (3 semester hours)

This course studies project integration, project human resource management, and stakeholder management. Students will be exposed to the skills to plan, monitor, and control resources to complete a project. Skills will be introduced to understand how to assess project stakeholders and keep them informed regarding the project status. (Prerequisite: **BUSN663**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN667 Advanced Business Project Cost Controls (3 semester hours)

This course introduces the advanced concept of project cost management. The concepts of creating a budget and controlling and monitoring the budget and costs through earned value management are explored. The student will also be able to articulate to stakeholders and senior leaders the expectations for a project to finish within its budget. (Prerequisite: **BUSN663**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

BUSN669 Business Intelligence Analysis (3 semester hours)

The course provides the student with a clear understanding of the importance of aligning business intelligence to organizational strategy, performance, competitiveness, and tactical business decisions. The student will focus on leveraging the organization's internal and external data-rich assets to support business strategies. The student will apply common methods used in business intelligence to analyze data and present findings related to the state of the business.

BUSN695 School of Business Internship (3 semester hours)

Participating in an internship provides students with valuable educational and professional opportunities designed to make connections between theory and practice. During internships, students explore and gain hands on experience in their field of study, exploring practical applications in a professional work environment. The primary responsibility for finding an internship belongs to the student; however, there are a number of resources in place to help the student in their search and application process.

BUSN696 Capstone: E-Portfolio (3 semester hours)

The MBA Capstone E-portfolio course is the final course in the MBA program. This course will prepare MBA students to reflect on their graduate experience by compiling and revising artifacts from previous courses in the program into an organized e-portfolio. The e-portfolio will reflect the student’s educational growth from their entry in the MBA program to its completion. In addition, the graduate student will develop the skills necessary to successfully transition to and navigate post-graduate professional activity. Finally, students will be given the resources to connect with the university in an ongoing relationship.

Spanish language learners may complete this course in Spanish.

BUSN697 Master's Capstone: E-Portfolio (3 semester hours)

This Master's Capstone E-portfolio course is the final course in the Master's Program. This course will prepare graduate students to reflect on their graduate experience by compiling and revising artifacts from previous courses in the program into an organized e-portfolio. The e-portfolio will reflect the student's educational growth from entry in the graduate program. In addition, the graduate student will develop the skills necessary to successfully transition to and navigate post-graduate life as well as understand the civic and social responsibilities of being educated citizens. Finally, students will be given the resources to connect with APU/AMU in an ongoing relationship.

Spanish language learners may complete this course in Spanish.

BUSN698 Comprehensive Examination for MBA (0 semester hours)

Comprehensive final examination for students in the Master of Business Administration program.
IMPORTANT: You must have COMPLETED all other courses in the program and have a GPA of 3.0 in order to register for this course. As an MBA student, you must pass this comprehensive exam in order to have your degree conferred. The comprehensive exam must be taken by the course end date or a failing grade will be posted. If you fail your first course attempt to pass the comprehensive exam, you will need to get approval to register for a second attempt of the course and BOTH final course grades will show in your transcript.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Business (ECON)

ECON600 Managerial Economics (3 semester hours)

This course is designed to use economic analysis to enhance business decision-making within private businesses, not-for-profit institutions, and public agencies. Economic concepts covered include demand analysis, production and cost analysis, linear programming applications, pricing policies and regulation.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ECON610 Global Economics (3 semester hours)

This course is a study of theory and concepts fundamental to understanding the global economy. Students learn to analyze the global business environment of industrialized developing countries, and to think strategically, using micro and macroeconomics principles.

Graduate Course Descriptions

Business (ENTR)

ENTR500 Ideation (3 semester hours)

There are two types of entrepreneurs - those that have a myriad of ideas and those that can't think of one idea. This course will help the student identify opportunities for a new business venture by either deciding on one idea they have or helping to create ideas. This course will span the realm of possibilities for a new business venture and the student will leave the course with a plan for taking the idea and turning it into reality.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR510 Lean Accelerator (3 semester hours)

The Accelerator is a dynamic learning and business development experience, unlike any class you will have had before. You start with your own creative ideas and, through the rigorous lean startup protocol, strive to determine the exact business model by which to launch and go to scale. The Accelerator model is based on lean startup and customer development principles (i.e., innovative business models, scientific approach, hypothesis testing, rapid iteration, minimum viable product, problem-solution fit, and customer discovery).

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR615 Legal Practices for Small Business (3 semester hours)

This course examines the legal and ethical issues small business owners face in the start-up and growth processes and equips them with the concepts needed to be successful. Students review decisions affecting business formation, including business entity selection and formation, employment law, intellectual property, taxation, government regulation, and contract law.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR617 Legal Practices for Entrepreneurs (3 semester hours)

This course is intended to address the various legal, tax, and ethical issues that confront individuals and companies in starting up new ventures, either within an existing company or a new start-up company. Students are exposed to the process of buying and/or selling a company, intellectual property, tax implications, and ethical challenges entrepreneurs face.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR620 Small Business Operations (3 semester hours)

This course focuses on lean processes associated with owning a business and equips students with modeling skills to help them make better decisions in the operations process. Students evaluate different lean operations in areas such as lean six sigma, quality improvement, value creation, project management, the DMAIC process, pricing strategy, assumption testing, and inventory management. *This course uses spreadsheet software.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR621 International Entrepreneurship (3 semester hours)

This course focuses on international opportunity for new and emerging ventures; market analysis; exporting; joint ventures, regional, legal, and cultural issues; and financing foreign ventures. The course provides students with an understanding of the complexities faced by entrepreneurs doing business in a global environment and with knowledge to help them be successful within the global context.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR623 Venture Capital (3 semester hours)

This course covers major sources of funding for entrepreneurs - including family and friends, angels, venture capitalists, informal investors, banks, and crowdfunding. Each are reviewed and evaluated in this course. Some topics for this course include valuation, bootstrapping, joint ventures, strategic alliances, and private placements. Students create financial statements, develop a funding plan for a new venture, and create a pitch to present to an investor. *This course uses spreadsheet software.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR625 Small Business Funding (3 semester hours)

This course examines financial strategies needed to support a small business. Topics addressed include managing the cash cycle, seed and venture capital, cost of capital and capital structure, entry strategies such as franchising and acquisition, self-funding, debt financing, angel investors, and financing from venture capital firms.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR630 Entrepreneurial Marketing (3 semester hours)

This course examines the marketing process and components of a successful marketing strategy for starting and growing a successful entrepreneurial venture. Students learn about the evolving practice of marketing and the potential for entrepreneurial thinking. Focal points range from issues with conventional marketing paradigms to the development of marketing strategy in the digital age.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR631 Small Business Marketing (3 semester hours)

In this course, students examine the unique marketing challenges faced by entrepreneurs launching new products and/or services. Topics include: designing new offerings, targeting customer segments, and marketing on a tight budget. The course is designed to be useful for small business owners.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR635 Business Plan Development (3 semester hours)

This course is designed to provide the student with the skills necessary for developing a comprehensive, effectively written business plan for a new business venture. Every business benefits from a business plan. This class helps students understand that a business plan is more than a strategic plan. The motives for a business plan are largely the same for every business: to have an intent, purpose, and direction for the business. This course deals with the critical decisions and action steps entrepreneurs must make in both planning and executing a new venture. The business plan is often a tool used for those who may be interested in the business venture for a variety of reasons. Therefore, the plan must reflect the concept's viability and business model, the environment in which the firm operates, and the expertise of the management team to execute the plan.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

ENTR699 Entrepreneurial Project Capstone (3 semester hours)

As a culmination to the graduate-level Master's program in Entrepreneurship, this capstone course focuses on tying together the functional aspects of an entrepreneurial initiative to position it for growth and longevity. Topics covered include elements that must be considered by the entrepreneur to better position the organization for future growth, such as market research, management acumen, funding, etc. Students evaluate the opportunity of their venture as a foundation for the strategic business plan that stresses growth and answers to market shifts. This course may not be taken until all other courses are COMPLETED and student has a 3.0 GPA.

Spanish language learners may complete this course in Spanish.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Child and Family Development (HDFS)

HDFS501 Advanced Child Life Theory and Practice (3 semester hours)

Advanced Child Life Theory and Practice provides students with the knowledge and tools to educate, prepare and support children and their families who are experiencing acute or chronic illness or trauma. This course covers scope of practice, impact of illness, family centered care, therapeutic play, preparation and official documents of the Association of Child Life Professionals.

Note: This course is taught by a Certified Child life specialist and meets one of the academic requirements of the Association of Child Life Professionals (ACLP®) to become a Certified Child Life Specialist.

ACLP® is a registered trademark of Child Life Council, Inc.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HDFS502 Therapeutic Play (3 semester hours)

This course will cover the history, theories, techniques, applications, and skills as they relate to therapeutic play. Students will develop therapeutic strategies for meeting children's emotional needs and helping them to cope during times of acute and chronic illness, bereavement, and trauma. (Prerequisite: **HDFS501**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HDFS503 Death, Dying and Grief - A Child's Perspective (3 semester hours)

This course explores issues around death and dying and the impact on children to include the theoretical and multicultural perspectives as well as ethical and moral issues. Students will also examine the impact of death and dying on a family and community. Students will engage with tools such as legacy building and memento creation, identify and utilize resources that promote positive coping skills, and identify strategies for helping children to cope with terminal illness and impending death. (Prerequisite: **HDFS501**)

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HDFS540 Family Systems (3 semester hours)

This course will examine the ecological or systems approach to understanding families as well as a review of historical and contemporary family theories. The course will include a look at family structure, family dynamics, family relationships, and family roles particularly as they are impacted by a wide range of stressors that necessitate intervention strategies. The nature of families will be explored across cultures and family composition.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HDFS596 Child Life Practicum Experience (3 semester hours)

This course supports students who are completing a clinical practicum in child life as part of their graduate program in Psychology. This experience will expose students to relevant clinical practices in child life. Students will complete their practicum experience while participating in weekly online discussions throughout the course. Students will be expected to complete a work journal, keep accurate time records, and evaluate their practicum experience. The course will integrate the competencies as outlined by the profession throughout the course. (Prerequisite: **HDFS401** or **HDFS501**)

Note: Students are required to secure their own practicum experience. The University does not assist in placement.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

HDFS597 Child Life Internship (3 semester hours)

The Child Life Internship is designed to support students who are completing an internship as a part of the certification requirements for Child Life Specialist. This internship will expose students to relevant work practices in their area of study.

Students will complete their internship while participating in weekly online discussions throughout the course. In addition, students will be expected to complete a work journal, keep accurate time records, and evaluate their internship experience. The course will integrate industry competencies throughout the course and encourage students to apply the skills they learn.

Note: Students are required to secure their own internship, because the University does not assist in placement. This course is designed for students needing a University affiliation for clinical placement.

View the course schedule to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

Graduate Course Descriptions

Computer Science (CSCI)

CSCI500 Foundations of Advanced Computer Science (3 semester hours)

This course serves as an essential primer for students in computer science, providing the foundations for advanced computer science study and subsequent work in **CSCI505**, **CSCI510**, and **CSCI520**. It develops core knowledge and skills in data structures, algorithms, machine learning, and big data analytics. Emphasis is placed on applying theory to computational systems and software development challenges, while introducing techniques that support deeper understanding of advanced computational problems, machine learning, artificial intelligence, and big data analytics. The course also highlights connections to engineering concepts and professional practice within the field. These elements strengthen the subject foundations and align with program outcomes, ensuring students have the resources needed for progression within the Master of Computer Science degree.

Spanish language learners may complete this course in Spanish.
